LABBAI (LUBBAY) (Tamil, *Ilappai*, said to be a corruption of 'arabi'), a class of Indian Muslims, also known as *Dionakas* (Skt. *devanaka*, "Greek, western"), supposed to be descended from Arab immigrants who intermarried with native women, but now having nothing to distinguish them from the aboriginal people, except their mode of dress and manner of shaving the head and trimming the beard. In 1911 they numbered 401,703, found chiefly on the E. coast of Southern India. Most of them are Sunnis, of the Shāfi'i *madhhab*, and their head-quarters are at Nagore, the burial place of their patron saint, Shāh al-Hamīd 'Abd al-Qādir (ob. 1600), commonly known as Kādir Wali or Mīrka Shāh (see *Gazetteer of the Tanjore District*, p. 243). They read the Qur'ān in Tamil translation, written in Arabic characters. They are industrious and enterprising, especially as fishermen and traders.

Bibliography: E. Thurston, *Castes and Tribes of Southern India*, Madras 1909, iv. 198 sqq.; Kādir Husain Khān, *South Indian Muslims*, Madras 1910, p. 29 sqq.; *Manual of the Administration of the Madras Presidency*, Madras 1893, iii. 437. (T. W. ARNOLD)

LABBAIKA. [See TALMIYA.]
LABID b. RABI' A. AḤ 'AḤ, an Arab poet of the pagan period, who lived into the days of Islam (*muhaddram*), belonged to the family of Banū Dja'far, a branch of the Kilāb, who belonged to the Banū 'Amir and therefore to the Ka'ab Hawāzin. According to Ibn Sa'd, vi. 21, he died in 40 (660/661) in the night on which Mu'āwīya arrived in al-Nakhaila to conclude peace with Ḥasan b. 'Alī. Others, like Ibn Hādjar, iii. 657, whom Nöldeke (*Fünf Mu'allafat*, ii. 51) thinks ought to be followed, give 41 A. H., others again 42. He is said to have reached an unusually great age (al-Siddiqī, *K. al-Mu'ammarn*, ed. Goldziher, ch. 61). In fact he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 A. D. he seems to have attained a prominent position in his tribe by his command of language. As quite a young man he is said to have accompanied a deputation from his tribe to the court of king Abū Kābūs Nu'mān of al-Hira (c. 580—602), and when the latter was incited against the Banū 'Amir by his friend Abū Rabi' b. Zayd al-'Alat (of the tribe to which Labid's mother belonged), Labid succeeded with a satirical *raḡas* (*Dirwān*, No. 33) in so ridiculing him to the king that he restored his favour to the Banū 'Amir. A verse from Nu'mān's answer to his courtier who sought to defend himself from the lampoon on him became proverbial (cf. al-Mufaḍḍal, *al-Fihrist*, i. 41 sq.; al-'Askari, *Amthal*, on the margin of Ma'idnī, ii. 117, 7—18;

al-Ma'idnī, ii. 33; *A. al-Aghani*, xv. 294 sqq.; 91 sqq., xvi. 22 sq., 21 sqq.; 'Abd al-Qādir, *Kānānat al-Adab*, ii. 79 sqq., iv. 171 sqq.). In his later poems Labid also often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet and scorned the profession of a wandering singer, practised by his contemporary al-'Ash'ā. But the coming of the Prophet Muḥammad threw him out of the usual groove. We do not know the exact date of his conversion to Islām. As early as Djumādā II of the year 8 the chiefs of the tribe of 'Amir b. Sa'sa'a, 'Amir b. Tufail and Arbad b. Ka'is, a stepbrother of Labid, seem to have negotiated in Medina about the adhesion of their tribe to the new constitution without reaching any result (see Caetani, *Annali*, ii. 90 sqq.). Both men are said to have soon after come to an untimely end, 'Amir from plague and Arbad from a lightning stroke; the latter story seems to find confirmation in Labid's lament for him (*Dirwān*, No. 5). The accusation on the other hand that Arbad attempted to kill the Prophet is quite incredible; for in that case Labid could hardly have composed several elegies on him and they would certainly not have been included in his *Dirwān*. In the year 9 the tribe again sent a deputation to Medina which included the poet and an agreement was reached. Labid is said on this occasion to have become a Muslim. He later migrated to Kufa where he died. Of his family only a daughter is mentioned who is said to have inherited his talent (see al-Ma'idnī, ii. 49, 13 sqq.; al-Ghazālī, *Mafāhīl al-Budūr*, i. 52, 7 sqq.).

Labid's poems were very highly esteemed by the Arabs. Al-Nābiḡha is said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hawāzin, on account of his *Mu'allafat*. He himself is said to have claimed third place after Imru' l-Qais and Tarafa. Al-Djumahī (*Tuhfat al-Su'ara*, ed. Heil, p. 29 sq.) places him in the third class of pagan poets along with al-Nābiḡha al-Dja'dī, Abū Dhur'ah and al-Shammākī. Labid showed himself equally master of the *hijazī*, the *marthiya* and the *ḡazal*. One of his *ḡazals* was adopted into the collection of *Fünf Mu'allafat* and is thought by Nöldeke (*Fünf Mu'allafat*, ii. 51) to be one of the best specimens of *ḡazal* poetry. Labid uses the traditional pictures Beduin poetry. Labid uses the traditional pictures from the animal world — wild asses and antelopes fleeing before the hunter and fighting with his dogs — as charmingly as the usual complacencies about drinking bouts. He seems on the other hand to have only cultivated the *muḥabba*, because it had been traditional. He deals far less with the subject of woman's love than with the description of the *Aḡal* which he likes to compare with

artistic calligraphy. He is also fond of recalling memories of places of his native district, the palm-groves and irrigation works of which continually move him to charming descriptions; indeed in one such connection he gives the whole itinerary (*Dīwān*, No. 19, v. 4-299.) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, *op. cit.*, p. 12). As his almost contemporary Abū Dhū'ayb is fond of doing, in the *Ma'allāqāt*, v. 55-299, he turns however once more to his beloved and thus combines the *naṣīb* with the main part of the *ḥaydū* to an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is however distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muhammad's mission. While Zuhair, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Labid on such occasions always strikes a religious note. He certainly did not profess Christianity nor can we see in him a representative of the so-called Hanifa of the *Sīra*, as von Kremer wished to do. In him rather we find the belief in Allāh as the guardian of morality finding particular expression, a belief widely disseminated in Arabia by the preaching of the Christian church. Such passages mutually invited the Muslim traditionists to increase them, indeed a later author went so far as to ascribe to him a verse by Abū 'l-Atāhiya (fig. 18). But many passages of his *Dīwān* seem to owe their inspiration to the Qur'an. The statement that he wrote no more poetry after his conversion to Islam is obviously an invention (see Ibn Sa'd, vi. 21, repeated later, e.g. by al-Jūzjānī, *Maṣābiḥ*, i. 52 infra); it is contradicted by the simple fact that poems 21 and 53 of the *Dīwān* were only composed shortly before his death (*K. al-Aghānī*, xii. 101). The description of Paradise (*Dīwān*, No. 3, 4) is certainly inspired by the Qur'an like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in Nos. 39 and 41, verse 11 of which, as Ibn Kātib (K. al-*Ḥisr*, p. 153, 1) already points out, certainly must be written after his conversion, it is not to be considered an interpolation, he replaces the *naṣīb* by pious admonitions. Thus he creates a new artistic form, that of poetical parenesis on the transitoriness of human life; besides the Qur'an he may of course have been influenced by Christian preaching. He only follows older models in the connection when he combines admonition with the avowing of blame from a woman. In No. 14, as in Taraf's *Ma'allāqāt*, verses 56-299, 63-65 (cf. Caillet, *Des Schickel*, p. 8), where this is however only an episode in the *ḥaydū*.

Labid's *Dīwān* was edited, according to the *Fihrist*, p. 158, by several of the greatest Arabic philologists, al-Sukkari, Abū 'Amir al-Shalabi, al-Azma'i, al-Tūsi and Ibn al-Sukūn. Of these editions only half of that of al-Tūsi with a commentary has survived in the manuscript edited by al-Khalidī [see below] of the year 589. All other MSS. are much later, e.g. those in Leiden, Strasbourg and that in Cairo not yet edited which also contains the *Dīwān* of Abū Dhū'ayb, ed. by J. Hill.

Bibliography: Ibn Sa'd, *K. al-Tabaqāt*, v. 420/1; Ibn Kātib, *Libro Fecit et Postarum*,

p. 148-156; Abū 'l-Faraj al-Isfahānī, *K. al-Aghānī*, xiv. 90-98; *Dīwān Labid al-Amiri Rawayat al-Tūsi*, al-Tūsi al-*alā* bi-Hār al-Naṣīb al-mawḥūda 'inda Ṭāḥī al-Shalabi 'Yūsuf Ḥiya al-Dīn al-Khalidī al-Maḥḥāḥ (Vienna), al-Ḥawāṣī 1297; A. von Kremer, *Über die Gedichte des Labid*, S. B. Ak. LACCADIVES (*Lakṣadīp*, "the hundred thousand isles"), a group of coral atolls lying off the Malabar Coast between 8° and 14° N. and 71° 40' and 74° E. There are thirteen islands in all, but only eight are inhabited, and these are divided into two groups — the northern, including the inhabited islands of Amīni, Kārdamāt, Kiltan and Ceṭṭat, and the southern, including the uninhabited islands of Agatti, Kavaratti, Androth and Kulpeni. The northern group, for administrative purposes, forms part of the south Kanara District and the southern, of the Malabar District. To the south of the Laccadives stands the isolated island of Minikoi, belonging physically neither to this group nor to the Maldives, but approaching rather to the latter. The Laccadives were originally colonized by Hindūs from Malabar but the inhabitants were converted to Islam in the thirteenth century, according to tradition. They number about 10,000, and in habits and customs resemble the Mappillas of North Malabar, but their women hold a higher position, and are neither veiled nor secluded. Inheritance follows the female line. The people formerly owed allegiance to the Kolattūṟ Rājās, but were virtually independent until, in the sixteenth century the Rājās bestowed them on his admiral, the 'Alī Rājās of Kanāur, whose descendants governed them until 1791, when Kanāur was conquered by the British, into whose hands they fell.

Bibliography: J. Stanley Gardiner, *The Fauna and Geography of the Maldives and Laccadive Archipelagoes*, Cambridge 1901-1905; *Malabar District Gazetteer*, Madras 1908; *Imperial Gazetteer of India*, Oxford 1908.

(T. W. HAID)

LĀDHĪK (Lādīk, Greek Λαδία), the name of several towns in Asia Minor.

1. The ancient Λαδία in κατακεκαυμένη (Lādīk Sūkhō). It probably derived this name from the smelting furnaces which it had around it as the centre of the quicksilver mining area. It was in Karāmān north of Kaniya on the great military road which ran through Asia Minor. Ḥādīdī Khalīfa already knows it by its modern name of Vörgö Lādīk or Lādīliya in Karāmān.

Bibliography: Ḥādīdī Khalīfa, *Dihān-Namā*, p. 611-299; Ibn Bībī, ed. Houtsma in *Recueil de textes relatifs à l'hist. des Séfévides*, iii. 23, 25 = iv. 8, 9; Cramer, *Asia Minor*, ii.

33; Hamilton, *Travels in Asia Minor*; Ramsay, *Class. Revue*, xix., p. 367 sq.; Sarre, *Reise in Kleinasien*, p. 25; Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 136, 149.

2. Lādhik (Hādīk) Khālifa: Lādhikīya, the ancient Laodicea ad Lycum was in the S.E. part of Džermiyan. Al-Battānī calls it, following Greek sources, Lādhikīya Frādīs (= Φαυρία while Ptolemy places it in Caria). According to Ibn Battūta it was a large town with 7 Friday mosques, beautiful gardens, flowing rivers and springs and fine markets. The Greek women there made remarkably beautiful and durable woollen goods, embroidered with gold. Ibn Battūta also praises the hospitality of the inhabitants but censures the freedom of their morals. Slave girls were sold and prostitution practised even in the public baths. On the history of the town (now *Liki Hiper*) see DEBILLI.

Bibliography: al-Battānī, *Opus astronomicon*, ed. Nallino, ii. 39; iii. 237 (Nº 116); Ibn Battūta, *Tuhfat al-Nawāṣir* (ed. Paris), ii. 270 sq., 457; Hamd Allah Mastawī, *Nushat al-Kutub*, ed. Bombay, p. 162; 'All of Yazd, ed. Calcutta, ii. 448 sq.; Hādīk Khālifa, *Dhikr-Numā*, p. 631 sq.; Le Strange, *The Lands of the Eastern Caliphate*, p. 143, 153 sq.; Sarre, *Reise in Kleinasien*, Berlin 1896, p. 12.

3. Lādhik, the ancient *Λαοδικεα Πρωτεύς* south of Amāsiya.

Bibliography: Ibn Bibi, ed. Houtsma, *passim*; Le Strange, *The Lands of the Eastern Caliphate*, p. 146. (E. HONIGMANN)

AL-LĀDHĪKIYA, a sea-port in Northern Syria, the ancient *Λαοδικεα ἑστὴ* *σαῶν*. It was founded by Seleucus I, who called it after his mother Laodike, and towards the end of the Seleucid empire it was a member of the alliance of the four most important Syrian cities, the *ἐστὴς ἀστυὶς*, Antiocheia, Apameia, Seleucia and Laodiceia. In the reign of Justinian I it was made the capital of the newly founded province of Theodoriana.

When the Arabs under the governor of Hims, 'Ubbāda b. al-Sāmīt al-Anṣārī, advanced on the town, the inhabitants made a determined resistance. 'Ubbāda encamped near Lādhikīya and had deep trenches dug in which even horsemen could advance unobserved. After a pretended retreat he returned in the night and was then able to surprise the inhabitants who had unsuspectingly opened the great gate of the city, and to enter the town. The citadel was then stormed and 'Ubbāda proclaimed upon the walls *Allāh akbar*. A section of the Christian inhabitants fled to al-Basaid (Hosfay); al-Balādhuri, ed. de Goeje, p. 133, should thus be corrected for *al-Yusufid*: Ed. Schwarz in Wellhausen, *Z. D. M. G.*, ix. 246). Their request to be allowed to return to the town was granted them on payment of a fixed sum as *ḡharāḡ*. They retained possession of their church, while 'Ubbāda had a new mosque built which was later enlarged (al-Balādhuri, *op. cit.*, p. 132 sq.). About 97 (according to al-Balādhuri: 100 A.H.), the Greeks attacked the coast of al-Lādhikīya with a fleet, burned the town and carried off its inhabitants as prisoners (al-Balādhuri, *op. cit.*; Brooks, *J.H.S.*, 1878, xviii., p. 195). Umar had al-Lādhikīya rebuilt, fortified and ransomed the inhabitants from their captors. Yazid completed the restoration of the city after Umar's death and he also

put a garrison in it. According to another story however, Yazid's services in the town were only the renovation of the defences and the strengthening of the garrison (al-Balādhuri, *op. cit.*; Mas'udi, *Murūṣṣat al-Diḡab*, Paris, viii., p. 281).

Nicephorus Phocas in 968 won the town and the whole of Northern Syria from the Byzantines (Yahyā b. Sa'īd al-Antākī, ed. Kradkovsky and Vasiliev in *Patrolog. Oriental*, 1924, xviii., p. 816). In 980, according to Yahyā b. Sa'īd, who, Rasen thinks, took his statement from a local chronicler of al-Lādhikīya, the emperor Basil II appointed a certain Karmarīk, who had distinguished himself in an expedition against Tarsūbulus which belonged to the Fātimids, to be governor of the town. When it was besieged by the Arabs Naṣrīl and Ibn Shākīr, he was captured during a sortie, and beheaded in Cairo (Rosen, *Zapiski Imp. Akad. Nauk*, xlv., p. 16 sq., 153 sq.). Michael Burtzes (al-Burḡī) in 992 put down a rising of the Muslims in the town and had them deported to Bilād al-Rūm (Yahyā, ed. Rosen, *op. cit.*, p. 30, 237). In 1086 al-Lādhikīya belonged to the Banū Munkidh of Ḥamīr (Derenbourg, *Oriens*, p. 27 sq.) who had, however, to cede it to the Salḡūk Malik Ḥāsh. In August 1098, the Count of Normandy took the town; it then passed in rapid succession to the Byzantines, to Bohemund of Tarento, to the Byzantines again and finally after 18 months' siege, to Tancred of Antākīya (Röhrich, *Gesch. des Kgr. Jerusalem*, p. 45, note 8). In 1104 we again find the Greeks besieging it by land and sea, and Bohemund promised the Emperor Alexius Comnenus in the treaty of Devel (1108) the cession of this *επαρχία* among other places (Anna Comnena, *Alexias*, Roma, ii., p. 241, c). Tancred however soon afterwards with the help of a Pisan fleet took the town which in the meanwhile had again passed to the Muslims. The governor of Halab took and sacked it in 1136; in 1137 and 1170 it was visited by two severe earthquakes, in which only the principal Greek church remained intact. On July 23, 1188, Salḡū al-Dīn took the town ('Imād al-Dīn, *Faḡh*, p. 141; Abū Ḥāshim, *Kutub al-Rawḡḡān*, ed. Cairo 1287/1288, ii., p. 128 = *Hist. Orient. des Crois.*, iv., p. 361). In autumn 1197 Bohemund III succeeded once more in conquering al-Lādhikīya or a part of the town at least. In 1223 the Hāshis destroyed the town or its citadel out of fear of the Christians approaching on the Fifth Crusade. But even after this (since 1197), half the city remained in possession of the Franks. Balbars in 1275 demanded that they should hand over this part of it. In 1281 al-Lādhikīya belonged to the emir Sonkor of Dīnashir, to whom the Sultān had been forced to surrender it in a treaty (June 24); but after the fall of Sonkor, another emir won it back from Balbars (April 20, 1287); soon afterwards a new earthquake almost completely destroyed several of its strong towers, the pigeon-tower, the light-house and the towers in the sea; great siege engines completed the destruction of the fortifications.

The district of al-Lādhikīya, which had hitherto gone with Halab under the Ayyūbids (Yakut, *Muḡjam*, ed. Wüstenfeld, iv., p. 338; Ibn al-Shihna, ed. Beirut, p. 231), about the end of the XIIIth century was placed in the new province of Tarsūbulus (Umari, *Tarīḡ*, p. 182, in R. Hartmann, *Z. D. M. G.*, 1916, p. 35; Khālī al-Zahīr, *Zakān*, ed. Ravaisse, p. 48; *Dīwān al-Imār*,

Paris MSS. Arab. 4439, fol. 94^v, 152^v, 243^v, in van Berchem, *Voyage en Syrie*, p. 290, note 3; al-Kāshgharī, *Subh al-Ashā*, iv, 145, transl. Gaudelroy-Demombynes, *La Syrie*, p. 113 sq. The Arab geographers and historians mention many ancient buildings that had survived in the town; they also tell of two castles connected with one another on a hill which commanded al-Lādhīqīya (Bahā' al-Dīn, in *Hist. Or. des Croiz.*, iii, 110), a great city-gate, which it took a number of men to open (al-Balādhurī, *op. cit.*, p. 152), and the splendid monastery of Daīr al-Fārīs (Ma'ā'idī, *Murūsh al-Dhukab*, viii, p. 281; Demashki, ed. Mehren, p. 209; Abu 'l-Fidā', *Geogr.*, transl. Reinaud-Guyard, i/ii, 35; in Ibn Battūta, i, 485; al-Fārīsī) called after Tall Fārīs still the name of the eminence to the north of the town (M. Hartmann, *Z.D.P.F.*, xiv, p. 166 and map). A short description of al-Lādhīqīya is given by Raulin of Caen (*Gesta Tancredi*, ch. 144; Röhricht, *Z.D.P.F.*, x, 316 has put together a list of the buildings of the town known from Frankish sources). In spite of the earthquakes and frequent pillaging suffered by the town in course of centuries, it never seems to have been quite desolate and uninhabited. The fine, high houses and the straight streets, paved with marble blocks, noted by Ibn al-Athīr and Abū Shāma (*Hist. Or. des Croiz.*, i, 720; iv, 361) and which they say had suffered much when the town was sacked (cf. also Ya'qūbī, ed. de Goeje, *B.G.A.*, vii, 258), recall the description of Laodicea in Pseudo-Strabo as a *εὐκλεια ἰσοκλίμη ἐδὴς* (Strabo, xvi, p. 753), and of the modern town van Berchem says (*J.A.*, 1902, p. 425; cf. *Voyage*, i, p. 289 sq.): *la ville de Lattakieh a gardé ses rues droites. Il est curieux que si plain, d'aspect tout moderne, soit d'un moyen âge; il semble peut-être à l'antiquité, comme certaines rues droites de Damas et Jérusalem.* The origin of the straight streets and the square plan of the town (cf. Th. Schumacher in the *Festschrift für H. Kiepert*, 1898, p. 335–348) has been ascribed to architects of the Roman empire (A. v. Gutsch, *Griech. Studien*, 1924, passim), but more recently Caltrera has shown that they already existed in the early Hellenistic period and had been borrowed as early as by Hippodamus of Miletus (fifth century) from the architecture of the ancient east (*Architectura Hippodami*, in *Memoria dell' Accad. dei Lincei*, ser. v, vol. xvii, p. 403, 453 sq., 473; Camont, *Faibles de Douze-Europes*, Paris 1916, xii, note 4, 25 sq., 483).

LAGHUAT, AL-AḤWAT, a town and oasis in Southern Algeria, 250 miles south of Algiers in 2° 55' East Lat., 33° 48' N. Lat., at 2,400 feet above sea-level. In 1911 it had 5,598 inhabitants of whom 595 were Europeans. Laghuat which forms part of the "Territoire" of Ghardaia is the capital of a mixed commune and a native commune of 6,650 square miles with 19,810 inhabitants.

The town and the oasis lie on the right bank of the Wād Maī, which comes from the Djebel Amār and finally under the name of Wād Djedi enters the Shott Melghir in the south of the province of Constantine. The houses lie in terraces on the slopes of two rocky hills, spurs of the Djebel Tisgarine, the European quarter on the north-west slope and the native quarter on the north-east slope. It is defended by a wall and two forts on the summit. The oasis extends in a semi-circle north-west and south-east of the town. The north-west part is the more extensive and contains palmgroves and fields of cereals. A canal led by a dam from the Wād Maī called the Wād Lekhīr provides for the irrigation of the gardens. The palm-trees to the number of 30,000 produce dates of mediocre quality, but they supply the food of the inhabitants. The situation of Laghuat between the southern Oran and southern Constantine at the point where roads diverge to the west, to the Oud Sidi Saikh, to the south of the Maī and to Wargla, to the east to the Zāhen and Blakra, makes this place a considerable centre of commerce.

History. In the tenth century A.D. there was already on the banks of the Wād Maī a little town, the inhabitants of which, after having recognised the authority of the Fātimids, took part in the rebellion of Abū Yaṣīd. The country round was inhabited by wandering Berbers of the family Maghrawa. The Hilālī invasion brought other tribes of the same stock into this region, notably the Kael, driven out of the Zab, who founded a village called Ben Hata. Other Kūr (Bū Mendula, Nadjal, Sidi Mimūn, Badla, Kaṣbat ben Fotūh) were built by other refugees, some of Arab origin (Dawawida, Uḥād b. Zayyan), others came from the Maī. These groups together took the name of al-Aghuāt.

We know very little of the history of this town down to the xviiith century. At the end of the

xviiith century it paid tribute to the Sultan of Morocco; in 1666 the Ksar of Badia and of Kshat Totah were abandoned. In 1698 a Marabout originally from Tlemcen, Si al-Hadjidj 'Aissa, settled at Ben Hsta, imposed his authority on the people of the three other Ksar and on the neighbouring tribe of the Larba. Under his leadership the people of Laghuat defeated the people of Ksar al-Azafia but were forced to pay tribute to the Sultan of Morocco, Mully Isma'il, who camped under the walls of the town in 1708. After the death of Si al-Hadjidj 'Aissa (1738 A. D.) the history of Laghuat is reduced to that of the struggle between the two sif who disputed control of it, the Ulad Serghine, of the south-west quarter and the Hallaf who inhabited the north-east quarter. In the middle of these feuds which bathed the oasis in blood, the Turks made their supremacy recognised. In 1727 the Bey of Titteri had imposed an annual tribute on the Ksūmna. The Mzabls driven from the oasis where they had acquired a part of the gardens, formed with the nomads of the south a confederation, over which the people of Laghuat triumphed with the help of the Larba. Towards the end of the xviiith century the Turks reappeared and enforced once more their suzerainty which the Laghuati had been gradually casting off. The Bey of Mouda fell in the first expedition (1784), but the Bey of Oran, Muhammad al Kalir, seized the town and destroyed the quarters of the Ulad Serghine (1786). His successor 'Olmia then took the field against the Hallaf whom he scattered (1787).

The two enemy factions were not long however in reorganising themselves and civil strife began again until the chief of the Hallaf, Ahmad b. Salim, succeeded in making himself master of Laghuat and the neighbouring Ksars (1828). But peace did not last long. The Ulad Serghine supported by 'Abd al-Kadir regained the upper hand in 1837. Their chief al-Hadjidj al-'Arbi was appointed khalifa by the Amir. He could not hold out and was forced to take refuge in Mzab. His successor 'Abd al-Baki was no more fortunate, although he had 700 regular troops and a cannon. In obedience to the Amir's orders he tried to imprison the notables but this provoked risings and he had to leave Laghuat (1839). Al-Hadjidj al-'Arbi, again appointed khalifa, was defeated by Ahmad b. Salim in alliance with the Marabout of 'Ain Mahda, Tidjant, and then taken prisoner. Thus becoming again lord of Laghuat, Ahmad b. Salim placed himself under French protection who appointed him their khalifa in 1844. A French column under the command of Colonel Marry-Monge on this occasion camped at the very gates of Laghuat. The French came back again in 1847 but did not definitely install themselves till 1852, when the Sharif Muhammad b. 'Abdallah, already lord of Wargla, had gained entrance to the town with the help of a section of the Hallaf. To retake it from him a column was sent under General Pélissier. Laghuat was taken by storm after a desperate fight in which General Bonscœur and Commandant Morand were killed (December 1852). A permanent garrison was then stationed in Laghuat and it became the base of French operations in the south.

LAHIDJ, a sultanate in South Arabia with its capital of the same name north-west of 'Aden, bounded by the Hawshabi territory on the north, the Fadli territory on the east, the 'Akrabi land in the south and the Subahli territory in the west. The capital, called Lahidj or el-Hsta lies at a height of 350 feet above sea-level between the two arms of the Wadi Tahan, the Wadi Saghr and the Wadi Kabir, in a fertile oasis which, occupying a wide valley, owes its existence to its irrigation by canals led from the mountain streams and walls of excellent water as much as 15 feet deep. The town is surrounded by palmgroves and fields on which cereals are grown, notably *sherre* (*Solens cereale*) and different vegetables; in addition to date-palms there are all kinds of fruit trees, including citrons and cocoa-palms, this being one of the most northerly points in Arabia where the latter are found. The town which was visited in 1503 by Ludovico di Barthez and in 1810 by V. G. von Seetzen and which Niebuhr still calls small, while on Wellsted's visit it had about 400 houses and 800 straw or reed huts with almost 5,000 inhabitants, owes its prosperity to the Russo-Turkish war in the course of which in 1878 England temporarily proclaimed a state of siege in 'Aden and evicted the Arabs and Somalis from 'Aden. The latter went to Lahidj where they built themselves thousands of huts close to the town, which now form extensive suburbs and considerably increased the number of inhabitants. The sea of houses is dominated by the palace of the Sultan, built by Indian architects and four to five stories high with extensive subsidiary buildings; it is entirely built of clay and painted white. The palace is surrounded by a clay wall, to the east of which lies the town with its numerous rectangular flat-roofed houses, all built of sun-dried bricks made of a mixture of dung, clay, straw and dried grass and one or two stories high. The monotony of the picture is broken only by the very simple, insignificant mosques which are outlined in white round the roof. To the east of the palace in the shade of beautiful leafy trees and palms is a pleasant looking one-storied bungalow built by the Sultan for foreign guests. Round the town are scattered little groups of low straw huts, made of *sherre* stems and surrounded by a hedge which are inhabited by Somalis and their families. In addition to these there are also Sawahils settled in Lahidj. The great mass of the inhabitants however are Yemen Arabs, who live in the numerous houses and mud-huts, which form the town with its narrow, winding, dusty streets. A part of the town is reserved for the Jews, who look wretched and are merchants and artisans. There are also a few Muslim Jews who are traders. All types of the population are met with in the bazaar street which is barely six feet wide. Not far from this is the *ammanet*'s market where smiths, Arabs and Jews have erected their simple workshops in open booths. The principal weapons made here are the fine *ghimbays* while the long cavalry lances, which are used by the Yemen Kabils are made in Dabhin, Angah or Hawir and brought for sale to the Lahidj market. In

Wellsted's time there were also 30 silk-weavers here, who got their yarn from India. The oasis is very well watered and the numerous little canals are fed by the perennial stream which passes not far from the town. Lahidj which plays an important part in the caravan traffic is connected by a road with 'Aden and in 1907 was to have been linked up by a railway with 'Aden and Dill', part of which was actually surveyed but the plan was abandoned. England took up the scheme again in 1915 during the war and laid a strategic railway of 1 metre gauge for 25 miles to Lahidj; in 1921 it was extended a few miles beyond the oasis of Lahidj and now reaches Hābil al-Hamra, 8 miles N.W. of al-Hōḡā. The continuation of the railway to San'a would open up Southern Yemen and increase the importance of Lahidj.

History. The name Lahidj (Lahidj) which means a damp low lying area intersected by water channels, a place-name that admirably suits Lahidj, is connected by the genealogists with the Himyar Lahidj b. Wa'il b. al-Ghawth b. Katan b. 'Arth b. Zuhair b. Abyan b. al-Humaisa' and is applied by the geographers to a district in Yemen which forms part of the territory of Abyan north-east of 'Aden. Al-Hamḍānī mentions it among the towns of the Yemen Thāma and says that in his time the descendants of Aṣṭab b. 'Amr b. al-Hārith dhs Aṣṭab b. Malik b. Zaid b. al-Ghawth b. Sa'd b. 'Awf b. 'Adi b. Malik b. Zaid b. Sadāb b. Zur'a Himyar al-Aḡḡar were alive. Yāqūt says the same for the district of Lahidj which included the towns and villages. A number of poets, particularly South Arabians, are familiar with the town, e.g. Kaṣī b. Maḥṣūṣ 'Amr b. Ma'dikarib, Khulāḥḥ b. 'Amr, Sa'īd al-Himyarī, 'Amr b. al-Sulaimān and especially the famous 'Umar b. Abī Raḥī'a, who had property there.

After Yemen had been won for Islam, Lahidj shared the fortunes of this extensive province of the Arab empire. Lahidj thus passed with Yemen to the Umayyads and then to the 'Abbāsids until under al-Ma'mūn the bold 'Alīd Ibrāhīm b. Mūsā b. Qa'far b. Muḥammad, drove his governor Isḥāq b. 'Isā al-'Abbāsī out of Yemen and made himself independent there. In 203 (818/819) the Caliph made a partition of Yemen by which the coast lands from Mecca to 'Aden were put under the governor Muḥammad b. 'Abdallāh b. Ziyād al-Umawī who founded the town of Zabīd and became the founder of the Ziyādī dynasty which with one interruption (the capture of Zabīd in 293 [905/6] by the Ḥammarīn 'Alī b. al-Faḥl al-Himyarī al-Khanṣarī, d. 303 [915/16]) ruled over Zabīd until 402 (1011/1012). Lahidj with 'Aden, Abyan, Haḍramūt and al-Shihr passed into the hands of the Banū Ma'n in the time of the Abyssinian slaves, who ruled the Ziyādī kingdom when the dynasty died out. In 439 (1047/1048) 'Aden came under the rule of 'Alī b. Muḥammad al-Sulayhī (d. 459 = 1066/1067). Zur'a b. al-'Abbās (d. 485 = 1092/1093) was installed as governor here and ruled in a practically independent fashion. Ibn 'Umar, the ruler of Lahidj, al-Shihr and Haḍramūt, who later seized 'Aden and ruled jointly with his brother Ma'sūd, made an alliance with him. Their successors succeeded in conquering a great part of the Yemen, but internal discords soon weakened them and in 1152 A.D., the caliph al-Ma'mūn took 'Aden with the help of treachery

and was able to hold it until the Ayyūbīd al-Malik al-Mu'izzam Tūrūn-shāh in 1173 A.D. conquered a great part of Yemen including 'Aden, with whose fate that of Lahidj was henceforth linked. Tūrūn-shāh placed a governor in 'Aden, the brother of the Imām of San'a, Malik al-Ma'sūd, whose successor Sulṭān Nūr al-Dīn (1233-1249 A.D.) was the founder of the Raṣṣīd dynasty of Yemen. He soon conquered the whole of the Yemen and ruled it under the nominal suzerainty of the 'Abbāsīd caliph, with whom he quarrelled in 1249 so that Sulṭān al-Malik al-Mu'izzam Shams al-Dīn was sent against him and took 'Aden and Lahidj from him. In 1251 al-Mu'izzam granted Lahidj and Abyan to his brothers Mufaḍḍal and Fa'is as a fief. Lahidj again changed its owner when in 1294 Ibrāhīm b. Muḥaffar took 'Aden and Lahidj but had soon to part with them again to Da'ūd, Muḥaffar's successor. In 1302 Lahidj passed as a fief to the Sharīf 'Imād al-Dīn Idrīs. In 1307 the town was pillaged by the Dhahānī, in 1323 'Umar b. Dīwān rebelled in Abyan and Lahidj and besieged 'Aden as his son again did in 1325. In 1454 'Aden with its hinterland passed to the Tāhirīds who held it till 1507. The expeditionary force led by Ḥasan al-Muḥarrīf which the Mamlūk Sulṭān Qānṣūh al-Qūṣrī sent at the request of the Tāhirīd Sulṭān 'Amir b. 'Abd al-Waḥḥāb to prevent the encroachment of the Portuguese in the Red Sea and which conquered a great part of the Yemen, only paved the way for the Turks. In 1538 the Turkish governor of Kulsūm, Sulaimān Paṣhā, set out with a fleet and took 'Aden which belonged to the Turkish empire until in 1635 the Turks had to leave the Yemen, which again became independent under the Imāms of San'a. Quarrels among the claimants to the imāmate however soon shattered the kingdom and in 1728 the 'Abd'alī leader Faḥl b. 'Alī b. Faḥl b. Sillīh b. Sallīm, the founder of the dynasty of Lahidj, made himself independent of the Imāms and made Lahidj the capital of his territory. In 1735 he took 'Aden. His grandson Aḥmad b. 'Abd al-Karīm in 1802 concluded through Sir Home Popham a commercial treaty with England but his nephew and successor Muḥsin came into conflict with England (1837) through the plundering of the Indian ship Doria Dowlat by his people and thus lost 'Aden, the fort of which passed to England by a preliminary treaty concluded on January 23, 1838, while the Arabs in the town were to remain under the jurisdiction of the Sulṭān of Lahidj who received in compensation a subsidy of 541 dollars a month. On January 19, 1839 the English occupied 'Aden and by a second treaty of June 18, 1839, Captain S. B. Haines made an arrangement between Sulṭān Muḥsin of Lahidj and England, by which the former agreed to guarantee the security and regularity of the caravan traffic with 'Aden and to maintain a loyal friendship with England, while Haines in return undertook to pay subsidies to the tribes of Faḥl, Vāḥ, Ha-wāḥib and 'Amir and to pay Sulṭān Muḥsin and his descendants 6,500 dollars annually from Dhū l-Ra'da 1254. At the same time the contracting parties agreed to support one another in case of war between the 'Abd'alī and Lahidj, to put subjects of the Sulṭān coming to 'Aden under English jurisdiction during the time of their stay and those who came to Lahidj from 'Aden under that of the Sulṭān; further all goods belonging to

the Sultan, or his sons were to enter or leave 'Aden free of duty. In spite of this treaty the Sultan, who was still sore over the loss of 'Aden, continued to intrigue against the English and supported the attack of the Arabs on 'Aden in 1840 and even had the English representative in 'Aden, Hassan Khatib, murdered and regularly adopted a hostile attitude towards the English. His constant failures however forced him to change his policy and on February 11, 1843 he concluded a new agreement with England which was renewed in a more stringent form on February 20, 1844, before his monthly allowance was again paid to him. Muhsin b. Fadl, who had again allowed himself to be involved in a war with England in 1846 in which he was defeated, died on November 30, 1847. His son and successor Ahmad maintained friendly relations with England as it was in his best interest to do so. He died in 1849 and was succeeded by his brother 'Ali who resumed a policy of hostility to England and roused the hostility of the tribes against 'Aden. On March 7, 1849 a treaty was however concluded with the East India Company which was ratified on October 30, by Lord Dalhousie, but an attitude of constant friendship to England was not thereby secured. The Sultan even cut off supplies and it finally came to open fighting in which the Sultan was defeated on March 18, 1858 at Sheikh 'Othman so that he had again to reconcile himself to a peaceful policy. When in 1873 the Turks in their reconquest of the Yemen advanced on the hinterland of 'Aden, the English occupied Lahidj and the Turks had to retire as a result of English diplomatic negotiations with the Sublime Porte. Whether these negotiations were instigated or approved by the Sultan who had lost his independence — only nominal it is true — by the Turkish occupation of his territory, is not known. In any case in 1887, as E. Glaser records, Sultan Fadl b. 'Ali was receiving a monthly allowance of 1,250 dollars from 'Aden.

hammad Naze reached Lahidj in their advance on 'Aden where there was a battle with the English and their allies. In the course of the fighting the English troops evacuated Lahidj and Sultan 'Ali b. Ahmad was shot. A counter-attack on July 21, 1915 restored Lahidj to the English but by August 21 they were again driven out of Lahidj which was occupied by the Turks who held it till the beginning of 1918. It was not till the collapse of Turkey on the Palestine front and the cutting of communications with the Yemen that the position became untenable for the Turkish troops and forced them to retire. Since July 1915, 'Abd al-Karim b. Fadl b. 'Ali has been ruler of the Sultanate of Lahidj.

LAHIDJAN. 1. A town in GILAN to the east of the Safid-Rūd and north of the mountain Dulfak (cf. the ancient name of a people *Δελφάκας*) on the river Čom-khala (Pardesar) which 8 miles higher up flows through Langarūd, the present capital of the district of Rān-i Kūh.

Lahidjan although unknown to the early Arab geographers is certainly one of the oldest towns in Gilan. Its foundation is attributed to the legendary Lāhidj b. Šam b. Nūh. The river Safid-Rūd divides Gilan into two parts. In ancient times the river formed the frontier between the Amardoi on the east and the Kadusioi or Gēlān on the west; cf. Andreas, *Amardoi*, in Pauly-Wissowa, *Real-Encyclopädie*. In the Muslim period the part of Gilan to the east of the river was called Biya-pāh and that to the west Biya-pas (the word *biya* "water" [cf. Ahmad Rāzi in Dorn, *Auszüge*, p. 100], corresponds to the Avestan *vādi*, "water-course"). According to Kāshāni the people of Biya-pāh were 'Alids (Zaidis) and those of Biya-pas Hānbalis or sectarians of mād Abū Dja'far (= Tahart).

The old dynasty of Biya-pāh was that of the Kawtūm or Hawthūm (in the modern Rān-i Kūh). Its founder was Nāsir al-Hakīk Ḥasan 'Uṣṣāh, a descendant of the Caliph 'Alī, who preached Zaidi doctrines in Gilan and died in 304 (917) (Ibn al-Aṭhār, viii, 61; Tahart, iii, 2292). His descendants are known as Nāsirwānd. Later the family divided into two branches; in the reign of Uldjān the lord of Kawtūm was Sūlūk b. Sulār b. Kaikāwūs b. Šāhīnshāh (the descent of this branch is not quite certain); the lord of Lahidjan, the most powerful of the princes of Gilan (or of Biya-pāh), was Naw-Pādīghāh (or Šāh-i naw). When in 706 (1307) Uldjān arrived before Lahidjan (via Tārom-Lowāhān-Dailamān-Rustā) Naw-Pādīghāh submitted to him and thus kept his position.

Lahidjan became more generally known as the capital of the dynasty of Biya-pāh called Kār-Kiyā. These sultāns came originally from the village of Malāt (in the district of Rān-i Kūh). About 769 during the civil war between the two lines of Nāsirwānd, the descendants of Šarāf al-Dīn of Lahidjan and those of Amīr Muḥammad of Rān-i Kūh, Saiyid 'Alī b. Saiyid Kiyā seized Biya-pāh, Dailamān and some districts of Māzandarān. The power of the Nāsirwānd was re-established in 791—792; in 908 (1502) the troops of Amīr Ḥisām al-Dīn of Fūmān (Biya-pas) sacked the town and similar invasions were repeated in 910 (1504) and in 914 (1501) but, except for such interruptions, the dynasty of the Kār-Kiyā lasted till 1000 (1592). The Šafāwīs had close connections with Lahidjan. In the village of Šāhkhānbar on the road from Lahidjan to Langarūd is the tomb of Šāhkh Ibrahim Zāhid (d. in 714 = 1314) who was the spiritual father (*pir*) of Šāhkh Šāfi al-Dīn, the famous ancestor of the Šafāwīd dynasty. Šāhkh Ismā'il I, a fugitive from the Ak-Koyunlu, found refuge with the Kār-Kiyā Mirzā 'Alī and studied under Mawlānā Šams al-Dīn Lahidjī (E. Denison Ross, *The early years of Shah Ismail*, *F.R.S.*, 1895, p. 286). These friendly relations were broken in the reign of the Kār Kiyā Khān

Ahmad Khān (943—975 and 985—1000) who was at first imprisoned by Šāh Tahmāsp and later driven from the throne by Šāh 'Abbās, who was indignant at his intrigues with the Ottomans. Ahmad Khān ended his days in Constantinople (Hammer, *G.O.R.*, ii, 562, 576). In 1000 (1592) Šāh 'Abbās came to Lahidjan and destroyed the garden in front of the castle. During their occupation of Gilan (1724—1734) the Russians built two forts in Lahidjan. Lahidjan has now lost all political importance, but has retained its local importance as the centre of one of the largest and richest districts in Gilan. The town has 2,260 houses with 10,000 inhabitants. There are many tombs there of members of the old ruling family. The district is divided into seven cantons:

Bibliography: Yāqūt, iv, s. v. Lahidj; *Nuḥāt al-Kūh*, ed. Le Strange, p. 163; on the conquest of Lahidjan by Uldjān cf. the continuator of Rāhid al-Dīn in Dorn, *Auszüge aus muḥamm. Schriftstellern*, St. Petersburg 1858, p. 138—152, and Abū 'l-Kāsim Kāshānī, *Tārīkh-i Uldjān*, MS. of the Bibl. Nationale in Paris, Suppl. Persien 1419 (fol. 38—41 contain an important description of Gilan from Asl al-Dīn Muḥammad Zawzani); cf. also d'Osson, *Hist. des Mongols*, iv, 488—497; Zahir al-Dīn Ma'āghī, *Tārīkh-i Gilān wa-Dailamīn* (until 894/1432), ed. Rabino, Rašt 1330 (from the unique Rodleian MS.); 'Alī b. Šams al-Dīn, *Tārīkh-i Khānī*, ed. Dorn, St. Petersburg 1857 (history of the Kār-kiyā 880—920/1475—1514); Dorn, *Auszüge aus muḥamm. Schriftstellern*, St. Petersburg 1858, index; Ritter, *Erdbunde*, viii, 544 sqq.; Melgunof, *Das südliche Ufer d. Kaspi. Meeres*, Leipzig 1868, p. 230—234 (the transcription of the rather defective transcription by the translator of the proper names in the Russian original is not always free from errors); Barthold, *Asiatic geography*, *Arak*, St. Petersburg 1903, p. 156; Rabino, *Le Gilan*, *R.M.M.*, 1915—1916, xxvii, p. 291—334, 397 sqq. (a valuable work containing a complete toponymy and a synopsis of the history of Gilan).

2. Several districts in Persia have however derived from the stems *Lāh* and *Lār* [q. v.]: Lāhidj, an important little town in Transcaucasia west of Shamakha [cf. *SAWJAN*]; Lāhidjī, a village in the canton of Kurbāl in the province of Fārs; Lāhidjan, a canton of Mukrī Kurdistān [cf. *SAWJAN*]; Lāh, which the *Šāraf-nāma*, i. 280 calls Lāridjan. There is a village of Lahidjan near Ikhīcī, south of Tabriz and a village of Lāridjan south of the Araxes about 12 miles above the mouth of the river of Ardabil (Kara-Šu). The forms *Lāh* and *Lār* may both come from **Lādā* (cf. the old Persian *Māda*, which gave *Māh* in Persian and *Mar-kā* in Armenian). According to the dictionaries (Vulliers) the old name of the town of Lār [q. v.] was Lād/Lādh; the silk called *lādā* is also known as *lāh* (*lāh* however may equally well be explained by *lāz*). The change of *d* (*dh*) to *r* is

attested in the Caspian dialects (it is regular in Tāt; in Māzandarānī we have the parallel forms *lād/lādā*; Melganoḡ, p. 221). The fact that we have districts of Lāhīdījān and Lāridījān in the adjoining provinces of Gīlān and Māzandarān is remarkable, but still more significant is the fact that Lāhīdīj of Shīrwān represents an islet of Irānīan Tāt surrounded by Turks (the Tāt are now found scattered throughout Daġhīstān, the country round Teherān, Adharbāidjān, etc.). Their present name has a rather general and vague character, cf. *lāt*. The colony of Lāhīdīj may have retained the original dialect formerly spoken in the metropolis. The name of the silk *lādī/lādā* suggests the former existence of a place called Lād, which produced silk (cf. *Yāqūt*, s. v. Lāhīdīj). [Yāqūt says that Lāhīdīj produces the silk called "Lāhīdī" which is not of high quality]. With the suffix *-ī*, the word *Lād-ī* would mean the people of Lād. It remains to be seen if the region of Lāhīdījān is not the ancestral home of numerous Lāhīdīj colonies. At the present day there is spoken in Lāhīdījān — although with certain local peculiarities — the Gilakī dialect but this parent dialect has here exercised a levelling influence, of which the foreign Turkish was incapable in the case of the people of Lāhīdīj of Shīrwān. As to Lāhīdījān of Kurdistān we may recall the hypothesis of Andreas that the name "Dīmā" by which the Zāzī call themselves (north of Diyār-bakr) is a metathesis of Dīlām (Dailām). The emigrations from Gīlān, still very obscure, certainly penetrated far to the west. — [To the names mentioned one might add perhaps that of Kalā-i Lāhūdīj in Khūstān(?); cf. *Tārīkh-i Qazvīn*, G. M. S., xiv/l, p. 240]. (V. MINORSKY)

LAHŌR, capital of the province of the Panjāb, British India, situated on the river Rāwī, at 31° 35' north latitude, 74° 20' east longitude. Population in 1911, 228,687, of whom 129,301 were Muhammadans. The foundation of LahŌr is traditionally attributed to a mythical Lava or Loh, son of Rāma, after whom it was named Lohāwar. It is not mentioned in the chronicles of the invasion of Alexander the Great, nor is the town described either by Strabo or Pliny; but it may be the Lahokla of Ptolemy, which Sir Alexander Cunningham (in his *Ancient Geography of India*) explains as Lavāka, "the abode of Lava". In the *Mahābhārata*, the Panjāb is called Tākadasa, or the country of the Tākas. According to Huiien Tsiang, Tāki was the capital of the Panjāb in 633 A.D. He makes no mention of LahŌr by any name capable of identification as such, though he traversed the entire province and stayed in it for quite two years. Possibly the Lohkot of the *Purāṇas* is LahŌr. The *Dharm Bhāgā* (a compilation from the *Purāṇas*) gives an account of a battle between Rāmal, Rājā of Lavpūr, and one Bhīm Sen Kanēson, the mythical ancestor of the solar Rājput princes of Central India, is said to have migrated south from Lohkot, an event assigned by Colonel Tod to c. 145 A.D. One of the city gateways is known as the Bhātī Gate; the Solankhis and Bhātis of Rājputāna point to LahŌr as the seat of an earlier settlement. The first distinct mention of LahŌr occurs in the history of the campaigns of Subuktāgin, and of Mahmūd of Ghazni, when the Brahman kings of the Kābul valley, being driven from Pashāwar and Ohind, established their new capital first at

Bhēra on the Dībelam, and then at LahŌr. Both Dīai Pāl, and his son Anang Pāl, the successive antagonists of the Ghazni invaders, are called Rājās of LahŌr by Farīht, according to whom the Hindū dynasty was subverted in A.D. 1031, when LahŌr became the residence of a Muslim governor under the king of Ghazni. A final insurrection of the Hindūs was quelled by Mawdūd in 1042, and the city was left in charge of Malik Ayaz, whom Muhammadan tradition regards as the founder. During the reign of Mas'ūd III (1099—1114), LahŌr became the capital of the Ghazni dynasty, but was captured in A.D. 1186 by Shihāb al-Dīn, known as Muhammad Ghori, the Muhammadan conqueror of India. The town was sacked by the Mongols of Čingiz Khān, and of Timūr, and in the reign of Mubārak Shāh it was "a desolate waste in which no living thing except the owl of ill-omen had its abode" (Elliot-Dowson, iv, 56, 57). LahŌr remained insignificant throughout the period of the Pathān dynasties. In 1436, Bahlol Lodī seized LahŌr as a first step to power. It was plundered by Bābūr's troops in 1524.

Even at this time the Panjāb was an almost uninhabited waste, except for a few walled cities in which the Hindūs could exist in some security from the frontier raiders. "The Mongols of Balkh and Kābul every year used to make raids on the Panjāb, and for this reason the province remained depopulated for a long time, and very little agriculture was carried on. Rāj Rām Deo Bahṭī, of Patāla, rented the whole Panjāb from the governor of LahŌr for 900,000 *takas* (£ 2,000)" (*Bābūr's Memoirs*).

Under the Great Moghals, Āgra, Dīhli, and LahŌr were the three chief cities and mint-towns of the Moghal Empire. Akbar held his court here from 1584 to 1598, and repaired and enlarged the fort. In the time of Dīshāngīr, who made it a secondary capital, LahŌr reached its zenith of wealth and splendour; the tombs of this emperor and of his famous consort Nur Dīshān, are on the opposite bank of the Rāwī. The place fully shared in the misfortunes which attended the decline of the Moghal Empire. Situated on the high-road from Afghānistān, it has been exposed to the visitation of every Western invader, and suffered from the successive conquests of Nādir Shāh, Ahmad Shāh Durrānī, and other less famous depredators. LahŌr was a bone of contention between the Sikhs and the Mughals, and the great city of the Moghal princes and their viceroys was reduced to little more than a heap of ruins. But the rising of Sikh power under Rājājī Singh (1798 A.D.) made LahŌr once more the centre of a flourishing realm. It relapsed into anarchy after Rājājī Singh's death. Then followed the First and Second Sikh Wars, and annexation to British India in 1849. Since that time the capital of the Panjāb has grown steadily, and a new town covers a large tract which was recently a wilderness.

The native city is a walled town with thirteen gates. It has been a municipality since 1867. The old crafts are moribund, but have been replaced by trades of a modern character. There are power mills — cotton, flour, iron — and a large agricultural market. The European quarter, or Civil Station, lies to the south and east of the city, and is a large administrative, educational, and business centre. The older part is known as Anārkalī, and here are the buildings of the Government Secretariat,

University of the Panjab, Government College, Medical and Law Colleges, and Museum. Anārkhali is connected with the newer Civil Station by a fine thoroughfare called the Upper Mall, on which are the High Court, Cathedrals (Anglican and Roman Catholic), Lawrence Gardens, and Government House. Further out is the important military station of Lāhōr Cantonment, formerly known as Miān Mir. Lāhōr is a great railway centre, and the headquarters of a big system, the North Western Railway, with extensive workshops and a large railway colony.

LAILA (Λ), night, *Lailat al-barā'a*, *Lailat al-Kāfir*, see KAMAYAN.

LAILA 'LAKHYALIYA, an Arab poetess, daughter of 'Abdallāh b. al-Rahhāl(a) b. Ka'b b. Mu'āwiya of the tribe of 'Ukail b. Ka'b. She got her name from the fact that her father—according to other traditions one of her ancestors Ka'b or Mu'āwiya—was known as al-Akhyal (= "the falcon"); perhaps it was a common name in her family and the phrase *naḥnu 'l-akhyāl* in her verses glorifying her family may refer to this (*Aghāni*, x, 80; *Hamāsa*, p. 711). Laila is usually mentioned in connection with her fellow-tribesman Tawba b. Humayr al-Khazdaji; fragments of her laments for him are preserved in the *Kitāb al-Aghāni*. She also wrote an elegy on the death of the Caliph 'Uthman. It is also recorded of her that she exchanged lampoons with Nabigha al-Djādi. Her conversations with Mu'āwiya, 'Abd al-Malik and Haddād b. Yūsuf are several times recorded. She begged the latter, in her old age to take her to her uncle Kaysi b. Maslin in Khorāṣān and she is said to have died on the way. She must therefore have flourished in the second half of the first century A.D.

(H. H. BRÄN)

LAILA KHANIM, with Fitnet Khanim, the greatest Turkish poetess of the older school, at the end of the romantic and beginning of the modern period. Born in Constantinople, the daughter of the Kāzī 'Askar Morel-side Hāmid Efendi, she received an excellent education. 'Azet Mollā [q.v.] contributed most to her poetical development; she was related to him and always retained a grateful memory of him as is shown by her elegy full of deep feeling on his death. In her case the lack of information about her is characteristic of the old Turkish conception of women about whom very little is spoken in public. She was early married but divorced very soon afterwards. She had the reputation of a Lesbian. She cared very little about the opinion of the world. She lived for her pleasures and her writing. A few anecdotes relate to her infringements of the social code of Turkish ladies. She joined the

Mawlawi and was buried in the Mawlawi convent in Galata. She died in 1264 (1848).

Lailā Khanim left a regular *Divān* entirely lyrical which was several times printed (Bulak 1260, Constantinople 1267, 1299 etc.). Although she is still completely in the purely Oriental conventional period of Turkish poetry, her place at the end of the old school is not to be denied. Her verses are simple and clear and free from the affected bombast of the time and with their classically correct language much easier to understand than the majority of contemporary poets, wherefore admirers of the old school like M. Nāḍī can find very few "good" verses in her. Her hymns (*munāḍāt*) and elegies were particularly admired. She was celebrated for her ready wit.

LAILA U-MADJNUN. [See MAJNUN.]

LAITH. [See KINANA.]

LAK, i. the most southern group of Kurd tribes in Persia. According to Zain al-'Abidin their name (Lak, often Lakk) is explained by the Persian word *lāk* (100,000) which is said to have been the original number of families of Lak. The group is of importance as the Zand dynasty arose from it. The Lak now living in Northern Lūristān are sometimes confused with the Lār (Zain al-'Abidin), whom they resemble from the somatic and ethnical point of view. The facts of history however show that the Lak have immigrated to their present settlements from lands further north. The Lakk language, according to O. Mann, has the characteristics of Kurdish and not of the Lūri dialects (cf. 108). Čirikov, *Puteviĭ Jurnāl*, St. Petersburg 1875, p. 227, says: "the Lur and the Lak speak different dialects and hate one another".

The Lak appear in the *Shāraf-nāma*, i, 323 alongside of the Zand, among the secondary Kurd tribes, subjects of Persia. According to Kabāno, the Lak were settled in Lūristān by order of Shāh 'Abbās who wished in this way to create some support for the new *wālī* of Lūristān, Hussain Khān, whom he had chosen from among the relatives of the old Shāhwardī Atābeg (*Tarikh-i 'Alam-ara*, p. 369). Of these tribes, the Silila had formerly lived at Māhidāst (S.W. of Kirmānshāh); the Dillān take their name from Abū Dulaf (cf. the article AL-GĀSIM p. 158) whose fields in the third (ninth) century lying in the north of Lūristān (cf. *SULTAN-KHĀN*); the Bādjiān of Zohāb [q.v.] as well as of Lūristān say they come from Mawṣil and are evidently one tribe. The Lūristān branch seems to have exchanged its Kurmandji dialect for

Lakki during its sojourn among the Lak in the time of Shāh 'Abbās. Even after Shāh 'Abbās there were several Lak tribes outside of Luristān. Zain al-'Abidin (beg. of the sixteenth century) mentions among the Lak: the Zand, the Māfi, the Bādījān and the Zandi-yi kūs (?). To the last tribe (according to Hostum-Schindler: Begele) belonged Karīm Khān Zand (born in Pāriyā, the modern Pāri about 20 miles from Dawlābād on the Sulṭānshāh road). When at Shīrāz, Karīm Khān sent for the Lak tribe of Bāirānwand. In 1212 (1797) the Bāirānwand and the Bādījān actively supported Muḥammad Khān Zand in his attempt to take the power from the Qājār (H. J. Brydges, *A History of Persia*, London 1833, p. 46, 58; R. G. Watson, *A History of Persia*, London 1866, p. 116). Under the Qājārs several Lak tribes were broken up. The Zand have almost completely disappeared; in 1830 remnants of them were to be found among the Bādījān of Khānīkūn (Khurshīd-Efendi, *Siyāhat-nāme-i Husūd*, Russ. transl., p. 112, 221); there are still a few Zand families in the Dork-Fārsānān district to the S.E. of Kirmānshāh (N. M. M., xxxviii, p. 39); a section of the 'Amala of Pusht-i Kūh claims to be descended from the Karīm Khān tribe. At the present day there are Māfi at Warāmin, Tīhrān and Kārwīn.

According to a good list compiled by Rousseau at Kirmānshāh in 1807 (cf. *Fundgruben d. Orient*, Vienna 1813, iii, 85—98) there were considered as Lak the following tribes: Kālūh, Māfi, Nānaki, Dāliwānd, Pāyrawān, Kūlyā'i, Sūfiwānd, Bāirānwānd, Karkūki, Tawālī, Zūyirwānd, Kākūwānd, Nāmīwānd, Ahmādwānd, Bohū'i, Zūliya, Hārsīnī, Shākhwānd.

According to O. Mann and Rabino, the Lak tribes of Luristān are as follows: Salsila (9,000 families), Dīlfān (7,470), Tīrhān-Amrā'i (1,582 families), the Bāirānwānd (6,000 families) and Dālwānd (1,000 families) forming part of the Bālā-girwa group, a total of about 15,000 tents. The Bāirānwānd and Dālwānd live to the east of Khurramābād around the sources of the river which flows through this town; the Salsila and the Dīlfān occupy the beautiful plains of Alāghar and Khāwa respectively while the Tīrhān (perhaps = Tarkhān, i.e. "exempt from taxes") live between the left bank of the Saimara and the lower course of its left bank tributary from Khurramābād. The territory occupied by the Lak and including N. and N.W. Luristān is sometimes called Lakistān.

The cohesion of the Lak tribes is evident from the fact that even before 1914 the Salsila, Dīlfān and Tīrhān were united under the authority of Naṣar 'Alī Khān of the Amrā'i clan. In addition to the bonds of tribe and language, there is that of religion for all the Dīlfān and many of the 'Amala of Tīrhān belong to the extremist Shī'a sect of the Ahl-i Haqq (cf. SULṬĀN ISHĀK).

Bibliography: E. Beer, *Das Turānische Zendje*, Leyden 1888, p. xviii, xxvi; Zain al-'Abidin Shīrwānī, *Bustān al-Siyāhat*, Tīhrān 1315, p. 522; O. Mann, *Skizze d. Luristān*, S. B., Ak. Wien, 1904, p. 1173—1193; O. Mann, *Die Mundarten d. Lur-Stämme*, Berlin 1910, p. xxii—xxiv, to the number of tribes speaking "Lakki" the author adds the Kālūh of Kirmānshāh and the Māfi of the Pusht-i Kūh; Rabino, *Les tribus du Luristan*, R. M. M., 1916; Minorsky, *Notes sur la secte des Ahl-i Haqq*, R. M. M., xl, 56. 2. Name given themselves by the Ghazni-

Kumuk, a people living on the eastern Kōi-su in central Daghistan [q. v. and Erckert, *D. Kaukasus und z. Völker*, Leipzig 1887, p. 248—257 and Durr, *Die heutigen Namen d. kaukasischen Völker*, Petersb. Mitteil., 1908, p. 204—212].

On the other hand the term Lek in Armenian and Lek-i (plural Lek-ebl) in Georgian means the Lezgi/Lezgi of Daghistan (where the *e* may certainly name the value of *ā/a*: Lezgi). This last name seems to have been applied to the highlanders of Kūrd, living in and around the sources of the Samur, and later to have been extended to all the people of Daghistan, although no people of the Caucasus actually call themselves Lezgi/Lezgi. Marquart, *Beiträge z. Geschichte und Sage v. Iran*, Z. D. M. G., 1895, xlix., has attempted to explain the Arabic al-Lakr by the addition of the Persian suffix *-zi* to the name Lek (or Lak), cf. Sag-i, "inhabitant of Sūfīn". (V. MINORSKY)

LAKHM (PARU). With the exception of the Lakhmid clan in the 'Irāk, so frequently celebrated in the old Arab poetry, the pre-Islamic history of this family is not well known and is full of legend. Their traditional genealogical tree is given in the article DJUDHĀM. According to it Lakhm was of Yemen origin and was the brother of Djudhām and 'Amila. These genealogical tables may be taken for what they are worth for Djudhām. As to Lakhm, Vemēnī and Ma'addī claim descent from the powerful Lakhmid dynasty of the 'Irāk. As to the reputed relationship of Lakhm with Djudhām and 'Amila, it must correspond to facts sufficiently established in the century when Islām first appeared. It shows that the three groups were then connected by community of aims and interests. This forms a solid guarantee of a genealogical connection even if open to criticism in other respects.

Of the three sister-tribes, Lakhm was undoubtedly the most illustrious and the oldest also. Legend connects it with the descendants of Abraham. A Lakhmid is said to have taken Joseph out of the well into which his brothers had thrown him. But by the eve of the Hidjra, the vigour of the Lakhm had been sapped, while the 'Amila [q. v.] and notably the Djudhām who under the 'Omāyads played a leading part, had increased in importance. Two centuries before the Hidjra, the surplus Lakhmid population had spread over the lands in the north of the Peninsula in Syria and Palestine and in 'Irāk where they established the Lakhmid pbylarchate of Hīra [q. v. and the article DJUDHĀM], continually at war with the Ghassānids of Syria. In Syria we find the Lakhm settled in the same cantons as the Djudhām. Like the latter, they had adopted Christianity which had also become the official religion of the Lakhmids of Hīra.

When Islām appeared, the Djudhām had practically absorbed their relatives, the Lakhm of Syria, a peaceful absorption by mutual agreement. In the first century A. H. the two tribes were usually named together as forming one group, and even when reference is made to a "chief of Lakhm" we can hardly be wrong in thinking he also ruled the Djudhām. The *hishā* Lakhmi becomes rare in comparison with Djudhāmi. In the wars of Islām, during the conquest of Syria, at Yarmūk, at Siffin, and later in the course of the campaigns under Yazīd I, against the sacred cities of the Hidjāz, the two tribes fought under the same chiefs and under the same banner. "Lakhmi" became

practically reduced to little more than a title of honour. Its archaic flavour, the glorious memories which it recalled of the phylarchs of 'Irāk, was very impressive in the "Burke" or "Almanac de Gotha" of the Arabs. But as to the Lakhmids, they no longer have a separate existence from the Djudhām. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Djudhām. It is the latter that the chroniclers usually have in mind.

(H. LAMMENS)

LAKHNAU, former capital of the province of Oudh (Awadh), now secondary capital of the United Provinces of Agra and Oudh in British India; situated on the river Gumti, at 26° 32' N. L., 80° 56' E. L. Population at the 1911 census, 19,782, of whom 4,461 were Muhammadans. Nothing is known of its history prior to the Muhammadan invasion; even the derivation of the name is uncertain, though the first syllable is a contraction of Laṣman or Lakhman. The oldest part is the Laṣman Tila, which was colonised by Shaikh al-Fāris at the close of the thirteenth century. A member of this fraternity, Shāh Muṣṭafā, who died in 1478, gained much saintly repute and his tomb is an object of pilgrimage. Lakhnau's prominence began in the time of the Sūrī kings of Dihli. It was occupied by Humāyūn in 1526, and taken by Bābur in 1528; under Akbar it was the chief town of a *subhār*. The decay of the Mughal Empire enabled Sa'adat Khān (1724) to found the dynasty of the Nawāb-wazirs of Oudh, who ruled as independent governors, and latterly as kings of Oudh, till 1856. Sa'adat Khān, a Saliyid from Persia, of the Shī'a sect, a warrior of the Empire, destroyed the power of the Shaikhhs of Lakhnau, but retained his capital at Faizābād. He adopted the fish as the dynastic badge. The grandeur of the city dates from the time of Āṣaf al-Dawla (1775—1797), the fourth of his line, whose reckless munificence has passed into a proverb, and whose reign was the golden age of Lakhnau, which he made the capital of Oudh. East of the beautiful Victoria Park (1887) is a fine group of buildings, the Rūmī Darwaza, the Great Imāmshāh, and a mosque, all built by Āṣaf al-Dawla. The second and third are in the Maḥḥi Bhawan, or old fort; here also is the Laṣman Tila, surmounted by the mosque of Awrangzīb. The Great Imāmshāh is the chief architectural glory of the city. To the same period belongs the Martinière, built by General Claud Martin, first as a residence for himself, afterwards converted into a school.

Sa'adat 'Alī Khān (1797—1814) constructed the

Dilkushā palace and the Sikandra Bāgh. He and his successors continued to adorn the suburbs with public monuments, parks, and country seats. The meretricious style of the period marks the decay of Indian Muhammadan architecture.

Ḥāshī al-Dīn Haider assumed the title of king of Oudh. He built the Chattr Manzil palaces, and the mausoleum called the Shāh Nadjaf.

Muḥammad 'Alī Shāh (1837—1842) reformed the administration, and by his economic measures stayed the downfall of his house for two more reigns. His name is associated with the buildings at Husainābād. During the reign of his son Amdjad 'Alī Shāh, all the old abuses returned, and the government of the country became utterly paralyzed.

Wājīd 'Alī Shāh (1847—1856) was the last king of Oudh. He built the Kāsar Bāgh palace, a florid structure of stuccoed and gilt brick.

Mal-administration by one of the most extravagant courts known to history led to the annexation of Oudh in 1856 during the viceroyalty of Lord Dalhousie. Some of the fiercest fighting in the Mutiny took place at Lakhnau, the name of which will be ever remembered in connection with the gallant defence of the Residency.

Modern developments have been stimulated and controlled by the wise generosity of the Local Government, and Lakhnau with its suburbs is regarded by many as the finest city in Northern India. As a centre of Urdū culture, it is the rival of Dihli itself and is a seat of learning with unusual facilities for female education. The Canning College (1864) in the Bāishāh Bāgh, King George's Medical College (1910), and the Isabella Thorburn College for women, are now included in the University. Secondary establishments include the Colvin School, and the Reid Christian College. The Provincial Museum is also in Lakhnau. The Cantonment is the largest military station in the United Provinces. The city is a great railway centre, and the head-quarters of the Oudh and Robilkhanda Railway are here. There used to be an extensive native manufacture of gold and silver brocade, muslins, embroidery, brass and copper ware, but here as elsewhere indigenous arts have fallen on evil days.

LAKHNAUTI. [See GAUR.]

LAKIT. [See LUKATU.]

LĀLEZĀNI. [See MEHMET LĀLEZĀNI.]

LĀM (BANĀ LĀM), an Arab tribe leading a nomadic life on the lower course of the Tigris ('Alī Gharbī, 'Alī Sharbī, 'Amāra). According to the statistics of Khurshīd Efendi (middle of the sixth century) there were over 4,400 families of Banī Lām west of the Tigris (between 'Amāra and Shatt al-Jafrī) and 5,070 east of the Tigris, along the Persian frontier from Mandali to the region of marāḥ (ḥār) into which the Karkha disappears. 17,450 families of the Banī Lām went over to Persian territory between 1788 and 1846 (the southern parts of the Puḡḡ-i-Kūh, the domains of the wālis of Huwāza); some columns were even established east of the Karkha and at Fallāhiya. The Banī Lām claim to come originally from

the neighbourhood of Mecca (Lycama a Nijeholt, *Voyage*, iii. 225) and their eponym was their chief Faraj Lām. The Bani Lām, for the most part Shi'is, were on friendly terms with the walls of Huwaira (the Musha'sha', Arab saiyids, q.v.) who played an active part in Persian politics in the time of the Safawids. In 1678, 1715, 1742, 1748 the Bani Lām in connivance with the chief of Huwaira rebelled against the pashas of Baghdad. Less happy were the relations of the Bani Lām with the Lār walls of Pusht-i Kūh who deprived them of the villages of Bayāt, Deh-i Lurān and Bakāye, but as a rule the Bani Lām got on well with their Lār neighbours.

'Alī Ridā Pāshā (in 1836) and Nadīb Pāshā (after 1843) inflicted heavy defeats on the Bani Lām. The central Persian government also (expeditions of Mu'tamid al-Dawla in 1841) drove the Bani Lām from the left bank of the Karḡha but, protected by the mountains of Pusht-i Kūh to the north and on the east and by the *khār* to the south, the Bani Lām kept till 1914 a position of autonomy between Turkey and Persia. The presence of the Bani Lām and the Sawwād Lārs between 'Amīra, Pāy-i Pul and Dīfūl had stopped commercial traffic by this direct route.

The unity of the tribe was lost in the sixteenth century; the section on the right bank and that on the left of the Tigris had each its own shāikh. In 1821 the energetic Madhkur (Mātkūr), son of Djanīl, succeeded the deposed Shāikh 'Arār but Layard noticed that he had already little authority over his rivals. Lady Blunt speaks of Shāikh Mīhān and her son Boneye. Shāikh Ghadīn, son of Boneye, at the beginning of the war of 1914 attacked the English force at Ahwāz but was soon disposed of.

(V. MINORSKY)

LĀM, 23rd letter of the Arabic alphabet, with the numerical value 30. For palaeographical details see the *ART. ARABIA*, plate I.

LAMAS-SŪ (Turk. 'river of Lamas'; Ar. LĀMĪS), a river in Cilicia, coming from the Taurus, a day's journey from Tarsūs between Ayāh and Mersina; in ancient times it marked the boundary between the two Cilicias (of the mountains and the plains). On the banks of this river exchanges of prisoners with the Greeks and the payment of ransoms were several times made. The first of these took place in the reigns of Hārūn al-Rashīd and the emperor Nicephorus I in 189 (805); the second under the same caliph and emperor in 192 (808); the third in the reigns of the caliph al-Wāthik and the emperor Michael III the 'Drunkard' in Muharram 231 (Sept. 845); the fourth in 241 (856) and the fifth in 246 (860)

under the same emperor and the caliph al-Mu'tawakkil; the sixth in 283 (896) under the caliph al-Mu'tadid and the emperor Leo VI; the seventh called 'redemption from treasury' under the same emperor and the caliph al-Mu'tasif in 292 (905); the eighth three years later in 295 (907); the ninth took place in 305 (917) under the caliph al-Mu'tadid and the emperor Constantine Porphyrogenitos; the tenth took place in 313 (925) under the same rulers; the eleventh in 326 (938) under the same emperor and the caliph al-Rādī; the twelfth took place in 335 (946) in the caliphate of al-Mu'izz through the intermediary of Saif al-Dawla the Ḥamdānīd, lord of Aleppo. This river had at this place either a ford or a bridge which the ransomed prisoners crossed. There was also a town of the same name (*Lāma*, *Lamus*) on this river not far from the sea.

(CL. HUART)

LAMGHĀNĀT, a district in eastern Afghanistan. It is often referred to by Bābār, see W. Erskine's translation of his 'Memoirs', p. 141 and P. de Courteille, i. 287. The name is fancifully connected with Lamech, the father of Noah.

(H. BEVERIDGE)

LĀMĪŦ, nom de plume (*taḥalluṣ*) of SHAIKH MAHMUD b. 'OTHMĀN b. 'ALĪ al-NAKĤĀNĪ, a celebrated Ṣūfī writer and poet of the early part of the reign of Sulaimān I, the era; not only of the greatest political development of the Turkish empire, but also that in which literature was most cultivated. He was born in Brusa, the son of the *defterdār* of Sulṭān Bāyazīd's treasury. His grandfather had been taken by Timurlenk after his invasion to Transoxania (Samarḡand) where he learned the art of *naḡḡashī* (embroidery and painting) there highly cultivated and on his return to Asia Minor introduced the first embroidered saddle. On the completion of his theological studies with Mollā Aḡhawān and Mollā Muḥammad b. al-Ḥādīdī Ḥasan-zāde, LāmīŦ, who had an inclination to Ṣūfism, became *warid* with the Nakshbandī Shāikh 'Arīf bi-llāh Saiyid Aḥmad al-Baḡḡārī. He spent his whole life in the calm retirement of a Ṣūfī, free from external cares and favoured by the patronage of Sulṭān Selīm and Sulaimān who frequently showed signs of their favour to him and his numerous family; he lived in Brusa writing industriously till his death in 938 or 940 (1532 or 1533). He was buried in the mosque built by his grandfather on the citadel in Brusa.

The versatility and quality of his literary output in prose and poetry is really astonishing. But his work was not so much original as translations and

adaptations, as was characteristic of the period which regarded slavish attachment to Persian models as the highest ideal. He usually took as his model Djami, then the most celebrated poet of Persia with whom he had a further link in their both being Naqshbandis and therefore was called Djami-Rûm. His prolificacy is greater than that of any Turkish writer. We have a cycle of nine romantic poems from his pen. His importance to Turkish literature is considerable but is greatly exaggerated by von Hammer who devotes the longest monograph in his *Gesch. d. osm. Dichtkunst* (ii. 20—195) to him. Lami's style is still comparatively lucid and simple. There is not yet any trace in him of the overwhelming turgidity of the later artificial classicism, yet it must be confessed that most that is beautiful in him is due to his Persian originals. Ziya Paşa in his *Şarh-ı Nisrî* has for this reason paid no attention to him.

The list of his works as given in the *Şaraf al-İsmâ* numbers 24 but in reality there were more. His prose writings are: the translations of Djami's Sûfi works: *Nafâhat al-Uns* (biographies of Sûfis with the sub-title *Fatûh al-Muğîbidîn li-Tarîqih Kullih al-Muğîbidîn*) and *Şawâhid al-Nubuwwa* ("The witnesses of prophecy", printed at Constantinople in 1293); the *Şaraf al-İsmâ*, "The worth of man", considered by Lami to be his masterpiece which is a Turkish version of Part 22 of the 51 Arabic tracts (*Rasâ'il*) of the *Ishmâ' al-Safâ*, the struggle between man and animal (ed. and transl. by Dieterici, Berlin 1858, Leipzig 1879 and 1881; *Thier und Mensch vor dem Könige der Genien*). His works of a religious character are *Mu'ammâ Azmâ al-kunû*, translation and commentary on the 100 verses of Mir Husain Nishabûri on the 99 names of God and *Miftâh al-Najât li-Şarh al-Şawâhid wa-A'yât*. He also wrote a collection of letters, *Munhâzât*, a commentary on the *Dihâdj-i Gülîstân* of Sa'dî, and *İbrat-nâmâ* ("Book of examples", a collection of tales and allegories, lith. Constantinople, n.d.); a *Ma'âlim al-Lafîz*, or *Lafîz-nâmâ* (a collection of often very dating anecdotes, quite in the style of Boccaccio's *Decamerone*, which received its final form from his son, 'Abd Allâh Lem', also known as a poet). Finally as a kind of transition to pure poetry he wrote two *munâzara* (disputations in the mixture of prose and verse later so popular), namely: *Munâzara-i Bekâr ü Şerîf* ("Disputation between summer and winter", Constantinople 1290, with the title *Munâzara-i Sultân Bekâr ü Şerîf ü Şerîf Şîrî*) and *Munâzara-i Nafâ ü Rûk* ("Disputation between Soul and Spirit").

His very much more important poetical works include a large *Dîvân* of about 10,000 verses which contain much that is beautiful and original; besides *şâhîdî's*, *ghazal's* etc. it also contains the *Şekr* in 1288; transl. by Pfizmaier, *Verkerrückung der Engli-i Bursa* (separately printed at Constantinople Stadt Bursa, Vienna 1839).

His great *Mahmûm* poems were of permanent influence; some deal in a popular fashion with stories from Persian legends, namely: *Salâmân ü Abdâl* (dedicated to Sultân Selim), from Djami's original; *Wîs ü Rûmân* (dedicated to Sultân Salâmân), from the original of Fakr Dîvânî (d. 440 = 1048) and a version of Nijâmî al-'Arûzi al-Samarqandî; *Wâmîş ü Adhâr* from the Persian original of 'Unsurî (d. 441 = 1050) translated at the express desire of Sultân Salâmân (transl.

by von Hammer, Vienna 1833); *Parhâd-nâmâ* (transl. by von Hammer, Stuttgart 1812); *Hefî Paiker*, "The seven beauties" (based on Hâfî's *Hefî Manqar*, which again goes back to Nijâmî's *Hefî Paiker*). Besides the two allegorical dramas *Gûl ü Çâğân* ("Ball and Bat") and *Şam ü Parvânâ*, "Candle and Butterfly", the latter probably from the Persian of Ahlî Shîrîzî, he also wrote two *Mahmûm*'s of a religious nature, the *Makâlât-i Hazrat-i Imâm Husain* recalling the Shî'î *Tâziya* (illustrated MS. in the 'Ashîr Library, No. 249) and *Manâbat* (or *Manâkib*) *Uways al-Karnî*.

Finally there are his political allegories *Hum ü Dil* from the Persian original of Fâtah Nishabûrî and the Turkish version of Ahlî (ed., transl. and annotated and compared with Lami's Turkish version by R. Dvofák, *Hum ü dil, persische Allegorie von Fâtah aus Nîlapur*); the *Khrâd-nâmâ* ("Book of the Intelligence") and the *Diyâr-nâmâ*.

Flügel, Leipzig 1835—1858.

(TH. MENZEL)

LAMTA, a large Berber tribe of the Barîni family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Sanhâja, Haskûra and Garûla; others give them a Himyarite origin like the Hawwâra and the Lawâtta.

The Lamta were one of the nomad tribes who wore a veil (*mulathkîmîn*). One section lived on the south of the Mârb, between the Massîfa on the west and the Târga (Tuareg) on the east; they even seem to have extended as far as the Niger. In the south of Morocco, in al-Sûs, where there were Lamta who led a nomadic life, in company with the Garûla, the Lamta occupied the territory nearest to the Atlas. On the coming of the nomad Arabs of the Ma'kil family, the two sections of the Lamta were absorbed by the Dhawî Hâssân; the remaining sections then joined the Shabânî, another Ma'kil tribe, to oppose the Garûla who joined the Dhawî Hâssân.

In the territory of the Lamta of al-Sûs at the mouth of the Wâdî Nûl (now Wâd Nûn) lay the commercial town of Nûl or Nûl of the Lamta, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynasties have struck coins there.

The jurist Waggāg b. Zallū of Sidjilmāsa, a pupil of Abū 'Imrān al-Fāsī, was a member of the tribe of Lamta; one of his pupils was 'Abd Allāh b. Yūsuf al-Gazālī, founder of the Almoravid empire.

The country of the Lamta was noted for the lamtiya bucklers made at Nūl with the skin of the lamt antelope.

Bibliography: al-Idrīsī, al-Bakrī, Ibn Khaldūn, *Kitaḥ al-Iḥār*, indices, s.v. Lamta and Nūl; Leo Africanus, *Description de l'Afrique*, ed. Schefer, III. 372, 437. (G. S. COLIN)

LAMTUNA, a large Berber tribe belonging to the ethnic group of the Ṣanhādja who lived in tents, and led a nomadic life in the desert to the south of Morocco with other tribes whose members veiled their faces with the *lithām* [q. v.] (*muṭaththimūn*).

At first idolaters, the Lamtuna embraced Islam and converted also the Negro peoples who lived around them. After having had a series of independent kings, they fell into anarchy until Yahyā b. Ibrāhīm al-Gudālī took control of them; having gone on a pilgrimage to Mecca in 440 (1048–1049) he brought back from Nāḥī the jurist 'Abd Allāh b. Yūsuf al-Gazālī, who after having instructed the Lamtuna in the principles of religion and Muslim law, made himself their chief, conquered their neighbours, the Gūdāla and Massūfa, and led them to the conquest of Morocco. He was the founder of the Almoravid empire, also known as the empire of the Muṭaththimūn or Lamtuna (cf. ALMORAVIDS). At the fall of the Almoravid empire the Lamtuna disappear from the history of Morocco. Their name is still borne by some tribes of Mauritania.

Bibliography: The first paragraphs of the chapter devoted by the Arab historians to the history of the Almoravid dynasty especially: Ibn Abī Zār, *Rawḍ al-Kīfī*; Ibn Khaldūn, *Kitaḥ al-Iḥār*, ed. de Slane, I. 235 and 237; al-Bakrī, *Kitaḥ al-Mughārik*, ed. de Slane, 1911, p. 164–168. (G. S. COLIN)

LANKORAN (LENKORAN), the capital of the district of the same name in the province of Bākū. Lankoran is the Russian pronunciation of the name which was at one time written Langar-kunān (anchorage), or perhaps Langar-kunān (place which pulls out the anchors) which is pronounced Lankārān in Persian and Lankōn in Tāliš. The ships of the Bākū-Enzeli [q. v.] line call at Lankoran, which has an open roadstead but at 8 miles N.E. of the town is the island of Sarī, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lankoran, de Morgan found monuments of very great antiquity (dolmens, tombs, cases of exposure of bodies in the Mazdaean (?) fashion), but it is not known at what period the town of Lankoran was founded. Certain statements (cf. *Tārīkh-i 'Alam-nāma* under the year 940 [1533] in Dorn, *Ausgabe*, IV. 283; and Shāhī 'Alī Ḥazīn [about 1725 A.D.], *Tārīkh-i 'Aḥmād*, ed. Balfour, p. 157) suggest that the capital of Tāliš was originally at Astārā; towards the end of the xviiith century Lankoran became the capital of this khānate. The whole district was annexed by the Russians under Peter the Great (treaties of 1723 with Tahmāsp II and 1729 with the Afghān Ashraf) but returned to Persia by the treaty of 1732. Retaken by Count Zubov in 1796, Lankoran was retaken in 1812 by the Persians who

fortified it. On the 9th Muharram (22nd Jūrā) 1228 (Jan. 1, 1813), Lankoran was taken by storm by General Kōtliarevskī after a brave resistance of the Persians. This event hastened the conclusion of the treaty of Gulistān (1813) by which Persia ceded to Russia part of Tāliš to the north of the river Astārā. From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed part of the republic of Ādharbāijān, a member of the Soviet Union.

The population of the town, which was 3,970 in 1867, had reached 11,100 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,200 inhabitants and in 1861 99,082. Later the district was reduced to 2,000 sq. miles; in spite of this, its population in 1897 was 125,895 of whom 46.5% were Azarī Turks, Iranian Tālish 46.2%, Russians 6.9% (in the north) and Armenians (6.2%). The district is composed of 3 zones: to the north, an eastern continuation of the steppes of Mughān; to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation; to the west are wooded mountains running from 5,500 to 7,500 feet above sea-level which rise from the Russian frontier forming the boundary with the Persian province of Ardabil. The district is rich in forests and has good fishing.

(V. MINORSKY)

LĀR. 1. Capital of the district of Lāristān, to the southeast of Fārs. Very little is known of Lāristān and its early history. The country appears to correspond to the land of the dragon Hāfāt-bōkht which was killed by Ardāshīr Pāpakān. According to Persian legend, Ardāshīr's adversary lived in the village of Alār in the rastaḥ of Kōdjārān which was one of the maritime rastaḥs (*rasāḥ al-tif*) of the province Ardāshīr-Kharrā (Taharī, I. 820); Nöldeke in his translation of the *Kārnāma* (p. 30) gives the variants Gulār(?) and Kōcārān; the *Shāh-nāma*, ed. Mohl, v. 308: Kudjārān. Lastly the Armenian geography of the seventh century mentions a Khodjehrustan in Persia (Khuzihrstan) (cf. Marquart, *Erānshahr*, p. 44). The prefixing of an a to the name Lār is also found in the name of the island of Lār (cf. below). Marquart identifies Kōcārān with the castle of Dēgdūn near Strāf; on the other hand the *Fārs-nāma-yi-Nāḥīst* mentions a village of Kudjār-Kūhār in the canton of Galla-dār (the ancient Fāl/Pāl/Bāl of Ibn Baṭṭūta: Khundjābal = Khundj + Bāl) immediately adjoining Lāristān. According to a verse attributed to Firdawsi (cf. Vullers, *Lexicon*, s.v. Lād) but not found in the known editions of the *Shāh-nāma*, the town was

originally called Lārd (and fell to Gurgin Milād, one of the heroes of the cycle of the Kayānid Kai Khuraw). This would be a very curious case of the changing of *d* to *r* found especially in Armenian and in the Caspian Tātī dialect (Darmstadter, *Et.-Iranismus*, I, 73). The *Fārs-nāma-yi-Nāṣiri* mentions another legend according to which the people of Lār in Fārs had come from Lār in Dāmāwand (cf. below) the cold of which they could not endure.

The Arab geographers do not mention Lār, for apparently the old routes linking up the chief towns of Fārs, with Sirāf and Kāis, or Hurmūz (by Fāsā and Forḡ) avoided the town of Lār (cf. *Nuḥat al-Kūfūh*, p. 185; 187). According to Ḥamdallāh Mustawfī, Lār is a wīlayet near the sea and Ibn Baṭṭūṭa alone talks of Lār as "a large town, with springs, considerable rivers and gardens".

Lār had a local dynasty. Its princes, relying on the verse already mentioned regarding the presentation by Kai Khuraw of the town of Lārd to Gurgin, son of Milād, traced their descent from this hero. They were even crowned with the crown of their ancestor and this treasure was among the booty taken by the Ṣafawids in 1010.

The first prince of Lār to be converted to Islām (about 100) was Djalāl al-Dīn Irādī. The dates become more reliable from the time of the Amīr Kūth al-Dīn Muṣayyid Pākūy (?) (594-648). Fourteen of his successors are known but their order is not so certain; when in 748 (1347), Ibn Baṭṭūṭa passed through Lār, the Sultan of Lār, of Turkoman origin, was called Djalāl al-Dīn, while according to the genealogy of the Milādians, Bakalindjār II was ruling there between 731 and 753. The dependence of Lār on the Muzaffarids is shown by a gold coin of Shāh-Shudjā (760-786) struck in Lār (S. Lane-Poole, *The Coins of the Mongols in the British Museum*, 1881, p. 240). In 799 the troops of Muḥammad Sulṭān, grandson of Timūr, ravaged the eastern part of Fārs on the lines Kāris-Fāz, Djahrom-Lār, etc. (*Zafar-nāma*, I, 809). There are Timurid and Čaghatay coins struck at Lār (O. Codrington, *A Manual of Musulman Numismatics*, London 1904, p. 183). In the reign of the Milādian Dīhānshāh (859-883), the Russian merchant Almasī Nikitin, passed through Lār in 1469 on his way to Hurmūz and India and in 1472 on his way from Hurmūz to Shirāz. The Milādian Nūshtrwān "the just" (930-948) was a poet, musician and author; he died by the hand of a fulā. His successor Ibrāhīm Khān submitted to the Ṣafawids and received the title of *Amīr Dīwān*. His son Nūr [Nawrī] al-Dahr lived in the time of Sulṭān Muḥammad Ṣafawī. Under 'Abbās I Mirā 'Alī' al-Mulk, son of Nūr al-Dahr, was authorized to take the name of Ibrāhīm Khān II. The young Khān showed signs of independence and oppressed merchants and travellers. This could not be tolerated at a time when Lār lay on the great road between the capital and the sea. As a preparation for the occupation of Gombrūn (= Bandar-i 'Abbās) in 1614 (?) and of the island of Hurmūz in 1622, the Beglerbegi of Fārs, Allāhwardī Khān, in 1609 and 1610 (1601) marched against Ibrāhīm Khān and seized his possessions. Ibrāhīm II had to surrender to the mercy of Allāhwardī who treated him honourably and took him to Shāh 'Abbās at Balḥ, where he died during an epidemic. The government of Fārs was then entrusted to Kāṣī T-Kāim of Lār, a sincere Shī'

(*farḡ-i 'Abbāsī sawānī* [q. v.] *faimūda*); *Tārīkh-i Alam-ārā*, Tīhrān 1314, p. 423-426. Buildings of the Milādians are still to be seen at Lār — a mosque and a bazaar of hewn stone covered with stucco. The bazaar was restored in 1015, by Kanbar 'Alī Beg Dīh-i-omī, wazir of Lār.

The memoirs of Shāhkh 'Alī Ḥasīn contain interesting notes on the domestic life of Lār at the beginning of the 18th (xviii) century (rule of the Afghān Khudādād-Khān, passage through Lār of the routed army of Shāh Ashraf, etc.) According to 'Alī Ḥasīn (p. 210) the people of a part of the Lār lands (*garmūr*) of Lāristān were Shāfī'is. They had prospered under the Afghāns but Nādir, wishing to reduce them, sent against them the *sardār* of Fārs, Muḥammad Khān Balōč. The latter met with difficulties at Lār and having come to terms with its inhabitants returned to Fārs. In 1146, Muḥammad Khān rebelled against Nādir and tried to raise the Shāfī'is of Lār. The latter maintained a waiting attitude but by order of Nādir they were massacred and scattered. Lār was later annexed by a certain Nāṣir Khān, formerly a brigand in the *bulūki sa'ā* (a region between Lāristān and Kirmān) who received from the Shāh the title of Khān. His family (the begler-beg) remained more or less autonomous till 1202 (1845) when the governor-general of Fārs sent troops to Lār and appointed a simple *balāntar* there (*Fārs-nāma-yi-Nāṣiri*).

At the beginning of the 19th century the Balōč Mīrāb Khān invaded Lāristān (Pottinger, *Travels in Beloochistan*, London 1816, p. 163). In 1256 (1840) Lār was occupied by the chief of the Ismā'īlīs, Aḡā Khān who had rebelled against the Shāh (Schindler, *The Eastern Persian Iraq*, p. 94).

The town of Lār lying 37 *farṣakhs* to the S. E. of Shirāz was very frequently visited by European travellers in the 18th century when it lay on the direct route Shirāz-Djahrom-Dīwān-Lār-Bandar-i 'Abbās: Figueroa (1617), Sir T. Herbert (1627), J. A. Mandelslo (1638), J. B. Tavernier and Thevenot (1665), Struys (1672), Chardin (1673), Dr. J. Fryer (1676), Le Brun (1703). At this time there was a factory of the Dutch East India Co. at Lār (Thevenot, *Voyage*, Amsterdam 1727, iii. 400-476). After the fall of the Ṣafawids, Bandar-i 'Abbās became the port for the province of Kirmān only, while Būshīr became the principal port of the Persian Gulf. Lār conducted a local trade with the ports of Bandar-i 'Abbās, Līnga (q. v.) and Tāhīr (the older Sirāf; q. v.); cf. especially Stiffe, *Ancient Trading Centres of the Persian Gulf*, G. F., 1895, p. 166-173. In the 19th century, Lār has been described by Dupré and Stack.

Of the 76 bulūks of Fārs, that of Lār called Lāristān is the most extensive (57 × 47 *farṣakhs*, i. e. about 45,000 square miles). It is bounded on the N. W. by Ilarān, on the S. E. the bridge of Lāstūn separates it from the nāhiya of Bandar-i 'Abbās. This latter had a separate dynasty (the Kāhātī princes of Hurmūz). To the south Lāristān is washed by the Persian Gulf (the ports of Kūng, Līnga, Muḡhū, Čarak, Nakhīlā). In 1917 A. T. Wilson found Lār quite prosperous (*Notes on a Journey from Bandar-Abbās to Shirāz*, *Geogr. Journ.*, Series 1908, p. 152-170). On the west it is bordered by the cantons of Mālikī, 'Alā-marw-dāshī, and Khandj; on the north-west by the buluk of Dīwān; on the north by the buluk of Dārīb; on the northeast by the *Bulūki Sa'ā*.

The country is full of mountain ranges running parallel to the shore of the Persian Gulf and has a torrid climate. Water is scarce and brackish. The river of Lāristān, variously known as Rūdkhāna-yi Shūr-i Galladār, Shūr-i Hing, Rūdkhāna-yi Lamzān etc., runs from west to east and flows into the sea a farsakh east of Kung.

The subdivisions (*nāhiya*) of the *butūh* of Lāristān are as follows (their orientation from Lār is given and the distance from it is in farsakhs):

Nāhiya	Capital	Number of villages
1. Central	Lār	34
2. Shūr-i Kūb-i Lāristān	Bandar-i Ārak	29
3. Līngā	Līngā	10
4. Djuhāngtrīya	Bastak	7
5. Kawrastān	Kashūhī	4
6. Marā'īdīn	Isād-Khāst	6
7. Bikhā-yi Ahshām	Bairam	10
8. Bikhā-yi Fāl	Ashkanān	10
9. Fūmīstān	Gawbandī	16

Number	Orientation	Distance
2	south	25
3	south-east	45
4	south-east	7-21
5	east	30
6	north	15
7	west	20
8	south-west	22
9	south-west	35

The term *khāna* in the local dialect means a valley shut in by two ranges of mountains. Fūmīstān is derived from the word *fām*, corn.

The population of Lāristān is thinly scattered. The most important towns are Lār (Dupré: 15,000 inhabitants; Stack: 1,200 houses, 6,000 inhabitants) and Līngā (q. v.). The majority of the population is Persian. In canton No. 6 there are some Bahārī Turks and Nos. 2 and 3 are inhabited by Arabs.

Lāristān has Persian dialects of its own (O. Mann, *Die Tajik-Mundarten der Provinz Fars*, Berlin 1909, p. xxxiv. 126-131) and there is even a local literature in them. The *Fārs-nāma* mentions Akhund Mullā Muhammad Bakīr (*Nahbat*) who was well acquainted with Arabic, Persian and "Dari". Romaskevič has collected some of the poems in the local dialect of the poet Mahdīr as well as Persian quatrains by several popular poets, natives of Lāristān (Romaskevič, *Pers. narod. tvorčestvo*, in *Zapiski*, 1916, xlii. 313, 340).

Orient. 141, fol. 150 a-b (I am indebted for a copy of the text to the kindness of Muhammad Khān Kazwīnī); Iskandar-Munshi, *Alam-ārā*, Tihān 1314, p. 423-426; Mīnādījīm-baḥfī, *Ṣafā'ī*, ii. 666 (following Fajl-i Nishābūrī [?] and Ghaffārī); Hādījī Khālīfā, *Zayihmūrā*, p. 261; Shaikh 'Alī Hazīn, *Taḡhībīr*, ed. Belfour, London 1831, p. 89, 179-217, 246; Hasan Faṣṭ'ī, *Fārs-nāma-yi Nāḡīrī*, Tihān 1314, ii. 181-291 (excellent book full of valuable data). For references to travellers of the Ṣafawīd period,

cf. Ritter, *Erskunde*, viii. 736, 749-757 and Curtiss, *Persia*, ii. 114; A. Dupré, *Voyage en Perse*, Paris 1819, i. 423; Stack, *Six months in Persia*, London 1882, i. 133-145. The map of Southern Persia 1:2,000,000 (International Series), publ. in 1912 by the Survey of India.

2. An island in the Persian Gulf now called Abū Shū'āib. Nearchus had touched at it on his periplus but does not give the name, which according to Ptolemy was Σαῖδα (in Semitic = isle of seaweed). The Greeks praised the pearl fisheries of Lār. Ibn Khurdādhbih calls the island Alār. Other variants in the Arab geographers according to Le Strange are Allān and Lān. The *Fārs-nāma*, ed. Le Strange, p. 241 makes it a dependency of the island of Ardāshīr-Khūrā. Yāqūt (iv. 341) places it between the island of Kāis and the port of Strāf. The Portuguese called it Ilha de Lāzio from the village of Lār (should this be Lādh? — at the east end of it). It is 13 × 24 miles in area. To the east of it lies the little isle of Shīrwār (Ālīwār). Some ten miles north of Lār on the coast of Fārs lies the little harbour of Nakhīll. We do not know if there is any connection between the names of the town and of the island Lār. An island "Lārak" ("little Lār") lies south of the island of Hurmūz.

Bibliography: Tomaschek, *Die Küstenfahrt Nearchs*, in *Sitzber. Wiener Akad.*, cxi., 1890, p. 55.

3. A high valley lying in Māzandarān, on the sources of the Harz-peī. The altitude of Lār is from 8,500 to 6,500 feet. It lies west of Damāwand. The valley is deserted in winter. In summer the nomads pitch their tents there. The people of Tihān also go there for summer quarters. Stahl however (*Peterm. Mitteil.*, Ergänzungsheft No. 118, 1869, p. 619) found traces of ancient dwellings on the right bank of the river Lār. The locality is sometimes called Lāridjān, which must be a plural of Lār-E, "inhabitant of Lār" (on the suffix -E, cf. Marquart, *Beiträge*, Z.D.M.G., 1895, p. 666). The same derivation explains the Arabic transcription al-Lāris (Balādhuri, p. 8), one of the cantons of Tabaristān (not however found in the list in *Ilm Rusia*, p. 146). Al-Lāris formed part of the possessions of al-Maḡmughān taken in 131 (748) by Abū Muslim (Marquart, *Erānistān*, p. 127, 137). The term Lāridjān seems to have been applied especially to the place below the high valley of Lār near the modern bridge of Palūr; cf. Dih-Falūl in Ibn Isfandiyyār, transl. Browne, *G.M.S.*, p. 67. Lāridjān is said to have been the longest inhabited part of Tabaristān. Its village Waraka was said to have been the birthplace of Farīdūn. In the villages lying on the slopes of Damāwand, Stahl saw a festival celebrated in memory of the death of Zohāk (Aug. 11; cf. Morier, *Second Journey*, p. 357). At Lāridjān there was a special *marzban* under the Isphabāhs of Talaristān (Ibn Isfandiyyār, *ibid.*, p. 15, 183, 280). On the district of Lāridjān (Lāridjān) cf. LĀRIDJĀN. — Spiegel (*Varena*, Z.D.M.G., 1876, xxii., p. 716-726) was inclined to suppose a connection between Warak (Ibn Isfandiyyār, p. 15; Waraka, native place of Farīdūn = Thrāsiaona) and the Avestic country. Varena. The site of Waraka is unknown but in Lāridjān there exists a village Wānā; on the disappearance of *r* in Persian dialects, cf. *Grundriss d. iran. Phil.*, lii. p. 559, 351.

(V. MINORSKY)

LĀRANDA (also called *Ḳaramān* from the name of the dynasty which reigned there in the xivth century), a town in Asia Minor, capital of the *ḳazā* of the same name and of the *sandjak* of Konia, to the S.E. and 35 miles from this town. It is 4,000 feet above sea-level, has 2,000 houses, 7,500 inhabitants, 105 mosques, 21 Friday mosques, 4 dervish monasteries, 515 shops, 30 warehouses, 9 cafes, 4 caravanserais, 14 baking ovens, 7 baths, 5 mills, 1 military depot, 110 fountains, 1 barracks, 1 Greek school, 10 Muslim schools, 21 madrasas. There are a ruined fortress, mosques and other monuments in ruins from the time of the *Ḳaramān-oghlu* (mosque of Amir Müslül with pillars from ancient buildings). The town was annexed to the Ottoman empire in 1464. To the north is the *Ḳara-Dagh* covered with mediaeval monasteries now in ruins (*biñ bir kilise* = 1001 churches).

LARI MEHMED. [See MEHMET LARI.]

LARIN (F. *laet*), a silver coin current in the Persian Gulf and Indian Ocean in the xvth and xviiith centuries. It takes its name from Lār [q.v.], the capital of Lāristān [q.v.], at which it was first struck; cf. Pedro Teixeira (*Travels*, Hakl. Soc., 1902, p. 341): "There is also the city of Lār . . . whence are called laris, a money of the finest silver, very well drawn and current throughout the East" and Sir Thomas Herbert speaking of Lār in 1627 (*Some Years' Travels*, London 1665, p. 130): "near this byear the laries are coyned, a famous sort of money". The larin weighed about 74 grains (4.9 grammes) and had a high reputation for the purity of its silver. It was worth ten pence in English money (Herbert) or one-fifth of a French crown (Tavernier) or 60 Portuguese reis.

The larin is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions from dies like any other coin. It is admirably described by William Barret in his account of the moneys of al-Basra in 1594 (Hakluyt, *Principal Voyages*, Glasgow 1904, vi. 12): "The sayd larin is a strange piece of money, not being round like all other current money of Christianitie, but is a small rod of silver of the graine of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the juve halfe part and in the head thereof there is a stamp Turkesco and these be the best current money in all the Indies and six of the laries make a ducat".

The kingdom of Lār ceased to issue these coins after its conquest by Shāh 'Abbās the Great of Persia (Chardin, *Voyager*, Amsterdam 1735, iii. 125), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormuz of the latter half of the xvth century issued larins as did the Shāhs of Persia at Shirāz and the Ottoman Sultāns at Basra. In India they were struck in the xviiith century by the 'Adil Shāhī dynasty of Bidjāpūr and other rulers and the frequent finds of larins in Western India show how extensive was their circulation there. In the Maldivé Islands in the early xviiith century the king struck his own larins as we know from

the *Voyage* of F. Pyrard de Laval (Hakl. Soc., 1887, vol. I, p. 232 sq.). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the xviiith century. A degenerate descendant of the larin still exists (Philby, *Heart of Arabia*, ii. 319) on the Arabian side of the Persian Gulf, in Hassa where it is known as a *ḡawila*, i.e. the "long" (coin). It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Pulgrave (*Journey*, etc., London 1865, ii. 179) who adds that there is a proverb "like a Hassa *ḡawila*", applied to any one who like the local currency is of no use away from home.

Knox, *Historical Relation of Ceylon*, Glasgow 1911, p. 156; Chardin, Tavernier and other travellers.

(J. ALLAN)

AL-LĀT, an old Arabian goddess. The name (from *al-lāḥat*; cf. ALLAT) means "the goddess" but was the proper name of a definite deity, according to the Arabs themselves (e.g. Ibn Ya'ish, ed. Jahn, p. 44, 2) the sun. She is found as early as the Nabataean and Palmyran inscriptions and was later worshipped by various Beduin tribes (e.g. the Hawāzin; Ibn Hishām, p. 849, 13). An oath by al-Lāt is frequently found in the poets, e.g. Abū Sa'd in Ibn Hishām, p. 567, 7. Mutalammis, ed. Vollers, p. 2, 1. 'Aws b. Ḥajjar, ed. Geyer, p. 11, 2, and even in al-Akhtal, *Kitaḥ al-Aḡḡānī*, vii. 173. She had her principal sanctuary in the valley of Wādīdj near Ṭā'if, where the Mu'attib ('Attāb) b. Mālik b. Ka'b were her priests and a white stone hung with all kinds of decorations was her symbol. She is frequently mentioned along with al-'Uzzā (Ibn Hishām, p. 145, 7. 206, 8. 871, 6, where Wudd also is mentioned; 'Aws b. Ḥajjar, p. 11, 2) and among the *Ḳuraish*, she, along with this goddess and Manāt, was held in such high esteem, that Muḥammad once went so far as to recognise these three goddesses as intercessors with Allāh but soon afterwards withdrew this (Sūra, liii. 15 sq.). According to Tabari, i. 1395, 2 Abū Sa'fyan carried al-Lāt and al-'Uzzā with him into the battle of Uhud. After the capture of Mecca, al-Lāt was destroyed with her sanctuary in Ṭā'if by al-Mughāira, who were related to her priests. But she was not forgotten, for, according to Doughty, there are still in Ṭā'if blocks of stone which the people call al-'Uzzā, Ḥubal and al-Lāt, at which they secretly seek help in cases of illness.

AL-LATĪF (A.), "the Kind", one of the names of Allāh [q. v.].

LATĪFĪ, properly 'ABD AL-LATĪF ÇELEBÎ of Kaşani, secretary to the office for administering pious foundations (*imāret biżāfi*). He was secretary in Belgrade, came in 950 (1543) to Constantinople to the *makf* office of Eyub, then went to Rhodes and Egypt. He died in 990 (1582) on the voyage from Egypt to Yanbu' on the Red Sea.

Latīfī was a good poet and an even better stylist. He is famous for his collection of biographies of poets, *Tadhkirat-i Şu'arā*, which he finished in 953 (1546) and like Sehi, whose example he was the first to follow, dedicated it to Süleimān the Great. His love for his native city tempted him to attribute to it a whole series of poets not born there so that his work was jokingly called *Kaşani-nāma*. In spite of several inaccuracies, the book, which was printed in 1314 in Constantinople, is indispensable for our knowledge of the older poets of whom he deals with 302 from the time of Murād Khān to his own day. His able critical remarks show that he had excellent insight into the nature of the poet's art, but the standard that he imposes on the poets for adoption into his work is not too strict. He never published any continuation to his work although he lived for over 40 years after writing it; other works of his are: a *Manūpara*, which was edited in 1287 by Tewfik Bey; a regular *Divān*; a collection wrongly attributed to Kemāl Paşa-zāde of 100 *hadith*'s with paraphrases in Turkish verse; a *Risāle-i Ewāf-i İstambul*; also: *Nāṭir al-Leālī*, *Ratī' al-Azhār*, *Ants al-Fuṣṣāḥ*, *Fuṣṣat al-arkān*. A translation of his *Tadhkirat* was made by Thomas Chabert, Zürich 1800: *Latīf oder Biographische Nachrichten von vorzüglichen türkischen Dichtern nebst einer Blumenlese aus ihren Werken*.

(TH. MENZEL)

LAWATA, a Berber ethnical group, belonging to the family of Butr, whose eponymous ancestor was Lawā the younger, son of Lawā the older, son of Zabik. Ibn Khaldūn disputes the view of certain Berber genealogists recorded by Ibn Hām who consider the Lawāta as Saddarāta and the Mazāta as of Coptic origin. Others say the Lawāta with the Hawwāra and the Lamṭa were of Himyarite origin. In any case the oldest home of the Lawāta seems most likely to have been the eastern part of North Africa. They were found in Egypt to the north between Alexandria and Cairo; to the south in the oases and in al-Ṣa'id. Some

Lawāta led a nomadic life in the region of Barka. In the Maghrib they lived in the Djabal Lawāta (south of Gabes and Sfax) and it is probably this section that is mentioned by Corippus under the name *Aguatia* = Berber: *Lawāta*; others lived in the country round Bougie and in the region south of Tāret (Tabert) where they had adopted the Ibādī heresy. In Morocco there were Lawāta in the Tādla (the Zanāra section), in the south of Fās and in the land between Tangier and Arzila.

Bibliography: al-Idrīsī and al-Bakrī, indices; Ibn Khaldūn, *Kitaḥ al-'Ibar*, ed. de Slane, i, 147—150; transl., i, 171, 231—236.

(G. S. COLIN)

LAWḤ (A.), board, tablet; the first meaning is found in the Qur'an, Sūra, liv, 13, where Noah's ark is called *ṭāb al-lawḥ*. The second meaning is that of lawḥ as writing material, e.g. the tablets of the lawḥ (Sūra, vii, 142, 149, 153, where the plural *lawāḥ* is used; see *Litān*, iii, 421). *Al-lawḥ wa 'l-lawḥ* (Bukhārī, *Tafsīr al-Kur'an*, Sūra, iv, bāb 18) corresponds to our "paper and ink". The expression *mā байна 'l-lawḥain* "what lies between the two boards" is found in Hadīth, to describe the whole Qur'an (Bukhārī, *Tafsīr*, Sūra lix, bāb 4; *Litān*, bāb 84); cf. *mā байна 'l-daffatāin* (Bukhārī, *Faṣṣal al-Kur'an*, bāb 16). — In modern linguistic usage *al-lawḥ* also means a school-child's slate.

Al-lawḥ thus means the tablet kept in heaven which in Sūra, lxxxv, 22 is called *lawḥ mahfūz* (cf. ii, 1066, 1076). According to this passage, it is usually described as the "safely preserved" tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read *mahfūz*, the word does not go with *lawḥ* but with the preceding *Qur'an* and the translation is: "Verily it is a Qur'an, famous, preserved on a tablet" (see the commentaries); "preserved" i.e. against alteration.

In the commentaries on Sūra, xcvi, 1, the tablet is again mentioned: "We sent it down (the Qur'an) in the night of the decree"; this refers either to the first revelation made to Muḥammad or to the descent of the Qur'an from that tablet which is above the seventh heaven, to the lowest.

The tablet as the original copy of the Qur'an is thus identical with *um al-kitāb*.

The decisions of the divine will are also written on the lawḥ with the pen *qalam* [q. v.]. We have therefore to distinguish two quite different conceptions:

a. The tablet as the original copy of the Qur'an. This idea is found in the pseudo-epigraphical literature. In the *Book of Jubilees*, iii, 10, it is said that the laws relating to the purification of women after childbirth (Leviticus xii.) are written on tablets in heaven. Jub., xii, 28 sq., says the same of the law regarding the "feast of booths" (Lev., xxiii, 40—43) and Jub., xxiii, 15 of the law of tithes (Lev. xxvii.).

β. The tablet as the record of the decisions of the divine will is also found in the *Book of Jubilees*. In Jub., v, 13 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven. Enoch prophesies the future from the contents of these tablets (Book of Enoch, xciii, 2; cf. lxxxi, ciii, 2; cvi, 19). The "scripture of truth" is mentioned as early as Daniel, x, 21, the contents of which

Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages it is evident that in the pseudo-epigraphic literature also the tablets in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of *lawh* in Muslim literature.

For other passages, cf. the Index to Charles, *The Apocrypha and Pseudepigrapha of the Old Testament*, 2. v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In mystical and philosophical literature *lawh* is given a place in the cosmic system and sometimes explained as *uḥl fa'āl* and sometimes as *nafs hulli* or *umm al-āhli*.

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeast corner of the shores of the Black Sea.

The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the Rion, to the *Corokh* (the ancient Akampsis) and even to the sources of the Araxes also creates difficulties.

The earliest Greek writers do not mention the Laz. The name *Λαζαί*, *Λαζαί* is only found after the Christian era (Pliny, *Nat. Hist.*, IV, 4; *Periplus*, of Arrian, XI, 2; Ptolemy, V, 9, 5). The oldest known settlement of the Lazoi is the town of Lazos or "old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Noworossiisk) and 1,020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Taapsee. Klessling sees in the Lazoi a section of the Kerketai, who in the first centuries of the Christian era had to migrate southwards under pressure from the Zygoi (i.e. the Čerkes [q. v.]) who call themselves Adighe (Adıghe); the same author regards the Kerketai as a "Georgian" tribe. The fact is that at the time of Arrian (second cent. A.C.), the Lazoi were already living to the south of Sukhum. The order of the peoples living along the coast to the east of Trebizond was as follows: Colchi (and Sanni); Machelonae; Heniochi; Zydritae; Lazoi (Λαζαί), subjects of king Malassus, who owned the suzerainty of Rome; Apollas; Abacsi (cf. *ABKHAZ*); Samigae near Sebastopolis (= Sukhum).

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous *Periplus*, *Fragm. Hist. Græc.*, V, 180). According to Constantine Porphyrogenetos, *De Admin. Imperii*, Ch. 53, in the time of Diocletian (284—303), the king of the Bosphorus, Sauromatus, invaded the land of the Lazoi and reached Halye (N. Marr explains this last name by the Laz word meaning river). Among the peoples subject to the Laz, Procopius (*Bell. Got.*, IV, 2 and 3) mentions the Abasgi and the people of Susania and Skymnia (= Lechhum). It is pro-

bable that the name Lazica referred to the most powerful element and covered a confederation of several tribes. The Laz were converted to Christianity about the beginning of the VIth century. "In the desert of Jerusalem" Justinian (527—565) restored a Laz temple (Procopius, *De Aedificiis*, V, 9) which must have been in existence for some time before this. The Laz also sent bishops to their neighbours (Proc., *Bell. Got.*, IV, 2). In Colchis the Laz were under the suzerainty of the Roman emperors who gave investiture to their kings and the latter had to guard the western passes of the Caucasus against invasions by the nomads from the north. On the other hand the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis. In 458 King Gubares sought the help of the Sasanid Yazdegerd II against the Romans. Between 539 and 562 Lazica was the scene of the celebrated struggle between Byzantium (Justinian) and Persia (Khusraw II).

According to Procopius, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis but their towns (Archaeopolis, Sebastopolis, Pitina, Skanda, Sarapanis, Rhodopolis, Mochoresis) all lay to the north of the river while on the left bank which was desert land the lands of the Laz only stretched for a day's march to the south. Nearer to Trebizond were the "Roman Pontica" which only means that the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethnical point of view the "Roman Pontica" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus. Nicephorus Gregora (V, 7) says that the founder of the dynasty had seized "the lands of Colchis and of the Lazae". In 1282 John Comnenus received the title of "Emperor of the East, of Iveria and of the lands beyond the sea". In 1341 the princess Anna Anakhutia ascended the throne with the help of the Laz. The lands directly under the authority of the emperors of Trebizond seem to have extended as far as Makriali while Gonia was under a local dynasty (cf. the *Chronicle of Panaretis*, under the year 1376).

In 865 (1461) Sultan Muhammad II conquered Trebizond and as a result the Laz came into contact with Islam, which became their religion (*Şāhāt*). The stages of their conversion are still unknown. The fact is that even in the central regions of Georgia (*Akhaltzikhe*) Islam seems to have gained ground gradually from the XIIIth century (N. Marr in the *Bull. of the Acad. of St. Petersburg*, 1917, p. 415—446, 478—506).

In 926 (1510) Trebizond with Batum was made a separate eyalet. According to Ewliya Çelebi who went through this region in 1050 (1640) the five sandjaks of the eyalet were: Djanikha (Djanik = Samsun?), Trebizond, Guniya (Gonia), Lower and Upper Batum. The modern Lazistan was governed from Gonia, for among the *kādās* of this fortress we find Atina, Samla, Witse/Bise (= Witse) and Arkhawi (Ewliya and the version of the *Djibān-nuṣṣā* in Fallmerayer, *Original-Fragmente*, *Abh. d. Bayer. Akad.*, 1846). Hādīdī Khallāf and Ewliya Çelebi deceived by the similarity in sound of Caucasian

names (as also was Vivien de St. Martin) proposed a theory of the identity of the name Lazgi and Laz. Ewliya calls Trebizond "former Lazgi wilayet". Hâdjîdî Khalîfa after enumerating the peoples of the district (Lazgi): Mingrelians (Megril), Georgians, Abkhaz (Abaza), Çerkes and Laz, adds that the latter are those who live nearest to Trebizond. To the S. E. of Trebizond in the Çepni mountains he mentions the Turks who "worship as their God (*ma'bud*) the Shah of Persia (i.e. are extreme Shi'is) and are associated (*mushtarik*) with the Laz". Hâdjîdî Khalîfa and Ewliya do not agree on the number of the fiefs of Trebizond; Ewliya only says that the value of the eyâlet has depreciated through the unruliness of many of its 41 *nâhiye* (*Livân-nümâ*, p. 429; Ewliya, II, 81, 83-85).

The first serious blow to the feudal independence of the *dere-bey* of Lazistan was only struck at the beginning of the sixteenth century by the Ottoman Pasha of Trebizond, but Koch who visited the country after his expedition still found most of the hereditary *dere-bey*s in power, although shorn of some of their liberties. He counted fifteen of them: Atina (two), Balep, Artashin, Witse, Kapiste, Arkhawe, Kisse, Khopa, Makria (Makriali), Gonis, Batum, Maradit (Maradidi?), Perlewan and Cat. The lands of the three latter lay however on the Çorokh behind the mountains separating this valley from the river of Lazistan in the strict sense. On the other hand among the *dere-bey*s of Lazistan was the lord of Hamshin, i.e. of the upper valleys of Kalopotamos and of Furtuna inhabited by Muslim Armenians. According to the Armenian historian Lewond, transl. Chahnazarian, Paris 1826, p. 162, the latter with their chief Hamam of the Amatani family had settled in the district in the time of Constantine VI (780-797) (the old Tambur was given the name Hamshin < Hamamshem, "built by H."). It is evidently this region that Clavijo (1403-1406), ed. Srezniewski, St. Petersburg 1881, p. 383, calls "tierra de Arraqueil". He adds that the people, dissatisfied with their king Arraqueil (Arakel?), submitted to the Muslim ruler of Isfir. The Hamshin are now Muslims and only those of Khopa have not forgotten Armenian. A Hamshin lexicon was published by Kipshidze.

With the institution of the wilayets the sandjak Lazistan became part of the wilayet of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the sandjak was transferred to Rize (Rizalon), detached for this purpose from the old central sandjak of Trebizond. Lazistan lying to the west of the Ottoman-Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad. The kâdîs of the sandjak were: Khopa, Atina and Rize, subdivided again into 6 *nâhiye* (Samy-Bey, *Kamûs al-A'âm*, v. 3966). Cuinet, *La Turquie d'Asie*, I, 118-121, mentions Of as a fourth kâdî and gives 8 (7) *nâhiyas* (Hamshin, Karadere, Mapawri, Wakf, Kur'a-yi-sah, Witse, Arkhawi). In 1880 there were in the sandjak 364 inhabited places with 138,467 inhabitants, of above 689 were orthodox Greeks and the rest Muslims (Laz, Turkified Laz, Turks and "Hamshin"). The number of true Laz cannot be more than half the total population.

The term Laz is used in the west of Turkey to designate generally the people of the south-east country round the south-east of the Black Sea, but in reality the people calling themselves by

this name and speaking the Laz language now live in the two kâdîs of Khopa (between Kopmugh and Gurup) and Atina (between Gurup and Kemer). Laz is spoken in 64 of the 69 villages of the kâdî of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Turco-Soviet treaty of March 16, 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Çorokh). Rize and Batum are now outside the Laz country proper.

The Laz are good sailors and also practise agriculture (rice, maize, tobacco and fruit-trees). Before 1914 many of them earned a living in Russia as bakers and often came home with Russian wives, who became converts to Islam. The Laz are known for their conservatism in religious matters. Turkish proverbs and the marionette theatre (*karagöz*) are often very scathing about the Laz (*Lazlarin termeni musulman yemesi emi*, "the Muslim does not eat Laz jelly"; *termeni* from the Greek *typhos*).

The Laz language is closely connected with Mingrelian (which is a sister language of Georgian) but N. Y. Marr finds in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect. In the Lazo-Mingrelian group he believes he can find resemblances to the more Indo-European elements in old Armenian (Grabar). There are two Laz languages, eastern and western with smaller subdivisions (the language of the Çkhala). Laz is very full of Turkish words. It has no written literature but there are local poets (Kashid Hilmi, Pehlivan-oghlu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Pisarew in *Zap.*, 1901, xlii., p. 173-201) in which the harmony of the vowels is much neglected (cf. a specimen in N. Marr, *Tekmil i revlianiya*, St. Petersburg, vii., p. 55).

The Georgians call the Laz Çan but the Laz do not know this name. "Çan" is evidently the original of the Greek name Sannoi/Tzannoi and it survives in the official name of the sandjak of Samsun (Djank). From the historical point of view the separation of the Laz and Çan seems to have taken place in spite of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Müller in *Geogr. Graeci Minori*, ad *Arriani Peripl.*, 8) he places on the river Of the frontier between the Colchis (Laz?) and the *Θαυμας* (?). Koch mentions the interesting fact that the people of Of speak a "language of their own" and according to Marr, the people of Khoshnizhin (near Atina) speak an incomprehensible language. Procopius places the "Sannoi who are now called the Tzannoi" on the area adjoining the mountains separating Çorokh from the sea (the Parayadres range, the name of which survives in the modern Parkhar/Balkhar). The researches of N. Y. Marr have shown that the Çan (Tzannoi) had at first occupied a larger area including the basin of the Çorokh and its tributaries on the right bank from which they were temporarily displaced by the Armenians and finally by the Georgians (Kharthli). The chronicles of Trebizond continue to distinguish the Laz from the Trianids (Tçavides). The latter in alliance with

the Muslims attacked the possessions of Trebizond in 1348 and in 1377 were punished by the Emperor. At this period the Trianids must have been in the southwest of Trebizond (besides, the sandjak of Djanik is to the west of this port). Thus the Georgian application of the name Çan to the Laz may be explained by the confusion of the two tribes, one of whom (the true Çan living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

(V. MINORSKY)

LAZARUS is the name in the Gospels of 1) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xvi. 19—31); 2) the dead man whom Jesus raises to life (John xi.). The Kur'an mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (Sura, III. 43). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Tabari (*Annals*) talks of these miracles in general. According to him, Hām b. Nūh is revived by Jesus (I. 187). Al-Kisf only mentions Sām son of Nūh of those restored to life by Jesus. Tha'labi relates, closely following St. John's Gospel: "al-'Azir died, his sister sent to inform Jesus, Jesus came 3 (in the Gospel 4) days after his death, went with his

sister to the tomb in the rock and caused al-'Azir to arise; children were born to him". In Ibn al-Athir the resurrected man is called "Azir", the *al* of El-'Azir was taken for the article, as in al-Yāsa' (Elixa) and Alexander (al-Iskandar) or in Azar in the Kur'an, whose name Fraenkel derives from Elizer. In Ibn al-Athir we find Muslim legend endeavouring to increase the miracle, Jesus raises not only 'Azir (Lazarus) but also his wife (children are born to him), and Sām (son of Nūh), the prophet 'Uzair and Yahyā b. Zakariya (John the Baptist).

D. M. G.*, 1902, lvi. 71—73; J. Horowitz, *Hebrew Union College Annual*, 1925, II., p. 157, 161; do., *Koranische Untersuchungen*, 1926, p. 12, 85, 86. (BERNHARD HELLER)

LEBARAN. [See 'ID AL-FITK.]

LEO AFRICANUS. AL-HARAN R. MUHAMMAD AL-WAZZAN AL-ZAYXIRI, called Yuhannā al-Asad al-Gharnāfi, in Latin Johannes Leo Africanus, born at Granada in 901 (1465) was brought up in Fās. Entrusted with three diplomatic missions to the South of Morocco by the Banū Waggās, he went to Mecca in 921 (1516) and then to Stambul. Captured on his way home by Sicilian corsairs he was taken to Naples in 926 (1520), then to Rome where the Pope baptised him "Johannes Leo". At Rome he compiled the following works, only the first of which has come down to us in the original Arabic text: 1. *Arabic-Hebrew-Latin Vocabulary* composed in 930 (1524) for the physician Jacob ben Simon (MS. Escorial 598; cf. H. Derenbourg, *Cat. ust. arabes de l'Escorial*, Paris 1884, I. 410); 2. *Descrittione dell' Africa*, which he translated into Italian on March 10, 1526 (divulged since 1531; publ. by Ramusio, *Navigazioni, viaggi*, Venice 1550, I. 1—103); French transl. by Temporal, ed. Schaefer, 1896; Latin by Florianus; English by Pory, ed. Browne, 1896; Dutch by Leers; German by Lorbach); 3. *Libellus de viris illustribus apud Arabes*, finished in 1527, Latin transl., ed. by Hottinger, then by Fabricius. These works gave the west the earliest materials for a history of Islam; cf. in the economic and social monograph on the city of Fās, *Descriptions*, Bk. IV., Ch. 23—54, a remarkable resumé from the Maliki point of view of the historical development of theology. Before 957 (1550) Leo returned to Tunis where he died, a good Muslim.

(L. Massignon)

LEPANTO, is the Italian form of the name of the Greek town Naupactos which the Turks call İne Bakht. This is how the Turkish form is transcribed, e.g. by Leunclavius (*Annales Turcici*, p. 35) while von Hammer (*G. O. R.*, III. 318) transcribes it as Aina Bakht, which he translates

"Spiegelglück"; in view of the Greek form however it is very probable that the Turks originally pronounced it *Ine Bakht*. The town is situated in the ancient Locris, north of the strait which leads from the Ionian Sea towards the Gulf of Corinth, known since the middle ages as the Gulf of Lepanto.

After forming from the thirteenth century part of the despotry of Epirus, Lepanto fell into the hands of the Venetians who made it one of the strongest places in Greece. Muhammad II during his war with Venice therefore undertook an expedition to take the town by land. In 1477 Khādīm Salīmān Pasha was given the task but did not succeed (*Tawārīkh-i Āli 'Othmān*, ed. Giese, p. 115). It was Bāyazīd II who ultimately took the town in 1499 with the help of the Turkish fleet after the latter had defeated the Venetians near the island of Sapienza (Burūk Ro's Adası) in July. The town was already being besieged by Mustafa Pasha, beglerbeg of Rūm III; Bāyazīd joined the army later. The commander of the garrison had declared he would never surrender until Turkish vessels should enter the strait. This happened after the battle of Sapienza, for the Venetians made a feeble resistance. The Venetian commander capitulated on Aug. 26, 1499 (cf. *Tawārīkh-i Āli 'Othmān*, p. 127 and *Asbāk Pasha Zāde*, p. 257—258, which gives the date as 3 of Muharram 905 = Aug. 10, 1499). Immediately afterwards Bāyazīd built two forts to defend the entrance to the Gulf.

Lepanto is particularly celebrated for the famous naval battle fought on Oct. 7, 1571, between the Turkish fleet and the Christian fleet consisting of 108 Venetian galleys, 77 Spanish, 6 Maltese, 3 Savoy and 12 Papal in addition to 8 enormous Venetian galleasses (the figures given by the Turkish historians vary considerably) united under the command of Don John of Austria. This great combined expedition of the Christian fleets had been provoked by the capture of Cyprus by the Turks under Lala Mustafa Pasha in 1570 and 1571. The Turkish fleet came for the most part from Cyprus with the *serasker* Pertew Pasha and the Kapudan Pasha 'Alī and was joined by Uludj 'Alī Pasha (Ochiali) beglerbeg of Algiers with 20 ships. After raids on the coast of Crete and the Ionian Islands it had cast anchor off Lepanto; it was here the Turks learned of the approach of the Christian fleet. The Turkish fleet consisted of 300 ships (so von Hammer; Hādījī Khalifa speaks of 180); it was not at the top of its strength on account of the numerous desertions. Against the advice of Pertew Pasha and Uludj 'Alī, the Kapudan Pasha decided to leave the bay of Lepanto and to attack The Christian ships entered the Gulf on Oct. 7; the battle which followed only lasted a few hours and ended in the complete destruction of the Turkish fleet; the Kapudan Pasha perished in the battle; Pertew Pasha escaped with difficulty and Uludj 'Alī who commanded the left wing succeeded in saving 40 vessels. This, their first great defeat at sea, is called by the Turks *inğhān denanma isfiri*, the "expedition of the destroyed fleet". The immediate results of this event were not considerable, for the Allies could not take advantage of their success and the Turks very soon succeeded in making good their losses in material; Muhammad Sokollī (q.v.) was credited with saying that the empire was rich and powerful enough to make the anchors of the fleet of silver, and the

ropes of silk and the sails of atlas (Pečewi, i. 499). The moral results however were very great and justify the great importance attached in history to the battle of Lepanto.

In June 1687 the Venetian and Austrian forces seized Lepanto, but they had to surrender the town to the Turks by the treaty of Carlowitz (1699); as Venice then held the whole of the Morea, Lepanto remained the only Turkish stronghold in this region. The Turkish history of the town ended with the insurrection of the Greeks, as a result of which Naupactus was incorporated in the kingdom of Greece.

The defence of Lepanto consisted of 3 successive lines of fortifications on a cone-shaped hill; it was the residence of a *sandjak-beg* of the *şeylet* of the Kapudan Pasha (Hādījī Khalifa, *Tuhfat al-Kibar*, p. 67*). Its great strategic and maritime importance is explained by Hādījī Khalifa in *Rumīl and Bosna*, transl. by von Hammer, p. 125.

Bibliography: von Hammer, *G.O.R.*, ii. 150, 318 sq.; iii. 592 sqq. The battle of Lepanto is described by the historians of the xvth century: Pečewi, *Tārīkh*, Constantinople 1283, p. 495 sqq.; Selmīkī, *Tārīkh*, Constantinople 1281, p. 101 sqq.; Hādījī Khalifa, *Tuhfat al-Kibar*, Constantinople 1041, fol. 42 sqq. Among later descriptions: Djawdat Pasha, *Tārīkh*, i. 119, Constantinople 1302; and the publication of several documents by Safwat Bey in *T.O.E.M.*, No. 9 (Aug. 1911). A survey of the extensive European bibliography is given in *G.O.R.*, iii. 787; cf. also the article by Awram Galanti in *T.O.E.M.*, No. 78, Jan. 1924.

(J. H. KRAMERS)

LERIDA, the ancient *Ilerda*, the Arabic *Larida*, a town in northern Spain, halfway between Saragossa and Barcelona, now the capital of the province of the same name, with a population of about 29,000. It lies at a height of about 600 feet on the right bank of the Segre (the *Wādī Shīḡar* of the Arabs; Yāqūt, *Mu'jam al-Buldān*, s.v., wrongly makes this another name of Lerida), and forms an important strategical point at the entrance to the plains of Aragon.

Lerida, which is undoubtedly of Iberian origin, was taken by Julius Caesar in 49 B.C. in the first Civil War between him and Pompey. In 546 a council met there and it was occupied by the Muslims in the first half of the eighth century. It seems to have henceforth shared the fate of Saragossa and to have been an important point for the defence of the Upper Frontera (*al-thughra al-'ālā*). It was later part of the independent kingdom of the Banū Hūd of Saragossa. At the division which took place on the death of Sulaimān b. Hūd al-Musta'in bi 'llāh (1046), it fell to his son Yūsuf but was again taken by the ruler of Saragossa Ahmad al-Muktadir.

(E. LÉVI-PROVENÇAL)

LEWEND, the name of the members of an irregular militia, which formed part of the armed forces of the Ottoman empire during the early centuries of its existence; they were chiefly

employed as soldiers on the fleet in the period when the Turkish navy consisted mainly of the corsair vessels, which the Sultans employed for their naval expeditions. The word *lewendi* seems to have been borrowed like many other naval terms from the Italian. The Italian word would have been *levantino* (Sami, *Kāmūs-i Türkî*) or *levanti* (Djavidat Pasha) and was originally used by the Venetians for the soldiers whom they recruited from the inhabitants of their possessions in the Levant, to defend the coasts or serve on the fleet. It was the same category of men, i.e. Christian Greeks, Albanians or Dalmatians, living on the Mediterranean coasts that the Turks used at first. After a time Turkish elements from Asia Minor joined them.

The lewends were a soldiery almost without discipline whom it was impossible to make use of when the navy came to be regularly organised. Even in the time of Muhammad II the use of 'asab' had been begun for the naval service and under Bayazid II, the first regular body of marines was formed, consisting of 400 'asab'. About the same time the 'asab' were employed on the galleys as *kürchü* in place of the less loyal Christians (Hâdidi Khalfa, *Tuhfat al-Nihar*, p. 10^b). Thus the true lewends were gradually removed from the navy. We find however that the word *lewend* is still used at a later period to indicate the soldiers of the navy, especially the riflemen (*tâfenbü*, cf. Djavidat Pasha); in Constantinople there were two barracks of lewends, belonging to the organisation of the arsenal. In a figurative sense, the great naval captains of the xvth century are also called *lewend* (e.g. by Safwat Bey in his article *T.O.E.M.*, No. 24).

The lewends after having been removed from the fleet still continued to exist as marauders, especially in Asia Minor where they were a scourge to the country. The word *lewend* thus acquired the meanings of vagabond and rascal; this last meaning has even passed into Persian. On the other hand, the Pashas in the province for long continued to recruit their bodyguard among the lewends (cf. the picture of a lewend in the plate on p. 416 of the third volume of d'Osson).

From the end of the xvth century, the government found itself forced to take steps to abolish the bodies of lewends still in existence. Ordinances of 1695, 1718 and 1720 gave them permission to join the new corps of the *bell* and *gövalta* (Râshid, *Ta'rikh*, Constantinople 1282, v. 13, 123). Finally a series of military expeditions in 1737, 1747, 1752, 1759 and 1763 exterminated the last bands of this turbulent soldiery, who still existed in different parts of Asia Minor (Ist. *Ta'rikh*, p. 25, 30, 78, 269; Wajif, *Ta'rikh*, p. 117, 234).

L'ĀN (A.), an oath, which gives a husband the possibility of accusing his wife of adultery without legal proof without becoming liable to the punishment prescribed for this, and of denying

the paternity of a child borne by the wife. *In the language of the Shar'ia, evidence given by the husband, strengthened by oaths, by which the husband invokes the curse (*l'ān*: from this the whole process is a *qat'ori* named) and the wife the wrath of Allah upon themselves, if they should lie; it frees the husband from *ḥadd* (the legal punishment) for *zâd* (accusation without proof of infidelity by persons of irreproachable character) and the wife of *ḥadd* for incontinence" (A. Sprenger, *Dictionary of the Technical Terms used in the Sciences of the Muslims*, Bibl. Indica, Old Series, ii, 1309). On the technical use of the related verbal forms, cf. the Arabic lexicons and Dozy, *Suppl. aux Dict. Arabes*, s.v.; al-Kastallânî, commentary on al-Bukhârî, *Tuhfat*, 25, at the beginning; al-Zurkânî, commentary on the *Muwatta'*, *Bâb mû dhâ f 'l-L'ān*, at the beginning.

1. The following Qur'anic passage is the basis for the regulations regarding the *l'ān*: xxiv. 6-9. *As to those who accuse their wives (of adultery) without having other witnesses than themselves, the man concerned shall swear four times by Allah that he is speaking the truth and the fifth time that the curse of Allah may fall upon him if he is lying, but the woman may avert the punishment from herself if she swears four times by Allah that he is lying and the fifth time that the wrath of Allah may fall upon her if he is speaking the truth. If Allah were not gracious and merciful towards you and wise and turning lovingly towards you".

These verses belong to a part of the Qur'ân, apparently composed at one time, containing various regulations about adultery and consisting of xxiv. 1-10, 21-26; verses 11-20, which certainly belong to the year 5 were inserted later; our verses must therefore be older (cf. Nöldeke-Schwally, *Geschichte des Qur'ân*, i. 210 sq.; H. Grimme, *Mohammed*, ii. 27, puts the Sûra between the battles of Badr [2 A.H.] and Uhud [3 A.H.]).

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Qur'ân, xxiv. 4 (cf. also verses 23-25) for *zâd* and are therefore, like this penalty, primarily Muslim and have no affinities in Arab paganism in which an institution like the *l'ān* had no place at all (contrary to D. Sanitiana, *Institutioni di diritto musulmano*, i. 221 below). The word *l'ān*, which comes from the Qur'ân, is unknown to the pre-Muhammadan poetry.

The hadiths concerning *l'ān* are almost entirely (the oldest probably exclusively) exegetical and profess to give the occasion of the revelation of the Qur'anic verses in question; they are to some extent contradictory (attempts to harmonise them are found in al-Zurkânî, commentary on the *Muwatta'*, *Bâb mû dhâ f 'l-L'ān*), systematised and unreliable (cf. Nöldeke-Schwally, etc., where further references are given, to which may now be added those in A. J. Wensinck, *Handbook of Early Muhammadan Tradition*, p. 56 sq. [to p. 56 ult. may be added, Tit. 44, Sûra 24]). Four types may be distinguished among them: 1. the husband (unnamed) laments his sad case to Prophet in covert language whereupon the verses are revealed (oldest form); 2. 'Uwaimir b. Ḥarith asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); 3. Hilâl b. Umayya accuses his wife of adultery and is to be punished with *ḥadd*

for this, when Allāh saves him sometimes by the revelation of the verses (this type probably a development of the first, in which Sa'd b. 'Ubadā also is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and not original appearance); 4) some one marries a young woman and finds her not a virgin while she disputes his assertion; the Prophet therefore orders *l'ān* (not exegetic). There are of course other transitional and mixed forms. In so far as the *ḥadīth*s yield nothing new about *l'ān*, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Qur'anic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon in the Qur'ān, whether *l'ān* makes separation between the husband and wife necessary. In many *ḥadīth*s this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the *l'ān*. The statement that al-May'ab b. al-Zubair is said to have held this view (Muslim; Nasā'i) is however based only on an inadmissible interpretation of another *ḥadīth*, in which he appears as a contemporary; on the other hand that 'Uthmān al-Battī held it may be considered sufficiently proved (al-Zurkāni on the *Muwatta'*). Among the oldest representatives of the other view which later became predominant, that a continuance of the marriage was impossible after *l'ān*, may be included with some probability 'Abd Allāh b. 'Umar and with certainty al-Zuhri in whose time it was already *sunna*, and Ibrāhīm al-Nakha'i (*Kitaḥ al-Āḥḥ*); the tracing of this opinion back to 'Abd Allāh b. 'Abbās, which we find in the *ḥadīth*s, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of *l'ān* is to be carried through, whether by a triple *talāq*, which the husband has to pronounce against his wife or by the decision of the judge before whom the *l'ān* is taken or by the *l'ān* itself. The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the *Ḥaṭṭ* of al-Zuhri in al-Tabari, *Tafsīr* and al-Bukhārī, *Talāq*, bāb 30 and *Ḥudūd*, lib 43; the tradition in Ahmad b. Hanbal, v. 330 sq. forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Ṭayālīs, N° 2667). The second opinion survives in the later legal *ikhtilāf*; apart from the ample testimony to it in *ḥadīth*, its oldest representatives known with probability or certainty are 'Abd Allāh b. 'Umar, al-Zuhri, in whose time it appears as *sunna*, and Ibrāhīm al-Nakha'i (*Kitaḥ al-Āḥḥ*); its ascription to 'Abd Allāh b. 'Abbās is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the *maḥabbah*. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about *l'ān* in tradition, going beyond what is laid down in the Qur'ān, are of less importance. Thus, when the question is raised at all, it is unanimously laid down that the husband can never marry the wife again at a later date, that a *l'ān* may take place during

pregnancy (legal *ikhtilāf* is later attached to their interpretation of this *ḥadīth*), that the child has only relationship with its mother as regards kinship or inheritance i. e. is considered illegitimate. Other *ḥadīth*s say that the *l'ān* must be taken in a mosque and attribute the formula to be spoken there by the *ḥādī* to the Prophet. We are also brought into contact with questions of detail, which play a part in the later *ikhtilāf* by a tradition according to which the Prophet did not allow *l'ān* unless the husband and wife were on equal terms as regards *lāḥim* and freedom; a series of older authorities who held the contrary view is quoted in the *Mudawwana*.

Details of the further teaching of Ibrāhīm al-Nakha'i on *l'ān* are given in the *Kitaḥ al-Āḥḥ*. Two more general pronouncements in Mālik and al-Shāfi'i bring us to the period of the rise of the *maḥabbah*. Mālik states definitely that it was the *sunna* of al-Madīna, about which there is no doubt and no *ikhtilāf*, that the husband and wife after the *l'ān* has taken place could never marry one another again and al-Shāfi'i says that with *l'ān* divorce of the pair and denial of the paternity of the child was *sunna* of the Prophet.

3. The teachings of the separate *maḥabbah*, develop the views of their earliest representatives, not entirely on the same lines (e. g. from the *Muwatta'*); it is to be assumed with probability that Mālik followed the second view regarding the element in *l'ān* which annulled the marriage [cf. above], while his school later held the third opinion entirely. The most important regulations of the Fiqh regarding *l'ān* that go beyond what has been so far discussed are as follows: if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally prescribed fashion and she denies his charge, recourse is had to the process of *l'ān*. If the husband refuses to pronounce the formulae prescribed for him, he is punished with the *ḥadd* for *zina*, according to Abū Hanifa, however, imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to *ḥadd*. If the wife refuses to pronounce the corresponding formulae, she is punished with the *ḥadd* for adultery, according to Abū Hanifa and the better tradition of Ahmad b. Hanbal, however, imprisoned until she pronounces the formulae, whereupon she is set free or confesses her transgression and is then liable to *ḥadd*. On the question whether *l'ān* is possible if one partner is or both are not Muslims or not free or not *adī*, there is wealth of *ikhtilāf*, which cannot be detailed here; the same applies to the possibility of *l'ān* during the pregnancy of the woman, with the object of denying the paternity of the child. On this point the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objects of *l'ān* (accusation of the wife of adultery and denial of paternity) which is only a result of later developments. In the whole of the earlier period these two objects coincide from the juristic point of view. The divorcing element in *l'ān* is, according to the Mālikis (on their presumed divergence from Mālik himself on this question; cf. above) and a tradition of Ahmad b. Hanbal, the *l'ān* of the wife, according to al-Shāfi'i that of the husband, according to Abū Hanifa and the

better tradition of Ahmad b. Hanbal however the verdict of the judges pronounced after the *li'an* of both. Opinions also differ regarding the legal consequences of a later withdrawal of the *li'an* by the husband; according to Abū Hanīfa and one tradition of Ahmad b. Hanbal, a new marriage of the two people is possible in this case, according to Mālik al-Shāfi'ī and the better tradition of Ahmad b. Hanbal it is not; among older authorities only Sa'īd b. Djubair is in favour of the first view, while 'Umar, 'Alī, 'Abdallāh b. Mas'ūd, 'Abdallāh b. 'Umar, 'Aṣ' and al-Zuhri are quoted as in favour of the second (not all have historical confirmation) which was also held by al-Awzā'ī and Sufyān al-Thawri. Finally it is a disputed question whether the *li'an* can only be performed orally or (in the case of a dumb person) by gestures; al-Bukhārī devotes chapter 25 of his *Kitaḥ al-Ṭalāq* to the discussion of this question and the reasons for his attitude to it.

4. It is easy to understand that resort was only had to the *li'an* in extreme cases. Thus we find a scholar of Cordova in the fourth century A.H. pronouncing the *li'an* against his wife simply in order to revive this *manā* of the Prophet, which had fallen into oblivion (I. Goldziher, *Muslimgeschichte Studien*, ii. 21). But it has not yet fallen completely into desuetude, as Muslim law has no other means of disputing the paternity of a child (cf. Juynboll, *Handleiding*, p. 217, note 2; Santillana, *Institutioni*, p. 222).

(JOSEPH SCHACHT)

LIHYÂN, an Arab tribe, a branch of the Hudhail [q. v.]. Genealogy: Lihyān b. Hudhail b. Mudrika b. al-Yās b. Mudjar. Settled like the other branches of the Hudhail in the country N. E. of Mecca, the Lihyān do not seem to have had in the period just before and after Islām a history independent of their brethren; it is only rarely that they are mentioned apart from them, e.g. in *Ḥamasa*, p. 34, a propos of their battles with the warrior-poet Ts'abbata Sharrān; Yāqūt, *Mu'jam*, ed. Wüstenfeld, ii. 272; iv. 104 (cf. *Ḥamasa* of al-Buḥārī, p. 80—81; Ibn al-Djarrāb, ed. H. H. Bräun, Nr. 86 = *S. B. Ak. Wien*, 203, s. 1927, p. 31), ii. 614 of a battle with the Khuzā'a. The poets of this tribe are as a rule reckoned among those of the b. Hudhail — e.g. Mālik b. Khālid al-Khuzā'i, al-Mutanakkibūn al-Khuzā'i, etc. At the time of the preaching of Islām we find them like the rest of the Hudhail under the political influence of the Quraysh. This explains their hostile attitude to Maḥammad, which resulted in the murder of their chief Sufyān b. Khālid b. Nuṣayb by 'Abdallāh b. 'Umayr at the instigation of Maḥammad. This murder was cruelly avenged by the Lihyān who slew several Muslims in their turn (*yawm al-Raḡīf*, 4 A. H., cf. HUPHAN). As there is no further mention of hostile relations between the Muslims and the Lihyān, it is probable that the latter were included in the subjugation which the Hudhail made to Islām.

After the triumph of Maḥammad and in the periods following, there is an almost complete lack of information about the Lihyān and there are very few persons of note belonging to this tribe: the grammarian al-Liḥyānī, whose full name was 'Alī b. Ḥāzim (Khāzim) or b. al-Mubārak, d. in 222 or 223 (cf. al-Zuhairī, *Tahāqūt al-Nuḥāt*, ed. Krenkow, *R. S. O.*, viii. 145, Nr. 125, with bibliography; Flügel, *Die gramm. Schulen*, p. 51) perhaps belonged to it, but other sources (Yāqūt, *Irshād*, ed. Margolionth, v. 229; *Taḍj al-'Arūs*, x. 324, 10) trace his *nishā* al-Liḥyānī to the unusual length of his beard (*hiyya*).

There was some reason to suspect that the Lihyān at a remoter period of Arab history had played a more important part than that almost unnoticed, which they did later: this seems evident from a passage in Ibn al-Kalbi (*K. al-Aḡnām*, p. 57 = Yāqūt, *Mu'jam*, iii. 181, 16) who assigns to the Lihyān certain priestly functions (*adūna*) in the cult of the Hudhail idol Sawā' (cf. Wellhausen, *Korte Arab. Heidentum*,² p. 18—19); the discovery of several hundreds of inscriptions and graffiti in the north of the Hijāz has not only confirmed this suspicion but revealed the existence of a Liḥyānī state several centuries before the coming of Islām. These inscriptions, first known from the imperfect copies of Doughty and Huber, were later collected in large numbers (over 900) by Euting and deciphered by D. H. Müller after preliminary work by J. Halévy. They are now available in still larger numbers and better known as a result of the discoveries and publications of Fathers Janssen and Savignac. They are almost all in the vicinity of the village of el-'Ola (especially in the area full of archaeological remains, called *el-Kharibe* and in the rocky cliffs to the east of this) not far to the south of the great Nabataean centre of al-Hijr [q. v.], Madā'in Salīh; some have even been found here although in much smaller numbers. Their epigraphy closely resembles that of the Minaean inscriptions (which are also found in very large numbers east of el-'Ola) of which the Liḥyān inscriptions represent a dependent or parallel form, but in any case of a decidedly later date (against D. H. Müller who wrongly thought them older). Their language on the other hand is quite like that of the Thamudaean and Safaitic inscriptions, in Northern Arabic and only differs from classical Arabic by several peculiarities (especially the use of *aw* in place of *al* for the article, and of a participle of the form *nif'al* in contrast to the form *mufa'il* of the classical Arabic).

From these inscriptions we learn that el-'Ola — the old name of which is given in the form *DDN* identical with the Dedān of the Bible — was the capital of a "kingdom of (or of the) Liḥyān", of which some of the kings were Talmā I and II (cf. the name of Talmā, king of Geshūr, father-in-law of Ashalom, II Sam. iii. 3 and xiii. 17), Takhmai, Lawdhan, Hanu'ash *M-SH-M*, Karīb'il. This kingdom seems to have been for a long period of remarkable size and importance; before it was formed or became quite independent el-'Ola-Dedān was a colony of the Minaeans and formed one of the stages on the great trade route which brought the merchandise of the Yemen and India to the ports of the Mediterranean. After the fall of the Minaean kingdom (according to M. Hartmann between 230 and 200 B.C.) the Nabataeans

replaced the Minaeans in the control of trade and settled in al-Hijr; but at the same time the Lihyāns, who had absorbed Minaean civilization formed an independent kingdom and arrested the southward advance of the Nabataeans; the frontier of the two states must have been between al-Hijr and el-'Ola. It is probable that these Lihyāns were simply a section of the Thamūd [q. v.] whom we find mentioned in the annals of Sargon of Assyria, while there is no ancient reference to the Lihyāns until Pliny who mentions them (*Hist. Nat.*, vi. 33, 3) under the name of Lechieni. Their power must have increased after the fall of the kingdom of Petra (106 A.D.) and it seems that from this time onwards, they also held al-Hijr, abandoned by the Nabataeans.

When and how the Lihyān fell in their turn to the position in which we find them in the sixth century forming part of the tribe of Hudhāl, and settled in a territory considerably to the south of their original home, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamūd with the Thamūd proper and the Nabataeans of al-Hijr: a memory but a very vague one of the old kingdom of Lihyān may perhaps have survived in the isolated mention in a tradition that the Lihyān were "remnants of the Dūrhum", who later became part of the Hudhāl (Tabari, *Annales*, ed. de Goeje, i. 749, 11-12; [cf. Dūrhum] following Ibn al-Kalbi; *Taḍī al-'Arāḍ*, x. 324, 1-2, following al-Hamdānī, probably in *al-Iktilāf* and the passage is not found in the text of the *Djāsiṭ al-'Arab*). The Thamūdian graffiti (which used to be called proto-Arab) are a development (later or parallel) of the Lihyān script, the last stage of which is seen in the Ṣafaitic graffiti; but we are completely ignorant of the historical relations of the peoples who used these similar scripts.

The ruins of Dūdān-el-'Ola, although they have so far only been superficially explored give us some idea of the advanced stage of civilization to which the Lihyāns had attained; besides tombs, some of which are decorated with sculptures in high relief, Fathers Jaussen and Savignac have discovered a sanctuary with a central basin circular in form (for ablutions?) and ornamented with large statues several important fragments of which have been discovered. An inscription in this sanctuary mentions an *asfal* of the god Wadd: this term, which certainly is the name of a sacrificial office is not unknown to Muslim Arab tradition (*Aghāni*, xxxix. 686; Ibn Duraid, *K. al-Ishṭihāq*, p. 197, 7). Among the deities worshipped by the Lihyāns we find alongside of typically Arab ones like Alīsh, al-Lāt, Wadd, Yaḡūth and a god Dhū Ghābat of whom we know nothing definite, gods of Aramaean origin, like Baṣamen, the god of the sky and, in a theophoric name, Salm; in these names as well as in the use of other Aramaic terms (among them *naṣā* in the sense of "tomb") there is apparent the influence of the Nabataeans, who undoubtedly contributed with the Minaeans to form the character of Lihyān civilization. The presence of Judaean elements, which Müller and Glaser thought they could recognise is on the other hand more than doubtful.

LIMNI, Turkish form of the name of the island of Lemnos in the Aegean Sea between Mount Athos and the mainland of Asia Minor about 50 miles S.E. of the entrance to the Dardanelles. In ancient times a possession of Athens, in the middle ages it belonged to the Byzantine empire; in this period, in 901, the island was sacked by the Muslim inhabitants of Crete. Towards the end of the middle ages Lemnos had passed into the hands of the Italians who called the island Stalmene (formed with the addition of the Greek preposition *stē* and the article). When the Turks took Constantinople the island belonged to the Genoese lords of Lesbos (Midillū), the Gataluso. Under Bāyazīd I, who had fortified the Dardanelles, Lemnos passed with the other islands under Turkish rule. But when Constantinople became the Turkish capital it was inevitable that Lemnos, the largest of the three islands commanding the entrance to the Dardanelles (the others are Imbros and Tenedos, or Bozdja Ada) entered the direct domination of the Turks. In 1456 took place Muḥammad II's expedition against Ainos as a result of which the Conqueror became lord of the islands of Thasos, Samothrace and Imbros. Negotiations had been going on between the lord of Lesbos and the Sultān regarding the payment of tribute. But in the course of these negotiations the people of Lemnos, dissatisfied with the rule of Nicolas Gataluso, brother of the lord of Midillū, voluntarily submitted to the Sultān who appointed Hamza Beg governor of the island and entrusted Ismā'il, beg of Gallipoli, with the task of installing him there. Gataluso succeeded in leaving the island before the arrival of the Turks. The date of these happenings which are recorded only by the Byzantine historians Ducas (xlv. 190) and Chalcocondylas (viii. 248) is not certain; but Ducas who was representative of the princes of Lesbos at the Sultān's court, may be considered a reliable authority. In 1457 a Papal fleet drove out the Turks — the Pope had intended to establish an order of Knights on Lemnos — but some time afterwards the same Ismā'il Beg recovered Lemnos with the adjoining islands (Ziukeisen, ii. 235, 299.). In 1462 Muḥammad became master of Lesbos also. In the following year the Turkish possession of Lemnos was disputed by the Venetians whose Admiral Canale in 1467 (A.H. 872 in Neshri and Sa'd al-Din, according to von Hammer) took Ainos and the islands in this part of the Aegean Sea (cf. also Müneddjim-Baḡh, iii. 384); these conquests resulted in Muḥammad's great expedition against the island of Euboea or Negropont (in Turkish:

Eghribos) in 1468. Soon afterwards the Turks retook Lemnos and by the peace concluded with Venice in 1479 this island remained definitely a possession of the Turks. In this last year the island of Tenedos was fortified by the Sultan so that the system of defences of the Dardanelles was completed.

In July 1656 the Venetians won a victory over the Turkish fleet before the Dardanelles and as an immediate result took Tenedos, Samothrace and Lemnos. These conquests were such a threat to the capital that the grand vizier Mustafa Köprülü took energetic measures and sent an army of 4,500 men under the Kapudan Paşa Topal Muhanmad, the latter besieged the citadel of Castro for 63 days, after which the Italians capitulated on November 15, 1657. Tenedos was regained from the Turks by the same expedition (Na'ima, II, 578, 585, 633). Finally in 1770 in the Russo-Turkish war Count Orloff laid siege to Castro and after 60 days had obtained its surrender, when the Kapudan Paşa Husan attacked the Russian fleet in the harbour of Mudros (Turkish: Mündüros), forced the Russians to withdraw on October 24, 1770 (Wäsil, II, 118).

Turkey lost Lemnos after the Balkan War. By the peace of Athens (November 14, 1913) it had been stipulated that the Powers should delimit the frontiers, and the Powers in February 1914 allotted all the Aegean islands to Greece except Tenedos, Imbros and Castellorizo. Turkey, reinforced by a strong public opinion, would not accept this decision, but the outbreak of war in 1914 prevented the negotiations being brought to a satisfactory conclusion. In the course of the war the strategic importance of the island for Turkey became manifest; after the failure of the naval attempt to force the Dardanelles, the Entente powers in April 1915 established a naval base in the Gulf of Mudros which lies on the south side of the island to serve as a base of operations for the forces which were to be landed at Gallipoli, to force a road to Constantinople. This is how the British admiral's flag-ship in the Gulf of Mudros came to be the scene of negotiations which preceded the Armistice of Mudros between Turkey and the Entente powers on October 30, 1914.

In the old administrative division of the Turkish empire the island formed part of the sandjak of Gallipoli which was the sandjak of the Kapudan Paşa; after the reforms of the sixteenth century Limni became a sandjak in the Balı-ei Safid Wilâyet including the *şehâ's* of Limni, Bordja Ada (Tenedos) and Imros (Imbros). Castro, a little harbour on the west coast, was always the seat of the governor and had the garrison. Cuinet gives 27,070 as the total of the population which has always been predominantly Greek. Cuinet gives the Muslims as 2,450. One of the specialities for which Lemnos has always been celebrated since ancient times is "terra sigillata" (Turkish: *mu-i sigillatim*), a kind of earth found near the village of Kokkino on the south coast (where it has been sought to locate the site of the ancient Hephestia) which is credited with medicinal virtues. This bed of clay was unearthed once a year (August 16) to the accompaniment of certain ceremonies at which the Greek priest and the Turkish hodja both assisted (Na'ima, II, 586).

LINGA, a little seaport on the Persian Gulf which lies between Lârisân (q.v.) and the desert. The old port was at Kung, 8 miles east of Linga; the Portuguese had a factory there where they ruled long after the loss of Hormûz (to 1711). In the reign of the Zand dynasty, 1,000 Djawâsim Arabs (Bani Djâhîm, Djawâhîm, Kowâsim) with their chief Shaikh Sâlih came from Ras al-Khaima ('Omân) and took Linga from the *shahdâr* of the district Djahangîr. In 1837 the Persian government took possession of Linga and deported to Teherân the last hereditary shaikh (Kadîb). The present population is very mixed (Arabs, Persians, Hindus, Africans). On the shore at Linga are wharves for building boats for local traffic and the port is fairly busy, but the mountains which rise from 3,500–4,000 feet behind Linga make communication with the hinterland difficult (Lâr is 45 farsakhs from Linga).

LISAN AL-DÎN. [See *IBN AL-KHATÎB*.]

LISBON, Portuguese Lisboa, a city at the mouth of the Tagus, now the capital of Portugal, with 435,000 inhabitants; tradition ascribes its foundation to Ulysses and it originally bore the Phoenician name of *Oliippo*. Under the Romans it received the name of *Felicitas Julia* and formed a *municipium*. It was under the rule of the Alans from 407, of the Visigoths from 585 to 711 when it passed into the power of the Muslims.

For the Arabic transcription of the name of Lisbon we find the two forms *Lishbân* and *Ushbân* with or without the article (cf. especially, David Lopes, *Os Arabes nas terras de Alexandre Herculano*, Lisbon 1911, p. 58–59 and the references there given). The most usual ethnic is al-Ushbânî. Lisbon was not a large town in the Muslim period but it was nevertheless frequently described by the Arab geographers. Al-Idrisî speaks of its ramparts and its castle and of the springs of warm water which rose in the centre of the town. It is built, he says, opposite the fort called al-Ma'das (Almada), so called from the gold dust washed up on the bank by the Tagus. It is also from Lisbon that this geographer followed by several authors makes the legendary expedition of the "Adventurers" set out (no doubt to the Canary Islands; cf. above II, p. 820, s.v. *AL-KHÂLIDÎ*).

Lisbon very early (by 711) fell into the hands of the Muslims and under the Omayyad caliph of Cordova formed a part of the district of Balâta, along with Santarém and Cintra. The Arab chroniclers record several risings there which were quickly suppressed. It was however from the Normans (*Afâghû*) that Lisbon suffered most in this period. During their first invasion of al-Andalus in 229 (844) it was there that they disembarked for the first time. According to Ibn 'Idrîs, their fleet consisted of 54 galleys and 34 vessels of less

importance; the alarm was given to the caliphs of Cordova by the governor of Lisbon, Wabū Allāh b. Hāzim. Again during the invasions of 966–971, in the reign of al-Hakam II, the Normans began by ravaging the plains of Lisbon after landing at Alcaicer do Sal (*Kaṣr al-Sal Dānīl*). For further details, cf. the article *MAURIS* and the literature there quoted.

After the fall of the Omīyad caliphate of Spain, Lisbon formed part of the independent kingdom founded by the Afṣāids [q. v.] with Badajoz (Batalyaws) as capital. Under the Almoravids, it seems to have been taken for a brief period by the Christians and retaken at the end of 504 (1110) by the Emīr Sir b. Abī Bakr, at the same time as Santarém, Badajoz, Porto and Évora. It was only some 40 years afterwards, in 542 (1147) that it was finally conquered by Afonso I Henriques of Portugal with the help of a body of Crusaders who were on their way to Palestine under Arnould van Aerichot.

Reimund and de Slane, p. 172–173; E. Fagnan, *Extraits inédits relatifs au Maghrib*, Algiers 1924, index; Ibn l-Idrīsī, *al-Bayān al-mughrib*, vol. iii, ed. Lévi-Provençal, Paris 1927, index. (E. LÉVI-PROVENÇAL.)

LITHAM (A.) (sometimes also pronounced *lifām*), the mouth-veil, is a piece of material with which the Beduins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on Hariri, ed. de Sacy, Paris 1821, p. 374 a). It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf. *Dhu l-Rumma*, No. 5, 43, also No. 39, 24, and 73, 16; and the commentaries on Mutanabbī, p. 464, 27 and Hariri, p. 374, 2). It also made the face more or less unrecognisable and thus formed a protection against the avenger of blood (Goldziher, *Z. D. M. G.*, xli, 101). The *lithām* was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it; thus in the *1001 Nights* (ed. Macnaghten, l. 878) it is worn by a princess, who disguises herself as a man, and (*ibid.*, ii, 59) by a woman for similar reasons. A denominative verb has been formed from *lithām*, the fifth form of which in particular means "to put on the *lithām*" (e.g. *Aghāni*, viii, 102, 00; xxi, 35; 19; *Agāni*, ed. Kosegarten, p. 121, 23; Wright, *Opuscula arabica*, p. 111, 2; Hariri, *Maḥmūdī*, ii, 433, 2), while the eighth form in the meaning "to put on something as *lithām*" is generally used only metaphorically (see below). *Talithama* usually means a woman's veil (Cherbonneau in *J. A.*, 1849, i, 64), but *talithamat al-hayāt* is also found as the distinctive dress of a particular office under the Fātimids: their chief *kaṭib* wore it along with the *surbas* and *salimān* (de Sacy, *Chrest.*, ii, 92). In general however, the *lithām* does not seem to have been worn by town-dwellers.

The *lithām* has no considerable importance for Islam from the purely religious point of view; it is forbidden along with certain other garments for the *nuḥḥim* (Bukhārī, i, 390; below).

The custom of wearing a *lithām* was generally disseminated among the Ṣanhājī tribes [q. v.] in

N. W. Africa, who are therefore described as *lithām*-wearers, *mulaththimūn* or *mulāṭ al-mulaththimān*; as the Almoravids originated in one of their clans, the Lamīna, the *lithām* thus came to have a certain political significance. The custom of wearing a *lithām* (below the *niḥāb*, see Bakrī, p. 170) was found in other parts of Africa also, e.g. in Kānem (Makrī, i, 193, 29.) and still prevails among the Tuareg. These Africans retained their veils even on journeys into the eastern lands of Islam, where it was not the fashion, while their women went unveiled. A tradition of late invention explains these remarkable customs by a story that on one occasion during an attack on a village where there were many women but only a few men, the men put on veils and the women took up arms to deceive the enemy as to their real numbers (Goldziher in *Z. D. M. G.*, xli, 101); another story has it that after the fall of the Omīyads, 200 Omīyads escaped to Africa disguised as women and that the wearers of the *lithām* are descended from them (Wāstenfeld, *Der Tod des Hunjūn*, p. viii). According to Bakrī (text, p. 170 = transl., p. 321), they never took off the *lithām* and if one of them fell in a battle and lost the *lithām*, not even his friends could recognise him till the *lithām* was put on him again; they also called other men who did not wear the *lithām* "fly-mouthed". The Almohads, particularly Ibn Tūmart, opposed the veiling practised by the Almoravids. They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the *lithām* (Goldziher in *Z. D. M. G.*, xli, 102). Among further passages, where the term *mulaththimūn* occurs in this sense may be mentioned 'Abdallāh, ed. de Sacy, p. 483, note 48 (with other references); Fleischer, *Kleine Schriften*, ii, 243 (discusses several passages); Marquart, *Die Beninammlung*, Index, s.v. *Lithāmträger*.

The word *lithām* and its derivatives was very much used in figurative language, especially by poets. From expressions like "to kiss the lips of the beloved one, which are under their *lithām*" (Dozy, *Vitement*, p. 400; cf. *mā taḥṭu l-lithām* = the face in Mutanabbī, p. 464, 27) develops the meaning of *lithām* "to kiss" ("Omar b. Abī Rabi'a, ed. Schwarz, p. 6, 20; Ibn al-Fārid, *Diwān*, Marseille 1853, p. 125, l. 5 from below) and especially *talithama* = "to kiss one another"; *multham*, the place which is kissed (Farasdaq in Dozy, *Supplément*). A girl is given a *lithām* woven out of her own hair (*1001 Nights*, Breslau edition, ii, 32, 2); the camel has a *lithām* of foam around its mouth (*Dhu l-Rumma*, p. 76, 17); the wolf is *aghannu l-lithām* = black in the region of the muzzle (Tirmidhī, p. 4, 35; of the wolf, we find it said in *Hamza*, i, 702, 27: *lan yataḥṭithām*); the wine-jar has a *lithām*, i.e. a piece of cloth over its mouth (*multham*; *Mufaḥḥalīyat*, ed. Lyall, No. 125, 2; cf. also Akhtal, ed. Nāḥal, p. 85, 2 and 'Alkama, ed. Socin, ii, 43, on [ars]; the sun is darkened by clouds of dust and is thus given, as it were, a mouth-veil (*lithama*, Mutanabbī, p. 601, 13): "as the day (*nahār*) doffed his *lithām*" [description of dawn in the 'Arabshāh, ed. Galim, p. 64, 2 from below; cf. the commentary on Hariri, *Maḥmūdī*, p. 240, 20: *kaḥṭafa l-lithām* al-*lithām*; many titles of books also begin with *Kaḥṭaf al-Lithām*, cf. Brockelmann, *G. A. L.*, ii, 659];

the *lithām* is to be taken from the walls of buildings, i. e. they are to be exposed ('Inād al-Dīn, ed. Landberg, p. 65, 12); to doff the *lithām* of one's origin = to confess it freely (Hārūt, *Mafāhīm* 2, ii. 426, 3); the archangel Israfil has one of his four wings veiled like a vast mouth-veil (*lithām*) from heaven down to the seventh earth (Kāwīmī, ed. Wüstenfeld, i. 56, below); a voice may be hidden, *malhām* (Tarfā, ed. Alīwardī, N^o 5, 26 = Hārūt ed., 1886, p. 10); a further metaphor is found in Ibn al-Fārid in de Sacy, *Christ.*, iii. 55, verse 25.

Bibliography: I owe most of the individual quotations above to Prof. A. Fischer and F. Krenkow. In general, cf. Dory, *Vêtements*, p. 399 sq. and *Supplément*, ii. 516; on the veils of Muslim women, in general, cf. Soonek Hargrove, *Three popular dowlings described*, *Vestpr. Grähe*, i. 295-299.

(W. BJÖRKMAN)

LIWĀ' (A. *flag', from *lawā'* to "enrol") means in Turkish official terminology an administrative area, several of which form a *wilāyet* "province" and one is in turn divided into *hazā'* "districts". It corresponds pretty much to the *département* in France. It is synonymous with *sanjak* (T. *flag') and is used alongside of it. The *liwā'* is governed by a *mutasarrıf*, whence a third synonym *mutasarrıf-lik*. The institution of the *liwā'* goes back to the early days of the Ottoman empire but it was under Mahmūd II in 1834 that the present administrative organisation came into being.

(CL. HUAT)

LIWĀN (A., for *al-liwān*; Dory, *Supplément*, ii. 563) in eastern houses is a hall, enclosed by walls on three sides and open through an arch on the fourth; it is raised two or three steps and forms the focus of the house, all the rooms of which open on to this *atrium*, which is ornamented with plants and trees. This is a type borrowed from the Sassanian palaces, of which a specimen has survived to the S.E. of Baghdad, in the ruin called *Tāq-i-liwān*, "vault of Chorooses", or *Liwan-liwān*, "hall of audience". It corresponds to the *salāt* of the modern Persians. It is open on the north side to get the cool air.

(CL. HUAT)

LODI, the name of a clan of the Ghilzai tribe of Afghanistan. A family of this tribe was established in Multān before India was invaded by Mahmūd of Ghazni, for that district was ruled, in 1005, by Abu 'l-Fath Dawād, grandson of Shāhkh Humād Lodi who had established himself there, but the importance of the tribe dates from the reign of Fīrūz Tughlūk when some of its members entered India for purposes of trade, but soon occupied themselves with politics. Dawlat Khān Lodi competed with Khidr Khān [q. v.] for the throne on the extinction of the Tughlūk dynasty. Malik Bahādur Lodi took service under Malik Mardān Dawlat, governor of Multān, and his eldest son, Sulāim Khān, served Khidr Khān at Multān. After the battle on Nov. 12, 1405, in which Khidr Khān defeated and slew Malik (Ishāq Khān), Sulāim

Shāh received the title of Islām Khān and the chief of Sirhind, where he settled with his four brothers and assembled a body of 12,000 horse, mostly of his own tribe. His next brother, Kālā, had a son named Bahlūl (usually called "Bahul") in India, whom Islām Khān adopted, to the exclusion of his own son, Kutb Khān, and married to his daughter. Kutb Khān fled to Dihli and entered the service of Muḥammad Shāh the Saiyid, to whom he described his relations as a danger to the state. Muḥammad sent a force against them and they were defeated and fled to the hills, but almost immediately returned, recovered their possessions, and defeated the minister, Hīām Khān, near Sādhawra. In 1442 Dihli was threatened by Mahmūd Khaldjī II, of Mālwa, and Muḥammad Shāh appealed to Bahlūl, who demanded, as the price of his assistance, the execution of his enemy, Hīām Khān and the appointment of Hamīd Khān as minister. The feeble king complied, and Bahlūl marched to Dihli with his contingent and took command of the army. The battle with the army of Mālwa was indecisive, but Mahmūd was recalled by the news of a riot in his capital and Bahlūl was hailed as the saviour of the kingdom, and received the title of Khān Khānān and the government of the Panjāb. He shortly afterwards picked a quarrel with Muḥammad and besieged him in Dihli, but retired to Sirhind without capturing the city. In 1443-1444, Muḥammad died, and was succeeded by his son 'Alam Shāh, a feeble monarch who, after a brief and troubled reign in Dihli, retired to Badliān, which he made his place of residence. Bahlūl then marched to Dihli and 'Alam Shāh abdicated in his favour. Bahlūl ascended the throne on April 19, 1451, and reigned for thirty-eight years. He was succeeded, on July 17, 1489, by his son Sīkandar, who reigned until November 21, 1517, when he died and was succeeded by his son Ibrāhīm, who was defeated and slain by Bābar on the field of Pāntpat on April 22, 1526.

Bibliography: Niḡām al-Dīn Ahmad, *Tahqīq-i Akbari*; Khwāfī Khān, *Muntahā al-Tawārīkh*, ed. and translation by G. S. A. Ranking, all in *Bib. Ind.*, series of the A. S. B.; Muḥammad Kāsim Firāhtā, *Gulshan-i Ibrāhīmī*, Bombay 1832.

(T. W. HAIG)

LOJA (A., *Lauja*), a little town in Andalusia, 35 miles S.W. of Granada, on the left bank of the Genil at the foot of an imposing limestone mountain, Periquetes. It has now rather less than 20,000 inhabitants but seems to have been more important in the Arab period. It was the birthplace of the famous Ibn al-Khattīb Lisān al-Dīn [q. v.] who wrote an enthusiastic description of it. One can still see there the ruins of the *hijra* which commanded the town in the Arab period. It was repopulated in 280 (893) in the reign of the caliph Abd Allāh b. Muḥammad. This "key of Granada" was besieged in 1488 by the Catholic Kings who took it after a month's siege with the help of a body of English archers.

Bibliography: Yāqūt, *Muḥjam al-Buldān*, vii., p. 343; F. Simonet, *Description del reino de Granada*, Granada 1872, p. 95-96.

(E. LÉVY-PROVENCAL)

LOMBOK (usually called by the natives Tanah Sazak), the second in order of the Little Sunda Islands lying east of Java; the Strait of Lombok separates it from Bali, the Strait of Alas

from Sumbawa. A not very broad, rather flat, strip runs from east to west approximately through the centre of the island, which is in part extremely fertile and is shut in by hills on the north and south. In the north is the volcano of Rindjani, revered as holy by a large section of the population. The island is one of the richest parts of the Archipelago; the main industries are agriculture and cattle-rearing, the first being on a particularly high level. A quantity of the rice which is in part grown on fields excellently irrigated is exported.

Even if we exclude the foreign traders settled on the coast towns (especially Buginese, Arabs and Chinese) the population is not homogeneous but consists of two groups which are sharply distinguished territorially also; the smaller western part is inhabited by Balinese, the centre and the east by the much more numerous Sasak. The inhabitants of the western part are descendants of the Balinese, who came as conquerors to Lombok in the xiith and xvith centuries and gradually extended their power over the whole island; they intermarried very little with the native population, so that they do not differ very much from the people of their original home; their language is Balinese, and they profess the peculiar form of Hinduism and Buddhism which is found in their mother island, with a few exceptions (they have for example adopted a *dewa-slaw* into their pantheon and the sacrifices to this Muslim god must not include pork).

The Sasak are the true aborigines of the island; they are quiet and industrious; in their physical features they most closely resemble the Sumbawaneses and their language (not yet fully studied) shows a similarity in certain points with the Sumbawaneses. They have all adopted Islam except for the little group of the Bodha, who have remained pagans; they live quite apart from the rest of the island, especially in the northern districts of Tanjung and Bajan and on the south coast and engage in agriculture of a primitive type. They claim to be the descendants of Balinese who immigrated hither in ancient times before the great invasion; there is however no ground for this assertion; physically and linguistically they are in no respect different from the Sasak around them and the name Bodha is also found in other parts of the East Indian Archipelago as an expression used by Muhammadans to indicate groups of people who have remained pagan.

Of the earlier history of the island we only know that in the sixth century, it was a possession of the Javanese empire of Matjahahit; we have no really reliable information as to how and when it became converted to Islam. Islam probably came to Lombok from Eastern Java at the time of the decline of the Empire of Matjahahit. Evidence of a considerable Javanese influence can still be traced, and according to a chronicle in the Javanese language found in Lombok, it was Pangeran Prapen, the son of Raden Paku (Sunna Giri) who converted Lombok by force to Islam.

The Sasak are of course no more orthodox Muslims than any other people in the East Indian Archipelago, but Islam has so far influenced them that we may see in it the reason why, in spite of the long Balinese dominion, there has been no assimilation between Balinese and Sasak. They are divided into two groups or sects: *Waktu lima* and *Waktu tiga* (1810). The former, who

live mainly in the plain of Central Lombok are the Orthodox among the Lombok Muslims; their name shows that (in theory at least) they observe the obligations prescribed by Islam of performing 5 (= *lima*) *salat*'s a day. In keeping with this, the name of the *Waktu tiga* (who live mainly in the mountains) would mean that they are of the opinion that three (*tiga*, *llu* = 3) prayers a day are sufficient. This is however an improbable explanation. Many are of the opinion that the name is to be explained by the fact that the *Waktu tiga* only know of three times of prayer, namely the *salat* on Friday (or at birth), at death, and at the end of the month of fasting; others say that the full name is *waktu-llu-datu*, which is said to be an expression indicating the old paganism (the religion of the time of the three kings, namely the kings of Selaparang, Sakra and Pedjanggi). There is no certainty on the point however. In any case the *Waktu tiga* are regarded, and not without reason, by their countrymen the *Waktu lima* as half heathens. There are few mosques in their country; they leave the performances of practically all religious observances to their religious leaders (*kjahi*) and they do not observe the ordinances regarding the eating of pork, fasting or pilgrimage to Mecca. They only observe Muslim principal festivals and their marriage ceremony also shows that they wish to be regarded as Muslims. At the same time pagan sacrifices and pilgrimages (which however can also be found among the *Waktu lima*) play a prominent part in their life. In their villages, there is always in addition to the Muhammadan *kjahi* a *finangka*, i.e. one who acts as an intermediary at the worship of all kinds of spiritual powers from the world of animism. It is particularly among the *Waktu tiga* that we find the custom that the village headman keeps two coarse pieces of cloth woven out of different coloured threads (the one "male" and the other "female") to which offerings are made in cases of illness etc.; every household makes a copy on the pattern of these pieces of cloth, which are also treated with reverence.

Practically nothing is known of the early period after the conversion of Lombok to Islam; the island was divided into little principalities often at war with one another; the eastern part was under the influence of Matassar and Sumbawa, the western under the influence of Bali. In 1674 the Dutch East India Company concluded its first treaty with the princes of Lombok. Soon afterwards in 1692 took place the first serious Balinese invasion and about 1740 the king of Karangasem succeeded in bringing the whole island under his sway. Four small Balinese kingdoms then arose on Lombok which were frequently at war with one another until in 1838 the king of Mataram overthrew his opponents and ruled over the whole of Lombok. Down to 1849 he regarded himself as a vassal of the King of Karangasem on Bali; he then placed himself under the suzerainty of the government of the Dutch East Indies. The Sasak repeatedly rebelled against their Balinese rulers until finally in 1894 the Dutch intervened with the result that they conquered Mataram; since 1895 Lombok has been directly under Dutch rule and administered jointly with Bali.

Bibliography: A complete bibliography for Lombok to the end of 1919 is given in C. Lekkerkerker, *Bali en Lombok*, Rijswijk 1920.

LORCA (A., *Lorqa*), a town in Eastern Spain between Granada and Murcia, with 26,700 inhabitants. It is the ancient *Lava* or *Helioreva* of the Romans. In the Muslim period it formed part of the *Amra* of Tudmir [q.v.] and was famous for the richness of its soil and subsoil and for its strategic position. Its *hiza* was one of the most substantial in Andalusia. It is 1,200 feet above sea-level on the southern slope of the Sierra del Cano, and dominates the course of the river Guadalestín. Under Arab rule it usually shared the fortunes of Murcia and became Christian again in 1266.

LUBNAN (LEBANON). The Arabs have a somewhat confused, almost mysterious idea of Lebanon. Here they place the vojura of the *Ahdal* [q.v.]. They do not distinguish it from the Anti-Lebanon for which they have no special name. "*Qiblah* Saḥr" means to the Arabs the section of Anti-Lebanon to the north of the valley of the Barada [q.v.]. The massif of Hermon has been known since the time of Hassan b. Thabit as *Djabal al-Zubayr*; it is the *Djabal al-Sayid* of modern writers. Nor are the Arab geographers agreed about the northern boundary of Lebanon. Some include al-Lukkām (Amman) in it. This confusion has been facilitated by the vague popular appellation *Djabal*, which has been applied from the Middle Ages to the present day to the range parallel to the Mediterranean running through Syria from the mouth of the Orontes to Galilee; from this comes the name *Ahl al-Djabal*, *Djabaliyyān*, "mountaineers", applied by the Muslim chroniclers to the Nuparis, Mutawālīs, Druses etc. A hadith tells us that stone from Lebanon was used in building the

Ka'ba. This tradition perhaps explains why the Arab geographers see in Lebanon the continuation of the long arête which separates the Hijāz from Najd and Syria and Anatolia to the Black Sea. The southern frontier of Lebanon is usually made to coincide with the lower valley of the Litānī, the modern Kāsimiyya. Current usage, conforming to local tradition, makes the Lebanon lie between this river and the Nahr al-Kabrī (the ancient Eleuthera) on the north. This is the region which our historical survey will cover. The backward and the scattered population of the Anti-Lebanon has always gravitated in the orbit of the towns of Eastern Syria, while Lebanon with its towns opening to the sea and its flanks watered by the abundant rains yielded by the moisture from the sea, which it gives to the rest of Syria by its rivers, is in economic and political dependence on the centres of the ancient Phoenician country.

Lebanon is rarely mentioned by the pre-Muhammadan poets; for example by Nabigha Qhabyān, whose patrons were phylarchs of Ghassān. The name becomes more familiar to their Muslim successors, e.g. Abū Dabbāl al-Djumaḥī, Nabigha al-Shaibānī and 'Ahd al-Rahmān b. Hansān, from their attendance at the Omayyad court. Its territory, covered with forests, of mediocre fertility, difficult of access, cut up by deep valleys and torrentuous rivers, from the Arab conquest has offered a place of refuge to several small nationalities, increased from time to time by the influx of all the oppressed and persecuted.

The semi-independence which it has never ceased to enjoy has favoured its evolution on individualist lines and the local development of its communities, formed at the expense of orthodox Islam i.e. the Mutawālīs, the Druses and the Nuparis [q.v.], not to speak of the Christian sects, Malkites, Jacobites and Maronites; these last are nowhere mentioned by name by the Arab writers, who dealing with Lebanon. The degree of autonomy won by these groups, religious in their origin but finally strictly national, enables us to follow the fluctuations of Arab penetration and Muslim power in Syria.

Each sect, often each district, lived under the rule of petty native dynasties, supposed to be founded by ancestors in Damascus, Baghdad or Cairo. They received grants of investiture and were in return liable to certain obligations and military service, when the actual authority was able to force them to it. With a remarkable agility, the feudal chiefs of the Lebanon practised the art of manoeuvring through all the turnmills that saw successively installed in the east the rule of the caliphates, Saljūq Sultānate, Aiyūbids, Franks, Mamlūks and Turkish pashas.

Not realising its strategic importance, the Omayyads and 'Abbasids did not think of occupying Lebanon, still thinly populated except in the districts on the coast; they were less far-seeing than the Crusaders, who built massive fortresses on the frontier of the "Mountain": Huan al-Akrād [q.v.] and Shikaf Arnūa. This negligence enabled the Djaradims [q.v.] to enter Lebanon. The establishment of the Maronites in the upper regions of northern Lebanon must have coincided with the coming of these Anatolian invaders and have facilitated the organisation of this Christian group, which was destined to play a preponderating part in the Mountain. At the end of the ninth century,

Arabs of Tanakh, coming from the region of Aleppo carved out for themselves in southern Lebanon a principality, that of the "amirs of al-Gharb" in the middle of peoples, partly Arabized and influenced by Shi'a teaching. The development of this emirate was arrested in the eleventh century by the creation of the Frankish fiefdoms of Sayâté (Saïdâ) and Barut (Bairût). The lordships of Gibelet (Djubbil), Batroun (Bâtrûn) and the county of Tripoli depended for support on the Christians of northern Lebanon.

After the expulsion of the Franks, the Mamlûks of Egypt entrusted the defence of Bairût to the Tâshkîds. In the xiiith and xivth centuries, the rising against the Mamlûks followed by the extermination of the Mutawallî and Druse rebels of Central Lebanon made it easier for the Maronites to occupy the lands south of the Nahr Ibrahim (Adonis). In the beginning of the xvth century the Tâshkîds joined the Ottomans who were conquering Syria. Weakened by internal dissensions they had soon to yield place to the Haus Ma'î of whom Fakhr al-Dîn [q. v.] was the most noteworthy representative. In 1606 on the death of the last of the Ma'îds, their political inheritance passed to their relatives, the Banû Shihâb who came originally from the Wâdî 'l-Taim, on the western slopes of Hermon.

The fall of Fakhr al-Dîn had opened Lebanon to Turkish intrigues. They were not long in undermining the authority of the Shihâbîds, constantly struggling with the insubordination and encroachments of the Druse feudal chiefs. In the interests of agriculture the Ma'îds had encouraged the immigration of Christians from the north into southern Lebanon. This policy was intensified by the Shihâbîds who were on good terms with the Maronites. The most famous of these amirs was Bashîr [q. v.] a Christian by birth (b. 1707). Resuming the scheme of the Ma'îd Fakhr al-Dîn, he worked for half a century in forming a great state of Lebanon. Deposed in 1840 he died in exile. Direct Turkish rule in Lebanon (1840—1860) perpetuated anarchy and insecurity there and fighting between the Maronites and Druses. This ended in the massacre of Christians by the Druses and the landing of French forces to restore order. An international commission was appointed to elaborate a "Règlement Organique", the charter of a new autonomy for Lebanon, under the control of Europe. At the head of it was a Catholic governor-general, appointed for five years with the approval of the Powers in whom was centralized all the executive power. As a counterpoise to this authority, an administrative council was elected in such a way as to secure representation to the various communities. From this "Règlement Organique" arose modern Lebanon which owes to it fifty years of prosperity and peace such as it had never before known.

The Great War upset everything. Turkish forces occupied the Mountain and a Turkish governor was appointed; famine and disease soon decimated the population. On April 25, 1920, the conference at San Remo entrusted to France the mandate for Syria and Lebanon. On Sept. 1 of the same year, at Bairût, General Gouraud, High Commissioner of the French Republic, solemnly proclaimed the creation of the "Etat du Grand Liban" with Bairût as its capital. In addition to the "Autonomous Lebanon" created in 1860, this new state in-

cluded the districts of Tripoli, Saïdâ and Tyre. It stretches from the Nahr al-Kahr in the north to the borders of Palestine and is bounded on the east by the chain of the Anti-Lebanon. Grand Liban is governed separately from the "Confédération Syrienne", with which it reserves the right to conclude agreements. It is administered by a French official until a native governor is appointed. A representative council of 30 members elected by vote discuss matters of general interest and the budget.

According to the last census (1921—1922) the population is 629,000. The Christians number 330,000 of different sects of whom 200,000 are Maronites; 275,000 Muslims (125,000 Sunnis, 105,000 Mutawallîs or Shi'as, 45,000 Druses etc.); 3,500 Jews; 20,000 foreigners.

LUDD, a town in Palestine, S.E. of Yâfa, is mentioned in the Old Testament (only in the later books: Chr. ii. 33; Neh. vii. 37, xl. 35; I Chr. viii. 12) under the name of Lod, in the Greek period as Lydda; the Greek name of Diaspolis given in the Roman period did not drive out the old name, the preservation of which was helped by Acts, ix. 32 for example. It was an important place in the early centuries of the Christian era; the capital of a toparchy; it had a rabbinical school and was the see of a bishop at quite an early date. It was particularly famous for the alleged tomb of St. George above which a church was built. It was conquered with several other towns in Palestine by 'Amr b. al-'Âsî and at a later date was the temporary capital of Sulaimân whom his brother, the Caliph Walîd (705—715), had appointed governor of Filastîn, until he rebuilt Ramla, after which Lydda began to decline. In the tenth century, Mağaddasî mentions the splendid church of St. George and the Muslim legend connected with that of the dragon-

slayer, according to which Christ will one day slay Antichrist at the door of this church. After the church had been destroyed by the Fajimid Caliph Hâkim (996-1020) and rebuilt once more, it was destroyed in 1099 by the Muslims on the approach of the Crusaders, so that the victors only found the splendid tomb when they arrived. Under Christian rule Lydda again became the see of a bishop and a new church was built immediately adjoining the ruins of the old one but was destroyed by Saladin. The town never recovered from its complete destruction by the Mongols in 1271. A mosque was erected on the site of the earlier church while the ruins of the church of the Crusaders were handed over to the Greeks who restored them in modern times.

LUDDHIANA, is the name of a district and town in the Jalandhar Division of the Punjab province of British India. The tract is an alluvial plain bounded on the north by the river Sutlej and traversed by the old bed of that stream; the area is 1,455 square miles. There is some irrigation from the Sirhind Canal. The early history is obscure; Sunet is a site where ancient coins are found peculiar to the place. The tract is prominent in the annals of the Sikhs. In the year 1809 Luddhiana town became the British frontier cantonment, and the district assumed almost its present limits at the conclusion of the first Sikh War in 1849. The population of the district in 1921 was 367,622, of whom 30 per cent were Dîst Sikhs, fine men and excellent farmers. Gujjars, Arains and Muhammadan Rajpûts come next in numbers.

The town of Luddhiana stands on the Grand Trunk Road close to the Barhanullah; it is an important junction on the North Western Railway. The founders were Lodi Pathans from whom it took its name. After the first Afghan War the exiled family of Shâh Shujâh domiciled here. The population in 1921 was 51,880. Luddhiana is a busy market town famous for the manufacture of shawls and turbans, of furniture and woodwork, and for wool and silk dyeing. Military contractors supply uniforms and accessories to the Indian Army. The principal women's hospital of the Province is here, founded by the American Presbyterian Mission, which has its chief station in Luddhiana.

(S. R. WHITEHEAD)

LUHAIYA, a harbour at the southern end of the Gulf of Djibuti on the Arabian coast of the Red Sea. The little, now unimportant, town lies on what was once an island but has become joined to the mainland in comparatively recent geological times and is separated from it at high tide, while the harbour is dry at low tide. The town in Niebuhr's time had no wall around it, but there were ten or twelve towers

on the land side at intervals of 250 paces with entrances at a height above the ground reached by a ladder. The towers were armed with a few cannons. When Ehrenberg visited Luhaiya in 1825 the town was enclosed by walls. At the present day there rises behind the town a fort built by the Turks with one or two modern guns. The houses of the town are for the most part wretched little straw huts, such as are usual in Tihâna; only a few are built of stone. The harbour of Luhaiya is hardly worth the name, as the anchorage is bad and the entrance is made difficult by sunken reefs. Even quite small ships have therefore to anchor far from the town and at low water even small boats cannot reach the shore if loaded. The drinking-water is brackish and dear. The coast around Luhaiya is dry and sterile. The main industry of the population, who are mainly Arabs, but include a few Ionians was and still is fishing and trading. Luhaiya owes its importance mainly to the trade in coffee, which is brought down from the highlands, stored, shelled and sold. Near the town there are also a few coffee plantations, the produce of which is highly esteemed and used to be reserved for the Sultan of Turkey. There was and still is a busy trade with Djibda, Hodeida and 'Aden, mainly conducted by Arab sailing-ships. The principal article of export is coffee and corn is imported. Luhaiya is connected with Djibda and Hodeida by a caravan road 621 miles long. There is also a telegraph line to Hodeida. The Eastern Asia Service of the Lloyd Triestino has a three monthly service to Luhaiya.

Nothing definite is known about the origin of Luhaiya. A. Sprenger identified the town with the *Maqatta* *waye* of Ptolemy but this equation seems at best only possible. The identification of Luhaiya with the old town of Sambrechate or the harbour of Laupas or *Narvye* *zapus* which E. Glaser supports, is very improbable. Niebuhr supposes that the harbour only arose in modern times when the demands of the export trade in coffee from the interior required it. Here also, as at Mokha, the hermitage of a Muslim saint is said to have been the nucleus around which the admirals of the saint gradually collected and built the town. A chapel was built over his tomb, the vicinity of which was considered auspicious for living and dead. At the beginning of the sixteenth century the Portuguese who call the town Loya for the first time became acquainted with Luhaiya. In 1513 Alfonso d'Albuquerque entered the harbour on an expedition into the Red Sea. Luhaiya then formed part of the territory of the Imâm of San'â to whom it paid tribute. In the second half of the sixteenth century Luhaiya suffered from the raids of the Hâjjid and Bakîl tribes, who on one occasion burned it down. In spite of this the trade of the town must even then have been not inconsiderable, for about 1760 in Mawsim (April to July) it paid 3,000 dollars from the harbour revenues to the Imâm of San'â. At the beginning of the sixteenth century the governor of the Imâm of San'â made himself independent in Luhaiya; but when the Wahhabis invaded the Yemen and defeated the *ghâs* of Luhaiya, the latter went over to the victors and took from the Imâm of San'â the whole of Tihâna from Luhaiya to Bab al-Mandab along with Bîr al-Fakhî and a considerable part of the coffee-growing country. Luhaiya now seemed to

have a brilliant future before it; for it was to be the main harbour of export not only for the whole of this vast area but of the Wahhal country also and negotiations were opened with the East India Company, who were invited to establish a factory in Luhaiya. Luhaiya's prosperity was again interrupted by the invasion of Muhammad 'Alī who occupied Luhaiya in 1833. In 1869 we find it in possession of the Turks under whom the port and its hinterland formed a *şahā* in the *sanjak* of Hodeida. Luhaiya was also used by them as a base of operations against the never completely pacified highlands of 'Asir, which obtained independence with the collapse of Turkey in the world war. Seyyid 'Alī b. Muhammad al-Iḍrī, lord of 'Asir who is considerably under Italian influence, has held Luhaiya and Hodeida since 1918.

LUKATA (A.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also said to be more meritorious to leave them. The finder is bound to advertise the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Mālik and al-Shāfi, has the right to take possession of the article and do what he pleases with it, but according to Abū Hanifa, only if he is "poor"; but the use of the articles as religious alms (*ṣadaqa*) even before the expiry of a year is permitted in a preferential clause in Abū Hanifa and Mālik. If the owner appears before the expiry of the period he receives the object back, as he does after the expiry of the period if it is still with the finder; but if the finder has disposed of it in keeping

with the law, he is liable to the owner for its value; Ḍawūd al-Zāhiri alone recognised no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Ahmad b. Hanbal (in al-Bukhārī also; cf. his superscription to *Luḡaṭ*, hāḥ 1). As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of injured animals and more onerous when they are not injured. Al-Shāfi and Ahmad b. Hanbal have similarly some special regulations for articles found in the *ḥaram*, the sacred territory in Mecca, which at bottom go back to the old idea of a special right of ownership by Allah in the *ḥaram* and articles found in it.

These prescriptions of the *Fiqh* are based on certain *ḥadīth* which have been handed down with several variants (cf. al-Bukhārī, *Luḡaṭ*; Muslim, Constantinople 1329/1099, v. 133) which need not be quoted in detail here as they agree with the principles in all essentials. But it may be mentioned that in a very old stratum, later worked over, there is mention of a two or three year period. In the conception of the primitive jurists the article found is sometimes described as deposited (*ṭawāṭa*); further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the *ṣakā*; finally there is a *ḥadīth* which forbids the Mecca pilgrims (*ḥāḍirīn*) to pick up articles found at all. From the superscription by Bukhārī to *Luḡaṭ*, hāḥ 11, it is evident that found articles might be handed over or used to be handed over to a government office, their retention in the finder's case is justified by quoting a special tradition.

None of these traditions can be considered historical; at most the prohibition by the Prophet in his address after the occupation of Mecca from keeping articles found in the *ḥaram* without advertising the index (cf. above) may be genuine on account of its antiquated terminology; *Luḡaṭ* is not mentioned in the *Kurʾān*.

Sachau, *Mohammedanisches Recht*, p. 639/1097; D. Santilana, *Istituzioni di Diritto Muhammedano Malchitta*, I, p. 328—329/109. (J. SCHACHT)

LUKMAN, a legendary figure of the period of Arab paganism, who was adopted into the *Kurʾān* and later legend and poetry. The story of Lukman shows three main stages of development: I. The pre-Kurʾānic: Lukman al-Muʾnmar, the long-lived hero of the *Djāhiliyya*; II. The Kurʾānic: Lukman, the wise maker of proverbs; III. The post-Kurʾānic: Lukman, the writer of fables.

I. Lukman in the old Arab tradition.

Even the earlier legends already show Lukman in several aspects: 1. as Muʾnmar; 2. as a hero; 3. as a sage. — He is offered a long life. He chooses the duration of the lives of seven vultures; he brings up a vulture; when it dies, he keeps a second one and so on, for six vultures, which he survives, but he dies at the same time as the seventh, Lūḥād. The vulture was by far the most popular emblem of longevity among the Arabs (Ps. ciii. 4; Goldziher, *Abh. zur arabisch. Phil.*, ii., p. 11, 107); R. Basset (*Lukman Bekir*, p.

xxvii.—xxix.) finds a remarkable parallel in the interpretation given by Sidoses Apollinaris, for example, of Romulus's watching for birds: Romulus sees twelve vultures, which means the twelve periods through which Rome will endure. The *Asnâ al-Mu'minin* of Abû Hâsim al-Sijistânî gives Lukmân second place for longevity: Khidr was the longest lived man, and Lukmân the second, who lived seven times the length of a vulture's years, i. e. $7 \times 80 = 560$ years; but the figure is increased in different stories to 1,000, 3,000 or even 5,500 years. The last of the vultures reared by Lukmân was called Labad = endurance; when Labad finally lets his wings droop, Lukmân stirs him up to fly again, but in vain; Labad dies and with him Lukmân. Lukmân, as Damiri noted, was already celebrated by Nabigha. — Various adventures are ascribed to Lukmân such as the heroes of the Dîhiliya always had to go through; he was the first to punish the adulteress by stoning and the thief by cutting off his hand. — Lukmân belonged to the tribe of 'Ad. Here we have the old Arab saga coalescing with the Qur'anic legend. 'Ad, sinful like Sodom, is devastated by drought. An embassy is sent to Mecca to pray for rain and Lukmân goes with it. In the enjoyment of the hospitality given them the 'Ads forget the purpose of their journey. Reminded of their duty, one of them obtains by prayer a black cloud. This cloud brings to the tribe of 'Ad the destruction which was to be their punishment for rejecting the Prophet Hûd.

Lukmân was already known in the pagan period as a sage. His wisdom is celebrated by pre-Muslim poets (Horowitz, *Koranische Untersuchungen*, p. 133). It is natural to suggest that the old stories refer to more than one person. Lukmân's wisdom forms the transition from the Dîhiliya to the Qur'an.

II. Lukmân, the maker of proverbs.

In Sûra xxxi. of the Kur'an, Muhammad introduces Lukmân as a sage and makes him utter pious admonitions. These latter do not bear the stamp of Lukmân nor of Muhammad but belong to the common stock of proverbial sayings. A characteristic example is the following: "If all the trees in the earth were pens, and if God were to swell the sea into seven seas of ink, the words of God would not be exhausted" (Sûra xxxi. 26). This great hyperbole is found in hundreds of variants (S. Reinhold Köhler, *Und wenn der Himmel wäre Papier*, in *Orient und Occident*, ii. 346—359; *Ethnologische Mittheilungen aus Ungarn*, i. 311—323; 441—453). It is recorded that this saying arose out of a dispute with the *akhar* of the Jews. The *akhar* insisted that all knowledge was contained in the law, and the saying is directed against them. Does this really mean that Muhammad borrowed this hyperbole from the Jews, to whom it really belonged originally? In the admonition of Lukmân: "Moderate thy pace, lower thy voice, for of all voices, that of the ass is most hateful" (Sûra xxxi. 18) Rendel Harris has found the model in Akhikar: "Lower thy head, speak quietly, and look down! For if a house could be built by a loud voice, the ass would build two houses in a day".

Once Muhammad had consecrated Lukmân as the wise utterer of proverbs, everything that was thought pious or sensible could be attributed to him. Wâhî b. Munabbih is credited with saying

that he had read 10,000 chapters of Lukmân's wisdom. The Arabic collections of proverbs (notably Maïdanî) attribute much to Lukmân (see K. Basset, *op. cit.*, xlv.—liv.). Tha'labî devotes a chapter of his *Maqâlât* to the wisdom of Lukmân. Many sayings seem to link up with the Sûra of Lukmân. Sûra xxxi. 14 advises reverence for parents but warns against being led astray by parents to worship false gods. Tha'labî's authority makes Lukmân say: "Be amenable to your friends but never so far as to act against God's laws". There is much that recalls Akhikar: Lukmân teaches that the rod benefits the child like water the seed. In Akhikar we have: "Spare not thy son for strokes of the rod are to a boy like dung to the garden". Lukmân says: "When thou seest people who remember God, join them; hast thou knowledge it will be useful to you with them and they will increase it; if thou hast none, they will teach thee; when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee, and if thou art ignorant, they will increase thy ignorance". Akhikar says: "Join the wise man, then thou wilt become as wise as he, but join not the brawler and babbler, lest thou become associated with him". Lukmân gives excellent advice for one going on a journey and also adds that he should be armed, similarly Akhikar. In Maïdanî's Arabic proverbs Lukmân is credited with the following admonition: "My son, consult the physician before thou faltest ill!" This corresponds to the first saying in Ben Sira's alphabet: "Honour the physician before thou requirest him". On the other hand Lukmân's warning against hypocrisy is found in similar form in the *Disciplina clericali*.

Muslim legend is fond of making the sages and wise men of the past into prophets. But since Muhammad quotes Lukmân as a sage, the story was told that God offered Lukmân the choice between becoming a prophet or a sage. Lukmân chose wisdom and became vizier to King David, who called him fortunate: "Hail to thee, thine the wisdom, ours the pain!" Lukmân lived down to the time of the prophet Yûnus (Jonah). He is also called judge of the Jews. Muslim legend sometimes also, although very rarely, makes Lukmân a prophet and even gives him the "Modjalla" (*magilla*), the roll of wisdom (Tahari, *Annales*, i. 1208).

III. Lukmân, the writer of fables.

Lukmân was honoured by Muhammad and after him as a maker of proverbs. A few centuries later he became a writer of fables also, perhaps because *amthal* meant both proverbs and fables. Lukmân thus became the Aesop of the Arabs. Much was transferred to Lukmân that was told in Europe of Aesop. The tendencies to this can be traced quite early. While the very earliest legend saw in Lukmân the hero and Muslim legend makes him a sage, judge, vizier, or even a prophet, the later Oriental legend delights in describing him as a carpenter, a shepherd, a deformed slave, an Egyptian, Nubian or Ethiopian slave, a feature which is obviously modelled on the story of Aesop. Lukmân's master orders him to set the best before his guests. Lukmân gives them the tongue and heart of a sheep. On another occasion his master tells him to set his worst before them. Once again Lukmân sets a heart and tongue before them, for there is nothing better than a good tongue and a good

heart and nothing worse than an evil tongue and an evil heart (in Plutarch and in the *Vita Aesopi* of Maximus Planudes the tongue only is mentioned and not the heart). — Lukmān's fellow-slaves on one occasion eat their master's figs and accuse Lukmān. At Lukmān's suggestion the master makes them all drink warm water. Lukmān vomits water only, the other slaves figs and water. — Lukmān's master in his cups had wagered he would drink up the sea. Sobered he asks Lukmān's advice. The latter demands of those who had taken up the wager that they should first dam back all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries. The latter is a widely disseminated motive in fairy tales of the type of the Emperor and the Bishop (Walter Anderson, *Katze und Axt*, *F. F. Communications*, N° 42, p. 134—140, especially p. 139 where reference is made to Lukmān; Chauvin, *Bibliographie*, viii, 60—62). These anecdotes are also found in the *Vita Aesopi* of Planudes (xivth century), but they are known as early as Plutarch, *Convivium septimum*.

The older Arabic literature does not know fables of Lukmān. They first appear in the late middle ages. The Paris manuscript published by Jos. Derenbourg belongs to the year 1299 and contains 41 fables. These fables have often been published and thoroughly discussed in scholarly fashion especially by Derenbourg, R. Basset and Chauvin. Out of the 41 fables, N° 23 alone has no parallels: the thornbush begs the gardener to tend it so that kings may delight in its flowers and fruits; the gardener waters it twice a day and the thornbush overruns the whole garden. R. Basset recalls the fable of Jotham of the thornbush which destroys everything (*Judges*, ix.). All the others with the exception of the thirteenth (the midge and the bull) are found in the Syrian fables of Sophos (= Aesopus) published by Landsberg. All are found in Aesop except N° 9 (the gazelle in the well), N° 22 (thornbush), N° 24 (wasp and bee), N° 40 (the man and the snakes). It has been further observed that in these fables the very animals indigeneous among the Arabs, the ostrich, the hyena, the jackal and the camel play no part. As these fables first appear in the late middle ages there can now be no doubt that we have to deal with a selection of Aesop's fables translated into Arabic.

IV. Related legendary figures.

Lukmān is a many-sided figure: he is *Mu'ammār*, hero, sage, maker of proverbs, and writer of fables. It is no wonder then that he has often been compared and identified with other legendary heroes, Prometheus, Alkmaion, Lucian and Solomon. Abu 'l-Faraj makes Lukmān the teacher of Empedocles. Three of these equations deserve closer examination: 1) with Balaam, 2) with Akhikar and 3) with Aesop. The identification with Balaam is old. Arabic legend gives the following genealogy: Lukmān b. Ba'ūr b. Nāḥūr b. Tārīkh. It is evident that the Kur'an exegetes sought for something corresponding to Lukmān in the Bible. They found this in Balaam as the vowels *ba'āl* and *lahmān* both mean the same: "to devour". This then became a Muslim tradition, which entered the Hebrew *Mishle Simkai* where Lukmān is one of the seven wise teachers of the king's son (ed. Cassel, p. 220 sq.) and also the *Disciplina clericalis* of Petrus Alphonsus, where the correct text is "Balaam

qui lingua arabica vocatus Lucaman" (ed. Hilka-Söderhjelm, p. 3). The Kur'an exegetes had no doubt about this identity. The question arises however: did Muḥammad himself see Balaam in Lukmān? — and next: is Lukmān really Balaam? Derenbourg, Basset and Eduard Meyer (*Die Israheliten und ihre Nachbarskinder*, p. 378) answer in the affirmative. But it is quite incredible. The pre-Kur'anic tradition about Lukmān, the Kur'an Sūra, which shows deep reverence for Lukmān, have no single feature of the hated Balaam of the Bible and the Haggada. This identification was only made later by Kur'anic exegetes, who wished to connect Lukmān with the Bible at any cost, and made him the son of Be'or, i.e. Balaam, just as they sometimes made him the nephew or cousin of Job.

Lukmān's similarity to Akhikar was also noticed long ago, but it is only quite recently that the identification has found a vigorous champion in Rendel Harris, who devotes the chap. vii. of his *Story of Akhikar* to it. He bases his identification on the agreement of Sūra xxxi. 18 with Akhikar's warning about the voice of the sea, and an Arab hypotheses which compare Lukmān with other figures in legend and history, notably to the relationship of Lukmān, Akhikar and Aesop. The story of Aesop shows originally a close relationship to that of Akhikar. The later legend of Lukmān has borrowed much of the story of Aesop and thus becomes like the Akhikar story but in reality Lukmān is not directly connected with Akhikar but with Aesop.

The development of the Lukmān legend seems varied but clear. Lukmān properly belongs to the legends or possibly the history of Arab paganism. For even this period already knows the sage Lukmān. With Muḥammad he becomes the teacher of pious doctrine. Incited by the Kur'an the interpreters of the Kur'an found Lukmān's sayings in many places and found Lukmān himself in the Balaam of the Bible. He was credited with fables in addition to the proverbs and was thus made the Aesop of the Arabs.

Horowitz, *Kur'anische Untersuchungen*, Berlin-Leipzig 1926, devotes a very full section to Lukmān, p. 132—156. — On the fables of Lukmān and their many relationships see Chauvin, *Bibliographie des ouvrages arabes*, iii, 1—82. — On Lukmān-Balaam see Jos. Derenbourg, *Fables de Lukmān le Sage*, Berlin-London 1850, p. 5—50. — On Akhikar-Aesop see Noldke, *Untersuchungen zum Akhikar-Roman*, Berlin 1913, p. 61—63. — On Lukmān-Akhikar see Conybeare, Rendel Harris, Agnes Smith Lewis, *The Story of Akhikar*, Cambridge 1913, p. LXXIX—LXXXIII. (BRENNAN HELLER)

LULI, one of the names for gypsies in Persia; parallel forms are: in Persian, *Luri*, *Lori* (*Farhang-i Qajāri*); in Baluchi, *Lori* (Denys Bray, *Centre of Baluchistan*, 1911, iv, 143, gives the popular etymology from *lor* = "lot, share").

The name *luri* is first found in a legend relating to the reign of Bahram Gur (420-438 A.D.). At the request of this Sassanian King, who wished to amuse his subjects, the Indian king Shāngal (?) sent to Persia 4,000 (12,000) Indian musicians. Hamza (350=961), Berlin-Kaviani, p. 38, calls them *al-Zuff* [q.v.], Firdawsi (Mohl, vi, p. 76-77), Lūriyān: *Tha'libi* (c. 429 [1037]), ed. Zotenberg, p. 567, says that from then on descended the black *Lūri* (*al-Lūriyān al-sūdān*), skilful players of the flute; the *Muḥḥit al-Tawārīkh* (c. 520 [1226]), transl. Mohl, *J. A.*, 1841, vii, p. 515, 534, confirms this origin of the *Lūri*. The *Lūri* (plur. *Lūriyān*) are often mentioned by Persian poets. Mīrāḥīrī (Dāghān-Ghazvīn-Ghazvī, 9th/15th century), Dīnāl al-Dīn 'Abd al-Razzāk (d. in 388 [1192], *Isfahān*), Kamāl Ismā'īl (d. in 635 [1237], *Isfahān*), Hāfīz (d. in 791 [1389], *Shīrāz*) say that the *Lūri*'s are "black" (like night), petulant (*ḥāḥā*) and elegant (*shāghīl*) that they play the flute, that their way of living (*ḥanagāh* "baggage") is irregular. The Persian dictionaries explain *Lūri*/*Lūriyān* as "shameless, gay, sweet, musician, woman of light morals", etc.; cf. Vallée (the quotation from Amīr Khusrāw (d. in 725 [1325] in India), *ibid.*, s. v. *Lur* refers rather to the inhabitants of Luristan).

The origin of the name *luri* has not yet been investigated. The term seems to be applied to the inhabitants of the town of Sind which the Arab authors call *Arur* or *al-Rūr* (cf. *Arur* > *al-Rūr*; *Alūr* > *al-Lūr*). This town had been conquered by Muḥammad b. al-Qāsim before 95 (714) (*al-Balādhurī*, ed. de Goeje, p. 439, 440, 445). According to al-Bīrūnī, ed. Sachau, p. 100, 130, the town of *Arur* (*Arur*) lay 30 farsakhs S.W. of Multān and 20 farsakhs above al-Manṣūra. In Elliot, *History of India*, London 1867, i, 61, 363, the town is called *Ahor*. This town, the old capital of the Hindu rājās of Sind, is now in ruins (on the Indus, in the *taluka* of Rohri in the district of Sukkur; cf. *Imperial Gazetteer of India*, Oxford 1908, vi, 4 and xxi, 308: *Aror* and *Rohri*). The change of "Arur/Rūr into Lūr/Lūri is readily explained by the phonetic law of dissimilation of the two *r*'s especially after the change from *Aror* (Indian) to *al-Rūr* (Arabic). The descendants of the Indian musicians of Bahram Gur (i. e. the gypsies) seem to have been called after the most important town that the Arab invaders had known, and perhaps before them, the Sassanians. This explanation would locate quite precisely the original home of the *Lūri/Lūriyān*, without in any way prejudicing the ethnical relationship of this tribe.

The term *Lūri/Lūriyān* (unknown in Khurāsān, Iran, now 1914) is particularly found in the S. E. of Persia, in Kirān and in Baluchistan. *Lūri* or *Lūriyān* is also found in Turkestan; Biber, ed. Irmensky, p. 358, 457, uses "Lūri" in the sense of "player"; Abu 'l-Ghāzī, ed. Desmaisons, p. 241, 258, 276, 282, mentions in the 15th century, a Shaikhān prince of Marw and Abūwār, son of a Lūri woman. Mayew, *Indische Reis. Geogr. Obss.*, iii, part iv, p. 349, and *Geogr. Magazine*, 1876, p. 326-330: Lūri in Eastern Bakhārā; Grémard in Dutreuil

de Rhins, *Misc. scient. dans la Haute Asie*, Paris 1898, ii, p. 308: Lūri and Aghā in Chinese Turkestan; Valikhunov, *Sol'meniya, Zapiski Ross. Geogr. Obsh.*, 20 ethnografi, St. Petersburg 1904, xxix, p. 43: Lūli (sic) and Multān in Kashghār. Lastly it has been suggested that the name of the gypsy tribe in Syria, Nūrī, plur. Nawārā is derived from Lūli.

The Lūri/Lūli gypsies (cf. the reference above to their dark skin) must be clearly distinguished from the Lur [q.v.] highlanders who live in the southwest of Persia, have a fair skin and speak an Iranian dialect with no trace of Indian elements. The situation is however slightly complicated by certain minor points. In the first place the use of the terms Lūli, Lūri, Lur, etc. is not always quite clear. In the confederation of Arab tribes of Fars there is a Lur clan; Sykes, *Ten thousand Miles*, p. 330; Rūlīch, *Peyghāb v. Baluchistan*, *Iran. Geogr. Obss.*, 1902, xxxiii/1, p. 69 speaks of a Lūri section (Persian pronunciation of Lūri?) among the Lūli of Kirān. Edmonds notes the existence of a Lūri (?) clan in Luristān in the Daghānā division of the Baluchwand group. In Kurdistan there is a clan Lur-i Kulāghār (cf. SENNA).

Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, rope-dancers (cf. Čirikow, p. 277). As early as the 15th century, Shāhīd al-Dīn al-'Umārī mentions the talent of the Lurs in these directions and in our own day we find wandering troops of Lurs as far north as Tabriz where there is a permanent colony of Karāfi gypsies, professional actors and singers. It is possible that the special qualifications of the Lur and gypsy players differ somewhat; the Sarmān of Kurdistan (cf. SARPUL and SENNA) who excel in singing and dancing are not acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Lur artists belong.

There is nothing impossible in a gypsy infiltration into Luristān. Whatever was the ethnical entity covered by the name Zuff (on the confusion of the Zuff with the Lūri see above: Hamza, *Tha'libi*) the existence of Zuff colonies in Khurāsān is known as early as the time of al-Balādhurī (q.v.) (cf. Hawmāt al-Zuff between Arādīn and Rām-Hormūt; the modern town of Hindiyyān ["the Indians"] may have a similar origin). According to Balādhurī, p. 382, when in the second quarter of the first century A.D. the Zuff had apostasized from Islām, they were joined by the local Kerds, which provoked the punitive expedition of 'Abd Allāh b. 'Amīr to Ishādī (= Māmanīr, the future capital of Lur-i Bururg). The alliance of the Zuff and Kerds (= Lurs; q.v.) at so early a date is curious. Under al-Rūr, Yāqūt, ii, 833 mentions two places in Sind and a small district (*nāhiya*) under Alwāz in Khurāsān. Schwarz, *Persien im Mittelalter*, v, 665, identifies this Rūr with the district of al-Lūr (cf. LURISTAN). In the light of what has been said above one might suppose the existence in al-Lūr of a very ancient Indian colony. But as our sources contain no positive confirmation of this hypothesis (according to Ibn Hawkal, p. 176, the "Kerds" were predominant in al-Lūr) the questions of the origin of the name al-Rūr in Khurāsān, of the identity of this al-Rūr with al-Lūri and of the remoter origin of the name Lur must for the present be left open. In any case even if the name Lur came from the town of

al-Lūr, the origin of the name would not necessarily settle the question of the ethnical origin of this people.

As to the general question of the gipsies in Persia, their names in the provinces other than Kirmān and Balūčistān are as follows:

in Khōrāsān: *Kīrah-nāli* (in which a fantastic popular etymology sees *khair-i dāmār*, interpreted as "innumerable"; in Transcaucasian Turkish dialects *ghirāmal* means "vaunted"; cf. the comedians of Fath 'Alī Akhundow, q.v.);

in Astarābād and Māzandarān: *Djāgi* and *Gāodžari*;

in Adharbāidjān: *Karāci* (and *čaghatai* Turk means "faithful servant, person near the khān", Abn 'I-Ghazāl, p. 145 and Bagadow, II 45);

in Fārs (and elsewhere): *Kāzoli* (= *Kābuli*).

The names mentioned may correspond to slight local distinctions not yet fully known. Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia: *Sanādi* (?), *Kāsa-tarāhi*, "cup-makers", *Badžighi*, *Adenestri* (*Adhar-narse* ?), *Zargat-i Kirmāni*, goldsmiths of Kirmān, *Shahriyūri* (winter at Hamadān, summer near Dāmawād), *Karzi*, *Tadr-jabibi* (*dawar* + *jābi* "shop-doctor" ?), *Gāohāi*, *hāsh-hāpān* (in Turkish *hāsh* "head" + *hāpān* "he who seizes" ?), *Gāodari* (bold hunters in Māzandarān; cf. de Morgan), *Kāsi*, *Badjumbūn*. According to Newbold the Persian gipsies fall into two classes: *Kāzoli* (or *Ghurbati*) and *Gāohāi*.

As names applied to Persian gipsies in general Gobineau gives *Beshawān/Peshawān* (cf. the name of the Armenian and Transcaucasian gipsies, the *Boshjo*) and *Ođjūli* (?). The following gipsies have a general and neutral character: *Ghurbati*, "living in a foreign land"; according to Ivanow, the Persians who confuse *gh* and *g*, see in *ghurbati* an offensive allusion to the promiscuity (*ghurbat*, "relationship, consanguinity") of which isolated communities in all ages have been accused; the name is sometimes transcribed *ghurbati* and *kurbati*, *Fiyūdi* (from the Arabic *fiyūdi*, "counters"), *Ustākari*, *Aghā*, *Ghurbāl-band* ("slave-makers").

The number of gipsies in Persia may be estimated at 20,000 families, or 100,000 souls, of whom 5,000 families are in Adharbāidjān and 300-500 families in Kirmān (Sykes). The gipsies have an organisation of their own at the head of which is the chief of the Shāh's runners (*khāfir-dāgh*) under whom are the provincial deputies (*khāfir-tār*). In western Persia the gipsies are very little different from the Persian peasantry (Sykes, Ivanow). In Khōrāsān they play a considerable part in the life of the rural community as artisans, making and repairing shoes, chains, umbels etc. In Astarābād the Gāodžari are coppersmiths, carders of wool and cotton (de Morgan). Throughout Persia one sees the black tents of the nameless *lūr* who must be gipsies. It remains to be seen also if the Kurd tribes bearing names like *Kharāzi* ("turners"), *Larr-i Kulāghar* ("batters") are not of gipsy origin (cf. the article *SENNA*). In the towns, such as Sabzawār, Nihāpur and Tabriz, the gipsies have quarters of their own. There are troops of gipsy dancers and musicians in Persia but they do not seem to be very popular. Ouseley gives a description of the dances and of the marionette theatres of the Karāzi (Tabriz). The dancers and singers of the Sūmāni tribe in Kurdistan have

often been described by travellers; cf. notably: Lycklama and Nijeholt, *Voyage*, IV, p. 30-70; Cirikow, *Persian Journal*, p. 282, 290, 330; Khurshid-Esfendi, *Siyāhat-nāme-i Hindūstān*, Russian transl., p. 119; cf. T. Thomson, *The Seamen: are they Gypsies*, *Journ. Gipsy Lore Soc.*, II, 1909, p. 275-276.

The language of the gipsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seem to be rarer than in the Roman of Europe; the language of Kirmān and Khōrāsān (Sykes, Ivanow) contains a large number of unrecognisable elements. Longworth Dames out of 96 words in Sykes's vocabulary found 12 Indian, 4 Arabic, 25 Persian and 52 of unknown origin. He would regard this dialect rather as an artificial secret jargon. Denys Bray (quoted by Ivanow) in any case confirms the fact that the Lūr of Balūčistān is learned by the children as a separate language ("is at any rate acquired naturally by Lūr children, as a language for the home circle").

The Sūmāni use Kurdish mainly. According to Cirikow they are called *Dummi*, which must correspond to *Dūmān* (= *Dūm*, the name of a low caste in India from which comes the well-known name for gipsies: *Rom*). The vocabulary of the *Dūmān* (Baghdād, Aleppo?) as collected by Newbold, *J. R. A. S.*, 1856, p. 303 from an informant from Allum-kopri, is full of Kurdish words: *kāmar*, "stone", *ghat*, "salt", *dāwak*, "boy". A Kurd tribe in the east of Bōhān bears the suggestive name of *Sindi/Sandilyān* (the "Sindians"). According to the *Sharaf-nāma* the chief of the Karāzi clan (of the Zākī) had married a gipsy woman. In discussing the relationships of gipsies and Kurds, it should be remembered that in 220 (835) a section of the Zākī settled in Khānīn, i.e. at the gate of Kurdish territory; cf. de Goeje, *Mémoires*, p. 30; Taheri, III 1168.

According to Sampson, two categories of gipsy speech may be distinguished according to the fate of the primitive Indian aspirated *medial*: the one changes them into aspirated *tonnes*, i.e. Prakrit, *khāni* > *ghar* (Armenia, Europe), the other deprives them of aspiration, *khāni* > *har* (Persia, Syria, Egypt). The interest of the Persian dialects lies in the fact that Persia was the first country in which the gipsies sojourned after leaving India (probably in the Sassanian period). In the gipsy dialects of Persia, so yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Ouseley for example found among the Karāzi of Tabriz the word *kān* "sister" which must be older than *ghen* or *ken* (cf. also *ghavā* in Gobineau).

LULU', BAKR AL-DIN ABU 'L-FARĀ'IL AL-MALIK AL-RAHIM, AIBEG of al-Mawṣil. Lu'lu', who had once been his slave, had great influence with the Zangid Nūr al-Dīn Arslān Shāh I and when Nūr al-Dīn on his deathbed (607 = 1210—1211) confirmed the nomination of his son al-Malik al-Kābir 'Izz al-Dīn Mas'ūd as his successor, he appointed Lu'lu' as regent of the kingdom, while the younger son Imād al-Dīn Zangī was given the two fortresses of al-Akr and Shāh near al-Mawṣil. At the end of Rabi' 1, 615 (end of June 1218) al-Malik al-Kābir died after appointing his minor son Nūr

al-Dīn Arslān Shāh his successor and Lu'lu' his regent. When Imād al-Dīn seized the fortress of al-Imādiya in Ramādān of the same year (Dec. 1218), Lu'lu' sent an army against him. Lu'lu's troops besieged al-Imādiya but had to return with nothing effected, whereupon the other fortresses in al-Hakkāriya and al-Zawarān surrendered to Imād al-Dīn when the latter made an alliance with the lord of Irbil, Muṣaffar al-Dīn Kōkbārī. Lu'lu' sought the assistance of the Aiyūbid al-Malik al-Ashraf, who ruled the greater part of Mesopotamia, and recognised his suzerainty, whereupon al-Ashraf sent an army to Nāshīn to help Lu'lu' if necessary. In Muharram 616 (April 1219) Imād al-Dīn was defeated by Lu'lu's forces near al-Akr and had to flee to Irbil. Peace was however soon afterwards concluded through the intervention of al-Ashraf and the Caliph al-Nāṣir, but when the sickly Nūr al-Dīn died in the same or the following year and his brother Nāṣir al-Dīn Mahmūd, who was some three years old, succeeded him, Imād al-Dīn and Muṣaffar al-Dīn began to raid and plunder the district of al-Mawṣil whereupon Lu'lu', who had first sent his eldest son with an army to al-Ashraf to help him against the Franks, appealed for help to Aibeg, al-Ashraf's general in Nāshīn. Aibeg set out at once and joined Lu'lu'. On Rabi' 20, 616 (Oct. 1, 1219) Lu'lu' was defeated near al-Mawṣil; but while he was again collecting his followers around him Muṣaffar al-Dīn retired. After the conclusion of peace, Imād al-Dīn occupied the fortress of Kawṣhā, and Lu'lu' had again to appeal to Ashraf. Muṣaffar al-Dīn however induced a number of emirs, among them Ibn al-Mashṭūb, to secede from al-Ashraf and take up a position at Dunāṣir to prevent the latter's passing. The emirs however soon changed their views with the sole exception of Ibn al-Mashṭūb who went to Irbil. He was twice defeated, first by the garrison of Nāshīn and then by the troops of Farrūkh Shāh, lord of Sindjār, who took him prisoner. When he had been released, he collected a plundering horde around him and ravaged the country far and wide. He was defeated by an army of Lu'lu's and took refuge in the fortress of Tell A'far. The latter was besieged and Lu'lu' himself came up from al-Mawṣil. On Rabi' 17, 617 (June 21, 1220) he had to capitulate and Ibn al-Mashṭūb was taken prisoner and brought to al-Mawṣil. After al-Ashraf had made peace with Muṣaffar al-Dīn he handed over to Lu'lu' the fortresses of Dihūdaia, Nāshīn and the governorship of Mesopotamia, to which other fortresses were later added. After the death of Nāṣir al-Dīn (619 = 1222—1223 or according to others not till 631 = 1233—1234) Lu'lu' was recognised as Aibeg of al-Mawṣil and assumed the name of al-Malik al-Rahim. In 635 (1237—1238) he became involved in war with the Aiyūbid al-Salāh Nadjm al-Dīn. The latter took the Kh'azimians into his service and granted them Harrān and Edessa whereupon they seized also the town of Nāshīn. About three years later they were defeated by the ruler of Halab and Hims and Lu'lu' regained Nāshīn with Dīr. Lu'lu' had also to fight the lord of Halab, the Aiyūbid al-Nāṣir Yūsuf. In 648 (1250—1251) he was defeated and Nāshīn, Dīr and Karkīyā fell into the hands of the Aleppo forces. Lu'lu' died in 657 (1259) aged over 80, after recognizing the suzerainty of Hūlagū [q. v.].

(K. V. ZATTESTEIN)

LULU¹, i. A Mamlūk of Saif al-Dawla the ruler of Aleppo, visier of his son Sa'īd al-Dawla and his grandson Sa'īd al-Dawla. On the latter's assassination, he became guardian of his sons and from 394—400 (1003—1009) independent governor of Aleppo under Fātimid suzerainty; cf. the article HAMDANIDS where the bibliography also is given.

2. A eunuch and the trusted adviser of the Saljuq Sultan Ridwān of Aleppo; on the latter's death in 507 (1113) he became Atabeg of his son Alp Arslān al-Akhras (lit. "the dumb"), so called on account of an impediment in his speech. Alp Arslān who left the government in the hands of Lu'lu' rendered himself hated by his court on account of his crimes and tyrannical conduct and fell a victim to a conspiracy in which Lu'lu' seems to have had a share. To retain a firm hold on the reins of government, he appointed Alp Arslān's six year old brother Sultan Shihāb his successor who reigned in name till 517 (1123). Anarchical conditions prevailed in Syria throughout the whole period (cf. the art. HALAB). To retain his power Lu'lu' had to steer a course between the Crusaders, Syrian Atabegs and the Great Saljuq Sultan Muḥammad. He promised to hand over Aleppo to the latter but at the same time secretly sought the help of the Atabeg Toghtiklu [q. v.] of Damascus against him and of Ighāzī of Maridīn and on the other hand to prevent them becoming too strong betrayed their movements to the Crusaders who were able to inflict damage on them. He succeeded in retaining Aleppo with the help of Toghtiklu's cavalry. To raise the necessary funds to pay these and his own troops he extorted the last farthing out of his visiers and the wealthier inhabitants of Aleppo. He himself never left the citadel for fear of conspiracies. When he was at last forced in 510 (1117) to make a journey, either to take his treasures to a friend's care or to get money stored with him, his Turkish bodyguard fell upon and killed him. The latter seized his treasure and tried to take Aleppo by surprise but were defeated by the garrison and had to give up the booty. Lu'lu' is a typical example of the anarchy in Syria, at the beginning of the Crusades which was only put an end to by the energy and ability of Nūr al-Dīn.

Bibliography; cf. the art. HALAB; Kamāl al-Dīn's *Geschichte von Aleppo*, transl. by Silv. de Sacy, in Röhrich's *Beiträge zur Geschichte der Kreuzzüge*, I, Berlin 1874, p. 243, 245—251.

(M. SONCKENHOFF)

LULU^A (A. "pearl"), a fortress near Tarsūs in Cilicia, which was besieged by the Caliph al-Ma'mūn in 217 (832). It was the strongest of the Greek citadels and the one that wrought most havoc among the Muslims; it had a large garrison and was well supplied with arms. The caliph, not having succeeded in taking it, blockaded it for a hundred days with two forts, the troops of which routed the Emperor Theo-

philus; as a result of this defeat, the people of Lu'lu'a appealed to 'Uḡayf b. 'Anbasa who was their prisoner to negotiate for them and capitulated on obtaining safeguards (*amān*) granted by al-Ma'mūn.

(CL. HUART)

LUR (in Persian *Lur* with a short), an Irānian people living in the mountains in S. W. Persia. As in the case of the Kurds, the principal link among the four branches of the Lurs (Mamāni, Kūhgīlī, Bakhtiyārī and Lurs proper) is that of language. The special character of the Lur dialects suggests that the country was irānised from Persia and not from Media. On the ancient peoples, who have disappeared, become haniated or absorbed in different parts of Luristan, cf. the latter article.

The name. Local tradition (*Tārīkh-i Gushda*) connects the name of the Lurs with the place Lur in the defile of Mān-rūd. This tradition is perhaps based on a memory of the town al-Lūr mentioned by the early Arab geographers (Iṣṭakhrī, p. 195 etc.), the name of which survives in Šahr-yi Lūr (to the north of Dizfūl). There are several other place-names resembling Lur, namely Lir, a district of Qundal-Sabūr (Schwartz, *Persien*, p. 666; cf. the Kūhgīlī tribe: Lirāwī), which may be to Lūr what *gil* in Luri is to *ghil* "money" in Persian; Lurdjān (Yāqūt: Lurdagjan, now Lurdagjan) according to Iṣṭakhrī, capital of the canton of Sardin (between Kūh-Gīlī and the Bakhtiyārīs) and lastly there is a place called Lurt (Lort) near Saimara.

Mas'ūdī alone, in his list of "Kurd" tribes, speaks of the Lursiya tribe (which may mean the Lurs connected with the district of al-Lur). In the 13th century Yāqūt uses the names Lūr, Lurt to mean the "Kurd" tribe living in the mountains between Kūhistan and Isfahān; he calls the country inhabited by it *Hilāl al-Lur*, or Luristān.

These facts show the stages of evolution of the geographical term (perhaps pre-Irānian) into an ethnical name. If however we seek an Irānian etymology for the name Lūr, its connection with the first element in Lur-as (already proposed by von Bode) at once suggests itself. According to Justi, *Iranische Namenbuch*, Lur is explained by "rudhā" "red". The place-name Rūr in Yāqūt may supply an intermediary form. The *Tārīkh-i Gushda* gives a popular etymology *Lur* < *lir* "wooded hill" in Lur.

Ethnology. If the linguistic data connect the Lurs with Fārs, local tradition only regards as true Lurs the tribes who came from the defile of Mān-rūd. According to the *Tārīkh-i Gushda*, p. 539, 547, there is in the *mlāyet* of Mān-rūd a village called Kurd near which there is a defile. The place called Lur is situated in this *mlāyet* (the word means in Luri a "little ravine", cf. O. Mann). The name Mān-rūd most resembles that of Mādiyān-rūd (the word *mādiyān* is found as mān/mūn in Luri; Żukowski, iii. 158) but certain historical considerations make us look for it near Māngarra-Māngarra (cf. *Tārīkh-i Gushda*, p. 548 on the place lying between Mān-rūd, Samhā and Māngarra). The clans (*gushdā*) of the natives of Kūh-i Mān-rūd

were later called after the places where they had settled, like the *Djangu'i* (Cangrû, *Djangudi*) and the *Uari* (Avari). The governing family of the Atabegs of Little Lur belonged to the *Djangu'i* (the name of their clan, the *Salbûr*, *Salghûr* should be corrected from *Salwâr*, *Alam-âr*, p. 369; *Salwâr*, *Ali Ham*, *Tughlûk*, p. 135 and *Salawâr* in Houtum-Schindler). The *Turkish-Guide* concludes by enumerating the 8 clans (*sh'ad*) of the two principal *gûrah* and the 18 other tribes (*sh'ad*) of the Lurs.

A few names (*Mangarra*, *Anârak*, *Djandak*) correspond to modern names. Finally 4 clans are mentioned: *Sâh* (*Sân*), *Arân* (*Ashân*, *Asân*), *Ayri* and *Bibi*, who, although speaking Luri, are not Lurs; the people of the other villages of *Mânûd* were peasants (*sh'ad*).

About 500 (1106), a hundred (or 400) *Fadhwi* Kurd families arrived from Syria. They came by the north (*Shuturûn-Kûh*) and settled at first on the lands of the *Kharûshî-wazîr* (cf. the article *LUR*: *KURD*; cf. *Nûshat al-Kutûb*, p. 70 under the word *girdân*). At the beginning of the 15th (15th) century new tribes flocked to the standards of *Hasanp* of the Great Lur. Among them were two Arab tribes: *'Ukaili* (*'Akili*; cf. the place of this name below *Shahîr*) and *Hâshim* and 28 different tribes (*mutafarîk*) among whom we find the *Bakhtiyârî* (*Makhtârî*), the *Djawnîkî* (*Marîkî*), the *Gîtwand* (cf. the village near *Shahîr*), the *Djîkî*, the *Lîrîwî*, the *Mamâsî* (*Mamâsî*) etc. According to the *Sarraf-nâmâ* (t. 26) all these tribes also came from Syria. These waves of immigration must have had a considerable effect on the ethnical composition of the Great Lur. It is probable that the immigrants were Kurds and that traces of them still survived among the Kurds whom *Im Buzurg* (ii, 21-30) found at the beginning of the 15th century near *Bahbâkân* and *Râm Hormûz* when on his way to the capital of the Grand Lur. There has long been a village of Kurds on the *Djârîshî* and it had even given its name to this river. *Shihâb al-Dîn al-'Umârî* (*N. R.*, xiii, p. 330-332) mentions the existence of Lurs in Syria and Egypt and tells how *Salâdin* (563-589), alarmed by their dangerous ability to climb the steepest ramparts, had them massacred en masse. This anecdote throws a light on the causes which produced the arrival in (return to) Luristan about 600 A.D. of numerous Iranian tribes.

The southern part of Little Lur was exposed to infiltration by Kurds, especially through the valley of *Karkha* (cf. *LAK*; just to the north of *Sûs* is a tree *âzîrî Bûsû*, bearing the name of a clan of the Kurd tribe of *Djangu'i*, celebrated in the history of the *Hasanwâhid*; cf. *Im al-Athîr*, ix, 146, 219) and exposed to Turkish and Mongol invasions (cf. the desperate fighting of the Atabegs of the Lur: *Kûdik* against the *Bayân* and *Alaw* (= *Bahâlu*) Turks).

In the Safawid period, Turkish tribes were introduced into Luristan from the direction of the *Kûh-Gîllî* (where traces of them still exist) and Georgian and Armenian colonies to the north of the *Bakhtiyârî* country. On the movements of the population under *Nâdir*, the *Zemls* and *Kadjars* see below. The ethnical situation gradually stabilised at the beginning of the 19th century.

The names of the Lur tribes and groups are now quite well known and as we have lists going from 1836 to 1922 a comparison enables us to

note the changes that have taken place meanwhile. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds but the general framework of the tribal grouping remains essentially the same.

In 1881 (*Curzon*, ii, 274) there were 421,000 Lurs of whom 170,000 were *Bakhtiyârî*, 41,000 *Kûh-Gîllî*, and 210,000 *Fadhî*. According to *Rabino* this last section numbered in 1904: 31,650 tents (or 150,000 individuals) in *Pish-Kûh*, and 10,000 tents (or 50,000 individuals) in *Pusht-i Kûh* (this last figure seems too low).

The *Mamâsî* (*Mamassanî*) group includes 4 main tribes: the *Baksh*, *Djawnî* (*Djawnî*), *Dush-mansiyârî* and *Rustamî* (cf. the article *LUR*). The *Kûh-Gîllî* group (*Kûh-Gâllî*) includes 3 large tribes (*Akshârî*, *Bawî* and *Djîkî*). The first of these tribes (cf. the name of the old Turkish tribe of *Aghadjârî*) is of a composite character, for of its 9 clans four (*Aghâr*, *Begdâlî*, *Çaghata* and *Kara-Baghllî*) are Turkish (evidently the remains of the *Shah-Sewan* to whom the government of *Kûh-Gîllî* had been given under the *Safawîs*) and a fifth clan (*Tilakûhî*) bears the name of a district in Kurdistan of *Senna* [q.v.]. On the second tribe, *Bawî*, *O. Mann* notes that it bears the name of an Arab tribe of the neighbourhood of *Ahwâz*; but there is also a mountain called *Bawî* to the south of *Khurramshâh*. The third tribe, *Djîkî*, is purely Lur and is composed of two main sections: *Çarbanîs* and *Lîrîwî* with very many subdivisions. This threefold composition of the *Kûh-Gîllî* group is typical of many of the Lur tribes.

As to the *Bakhtiyârî*, *Sewyer* as long ago as 1894 said that their territory was "thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, everything appertaining to the *Bakhtiyârîs* may now be said to be known". But *Curzon's* tables (1890) are still the last word available to the student. Of the two *Bakhtiyârî* groups, *Çahâr-lang* and *Haft-lang*, the latter is the more important at the present day. The *Çahâr-lang*, who used to be in the south are now mainly on the outskirts in the district north of the northern barrier (between *Burâdjîrî* and *Golpâyagân*).

The main groups of Lur are: *Tarlân*, *Dîfân*, *Sîlîs* (cf. *LAK*) and *Hîstî-gîrwa*. The tribes of the last group are the Lurs par excellence and have important subdivisions: *Dîrgwand*, *Sagwand* etc. It is possible that the *Dîrgwand* are the real nucleus of the Lur race. Their chiefs are called *not*.

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chiefs, the Lurs proper (*Dîfân-gîrwa*) are distinguished by a more democratic feeling. The power of the hereditary families of *khâns* is based on their 'guard' (*hâstî*) but this power is considerably reduced by the authority of the chiefs of the clans (*not*). The *khâns* are forced to court the favours of these wild, petty chiefs (*Edmonds*: "uncouth headmen"); the latter are amenable to the solicitations of their neighbours and in this way the tribes are broken up and new groupings take place.

Little is known of the etymology of the Lurs. The notes of *Dubouset* (who commanded a Lur regiment in 1859), *Études sur la popul. de la Pers.*, p. 23, of *Khanikoff*, *Mém. sur l'éthnogra-*

phie de la Perse, Paris 1866, p. 15, 110 and 138, and of Danilow only touch the surface of the subject. Dahousset particularly notes the peculiar (compressed) form of the skull of the Lurs. Edmonds emphasises the difference between the Lurs and the Laks; the latter are taller, have purer features and aquiline noses. Their women are more beautiful than those of the Lurs. The hair of the Lurs is often chestnut-coloured; very heavily bearded men are found among the Lurs. (The Persians call Luristan: *ma'dan-i lûh*, "mine of beards"). The women do not seem to have such liberty among the Lurs as among the Kurds. According to Edmonds there are no cases among the Kurds of women acting as chiefs of tribes. Rot v. Hammer (II. 239) mentions under the year 1725 the warlike exploits of the two daughters of the Wali 'Ali Marikan Khan.

The domestic life and manners of the Bakhti-yāris have found enthusiastic panegyrist in Layard, Mrs. Bishop and Cooper, *Grace*, New York 1925. On the other hand the Lurs have been very severely judged by most travellers, cf. Edmonds, *Geogr. Journ.*, 1922 (*Ibid.* the speech of General Douglas who was wounded by the Lurs in 1904).

Bibliography: for the Mamsāni (cf. the article III.1) and the Kūh-Gilū, cf. especially Hassan Fakhri, *Fārs-nāma-yi Nāṣiri* on which are based Demorgny, *Les tribus du Fars*, *R. M. M.*, 1913, xxii and B. Miller, *Kednys plemena Farsa*, *Wust. zbornik*, St. Petersburg 1936, II, p. 213-218. Cf. also the lists in Bode, Layard, Shail, Baring etc. (summed up in Curzon, *Persia*, II. 317) and those of O. Mann, *Die Mundarten d. Lur-Sprache*, p. xv-xxi. For the Bakhti-yāri Rawlinson, *A March from Zohab*, p. 102-106 (cf. Ritter, *Erkundung*, IX. 210-215); Layard, *Discr. of Khuzistan* and especially *Early Adventures*; Curzon, *Persia*, II. 286-288. For the Lurs: the lists of Rawlinson (Ritter, *Erkundung*, IV. 215-219), Bode, Layard, Čirikow, Houtum-Schindler, O. Mann, *l. c.*, p. xxiii, and especially the articles by Rahmo, *R. M. M.*, 1916, and Edmonds, *Geogr. Journ.*, 1922.

Religion. The Christian and Jewish colonies (cf. the evidence of Benjamin of Tudela) settled in the village of Karbā since the Sāsānian period (cf. MĀNĀBARĪDĀN) may have left some traces in the country. A very curious tradition is the story of the conversion of the Bakhti-yāris to Christianity in the time of Constantine the Great (?) (Hamway, II. 168). A mention in the *Tārīkh-i Dīkhān-gushā*, G. S. M., XVI/2, p. 216 shows that in 650 the *malik* (lambān) had gained a footing around Gird-Kūh. The Hurufi heresy had probably also a following in Luristan, for the *marid* of its founder Faḡl Allāh who attempted the life of Sulṭān Shāhrukh in 1437 was called Ahmad Lur (Brown, *Pers. Lit. under Tartar Dominion*, p. 366). In the Safawid period the walls of the Little Lur claimed descent from 'Abdā, son of the Caliph 'Alī, whose tomb is shown near Surwān (Māsānūdhān); cf. Rawlinson in Ritter, IX. p. 402. The esoteric doctrines of the extremist Shī'a are wide spread in Luristan. The great majority of the Lak are Ahl-i Haḡḡ ('Ahl-i-lāh); q. v. The Sagwand, Pāpi and Badāzī tribes are also followers of this secret religion. In the belief of the Ahl-i Haḡḡ, Luristan is the scene of the activities of the third avatar of the divine

manifestation who is called Hādā Khoshā and numbers among his "angels" Bāhā Tahīr [q. v.]. An important sanctuary of the sect, the tomb of Shāh-zāde Ahmad (the alleged son of the imām Mūsā Kāzīm), is in the district of Kūh near Bāw (territory of Kalawand) and is kept by Salyidi of the Pāpi tribe; these Salyidi wear red turbans which recalls the predilection for red of the old Muḥammira = Khurramīya [q. v.] whose flags were of this colour.

The religion of the Lurs was so little orthodox even from the Shī'a point of view that at the beginning of the sixteenth century prince Muḥammad 'Alī Mirā had to send for a *muftī* to convert the tribes to Islām (Rahmo, p. 24). All the Lur and Lak tribes are officially Shī'a (contrast the attachment of the true Kurds to Sunni orthodoxy).

Language. Down to the beginning of the 19th century our knowledge of the Lur dialects was confined to 38 words collected by Rich, to 4 Bakhti-yāri verses in Layard and to some thirty words collected by Houtum-Schindler. As late as the *Grammaire d. Iran*, *Phil.*, 1/2, 1898-1901, p. 249, we find the thesis stated that Luri is closely related to Kurdish and may even be described as one of its dialects. The materials of Zakuwālī (collected in 1883-1886) were finally published the day after the death of the author (d. 4/3/1918). The merit therefore of having first established the important fact that Kurdish and Luri are quite separate ("eine tiefgehende Scheidung des Kurdischen vom Luri") is due to O. Mann. This scholar has shown that although there are Kurd tribes in Luristan (cf. the article I.2), the true Lurs speak dialects which belong undoubtedly to the S.W. Iranian group (like Persian and the dialects of Fārs) and not to the N.W. group (like Kurdish and the "central" dialects).

The Luri dialects which have none of the asperities of Kurdish (cf. X.2) fall into two categories. To the first belong the dialects of the Great Lur: Mamsāni, Kāhghū and Bakhti-yāri (the latter has a few insignificant peculiarities of its own); to the second belong the dialects of the Little Lur, i.e. of the Fāli Lurs.

Even the first group possesses very few special features compared with modern Persian. From the point of view of phonetics: *-am* at the end of a word becomes *-em*, *-um* (*asthānān/isthānūm; idām/ādhām*); *h* changes into *l*: *pūl/pil*; intervocalic *d* gives *dh* (*y*): *midāhān/ldhān*; the combination *-kht* *st* give *-ādh* and *-kt* (*f*): *dhādhādhādhā, rāst/rāst*; initial *dh* becomes *h*: *dhānā/honā*, etc. Peculiar to Bakhti-yāri are the change of intervocalic *w* to *z*: *ghāwān/ghāwān* and the occasional change of *dh* to *z*: *lāz = lādhān*. It is remarkable that some of these phonetical peculiarities were long ago noted by Hamedallāh Mustawfī (*Tārīkh-i Gushā*, p. 537-538). He says that Luri (although full of Arabic words) does not have the peculiarly Arabic sounds, like *kh*, *gh*, *ch*, *f* and *z*. Inflection: Plural in *-ghā, -ghāl, -āl, -ā, -āghā, -āghāl*; accusative in *-ā, -ā* instead of *rā*: *ghānā, ghāl*; genitive in *-ā, -ā* instead of *rā*: *ghānā, ghāl*; formation of the present: *l* instead of Persian *sh*: first Persian plural ending in *-ān* (*n*): *lāghānān* = *lāghān*. Luri usually forms the pretérito of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fārs) which

give the preterite a passive construction. Vocabulary. In the present and preterite stems Lur usually follows Persian but we find stems and words unknown in Persian: *zadnam*, *zadnam*, "to throw"; *tar*, *tarum*, "to be able"; *ta*, "eye", etc. From the Mongol period, Lur has kept several expressions like: *zishmal*, "chief of a clan", in Mongol, *zhishmal*, "official"; *zairul*, "guard of the khan", in Eastern Turkic "camp, laager", cf. Budagow, II, 102; *kāran*, "encampment", in Mongol, *sharin*, "camp, tent".

As to the Feili group, their dialect differs very little from ordinary Persian (Mann: "weiter nichts als ein stark abgeschwächtes Persisch").

There are in Luristan a few islands of Kurds of some importance. Such are in the north the Lak tribes (q.v.). Among the Feili, the Mahli group (on the frontier of Kirmanshāh, at Huzailān, and further south) speaks a southern Kurdish dialect like that of the Kalhur. The Kurdiqūshān group (to the south of Pusht-i Kūh) speaks a "kurmandji" Kurdish. Linguistic conditions in the Pusht-i Kūh still require further study.

Mann, *Die Mundarten d. Lur-Sprache im süd-west. Persien, Kurd. pers. Forschungen*, Berlin 1910, part II. (bibliography, list of tribes, Mamāsanī, Kūh-gāhī, Bakhtiyārī and Feili texts); D. L. R. Lorimer, *The Phonology of the Bakhtiyārī*, publ. by the R. Asiat. Society, London 1922; Zukowski (J. 4. L. 1915), *Material d'un dialecte pers. nord-est*, III: dialects of the Bakhtiyārī Carlang and Haftlang, Petrograd 1922 (texts collected in 1883—1886, vocabularies Bakhtiyārī-Russian and Russian-Bakhtiyārī); Hadad in the preface to O. Mann, *Kurdisch-Persische Forschungen*, Berlin 1926, III: On the Mamāsanī and Kūh-gāhī materials of Romakewicz, cf. *Bull. Acad. de Russie*, 1919, p. 452.

Literature. The Lar tribes and especially the Bakhtiyārī have a rich popular literature, fairy tales, epic fragments celebrating the exploits of their heroes (like Muhammad Taqī Khān Carlang and Hajjī Shāhī Haft-Lang), lyrics, songs sung at marriages (*shāhād*) and cradle-songs (*lāla*). These pieces are often pretty and full of sentiment; cf. the collections by O. Mann and Zukowski (the latter published an article on Persian and Bakhtiyārī lullabies in the *Journal. Mus. Navarin*, *Paris*, Jan. 1889); D. L. R. Lorimer and E. O. Lorimer, *Persian Tales*, London 1919, p. 197—351; *Bakhtiyārī Tales* (translations only).

There are also Lur poets writing in the established literary forms: Humān Kālī Khān Haft-Lang (killed in 1882), Nadjmā Mamāsanī, Daftari, Fāyī (still alive in 1902), Isādī (d. 1905), 'Alī Asghar Khān Nishāwandī (cf. O. Mann). A *Madrigal-nāma-yi Bakhtiyārī* by Shāhī 'Alī Akbar Mu'ammam was liturg. at Teherān in 1314. A *ghazal* by Mullā Zulf 'Alī Kurānī was published by V. Marr in the *Comptes Rendus de l'Acad. de l'U. R. S. S.*, 1932, p. 55—58; according to V. Marr a *naghma* of Bakhtiyārī poets compiled by 'Omām-i Samānī is in the library of Sālū-i Fāthī. Another similar *naghma* comes from the pen of Ahmadiyī Bakhtiyārī.

History. On the participation of the tribes of Khūstān and Fārs in the fighting between Arabs

and Persians in the early centuries of the Hijra cf. the article *KUAYN*. The Caliphs interfered directly in the affairs of the country, especially in Lurī Kūhī (q.v.). The fortunes of the Lurs were more closely associated with the Iranian dynasties ruling in Khūstān, at Shīrās, Isfahān, Hamadān and on the Zagros: the Saffarids, Buyids, Kākawhids, Hasawahids and their successors of the family of Abu 'l-Shawh (cf. the article *KUAYN*).

We have coins of the Buyids struck at Idhād (Gordrington). In 323 the Buyid army marched through Luristan (Sūs — Shāpūr-kh'ast — Karadī). The Hasawahid Kaḍa whose capital was at Sarmādj (south of Bisitūn) extended their dominions into the valley of the Karḥa. Shāpūr-kh'ast (= Khurramābād) formed part of their possessions about 400 (1009) (Ibn al-Athīr, ix, 89; *Zuḡarī* *et al-Ummī*, ed. Amedroz, II, 291, iii, 451). The Kākawhid Garshāp sustained a siege by the Saljūqs in Shāpūr-kh'ast (434 = 1042). The ends of this last dynasty later settled in northern Luristan: the family of Zangī b. Barak in Shāpūr-kh'ast before 499 (1105), Hūsam al-Dīn Alpaghshāh at Dīl-i Māhīl on the Karḥa before 549 (1154) (*Kāshān al-Sūfī*, G. M. S., p. 285). A Turk Hūsam al-Dīn Shūbā or Aghar is mentioned as lord of Luristan and of a part of Khūstān between 547 and 570. A long inscription (Kāfī?) on a stone near Khurramābād is still undeciphered (cf. a copy in von Bode, II, 298; Rawlinson thought he recognised in it the name of the Atābeg Shūbā al-Dīn but according to Curzon it has an earlier date [517 = 1123]).

In any case all attempts from outside to subdue Luristan or to take parts of its territory affected the tribal system very little, the development of which came to a head at the coming of the Atābegs.

The principal source for the domestic history of the country is the *Ta'rikh-i Gushda* (750 = 1330) based in turn on the *Zubdat al-Tawārīkh* of Djamāl al-Dīn al-Kāshānī (of which the Preussische Staatsbibliothek only has the first volume, N° 368 of Petrich's Catalogue). The *Madghūl al-Ansūd* (c. 745) is based on independent oral tradition but is less accurate. The *Dīkhān-nāma* although late (its author Kādī Ahmad died in 975) uses unpublished data. The *Sharaf-nāma* (1105 = 1596) is based on the *Zubdat al-Tawārīkh* or perhaps a good copy of the *Ta'rikh-i Gushda*. According to these sources which supplement the statements of the Arab geographers, the situation in Luristan about 300 (912) was as follows:

The Shāh (q.v.) — who are not mentioned by the Arabs before the Mongol epoch — occupied a part ("half") of Luristan. The wāliyy of Shūbān proper (*Ta'rikh-i Gushda*, p. 537 and 539, 23) had a governor named Nadjm al-Dīn Akbat (according to the *Madghūl al-Ansūd* the title Nadjm al-Dīn was hereditary among the Shāh) while the Lar territory under the Shāh (probably Kūh-Gūh) had a pishwā Saif al-Dīn Māhām whose family had been prominent in the country since the Sāsānian period; he was of the Rūshān tribe which the *Ta'rikh-i Gushda* mentions among the Lar tribes. The rest of Luristan was ruled by a family of Lar princes (independent of the Shāh) of whom Badr ruled in the Great Lar and his brother Manjūr in the Little Lar. Their dates are uncertain. Badr's successor was his grandson Naṣr al-Dīn Muḥammad

U. Khalil b. Badr (according to the *Madjid al-Dawla*, Nagr al-Din was a nephew of Aserang [Rang] b. Muhammad b. Hilal). Nagr al-Din was deposed by the Fadlavi Kurds who founded the dynasty of the Atabegs of the Great Lur and relied for support on tribes who came from outside Laristan (cf. above under Ethnology). The same Fadlavis drove the Shal out of their settlements.

We know nothing of Maufar, brother of the above mentioned Badr. The tribes of Little Lur were directly under the caliphs and in the north were subjected to the invaders. The founder (about 580) of the native dynasty of the Atabegs of Lar-i Kāchik [q. v.] had to dispose of a rival Surkhāb b. 'Aiyar (probably a scion of the dynasty of Abu 'l-Shawk which was called 'Aiyar/Annar; cf. the article KURDS).

The history of the two dynasties of the Atabegs is filled with feuds, murders and executions but in domestic affairs the state of the country was fairly prosperous. The Atabegs built bridges and madrasahs (Ibn Battuta) and secured a peaceful existence for the inhabitants (cf. *Ta'rikh-i Gusha*, p. 550). The revenues of each of the two Atabegs were estimated at a million dinars while each of them paid to the Mongol treasury a tribute of 91,000 dinars only (*Nusbat al-Kalab*, p. 70).

In the interval between the Mongols and the rise of Timur, the two Atabegs were vassals of the Masafarids. In 788 and 795 Timur ravaged Little Lur but treated the lord of Great Lur more kindly. In 795 Timur passed through Kūh-Gill and Shalistan. The Timurids (cf. the article *BARBARIS*) consolidated their power in Laristan and in 837 the last Atabeg of the Great Lur disappeared.

Safawid period. The lords of the Little Lur maintained their position and by intrigue even succeeded in extending their power over the plain to the west of the mountains of Push-i Kūh. After the execution of Shah-wardi Khān, Shah 'Abbas installed in his place a waft descended from a lateral line of the old family. The possessions of this Waft, Husain Khān, were, however, somewhat reduced.

After the disappearance of the dynasty of the Great Lur the power had passed to the chiefs of the tribes composing this federation. Under Shah Tahmasp we find the title of Sardar of the local *atlas* conferred on Tādj-mir, chief of the principal clan, the Astaraki. Tādj-mir, having neglected his duties, was executed and replaced by Mir Djahāngir Bakhtiyari (the Astaraki and Bakhtiyari had come to Laristan after 600; cf. *Ta'rikh-i Gusha*). Djahāngir under the guarantee of Shah Rustam of the Little Lur pledged himself to supply annually to the Safawid treasury 10,000 mules. In 974 the governor of Hamadan was sent to remind him of his obligation (*Sharaf-nama*, I, 48). Henceforth the Bakhtiyari tribe becomes of the first rank and, as usual, gives its name to the whole confederation.

As to the Kūh-Gill territory, it was governed by Khāns of the Turkoman tribe (Shāhsewen) of Afshar settled among the Lurs. In 988 (1580) a dervish impostor claiming to be Shah Isma'il II had a considerable success among the Džaki, Džawānīki and Bandūmī tribes who killed several Afshar governors. In 1005 as a result of the excesses committed by the Afshars as well as by the Lurs, the governor of Fars, Allah-wardi Khān, established the direct centre of his government in Kūh-Gill (*Ta'rikh-i Alam-ara*, p. 198, 358).

We do not know under what circumstances at the end of the Safawid dynasty (*Farrah-nama-yi Nādir*) the group of Mamūsanī tribes, who had migrated into the Great Lur (after 600) occupied the ancient Shalistan (cf. *IBUL*).

After the Safawids: During the troubles provoked by the appearance of the Afghans before Isfahān, the waft of Laristan, 'Alī Mardān Khān Feili (a descendant of the Husain Khān appointed by Shāh 'Abbas), played a considerable part. With 5,000 of his men he took part in 1135 (1722) in the defence of the capital. He was even appointed commander-in-chief of the Persian troops but the other Khāns refused to take orders from him. When the Turks invaded Persia in 1725 'Alī Mardān Khān abandoned Shuramābid (which was occupied by Ahmad Pašja) and retired to Khūstān from which he undertook a diversion against Baghlid. The Turks who had gone through the Bakhtiyari country and reached Firūzān had to retire. Cf. 'Alī Hazīn, *Ta'rikh-i Afshar*, ed. Balfour, London 1831, p. 175, 174, 137, 148, who was an eye-witness of the events; Hanway, *The Revolutions of Persia*, II, 135, 159, 168, 238; Malcolm, *History of Persia*, London 1829, II, 60-61; von Bode, *Travels*, II, 281-283; Hammer, *G.O.R.*, IV, 227.

About the same time several Bakhtiyari Khāns (Kāsem-Khān, Safi-Khān) are mentioned as resisting the Afghan and Ottoman invaders but they did not agree well with 'Alī Mardān Feili. In 1137 (1724) 'Alī Muhammad Husain Khān Bakhtiyari recognised as his suzerain a certain pretender who claimed to be prince Safi Mirza. The latter's headquarters were in Kūh-Gill; he was not taken till 1140 (1727) (Hanway, II, 168, 238; Mahdi-Khān, *Ta'rikh-i Džakān Gusha-yi Nādirī*, Tabriz 1284, transl. into French by Jones, London 1770, p. xxvii). The Afghans do not seem to have penetrated into the Bakhtiyari country and their expedition in 1724 against Kūh-Gill was a fiasco. (v. Hammer, II, 210; Malcolm, *op. cit.*, II, p. 449). By the treaty of 1140 (1727) the Afghans agreed to cede Laristan to Turkey with other western provinces. The Turks kept it (nominally) till 1149 (1736) when Nādir re-established the status quo (Hanway, II, 254, 347; von Hammer, *G.O.R.*, IV, 235, 312).

Under Nādir a certain Turkoman chief named Hābi Khān Čapushlu (Čawushlu) was appointed beglarbeg of Laristan-i Feili. On the other hand 'Alī Mardān Feili was entrusted by Nādir with diplomatic negotiations in Constantinople. Nādir in 1732 passed through Kūh-Gill with his troops where Muhammad Khān Balūči (the claimant to Shirāz) was defeated. The local Afshars had to support Nādir, who was one of their tribe. Several expeditions were sent against the Bakhtiyari among whom a new chief 'Alī Murād Mamūwand (Čahār-lang) had collected together the malcontents. In 1732 Hābi Khān Čapushlu was sent against him for the first time. In 1149 (1735) Nādir Shāh took the field against him in person going via Qizilāh and Barburūd. The Bakhtiyari country was several times ravaged but the main blow was directed against the little explored country south of Sūtmān-kūh. 'Alī Murād was captured and executed. The Bakhtiyari were decimated and deported to Džam and Langer (in Khūstān). A little later a Bakhtiyari detachment distinguished itself in the assault on Kandahār (Mahdi Khān,

op. cit., p. 116, 134, contains interesting geographical details; transl. Jones, I, 185, II, 18; Ali Hāzin, p. 231, 253; Malcolm, II, 21).

The deported Bakhtiyār returned from Khuzistān immediately after the death of Nādir (*Ta'rikh-i Afāq Nādirīya*, ed. Mann, p. 26) and when the dynasty of the latter was extinguished the Bakhtiyār chief 'Alī Mardān Khān (who is not to be confused with the two Wāhs of Luristān-i Feili) attempted to play a big part. In 1163 (1750) along with Karīm Khān Zand he set up at Isfahān a scion of the lateral line of the Safawids (Alī Dāwūd under the name of Ismā'īl III). The career of "guardian of the sovereign" noted by Nādir seemed to be certain for him also but Karīm Khān gained the upper hand; the troops of 'Alī Mardān who included Lak of the tribes of Kāhur and Zangana were defeated in 1752; he escaped to Baghdad but died there by the hand of an assassin; cf. Mirzā Sādiq, *Ta'rikh-i ghilz-guzāh*, quoted by Malcolm, II, 61 and note 7; Hammer, *G.H.R.*, IV, p. 475, 477; R. S. Poole, *The Coins of the Shahs of Persia*, London 1887, p. xxxv; Curzon, II, 289.

Karīm Khān [q. v.] who had disposed of his Bakhtiyār rival was himself a Lak of the tribe of Zand, settled in the immediate neighbourhood of Luristān-i Feili. On the movements of population in his time, cf. the articles *KURAN* and *LAK*. In 1200 (1785) when Qasr Khān Zand had to fall back on Shūsh a number of Lurs and of Turks assembled at Isfahān under former partisans of 'Alī Mardān Khān but the town was soon occupied by Akā Muhammad Qājār who had nothing better to do than attack the Bakhtiyār ('Alī al-Karīm Shirāzi, *Ta'rikh-i Zandīya*, ed. Beer, p. 29; Malcolm, *op. cit.*, II, 179 sq.) which injured his popularity among the tribes.

The Lur Bakhtiyār country was never completely assimilated during the century and a half which the Qājārs reigned. A résumé of the history of the Bakhtiyār in the 19th century has been given by Curzon in Ch. xlv. of his *Persia*. At first the Kunneri family, descended from the brother of 'Alī Mardān Khān (cf. above), came to the front but the expedition of the governor of Isfahān Manūčihr Khān Mu'tamid al-Dawla (whose real name was Vaniholopow, he was an Armenian from Tiflis) in 1841 put an end to the career of the Bikhāni Muhammad Taqi Khān and the family did not recover. About 1850 the Bakhtiyār-wand (or Baidarwand, a family which claimed to be descended from a shepherd named Tāpī) rose to prominence in the Hāshang group and in spite of the assassination in 1882 of its chief Husain Kāli Khān (Hāshangī lkhām) by order of prince Zill al-Sulaym retained its wealth and its importance. The Bakhtiyār played a considerable part in the Persian revolution which ended in the deposition of Muhammad 'Alī Shāh Qājār in 1909. The Bakhtiyār country all this time enjoyed perfect autonomy under the rule of its *khāns* and *shāhs*.

The centralising efforts of the Qājārs had more effect in Luristān-i Feili (formerly Lar-i Kūsh) in as much as, as a result of the governorship in Kirmānshāh of the energetic prince Muhammad 'Alī at the beginning of the 19th century, the old family of the *mīrāns* of Luristān found its rights reduced simply to the possession of Pish-Kūh (q. v. and *Chirkow*, p. 227). The Pish-Kūh formed the Persian province of Luristān. Muham-

mad 'Alī Mīrān with troops and artillery marched through this province. In 1836 Rawlinson followed him at the head of his Gurān regiment. After the famous expedition of Manūčihr Khān (1841), his nephew Sulaimān Khān Sahām al-Dawla, governor of Khuzistān, maintained order in Luristān but for the second part of the 19th century Luristān was plunged more or less into a state of anarchy. It was not till 1900 that prince 'Ain al-Dawla was able to restore order in Luristān and at this time several explorers travelled freely in the disturbed province. But in November 1904 two British officers (Col. Douglas and Capt. Lorimer) on their way to Khurramshād were attacked and wounded by Lurs. A considerable agitation was stirred up among the Lurs (and in western Persia generally) by the appearance among them of the rebel prince Salār al-Dawla (several times since 1905). In spite of the efforts of the Persian government Luristān remained closed till 1917, when with the help of foreign representatives several caravans went from Dizful to Burtūjdīd. About the same time the Persian government conferred the rank of *valī* of Pish-Kūh on Naqar 'Alī Khān Amrā' (cf. the article *LAK*); cf. Edmonds in the *Geogr. Journ.*, 1922.

It is only since the accession of Rida Khān (later Shāh Rida Pahlawī) that the situation in the region inhabited by tribes of Lur origin changed radically and the authority of the Central Government enforced respect for itself through the whole of the south-western provinces.

(V. MINORSKY)

LUR-I BUZURG, a dynasty of Aikbēgs which flourished in Eastern and Southern Luristān between 550 (1155) and 827 (1423) the capital of which was Ishādī (= Mālamīr; q. v.).

The eponymous founder of the dynasty, also known as Faqlawī, was a Kurd chief of Syria named Faqlōya. His descendants (the *Qasbiyān*—see mentions 9 predecessors of Abū Tāhir) migrated from Syria and passing through Masyāfīkīn and Ādharbāydjān (where they made an alliance with the Amra Dīwādī [?] of Gilān) they arrived about 500 (1006) in the plains north of Āshurān-Kūh (Luristān).

Their (1) chief Abū Tāhir (b. 'Ah) b. Muhammad distinguished himself in the service of the Salghurid Sunqur (543—556) in an expedition against the Shāhānkāra [q. v.]. As a reward Sunqur gave him Kūh-Gillīya and agreed to send him to conquer Luristān. He succeeded in this. Abū Tāhir assumed the title of Aikbēg and later quarrelled with Sunqur and made himself independent (c. 550). (The *Maqāna al-Anālī* seems to confuse several individuals under the name Ka'id 'Alī, to whom it attributes the following successes: the defeat of the Shāl [q. v.], the deposition of Nāqir al-Dīn, last descendant of Badr, ruler of Luristān, and the defeat of the Khuzistān troops commanded by the Turk Eshek).

Under the son of Abū Tāhir, (2) Malik (sic) Hāzrasp (600—626 or 650?), Luristān prospered and new Arab and Iranian tribes flocked into it. Hāzrasp drove out of Luristān the last remnants of the Shāl and invaded Luristān proper. The Shāl migrated to Fāz. Hāzrasp disputed with the Salghurids the possession of the fortress of Māndjāht (Mungāht, S. W. of Mālamīr). The possessions of Hāzrasp were extended up to a distance of 4 farsakhs from Isfahān. The Caliph

Nasir (575-622) confirmed to Hazrasp the title of Atābeg. On the other side Hazrasp maintained friendly relations with the Khwarizmshāh Muhammad and gave his daughter in marriage to his son Ghiyāth al-Dīn (*Djihad-nama*, G.M.S., XVI/2, p. 113, 204). [The *Djihad-nama* mentions two sons of Hazrasp: 'Imād al-Dīn (d. 646) and Nusrat al-Dīn Kalha (d. in 649); the former bought Zarda-Kūh, where several members of the family were afterwards interred].

(3) Tikla (c. 655-656), son of Hazrasp and his Salghurid wife, successfully withstood four attacks on him by the Salghurid Atābeg of Fārs, who was indignant among other things at the expulsion of the Shāl from Luristān. Tikla took from Hūmā al-Dīn Khalīl (d. in 640) certain districts of Lur-i Kūsh. He defeated the generals sent against him from Khūristān by the caliph. During the Baghdād campaign of Hūlāgū Khān (655), Tikla accompanied him in Kūbūkā-nōin's division (*sumas*). He did not however conceal his feelings about the treatment inflicted on the caliph and Muslims. Hūlāgū took umbrage at this and Tikla fled to Luristān and shot himself up in Māndjast. Hūlāgū pardoned him but later changed his mind and had him executed in Tabriz. Tikla was buried at Zarda-Kūh.

(4) Shams al-Dīn Alp Arghūn succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence was at Ishādī and at Sas (probably Shān on the Kārn above Shāstār) and his summer one at Dīy-i sūd (on the upper waters of the Zarda-rūd) and at Bāruft (source of the Kārn).

His son (5) Yūsuf Shāh had spent his youth with Abaka-Khān (663-680) and even after appointed in his father's stead remained at the Mongol court with 200 horsemen. He took part in the war against Turak-khān (q. v.) and distinguished himself in a skirmish with the Dailamites. To the possessions of Yūsuf Shāh Abaka added Khūristān, the region of Kūh-Gillīya and the towns of Fīrūzān (7 farsakhs above Isfahān) and Dīr-bādshāhān (Gulpaygān). Yūsuf Shāh went to Kūh-Gillīya and attacked the Shāl settled in the modern Mammasant country east of Kūh-Gillīya. After the death of Abaka, Yūsuf Shāh was forced against his will to go with 2,000 cavalry and 1,000 foot to the help of Ahmad Takūdā. The latter was defeated (685) and the Lurs retreated from Tāms to Nānāz across the desert where the majority died of thirst. After the accession of Arghūn, Yūsuf Shāh went to pay him homage and interceded on behalf of the former vizier Khwādja Shams al-Dīn who had taken refuge in Luristān (cf. d'Osseson, iv, 5).

His son (6) Afrāsiyāb sent his brother Ahmad to the court of Arghūn while he himself remained in Luristān where he put to death the members of the former vizier family. Their relatives having taken refuge in Isfahān, Afrāsiyāb sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghūn (690). The Lurs killed the Mongol governor of Isfahān. Afrāsiyāb appointed members of his family to govern in Hamadān, Fārs and in the territories reaching to the Persian Gulf and even began to march on the capital. The Mongol general Amir Turak was defeated at Kūhrūd (Kohrūd, near Kāshān). Kaikhatū Khān sent Mongol troops against Afrāsiyāb and troops from Lur-i Kūsh. Afrāsiyāb shot

himself in Māndjast but after some time went to Kaikhatū who pardoned him. Returning to Luristān, Afrāsiyāb massacred his own relatives and a number of the notables. Ghāzār Khān (694-703) at first showed himself favourable to Afrāsiyāb but in 696 on the complaint of the Amir Hūrūdāq of Fārs, Afrāsiyāb was tried and executed at Malāwand (?) of Fārs.

The rank of Atābeg was next conferred on his brother (7) Nusrat al-Dīn Ahmad (from 695 to 730 or 733) who had spent most of his life at the court of the Ilkhāns. According to the *Maqna'at al-Ansāb* he introduced Mongol institutions (*āyāt-i monghāl*) into Luristān. Hamdallāh Mustawfī praises his able and prudent administration which repaired the damage done by Afrāsiyāb. He was a friend of men of religion and several books were dedicated to him, like the *Tārīkh Ma'ān* fi *Ahwāl-i Malak-i Isfahān* of Fāzī Allāh Karwīnī. The *Maqna'at al-Ansāb* gives him the title of *pir*. According to Ibn Battūta he built 160 madrasas ("hermitages") of which 44 were at Ishādī and he had roads cut through the mountains.

His son and successor (8) Kukū al-Dīn Yūsuf Shāh II (733-740) was also a just ruler. His lands (*Maqna'at al-Ansāb*) extended from Būra and Khūristān to Lālamūstān (?) and Fīrūzān. He was buried in the madrasa of Ruknābād.

His successor was his son (according to Ibn Battūta his brother) (9) Muza'ffar al-Dīn Afrāsiyāb II (Ahmad). Ibn Battūta travelling via Maḡal-Rāms-Tustar, visited the capital Ishādī or Mālmir. He found the prince given to wine. The Arab traveller describes the peculiar customs of the Lurs which he witnessed at the burial of the son of the 'sultan'. The latter's possessions included Tustar (Shāstār) and extended to Garwā al-Rūh (the modern Kahravākh in Čarmāhāl west of Fīrūzān). During the ten days the Arab traveller took to cover this distance he found shelter every night in a madrasa. At the same time (740) Hamdallāh Mustawfī mentions among the possessions of the Great Lur Dīshālāq (apparently this district N.E. of Luristān and west of Gulpaygān).

Next follows an obscure period. According to the anonymous historian of Mirzā Iskandar, the successor of Afrāsiyāb was his son (10) Nawr al-Ward ("rose-bud"), who ruled from 736 (?) to 756 and dispipated the treasures of his ancestors. According to the *Djihad-nama*, Muhammad Muza'ffar of Fārs (715-760) learning of his dealings with Abū Ishāk Indjū had him blinded at Sas in 756. His cousin (the *Djihad-nama* has: nephew) (11) Shams al-Dīn Pashang b. Yūsuf Shāh II (?) succeeded him and ruled from 756 to 780. At this time Luristān became involved in the civil wars of the Muza'ffarids. When Shāh Mansūr, making Shāstār his headquarters began a series of raids on the lands of Pashang, Shāh Shudjā' (elder brother and rival of Mansūr, d. 786 = 1384) came to the help of Pashang. We have coins of 762 and 764 struck at Ishādī in the name of Shudjā' (S. Lane-Poole, *Cat. of Oriental Coins in the Brit. Mus.*, vol. vi, [London 1881], p. 335, 237). After the death of Pashang a struggle began between his two sons (12) Malik Pīr Ahmad and his younger brother (12bis) Malik Hushang in which the latter was killed. (According to the anonymous historian of Iskandar, if he has been rightly understood by Howorth, Ahmad and Hu-

shah were sons of Nawr al-Ward and the former was the immediate successor of his father). Shah Manjūr drove out Pir Ahmad and appointed in his stead a notable named Malik Uwais. When Timur passed through Luristan in 795 Pir Ahmad came to meet him at Kām-Hormuz. Timur later received him graciously at Shiraz, confirmed him by a decree (*al-ta'aruf*) in his hereditary possessions and allowed him to repatriate 2,000 families of Lurs deported by Shah Manjūr. In spite of this in 798, Timur took as hostages to Samarkand the brothers of Pir Ahmad Afrāsiyāh and Manjūrshāh. Timur afterwards divided Lur-i Buzurg (?) between Pir Ahmad and Afrāsiyāh. After the death of Timur, Mirzā Pir Muhammad imprisoned Pir Ahmad in Kulandis. He was restored in 811 but met his end in a popular rising. The son of Pir Ahmad (13) Abū Sa'īd, kept for two years a hostage at the court of Mirzā Iskandar at Shiraz, succeeded his father and died in 820. His son (14) Shah Husain died in 827 by the hand of his relative (15) Ghāsiyāh al-Dīn b. Kā'm b. Hūshang (1266). The latter seized the power but the Timūrid Sulṭān Ismā'īl b. Shāhrukh sent troops to expel him and thus ended the rule of the Farḡawī family. Later the power passed into the hands of local notables of the Baghliyāsi tribes (*Sharaf-nāma*, I, 48).

(V. MINORSKY)

LUR-I KUCIK, a dynasty of Atābegs which ruled in Northern and Western Luristan between 580 (1184) and 1006 (1397) with Khurramshāh as their capital. The Atābegs were descended from the Lur tribe of Djamāl (Djāngardī). The dynasty is also known by the name of Khurshidī from the name of the first Atābeg. (It remains to be seen if this name is connected with that of Muḥammad Khurshid, vizier of the former rulers

of Luristan before the rise of the Atābegs of Lur-i Buzurg). After 730 the power passed to another line which later claimed to be of 'Alid descent; at this time also the title *malik* succeeded that of *atābeg*.

The ancestors of the Khurshidī had entered the service of Hishām al-Dīn (of the Turk tribe of Shāhli or Shāhli) who ruled Luristan and Khuzistan about the end of the Seldjūq period (c. 550—580).

(1) Shādūjā' al-Dīn Khurshid b. Abū Bakr b. Muḥammad b. Khurshid was at first *Shāhna* of a part of Luristan on behalf of Hishām al-Dīn but after the death of the latter (in 570 or 580) became independent lord of the whole of Lur-i Kucik. He waged war on the Djamrawī (the tribe in which he had originated, but which was then being ruled by his rival Surkhāb b. 'Aiyār) and besieged their stronghold Dīzi-Siyāh (in the district of Mānrad and in the 'wilāyat' of Samhāf). The inhabitants headed all Mānrad over to him but the caliph ordered Shādūjā' al-Dīn to deliver up to himself the stronghold of Mānrad (Müngerre north of Kīlāh). In compensation Shādūjā' al-Dīn drove back the Bayāt Turks who were ravaging Luristan. He led a nomadic life and spent the summer at Kīrt (in Balā-Girtwa) and the winter at Dulur (Dih-i Lurān in Pasht-i Kūh) and at Malāh (?). He died a centenarian in 621 and his tomb was venerated by the Lurs. His son Badr was killed by his nephew (2) Saif al-Dīn Rustam b. Nūr al-Dīn who became Atābeg and was a good ruler. Rustam was succeeded by his brothers first (3) Shāh al-Dīn Abū Bakr and next (4) 'Izz al-Dīn Garshāsp. The latter married the widow of Abū Bakr, Malika Khātūn, who was the sister of Sulaimān Shāh Atwa, later commander-in-chief of the caliph al-Musta'īm (*Atāh* should be altered to *Atwa*, name of a tribe or a district in the time of the last Seldjūqs; cf. *Rihālat al-Sudūr*, *G.M.S.*, p. 346; *Djikhān-gushā*, *G.M.S.*, XVI/2, p. 453; *Nuḥdat al-Kulūb*, *G.M.S.*, p. 107; Dehery, *Recherches sur quatre princes d'Hamedan*, *J.A.*, 1847, p. 177). When (5) Hishām al-Dīn Khālīl b. Badr b. Shādūjā' killed Garshāsp, a struggle ensued between him and Sulaimān-shāh (Shāh al-Dīn ?). The Lurs took Balūr (near Hamadan) but finally Khālīl was defeated and killed near Shāpur-khast in 640 (1242).

His brother (6) Badr al-Dīn Mas'ūd went to the court of Māngū and returned in the train of Hülegü. This ferocious man, an authority on Shāfi' law, ruled till 658. He showed great kindness to the family of Sulaimān-shāh, when the latter was executed at the taking of Baghād. The sons of Mas'ūd were executed by Abūka, who appointed Atābeg (7) Tādī al-Dīn b. Hishām al-Dīn Khālīl (also executed by Abūka in 677).

He had two immediate successors, the two sons of Mas'ūd of whom (8) Falak al-Dīn Ḥasan ruled a part of Luristan (*alīār, alīār*) and (9) 'Izz al-Dīn Ḥusain ruled the crown domains (*inḡā*). The number of their troops was 17,000. They channised the Bayāt and reunited under their control all the lands between Hamadan and Shāhtar and between Isfahān and the Arab lands. Both died in 692.

Kāshānī appointed as their successor (9) Djamāl al-Dīn Khāḡī b. Tādī al-Dīn, who was killed in 695 near Khurramshāh by (10) Hishām

al-Din 'Omar b. Shams al-Din 'Darmak' b. Shams al-Din b. Tahamtan b. Badr b. Shuja' who relied for support on the Mongol tribes settled in the lands adjoining Luristan. The other rulers did not recognise this usurper and he had to make way for (11) Samsham al-Din Mahmud b. Nur al-Din b. 'Izz al-Din Garshasp who slew a certain Shihab al-Din Ilyas and in turn was executed by Ghazna in 695.

(12) 'Izz al-Din Muhammad b. 'Izz al-Din (8th) was a minor and his cousin Badr al-Din Mas'ud (son of 8) obtained from Uldjaitu the title Atabeg and ruled over a part of Luristan (later) but later 'Izz al-Din fully established his authority. After his death (716 or 720) his widow (13) Dawlat Khātūn retained a semblance of authority while the real power was in the hands of the Mongols. Such was the state of affairs when Hamid-Allah was writing his *Tarikh-i Gushda* (c. 730). Later the *malik* (who according to the anonymous historian of Iskandar became the wife of Yūsuf Shāh of the Great Lur) found herself forced to surrender the throne to her brother (14) 'Izz al-Din Husain who received investiture from Abū Sa'īd and ruled for 14 years. His son and successor (15) Shuja' al-Din Mahmud was killed by his subjects in 750.

(16) The Malik 'Izz al-Din b. Shuja' al-Din was only 12 when his father died. The vicissitudes of his life are known from the record of them in the *Zafar-nāma*. In 785 (1383) the Muzaffarid Shāh Shuja' with his army visited Khorramābād and married the daughter of 'Izz al-Din. Another of his daughters was married to Ahmad b. Uways Dihlī. When Timur arrived in Persia in 788 he was told of the depredations of the Lurs of 'Izz al-Din. Setting out from Firuz-kūh, Timur by forced marches reached Luristan. Burujird was laid waste, and the fortress of Khorramābād tumbled to the ground. The ringleaders were thrown down from the tops of cliffs. The fate of 'Izz al-Din is unknown and we do not know if he was one of the Atabegs of Luristan to whom in 789 Timur granted an audience at Shirāz, but according to the anonymous historian of Mirza Iskandar, 'Izz al-Din was captured in 790 in the fortress of Rūmīyān (Armiyān, Wāmiyān, situated near Burujird) and deported with his son to Turkestan. At the end of three years both father and son were released. In 793, 'Izz al-Din played a part in the aggrandizement of the Muzaffarid Zain al-'Abidin, son of his old overlord Shāh-Shuja'. When in 795, Timur returned to Persia, he went from Burujird to Shahrīār. Luristan was overrun piece by piece and laid waste by the troops of Mirza 'Omar but 'Izz al-Din escaped his pursuers. In 798 prince Muhammad Sultan, governor of Fars, extended his authority over all Luristan and Khuzistan. In 805 we find a mention of the restoration of the fortress of Armiyān (?) near Burujird ordered by Timur and under 806 the *Zafar-nāma* mentions the arrival in Balakān from Nihāwand of a courier, bearing the head of 'Izz al-Din, whose skin had been stuffed with straw and publicly exposed. His son (17) Sidi Ahmad, whose irregularity in the payment of tribute seems to have provoked the punishment of his father, regained his possessions, after the death of Timur in 807, and ruled till 815 (or 825). (18) Shāh Husain ('Abbās', i.e. descendant of 'Abbās b. 'Alī b. Abū Talib), no-

other son of 'Izz al-Din, took advantage of the decline of the Timurids to extend his territory. He plundered Hamadān, Gulpāyagān, Isfahān and even undertook an expedition to Shahrīār where the Bahāri Turks slew him in 871 (or 873). His son (19) Shāh Rastam supported Ismā'īl I; at this period the lords of the Little Lur had already adopted the theory that they were of 'Alid descent. The son of Rastam (20) Oghur (or Oghuz) accompanied Shāh Tahmāsp on his campaign of 940 against Ubaid Allāh Khān and during his absence his brother (21) Dīkhāngīr seized the power. He was executed in 949. The governor (*jah*) of his son (22) Rustam Shāh handed over the latter to Tahmāsp Shāh who imprisoned him in Alamūt while Muhammadī, another son of Dīkhāngīr, was hidden by the Lurs at Čangala. An impostor in Luristan gave himself out to be Shāh Rustam Tahmāsp; then released the true Rustam who recovered his self but had to hand over a third of it (*do sang*) to his brother (23rd) Muhammadī. At the instigation of the wife of Shāh Rustam, the governor of Hamadān seized Muhammadī who was shut up in Alamūt. The sons of Muhammadī plunged Luristan and the adjoining provinces into great disorder. Ten years later Muhammadī escaped, and conquered Luristan while Shāh Rustam took refuge at the court of the Shāh. Muhammadī established good relations with Tahmāsp and Ismā'īl II but after their death submitted to Sulaym Murād III (982-1003), which earned him an extension of his territory by the cantons west of Pusht-i Kūh: Mandali, Djesān, Badrāy and Turak. But relations with the Ottomans soon became strained and Muhammadī became reconciled with the Safawis.

(24) Shāhwardī b. Muhammadī, who had escaped from Baghdad where he was living as a hostage, received investiture from Shāh Khudābāda after his father's death. At the time of the occupation of Nihāwand by the Turks Shāhwardī showed some signs of independence. In 1000 good relations with Shāh 'Abbās were re-established with whom Shāhwardī made the most of his alleged descent from 'Abbās b. 'Alī and his Shī'ism (*taḥayyuf* was 'Atabegīr). Shāh 'Abbās married his sister and gave him a Safawī princess in marriage. In 1002 Shāhwardī in a pitched battle killed the governor of Hamadān Oghurīn Sulaym Bayāz who was trying to levy taxes in Burujird. Shāh 'Abbās, filled with wrath, left the Khuzistan front and hastened to Khorramābād. Shāhwardī crossed the Saimara (Karkhā) and escaped to Baghdad. Luristan was given to Sulaym Husain b. Shāh Rustam. In 1003 Shāhwardī was pardoned and restored but he was not long in relapsing. In 1006 Shāh 'Abbās took the field against him a second time. Shāhwardī was besieged and slain in the fortress of Čangala (in Pusht-i Kūh). Husain Khān b. Manjir beg Salwat (?) was given Luristan, except Saimara, Hindomas (?) and Pusht-i Kūh which were given to Tahmāsp Kull Ismail. This may be regarded as the end of the dynasty of the Atabegs of the Little Lur, although the dynasty of "wālis" of Luristan (later of Pusht-i Kūh (q. v.) only) claims descent from Husain Khān who was a cousin of Shāhwardī.

LURISTÂN, "land of the Lurs", a region in the S.W. of Persia. In the Mongol period the terms "Great Lar" and "Little Lar" roughly covered all the lands inhabited by Lar tribes. Since the Safawid period, the lands of the Great Lar have been distinguished by the names of Kûh-Gilû and Bakhtiyârî. At the beginning of the xviiith century the Mamasani confederation occupied the old Shûllistân [q. v.] and then created a third Lar territory between Kûh-Gilû and Shûriz.

It is however only since the xviith century that Lur-i Küçük [q. v.] has been known as Luristân (for greater precision it was called Luristân-i Felli). In the xixth century Luristân was divided into two parts: 1. Fîsh-Kûh, "country on this side of the mountains" (i.e. east of Kabûr-Kûh) and 2. Pugh-i Kûh (country beyond the mountains) i.e. west of Kabûr-Kûh. At the present day the term Luristân usually means Fîsh-Kûh while Pugh-i Kûh means the Felli country.

The Mamasani territory and the Kûh-Gilû form part of the province of Fârs. The capital of the Mamasani is at Fahliyân (cf. *ibid.*). Kûh-Gilû (Kûh-Djîlâyâ, Kûh-Gilû) stretches from Bâht (west of Fahliyân) to Bîlbehâd; this last town is the main centre for the tribes of Kûh-Gilû. To the south the Kûh-Gilû tribes descend as far as the Persian Gulf. The mountains of Kûh-Gilû and the frontier between its tribes and the Bakhtiyârî are not yet well known. The chief rivers of Kûh-Gilû are the Ab-i Shûm which is formed by the junction of the Khairâbâd and the Zohra and in its lower course runs via Zaidân and Hindiyân, and the Ab-i Kardûstân or Djarrâhî, one branch of which later runs into the Kârn [q. v.] and the other towards Dawrak. On Kûh-Gilû see the valuable *Fârs-nâmâ-yi Nâḡir* of Hasan Fâsi (Tih-rân 1313), the *Annuaire* of Stoeckner, Haussknecht (*Revue de l'Orient*, Map. iv.), Wells and Herzfeld and the general account in de Bode, i. 251—259; ii. 327—398; Ritter, *Erdbunde*, ix. 132—144 is now very much out of date.

The Bakhtiyârî lands stretch from Çakîrmakîll (west of Isfahân) to Shûghtar; to the south the Bakhtiyârî march with the Kûh-Gilû and to the north they go beyond the northern barrier of Luristân (Shuturân-kûh etc.). They are found at Fâsaldân, Burburûd, Djâpalagh, and in the cantons around Burâdjîrd (even before 1840 many villages had been purchased here by Muhammad Taḡi Khân Cabâr-lang). Roughly speaking the Bakhtiyârî occupy the upper basin of the Zandârûd and of the Kârn [q. v.] above Shûghtar. The works of Layard, Sawyer, Mrs. Bishop, Curzon etc. give a very accurate picture of this mountainous country, in the centre of which rises the Kûh-i Rang (12,800 feet high) which forms the watershed between the Persian Gulf and the central Persian plateau. (It may be asked if the name Kûh-i Rang is not the Mongol *Arang*, "encampment, larger", found in Luristân).

The frontier between the Bakhtiyârî and the Lurs proper follows the western branch of the

Ab-i Diz, an important tributary of the Kârn. Luristân (Pigh-kûh) is bounded on the east and west by the convergent streams of the Ab-i Diz and the Karkhâ, while in the north the range of the Çahûn-âb-ḡilghân, Garû etc. separates Luristân from Nihâwand and Sîlghôr (district of Burâdjîrd). To the west of Karkhâ Pugh-i Kûh begins. In the northwest the frontier of Luristân runs to the southwest of the districts of Hâfîlân and Harân which belongs to the province of Kirmânsah.

The chief left bank tributary of the Karkhâ is the Kashgân (Rawlinson: Kashaghan) which is formed by two arms. The northern arm with its tributaries drains the beautiful plains of Hûr-rûd, Ahsitar and Khâwa. The southern arm, separated from the northern one by the Yâfta-kûh range, takes the name of the town of Khurramâbâd [q. v.] near which it passes. After the confluence of the two arms, the Kashgân, running S.W., receives on the left bank the combined waters of the Kawgûn and Tîym, which flow from Kûh-i Hâfîd Pahlû (south of Khurramâbâd) and the northern slopes of the Kûh-i Gird. These two ranges are at right angles to the mountains which follow the right bank of the Ab-i Diz, which they separate from the valley of the Karkhâ. On the right bank the Kashgân receives the Mâdîyân-rûd, "river of the mare". Above Kashgân the Karkhâ receives on its left bank several tributaries of less importance still little known (Rûhâr etc.). Below Kashgân and also on the left bank, the Karkhâ receives the Fâni, Leilan (Lehûm) and Ab-i Zâl. This last river with its tributaries Anârak etc. rises in the southern slopes of the Kûh-i Gird. The topography of the right bank of the Ab-i Diz is not well known. The sources of the Baladrûd and its right bank tributary the Kîr-âb lie a considerable distance to the north. The Baladrûd flows into the Ab-i Diz between Dîsfûl and Susa. The Kîr-âb receives on its right bank the waters of the Kûl-âb which come down from the high valley of Mûngarâz, which with the peaks that surround it form a kind of natural bastion and separate the basin of the Baladrûd from that of the Ab-i Zâl. The Sahrâ-yi Lur plain formerly well irrigated lies north of Dîsfûl and south of Kîr-âb ("pitch-water") whose naphtha spring has been known since ancient times. It was probably here that Darius settled a colony of Greeks (Ritter, ix. 201).

The interior of Luristân presents a series of mountain ranges, which stretch N.W. to S.E., the direction usual in Persia, and the one behind the other between the plains of Susiana and the northern barrier (height about 9,000 feet).

Ancient history. The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Susa where there have been found traces of occupation going back to the third millennium B.C., lies just at the entrance to the mountains of the Little Lar. The purest traces of the local culture and of this alone are found more to the south-east. Just as the Aḡâḡs of the Great Lar had for their capital Idhûd (= Mâhmûr) so in very early times, the lords of this district, the kings of Anapî (Hapîrî?), whatever were their relations with the rulers of Susa had control at least of

the Kārūn valley. The site of Mālmair (cf. de Bode, *Layard, Jéquier in de Morgan, Dîrê, en Persie*, 1902, li. 133-143 and Hüsing, *Der Zagros in seiner Fülle*, Leipzig 1908, p. 40-50) with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs is an important point. The recent discovery by Herzfeld (*Königschrift, Z.D.M.G.*, 1926, p. 250) in the Mamasani region of a bas-relief and bricks bearing Elamite characters (1500-1000 B.C.) is valuable as indicating the extent of Elamite penetration into the Lur mountains. Kūh-Gillū lying between Susiana and Persia may correspond to the still unknown region of Anshan (Anran) out of which came the ancestors of Cyrus the Great. On the survival of this name near Shāstār, cf. *Grundr. d. Iran. Phil.*, li. 418 (according to Rawlinson: Assia).

The antiquities of the valley of the Upper Kārūn (the two Sūzen, Luchagān, the mounds of Salm, Tūr and Irād) are insufficiently known (Layard, Sawyer). According to Sawyer, the higher Bakhtiari lands are "singularly devoid of any ancient landmarks".

For the west part of Luristān in the strict sense of the word see the articles MĀHARĀHĀN and PŪHT-I KŪH. No monuments of very great antiquity have yet been discovered in Pish-kāh except the maves (Medius?) of Sedarān between Mīngara and Khurramābād, Cirkow, p. 129. The early inhabitants of Luristān were the Kashūja = Kossaii who imposed their rule on Babylon between 1760 and 1650 B.C. The Achaemenids paid the Kossaii for the right of passage by the Babylon-Ecbatane route. These highlanders were temporarily subdued by Alexander the Great. Antigonus, pursued by Ramezes, traversed the heart of the Kossaii country, according to Rawlinson on the route Pul-i-tang-Keilan-pass-Khurramābād (Ritter, *Erkundung*, ix, p. 335). The Kossaii (who should perhaps be distinguished from the Kāra = Oghuz = Uvadjā = Khūz) spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European. Cf. E. Meyer, *Gesch. d. Altert.*, 1/2, Berlin 1913, § 455; Hüsing, *Der Zagros*, p. 24 and Autran in *Les langues du monde*, Paris 1925, p. 283. [The name Kashūja has perhaps survived in that of the river Kashūja].

It is also probable that northern Luristān was more or less dependent on the land of Ellipi, often mentioned by the Assyrians. This region, which was considerably influenced by Media is now located in the province of Kirmīnshūh. Cf. Andreas, *Alcesis*, in Pauly-Wissowa⁷; Streck, *Z. A.*, xv., 379; *Cambridge Ancient History*, 1924, li., cf. map.

We know very little about the Marwesi people who (Herodotus, v. 49) were bounded on one side by the Armenians and on the other by the Susians (Reinach, *Un peuple oublié: Les Mantiens*, *Revue des Études Grecques*, 1894, vii, p. 313-318).

Here we can only call attention to these various ethnical elements buried in the later strata of Iranian invasions. In the name of Faraidan, a canton in the northeast of Bakhtiari, we have a reminiscence of the Median tribe of Faraiakenoi (Herodotus, li. 110) and of the province of Haparranovē (Strabo, li. p. 80) which lay between Media and Persia (in Assyrian: Partakka, Partakka; cf. Streck, *Z. A.*, xv., p. 363). The translocation must have been accelerated by the formation of

the great empires, Achaemenid, Macedonian, Parthian and lastly Sassanian. There are many Sassanian towns in the valley of the Kārūn. Many Sassanian buildings are attributed by the natives to the Atāhegs of Luristān, who were certainly nothing more than the restorers. The complicated system of bridges is very remarkable (cf. the photographs in de Morgan, *Études Géogr.*, li. and *Études Archéol.*, Paris 1896-1897, p. 360-374) and the roads which may still be traced on the upper courses of the rivers of Susiana. The remains of roads, paved or hewn out of the rock, may be seen at Tang-i Sālak (between Bihbihān and Mālmair) near the Sassanian bas-reliefs (de Bode, l. 353, 364), to the east and west of Mālmair (de Bode, l. 390, li. 820; *Goddard's atabakan*), between Dīfāl and Kārūn (Rawlinson, *A march from Zohab*, p. 93), to the mouth of Khāwa (*Goddard's Khurram*, Cirkow, p. 216-227). All these works are evidence of a systematic and continuous penetration. But since at the end of the fourth (fifth) century the inhabitants of the plain of Khūzistān had not yet forgotten the Hūz language (Mukaddasi, p. 418) colonies of the ancient stocks may have survived in isolated corners of the mountains. The Lur highlands only assumed their present ethnical character under the Atāhegs.

The knowledge of the Arab geographers about the Lur country is very summary although they describe the routes between Khūzistān and Fars (cf. Schwarz, *Persien*, p. 173-180; Arrāḍīn-Shirāz, p. 190; Arrāḍīn-Sumatra), between Khūzistān and Isfahān (the road started from Isfahān; Ibn Khurūdādhbih, p. 57; Mukaddasi, p. 401) and lastly between Khūzistān and Dīfāl. As to these last routes, Isfahān, p. 196, reckons from al-Lur to Shāpur-Khāst 30 farsakhs, from there to Lāstār (= Alāstār) 12 farsakhs; from there to Nihāwand 10 farsakhs (the road must be that which follows the upper waters of the Bafā-rūd). A few details of this route are gleaned up by Mukaddasi, p. 401, who gives the following eight stages: Karādī (cf. the article *surpāshān*), Wafāwānī-Dīrkūn-Khurūdādhbih (certainly = Hūzūd, Hūzūd, north of Khurramābād)-Sabur-Khūwas (= Shāpur-Khāst = Khurramābād)-Karkūsh (?)-al-Khān-Karmānīn-al-Lur. Mukaddasi, p. 418 also makes one suspect the existence of a road along the Ab-i Dīr: from al-Lur to al-Dīr, two stages, from there to Rāyagān one stage, from there to Gūlpāyagān 40 farsakhs through uninhabited country (*mafrūḥ*).

Among the inhabited places in modern Luristān may be noted the following: the town of al-Lur, 2 farsakhs north of Dīfāl (Kāmarat Andamish) the site of which should be sought in the plain of Shāpur-yi Lur near Sāllihābād; the town of Lāstār, now disappeared, was certainly in the plain of Alāstār and the town of Shāpur-Khāst. The exact location of the latter is important for the comprehension of certain events in the fifth (eleventh) century (Ibn al-Athīr, ix. 89, 146, 211; x. 166; *Tārīkh-i Gūzid*, p. 557). Rawlinson had identified Khurramābād with Shāpur-Khāst (cf. *Le Strange, The Lands*, etc., p. 202, p. 668). The combined evidence of Isfahān, p. 196 and 201, of the *Nakhal al-Gūzid*, p. 70, 176 and particularly of the itinerary of Mukaddasi, p. 401 fully justify Rawlinson's identification (against Le Strange). The change of name, or moving of the site (cf. Schwarz) must have taken

place in the sixth century. The *Nushat al-Kulûb* (740 = 1340) which does not include Shâpur-Khâst in its enumeration of the towns of the Little Lur is the first source to mention Khurramâbad (a town in ruins). It is on the other hand not at all probable that the *niyâset* of Mân-rûd, the alleged ancestral home of the Lurs, is near Khurramâbad. It should be sought to the north of the town of al-Lur near Mân-garra (= Mângarra). Samhâ, mentioned in the *Ta'rikh-i Gûda*, p. 548, was in Mân-rûd; its fortress Diz-i Sijâh must correspond to the fort of Diz which defends the entrance to Mângarra and was destroyed by the walls of Pušt-i Kûh in 1895 (Mann, *Die Mandarten der Lur-stämme*, p. 117). Finally the stronghold of Gûr (Ta'rikh-i Gûda, p. 549, 552) is mentioned by Čirikow, p. 133, among the encampments of the tribe of Pâpi (to the south of Khurramâbad).

Economic conditions. Apart from the Bahktiyârî districts near Isfahan where there are flourishing villages, the Lur territories (inhabited by nomads or semi-nomads) only export the products of their cattle-breeding. But the future of the mountainous country which lies like an amphitheatre around the plain of Khûstân is very promising. The Lur lands are rich in minerals and especially in petrol. The famous wells of Masdjid-i Sulaimân (Masjd-Nafân), belonging to the Anglo-Persian Oil Company are in the middle of Bahktiyârî territory (between Shâhât and Mâlamir). The same Company whose concession includes all the petrol-bearing lands in the whole of southern Persia is putting into operation its claims in the Kûh-Gûr region (to the north of the port of Gûmâwa) etc. (cf. Schweet, *Die türkisch-pers. Erdölverkommen*, Hamburg 1919).

On the other hand the territories now occupied by the Lurs played a considerable part in ancient times, as they lay on this route between the great centres of the Persian empire. Their southern part (Kûh-Gûr) may become of great importance for air and railway communication between Mesopotamia and India. The Bahktiyârî country is now traversed by the caravan route connecting Khûstân with Isfahan and controlled by Lynch Brothers. Finally Luristân proper seems destined to be crossed by the main line connecting the Persian Gulf (Mohammara or Khûstân) with Teherân, and perhaps with the Caspian Sea. Before the war of 1914 surveys had already been begun for making the Mohammara-Dizful-Khurramâbad railway by the Persia Railways Syndicate (cf. Litzen, *Persien*, Berlin 1920, p. 63, 88). Since the change of dynasty in Persia, the Persian government proposes to carry through this task itself; cf. Millspongh, *American Tail in Persia*, London 1926, p. 272.

LUT, the Biblical Lot has in Muslim legend, even as early as in the Kur'an, an importance which he does not have in the Bible or Haggada. As his story is associated with the downfall of the sinful Sodom (not however mentioned in the Kur'an) he appears to Muhammad as a prophet of punishment along with Hud, Salih, Nuh and Shu'ayb as predecessors of Muhammad. When Muhammad is accused of being a liar he can console himself with the reflection that before him the people of Nuh, 'Ad, Thamud, the people of Ibrahim and the people of Lut also called their prophets liars (Sura, cxii, 43). Lut's people (called *banu Lut*, I, 13; *ahwān Lut*) are usually located between Thamud and Madyan. Lut in the Kur'an becomes a *muḥsil*, messenger of Allah (xxvi, 160; xxvii, 133), a *raḥīm*, a reliable prophet (xxvi, 162), a participator in wisdom and knowledge (xxi, 74). When Ibrahim warns his people, Lut believes him (xxix, 25). Lut is sent to sinners who forbid hospitality (xv, 70), waylay strangers and practise sodomy and cruelty such as no other people had before them. They threaten him that they will banish those who lead such a moral life saying: "if thou preachest right, bring God's punishment upon us" (xxix, 28). God thereupon sends his angels of punishment; Ibrahim's intercession is in vain (xi, 77, 78). The

angels come to Lut. His people demand the visitors for sinful purposes. In vain Lut offers his daughters instead. He feels himself helpless. The angels calm him, saying: "We shall save thee, only no one must turn round; thy wife will do it". The city was turned completely upside down (xi, 84; xv, 74); *sijfil* stones, marked by God, rained upon it.

The Kur'an mentions no other name in the history of Lut. The destroyed city is called *al-muṭalib* (lii, 54) of which the plural is *al-muṭalibāt* (ix, 71; lxix, 9) corresponding to the Hebrew *mutalib*, which is used in the Bible of Sodom.

The Kur'an commentators also know the Biblical story quite accurately (Tabari, ed. de Goeje, I, 346, 347). They are able to fill all the gaps and give all names. The sins of Sodom are fully described. Sodom has a king of the line of Nimrod. The inhabitants worship idols. Lut admonishes them for 40 years (al-Kisā'). Then God sends three angels Gabriel, Michael and Israfil (in al-Kisā' also the soul-taker Azriel). Ibrahim intercedes: "Will ye destroy a people among whom there are 300 believers?" No. — 300, 200, 100 . . . — No. — 14 believers. No. — This number is assured, Ibrahim comforts himself, in the belief that Lut's wife is one of the believers. The angels must not destroy Sodom until Lut testifies four times to its sinfulness. They at once meet Lut, who testifies. After meeting others they encounter Lut's daughter. She invites them into her father's house. Lut orders his people to be silent, especially his wife who has disobeyed him for 40 years (al-Kisā'). But Lut's wife deliberately makes a light to show they have visitors as she ostentatiously procures salt (this is why she becomes a pillar of salt) or she actually says: "Young men have come to stay with us, with more beautiful cheeks and sweeter fragrance than I have ever seen".

The people demand the young men; Lut offers his daughters. "If we wanted thy daughters, we would know where to find them", they reply. Lut bars the doors. At the bidding of the angel he opens them. Gabriel blinds the intruders with a blow of his wing. They tramp on one another. "Save yourself!", they cry, "Lut's house is bewitched!" As the hour of destruction is at hand, Gabriel (according to others the Angel of Punishment Michael) turns the town upside down, and lifts it up so high that the angels in heaven hear the crowing of the cocks and the howling of the dogs of Sodom. Sijfil stones fall; on each is marked whom it is to strike. As Lut's wife looks sympathetically on her people, she is struck by a sijfil-stone. The number of killed varies between 4,000 (The'labi) and four millions (Tabari, ed. de Goeje, I, 342). All perished, except one who fled to Mecca, brought his sijfil-stones to the Haram where it hung for 40 days between heaven and earth, until it finally slew the man who brought it there (The'labi).

The Muslim legend gives names to everything and explains them all. Lut takes his name from *lūṭa*, "to attach oneself", because Ibrahim's heart was affectionately attached to Lut (The'labi). Lut's wife is called Habska' or Wā'ila, his older daughter Rūh (?), the younger Kariya (?) (Tabari), Zughat (Yāqūt), or Kawāya (?) (al-Kisā'). Not only is Sodom mentioned, but also other four towns, whose names may be recognised the Biblical

'Amora, Admah, Šeha'im and Šo'ar. Of Šo'ar, The'alah says it was saved (Gen. xix. 20-23) "because it believed in Lot".

The Muslim legend has a little in common with the old Haggada (Gen. Rabba, xlix. 1; *Sanhedrin*, 109^b), e. g. the fact that Abraham thinks he is sure of a certain number of devout people. When *Pirke R. Eliezer* (xv.) describes the daughters of Lot favourably, when *Midrash Hagadol* (ed. Schochter, p. 287) calls the angels sent to Sodom, Gabriel and Raphael, Muslim legend may have had some influence on the later Midrash.

LUT' A. YAHYĀ. [See ALI MIRZĀ.]

LUT' ALI BEG Adlar, a Persian poet and biographer of the eighteenth century. He was born in Isfahan on the 20th Rabi' i. 1123 (June 7, 1711) and spent his youth at Kūm and later at Shīrāz, where his father lived while governor of Lāristān and the coast of Fārs under Nādir Shāh. After the death of his father, he made the pilgrimage to Mecca and travelled in Persia, finally settling in Isfahan in the service of Nādir's successors. He later adopted a life of seclusion and put himself under the spiritual direction of Mir Saiyid 'AH Meshtiq. He died in 1781.

Lut' Ali Beg is best known for the collection of biographies of Persian poets which he compiled between 1760 and 1770 under the title of *Ashāh-Kāsh*: in it he gives biographies of poets in Persian in alphabetical order arranged according to towns and districts. The last part deals with 60 contemporaries of the author and is followed by an autobiography. The *Ashāh-Kāsh* was lithographed at Calcutta in 1229 A. H. and at Bombay in 1277 A. H. There is a Turkish translation printed at Constantinople in 1259 A. H. Among his poems was a madhnavi, *Yusuf u-Zulaykha*, from which the author quotes many verses at the end of the *Ashāh-Kāsh*. Lut' Ali Beg was held in considerable esteem by his literary contemporaries; he was particularly intimate with the poet Hāfi of Isfahan.

Bibliography: Ethé, in *Grandes de Iran. Philologie*, ii. 215, 237, 313; E. G. Browne, *Persian Literature in Modern Times*, Cambridge 1924, p. 282-284. (J. H. KRAMERS)

LUT' ALI KHĀN was the last member of the Zand dynasty in Persia. He was born in 1709, the son of Dja'far, son of Karīm Khān Zand (q. v.). Dja'far, who had seized the throne in 1785, had concluded the struggle against the Kājār Agha Muhammad, who had forced him to retire to Shīrāz, where he died on Jan. 23, 1789 from poisoning. During the short period of the reign of his father, Lut' Ali Khān had been entrusted with the conquest of Lāristān and Kermān, which he had successfully carried through.

But after the death of Dja'far he was forced to flee from his own army to Kirmān to seek refuge with the Arab lord Bāghā. With the latter's help, he was able to make himself master of his capital Shīrāz where a certain Saiyid Murād had proclaimed himself king. It was chiefly through the efforts of his father's minister Hādījī Ibrāhīm who occupied the position of *kalantar* (mayor) of the town that Lut' Ali succeeded in getting himself again recognised as sovereign. After his accession the character of the young man, whose nobility and generosity had hitherto been as much praised as his personal bravery seems to have changed. His acts of tyranny and cruelty decided Hādījī Ibrāhīm to abandon the cause of the Zands and betray it to the enemy. This he did in 1791 when Lut' Ali Khān had set out against Agha Muhammad Khān. Hādījī Ibrāhīm seized Shīrāz and stirred up Lut' Ali's own troops to mutiny against him. The latter fled to the coast and succeeded in collecting a small armed force with which he tried in vain to retake Shīrāz. Then followed several years of guerrilla warfare waged with incredible vigour by Lut' Ali against the Kājārs. He went up and down the whole of southern Persia, being for some time supported by the lord of Fārs and even temporarily taking Yazd. In 1794 being assisted by the chiefs of the district of Garmsar, he even took Kirmān. Here Agha Muhammad besieged him with a large force. After four months the town capitulated; Lut' Ali Khān succeeded in once more escaping and reaching Ilam but here he was treacherously delivered over to his enemy who had him taken to Tihān where he was blinded and mutilated and finally put to death. Then came the terrible vengeance wreaked by the Kājārs on the people of the town of Kirmān (q. v.).

Lut' Ali Khān, the last chivalrous figure amongst the kings of Persia (Browne), probably had the sympathy of most of his contemporaries and it is recalled that even Agha Muhammad Khān openly recognised his bravery. But as his history was written under the new dynasty of the Kājārs in Persia, the Persian sources could not show much sympathy for him. European sources give a more faithful picture of the course of events. The more modern Persian historians like Mirzā Muhammad 'Ali Khān (*Dawra-ye Mulkshāhā-ye Tārīkh-i Iran*, lith. Tihān 1326, reproduced in Beck, *Neuersichte Konversations-Grammatik*, Heidelberg 1924, p. 229-236) do not hesitate to describe the action of Hādījī Ibrāhīm as treason. Hādījī Ibrāhīm who soon afterwards became minister tried to justify his conduct to Sir John Malcolm.

Brydges, *The Dynasty of the Kājārs*, London 1833, p. xxx. ff. of the introduction; the text contains a translation of the history *Mutahid al-sulṭāna* of 'Abd al-Razzāq b. Naḍīf Kūhī; E. G. Browne, *A History of Persian Literature in Modern Times*, London 1926, p. 245 ff. (J. H. KRAMERS)

LUTFI PASHA, properly (XAKKI) LUTFI PASHA b. 'ARIF MU'IN, an important Turkish statesman, scholar and historian, grand vizier in the time of Süleymān I al-Kānūnī. He was of Albanian descent. The date and place of his birth are unknown. He was brought up in the imperial court, which he had

apparently entered through the *darülmefine* for the *jadissaries*. Much may be learned of his career from his own biographical references in the "History" and in the *Asaf-nâme*. Even in the *sema* he devoted himself to theological studies, a fondness for which he retained throughout his whole life.

At the accession of Sültân Selim (1512-1520) he passed from the ranks of the pages as a *lekadâr* and filled in succession the following offices at the court: *izâzîngâr* (taster), *kapuçî kâğıt*, *mirâ-i âlîye* (bearer of the imperial standard). He then became *sandjak beg* of Kastamuni, beglarbeg of Karaman, of Anatolia and in 941 *pubbe veziri*. He spent a quarter of a century in the foreign service of the Sultan; according to his own account, he was through all the wars and battles in the reign of Sültân Selim who was very favourably disposed to him, usually in his train: in Rumelia and Anatolia, in Arabia, Syria and Egypt; similarly in the reign of Sültân Salim he took part in the campaigns against Belgrade, Rhodes, Hungary, Vienna, the Kizilbash, Baghdad, Corfu etc. In 945 (1538) he took part in the campaign to Kama Boghdân as second vizier. In 946 (1539) he succeeded as grand vizier. As Paşa, who had died of the plague, also an Albanian, at a period when the Ottoman empire was straining its strength to the utmost. (The year 944, which was suggested by Kläub Celabi's *Takvîm al-Tevârîk*, Constantinople 1146, p. 176 adopted by all later historians and so handed down, is incorrect as is proved not only by Lütfî Paşa's own statement but also by an analysis of events). He proved his ability in high army commands; in the fleet and in administrative offices.

He sought to carry through with a strong hand the reforms in internal administration which he had long recognised to be necessary, especially economies in the financial system, the abolition of oppressive institutions (*amaç*, privileges of courtiers), the development and independence of the navy, the importance of which for Turkey his foresight recognised. Easier than anyone else he saw the beginning of the collapse of the externally so brilliant political system. At the same time he conducted negotiations with Venice, Austria and France with great skill and firmness. It is noteworthy that he was the first to recognise the surpassing genius of Mi'mâr Sinân, whom he appointed state architect. He was a highly gifted statesman, an energetic inflexible personality, incorruptible and above all intrigue with high ideals and strong religious and scientific leanings. In spite of his violent temper he was regarded as a "good-natured Vizier".

He was a brother-in-law of Sültân Salim, whose sister Şahî Sühan he had married. Nevertheless he was summarily dismissed in 948 (1541) when in his rage he used threats to his wife when she reproached him with his inhuman treatment of a Muslim slave-girl. His eagerness for reform had naturally gained him few friends at court. It is said that only his rank as a *âzîm* saved him from execution. Whether the deeper reason for the matrimonial dissensions lay in his love for boys is not clear.

Lütfî Paşa was banished with a pension to Dimotika where he had a *şiflik*. Here he gave himself entirely up to his studies, for which he was well qualified by his constant intercourse with theologians and scholars during his whole

political career. After his return from Mecca to Dimotika — his successor Rustam Paşa was successful in preventing a complete reconciliation with the Sultan — he used his enforced leisure to compose numerous works in Arabic and Turkish. He died in all probability after 970 (1562) (so also Münâzîlm-başı), in any case after 961, in Dimotika. The date 930 (1543) usually given is impossible as he continued his history down to Ramadân 15, 961 (Aug. 14, 1554) and there is no reason to suppose that any other continued the history; on the contrary there are references in the text to events of the year 961. He only left one foundation, a *tekke* in Constantinople, after which the quarter and the Lütfî Paşa mosque take their names; its builder was a descendant Ahmed Celebi.

Lütfî Paşa is the author of 21 works, a list of which he himself gives in his "History", p. 1-4 (cf. also the list in Hammer-Purgstall, *Geschichte der osman. Krönung*, iii. 703; Flügel, *Katalog der Wiener Handschrift.*, ii. p. 224; Tschudi, *Türkische Bibliothek*, vol. xii, p. xv-xvii). It includes 15 Arabic and 8 Turkish works, to which perhaps may be added the *Kerâm-nâme* ascribed to him which he perhaps does not mention as his own because it was the result of his official activities.

His theological works have not come down to us, so far as we know. According to sources — not however specially biased in his favour — he had only a moderate knowledge of the different branches of theological study and medicine, which he loved to display with a dilettante's exaggerated opinion of his powers. This is not quite convincing however as not only his perhaps quite mediocre theological works but also his really important historical writings, except for the *Asaf-nâme* have been almost unnoticed.

As a poet he is praised by Sehi, who completed his *Heft Bîkışık* in 945 in the time of his grand vizierate. But the numerous verses scattered through his history are not by him. Verses certainly by him are very mediocre. Besides, he does not show much sympathy with poets as the contemptuous attitude to 'Alî Celebi, author of the *Humâyûn-nâme*, shows, to whom he makes the reproach that he had spent 20 years on this work instead of dealing with questions of *âvâz*.

His importance as a historian cannot however be too highly estimated. His *Asaf-nâme*, a kind of mirror for ministers, a textbook of ethics for viziers in which he sought to make available for his successors his wide experience of administration, obtained a certain success, as the not inconsiderable number of existing manuscripts suggests (ed. and transl. by R. Tschudi, Berlin 1910; ed. by Ali Avarî, Constantinople 1326). But his history *Takvîm-i Âlî-i Dîvân* is still more important. It is now accessible in a, however, rather mediocre, edition (Constantinople 1341). Lütfî Paşa, *Takvîm-i Âlî-i Dîvân* *Yükümlükleri Medris Vakıfları Nazariyatından*, No. 28) from an incomplete copy found by M. Tahir in Brusa supplemented by the formerly unique copy in Vienna by 'Alî used by von Hammer (Flügel, ii. 224, No. 1001).

Lütfî Paşa not only models his title on those of the old Ottoman chronicles but he copies this primitive style of historiography in his matter and style, which forms a striking contrast to the elaborate Persianistic court style. Down to Sültân Bayazîd he is only a copyist. Then however fol-

lows, and this is what makes his history so remarkable, a description of the events of which he himself was an eye-witness in the reigns of three Sultans (Bāyazīd, Selīm and Sulaimān). His account of the reign of Sulaimān is naturally the most valuable, especially the period of his grand vizierate. In contrast to the *ḥakānuwajjī* and the official *waḥḥa nuwāṣṭar*, he gives an absolutely untouched picture of the situation although he is not absolutely free from bias in dealing with other statesmen. His two historical works are one of the most important sources for our knowledge of the origins of the weakness and corruption of the Turkish empire in the 17th century.

M

MĀ' AL-'AINAIN AL-SHINGHĪ, the name by which the famous agitator in Mauritania [q. v.] at the end of the 16th century and beginning of the 17th century is best known (several explanations of his sobriquet are given; the literal meaning is "the water of the eyes" but the most satisfactory seems to be that which sees in it simply a euphemism, like that in the expression *Kurraṭ al-'Alī*).

Muḥammad Muṣṭafā Mā' al-'Ainain was the twelfth son of a chief and marabout of great fame in his own country, Muḥammad Faḥlī b. Mā'nin, born at Walḥa at the end of the 15th century and chief of the Moorish tribe of Galigima in the district of al-Ḥawḥ in the south east of Shinghī group. After breaking off from the Baklāya whose religious head was the chief al-Mukhtār al-Kunī [q. v.], he founded a new brotherhood affiliated to that of the Kāḥiriya [q. v.], to which he gave the name of Faḥṭhiya derived from his own. On the death of Muḥammad Faḥlī in 1869, Mā' al-'Ainain left the district of al-Ḥawḥ to complete his Islāmic studies in Shinghī (on this flourishing Moorish centre, see the long and interesting monograph by a native of the place resident in Cairo, Aḥmad b. al-Amin al-Shinghī, *al-Waḥī fi Tawāḥīn Uḥūd* [Shinghī, Cairo 1329 [1911]). Mā' al-'Ainain then settled for several years in al-Adīr [q. v.] but afterwards went further north to the al-Sūḥiyat al-Ḥamrā country, which was his usual residence from 1884. All this region, which now forms the northern part of Spanish Rio de Oro, was being desolated by marauding and brigandage. He succeeded in establishing security there, restored the land to cultivation, planted numerous palm-groves and encouraged trade by caravan to Senegal and Shinghī in one direction and to Morocco on the other. He chose

Smāra as his permanent abode and later built a *ḥaḥṣa* for himself there in the Moroccan style on the Wādī Tarrāḥ. Like the majority of religious leaders of the Saharan countries of North Africa, he practised commerce, politics and the proselytising activities of a marabout and was not long in gathering round him a considerable number of followers who became widely known throughout Morocco by their nickname of "blue men" on account of their costume, consisting of a *ḡallāba* of *blanc* (a cotton stuff from Guinea), a turban and a burnous, all blue in colour. They were also called 'Ainīya, from the name of their master, and *al-Shinghī* (*Shawāḥīḥ*), "the men of Shinghī".

Mā' al-'Ainain very soon entered into regular relations with the Sultans of Morocco. He had already made a sojourn in the country on his journey to the holy places of Islām, in the reign of Mawḥay 'Abd al-Raḥmān b. Iḥḥām [q. v.] (1238—1276 = 1822—1859). Later and especially in the reign of Mawḥay al-Ḥasan [q. v.] (1290—1311 = 1873—1894) he travelled regularly to Marrākush and to Fās and was welcomed by the Sultān, whom he supplied with slaves (in which he also dealt). When the young Mawḥay 'Abd al-'Azīz [q. v.] ascended the throne in 1311 (1894), he sent him his homage and went to visit him in 1896 in Marrākush. The Sultān gave him a gift in his southern capital of a site for a *ḥaḥṣa* of his order and he hired him a steamer to take him with his wife from the Moroccan port of Mogador to that of Tārīḥa, the natural harbour of the Rio de Oro for his capital Smāra. This little port henceforth became of some importance: German ships, Greek and Spanish sailing-vessels disembarked there merchandise from Morocco and considerable cargoes of arms and ammunition, all consigned to the agitator to enable him to supply

his followers and arm the Moorish tribes to enable them to fight French expansion beyond the frontiers of Senegal. For several years Mā' al-A'inain was able to maintain in all the vast area under his influence an atmosphere hostile to French penetration into Mauritania. He was largely the instigator of the anti-foreign outbreaks, which after the assassination on May 12, 1905, near Tiddikja of the explorer Xavier Coppolani decided France to occupy Tāgent in 1906.

After these happenings, Mā' al-A'inain, having assembled the chiefs of the great Moorish tribes who were in alliance with him, took them to Fās to demand the alliance and assistance of Morocco against France in Mauritania. He was favourably received by Mawlay 'Abd al-'Aziz and succeeded in getting a cousin of the Sultan, Mawlay Idri, sent to al-Adrar as representative of the *mahkum*. At the same time Mā' al-A'inain was authorized to install himself in the Moroccan *jaifa* of Tiznit, to summon to the holy war and to rally around him all the warriors of the Sahara from al-Sīs to the region of Sākiyat al-Hamra'. The hopes that Mawlay 'Abd al-'Aziz had based on the plans of Mā' al-A'inain were soon deceived. After the occupation of Ujda and the destruction of Shāwīya by the French he had to disown Mā' al-A'inain. The latter had no longer a chance even in his own country, where a fatal blow was struck at his power as a result of the al-Adrar expedition in the course of which French troops led by Colonel Geanaud completely scattered his forces. Mā' al-A'inain had however not lost all hope of regaining his former influence in his old territory. He aimed even higher, when in May 1910 he did not hesitate to proclaim himself Sultan and to attempt the conquest of Morocco, which he thought had been sold to the infidels by the 'Alawid sovereign. Having united around him all the tribes of the Anti-Atlas and of al-Sīs as well as his own followers, he reached Marrākush and from this town tried to take Fās by surprise, taking the road through the Central Atlas. But he was checked in his advance near Tadīs [q. v.] by a column under General Moinier which routed him completely on June 23, 1910. He just managed to escape and reach al-Sīs where he was abandoned by all his followers and had to sell his slaves and flocks in order to live. He retired to the *jaifa* of Tiznit, where he died on 17th Shawwāl 1328 (Oct. 28, 1910).

Two years later, the son of Mā' al-A'inain, Ahmad al-Hiba, in his turn attempted to proclaim himself Sultan. Proclaiming himself the Mahdi, he set out from Tiznit and entered Marrākush on Aug. 18, 1912, where he had himself proclaimed, while his troops put the city to fire and sword. But on Aug. 29, al-Hiba was defeated at Benguerir by Colonel Mangin, who after a second encounter at Sidi Bu 'Uthman entered Marrākush on Sept. 7 following.

Mā' al-A'inain, who had very many open or secret followers in Morocco has left in the country the reputation of a true ascetic and a great doctor in Islam. "The hair shaved, the face veiled, always clothed in white, he only appeared in public on Fridays to go to the mosque. Mā' al-A'inain led an austere life, lived exclusively on milk, dates and mutton. A well read man, he composed many pious works, books on theology, mystic Sūfism, astronomy, astrology, books full of contemplative reveries, on theological and dogmatic controversies,

on metaphysical theories, and of magical formulae to acquire riches and power by occult means. Like his father and his brother, he loved to spread among his disciples a reputation as a worker of wonders and a thanatologist. These magical practices much increased his prestige in Seguiet (al-Sākiyah al-Hamra') and in Morocco (E. Richet, *La Mauritanie*, Paris 1920, p. 126-127).

Almost all the works of Mā' al-A'inain, alluded to, were lithographed at his expense in Fās. He disseminated them widely for his warlike propaganda. They are as follows: 1. *Adh al-muḥabbah liḥa ma'a l-ḥaqiqah*, on the margin of *Muḥid al-awāḥid*, N° 20, 1321; 2. *al-Akḍar 'ala l-haṣṣa*, commentary on the *Warāḥat* of the Imām al-Haramain, 1320; 3. *Dalīl al-riḥl* 'ala *ḥamā al-ṭiṣṭaf*, 1321, 3 vol.; 4. *Dimān* of mystical poetry, 1316; 5. *Qiyāḥ al-muḥabbah fi al-ḥabīb al-ḥabīb*, 1302; 6. *Kiṣṣa Fāṭih al-ḥabīb 'ala ṣūṭ al-faṭḥ*, 1296, 2nd ed. in 1309; 7. *Ḥidāyat al-muḥabbin wa-naṣṣ al-muḥabbin*, *waḥḥa* on the *maḥm*, 1322; 8. *Ḥudūd al-muḥabbin fi l-ḥabīb al-ḥabīb 'ala l-mawḥid*, 1321; 9. *Ḥuṣṣ al-ḥabīb 'ala l-mawḥid*, 1321; 10. *Ḥuṣṣ al-ḥabīb 'ala l-mawḥid*, 1321; 11. *al-Ḥabīb fi ḥabīb al-ḥabīb*, 1320; 12. *al-Kiṣṣa al-ḥabīb*, also printed at Fās in 1324; 13. *Kurraṭ al-A'inain fi l-ḥabīb 'ala l-ḥabīb*, 1321, on the margin of N° 10; 14. *Mā yashā' al-ḥabīb*, on the margin of N° 36, 1320; 15. *Maḥmūd al-ḥabīb*, 1321; 16. *al-Maḥmūd al-ḥabīb*, 1306, on the margin of N° 29, 2nd ed. in 1320; 17. *Muḥid al-muḥabbah*, 1314, 2 vol.; 18. *Muḥid al-ḥabīb wa l-ḥabīb*, 1316; 19. *Muḥid al-ḥabīb 'ala ḥamā muḥabbah*, 1309; 20. *Muḥid al-ḥabīb wa l-muḥabbah*, 1321; 21. *Muḥid al-ḥabīb wa l-ḥabīb 'ala l-ḥabīb*, 1321; 22. *Muḥid al-ḥabīb wa l-ḥabīb*, 1321; 23. *Muḥid al-ḥabīb wa l-ḥabīb*, 1321; 24. *Muḥid al-ḥabīb*, 1321; 25. *Muḥid al-ḥabīb*, 1321; 26. *Muḥid al-ḥabīb*, 1321; 27. *Muḥid al-ḥabīb*, 1321; 28. *Muḥid al-ḥabīb*, 1321; 29. *Muḥid al-ḥabīb*, 1321; 30. *Muḥid al-ḥabīb*, 1321; 31. *Muḥid al-ḥabīb*, 1321; 32. *Muḥid al-ḥabīb*, 1321; 33. *Muḥid al-ḥabīb*, 1321; 34. *Muḥid al-ḥabīb*, 1321; 35. *Muḥid al-ḥabīb*, 1321; 36. *Muḥid al-ḥabīb*, 1321; 37. *Muḥid al-ḥabīb*, 1321; 38. *Muḥid al-ḥabīb*, 1321; 39. *Muḥid al-ḥabīb*, 1321; 40. *Muḥid al-ḥabīb*, 1321.

A short monograph was devoted to Mā' al-A'inain by his son Muhammad Taḥyī Allāh entitled: *Muḥid al-muḥabbah liḥa ma'a l-ḥabīb*, 1316. A notice of him is also given in the *Wasit* of Ahmad al-Shinqit, p. 360-362.

of Shaghr and Bakka, al-Rindj and Ma'arrat Mayrin, which he exchanged about five years later for 'Aintab, Rāwandūn and Zūl (Kunāl al-Lim, transl. Blochet, *R. O. L.*, v. 64, 72; Abu 'l-Fida', *Annales Mosulien*, ed. Reiske, iv, Copenhagen 1792, p. 312).

The town has not been much visited by modern travellers. Jullien describes Ma'arrat Mayrin as a large village, lying among sesame fields and olive trees in a rich plain. Garrett is enthusiastic about the fertility of the country: 'the soil there is unusually fertile, fig trees are numerous and roses are growing by roadside'. In modern times the name of the town is often written Ma'arrat al-Misrin (with the article) e.g. by J. B. L. J. Roussau (*Description du Pachalik de Halep*, in *Kundgruben des Orients*, Vienna 1814, iv, p. 21), Ritter (*Erdkunde*, xvii, p. 1576), Garrett (*Publishers of an American Archaeol. Expedition to Syria*, New York 1914, part I, p. 119) etc.

Not to be confused with our town is Ma'arrat al-Ikhwan (also called Ma'arrat al-Akhwan) east of it, sometimes called simply Ma'arra, e.g. by Seif (*Zalichr. f. Erdk.*, 1873, viii, p. 24; Ma'arrat), according to whom it is a large village, 'which lies bare and exposed with its white sugar-cone like roofs on a wide plain'. According to al-Djibrit of Halab (d. 843) and Ibn al-Shihna (edited by Abu 'l-Yunus al-Bathrān in the eleventh century), Ma'arrat Mayrin was earlier called *Dhāt al-Kuṣṣir* (*Z. D. M. G.*, xxiii, 182; Ibn al-Shihna, ed. Cheikho, Beirut 1909, p. 164 sq.; Lammens, *M. F. O. B.*, 1906, i, p. 240). But this statement is due to confusion with Ma'arrat al-Nu'mān (cf. Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927, p. 213, note 4).

Garrett, in *American Archaeol. Expedition to Syria*, New York 1914, part I, p. 119 (*Ma'arrat al-Misrin*). (E. HOSNIGMANN.)

MA'ARRAT AL-NU'MAN, a town in northern Syria, often called simply al-Ma'arra. It is celebrated as the birthplace of the poet Abu 'l-'Ala' Ahmad al-Ma'arri [q. v.]. According to al-Sam'ani (*Aḥṣā' al-Anṣāb*, reproduced by D. S. Margoliouth, *G. M. S.*, xx, 1912, fol. 536^v, l.

4) the *asīla* from the place-name was *Ma'arran* to distinguish it from that of Ma'arrat Nayrin, *Ma'arran*. The town probably lay on the site of the ancient Arra which is called *Kāṣa* 'Alfas' elsewhere in an inscription. Yāqūt says that Ma'arrat al-Nu'mān is an old town in ruins. Nāṣir-i Khusrāw in 438 (1047) found in the town wall a stone column with an inscription in some language not Arabic and Ibn al-Shihna also talks of old pillars being dug up in the town. Van Berchem notes the remains of a Greek inscription in the Madrasa (Verage, p. 203, note 4).

The town received its new epithet, to distinguish it from the numerous other Syrian towns of the same name, from the Companion of the Prophet, al-Nu'mān b. Baḥr, who was governor of this district under Mu'awiya and whose son died there. According to another tradition it is called after al-Nu'mān b. 'Adī al-Sā'ī of the tribe of Tanūkh. An earlier name of the town according to Ibn Baḥr and Khallid al-Zuhri (ed. Karabass, p. 49) was *Dhāt al-Kuṣṣir*, according to al-Dumayḥī *Dhāt al-Kayrān*; al-Djibrit and Ibn al-Shihna wrongly give this name to Ma'arrat Masrin [q. v.]. The site of a citadel still bears the name Ka'at al-Nu'mān (see below). We have much earlier evidence from another older name, *Ma'arrat Hims* (al-Balāḥḥari, ed. de Goeje, p. 131; Abu 'l-Fida', *Annales Mosulien*, ed. Reiske, i, Copenhagen 1789, p. 226 etc.). The district of this town originally formed an *illīa* (أقليّة) of the ḥudūd of Hims (Ibn Khurdādhbih, *B. G. A.*, vi, 75; cf. also — but this is an anachronism, — al-Kalāshandi, *Saḥḥ al-ḥadīth*, iv, 142, transl. Gaudelroy-Demombynes, *La Syrie*, p. 409); The Hims gate (see below) is probably also a memory of this. It was only from the time of Hārūn al-Rashid that the town belonged to the ḥudūd of Kinassar, the capital of which at a later date was Halab (Le Strange, *Palestine under the Moslems*, p. 36, 39).

As early as 278 (891-892) wa ḥudūd Ya'kūb giving the Baḥn Tanūkh as the inhabitants of the town. The district around it was one of the parts of Syria most strongly settled by Maronites (al-Ma'arrī, *Aḥṣā' al-Tanūkh*, ed. de Goeje, p. 155). As there was no running water near the town, its inhabitants had to collect rain-water in cisterns. But the country round was rich in olive, fig, pistachio and almond trees; wine was also made here as in the ancient Arra. According to Ibn Dīnāl the orchards stretched for nearly two days' journey from the town and formed one of the richest and most fertile areas in the world. South of Ma'arrat al-Nu'mān, just beside the town wall was, according to local tradition, the tomb of Joshua son of Nūn; but Yāqūt says his grave was really at Nalūn (cf. Goldziher, *Muslime und christliche Traditionen über den Gehenret der Jom*, in *Z. D. P. V.*, ii, 15-17). The ḥijāb Nālī Allāh Yūḥā' is Ma'arrat al-Nu'mān still bears the name of Joshua and has an inscription dated 604 (1207-1201) (Van Berchem, *Verage de Syrie*, p. 202, note 4).

When Abu 'l-'Ala' came to Ma'arrat Hims in the year 16 (637), the people came out to welcome him and promised to pay *diya* and *haraj* (al-Balāḥḥari, ed. de Goeje, p. 131; Caetani, *Annali dell'Islam*, iii, p. 794 § 284). The Caliph 'Umayr II was buried in 101 in the monastery of Simeon (*Dār Sūfīya*) at al-Naktra (Nasir) not far from Ma'arrat al-Nu'mān (Hosnigmann, *Z. S.*, i, 1922, p. 17; Dussaud, *Topographie historique de*

in Syria, Paris 1927, p. 184). 'Abdallah b. Tahir appointed by the Caliph al-Ma'mun in 307 as successor of his father in the governorship of Syria, destroyed the fortifications of Ma'arrat al-Nu'mân, while fighting against Nasr b. Shabib and many small towns like Hira al-Kafr and Hira Hanâk (Kamâl al-Din in Freytag, *Scheich al-Hisrâ al-Halabî*, Paris 1849, p. 20). In 290 the Karmatians under Sâhib al-Khâlî ravaged the country round Ma'arrat al-Nu'mân, Hims, Hamâ and Salamiya, slew many inhabitants of these towns and carried off the women and children into captivity. The Banû Kilâb in 325 (936-937) entered Syria from al-Nedjâ and advanced on Ma'arrat al-Nu'mân. The commander there, Mu'adh b. Sa'id, went out to al-Burâghûlî (sic unknown) to meet them but was captured there with the greater part of his army, and only later released by the Kilâbî Abu T-Abbâs Ahmad b. Sa'id, governor of Halab. The latter and the Kilâbî Yûsuf in 332 were driven from Halab by al-Humayl b. Sa'id b. Hamdân, Saif al-Dawla's uncle and pursued beyond Ma'arrat al-Nu'mân as far as Hims. Ikhshîd the governor of Egypt in 333, advanced against Saif al-Dawla as far as Ma'arrat al-Nu'mân, which he took. Mu'adh b. Sa'id whom Ikhshîd had again installed there as governor was slain in battle at Kinnasra by Saif al-Dawla. In 357 (968) the emperor Nicephorus Phocas took the town and destroyed its chief mosque and most of the walls. When Karghûya seized Aleppo, Zuhair the governor of Ma'arrat al-Nu'mân joined the Hamdânîd Sa'id al-Dawla (358) and set out with him from Manbidj against Aleppo; it was only when the Greek Turbans brought help to Karghûya that the pair retired to al-Khunsîra and Ma'arrat al-Nu'mân. In the treaty between Nicephorus and Karghûya (Sufar 359) Ma'arrat al-Nu'mân was promised to the latter. Sa'id al-Dawla held out in it for three years. Bakdjûr had deposed and imprisoned Karghûya in Halab and made himself sole ruler (364 = 975). Sa'id al-Dawla set out from Hims against him and with the Banû Kilâb whom he had won over to his side by promising them lands at Hims besieged Zuhair, who was an ally of Bakdjûr, in Ma'arrat al-Nu'mân. He forced his way with his followers into the town through the Hunâk gate; when they were repulsed, they burned the Hims gate. Zuhair thereupon surrendered and was executed in the citadel of Fânîya; the citadel of Ma'arrat al-Nu'mân was plundered by the conqueror. When Rammâh, a Mamlûk of Saif al-Dawla (*al-Saifi*) rebelled in 399 in Ma'arrat al-Nu'mân against Sa'id al-Dawla, the latter with Lu'lu' went to besiege the town but retired to Halab on the approach of Baddjâtakî (Freytag, *Lamunî Nabulî*, p. 45, l. 6); Lu'lu' who had seized the power in Halab in 392, next year had Kafr Kûma in the district of Ma'arrat al-Nu'mân and the fortress in the Arwâdj (the two districts of al-Rûdj, cf. Rozen, *Zap. Imp. Akad. Nauk*, xlv, p. 257, note 200) destroyed to prevent them falling into the hands of his enemies. When the Hamdânîd Nasir al-Dawla in 434 took the field against the Mirdâsîd Mu'izz al-Dawla Thimâl, he occupied Ma'arrat al-Nu'mân. In 452 on his campaign against his nephew Mahmûd, Thimâl spent eight days in the town; the inhabitants suffered severely as the Arabs on account of the severe winter were billeted in the houses and did much damage there. Mahmûd after

occupying Halab in 457 allotted Ma'arrat al-Nu'mân to the Turk chief Hârûn; on Shawwâl 17, 458, the latter entered the town with Turks, Dailamîs, Kurds, and men of the tribe of al-Awdj, about 1000 fighting men besides camp-followers. They pitched their camp before the gate at which public prayers were said. Although excellent discipline prevailed among them and no one injured the olive-trees and vineyards or even took water for their animals without paying for it, the inhabitants breathed more freely when they left the town again to assist Mahmûd on his campaign against the Kilâbîs. In 462 Turks in large numbers came out of Byzantine territory against Halab, went via Urtîk to al-Djazz, Ma'arrat al-Nu'mân, Kafarîb, Hamâ, Hims and Rafaniya, and laid Syria waste in dreadful fashion. The Turk Tutush in 472 undertook a campaign from Damascus against the north of Syria; he burned the region of Djabal al-Summâk and Djabal Banî 'Ulaïm, extorted enormous sums from the people of Sarmîn and Ma'arrat al-Nu'mân and plundered the country east of Ma'arrat al-Nu'mân; he laid siege to Tall Mannas (Θαλασσιόεις) in vain and burned Ma'arratathîs (the ancient Μαγαλασσιόων πόλις) in the district of Kafarîb. His son Ridwân in 488 gave the town of Ma'arrat al-Nu'mân with its lands to Saïmân b. Urrûk. Soon after the taking of Anjâkiya (491) the Franks advanced on our town, supported by the people of Tall Mannas, and all the Christians in Ma'arrat al-Nu'mân itself but they were defeated between these two towns. In the beginning of 492 they again besieged the town with a large army (then an *urbis munitissima*, Will. of Tyre, vii. 9) and took it, killing almost the whole population, 20,000 men, women and children (*Hist. or. des Croisades*, iii. 482 sq.). Ma'arrat al-Nu'mân was, like Jerusalem in the same year, completely sacked and the walls and mosque destroyed. During the siege the Franks had destroyed all the gardens round the town and the Kilâbîs, who had come to the help of Ridwân, consumed all the supplies of the district so that the country was completely starved. In 496 Ridwân reconquered the lost fortresses. At the end of 514, he concluded a treaty with the Franks by which the latter were allotted Ma'arrat al-Nu'mân, Kafarîb, al-Bîra and a part of Djabal al-Summâk etc. In 531 (1137) the Atîbeg Zangî regained Ma'arrat al-Nu'mân. When the inhabitants asked to have restored to them the estates of which the Franks had deprived them, he demanded the original charters of ownership from them but they had been destroyed. He therefore had search made in the books of the office of the financial department of Halab (*Dafatîr Dîwân Halab*) and found from the old payments of *harâdj* what families had owned property and restored them (Ibn al-Athîr, ed. Tornberg, xi. 34 = *Hist. or. des Crois.*, i. 423; Abu T-Fidâ, *Annâles Mamlûk*, ed. Reiske, iii. 470; v. 374). Zangî taxed the walls. While King Fulco of Jerusalem was putting down a rising in Anjâkiya, Turkoman tribes entered the district of Ma'arrat al-Nu'mân and Kafarîb but were driven out again by the Franks who thereupon conquered Kubbât b. Malaib (Kamâl al-Din, *Hist. Or. d. Crois.*, iii. 667, where our town is meant by al-Ma'arra, not Ma'arrat Magrin as Röhrich, *Gesch. d. Könige Jerusalem*, p. 197 assumes).

The Byzantine emperor John II Comnenos in 532 (1138) invaded the district of Ma'arrat al-

Nu'mân and then turned suddenly against Shams [q. v.] which he besieged in vain. The earthquake of 552 (1157-1158) wrought great havoc in Ma'arrat al-Nu'mân (Kamāl al-Dīn, transl. Blochet, in *R. O. L.* iv. 520).

Salāh al-Dīn in 584 (1188) went from Halab to Ma'arrat al-Nu'mân from which he made a pilgrimage to the shrine Abū Zakariyā' al-Maghribī who lived at the tomb of the Caliph 'Umar. Towards the end of the reign of Salāh al-Dīn (c. 1191) the town formed part of the Syrian possessions of Takī al-Dīn (*Hist. Or. & Occ.* v. 14). Ma'arrat al-Nu'mân is several times mentioned in the wars between Salāh al-Dīn's sons. About 589 it belonged to al-Malik al-Mu'izz al-Dīn Takī al-Dīn 'Umar. Later we find its possession alternating between Hamā and Halab. An old Shāfi'ī madrasa was built, according to the inscription on its gateway, in the reign of the Ayyūbid Sultan of Hamā, al-Malik al-Manṣūr Muḥammad I (plan in Creswell, *R. I. E. & O.*, xxi. 13); it is by the same architect as the lofty square minaret of the great mosque. Ibn al-Mukaddim in 596 (1159) owned the towns of Famiya, Kafarān and 25 estates in the district of Ma'arrat al-Nu'mân. In 597 the town was sacked by Salāh al-Malik al-Zāhir Ghāsi of Halab and seems to have belonged to him for a period. An inscription dated 604 (1207-1208) still bears his name. Al-Malik al-Adil in 598 went from Damascus via Hamā to Tall Safra where al-Malik al-Manṣūr of Hamā joined him. His opponent al-Malik al-Zāhir of Halab concluded a treaty with him by which he was to cede Kafar al-Nadīm to Adil and the part of Ma'arrat al-Nu'mân which he held to al-Malik al-Manṣūr. About 619 and 692 the town belonged to the lord of Hamā, al-Malik al-Nāzir; it then passed temporarily to al-Malik al-Mu'izz al-Dīn of Damascus who placed a governor in it (Kamāl al-Dīn, transl. Blochet, *R. O. L.*, v. 65; Maḥmūd and Ibn Waṣil, *R. O. L.*, ix. 497-499; Abū 'l-Fidā', *Annal. Mosl.*, ed. Reina, iv. 312). During this fighting the lands of Ma'arrat al-Nu'mân and Hamā were ravaged by a horde of Arabs under Mānī' (*R. O. L.*, v. 68). On the advice of Salāh al-Dīn b. Abī 'Alī al-Hudhūdī, al-Malik al-Mu'izz al-Dīn of Hamā in 631 (1233-1234) had the citadel of Ma'arrat al-Nu'mân rebuilt, but by 635 al-Malik al-Nāzir of Halab seized the town again and after a brief siege the citadel also. The news of its fall was brought to Halab by a carrier-pigeon (*R. O. L.*, v. 100, 105; Abū 'l-Fidā', *op. cit.*, v. 404, 434, 596). The Khawāssim, routed by Čingis Khān, entered Syria over the Furāt and advanced via al-Habbān, Tall A'ina and Sarmiz to Ma'arrat al-Nu'mân which then belonged to Halab. The geographer al-Dimāshqī also reckons the town to Halab.

After the victory of Baiḥar over the Tatars at 'Ain Dīlīs where the Mongol general Kethoghā' who had been left behind in Syria by Hülāgu fell, Khosrawshāh the Tatar lord of Hamā left Syria. Salāh Kutuz thereupon restored this town along with Bārn and Ma'arrat al-Nu'mân, which had belonged for 23 years to Halab in 658 (1259) again to its original owner al-Malik al-Manṣūr of Hamā.

Henceforth with slight interruptions Ma'arrat al-Nu'mân was in the possession of the lords of Hamā. In the years 710 (1310) the Sultan granted Bārn and our town to Abū 'l-Fidā' as a fief but he had to return them to Halab by 713 (1313) as the conditions of ownership had become ex-

tremely obscure on account of the frequent changes in the land-books and repeated grants by the Sultan (Abū 'l-Fidā', *Annal. Mosl.*, v. 274). A journey by the prince to Egypt in 716 resulted in the restoration of the town and citadel to him and a charter of presentation was prepared (*op. cit.*, v. 302, 304). Abū 'l-Fidā' quotes a portion of a poem which the Aleppo secretary (*Ḍarīb al-Ḍarīb*) Shihāb al-Dīn Maḥmūd composed on the event (*op. cit.*, v. 306). But by the end of the same year he had again to cede the town to Muḥammad b. Isā (*op. cit.*, v. 310).

The district of Hamā was confiscated in 722 and placed under the Egyptian governor as a separate province (*ḥudūd*); henceforth Ma'arrat al-Nu'mân formed a wilāyat of this province (al-Kalkashandī in Guadrigny-Demomhynes, *La Syrie à l'époque des Mamelouks*, p. 233). In the Mamlūk period the town had seven gates (according to the *al-Rawḍ al-Miṣṣar fī Akhbār al-Aḥfār*, quoted in al-Kalkashandī, Cairo, iv. 142): the Halab gate, the great gate, that of Shihāb, called after the adjoining tomb of Seth, the garden gate, the Hims Gate and the like gate (*kaḍā* probably a double gate of Hims). Ma'arrat al-Nu'mân was a station of the Egyptian pigeon-post (al-'Umarī, *Ta'rif*, transl. R. Hartmann, *J. D. M. G.*, lxx. 591; al-Kalkashandī, iv. 393).

After the battle of Marj Dīshlī in 822 (1516) the town passed to the Ottomans. Della Valle a century later found here (1616) a native chief under Turkish suzerainty and the Agha who lived there in Ponscke's time while paying tribute to the Porte retained complete independence. Trölle found in the town "zwei schöne Wirtshäuser, das eine war ziemlich hauffig, das andere aber noch wohl eingerichtet, und um und um breiten langen bleiern Tafeln bedeckt". Seetzen describes Ma'arrat al-Nu'mân as the most northerly place in the Pashalik of Damascus (Suriya). Walpole was a guest of the mutasarrif of the town. The district of the town later became a *kaḍā* of the liwā of Halab. When Sachau passed through it in 1879, a *ka'immakām* was living there; the frontier with Hamā was at Khūn Shaikhūn. After the world war the town was included in the territory under French mandate. According to Sachau it has about 40 well built houses and with its well cared for gardens and fields looks a peaceful and prosperous country town, while van Berchem calls it "a large village of rather dismal appearance"; it lies in a monotonous but well tilled plain at the foot of the eastern edge of the plateau of the Djebel Rihā. In the north-west it is commanded by the high hill on which stand the ruins of the mediæval citadel (on the map by R. Garrett and F. A. Norria, in *Americ. Archæol. Exp. in Syria*, i. 50 and *Princeton Exp.*, Divis. II, Sect. B, part 3). Kafar al-Nu'mân is wrongly placed north-east of the town; cf. however also van Berchem, *Voyage*, p. 202 and Eli Smith in Ritter, *Erzk.*, xvii. 1067 and Sachau, *Reise*, p. 94). Among the architectural features of Ma'arrat al-Nu'mân the most notable, next to the great mosque, is the already mentioned Shāfi'ī Madrasa (built in 595). A notable building of the Ottoman period is a large square caravanserai on the south side of which is a fine gateway with an inscription of 974 (1568-1567). Sykes was shown by the *ka'immakām* as one of the sights of the place the (alleged?) tomb of the poet Abū 'l-'Alī.

(E. HONKIMANN)

MA'AD, AḤD 'ABDĀ MA'AD v. WAHR, was one of the great singers and composers of the early Umayyad period. He belonged to Madina and was a client of 'Abd al-Rahmān b. Kaṭān (cf. *Agḥām*, i., 19) of the house of Wāḥida of the Banū Maḥmūd. He was a half-caste, his father being a negro. In his youth he was an accountant, but having taken music lessons from Sa'īd Khallīf, Neshī al-Farīs and Djamāl (q. v.) he adopted music as a profession and soon made a name for himself. During the reign of 'Abd al-Malik (65—86—685—705) he carried off the prize at a tournament of song organised by Ibn Saʿūd at Makka. He sang at the courts of al-Walid I (86—95—705—715), Yazid II (101—

105—720—724), and al-Walid II (125—126—734—744), the second of these treating him with unheard of favour. On the death of Ibn Saʿūd (q. v.) about the year 107 (726) Ma'ad became the leading singer, and when al-Walid II was called to the throne, Ma'ad, although an old man, was invited to his court at Damascus. Here he was honourably treated and received a gift of 12,000 pieces of gold. Shortly afterwards he was again commanded to appear at court, but he was very ill when he arrived. Paralysis intervened, and although he was lodged in the palace itself, and had every possible attention, he died (125—743). At his funeral, the caliph and his brother al-Uḥayr, walked in front of the bier, whilst the renowned songsters Sallāma al-Kass, one of Ma'ad's pupils, chanted one of his elegies.

Ma'ad must undoubtedly be counted among the "four great singers" (*Agḥām*, i., 98, 151; ii., 127) whatever opinions may be held as to the others. A poet of Madina said: "Tawnis, and after him Ibn Saʿūd, excelled [in singing], but pre-eminence belongs to Ma'ad". Ishāq al-Mawaffī (cf. ii., 439) said: "Ma'ad was a consummate singer, and his compositions reveal a talent superior to all his rivals". Poets like al-Buḥārī (q. v.) and Abū Tammām (q. v.) have shown the worth of Ma'ad in Arabian musical history. Among the compositions of Ma'ad his most famous were the seven known as the "Citius" (*Mudun*) or "Fortresses" (*Ḥuṭun*), whilst five others were celebrated as the *Ma'adāt*. His fame was made by his adoption of a grandiose (*Kamil al-Nawā*) style of composition in the rhythms (*Ḥawāṣ*) called *Ḥafīf* or "heavy". Among his pupils were Ibn 'Aṣha, Malik al-Ta'ī (q. v.), Yūsuf al-Kaṭīb (q. v.), Siyā, Sallāma al-Kass and Ḥabbāba.

(H. G. FARMER)

AL-MA'BARI, ZAIN AL-DIN wrote about the year 985 (1577) for Sultan 'Alī 'Adil Shāh of Bijapur (d. 987—1579) a brief history of the spread of Islam in Malabar, the coming of the Portuguese and their campaigns against the Muslims from 908 to 985 (1498—1578). The work is preserved in Brit. Mus. MS., N° 94, India Office N° 714 and 1044, 5 and in Morley, *Catalogue of Historical MSS.*, N° 13 and is entitled *Tuḥfat al-Mudabbihīn*; extracts were given by John Briggs in *Forbster, History of the rise of the Mahomedan power in India*, London 1829, iv., 531 sqq. and it was translated by M. I. Rowlandson, *Tuḥfat al-Mudabbihīn, an historical work in the Arabic language*, London, Gr. Transl. Pand 1833 and ed. by D. Lopez, *Historia dos Portuguezes no Malabar, por Zinadin, manuscripte arabe do século XVI publicado e traduzido*, Lisbon 1898.

(C. BROCKELMANN)

MACASSAR, an important seaport on the island of Celebes, on the Bay of Macassar; it is the capital of the administrative district of "Celebes en Onderhoorigheden" and also of the division of it of the same name administered by an assistant-resident. By the native population the town which has made very great

progress in the last few years, is still often called by its original name of Ujung-pandang (Ujung-patulang). The Dutch gave it the name Macassar from the kingdom of the same name. The heart of the Macassar country is the former principality of Gowa, which was put under the direct rule of the Dutch East India government in 1911 and is a remnant of the once very powerful kingdom of Macassar. The area inhabited by the Macassars in the wider sense stretches over the whole southern part of the southwestern peninsula of Celebes, as well as over the island of Saleier and several groups of island in the neighbourhood. The remainder of southern Celebes is inhabited by Buginese who are closely related to the Macassars and whose language, manners and customs are very similar.

The Macassars do not differ much in physical appearance from the Javanese; they are of above medium height and in general well built. Their mode of life, dress and dwellings are simple. The main industry is agriculture which is very successful on the generally fertile soil: in the plains rice is grown, often on wet fields, in the mountains maize particularly, but also vegetables and leguminous plants and coconuts. The cattle-rearing also is not unimportant. The native industries which are carried on in the houses of natives are not on a very high level; the work of the gold and silver-smiths is relatively good. An unfavourable verdict has often been passed on the character of the Macassars but this seems to be exaggerated; they find it difficult to submit to a regular life but for the rest they are not difficult to govern. Among their vices are their fondness for dice and cock-fighting. Originally three classes were distinguished in Macassar society, the princes and nobles, the people, and the slaves. Slavery has now been abolished even in the districts under independent rule.

The population generally professes Islam and its laws are on the whole conscientiously observed and the Muslim principal feasts faithfully celebrated. But one cannot of course say that Islam regulates the whole of their social and religious life. The customs which survive from an earlier period are very numerous and form a striking contrast to the ideas of Islam. In every village there is still to be found a little building which is used for the worship of the spirits of the animistic period (the chief of whom is *Karaeng Lowe*, i.e. the "great prince") and where heathen priests offer sacrifices. There can therefore be no question of fanaticism and the very simple mosques are in general in disrepair. The highest Muhammadan office is filled by the *da'i*, usually a man of princely descent, who used formerly to be appointed and dismissed by the king. He had control of all matters relating to worship and he also gave legal decisions in questions of inheritance and played an official part in marriages and divorces. There were lower officials under him who acted as preachers and preceptors, performed the offices of a sexton and gave elementary religious instruction. Their knowledge of Islam is usually very slight. The revenues of their clergy consists of the *sakka* (*sakka*), the *pitara* (*pitara*) and of presents on all sorts of occasions at which they take part, and of a certain percentage (*titik*) on the division of inheritances. The *sakka* is irregularly and unsatisfactorily paid, the *pitara* much better.

No particulars are known of the earlier history

of Macassar and of the regions inhabited by the Macassars in general. In the middle of the sixteenth century they were under the rule of the Hindu-Javanese Kingdom of Matjapahit. According to the native chronicles of the royal houses of Gowa and Tello, which, at least so far as the earliest period is concerned, are largely mythical, the Gowa originally consisted of an alliance of nine small districts each under a noble; after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Tello, Gowa is said, after the death of the sixth king (at the same time the first whom the chronicles represent to us as an ordinary mortal), to have been divided between his two sons; the one became ruler of Gowa and the other of Tello. It is certain that, so far as our knowledge goes, there were always close relations between these two kingdoms and that there was a certain degree of unity about them; they were known together to Europeans as the "kingdom of the Macassars". About the year 1512 Malays from Sumatra were given permission to settle in Macassar and it was perhaps they who first brought Muslim ideas to South Celebes. When the Portuguese appeared there in the middle of the century, they found only a few foreigners there, who were Muslim; it was not till the beginning of the sixteenth century that the Macassars in general adopted this new religion. During the reign of Tumidjallo (1565-90), Ishullah, king of Ternate, came to Macassar, concluded a treaty and at the same time attempted to introduce the Muslim religion into South Celebes. In 1603 Sultan 'Al-Muhammad and one of his brothers became converts to Islam, which thereupon spread rapidly over Gowa and Tello, chiefly through the influence of Karaeng Motawajja, administrator of Gowa and prince of Tello. We find traditions about the first preaching of Islam in South Celebes, similar to those of other parts of the archipelago. There they are particularly associated with a certain Dato-ri-Randang, a Minangkabau peasant from Kotalingah, who is said to have landed about 1606 in Tello and to have preached the Muslim faith, at the same time performing all kinds of miracles. Next to him, the two main apostles of Islam are said to have been his contemporaries Dato-ri-Tiro and Dato-Patimang. Their tombs are still much visited.

In the first half of the sixteenth century the kingdom of Macassar extended very much, so that it brought under its suzerainty almost the whole of Celebes, Baton, Flores, Sumbawa, Lombok and the east coast of Borneo. The Dutch East India Company, which had a good deal of trouble with the Macassars, did not succeed till 1637 in concluding a treaty with them which permitted freedom of trade but allowed them no permanent settlement. But as Macassar caused the Company further difficulties in the Moluccas, a war resulted in which the town was burned. By the peace concluded in 1660, the king lost a portion of his territory; the Portuguese were forbidden to remain in the kingdom while the Company were allowed to settle and trade freely in Macassar. Peace was again broken in 1665; the Admiral of the Dutch East India Company, Speelman, sailed with a large fleet to Celebes, destroyed the Macassar fleet and forced the king to sign a treaty of peace ("Hong-maich Verdrag", 1667; confirmed in 1669), whereby

the suzerainty of Macassar over Celebes was finally destroyed. Even after this, the relations of the Company and later of the Dutch government with the kingdom were not good. Tello was incorporated in the government territory in 1836 and leased to the prince of Gowa. In 1905 an armed expedition was sent to Gowa; since 1911, it has been under direct rule.

MADAGASCAR. With its area of 228,340 sq. m., Madagascar is the third largest island in the world after New Guinea (234,770 sq. m.) and Borneo (284,030 sq. m.). Its area is a little greater than that of France (207,000 sq. m.), Belgium (11,373) and Holland (12,740) combined. It is oriented from N.E. to S.S.W. and measures 1,000 miles in its greatest length and 350 in its greatest breadth with a coast line of 3,000 miles. The latest estimates put the native population at three millions.

The island was called *al-Komar* by the Arabs, *Bukini* (lit.: where there are (no) Buki) by the Bantus of the neighbouring East African coast and by certain Malagasy tribes. The Portuguese called it "Island of St. Lawrence" because they discovered it on that saint's day, August 10, 1506, and finally it became known as Madagascar from Marco Polo's name for it. The orthography *جزيرة القمر* unvocalized gave rise to the false etymology *Djazarat al-Komar* "island of the moon" with which the Portuguese historians became acquainted in the xvth and xvth centuries and which survived down to the end of the sixteenth century among the sailors of Southern Arabia.

The name *Komar* appears for the first time in the *Kutub Sairat al-Araf* of Muhammad b. Mūsā al-Khwarizmi (d. 220 = 835 or 230 = 845), in which mention is made of the famous "mountain of Komu", *جبل القمر* in which the Nile was reputed to rise. But the interpretation by *جبل القمر* "mountain of the moon" was already old in the ninth century for it is found as early as the *des solentis* of Ptolemy, which the minority of Arab geographers and notably al-Khwarizmi took as a model. The mountain called "of Komu" or "of the moon" is mentioned by all the Muslim geographers who deal with eastern Africa. We shall see below how and to what degree the name of this mountain is connected with that of Komu = Madagascar.

In my memoir entitled *Le K'ouen-louen et les anciennes navigations interocéaniques dans le Mer du Sud* (*J. A.*, 1919, vol. 13, and 14), I have rediscovered in traces the origin of the name Komu; the documents there utilized enable it to be connected with the name of the Komers and of the

崑崙 K'ou-lun of the Chinese. The Chinese sources take us also to East Africa in which the *Lu fan* is of Cao Ju-kun (1225) reproducing word for word two passages of the *Liu shan tai ta* of Cao K'uei-fu (1178) locates a land of *K'ou-lun* *ti-m'et-lun* "land of the Zang of K'ou-lun", which is close to a large island (= Madagascar) which is the regular home of the *feh* or *vela* of the Arabs, whose feathers are so large that they can be used for holding a load-must of water. The old name of Madagascar has survived in modern geography in the name of the Comoro Islands, the little archipelago lying to the N.W. of the island.

In his *Explorations portugaises de Madagascar en 1613* (*Bol. Soc. Geogr.* of Lisbon, 7th series, 1887, p. 313-356), Father Luis Martinho refers to the Malagasy as *Angue* (more correctly: *Baki*), which is also found in later travellers. It is the name given by the Eastern Bantu to the large African island: *Baki*, or with the addition of the locative suffix *-ni*: *Bakini*, *Baki* is to be connected with the Malagasy word *mbakila* "king-".

dom, subjects" (phonetically: *malakiki*), which is a plural Bantu form (*malakiki*) malagaised *malakiki* (Bantu plural form, *malakiki* + euphonic intervocalic Malagasy *ki* + *malakiki*). This radical is identical with the reduplicated form used by the Arab geographers, *Malakiki* or *Malakiki* [q. v.] and phonetically equivalent to the *Malakiki* of the early travellers and the Eastern Bantu *malakiki*, "the Malagaisies" and *Malakiki*, "Madagascar". This explanation seems preferable to that which I had proposed in 1904 in *J. A.*, vol. III, p. 490 sq. I think we must agree that the Malag. *malakiki* comes from *malakiki* and recognises a Bantu substratum in the Malag. word.

The present name of Madagascar is given by Marco Polo in the form *Madagascar* (cf. *The Book of Ser Marco Polo*, ed. Sir Henry Yule and Cordier², II, p. 411 sq.). Yule long ago pointed out that Marco Polo had not visited Madagascar and only knew it by hearsay, and that the information he gave about it really related to the adjoining east coast of Africa. The origin of this name is as follows: As I have already pointed out in studying once more this chapter of Marco Polo, *Madagascar* is undoubtedly a slightly erroneous formation of the form *Zang-bar* and should be corrected to *Madagascar* = "land of the Malagaisies", just as *Zang-bar* means "land of Zangor of the Zang" (cf. *Mémoires Soc. de Ling. de Paris*, vol. XIII, 1905-1906: *Trois étymologies malgaches*, p. 415-422), where *زنج* should be corrected

to *زنجبار*. This correction is justified by the following facts: In the *Travels* already quoted, Father Luis Matiano mentions a kingdom of the S. E. of Madagascar which he calls *Matacaris*, *Matacaris*, *Matacaris* (or *Matacaris*). Three years later in 1616, Father d'Almeida, travelling in the same country also mentions a kingdom of *Matacaris*. Cauche in his *Relation*, published in 1653 by Morisot (*Relations véritables et curieuses de l'île de Madagascar et du Brésil*, p. 10, 49, 99, 124, 127, 134), mentions a province called *Malagache* by some and by others *Madagascar*, the inhabitants of which he calls *Malagaches* and *Malagaches*. He also uses the term *Madagascaris*, but with the wider sense of the whole island and its inhabitants: Flacourt (*Histoire de la grande île Madagascar*, 1661, p. 1) says: "The island of Saint Laurens is called Madagascar by the geographers, by the inhabitants *Madagascar*, by Ptolemy *Mennithian*, by Pliny *Cornu*... but its real name is *Madagascar*". Later writers are all more or less inspired by the work of Flacourt and need not be discussed here. All these different readings go back to two forms: *Madagascar* and *Malagachi* which correspond exactly to two main categories of dialects: those with dental *d* and those with liquid *l*. It is the latter form that came to prevail over the whole island, sometimes with the sibilant: *Malagachi* and sometimes with the palatal: *Malagachi*. Both are paroxytone. The modern vernacular frequently uses the abbreviated form *gali* and even *gali*. These facts seem to justify the explanation suggested above for the name *Madagascar* which we owe to Marco Polo.

The doublet, *Malagachi-Malagachi*, *Malagachi-Malagachi* is obscure. According to the morphology of the language it may represent a form **male* or **male* + *gali* which recalls nothing, whether we take the form with soft letters *malagachi* or that

with hard noted by the Portuguese: *malakiki*. Nor do we know whether we have to deal with a western Indonesian root or a Bantu stem. In any case it is probable that we have to deal here with a foreign tribal name, the eastern or western origin of which can no longer be explained from an ancient or modern language.

In the Arab geographers the first detailed account of the island of Komr-Madagascar is found in the *Kitab Nushat al-Mughallab fi Tajarik al-Afrik* (1154) of al-Idrisi who included the large African island in the country of the Zang. "The people of the island of Zibag = Sumatra", he says, "in the seventh section of the first clime come to the country of the Zang in large and small ships and use it as a centre for trading in their merchandise as they understand one another's language" (MS. 2221 of the *Bibl. Nat. Paris*, f. 296, l. 13). This passage is very important as it shows that in the 12th century, Madagascar, wrongly located in the country of the Zang, had been long before colonised by immigrants from Sumatra who had introduced their language into the island and Malagasy was derived from it. In the eighth section of the same clime the island of Komr-Madagascar is situated seven days' sail from the Maldives. Its king lives in the town of Maliki. This is an island four months' journey in length. It begins near the Maldives and ends in the north opposite the islands of China. The geographer of Roger of Sicily, as his map shows, has combined into one huge island Madagascar, Ceylon and a part of Sumatra. In the ninth section, we are told that the people of Komr and the merchants of the land of the Mahradia (= Sumatra) come to the inhabitants of the east coast of Africa and are welcomed by them and trade with them (cf. my *Relations de Voyages*, Index, s.v. *Komr* and *Komor*).

Yakut in his *Mu'jam* (completed in 1224) says simply (vol. IV, p. 174): "al-Komr is an island in the centre of the sea of the Zang, which contains no larger island than this. It contains a large number of towns and kingdoms. Each king makes war on the others, Amber and the leaf *al-komr* (alc) are found on its shores. This is a perfume; it is also called betel flower. Wax is also obtained from it". The *Kitab al-Mughallab* of the same author contains identical information taken from the *Mu'jam* (ed. Wattenfeld, p. 358) but the latter text has more correctly "the leaf *al-komr*".

Abu 'l-Hasan 'Ali b. Sa'id al-Maghribi, best known as Ibn Sa'id, was born in 1208 or 1214 near Granada and died at Damascus in 1274 or in Tunis in 1286. The Bibliothèque Nationale in Paris has a copy catalogued as Ms. n^o 2234, a treatise on general geography which runs from f. 1 to 117 and is entitled: "The book collected and epitomised by 'Ali b. Sa'id al-Maghribi the Spaniard of the Book of the Geography (of Ptolemy) in seven climes; and he has added to it longitudes and latitudes from the book of Ibn Fathima". This copy of the original manuscript is dated 714 (1314-1315) and belonged to the celebrated geographer Abu 'l-Fid'f. The text contains in a few lines information of the highest importance to the following effect: "The Komr who have given their name to the mountain of this name situated in eastern Africa are brothers of the Chinese. They originally lived with the Chinese in the eastern regions of the earth, i.e.

in the interior of the Asiatic continent. Discord having broken out between them, the latter drove the Komr to these islands. After a certain period of time, dissensions broke out among the Komr who had migrated into these islands, the king and his family migrated once more and went to the large island of Komr = Madagascar and the King settled in a town of this large island, called Komritya. These Komr immigrants to the large island increased in numbers and spread through the different centres of the island; but new dissensions broke out and provoked a new exodus and many of them went to settle in the south at the beginning of inhabited land along the mountain which bears their name" (cf. *Relations de Voyages*, II, 316 sq.). If we translate these successive migrations into terms of modern geography, we get the following: The Komr, related to the Chinese, originally inhabited Central Asia, migrated from the interior of the continent where they were neighbours of the Chinese to the adjoining maritime lands and islands (= Indo-China, Malay Peninsula and Indonesia; in Decade II, Book II, Chap. IV, of *De Asia*, p. 352 of the little edition of 1777, the Portuguese historian Juan de Barros says that the Japanese claim to have originally come from China). They later migrated from Indonesia, more accurately from Somatra (cf. my *Empire sumatranais de Chulafaya* in *J.A.*, 1922, vol. XX.) to the large island which bears their name, the island of Komr = Madagascar and from there to the land of the mountain of Komr, the famous mountain in which the Nile was thought to rise = East Africa.

The first migration, that from Central Asia to the coasts of trans-Gangetic India certainly took place long before our era. Several centuries must have passed between the departure of the emigrants from the plateau of Eastern Tibet, their expansion in the region of the coast, from Burma to Indo-China and their crossing to Indonesia. Ibn Sa'id lived in the 12th century. How then could he have known of events that took place several millennia before his time and are not recorded elsewhere? Neither the history nor legends of the Far East knows anything of such happenings. The Indians, Sinites, and Indo-Sinites whom I have consulted cannot think of any text or inscription directly or indirectly referring to them. I am surprised at such a question being raised by a comparatively late Arabic text and I know no satisfactory answer. I was prepared by my studies on Madagascar to accept Ibn Sa'id's statement that the large African island was colonised by Somatrans whose ancestors had come from the Asiatic Continent; this is exactly what Ibn Sa'id tells us. The agreement between the Arabic text and historical events is striking; but this undeniable agreement is unexpected for we do not know as well as we ought, how and where such information could have been obtained in the 12th century. I put forward the hypothesis (*Relations de Voyages*, II, 320) that the Sa'id might have got the information at the court of Hüllagü where he spent some time in the 12th century. But we know from his biographies that the Spanish traveller lived in Baghdad, studying assiduously at the 35 libraries of that city and making extracts from manuscripts. He may have found in these works the statements he has so fortunately preserved for us.

A contemporary of Ibn Sa'id, Djamil or Najim

al-Din Abu 'l-Fath Yūsuf b. Ya'qūb b. Muhammad, better known as Ibn al-Mudāwir al-Shalbānī of Damascus, prepared his *Tārīkh al-Mustabīr* (Cod.: *al-Mustabīr*) in 1230 (MS. 6021 of the Bibl. Nat. in Paris). In the 25 folios devoted to the history of 'Aden, 72 s. & deals with the voyages of the Komr from their original home to 'Aden and notably in 626 (1228) from Madagascar to the African coast and to 'Aden (cf. *J. A.*, vol. 13, 1919, p. 469-483).

The following geographers: Shams al-Din Abu 'Abdallāh Sūfi al-Dimashqī (d. 1325), Abu 'l-'Abbās Ahmad al-Nuwairī (d. 1332), Abu 'l-Fidā' (1273-1331), Ibn Khaldūn (d. 1375), Makrūn (1365-1442) tell us nothing particular about the island of Komr. The towns, which some of them locate in the great African island, are really in Ceylon or further east or cannot be identified (cf. *Relations de Voyages*, index, s. v. *Komar* and *Komar*).

In the 15th century Ibn Mājid (cf. SHIHAB AL-DIN AHMAD b. MUHAMMAD) in his *Kitāb al-Fawā'id* (cf. my *Instructions nautiques et routes arabes et portugaises*, vol. I, p. 680, 2) includes the island of Komr among the ten large islands of the world and mentions it after the Arabian peninsula: "The island which is the second in size", he says, "is the island of Komr. It is now an island (sic). The information I have collected orally does not agree about its length or breadth for it is quite apart from the world and the inhabited climes of the earth. This is why there is doubt on the subject. In the large books on geography it is said to be the largest of the inhabited islands. Between it and the land of Sofala and the islands dependent on it (= the Mozambique Channel) there are islands and reefs. In spite of this sailors are able to pass among the islands and reefs. The island of Komr takes its name from that of Kāmran, son of 'Amur son of Shem son of Noah. To the south it has the sea which the Greeks called Okeānos, this is the ocean surrounding the world (*al-Muhit* in Arabic). It is the beginning of the southern darkness, which is to the south of this island of Komr". Ibn Mājid frequently mentions the island of Komr in his other Nautical Instructions also and it undoubtedly is Madagascar.

With Sulatmān al-Mahrī (cf. below) our information becomes more definite. In his *al-Umdat al-mahrīya* in Chap. IV., dealing with the islands and sailing routes along their coasts (cf. *Instructions nautiques et routes arabes et portugaises*, vol. II, I, 222), he says: "Let us begin with the island of Komr because it is a large island which stretches along the coast of Zang and Sofala. Its northern extremity is called Rāi al-Milī (= Amber Cape); it lies in 11° 02' of Nāsh (N. 8° 37' of the Great Bear = 8° 37' South; the true latitude is 11° 37'). Its southern extremity which is called Hūfā (I = Cape Sainte Marie) is in 3° 48' of Nāsh (= 31° 37' south; the true latitude is nearly 25° 38') according to some, in 1° 48' of Nāsh (= 24° 51' south) according to others. This latter latitude is the more accurate. There is a difference of opinion about the direction of the sea-routes along its coasts, because this island is remote from the inhabited earth. There are two opinions regarding the direction of the route along its east coast: according to some one should sail S.W. & W. according to others S.W. There is a third opinion that one should go W.S.W. from one end to the other of the island. This last view is that of the older sailing

masters. In my opinion, adds Sulaiman al-Mahri, it is possible that the route should be W.S.W., then S.W. $\frac{1}{2}$ W., then S.W. and in another direction still, for two reasons: the first that it is a large island, that its coast is long and the route is also long. The second reason is that the directions given have not been verified on account of the fewness of the voyages made to this island and the insufficient nautical knowledge of those who have been there. Sailing-masters (*mu'allim*) of Zang have told me that the route on the east coast from Rās al-Milḥ to the place where Na'ḥ is $8^{\circ} 14'$ ($= 13^{\circ} 30'$) south is to the south and from this place to the south end of the island is S. $\frac{1}{2}$ S.W. I have recorded that the route on its west coast from Rās al-Milḥ to the place where Na'ḥ is $8^{\circ} 14'$ ($= 13^{\circ} 30'$ S.) is to the south; and from this place to the south end of the island S. $\frac{1}{2}$ S.W. On the west coast from Rās al-Milḥ to the place where Na'ḥ is $6^{\circ} 14'$ ($= 16^{\circ} 44'$), the coast is perfectly safe; from $6^{\circ} 14'$ to its south end there is a *zāḥ* ("bank" or "shallow") about 2 *ṣam* ($= 6$ hours) sail or more in length to the neighbourhood of the coast. Between the island of Komr and the coast (east coast of Africa) there are four large inhabited islands, near one another, to which the people of Zang go. The first of these islands is Aḡazidiya ($=$ Great Comoro). It is in $11^{\circ} 14'$ $\frac{1}{2}$ of Na'ḥ ($= 9^{\circ}$ S. approx.; Mrovi, the capital of Aḡazidiya, is in exactly $11^{\circ} 40'$ South). Between it and the African coast it is 16 *ṣam* ($= 48$ hours) sailing. The second, Muḥāli (our Mohuli), is in $11^{\circ} 14'$ of Na'ḥ ($= 8^{\circ} 37'$ S., true Lat. about $12^{\circ} 20'$); the third Dumāni (capital of Anjouan) which is in $11^{\circ} 14'$ of Na'ḥ ($= 8^{\circ} 37'$ S., true Lat. $12^{\circ} 15'$) is to the east of Muḥāli; the fourth Mawūli (our Mayotte) is in $10^{\circ} 14'$ $\frac{1}{2}$ of Na'ḥ ($= 9^{\circ} 25'$ S., true Lat. $12^{\circ} 46' 55''$). To the east of these islands lies a great reef of rocks, about 4 *ṣam* ($= 12$ hours) sail, usually called *Ain al-Baḥr* ("eye" or "source of the sea"). The harbours of the west coast of Komr are Langāni ($15^{\circ} 17'$ S.), Sa'da (true Lat. approx. $13^{\circ} 34'$) and Manāḥilī ($=$ the bay of Mahadzamba, whose west point is in approx. $15^{\circ} 12'$ Lat.). Those of the west coast are Bender Banī Ima'īl (in the same latitude as Langāni on the west coast), and Bimārūh ($=$ Vohémar in $15^{\circ} 21' 15''$). All these ports are dangerous (for ships) except Langāni. Know that between Rās al-Milḥ and the coast of Zang, there are 50 *ṣam* ($= 150$ hours) sail; and 20 *ṣam* ($= 60$ hours) to the east of Rās al-Milḥ there is an inhabited island called Manawarā (one of the southern Maldives). To the southeast of the island of Komr lie numerous islands called Tiraḥā (the Mascarene Islands); they are 12 *ṣam* ($= 36$ hours) sail from the island of Komr.

In his *Kitāb al-Minhāj al-fāḥir* (f. 736 of the same MS.), Sulaiman al-Mahri gives another description of the island of Komr which does not differ from that given above. Four pages earlier on f. 711 he mentions several other harbours of the island of Komr with their latitudes calculated from the altitude of the Great Bear:

Island of Manawarā by $11^{\circ} 14'$; Bender Ima'īl or Banī Ima'īl on the east coast and Langāni or Langāni on the west by $10^{\circ} 14'$; Bimārūh on the east coast, Anāmil on the west by $9^{\circ} 14'$; the island of Amber (*Qasrat al-Anbar*) on the east coast and Bender al-Nūḥ on the

west by $8^{\circ} 14'$; Noshim (?) on the east coast and Malawin (?) on the west by $7^{\circ} 14'$; Manakāra on the east coast (true Lat. $22^{\circ} 08' 30''$) and Bender (al-)Shūbān, "port of the banks", by $6^{\circ} 14'$; Bender Hādūda on the east coast and Bender Kari on the west by $4^{\circ} 14'$; Wabaya (according to the Turkish text of Sidi 'Alī, the name is illegible in MS. 2559) on the east coast and Bender Hīt (or Hīt) on the west coast by $3^{\circ} 14'$; Bender Hādūda (sic) on the east coast; no name known on the west coast in this latitude by $2^{\circ} 14'$; Bender Kūa (or Kūa) on the east coast and the bay of Kari on the west coast by $1^{\circ} 14'$; the majority of the names of harbours, which are sometimes found on both coasts recall nothing known elsewhere.

Malagasy undoubtedly belongs to the western Indonesian group of the Malayo-Polynesian family. Down to the adoption of the Arabic alphabet, the language was only oral and, so far as we know, never written down in any alphabet. The lack of epigraphic material on the one hand and of ancient monuments on the other deprives us of any chance of regaining the past history of this vast island. Before the xvth century, a few Arabic and Chinese texts would constitute our only documents, if the linguistic substrata did not yield us some valuable information. These substrata are of two kinds, Bantu and Sanskrit.

These former are divided into three categories:

1. The borrowings of relatively recent date from Swahili, which in turn got them from Arabic, of the type: Malag. *baḥari*, "sea" < Swahili *baḥari* < Arabic *baḥr*; Malag. *kamba*, "coconut fibre rope" < Swahili *kamba* < Arabic *kinnār*, *kambar*; Malag. *zuhāt*, "rudder" < Swahili *urukani* < Arabic *ṣukhān*. These loanwords are practically only found in the maritime dialects of the N.W. and W. coasts.

2. The borrowings from Swahili of the type: Malag. *bān*, "brother" < Swahili *mshay*; Malag. *baḥana*, "master", "sir" < Swahili *baḥana*; Malag. *hāḥa*, "measure for rice" < Swahili *hāḥa*, "measure of about a quart", etc. Like the preceding, these loanwords are found almost solely in the maritime dialects of the west coast; it may therefore be assumed that they also are of recent introduction.

3. The following words are, on the other hand, used either in the old and modern coast dialects or in the dialects of the centre and east, that is outside of the zone frequented by the sailors of the east coast of Africa, Zanzibar and the Comoros. They are found in manuscripts of the Bibliothèque Nationale and in old records of travel; they are not borrowings, but belong to an old substratum of the language:

Malag. *amāḥa* "dog" < Bantu *amwa*;
Malag. *akanga* "guinea-fowl" < Bantu *kanga*;
Malag. *ampanḍra* "sea" < Bantu *panda*;
Malag. *amāmbi*, *amāmbi*, *amāmbi* "oa" < Bantu *ngombi*;
Malag. *angānu* "tale, fable" < Bantu *nganu*;
Malag. *amāmbi*, *amāmbi* "sheep" < Bantu *amāmbi*;

Malag. *amāmbi*, *amāmbi* "green pigeon" < Bantu *amāmbi*;

Malag. *amāmbi* "kind of lemur" < Bantu *ngedre* "little black monkey";

Malag. *amāmbi* in the tribal name *Kasi-mamby* "madame" < Bantu *amāmbi* "woman, wife";

Malag. *lāngana* "hog" < Bantu *lunguni*;
 Malag. *lānka, lōnka* "mangrove" < Bantu *mboko*;
 Malag. *lōnra* "pairoquet" < Bantu *lōnra*;
 Malag. *lōnra, mōlōnra, mōlōnra* "mauioc" < Bantu *mōlōnra*;
 Malag. *mōlōnra, mōlōnra* "sorcery" < Bantu *mōlōnra* "sorcerer";
 Malag. *mōlōnra* "poison" < Bantu *mōlōnra* "vegetable poison in which arrows are steeped";
 Malag. *lōnra* "goat" < Bantu *mboko*;
 Malag. *lōnra* "mīlva aegyptiaca" < Bantu *lōnra, lōnra* "falcon";
 Malag. *lōnra* "ship" < Bantu *lōnra*;
 Malag. *lōnra* "strangers to the country or place where one is" < Bantu *mōlōnra* "foreigners";
 Old Malag. *mōlōnra*, modern Malag. *mōlōnra* "stranger (means particularly foreigners of white race)" < Bantu *mōlōnra* "white strangers, Europeans"; etc.

The place-names of Madagascar further show a certain number of names of villages on the coast and of rivers running into the sea which are also Bantu, some Swahili and others ordinary Bantu. They are referred to in my memoir on *L'Origine Africaine des Malgaches*, J. A., 1908, vol. II.

The Sanskrit substratum contains many words of various classes:

1. Names of gods, spirits and of castes:
 Old Malag. *Vahā-hāri*, modern Malag. *Zahā-hāri*, "the supreme deity", lit. "the sun-god"; cf. *Om Vahā-hāri* < Indonesian *wah*, "god"; Sanskrit *hari*, "sun", the sun deified.

Old Malag. *lōnra*, "god of evil", *lōnra* *lōnra* < Sanskrit *lōnra*, "deity" (for the inverse semantic process, cf. Sanskrit *deva*, "god" > Zend *daeva*, Pahl. *dēv*, Pers. *dēv*, "evil spirit").

Old Malag. *Rān* in the expressions *lōnra-rān* *rān*, lit. "eaten by Rān the moon" = eclipse of the moon; *lōnra-rān* *mōlōnra*, lit. "obscured by Rān the sun" = eclipse of the sun.

Malag. *andriana, andriana*, "noble", "of royal or noble caste" < Kawi *arjya* < Sanskrit *arjya*, etc.

2. Names of the months:
 The names of the months in the Indian calendar are found in the dialects of all the tribes of Madagascar. They have not however been preserved in the original order and a month that is placed at the beginning of the year by one tribe is put at the middle or end by another. On the other hand *pramāsa, lōnra* and *lōnra* are not found in the Malag. lists; they are replaced by two *lōnra*'s (large and small), two *lōnra* (large and small) and a month called *lōnra* (1);

Skr. *pramāsa* > Malag. *lōnra, lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;
 Skr. *lōnra* > Malag. *lōnra, lōnra, lōnra*;

"the month or moon of lōnra";
 cf. also Skr. *lōnra* "season of the rains" > Malag. *lōnra, lōnra* in *lōnra-lōnra, lōnra-lōnra* "season of lōnra";

3. Common words:
 Skr. *lōnra* "10 millions" > Malag. *lōnra* "100 miles" > old Malag. *lōnra* > modern Malag. *lōnra* "100 miles";

Skr. *lōnra* "glass" > Malag. *lōnra* > old Malag. *lōnra*;
 Skr. *lōnra* "melon, pumpkin" > Malag. *lōnra*, Batak *lōnra* > Malag. *lōnra*.

Skr. *lōnra* "cloud" > Malag. *lōnra* > old Malag. *lōnra*;

Skr. *lōnra* "betel" > Javanese *lōnra* > old Malag. *lōnra*;

Skr. *lōnra* "kind of palm-tree" > Batak *lōnra*;
 Malag. *lōnra*, Javanese, Sundanese *lōnra* > Malag. *lōnra* "kind of palm-tree";

Skr. *lōnra* "fast" > Malag. *lōnra* > old Malag. *lōnra* "act of fasting";

Skr. *lōnra* "four" > Atchinese *lōnra* "a square game played by women" > Malag. *lōnra*;

Skr. *lōnra* "building erected on the occasion of a fête, a pavilion" > Mal. *lōnra*, pavilion, building in which guests are received > Malag. *lōnra*, in composition *lōnra*, "royal residence, court, palace, tribunal, a roof in the centre of the village under which business is discussed";

Skr. *lōnra* "manual, book, magic treatise" > Balinese *lōnra* "story, fable, in which animals are the principal characters" > Malag. *lōnra* "story, legend, tale";

Skr. *lōnra* "copper" > Malag. *lōnra* > Balinese *lōnra* "red copper" > Malag. *lōnra, lōnra*;

Skr. *lōnra* "ginger" > Malag. *lōnra* and the form with metathesis *lōnra*, etc.

Introduced by Muslims speaking Arabic, Islam has left numerous traces in Madagascar; the first and most important is the Arabic alphabet. The task of adapting the Arabic alphabet to the transcription of Malagasy was delicate and difficult. It was however satisfactorily accomplished. The Malagasy sounds *h, d, f, k, l, m, n, r, s, t* were transcribed by the corresponding Arabic letter. The other sounds were rendered as follows: Malag.

g by *g*; guttural *h* by *h* and sometimes by *g*; the group *gh* also by *g*; the sounds *dr* and *tr* which in Merina represent practically the *dr* and *tr* of the English *drace* and *travel* (they are pronounced a little farther back in the non-Merina dialects)

generally by *g*, sometimes by *g* with a *tanwin* (e.g. *antendri*, "date-palm" is rendered by *g*)

and the context alone indicates whether *g* is to be read *dr* or *tr*; Malag. *t* by *t* with a point below; *ts* by Arabic *ts*; Malag. *r* by *r* but the Arabic *ر* is also pronounced *r*: Arabic *رمضان*

ramadān > Malay *ramadā*; Malay *s* by *s* pronounced *s*: Arabic *سنة* "little child": the sound *sh* by

sh and in modern Arabic-Malay sometimes by *sh*. The Islamised non-Semitic peoples, who have adopted the Arabic alphabet and who have to transcribe the occlusive *p* have employed various notations. The Malays have rendered it by *p*; the Persian and following them the Muslims of the Comoro archipelago by *p*; the Swahili of East Africa by *p*; the Malagasy adopted an unexpected solution of the problem: down to the

seventeenth century they rendered *p* by *p*; i.e. *p*,

mounted by a vertical *tasbeeh*, then by ق. Contrary to Malay each letter is vocalised, which renders the reading of Malagasy-Arabic texts easy in spite of the variations in orthography, which are too numerous to be given here.

The Arabic-Malagasy alphabet was once used over a very considerable area; at the present day, it is only used on the S.E. coast where very many natives were still using it at the end of the sixteenth century. The Malag. Muslims of the N.W. and W. prefer to use the Arabico-Comoro or Arabico-Swahili alphabet. The latter renders by ت a *re* identical with the Malag. *re* but this form is only used in the island of Anjouan. The dialect of this island which has a *z* transcribes it by ج, the *z* of Persian and Turkish. The Arabic letters ت, ح, ه, ز, ن, ج, ح, ه, and ق are only found in Malagasy, when Arabic words are quoted and they are pronounced respectively *t*, *h*, *h*, *z*, *n*, *j*, *h*, *h*, and *q*.

Malagasy manuscripts in the Arabic character bear the generic name of *shura-be* "great writing", i.e. "sacred writing". They used to be difficult to obtain; the owners gave them an esoteric character which did not allow their contents to be communicated to a stranger. I was able to get some copied and to acquire a few others between 1890 and 1894. The Bibliothèque Nationale in Paris has ten, of which eight are undoubtedly old. MSS. 2, 3, 4 and 5 came from the old Abbey of St. Germain des Prés; No. 6 is also old, although it was only acquired in 1820. Thanks to an interlinear transcription and Latin translation by a European, which can be dated on palaeographical grounds between 1595 and 1620, it may be presumed that No. 7 reached Europe in the second half of the sixteenth century and must therefore have been written before that date. According to an MS. note by Langlès, "MS. 8 seems to have been brought to France in 1742"; the MS. 5132 wrongly classed with the Arabic manuscripts is also an old Malagasy manuscript. MS. No. 1 given by the Duc de Coislin to the Abbey of St. Germain des Prés has coloured drawings, coarsely executed of men, animals, trees, and cabalistic figures but not a single line of text. MS. No. 13 is a copy of four short modern manuscripts. With the exception of 1 and 13, all the manuscripts are on native paper, written with the *shalam* with native ink. Flacourt gives a detailed description of them in his *Histoire de la grande île Madagascar* (p. 194-199, of the edition 1661). The subject matter of the manuscript is very varied. There does not seem to have been a *shura-be* prototype out of which all the others proceeded. In an apparent disorder, the result of the fancy of the author or the copyist, we find collected *suras* of the *Koran*, interminable lists of the names of Allah, and of names of angels, Arabic religious texts with interlinear Malagasy translations (cf. the facsimile publ. in *N.E.*, vol. xxxviii, 1904, p. 457); Arabic-Malagasy glossaries, magic texts, and invocations in large numbers, magic squares and formulae, texts showing the magic influence, good or bad of the planets, signs of the zodiac, lunar mansions, months, and days of the week, of the male and female character of the twelve Muhammadan months (Muhammad is male, Safar is

female, and so on, in MS. No. 2, 19, 26), of patterns for amulets (*hirisi* < Arabic حُرُز).

The *suras* of the *Koran* are not reproduced in the order which was settled at the revision ordered by the Caliph 'Othman. MS. 6 gives them in the following order: *fatîha*, cxiv., cxiii., cxii. and so on to xcvi. (f. 2^e etc.). Then come verses 1-4 of *Sûra* xciv., verse 256 of ii., verse 16 and beginning of verse 17 of iii. The same MS. also contains *Sûra* xxxi. (f. 136^b) and f. 136^b-138^b, verses 158-159, 137, 256-259, 284-286 of *Sûra* ii. and verses 25-26 of *Sûra* iii.

Here we may mention several texts of particular importance, one of which is certainly unexpected. MS. 3 contains a bilingual glossary of 36 common words, Malagasy and Dutch, the two languages being transcribed into Arabic characters. It was published in *B.T.Z.F.*, vol. lxi, 1908. I have suggested that it must have been compiled by the interpreter of Frederik de Houtman, "who had spent four years with the Dutch and spoke their language well". He had supplied Houtman with "his collection of Malagasy words".

MS. 5 contains from f. 85^a to 88^a an Arabic poem with Malagasy translation in honour of a certain Lalla (I have not yet been able to ascertain if this is the lover of Madjnin, or of some Lalla in Arabic literature). The piece begins "The poets said..." and ends "... the girl who possesses beauty and kindness." The Arabic verses are of an unusual inaccuracy and show that whoever reproduced them had a very superficial knowledge of the language and poetry.

MS. 8 (f. 52^b to 56^b) preserves a *khutba* in Arabic entitled *الْبَيْتُ وَالْخَيْطُ* (*ba*) pronounced

Aladua: va-lakaitu (*la* is the Malagasy article), "the Khutba's prayer". Not a line in it is correctly written and some words are absolutely unrecognisable. Under the transformations they have undergone however we still find the formulae used in this sermon. The following are successively mentioned in the *khutba*: the Prophet and his family, the first four caliphs, 'A'isha, Fatima, her sons Hasan and Husain, the two uncles of the Prophet, Hanzala and al-'Abbas; then the Caliph Abû Ahmad 'Abd Allah al-Musta'îm bil'lâh (the text has *bi-l-lâh Allah*) Amir al-Mu'minin. Further on there is a re-

ference to Sulhân *قَاتِنَا عَدَا*, son of Sulhân 'Othman. The mention of the last of the 'Abbâsid caliphs seems to indicate that the Malagasy converts to Islam, among whom this *khutba* was in use, had been converted by Arabs who had left Baghdad or a country under al-Musta'îm in this caliph's reign, i.e. between 640 and 656 (124-1258). We cannot explain otherwise how his name appears with the title "Commander of the Faithful" in a *khutba* used in Madagascar. As to the Sulhân *قَاتِنَا عَدَا* (perhaps we should read *قَاتِنَا عَدَا* and

translate "Sulhân *قَاتِنَا* who is late", the *khutba* then indicating the Sulhân in question), I have not been able to identify him. As it is written, the name is neither Arabic nor Malagasy. MSS. 7 and 8 contain two identical versions of a religious text which I published in *N.E.* (xxxviii, 449-450). In a passage devoted to the glorification of the month of Ramadan, the anonymous author succe-

sively invokes the prophets of the Old Testament, Jesus and Mary, the Prophet Muhammad, the first four caliphs, Hasan and Husain and finally Abū Hanīfa al-Nu'mān, the great Sunnī Imām, and Muhammad b. Idrīs al-Shāfi'ī, the founder of the Sunnī school which bears his name. The mention of these two learned men and the *imāms* already mentioned are evidence of the orthodox character of certain Muslims of Madagascar and perhaps one may say of the generality of Muslims on the southeast coast. But the same manuscript N^o 8 contains a Persian text which prevents us putting forward this conjecture. This latter text which is still unique is found on ff 256-278. The last lines invoke the '*ashars mukadidars*', then, the first eight *imāms* of the Shī'a sect of the 'Twelvers' (cf. *ṬHAKĀ AHARIVA*) to whom the author has added 'Ali Akbar (²'Ali the elder'), son of Husain and half-brother of 'Ali Zayn al-'Abidin. The mention of these *imāms* of whom the last named, 'Ali al-Ridā, reigned from 183 (500) to 202 (818) is valuable, for it implies that the writer of this text belonged neither to the schismatic sect of the Zaidīya founded in 695 A.D. nor to the schismatic Shī'a sect of the Ismā'īlīya which dates from 765 A.D., but to the orthodox Shī'a sect of the 'Twelvers'. This is important, for the Persians whose historical tradition makes come from Shī'īz and colonise Kilwa on the east coast of Africa and the island of Anjouan in the Comoro Archipelago were Zaidīyas (cf. G. Ferrand, *Les Sultans de Kilwa*, in *Mémoires Henri Bassel*, in the press) who cannot come into consideration in the present case. The Ismā'īlīya, whose presence in Madagascar is evident from MS. N^o 8 thus form a separate group different from that of the Persians who had immigrated to the adjoining coast of Africa.

The Arabic-Malay manuscripts which I possess, those of the University Library of the Faculty of Letters in Algiers and the others which I have been able to see are, as a rule, similar in contents to those of the Bibliothèque Nationale, with the exception of the *ḥafṣa* and the Persian text, which so far as I know are found nowhere else. Quite a considerable number of manuscripts like MS. 13 contain genealogies of kings of the South-east, from which all these documents come, and local histories. One of them gives details of La Caen's campaign in the island of 1659-1663 (cf. *N. E.*, 1907, xxxi.).

The majority of the religious texts which are found in the Arabic-Malagasy MSS. of the Ind. Nat. are translated into Malagasy. The Arabic part is very incorrect and the Malay translation shows that the readers of Madagascar understood very little of it. The illustrations and lamented Gohlshies, to whom nothing Islamic was foreign, was interested in the texts which I published. Comparing three translations of the Malagasy text with the Arabic text he concluded that 'the meaning of the fundamental ideas was most gravely misunderstood' (*L'École supérieure des Lettres et des Sciences d'Alger au XIV^e Congrès des Orientalistes*, in *E. M. N.*, 1905).

The borrowings of the Malagasy from the Arabs who converted them to Islam are many and are found through all the tribes of the island without exception. The most notable are the names of the days of the week: *alabimani*, *alabato*, *alabato*, *alabato*, *alabato*, *alabato*. We may note that the Arabic article has been retained

for Monday, Wednesday, Thursday, Saturday and Sunday but dropped for Tuesday and Friday. The names of the days are here given in the Merina dialect; the forms of the other dialects show the regular phonetic variations.

2. The names of the twelve months in Merina and in the dialect of some other tribes reproduce the Arabic names of the twelve signs of the Zodiac: *alabamadi*, *adawra*, *adizana*, *asurutani*, *alabamadi*, *asurubula*, *adimimana*, *alabamadi*, *alabamadi*, *adidadi*, *adabo* and *alabamadi* in which we can readily recognise: *al-hamal*, *al-thaur*, *al-jawad*, *al-sarufan*, *al-asad*, *al-simbula*, *al-wisān*, *al-sarab*, *al-thaur*, *al-jawad*, *al-dalā* and *al-hūt*. Quite a number of tribes do not know the Merina series, but still use the names of Sanskrit origin given above (p. 68, col. 2).

3. The names of the 28 days of the month (the S. E. Malagasy however once had a year of 366 days) which are recorded by Flacourt (*Histoire*, 1661, p. 174) recall those of the 28 lunar mansions of the Arabs. According to the empirical method adopted by al-Sūst and other writers, i. e. dividing the 28 mansions by 12 the latter are evenly distributed among the signs of the zodiac. 'Know', says al-Sūst, 'that each of the signs of the zodiac has two mansions and a third' (A. C. de Motylinski, *Les Mansions lunaires des Arabes, texte de Mohammed al-Moqri*, transl. and annot., Algiers 1899, p. 68). In Madagascar to get rid of the fractions, three mansions have been attributed to the first fourth, seventh and tenth signs, and two to each of the eight others:

Signs of the Zodiac	Lunar Mansions
I. Alabamadi	1. <i>al-jarastani</i> < <i>al-jarastani</i> 2. <i>al-abutani</i> < <i>al-butani</i> 3. <i>asurubula</i> < <i>al-jurubula</i>
II. Adawra	4. <i>adabara</i> < <i>al-dabarān</i> 5. <i>alabaka</i> < <i>al-hak'a</i>
III. Adizana	6. <i>alabana</i> < <i>al-lan'a</i> 7. <i>arira</i> < <i>al-thira</i>
IV. Asurutani	8. <i>asurara</i> < <i>al-nathra</i> 9. <i>ataraf</i> < <i>al-jarf</i> 10. <i>alabaka</i> < <i>al-djabba</i> , etc.

The Arabic names of the lunar mansions thus become the names of the 28 days of the Malagasy months. Mentioned along with the day of the week, they take the place of the ordinal which the Arab-Malagasy texts rarely indicate by a figure. This method seems to have now fallen into disuse for ordinary purposes and is hardly used except in sorcery.

4. The *ḥisāb* (dialectal variants: *ḥisāb*, *ḥisāb* < *ḥisāb*, 'figure') is the art of divination; its object is to find out what is not known and the means of discovering a remedy against it. Used throughout the island with slight variants from one tribe to another, *ḥisāb*, to take the form generally used, is a direct derivative from the *ḥisāb al-ḥisāb*, lit. the science of sand or Arab numerary (cf. the *Kitāb al-Faṣl fī Ḥisāb al-Raml* of Shaikh Muhammad al-Zanātī, lith. Cairo, n. d.). Shaikh al-Zanātī's table from which is derived all those in use in Madagascar comprises the following 16 figures:

I 	II 	III 	IV 
V 	VI 	VII 	VIII 
IX 	X 	XI 	XII 
XIII 	XIV 	XV 	XVI 

Each figure of the table bears a name of its own and is composed of a certain number of dots, maximum eight (IV) and minimum four (XIII). Four figures have five dots (V, XII, XV and XVI); six have six dots (II, III, VI, X, XI, XIV) and four have seven dots (I, VII, VIII, IV). Each figure governs (حكم) a certain number of things or beings; according to the question put to the diviner, the latter considers very carefully the figure relating to the question asked. The influence of each of the figures comes from the sign of the zodiac, planet, day, Arab month and from one of the four elements to which it corresponds. It is also lucky or unlucky, male or female, *ḥalīb* (applying to the person consulting the fates) or *maḥlīb* (applying to the question asked); it is more or less strong and powerful. *شرفه* in such and such conditions, and it also shows in what state the thing asked shall be realised. The 16 figures of the table are divided into different groups each bearing a particular name:

the *ḥawāḥilī*, "those who enter" which number three (XI, II, XV). If they are present in a large number in the *ḥalīb* effected by the diviner, it is a very auspicious sign and the questioner will certainly obtain what he seeks. If one of the *ḥawāḥilī* proves to be the first figure, the object sought enters, i.e. is obtained;

the *ḥawāḥilī*, "those who go out" are three in number (III, X, XII). If they are several times represented in the *ḥalīb* effected by the diviner, it is an unlucky omen and the object sought will be unobtainable. If one of the *ḥawāḥilī* proves to be the first figure, the object "goes out", i.e. is lost to the seeker;

the *munāḥilī*, "those who return" (IV, V, VI, IX, XIV, XVI) are sometimes lucky, sometimes unlucky, according to circumstances. If one of the *munāḥilī* is the first figure, the operation will remain without a definite result;

the *ḥawāḥilī*, "those who are fixed, who do not vary" are the figures I, II, X, XI, XIII, XV. They are lucky and assure that the seeker will gain his end;

the *munāḥilī*, "the diemal" are figures III, VII, VIII, XI. If the first figure is one of the *munāḥilī* the questioner will not obtain what he asks, or will not escape the misfortune he fears.

The figures I, IV, VII, X are called *amḥilī* "the

pious". If the four figures found in it are similar, success is assured.

Figures II, V, VIII, XI are called *amḥilī*, "what concerns the pious". If the four figures found in it are similar the desire expressed, will be realised.

Figures III, VI, IX, XII are called *amḥilī*, "the end of the pious". If the four figures found in it are similar, the object desired is coming and will arrive or the desire is completely realised at the moment of consulting the diviner.

The sixteen figures are also divided into two groups of eight; one is called *ḥalīb al-ḥalīb*, "figure of him who asks"; these are the eight who represent him who is consulting the fates; the other *ḥalīb al-maḥlīb*, "figure of the thing sought", i.e. those who have to answer the request. If the first figure of the *ḥalīb* is among the eight *ḥalīb*, and the seventh among the eight *maḥlīb*, it is a very good omen. If on the other hand, the first figure is *maḥlīb* and the seventh *ḥalīb*, it will be impossible to avert the evil fate. It must also be enquired if the fifteenth figure of the operation of the diviner is *ḥalīb* or *maḥlīb*, if *ḥalīb*, it is lucky and if *maḥlīb*, unlucky.

If the *ḥalīb* is consulted on behalf of a sick man the presence of figures VIII, VI, V, XIV, IX, IV, XIII indicates his approaching end.

The four first figures of the table are also called *ḥayāt al-ayām*, "hours of the days". Repeated several times they indicate that the thing sought will be realised in the course of a day. The four following (V—VIII) are called *ḥayāt al-ayām*, "houses of the weeks" and indicate an interval of a week; the four others (IX—XII) *ḥayāt al-ḥuḥūr*, "houses of the months" indicate an interval of a month and the last four (XIII—XVI) *ḥayāt al-ḥuḥūr*, "houses of the years" indicate an interval of one or several years. If one of the houses of the days occupies a position other than the first four, the interval increases in proportion as it is remote from the first four places. On the other hand if one of the houses of the weeks, months or years is found before its place, the interval diminishes in proportion to its nearness to the first figure.

The figures I, III, V, and X mark the direction of the east; VIII, XII, XIV and XV, the direction of the west; II, IV, VI and VII, the direction of the north, and IX, XI, XII and XVI, the direction of the south.

Figure I of the preceding table is called *al-ḥayāt* or *ḥayāt*. The first of these names has passed into Malagasy in the form *alahian*. It represents the person who comes to consult the diviner; its zodiacal sign is Pisces; its planet Jupiter; its day Thursday and its element, the sea. The corresponding figure is the fifteenth. If it is lucky, male and *ḥalīb*; i.e. it is one of the eight figures representing him who consults the fates. Its month is *ḥuḥūr* - Hildja. If in the preparation of the *ḥalīb* it occupies the first place, the thing demanded will be realised after an interval of three days. The amount of happiness and success which it brings will be greater if it occupies the first place.

Figure II (*ḥayāt al-dūḥi*, Malag. *alahian*) is that of wealth, riches, possessions and estates, and merchandise of all kinds. Its sign of the Zodiac is Sagittarius; its planet, the Sun; its day, Sunday; its element, fire. The corresponding figure

is the tenth. It is lucky, feminine and *mafiab*, i.e. it is one of the eight figures which represent the thing sought. Its month is Djumadī al-Awwal. If it occupies the fourth place, the desire of the seeker will be accomplished after an interval of 55 days; if it is in the fifth place, it is still propitious; if in the fourth it indicates greatness.

Figure III (*habbat al-ahrija*, Malag. *adalu*) is that of the family, especially brothers and sisters. Its sign of the Zodiac is Rās Džawahir (<Pers. *gawān-e-kabr*: "the head of the Dragon"); its planet Saturn; its day, Saturday. The corresponding figure is the tenth. It is unlucky, male and *fiab*. If it is in the fourteenth place, the interval necessary for the accomplishment of the desire formulated is 150 days. It reaches the maximum size in the ninth place and strength in the third. Its metal is gold.

Figure IV (*al-djuma* > Malag. *dzuma*, *tuma*) is that of the country, gardens and barriers of the dead. Its sign of the Zodiac is Virgo; its planet Mercury; its day, Wednesday. The corresponding figure is the fourteenth, its element black earth. It is good or bad according to circumstances and *mafiab*. Its month is Djumadī al-Akhir. If it is in the fourteenth place, the interval before the realization of the desire expressed is 20, 55 or 150 days. It is large in the sixth place and strong in the fifth and tenth. Its metal is silver.

Figure V (*al-kawaf* <Pers. *kawaf* or *al-farah*; Malag. *adikawaf*) is that of children and learners of news. Its sign of the Zodiac is Libra; its planet Venus; its day, Friday. The corresponding figure is the twelfth. The south wind is its element. It is neither good nor bad; it is *fiab* and feminine. Its month is Raddj. If it occupies the fourteenth place the desire expressed is satisfied the day following. It is large in the twelfth place and strong in the fourth, eighth and eleventh. Its metal is gold.

Figure VI (*al-thilaf*, Malag. *alukula*, *alukula*) is that of the sick, of crimes, of war, of slaves, of loss of property, of remedies and of ships (sailing ships of the Western Indian Ocean). Its sign of the Zodiac is Aquarius; its planet, Mercury; its day, Saturday. The corresponding figure is the seventh. Its element is the west wind. It is good or bad according to circumstances, *fiab* or *mafiab*. Its month is Dhu l-Ka'da; it is female. If it is in the fourteenth place, the interval before accomplishment of the desire expressed, will be fifteen days. It is large in the ninth place and strong in the eighth, eleventh and twelfth. Its metal is silver.

Figure VII (*unkir* > Malag. *alikir*) is that of husband and wife, of women and of sexual relations. Its sign of the Zodiac is Capricorn; its planet, Saturn; its day, Saturday and its element earth. The corresponding figure is the sixth. It is unlucky, *fiab* or *mafiab*, and male or female according to circumstances. Its month is Shawwāl. If it is in the fourteenth place, it indicates an interval of 36 days before an answer to the question asked the divines is obtained. It is large and strong in the second, ninth and twelfth. Its metal is silver.

Figure VIII (*amra* > Malag. *alamura*, *alamura*) is that of death and removal. Its sign of the Zodiac is the Ram; its planet Mars; its day, Tuesday. Its corresponding figure is the sixteenth, its element, fire. It is unlucky, *fiab* and male.

Its month is Muharram. If it is in the fourteenth place, it indicates an interval of 21 days. It is large in the first and strong in the fourth. Its metal is iron.

Figure IX (*bayd* > Malag. *albiama*, *albidandi*) is that of departure and of those who clothe the dead in white linen. Its sign of the Zodiac is Cancer; its planet, the moon; its day, Monday. Its corresponding figure is the thirteenth and its element is water. It is neither lucky nor unlucky but may be one or other according to circumstances. It is *fiab* and female; its month is Djumadī al-Akhir. In the fourteenth place it indicates an interval of ten days for the accomplishment of the desire expressed. It is large in the ninth and strong in the eleventh. Its metal is copper.

Figure X (*najrat al-ahrija*, Malag. *anaralañ*) is that of strength and of rulers. Its Zodiacal sign is Leo; its planet is the sun; its day, Sunday; its element fire. It is male, *fiab* and very lucky. Its month is Dhu l-Ka'da. In the fourteenth place the interval before the accomplishment of the desire is 32 days. It is large in the tenth and strong in the thirteenth. Its metal is gold.

Figure XI (*najrat al-ahli* > Malag. *anarawañ*) is that of life in towns, of return to the domestic hearth, of ambition, friendship and of children. Its sign of the Zodiac is Taurus; its planet Venus; its day Friday; its element, black earth. The corresponding figure is the fifth. It is male, lucky and *fiab*. Its month is Ramaḍān. If it is in the fourteenth place, ten months will have to pass before the realization of the desire. It is strong in the fourteenth place and large in the eleventh. Its metal is copper.

Figure XII (*ʿaṣbat al-ahrija* > Malag. *karidua*) is that of enemies, cunning and ambushes. Its sign of the Zodiac is Dhill al-Djawahir, "the Dragon's tail", its planet Saturn; its day Saturday. The corresponding figure is the third; its elements are water and terra firma. It is unlucky, *mafiab* and feminine. If it is in the fourteenth place, the interval before the accomplishment of the desire is 66 days. It is large in the twelfth and strong in the thirteenth. Its metal is iron.

Figure XIII (*farāḥ* > Malag. *faraki*) is that of the road which leads to the house of death, to the cemetery. Its sign of the Zodiac is Cancer; its planet, the Moon; its day, Monday. The corresponding figure is the ninth, its element is water. It is lucky, *mafiab* and female. Its month is Dhu l-Ka'da. If it is in the fourteenth place, the interval before the accomplishment of the desire will be 50 days. It is large in the fourteenth and strong in the fifteenth. Its metal is copper.

Figure XIV (*idjima* > Malag. *aditama*, *aditama*) is that of learned men, of remedies, of knowledge, arms and medicine. Its sign of the Zodiac is Gemini; its planet, Mercury; its day, Wednesday. The corresponding figure is the fourteenth. Its element is the wind. It is lucky or unlucky, male or female, *fiab*. Its month is Djumadī al-Akhir. In the fourteenth place which is its own, it indicates an interval of 6 months before the accomplishment of the desire. It is large in the fourteenth and strong in the fifteenth. Its metal is iron.

Figure XV (*ʿaṣbat al-ahli*, Malag. *adibatti*) is that of the judge. Its Zodiacal sign is Pisces; its planet is Jupiter; its day, Thursday and its element, water. The corresponding figure is the

first. It is lucky, male or female and *qilab*. Its month is Shawwāl. In the fourteenth place the interval before accomplishment of the desire will be 55 days. It is large in the fourth and strong in the eleventh. Its metal is iron.

Figure XVI (*nafi al-ghandi* > Malag. *kian*) is that of the end of all things and the last of the *sikidi*. Its sign of the Zodiac is Scorpio; its planet Mars, its day Tuesday and its element water. The corresponding figure is the eighth. It is lucky or unlucky, male or female and *mafinab*; its month is Djumādā al-Awwal. In the fourteenth place it indicates an interval of seven days before the realization of the desire. It is large on the fourteenth and strong in the sixteenth which is its own. Its metal is copper.

These are the sixteen figures of the *sikidi* and the signification given them in Madagascar.

As its Arabic name shows, this "science of the sand" was first practised by tracing lines or dots on the sand; in Arabic one says *farah al-rum* "to strike the sand", to describe the preparation of the *ilm al-rumal*. On the east coast of Africa in Swahili the same operation is called *kipiga dho*, lit. "to strike the planchette" (which implies that the dots forming the sixteen figures are inscribed on a planchette) or *ramil*, a Bantuised form of the Arabic *raml* "sand". At the first the lines or dots were traced on the sand, then on a planchette of wood and lastly as in Madagascar on paper. According to another Malagasy method, the diviner also uses grains of sand, or seeds, especially those of the *famu* tree (*Piptadenia chrysanthus*, Bth.).

When requested to consult the fates by the *sikidi*, the diviner first of all pronounces the invocation: "Awake, O God, to awaken the Sun! Awake, O Sun, to awaken the Cock! Awake, O Cock, to awaken Man (*atombelani*)! Awake, O Man, to awaken the *sikidi*; not that it may lie, not that it may lead us to error, not that it may make a laughing stock, not that it may say foolish things, not that it may deal with any matter of no importance, but that it may search out secrets, that it may see what is beyond the mountains and the other side of the forest that it may see what no human eye can see. Arise! for thy skill which comes from the Muslims with long hair (sic! *silamu be raiha*), from the high mountains, from Raburabunka, from Tapelaketaketaika, from Zafit-simaita (eponym of a tribe of the south-east converted to Islam), from Andrianavitalahi, from Rakeliharuaana, from Iankara (eponym of another south-eastern tribe, converts to Islam), from Andriomani-Sulanatra, from Vaimiha (a dwarf tribe, of African origin as the name shows; the old owners of the soil), from Anakandrianamahitra, from Rakeliharavahu (lit. the little man with long hair)! Arise! for we do not have thee for nothing, for thou art dear and cause expense! We have taken thee in exchange for a fat zebu cow with a large hump. And for money on which there was no dust (i.e. coins which are still circulating). Awake! for thou hast the confidence of the ruler and thou representest the judgment of the people. If thou art a *sikidi* that can speak, a *sikidi* that can see and that does not repeat (only) the gossip of people, the hen killed by its owner, the ox killed in the market, the dust which clings to the feet (i.e. a *sikidi* who does not repeat what everyone knows): awake, on the mat which is on this very spot!"

(cf. *Antananarive Annuaire* and *Madagascar Magazine*, 1886, p. 221). If the diviner operates with seeds, he takes up a few at random and counts them two by two until at the end he has one or two which are placed at the top of the figure. The operation is repeated four times which gives the four rows of dots of the first figure.

When the diviner works on paper, he traces with the *fulam* a line in the form of the arc of a circle, the centre of which is indicated by a dot. The sum of the dots and initial and final curves (each of which counts as a dot) must not exceed 14, although the *ngisikidi* is understood to make the dots without counting them. He then draws three other concentric curves in the same way. This done, the dots are counted two by two and line by line from left to right. A vertical line separates the groups of two dots from one another. After the last vertical line there remains either the final curved line which counts as a dot, either a point or a line, i.e. two dots. This or these are written opposite each line and given figures I, II, III, IV:

The four first figures are called in Arabic, *ummalah* "the mothers":

Figure V is obtained by transcribing vertically from right to left the line *a'*, *b'*, *c'* and *d'* give in the same way figures VI, VII and VIII. These four new figures derived from the four first are called *al-bawāt* "the daughters":

Figure IX is formed by adding horizontally the dots of I and II (in the addition $\bullet + \bullet = \bullet\bullet$, $\bullet + \bullet\bullet = \bullet\bullet\bullet$, $\bullet\bullet + \bullet = \bullet\bullet\bullet$). All the other figures are similarly formed: III and IV give X; V and VI give XI; VII and VIII give XII; IX and X give XIII; XI and XII give XIV;

XIII and XIV give XV; and XV and I give XVI. The eight last figures are called *tanāl al-banāt* "the daughters of the daughters":

IX • • • • • •	X • • • • • •	XI • • • • • •	XII • • • • • •
XIII • • • • • •	XIV • • • • • •	XV • • • • • •	XVI • • • • • •

These sixteen figures contain the fate of the inquirer and the diviner has to give him the meaning of each of them by interpreting them from the table of *Shaykh al-Zanūlī*, which was given above (p. 714). We may therefore imagine what a high place the *shikī* occupies in Malagasy life, and the very numerous circumstances in which recourse is had to it. The diviner was and undoubtedly still is the true manager of it. In practice it is consulted for every act of private and public life whether of the individual, family, clan or tribe. I have not been able to learn how one becomes a *shikī*. It is the speciality of certain individuals without distinction of sex or birth. A diviner or a sorcerer may be man or woman (I have never known a woman sorcerer but have heard that there are such). The sorcerers may be of royal birth, noble or freeman (I have never heard of a sorcerer or diviner who was a slave, although slaves have been executed on charges of sorcery). The diviner or the sorcerer is very often the son or daughter of a diviner or a divineress, which assures him an extensive clientèle, for he or she is supposed to inherit the paternal (or maternal) secrets. The sorcerer or diviner may be either native or foreigner. I was taken for a diviner during a stay of forty months at Mananjary (S.E. coast) by the Muslim *shikī*'s of the district, who treated me as colleague after I had shown them my knowledge of Islam. It was in this way that I was enabled to be initiated gradually into the practice of *shikī* and appeal was sometimes made to it.

The area of dissemination of the *tanāl al-banāt* in Africa is considerable. It is found in Dénou and the *Travels of Burton* in Dahomey reveal the existence of practices closely allied to *shikī* among a West African people who are however not Muslim (cf. G. Ferrand, *Musulmans à Madagascar*, III, p. 242 seq.).

§ The great annual festival of the *fandriana* or the bath is only a survival under another form of the old *tanāl al-banāt* (q.v.). On this identification cf. G. Ferrand, *Note sur un Calendrier malgache et le fandriana*.

According to the evidence of the Portuguese discoveries and especially of Flacourt, the Muslim Malagasy of the S.E. of the xvth century faded during Ramadan, recited the obligatory prayers, read the Qur'an, but drank fermented liquors and mixed and ate pork. There were *shikī*'s in the S.E. so that assemblies of the faithful took place; but there is no mention of the existence of mosques in the early travellers and Flacourt says definitely in his preface that "the nation of which he is going to speak... has no idols or temples". At *de Siam* (q.v.) the success of Islam was only

mediocre in Madagascar. Malagasy does not readily assimilate foreign beliefs and customs and the latter do not profoundly modify native beliefs and customs. His whole philosophy is contained in the proverb *manai ni aina*, "life is sweet"; he thinks it good to be alive; the strict observation of the Qur'anic prescriptions would have upset too much his usual life and customs. Allah proscribes fermented liquors, standing stones, games of chance and consulting the fates as abominations invented by Satan. But these abominations are particularly dear to the Malagasy; they are particularly devoted to alcoholic liquors and to gambling, believe firmly in soothsaying and standing stones (*tanjambata*) are held in honour throughout the whole island. No doubt they venerate Allah, the Qur'an, the Prophet and saints of Islam but it is a purely verbal reverence and they are not really Islamised to the degree, that for example are the negroes of the adjoining east coast of Africa.

The conversion of the Malagasy to Christianity was also a failure. At the time of the conquest of the island in 1895 they were quite disposed to be converted en masse to Roman Catholicism, thinking it would please us; they had to be warned that the French government only attached importance to respect for the laws and respected the religious convictions of every one whatever they were. This fact of which I was a witness is more eloquent than any other and throws an illuminating light on the past.

The evidence quoted above and especially that of comparative philology enable us to draw up the following scheme of the settlement of Madagascar so far as our knowledge at present goes:

I. Many legends give the old Vazimba, now disappeared, as *tanjana-foal* or ancient masters of the soil i.e. the autochthons. The name which is found in East Africa is clearly Bantu and represents an older *va-voimba* Malag. *voimba*. They are said to have been of small stature. They were perhaps negritos.

II. There was an important immigration of African Bantus prior to our era of which we have an evidence in a certain substratum of African words which has survived in the modern language.

III. There was next an important immigration of Hinduised Indonesians from Sumatra (cf. G. Ferrand, *L'Empire sumatranais de Crivijaya*) in the second-fourth centuries A.D. A word like the Malag. *hiti* < old Malag. *hiti* = 100,000 < Malay *hiti* 100,000 < Sanskrit *hiti* 10,000,000 is over many others testifying to this fact. These Indonesians modified the somatological, cultural and linguistic type of the negritic Bantus who peopled Madagascar.

IV. Arrival of Arabs in the sixth-ninth centuries and conversion of the Malagasy to Islam. These Arabs probably came from the Persian Gulf and belonged to the Suma.

V. Another immigration of Sumatrans at the end of the tenth century. I consider the Waikwa to be western Indonesians, as I shall explain in the article *Waikwa*. The *Book of the Wonders of India* (*Adab al-Hind*, ed. by van der Lih, and *transl.* by M. Devic) mentions a piratical campaign by these Waikwa in 334 (945) in the Western India Ocean. It is probable that we have here a reference to the migration led by Ramani the

"Sumatran" or Ramina "the Sumatran" (sem.). His elder son Ra-Hadzi was the ancestor of the tribe of Zafin-d-Raminl, "the descendants of Ramini", of the S.E. coast of Madagascar. The younger son, Ra-Kuka, went into the interior of the island, reached the plateau of Imerina where he married a Vazimba woman. Ra-Kuka was the ancestor of Hura who bears his name.

VI. Coming of Persians of the sect of the "Twelvers" later than the reign of 'Alī al-Riḍā (183—202 = 800—818).

VII. Coming of other Arabs in the reign of the 'Abbāsid caliph al-Musta'īm, in the middle of the thirteenth century of our era.

AL-MADĀ'IN: a medieval Arab town or rather a group of towns in al-'Irāq (Babylonia) about 20 miles S.E. of Baghdad lying on either side of the Tigris in two almost equal portions. The name al-Madā'in (plur. of al-Madīna) "the towns" is explained from the fact that the two capitals situated opposite one another, Seleucia on the west, the Greek city founded by Seleucus I between 312 and 301 B.C., and Ctesiphon on the east (the first reference to which is in 221 B.C.), the winter residence of the Parthian and Sasanian kings, with several other places close at hand were regarded as forming a whole. The Semitic Aramaeans who formed the bulk of the population under the Arsakids and Sasanians comprised the whole group under the name *Māhād* or *Madīnāh* "the towns", which latter word the Arabs adopted in the plural form al-Madā'in peculiar to their language. Following the Sasanians, the Arabs reckoned seven towns in al-Madā'in, the official names of which they partly arabicised.

On the west bank lay Web-Ardesšir, corrupted by the Arabs to Behrūt (often wrongly read Bahurāt and Nahr Sūr or Sūr; cf. Streck, *Babylonia*, p. 262, note 3). The name does not mean "good" (as Ardesšir) as it is often explained but "house" (i.e. foundation) of Ardesšir (cf. thereon, Noldeke, *W. Z. K. M.*, vii., 1902, p. 7; Web = Aram. Bē). In Syriac and Talmudic literature Behrūt is usually called *Ardeh* (= Koche of the late classical writers) and *Māhād* (= "the town"). It occupied the lower southern half of the former Greek town. A parasang (c. 3 miles) north of it was the village of Darandūn (also Darandū), arabicised to Darīfīn. On the east bank stood Ctesiphon. The Arab historians and geographers usually reproduce this name, which is not Greek but very probably indigenous (Iranian?) by *Tasīfīn*; but we also find *Tasīfūn* and *Tasībūn* corresponding exactly to the presumed Pahlavi form (*Tasfōn*, *Tasbōn*). On these place-names cf. the very full discussion by Streck in *Paulys-Wissowa*, *L. Z.*, Suppl. vol. IV, 1902 19. Not uncommonly the town on the east bank, much more important for the Muslims, is called al-Madā'in (e.g. in al-Bīḥārī, *B. G. A.*, I, 87, 1). About an hour's journey away, south of Ctesiphon stood Web Antiochī Khosraw (= Antiochia, house of Khosraw). The Arabs usually called this city founded by Khosraw I Ansharwān, which was settled with the deported inhabitants of Antioch ad Orontem destroyed in 540 and is said to have been planned on the model of the Syrian capital,

Rūmīya = Rome or (New) Rome or Byzantium. The Syriac sources distinguish this new foundation from the older towns by the name *Ḥadīthā* = "New town".

We know nothing further about the three other towns of al-Madīn, which made up the number seven so popular in the east and was here no doubt deliberately chosen. The exact forms of their names are not even known.

As early as the Parthian period there was a stone bridge to convey the traffic between the two thickly populated banks of the Tigris, which the historian Hama al-Iṣṣāḥi (cf. his *Ta'rikh*, ed. Gottwaldt, p. 31, 20) describes as a marvel; but already in his day (beginning of the fourth = tenth century) there was no longer any trace of it. Under the Sāsānians a second bridge (of boats?) was erected. In the Muslim period however there was still only a bridge of boats.

In Tausifūn-Ctesiphon two main quarters are distinguished, the northern "old town", Arab. *al-Madīna al-ʿatīqa* and the southern, *Asfānahr* (*Asbānahr*, *Asfāhūr*, and other variants of the name).

The "old town" probably represents the oldest settlement on the east bank, the foundation of the Parthian period. In it was a royal palace which the Arabs called *al-Bayt al-abyad* = "the white palace" (there were other palaces of the same name elsewhere; cf. the article *Ḥal'ā-lawīn*), probably the residence originally of the Sāsānian kings built by one of the last Arsakids or first Sāsānians. The southern quarter *Asfānahr* also included a royal residence, the *ṭawān* (= pillared hall, palace), usually described more definitely by the Arab authors of the middle ages as *Imān Kīwā* (= Pers. Khosrow, Chosroes, the general title of the Sāsānian kings among the Arabs; cf. Streck, *Selucis u. Ktesiphon*, p. 37, note 1). Its builder is known with certainty to have been Sapor (Sāpūr) I (241–272 A.D.). It may be noted that later Arab historians often confuse the "white palace" and the *ṭawān*.

It can hardly be supposed that the site of al-Madīn, so favoured by nature, at the point where the Euphrates and Tigris most nearly approach each other, was without any considerable settlement until the time of Seleucus I. There is on the contrary every indication that the town of *Alhād* (written ideographically *ʿL-h*) dating back to remote antiquity like its successor *Upl*, the *Dyis* of the classical, cannot well be located anywhere else than on the site of the sister towns of Seleucia and Ctesiphon or in the immediate neighbourhood. What the Arab writers say about the founder of al-Madīn is worthless. They ascribe the foundation to mythical kings of the old Iranian epic like *Isfandiyār* and *Tahmāsrath* or other celebrated rulers of the east (like *Nimrod* or *Alexander*; cf. *Nimrod* see Abu l-Faraj, *Barbarismus*, *Ta'rikh al-Madīna*, Beirut ed., p. 20.).

For the pre-Muhammadan history of al-Madīn which does not fall within the scope of this work cf. Streck, *Selucis und Ktesiphon*, and the pertinent articles in *Early Windows*. The Arabic sources contain much valuable information for the Sāsānian period, the most notable is Tabari's history (cf. Noldeke, *Gesch. der Perser und Araber von Zeit der Sāsāniden*, Leyden 1879). We may here mention that under the later Sāsānians, Ctesiphon, to some extent, lost its popularity as

the winter capital, for they, especially Khosrow II Parwāz (599–628), preferred Dastagerd to it, three days journey to the north on the very old "royal road" (cf. DASTAGIRD).

We have fairly full information about the conquest of al-Madīn by the Arabs, especially the great chronicles of Tabari (i. 242f–2456) and Ibn al-Aṭṭar (ed. Tornberg, iii. 396–403; cf. also Caetani, *Annali dell' Islam*, iii. 732 sq.; Wellhausen, *Skizzen und Vorarbeiten*, vi. 68 sqq., and Streck, *Selucis u. Ktesiphon*, p. 38–41). After the glorious battle of al-Kādiyāz, which made the Arabs masters of 'Irāk west of the Tigris (cf. above, ii., p. 612b), the Caliph 'Umar ordered Sa'd b. Abi Waḥḥā, who was then in command of the Muslim troops operating in the 'Irāk, to march on the Persian capital. Sa'd advanced, fighting several battles on the Tigris and appeared before Behrasr in the first half of January 637 (= end of 16 A.H.). The strongly fortified town which was bravely defended was besieged and stormed in vain for two months. In the end the Persians whose supplies were exhausted fled by night unnoticed over the river so that when the Arabs stormed the town soon afterwards they found it quite deserted. A few days later the invaders were able by using a convenient ford to cross the Tigris, much swollen by the spring floods. This almost miraculous crossing effected without any loss is a much celebrated event in Muslim history; it is one of the famous "days" of the period of the conquest. The Persians had not expected that the Arabs would win their way across. The king had taken refuge with his family and court in Hulwān [q.v.]; the army had retired to Tīhr Nahrwān (about 24 miles north of Ctesiphon). Only a few regiments remained at the palace in the capital. At the end of March 637 Sa'd made his triumphal entrance through the deserted streets. The progress of the Arab operations had not given the Persians sufficient time to carry off the vast treasures accumulated in Ctesiphon. These all fell into the hands of the victors. The Arabic sources give many interesting details of the very valuable objects which were captured not only in Ctesiphon but in the pursuit of the Persian army. The total value of the booty taken in Ctesiphon was estimated at 900 million dirhems (of a nominal value of nine pence but it varied a great deal).

The occupation of the Sāsānian capital, the greatest royal city in nearer Asia, may be said to be the most important event of the period of Islam's splendour, the period of the great campaigns of conquest. In the "Old town" the victorious Sa'd built the chief mosque — the first Muslim place of worship to be built in the 'Irāk.

Al-Madīn was not destined to be the residence of the Arab governor of the 'Irāk; on the contrary it sank under Muslim rule to be a mere provincial town. It was soon overshadowed by the newly founded Arab military colonies of Kūfa, to which the garrisons of Ctesiphon were transported — a symbolic custom found elsewhere in the Arab east — Basra and Wāḥit. Basra and Kūfa now became the political and intellectual centres of Mesopotamia until the Caliph al-Manṣūr built Baghdad and the political and cultured centre of gravity of the land gravitated thither. The foundation of Baghdad dealt al-Madīn its death blow: it was now called upon to yield the building material necessary for the new capital of the caliphate,

just as Babylon had done for Seleucia centuries before.

In the history of the Umayyad and 'Abbāsid periods al-Madā'in was as a rule no longer of any prominence. It only played a part of some importance in the civil wars of the first two centuries of Islam, those provoked by the Khāridjīs as well as those provoked by the 'Alids. The Muslim inhabitants of al-Madā'in were, it seems, always strong supporters of the Shī'a. They were also hostile to the Khāridjī movement. As early as 658 there was fighting around al-Madā'in between 'Alī and the Khāridjīs. An attempt by the latter (in 664) to seize Ctesiphon from Behrām was thwarted by the commander there who had Shī'a sympathies, by destroying the bridge of boats. The Khāridjīs however later succeeded in twice gaining temporary possession of al-Madā'in, e.g. in 688 when the Khāridjī group of the Arrābiya [q. v.] wrought great slaughter among the Muslims who did not belong to their party. The second occupation of al-Madā'in in 696 was achieved by the Khāridjī leader Shāhib b. Yazid. On these events cf. J. Wellhausen, *Die religiös-polit. Oppositionen im alten Islam* (= *Abh. G. W. G., N. F.*, vol. v, No. 2 [1901]), p. 21, 36, 43, 45; R. Brünnow, *Die Chariaditen unter den ersten Omayyaden*, Leyden 1884, p. 22, 92. With the death of Shāhib b. Yazid, the power of the Khāridjīs was broken, but as late as 751 'Abbāsid troops had to be sent to suppress a leader of these rebels; cf. A. Müller, *Der Islam im Morgen- und Abendlande*, I, 440.

As regards the 'Alid wars in the 188s the most important campaign was that of Ḥasan to al-Madā'in in the year 661. Ḥasan lived there in the "white palace". Cf. on this expedition, the Arabic accounts of which differ not inconsiderably. Weil, *Geschichte der Chalifen*, I, 244; Flügel, *Gesch. der Araber*, Leipzig 1867, p. 158—159; A. Müller, *op. cit.*, I, 336 and especially J. Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, p. 67—68. In the later Shī'a troubles al-Madā'in appears in 684—686 and 744 as supporting the 'Alids; cf. Wellhausen, *Die religiös-polit. Oppositionen*, p. 72, 73, 80, 98. The importance of al-Madā'in as an objective in these civil wars is evident from the fact that in those days the military road from Basra to Kūfa did not go through the desert along the Arabian bank of the Tigris but went across the canals to the Tigris at al-Madā'in and from thence over further canals to the Euphrates; cf. Wellhausen, *Die religiös-polit. Opp.*, p. 85, note 3.

The Caliph al-Ma'mūn was repeatedly forced to lead an army against al-Madā'in: in 811, when in the troubles that arose over the succession on the death of Ḥārūn al-Rashīd the Baricide 'Imrān b. Muṣā defended the town against Ma'mūn (cf. I, p. 665) and in 815 when an 'Alid rebel Abū l-Sarāyā (al-Sarī b. Manṣūr, cf. I, p. 170) who had seized the town was besieged in it. For the rest we do not hear much more of al-Madā'in in the 'Abbāsid period; its two main components, Tāmasūn and Behrāsīr, continued for several centuries more to enjoy the modest existence of small country towns. As regards Rūmīya which was included in the system of towns forming al-Madā'in, the Caliph al-Manṣūr had temporarily held his court there in 754 and had caused Abū Maṣlūm [q. v.] to be treacherously murdered there (Yāqūt, II, 867, s.; Streck, *Babylonia*, II, 263). But about

the middle of the tenth century this place according to al-Mas'ūdī (*Murūj al-Dhahab*, ed. Paris, II, 200) was already completely deserted: the wall round it built of thick bricks was the sole relic of it left. When Yāqūt wrote in the early decades of the 11th century (cf. his *Ma'dām*, I, 768; v, 447, 7) the whole of the east side of al-Madā'in, i.e. Tāmasūn in particular was already completely deserted; on the west bank still stood Behrāsīr, a small town, practically a village, inhabited by peasants who practised only agriculture. It was now known as al-Madā'in.

When Hülāgū with his Mongol hordes was advancing to conquer the Caliph's capital in 1257, he pitched his camp in the ruins of the Iwān and in the following year, after he had been joined by the troops of the Mongol princes, he marched on Baghdad; cf. Rashīd al-Dīn, *Hist. des Mongols de la Perse*, ed. Quatremère, Paris 1836, p. 266.

The author of the *Murūj al-Dhahab* (ed. Juyḥall, III, 62) who wrote an epitome of Yāqūt and died in 1338 is also acquainted with Behrāsīr as a little town inhabited exclusively by Shī'a, as is also Bākhwī who about 1403 prepared a synopsis of the geography of al-Kaswīn [q. v.]; cf. the French translation of the latter *Takwīm al-Aḥḥād* by de Gulnes in *N. Z.*, II, 1789, p. 424. When Behrāsīr became deserted is unknown. Presumably the disastrous invasion of the Mongols under Timūr at the beginning of the 15th century which was so fatal to so many once flourishing towns of the lands of the Euphrates and Tigris also caused the collapse of this last settlement in the territory of al-Madā'in.

It was not till the sixteenth century that a modest village arose on the site of Ctesiphon, a little north of the ruins of the Iwān Kūfā, in sight of the highly venerated sanctuary of *Sulaymān Pāsh* and called after him. This consisted on my visit in 1927 of a single street of mud-houses and Khāns where the numerous Shī'a pilgrims who pass through here are put up. The building material is mainly supplied by the ruins of the Iwān especially of the north wing of its great hall which collapsed in 1888; cf. Herzfeld, *op. cit.*, II, 63.

In the Great War the site of al-Madā'in was the scene of desperate fighting, momentous in its results. This is usually called the Battle of Ctesiphon. When the Anglo-Indian army under General Townshend in the late autumn of 1915 began an advance from the fortress of Kūt al-Amāra along the Tigris to the north to try to take Baghdad, it was defeated on the 22nd and 23rd November 1915 in the district of the ruins of al-Madā'in by the Turks. The fighting took place mainly on the east bank; the British line of battle ran on the east of the ruins of the Iwān and the little village near it. This reverse forced Townshend to retire to Kūt al-Amāra, which was soon afterwards surrounded by the Turks and capitulated after a five months' siege on April 29th 1916. For further particulars of this battle, the greatest on the Mesopotamian front in the world war, see the works on this subject; cf. especially General Townshend's *My Campaign in Mesopotamia* (London 1919), p. 193 ff., 171—184, with plan of the battle (map 7).

In connection with this brief sketch of the history of al-Madā'in it may be mentioned that one of the most distinguished scholars in the

field of Arabic history was born here, namely 'Alī b. M. al-Madīnī (cf. the next article), born 753, d. between 830 and 845. His work itself has not survived but may be partly reconstructed from the numerous extracts in Baladhuri, Tāhiz, Yaḥyā, the *Kish al-Aḥbāb* etc. so that we have an idea of its contents; cf. Brockelmann, *G. A. L.*, i. 140—141 and J. Heer, *Die hist. und geogr. Quellen zu Faḡh's Geogr. Winterbuch* (Strassburg 1898), p. 5—6, 67—68. (On the chapter al-Madīn in Baladhuri) Durandus (Durandus), already mentioned above and included in the heptapolis of al-Madīn, was the birthplace of the famous traditionist and historian al-Khaṭīb al-Baḡdādī (d. 463 = 1071); on him cf. vol. II, p. 929 ff. and Bergsträsser, in *Z. S.*, II. 207—208. In the introduction to his biographical lexicon he gives a brief sketch of the history of al-Madīn, making a special point of noting the companions of the Prophet who came to this town and took part in its conquest; cf. G. Salmons, *al-Haḡḡ al-Baḡdādī, Introduction topographique à l'Hist. de Bagdad* (Paris 1904), p. 13, 25, 175—181, or p. 85—93 of the Arabic text.

As to the mint history of al-Madīn, neither the name al-Madīn nor as we might perhaps expect, Tāhāsin or Behrāsī is found on the coins of the Muslim period; on the other hand we have a considerable number of pieces with the inscription *al-Bāb* "the gate" which undoubtedly belong to our city. The Arabs adopted the custom of the Sāsānians who gave their coins struck in Ctesiphon the mint name *Bābā* = "the gate", which is to be interpreted like "Sublime Porte" as an official epithet of their royal capital (cf. the official designation of Constantinople as *Porte de Sébasté* "Gate of Sébasté"). We have not only a series of Arabic coins with the mint name al-Bāb down to the end of the Umayyad period but also a few pieces of Sāsānian type with the legend *Bābā*, on the latter (specimens of the year 67—68) cf. Nöldeke, *Katalog der orient. Münzen in den kgl. Museen zu Berlin*, I. (1898), p. 102. Coins are also found occasionally with the mint *al-Madīn al-ḡarbi*, the name of the northern quarter of Ctesiphon (with the Sāsānian Royal palace) cf. above. For the Arab coins of the mint al-Bāb cf. articles of various writers in *Z. D. M. G.*, xix. 394; xxxi. 148 ff.; xxxii. 691; xxxix. 25, 38; xlii. 702; cf. also Streck, *Sci. und Alter*, p. 37—38 and the references there given.

Here we can only refer briefly to the important part which al-Madīn played in the church history of the east independent of Rome, especially Nestorian Christianity. The see of Seleucia, said to have been first erected in the time of the apostles, was the premier diocese in the east. As supreme head of all the Nestorian bishops, in the Sāsānian period as well as in that of the Caliphs as patriarch of the east the occupant of the see of Seleucia bore the title Katholikos. A number of important synods were held at his official residence in the course of centuries. The episcopal cathedrae were in Behrāsī (New Seleucia) which the Syriac sources usually called Kōkḥ (cf. above); hence the official title of the patriarchate, "Church of Kōkḥ". Besides the official church of the bishop there were in al-Madīn in the quarters on either bank a whole series of other Christian churches, the names of which are occasionally found in Syriac and Arabic texts. From Seleucia

the Nestorian church developed considerable missionary activity, extending even to the Far East and reached its zenith in the period from the sixth to the ninth century. Under the 'Abbasids 25 metropolises — the first in rank after the Katholikos was the bishop of Kaskar [q.v.] — each of whom in turn had 6—12 suffragans under him, acknowledged the authority of the see of Seleucia. All the metropolises received their investiture in the cathedral of Kōkḥ. Soon after the foundation of Bagdad (762) the Katholikos also moved from Behrāsī (Kōkḥ), now declining politically and commercially, to the new capital of the empire in order, as religious and political head of the Christian community, the more effectually to champion their interests there at the court of the Caliph, where he usually enjoyed considerable prestige. But each new patriarch continued to be ceremonially installed in the mother church at Kōkḥ (probably down to the end of 'Abbasid rule). For further information on the significance of al-Madīn in oriental church history cf. Streck, *Babylonien*, II. 274—275, *ibid.*, *Sci. und Alter*, p. 42—7, 64 (sources in Syriac literature); J. Labourt, *Le Christianisme dans l'empire perse*, Paris 1904.

That al-Madīn was also for some time an important centre of the gnostic sect of the Manichaeans may be mentioned here, but it is doubtful whether their founder, Mani (Manes), as is often supposed came from Ctesiphon itself; cf. thereon most recently Schaefer, in *id.*, xiv. 23.

Finally it may be briefly recalled that al-Madīn possesses considerable interest for the history of Judaism, especially for the Talmudic period of it. As in the Hellenistic period, the Jews under Sāsānian and Arab rule had also their main settlement on the west bank in Behrāsī which in Jewish sources is usually called Māhōd, "the town". There, as in the Greek Seleucia (cf. Streck, *Sci. und Alter*, p. 10, 21), they formed an exceedingly high percentage of the inhabitants, indeed at times they seem to have been in the majority. That they are described as very rich is not surprising in view of the great importance of al-Madīn as a trading centre down to the time of the rise of Bagdad. At the same time their character is unfavourably described by the Māhōdians; it differed from that of the other Jews of Babylonia which is perhaps mainly to be explained by the fact that there were many proselytes among them. They also had a famous college, which was however only the intellectual centre of Babylonian Judaism under Kābī b. Yoseph (b. 229 A.D.), a native of Māhōd, and at other times was inferior to the other Jewish centres of learning in Babylonia, Nehardea, Sura and Pumbeditha. For further Jewish accounts of al-Madīn, cf. A. Reicher, *Beitr. zur Geogr. und Ethnogr. Babyloniens im Talmud und Midrasch*, Berlin 1883, p. 19, 25—24, 39—45; 61—62; see also Streck, *Sci. und Alter*, p. 27, 63 and 64 (Bibliography).

Apart from the wretched little modern village of Salmān Fāh the whole of the area of the town of al-Madīn measuring about 60 square miles is quite uninhabited. It is only from the middle of the xixth century that we have more or less full accounts of it by European travellers; cf. Streck, *Sci. und Alter*, p. 47—8. The first systematic topographical and archaeological examination of the extensive ruined site was made by E. Herzfeld, who visited it five times between 1903 and

1911. He dealt fully with the results of his examination in 1914 in the second volume (not published till 1920) of his and Sarre's *Archäologische Reise im Euphrat- und Tigrisgebiet*; cf. II, p. 46-76 and the pictures on Plates xxxix-xliv (Vol. III) and cxvii-cxxviii (Vol. IV). Herzfeld gives (II, 51) the first plan of the whole area prepared by him in 1911; cf. this reduced to 1/2 of the original also in Streck, *Sel. u. Babylon*, p. 50 and in Pauly-Wissowa, *op. cit.*, Vol. IV, 1106.

Of the towns on the west bank, notably Seleucia, there has survived from the Hellenistic period only remnants of the old city wall (*al-shr*), a double wall of gigantic dimensions, on the north and (less considerable) south side. The whole west side of the old city is now sunk in a permanent swamp (*hār*), formed since 1900 of the annual inundations. Within the south half of the ancient city walls, there now rise from the otherwise flat plain two mounds of rubble about 15 feet high (*ḡarā'a*, which in the 'Irāk is practically synonymous with *tell*), namely the *ḡarā'a al-Barāda* and the *ḡarā'a al-Nat al-Kaḡh*. The former which takes its name (powder-millhill) from a powder-mill which used to stand there to supply the Turkish troops, may, from the finds of pottery, conceal an important part of the Seleucid foundation of Bebeast. The second hill with the legendary name *ḡarā'a* (or *Kaḡr*) *ḡarā'a al-Kaḡh* = "hill or castle of the Kaḡh's daughter" may very well mark the site of the several times mentioned citadel of Seleucia-Kōkha. Beyond the above mentioned permanent swamp, further hills and walls may be seen: — Tell 'Umair (or *ḡarā'a* 'Umar), Khūṣāf or Abū Ḥalafīya, al-Sūṣīya, al-Khiyāmyāt and Tell al-Uḡhab. They perhaps all fall within the area of Seleucia, and probably come from suburbs of it.

The ruins on the east bank, those of Ctesiphon, begin about a mile above the village of Salmān Pāk. After isolated wall-like ruins of walls and vaults, the first considerable unit we reach is a large quarter of the town running for a mile along the Tigris opposite the Hellenistic Seleucia averaging 400 yards in breadth enclosed by a primitive much destroyed wall of clay: — hence the name *al-Tuwānīya*, "the little clay-wall". Within this area lie a few farmplaces with palmgroves, mulberry trees and fields. Al-Tuwānīya with its immediate vicinity must mark the site of Madīna al-Aṭīqa, the northern quarter of Ctesiphon. A second area filled with ruins is found around the village of Salmān Pāk and around the *Iwān*.

The village street of Salmān Pāk leads in a straight line to the much venerated tomb of Salmān al-Fārisī (Salmān the Persian) or, as it is usually called locally, of Salmān Pāk, "S. the Pure". He is said to have been the first Iranian to have adopted Islam, and as "Apostle to the Persians" is one of the most popular Shī'ī saints. According to Muslim tradition he died at an advanced age in 656 or 657 in al-Madā'in, where the Caliph 'Umar appointed him governor; it should be noted however that the Arab stories of Salmān's share in the conquest of the 'Irāk and in the government of al-Madā'in are little credible. Cf. on Salmān vol. IV, p. 116 and Streck, *Sel. und Klei.*, p. 53-54. The mausoleum with the alleged grave of Salmān which is crowned by a dome (it used to be shown in the vicinity of Isfahān) stands on the south side of a court enclosed by a high white turreted wall and in its

present form may date from the first half of the xviiith century, when it was renovated by Sulṭān Murād IV (1623-1640). In 1902-1905 the building was restored. A description of the interior by Kāḡim al-Dūḡalī is given in Herzfeld, *op. cit.*, II, p. 262, note 1.

South-west of Salmān Pāk about 1,000 yards from it close to the bank of the Tigris is a second Muslim tomb with a dome, that of Ḥudḡaifa b. al-Yamīn, one of the "councillors" of Maḥmūd. The latter, an ardent champion of the 'Alid cause, obtained, we are told, great merit by building the first mosque in al-Madā'in and died in 657 in Kūfa; on him see Ḥalāḡhūrī, p. 289; Tabarī, I, 2452; Streck, *Babylonien*, II, 262; Herzfeld, *op. cit.*, II, 59.

The tradition that these two companions of the Prophet are buried here is old and goes back to the third (ninth) century — the earliest reference is in Yaḡḡūbī, *B. G. A.*, VII, 320. Of the thousands of Persian pilgrims who annually visit the great Shī'ī shrines of the 'Irāk (Kerbela, Najaf, Kāḡimān and Sāmarrā) many chose to visit Salmān Pāk as one of the stages on the way out or home.

K. Niebuhr (cf. his *Reisebeschreibung nach Arabien*, Copenhagen 1778; II, 306) heard of a tomb of a third companion of the Prophet in al-Madā'in, namely that of 'Abd Allāh b. Salām, [p. 71] a Jew of al-Madīna. The latter — a strenuous opponent of 'Alī — never came to the 'Irāk so far as we know. The *Salmān-ḡarā'a* of 1317 (1906), p. 256 (according to Herzfeld, *op. cit.*) mentions in addition to Ḥudḡaifa a certain 'Abd Allāh al-Anṣārī, buried in al-Madā'in, but I think his statement like that of Niebuhr (or rather his informants) is not to be relied upon. There is possibly some confusion with 'Abd Allāh b. Sabā, who is said to have been of Jewish origin and accompanied the Caliph 'Alī to the 'Irāk, but was there banished by him, as his extravagant enthusiasm for him made him a nuisance, to al-Madā'in, where he may have died. Details of his end are not known. Herzfeld suggested 'Abd Allāh b. Ḥabāb, who, according to Mas'ūdī (IV, 410), was murdered by the Kharrījīs in 38 (658) while acting as 'Alī's representative in al-Madā'in. As the interior of Salmān's sanctuary is said to contain two graves, the second may be claimed as that of this uncertain 'Abd Allāh and not as that of the last Caliph Muṣṭa'īm executed by Ḥalāḡh, as Mignon, *Travels in Chaldaea*, London 1829, p. 78 says: he is followed by W. Ainsworth, *Narrative of the Euphrates Expedition*, London 1888, II, 276. For the existence of a tomb of a Caliph at al-Madā'in there is no literary authority.

As to the second area of ruins, which begins south of Salmān Pāk, its centre is formed of the great hall of Tak-ī Kīnā ("arch of Kīnā"), the glory of the celebrated Iwān, which will be dealt with briefly below. In the immediate vicinity of the 'Irāk, four groups of ruins may be distinguished of which the most notable is an oblong mound 20 feet high in the south, called locally *Ḥaymā'a* *al-Iwān* = "the harem of Kīnā" or *al-Qaḡḡā'a*, "the hyena-hill". It certainly conceals a single building. All these groups of ruins which fringe the 'Irāk on the four sides undoubtedly belong to the palace of the Iwān, which must have covered an area about 400 yards long and 300 broad. Some 500 yards S. E. of the ruins of al-'Irāk, behind an irrigation canal the surface shows fewer but continuous remains

of buildings, which stretch to a corner of the wall, called *Bustān-i Kīrā*, "the garden of Kīrā", which perhaps enclosed a park for animals. A thousand yards S.W. of Bustān-i Kīrā rises another mound, 20-25 feet high, almost square at the base, *Tell al-Dhikab* = "Gold-hill" or *Khuzat Kīrā* = "Treasury of Kīrā". It is apparently one large building, perhaps the treasure-house built by Khosrow II (cf. Tabari, I, 1042).

In conclusion it must be emphasized that, for the proper appreciation of the ancient mediæval and modern topography of al-Madā'in, the important fact must not be overlooked that the configuration of the whole country round was radically altered when the Tigris, since the end of the middle ages, completely changed its course here and now leaves its old bed immediately south of Ctesiphon for a stretch of 3 miles and describes a curve five times this length. We must further consider the possibility that not only has a considerable part of Seleucia disappeared in the Tigris, but smaller pieces of Ctesiphon have been gradually swallowed up by the floods of the river.

The most impressive memorial to its great past is now the *Tāq-i Kīrā*, which stands in the centre of the ruin of al-Madā'in. The surviving portion consists of a gigantic façade 102 yards long divided into two unequal portions by an arch 80 feet in width thrown boldly across. This, the front wall, originally over 100 feet high, divided into three stories is effectively relieved by open and imitated doors, arcades, pilasters and half columns. Through the gigantic archway one reaches a spacious hall 150 feet deep, on either side of which are five parallel side-chambers. A wide door in the back wall of the hall leads into a wide court apparently square in plan.

For the place of Iwān in the history of art and the date of its origin, the reader may be referred to Herzfeld, *op. cit.*, p. 7429. According to him the building shows a mixture of Oriental and Hellenistic styles. Sapot (Sāhur) I (241-272) is the only possible builder; Khosrow I (531-579) seems to have undertaken a considerable restoration of the whole. The most characteristic part of Iwān, which clearly shows it was mainly intended for a palace of audience, is the great hall, in the Sāsānian period the scene of ceremonial public audiences and receptions by the sovereign. Nothing has survived of the architectural details of the Iwān, and the stucco or mortar coating in which these found expression has fallen off. The Kaiser-Friedrich-Museum in Berlin possesses stucco rosettes, which Herzfeld (*Z. D. M. G.*, lxxx, 1927, p. 226) identified as ornaments from the Iwān. In the interior, the palace, as we know from the accounts of the Arabs, was adorned with pictures and images in gilt relief. When the Muslims, pending the building of a mosque of their own, used the great hall of the Iwān provisionally after the capture of Ctesiphon, the paintings remained there intact and were still to be seen two centuries later. For example in the ninth century we find the poet Abū Ḥabib al-Buhārī (cf. I, p. 773), who was very fond of describing palaces, describing the Iwān in a famous poem from his own observations; and this poem in the edition of his *Diwān* printed at Sтамбул in 1300 (1882) (Vol. I, 108 ff.). Almost the whole text is also given in Vāqūf, I, 427-429; pieces of it in al-Khatib al-Baghdādī (ed. Salman, p. 90-91) and in Xasrawī, ed. Wüstenfeld, II, 304.

The majestic remains of Ctesiphon, which from early times have always made a deep impression on the Oriental mind, very soon inspired the imagination of the poets. The Persian poet Afḡal al-Dīn b. 'Alī Khakāni (d. 595 = 1200 [q.v.]) wrote an elegy on al-Madā'in, one of his best works; cf. Ethé, in *Grandes L. Iran. Phil.*, II 264. This was printed in Sтамбул in 1330 (1912) and in Berlin 1343 (1924). This latter edition entitled *Awān-i Madā'in, un poème de Khakāni, adapté et augmenté par quelques poètes contemporains* (publ. No. 5 of the Franchshühler press) has a critical historical introduction by Dr. Kīdā Tawfīk and a commentary by the modern Persian writer Husain Dāniš; on it, cf. E. G. Browne, *The Press and Poetry of Modern Persia* (Cambridge 1914), p. 307.

Muslims regard the abandoned and ruined remains of the Persian royal city as monuments of the victory of their religion (on the alleged omen of the collapse of 14 pinnacles of the Iwān in the night of Muhammad's birth, see Streck, *Sel. und Ktes.*, p. 6) and as impressive symbols of fallen greatness. Like the pyramids, we find them in Arabic poetry as the regular symbol of the transitoriness of worldly power: cf. for example the verses of al-Tifḡḡ in Maḡḡat, *al-Kāfiq*; the chapter on the pyramids, ed. by E. Gracief (Leipzig, 1911), p. 47 and 88 (and 94). The Buḡyid Sulṭān Ḥajāl al-Dawla (1025-1043) recorded his visit there by inscribing on the wall of the Iwān two verses proclaiming the transitoriness of worldly things (see Vāqūf, I, 429, 5); cf. also Streck, *op. cit.*, p. 61. The Arabs reckoned the Iwān, like the pyramids, among the wonders of the world (cf. e.g. Ibn al-Fakḡh, *B. G. A.*, v. 255); indeed it was held to be not the work of man but of the demons, the *Jinn* [q.v.]. Quite early many legends became associated with the Iwān, some of which centre round the figure of Khosrow I Anušīrwan, still proverbial in the east for his generosity; e.g. the story of the old woman's hut which the king tolerated within the precincts of the palace (see Streck, *Babylonien*, II, 256-258; Streck, *Sel. und Ktes.*, p. 56 and *J. A.*, 1831, Vol. 15, p. 489) which Herzfeld (*op. cit.*, II, 68) traces to the lack of symmetry in the façade; also the story of the "chain of justice" to which petitions were attached (imitated by Ikhḡān in Tabari; cf. J. v. Hammer, *Geschichte der Tcheu*, Darmstadt 1843, II, 339) which according to Bermet still seem to be known among the people around al-Madā'in; cf. the legend published by him in *Le Liban, La Revue de Damas*, May 1926, p. 10-11; *La Légende du Melon d'or* taken down from the lips of a Bedouin there.

Down to the accession of the 'Abbāsids the Iwān seems to have been practically intact; then they began to use it as a quarry but this was abandoned as too costly, the yield being far below the cost of obtaining it. As to the Caliph who ordered it to be taken down, authorities differ. Al-Manḡūr is usually given (754-775) but very often Ḥārūn al-Raḡḡid also (788-809). In any case the partial destruction of the Iwān under the early 'Abbāsids is an assured fact; cf. Streck, *Babylonien*, II, 255-256, 259; *do. Sel. und Ktes.*, p. 61-62; Herzfeld, II, 63. The Iwān with the exception of the great hall and two wings of the façade had been destroyed by this time; for the part that was spared, the name *Tāq-i Kīrā*—now popularly pronounced *Tāq-i Kīrā* as a rule—

came into use, first, I believe, in Raghib al-Iṣṣā (Eḥṣā' al-Mawṣū'āt de la Perse, ed. Quatremère, p. 266) Yāqūt (i. 425), as well as Bākuwī (c. 1400) after him, knew only the arched hall flanked by two wings as remains of the Iwān. The building remained in this state practically unaltered till 1888 when on April 31st on the occasion of a high flood the northern front wing collapsed, probably undermined by the ruthless robbery of bricks. An attempt was made a few years ago to save the threatened south wing by securing its foundations. Pictures of the Tagi Kīāsi before and after 1888 may be found in Fr. Langenegger, *Die Baukunst des Irāq* (Oxford 1911), p. 16.

The *Kasr al-Abyad*, the "White Palace", has completely disappeared. At the capture of Ctesiphon it was spared by the Arabs like the Iwān. The Muslim general Sa'd took up his quarters in it. It met its fate in the reign of the Caliph al-Mu'tasim (902-908) who had it destroyed to provide building material to complete the al-Tā'īl palace on the east side of Baghdad; cf. Streck, *Babylonien*, I. 192; II. 259; Herzfeld, *op. cit.*, II. 63.

Systematic excavations have never been conducted on the site of al-Madā'in. The antiquities found here come from isolated chance finds; for a list of these see Pauly-Wissowa, Suppl. iv, p. 1166-1167. The Deutsche Orientgesellschaft has just (the autumn of 1927) begun excavations here and it is to be hoped that this enterprise, which is on a considerable scale, will yield valuable results for the archaeology, history and topography of Seleucia and Ctesiphon, especially on disputed points which can only be decided by the spade.

Bibliography: *B. G. A.*, ed. de Goeje; Yāqūt, *Mu'jam*, ed. Wasmuth; Tahrir, *Tha al-Aḥṣā* (ed. Tornberg); see the Indices to these works under al-Madā'in, Behrāmī, Iwān, Kasr al-Abyad, Rīmīya, Taisafin; *Kutub al-Ḥikmā*, Indices by Gūdal, s. v. — There is valuable material for the Christian history of al-Madā'in in the *Kutub al-Muḥḍat*, a history of patriarchs by Mārī b. Sulaymān of the xiiith century and in the abbreviation of the work continued to the xivth century by 'Amr b. Mattā and Ṣalḥ b. Yuhannā; see H. Giamouli, *Mari*, *Amr et Sībās de patriarche Nestorien commentaria* (text and lat. transl.), 3 parts, Rome 1888-1899. Of late mediaeval Oriental works may be mentioned Ḥamd Allāh al-Kātibī, *Nuḥḥ al-Kutub* (G. M. S.) p. 44-46 or 50-52 (transl.) and the already mentioned Bākuwī (cf. *N. E.*, II. 1789, p. 424). A naive description of al-Madā'in is given in a Turkish account of the end of the xviiith century entitled *Kitāb Mandāh al-Hudūd*; Bianchi translated this into French in *Recueil de Voyages et de Mémoires, publiés par la Société de Géographie*, II., p. 81 sq. (cf. p. 131). On the references, which contain minor errors, in Firdawsī's *Shah-nāma*, see Noldeke, *Das iranische National-epos*, p. 49 (in the *Grundriss der iran. Phil.*, Vol. II). — For further information from Oriental authors s. G. Le Strange, *The Lands of the Eastern Caliphate* (Cambridge 1905), p. 33-35; Streck, *Babylonien nach den arab. Geographien*, II. (Leiden 1901), p. 226-279 and *do.*, *Seleucia und Ktesiphon* (= *Der alte Orient*, vol. xvi, Hef. 3-4, Leipzig 1917). lmgunn, *op. cit.*, Suppl. vol. IV. 1102-1119 and *Seleucia* by Streck, *op. cit.*, II. A. col. 1148-1154 and *cf.* thereon also V. Tschirikover, *Die hellenist. Städtegründungen* (= *Philologus*, Suppl. vol. xix, 1927, Hef. 1), p. 90-92. — A historical topographical sketch of al-Madā'in from the earliest times to the present day is given by the Baghdad Carmelite Father Anastase in Arabic, in *al-Mashriq*, I. (Bairūt 1902), p. 673-681, 740-746, 780-786, 834-840 (giving extracts mainly from Arab authors and European travellers); J. M. Patchatchy, *Le palais de Chosroes*, in the Arab. periodical *Lughat al-Arab* (Baghdād), 1912, No. 8. — In Ritter's *Handbuch von Asien*, xi. (1844), p. 852-865 the accounts of various early European travellers are utilized. For the modern topography of al-Madā'in and the questions of archaeology and history of art arising out of the buildings there, the main authority is now E. Herzfeld's *Seleukia und Ktesiphon* in the already mentioned *Archäol. Anz.*, II. 46-76, 262, note 1 (suppl.). For further bibliography cf. Streck, *Babylonien*, *loc. cit.*; *do.*, *Sel. u. Ktes.*, p. 64 and Herzfeld, p. 46, note 1 and p. 49, note 1. (M. STRECK)

MADĀ'IN ŠĀLIḤ. [See AL-ḤIJRA.]

AL-MADĀ'INĪ. 'ALI b. MUHAMMAD b. 'ABD ALLĀH b. 'ABD SĀTIR b. 'L-ḤASAN, an Arab historian and writer, a client of the Qurāshī family of the 'Abd Šams b. 'Abd. Manāf, was born in 135 (752) in Bagra, where he was a pupil of the theologian Mu'ammār b. al-Ash'ath, but he became interested in *Adab* and history; he lived for a time in al-Madā'in but moved from there to Baghdad, where he was closely associated with Isḥāq b. Ibrahim al-Mawṣilī in whose house he died in 225 (840), according to the *Fihrist* in 215 (830), according to others not till 231 (845). His literary activity was very extensive and included works on the history of the Prophet, of the Qurāshī, of the conquests and the caliphate as well as the history of poets and lighter literature (*adab*). The *Fihrist* gives 239 titles of works from his pen but this includes the *Kutub al-Dawā'id* twice and many of the works may have been quite short. On the other hand his list is not complete. Although later writers using his works only rarely give their titles, we can add the following to the list in the *Fihrist*. Among historical monographs omitted in the *Kutub al-Adab* *Zufar b. al-Harith* used by Yāqūt (*Al-Ḥijra*, IV. 369) following a MS. of Sakkarī (cf. Heur, *Die hist. und geographischen Quellen in Fihrist* progr. W3, Straßburg 1898, p. 3). Among *adab* works is omitted especially the *K. al-Furūq* *al-Nā'ib* (cf. Wiener, *ibid.*, IV. 276 sq.), often used by al-Tamkhī, also the *K. al-Samīr*, cited II. 174, s. by the same, the *K. al-Muḥabbat* used by 'Abd al-Kādir al-Baghdādī (cf. *Abū al-Aswad*, II. 109, s.). The titles of his works seem to have varied often. Thus the *K. al-Nisā'* al-Furūq cited by 'Abd al-Kādir, *Abū al-Adab*, I. 408, is doubtless identical, one may say, with the *K. al-Nisā'* al-Nuḥḥ cited *ibid.*, IV. 366, s. below and 479, s. and the *K. al-Namādh* wa *'l-Namādh* of the *Fihrist*, 102, s., is doubtless the *K. Zabān* *l-yā* in al-Ma'idānī, I. 220, s. with the *K. al-Ḥijra* *l-yā* b. Mu'ammār in *Fihrist*, 104, s. and the *K. al-Ḥijra* al-Kūl in Ma'idānī, II. 78, s. with the *K. al-Kūl* wa

'*Abū al-Fihrist*, 103, 34. There still exist only parts 1 and 2 of the *K. al-Fihrist* (*Fihrist*, 104) in the *Zahiriya* of Damascus (cf. *Ḥatib al-Zuhayr*, *Ḥatib al-Karūn fī Ḍunāq al-Dawāshir*, p. 28, N^o. 1, 3). Of his historical works his *K. al-Fihrist al-Khawāṣṣ al-Kābir* seems to have been the most comprehensive. It came down to the reign of al-Mu'tazim. Tabari's account of the end of the reign of the caliph Hishām in 125 and the beginning of the reign of al-Walid seems to be based on it, although for Umayyad history he generally prefers *Abū Miḥḥan*. The *K. al-Fihrist al-Khawāṣṣ*, according to *Yāqūt*, *Irshād*, v, 315, is composed of several books, some of which were still available to him in Sakkast's manuscript. He is wrong however in thinking that this work was unknown to Ibn al-Nadīm, for it is evidently the *K. al-Fihrist* of the *Fihrist*, 103, 32, but it was omitted in the copy used by him. Of his historical monographs, the one used most copiously by Tabari was his history of Khurāsān, the title of which *K. Fihrist al-Khawāṣṣ* already given in the *Fihrist*, 103, 32, made its subject plain; it is a most important source for the history of Central Asia in the period of the Muslim conquest. His history of *Ḥapra* (*Fihrist*, p. 103, 4) seems also to have been Tabari's main source for his account of this town. As his authority Tabari gives 'Umar b. Ḥabib, in one passage he definitely mentions the latter's *K. al-Fihrist al-Khawāṣṣ* (II, 168, 10); perhaps he knew Madīn's work through the intermediary of 'Umar b. Shabba. Lastly Madīn's work on the Khawāṣṣ was used not only by Tabari but also by Balādhuri in the *K. al-Fihrist* (*Abūwaḥid*, *Anonymous*), by Muḥammad in the *K. al-Fihrist* and *Abū 'Alī* Faraj al-Isfahānī in the *K. al-Fihrist*. His separate work on the battle of Nahrawān may have been used by Tabari for the year 32. From his history of Muslim (*Fihrist*, p. 103, 21) al-Balādhuri seems to have taken his statements in the *K. al-Fihrist*, p. 11, 21; 12, 21; 47, 22 and he seems to have been acquainted with Madīn's numerous other monographs on the history of the conquest. Among al-Madīn's pupils, al-Zuhayr b. Bakkar was the best known continuator of his work, which was however rendered obsolete in the next generation by the systematic works of Balādhuri and Tabari.

Bibliography: *Kitāb al-Fihrist*, p. 100-104; *Yāqūt*, *Irshād al-Jah*, vi, Margoliouth, v, 309-318; Wüstenfeld, *Die Geographiker der Araber*, N^o. 27; Brockelmann, *G. A. L.*, I, 140. (C. BROCKELMANN.)

MADĀR. [See *ḤARĪ MĀ'IN*.]

MĀDDA (مَادَّة), a philosophical term = *aydūn*, Gr. *ēnē*, like the verbative *ēnē*, Gr. *ēnē*, a word of varied significance. In general it means that which can possibly exist (*possum*) but which really is not (*huc non fuit*) but may become something through the adoption of opposed determinations (*forma*). As the realization of the possible is conceived as advancing by stages, a lower stage of form may again be conceived as material for a higher form of development. The question is further complicated even in Aristotle by the distinction between a physical and a logical material (this consists in the conception of species, which is formed by the specific differentia) and by the division of the physical into a heavenly and an earthly material. In addition there were further different, especially neo-Platonic influences among the Arab philosophers.

The fourfold division of matter is very common, e.g. in the *Ḥikma al-Safā*, 1: prime matter, either directly or indirectly an emanation from the divine being, i.e. an intelligible matter conceived, according to Pseudo-Empedocles, as the first emanation but usually explained as is neo-Platonism as the last in the series (spirit, soul, nature), often defined as the effluence of light from the light of God; 2. the matter of the universe as a whole, especially and permanently, of the heavenly spheres, which first of all adopts the indefinite form of corporeality (extens) or at once the three definite dimensions; 3. the matter of the four earthly elements, fire, air, water and earth; 4. energy, which is already formed in some way, but can be used for definite purposes, e.g. wood, stone etc.

In agreement with Aristotle the philosophers regard God as pure immaterial form. Only an extreme mystic like 'Alī al-Karīm al-Jīlī, can call Him the *aydūn* of the world. As regards the lower spirits (spirits of the spheres, angels etc.) opinions differ, but most thinkers find it easy to assume an intelligible matter, and even to recognize in the first created, the highest world spirit, a material principle; next however they are fond of distinguishing this intelligible matter as receptive and the earthly sensual matter as passive. — Different opinions are expressed regarding the *principium individuationis*: in the comparatively speaking purer Aristotelians we find the tendency to seek it in matter and in those who are more inclined to Platonism in form. All insist, although with varying emphasis, upon the *divina* of matter for form more than the love of form for union with matter.

As to logical matter, it may be noted in conclusion that the three modalities of judgment (necessity, possibility and impossibility) are described as "matters" (*ilm* *ṣafā*). — Cf. also the article *ḤUKM*. (T. DE BOER.)

MADHANA. [See *MAḤANA*.]

MADHAB. [See *FĪQH*.]

MADHĪDĪ, an Arab tribe of Yemen origin, traced by the genealogists to Malik b. Uday, who is said to be descended in the fourth generation from Kaḥṣan and to have received his name MadhĪdĪ from a hill of this name on which he and his brother Tay were born. His sons are said to have been: Sa'ī al-Aḥṣar, Dhahī, Yuhayr called Murād, and Zaid called 'Anz. The MadhĪdĪ whose tribal lands are said to have lain near Tardī "on the road to Yemān" (*Yāqūt*, a. v.) and whose brother tribes were Khath'um and Murād, were, according to tradition, at war with the 'Asad b. Sa'ya about the time of the appearance of Muhammad; in the course of this war was fought the battle of Fāḥ al-Rū. In the Muslim period, families of the tribe of MadhĪdĪ were predominant in Kāfa along with those of Kinda and Hamḍān.

Bibliography: Tabari, *Ḥikma*; Ibn Duraid, *Kitāb al-Ḥikma*, ed. Wüstenfeld, p. 237; al-Bakr, ed. Wüstenfeld, p. 721; cf. Wüstenfeld, *Tabari*, 1. and *Register*; Wellhausen, *Scara der Arab. Literatur*, p. 248. (H. H. BRÄU.)

MADĪD, the second metre in Arabic prosody, very little used on account of a certain heaviness in its rhythm. In theory it consists of four feet in each hemistich and the prosodists quote in support of this several anonymous verses. In practice there are only three.

to Samhūdī (Wüstenfeld, *Geschichte der Stadt Medina*, p. 37) was especially associated with a place west of the tomb of Hanzā where the Banū Hāritha settled. The town which arose in this way was not surrounded by a wall so that its defences were the thick groves of palms and the orchards which surrounded the houses. As they were less thick on the north and west sides, these were most exposed to hostile attacks. The little forts (*ufum*, plur. *ufūm* or *ufūma*, plur. *ufūmāt*) which were built in considerable numbers formed a substitute for a wall and the inhabitants could retire into them in times of trouble.

There were in later times no reliable traditions regarding the origin and earliest history of Medina and the historians endeavoured to fill the gap themselves and as elsewhere made the Djurhum (q. v. and also Krauss, in *Z. D. M. G.*, lxx. 352) and the quite unhistorical 'Amalekites play a part in it (cf. also Hasān b. Thābit, ed. Hirschfeld, No. 9, verse 6). It is only with the coming of Jews to Medina that we are on surer ground, but the historians know so little of the exact period of these settlements that they connect them sometimes with Moses, sometimes with the deportation of the Jews under Nebuchadnezzar, and sometimes with the conquest of Palestine by the Greeks or by the Romans. According to various references in the Talmud there were Jews in Arabia in the early centuries of the Christian era and this certainly means North Arabia in the main (see Hirschfeld, *Beiträge zur Erklärung des Koran*, p. 49 sq.) and that they were numerous is evident from the existence of Jewish communities in Taimā, Hidd (Janssen and Savignac, *Mission*, p. 150, 242), Khaibar, Wādī 'l-Kura, Fadak and Makna, to which may be added that in Medina. Everywhere in these oases they took over and developed the cultivation of the soil, and it was probably due to them, that these scattered settlements each developed into a kind of town; evidence of this is found in the Aramaic name Madīna for Yathrib. According to the definite statement of Hasān b. Thābit (No. 9, verse 8 in Hirschfeld) they built a number of small forts in this town. But that they were not the first to do this may probably be concluded from the fact that the earliest inhabitants were not pure Beduins (according to Lammens, *Jah*, p. 72, these forts were built after the model of those of the Yemen). The Jewish tribe of Kainukā played a prominent part in the immigration, as at a later period one of the principal markets in the western part of the town was called after it. But gradually the tribes of Kuraiza and Nadir came to be the leading ones in Madīna Jewry. The former dwelled with the Bahdān on the W. Mahallā, the Nadir on the W. Buḥān (*Kitaḥ al-Aḥqāf*, xix. 95, where the Jewish tribes and the Judaized Arab tribes are detailed). While in this passage, as usual, the Kuraiza and the Nadir are numbered among the pure Jews, according to a notable statement in the historian Ya'qūbī (ed. Houtman, ii. 49, 52) they were not pure Jews but Judaized clans of the Arabic tribe of Djurhum, which Nöldeke has repeatedly emphasized as a genuine tradition. Now it is historically certain that at that time there were many Jewish proselytes (cf. Ibn Kutaiba, *Kitaḥ al-Ma'arīf*, p. 299) but in spite of this there are decisive reasons for believing that the Jewish element in Madīna did not arise in this

way. It is of special significance that the Kuraiza and Nadir are frequently called the *Ashmūni*, the "two (tribes of) priests", which shows that the Jews knew their genealogy and laid stress upon their descent (cf. e.g. Ibn Hishām, p. 660, 10: "thou revilest the pure of the two tribes of priests"). The same thing is seen from the fact that Nadir Saḥīya married by Muḥammad is described as belonging to the family of Aaron (Ibn Sa'd, viii. 86, 1). But the decisive fact is the way in which the Prophet speaks in the Madīna sūras to the Jews there. He apostrophises them as sons of Israel and reminds them that God has raised them above all men (ii. 44, 116); he brackets them with the ancient Israelites as if they had taken part in the Exodus from Egypt (ii. 46 sq.); Allah gave Moses the scriptures so that they might be rightly guided (ii. 50); they break the laws which he bound them to observe at the treaty of alliance (ii. 77 sqq.) etc. Such expressions suggest as clearly as possible that he regarded them as true descendants of the ancient Israelites. There must therefore have been in addition to the Judaized Arabs a stock of true Jews, and indeed it is obvious that without such there could have been no proselytes. Wellhausen moreover has aptly pointed out that the Arabian Jews by their language, their knowledge of the scriptures, their manner of life, their fondness for malicious mockery, secret arts, poison, magic, and cursing, and their fear of death, make an unusual impression which cannot be explained simply by the Judaizing of pure Arabs. But on the other hand it must not be forgotten that the Jews in Arabia were very much influenced by their surroundings and had assumed a character of their own. For example we find among them the division into tribes and families, characteristic of the Arabs, with the obligations associated with this. The names of these tribes cannot be traced to old Jewish names but are thoroughly Arabic in appearance, which is also true of their personal names among which true Jewish names like Samaw'al and Sāra are rare. The arabicisation of the Jews is particularly notable in the poems which are ascribed to Jews, most of which might have been equally well written by Beduins (see Nöldeke, *Beiträge zur Kenntnis der Poesie der alten Araber*, p. 52 sqq.).

While the Jews were supreme in other places like Khaibar, al-Fadak etc., the position was changed in Madīna as a result of a new immigration which the Arabs associate with the bursting of the dam at Ma'rib (q. v.) and the migrations of South Arabian tribes produced by it. In this way the two so-called Kaila tribes, Aws and Khazraj (q. v.), came to Madīna. No particulars of their coming are recorded, but from an interesting verse in Ibn Kharrādhbīh (*B. G. A.*, vi. 128) and Ya'qūbī, iv. 460, it is evident that they were for a long time subject and tributary to the Jews and that this part of Northern Arabia was at this time under Persian rule, in keeping with the usual Jewish policy of maintaining friendly relations with Persia. Later the Kaila Arabs however succeeded in casting off the Jewish yoke and bringing the Jews under their rule. According to tradition the occasion of this was that a powerful Jewish king named Pīṭaun, who exercised the *jus primae noctis*, was murdered by a Khazrajī Malik b. al-'Adīlān to save his threatened sister — a widely disseminated motif (cf. K.

Schmidt, *Jus primae noctis*, 1882, and also *E. Z.* 7, 1883, p. 156 *qqq.*) on which too much stress should not be laid. As to later events there are two different traditions: some make Mālik after his deed seek the help of a Ghassanid ruler, Abū Djabūla (cf. the name Djabūla among the Ghassanids), others of a South Arabian Tabbā, Az'ad Abikarib (c. 430; M. Hartmann, *Die arabische Frage*, p. 482, 497). In this second story, Wellhausen finds some support in some old verses and assumes that Tabbā is here an erroneous popular name for a later Abyssinian viceroy. There is however nothing in these verses about an attack of the South Arabians on the Jews of Madina alone but on the inhabitants of the town together, so that Wellhausen further supposes this attack may have so weakened the Jews hitherto predominant that the Arab inhabitants succeeded in breaking their supremacy; but this is of course no more than an attractive hypothesis. In any case the name Abrahā in Kais b. al-Khatim, N° 14, verse 15, cannot be used as a basis for further hypotheses for it is certainly not the celebrated Abrahā [q. v.] who is meant. Besides, these stories contain legendary allusions to Muhammad's future appearance in Madina, which betray at least a later recasting by Muslims.

The new lords of Yathrib took over the forts occupied by the Jews and built several more (Samhūdī, p. 37). They also learned "Nabataean" arts from them and began to cultivate palms and pursue agriculture. The Khazrajis, whose principal family was Nadjār (or Taim al-Lāt), as the most powerful tribe assumed the leadership and occupied the centre of the town where the modern Madina lies. West and south of them lived other Khazraj tribes while the territory of the Hāshim ran to the east. The Awsis, who also comprised several families, settled south and east of their brethren, the Nabī in the northeast separated by the Hāshim from their kinsmen. The two principal Jewish tribes Nadjār and Quraysh preserved a certain amount of independence and retained their lands under the Awsis while the Kaïnukā retained their lands in the southwest although their main industry was practising the goldsmith's art. Further details of the parts occupied by the tribes and families are given in Samhūdī (Wüstenfeld, p. 29 *sq.*, 37 *sq.*) but these can only now be partly identified. Besides there were in Madina, in addition to the Jews and the immigrant Kailla tribes several Arab tribes, some of which were already there when the former came. They were closely connected with the Jews and were partly Judaized. The settlement of affairs reached in this way gave the town a period of peace, which was however gradually broken as an increasing enmity arose between the two Kailla tribes, as was not infrequently the case with Arab brother-tribes. At first it was individual families that fought one another but this conflagration gradually spread until the existence of the whole town was threatened. The quarrel began with the feud of Sumair, so-called after an Awsi named Sumair. This was settled by an arbitrator but it was not long till renewed friction led to renewed hostilities, of which the so-called feud of Hāshim was the most serious. We are introduced to this second period by the poems of Kais b. al-Khatim of the Awsi family of al-Nabī. The fighting throughout ended unfavourably for the Awsis and the Nabī were finally driven from

their possessions. In their need the Awsis appealed for help to the two principal Jewish tribes. They at first refused it; but when the Khazrajis had foolishly slain some Jewish hostages, they concluded an alliance with the Awsis and declared themselves ready to assist them. It was no longer a fight between a few families but a struggle between the two great rival tribes in their full strength and other inhabitants of Yathrib, even the Beduins of the country round also took sides. At Bu'ath [q. v.] after long preparations a decisive battle was finally fought. It at first looked as if the Awsis were again to be defeated. The tables were turned and the Khazrajis suffered a severe reverse. It is interesting to note that 'Abdallāh b. Ubayy of the Khazrajis on this occasion displayed the same irresolution that he did later in his opposition to Muhammad; he took the field with the others but did not enter the battle. On the day of al-Sarfa he actually ran away. The battle of Bu'ath restored the equilibrium between the principal tribes, but the continual fighting had sapped the strength of the town and the bitter feeling which continually revealed itself made the lives of the inhabitants more and more unendurable. Then a momentous change took place when the people of Madina, who required a leader with a strong hand, and Muhammad, who had only to a slight extent succeeded in winning over the Meccans to his religious views, came into contact with one another.

The Kailla tribes at the time of their immigration to Yathrib had been heathens like the great majority of the Arabs. The principal deity they worshipped was Manāt [q. v.], after whom the Awsis were originally named but they also revered among others al-Lāt (cf. the name Taim al-Lāt already mentioned). Through living alongside of Jews they became influenced by their religious and moral ideas, but unfortunately we know very little of their spiritual outlook before the coming of the Prophet. The poet Kais deals in the Beduin style mainly with the quarrels between the tribes and families and rarely refers to religious matters. He nowhere mentions the local deities but refers to Allāh (No. 6, verse 22) whom he calls the creator (5, 6; cf. Goldner, *Z. D. M. G.*, lvii, 398), which is in itself sufficient to prove Jewish or Christian influence. Of him he says in N° 11, verse 8: "Allāh will only what he will"; verse 13, 12: "Praise be to Allāh, the lord, the lord of the building" refers to the Ka'ba in Mecca, the *masjid* covered with carpets (5, 14). The three days in Minā are mentioned in 4, 4 which shows that they then as later in the Muslim poets gave the young men an opportunity for love-affairs with women of other tribes. In rejecting a life after death, 6, 22, he is quite on a level with the pagan Meccans. Alongside of such representatives of a mixed religion there were others whose conceptions had developed farther through contact with Jews or Christians, so that they were reckoned *hanifs* [q. v.] as they definitely rejected the popular deities and had assumed a tendency to asceticism. Abū 'l-Hāshim and Az'ad b. Zurāra for example professed monotheism before they became acquainted with Muhammad (Ibn Sa'd, iii/a, 22, 139). A Khazraj, Abū Kais Sirma b. Abī Anas, wore sackcloth and laid stress on levitical purity; he actually thought of becoming a Christian but gave up the idea and adopted Islam when an old man (Ibn Hishām, p. 347 *sq.*). A man of the Awsi tribe,

Abū 'Amr 'Abd 'Amr b. Sa'īf was known as "the monk" from his ascetic mode of life; he later became an enemy of the Prophet, left Medina and fought against him on the side of the Meccans; he is also said to have supported those who built a rival mosque at the time of the Tabūk campaign (Ibn Hishām, p. 411; Ibn Sa'd, *muṣn.* 90, 7; Wāḥidī-Wellhausen, p. 310). In evidence of such influence of Christians in Medina one might quote a verse of Harbī b. Thābit (ed. Hirschfeld, p. 125, 12), but this probably refers to a later period and opportunities of mixing with them were to be found in many places in Arabia. One result of living alongside of Jews in Medina was that the art of writing was quite well known there (cf. Ibn Kuthayb, *Alaḥd al-Madīna*, p. 131 sq., 156; Ibn al-Jawzī, p. 473 sq.; Ibn Sa'd, *muṣn.*, *passim*).

The spiritual influence of the Jews on the Arab inhabitants of Medina became an important factor in the relations between them and Muḥammad, for it made them receptive to his religious ideas with which they became acquainted by visits to Mecca and in other ways. How finally a treaty was concluded between him and several representatives of the Medinese, by which the latter pledged themselves to take him into their community and to defend him as if he were one of themselves and how he and those of his followers who were still faithful to him thereupon migrated to Medina is related in the article MUHAMMAD. After a brief stay in the southern suburb of Kūba he entered the town and took up his abode with a Khazrajī, Abū Ayyūb Khālid b. Zayd, with whom he lived till a dwelling was arranged for him. He is said to have left the choice of the site to the movements of his camel — if the story is true, a very clever move not only from the religious but also from the political point of view. In any case it is certain that hardly anything ever showed so clearly his gift, based on his unshakable belief in his prophetic call, of leading men to follow his will, as the fact that he succeeded in a very short time in bringing some kind of order into Medina, happily split up by feuds, and making a kind of unity out of the heterogeneous elements in the town, the earlier Arab inhabitants of Yathrib, the later immigrants, now predominating Kāila tribes, the Muḥājirīn from Mecca and the Jews of Judaea and Arabia. We get a glimpse of the first step towards this goal from the ordinance of the community preserved in Ibn Hishām, p. 341 sqq. ("Book of the fines"; cf. Tabat, *Glossary* 1, v. 17) which Wellhausen, *Stories and Parables*, iv. 67 sqq. and following him Cartani, *Annali dell' Islam*, i. 305 sqq. and Wendt, *Muhammad as de Jure et de Facto*, p. 78 sqq. have discussed. It is most interesting for its limitations and it lacks in a marked degree clear and logical fundamental ideas, because Muḥammad was content temporarily with what could be attained and avoided everything that might cause strife. In it he calls himself the messenger of Allāh, but there is no reference to his divine inspiration. His object is to form a united *saḥma* out of the inhabitants of Medina and this is defined from the religious side as the community of believers from Mecca and Yathrib. But the non-believers are not excluded, for the same obligation rather with the town of Medina which included also Jews and heathens, of whom it is not demanded that they should adopt Islam. The tribes retain

their autonomy as regards blood-vengeance and ransoming of prisoners, but against the rest of the world generally the affording of protection was obligatory on every member of the community without exception and no one could conclude peace separately with the enemies of the community (particularly the Quraysh). All important matters, out of which misfortune might befall the community, were to be brought before Allāh and Muḥammad. The valley of Yathrib was to be *ḥaram* (or *ḥalāl*) for all who were bound by this ordinance. The whole document thus alternates continually between religious and purely political clauses in a very opportunistic fashion. It never became of great importance and it soon fell into oblivion as it was rendered obsolete by the rapid progress of events, certainly not against the wish of Muḥammad whose plans went far beyond what was laid down in it. The main cause of its loss of importance was the breach which soon occurred between Muḥammad and the Jews, which the latter provoked by their scornful criticism of Muḥammad's revelations, especially of the weak points revealed in his reproduction of stories from the Old Testament. This meant a serious threat to his authority and in addition the Jews endeavoured to destroy the agreement reached in Medina by endeavouring to revive the old hostility between the two Kāila tribes (Ibn Hishām, p. 385 sqq.; cf. Sura, iii. 114 sqq.). To meet these difficulties, which of course were very welcome to his enemies in the town, Muḥammad worked hard to unite his followers for a common object, the war with the Meccans, by which he could at the same time avenge the resistance offered him there. It was at first difficult for him to arouse enthusiasm for this war among the Muḥājirīn and even more the Ansar but finally, when a fortunate accident occurred to help him, he succeeded in bringing about a war with the Meccans which led to the momentous victory at Badr. On the further fighting of this campaign, the battle of Uhud and the war of the ditch, cf. the article MUHAMMAD. The latter campaign gets its name from the ditch (*al-khandaq* q. v.) which Muḥammad on the advice of a Persian (Salmān) had dug around the unprotected parts of the town and which, in spite of its modest dimensions (it is said to have been a fathom broad), formed a serious obstacle to the enemy. Ibn al-Jawzī in the 6th century still saw traces of it, an arrowshot west of the town. On its further course cf. Wendt, *Muhammad as de Jure et de Facto*, p. 36, 31. The Meccans in this fighting gave him very material assistance by their lack of warlike ability and energy, and the war contributed to consolidate his position in Medina, aided not a little by the lack of resolution among the Muḥājirīn who never managed to seize opportunities favourable to them. He was thus not only in a position to continue the war against his native city but also to repay the Jews in ruthless fashion for all the annoyance they had caused him. After the battle of Badr, the *Kainūḍā* were driven out of the town and after the battle of Uhud, which was against the Prophet, the same fate was meted out to a Kāila tribe, the *Nadīr*. But the worst lot was that of the Quraysh, whom in spite of the intercession of the Ansar he had massacred. These events however do not show the Jewish tribes in a favourable light as they made no attempt to help one another but left each other

in the lurch in most cowardly fashion. The Quraysh alone at this measure showed a courage which to some extent atones for their previous attitude. In this way Muhammad succeeded in disposing of the danger that threatened him from the Jews, for the Jews who were left in Madina were of no importance and caused him no serious difficulties.

With the treaty of Hudaibiya in the year 6 A.H. [cf. MUHAMMAD] the war with the Quraysh was practically finished, for in it his genius for diplomacy succeeded in bringing them to recognize Madina as a power equal in importance to Mecca. The official conclusion of the struggle was the bloodless occupation of his native city in 8 A.H. However great a triumph this was for the Prophet, it produced a new feud which was to prove fateful for Islam after the death of Muhammad. Even before the decisive turn in the struggle with Mecca, in the campaign against the Banu Muttalib, the ill feeling between the emigrants and a section of the people of Madina came to a head in threatening fashion and 'Abdullah b. Ubayy delivered several boastful speeches and threatened to expel the troublesome intruders (cf. Sura, ix, 111, 12), which he naturally denied when the Prophet later took him to task. But when Muhammad had entered Mecca, his faithful followers in Madina became anxious, as they feared he would now abandon their town and return to his native place. He calmed them however and declared that he would live and die with them (Im. Hisham, p. 824). But when he began to treat the Meccans with great clemency and after the battle at Hunayn was striving to win them over to his religion by rich gifts, the Ansar with justice felt themselves slighted and once again feared that he would abandon them. But he delivered them a speech in which he reminded them how he had united them when they were living in hostility to one another and declared his gratitude for all that they had done for him, and when he concluded by asking them to be satisfied if others went home with captured spoils but they with the messenger of Allah, they burst into tears and withdrew satisfied (Im. Hisham, p. 883 ff.). While in such stories there may be an echo of the later antagonism between the Ansar and the Quraysh, they undoubtedly give a not inaccurate hint of the feelings which found expression at this time. It is all the more remarkable that according to various indications there must have been an opposition to Muhammad at the time of the Tabuk campaign in Madina. His orations against the Munkafirs in the ninth Sura sound unusually excited and recall those of the Meccan period with their threats of punishment. There is also the notable, but unfortunately not quite clear story of the Masjid al-Dhar (cf. also Lammens) which some men had built south of the town in the land of the 'Amr b. 'Awf and which he mentioned until he saw that its object was to provoke discussion among the believers for the benefit of his former enemies (Sura, ix, 105 ff.), wherefore he had it destroyed. According to one story, the already mentioned Haifa Abi 'Amr was the moving spirit in it, (Im. Hisham, p. 906 ff.; Wajid-Wallhausen, p. 410 ff.; Tabari, i, 1704 ff.; Im. Sa'd, III, 36, 3, 46, 11). In any case Muhammad succeeded in again restoring peace, probably assisted by the fact that the leader of the Munkafirs died soon afterwards.

Faithful to his promise, the Prophet remained

in Madina till his death on June 8, 632. According to a reliable tradition (Tabari, i, 1817; Im. Sa'd, III, 37, 3, 58, 11, 59, 1, 71, 6), his corpse lay unburied for a whole day, so that its putrefaction was far advanced when it was finally buried under 'Ala's house, apparently a result of the great confusion into which his death had thrown the town. The unity created by his strong hand at once fell to pieces; the Ansar assembled and chose the Kharradj Sa'd b. 'Ubadah as their chief, while others proposed that the government should be shared between the Ansar and the Muhajirun. Umar's rapid and vigorous intervention however succeeded in thwarting these plans so threatening to Islam and carrying through the election of 'Abd al-Rakr as Caliph. He and his two successors resided in Madina, which thus became the capital of the rapidly growing empire. 'Abd al-Rakr and Umar, like the Prophet, were buried under the house of 'Ala, while 'Uthman's body was brought in the darkness on a door to the Jewish cemetery amidst oburgations and stone-throwing. In this period no one thought of strengthening the defences of the capital, not even during the riots after the Prophet's death and still less later when the holy wars were waged exclusively in foreign lands. 'Uthman had the forts taken down, but remains of them could be seen as late as the tenth century (Mac'udi, *K. al-Tanbih*, S. G. A., VIII, 206).

'Ali's reign brought a complete change for Madina. When the great civil war broke out between him and his rivals and the decisive battles were fought in the provinces, the Caliph recognised that the vast empire could not possibly be governed from the remote corner of the world in which Madina lay. While the earlier caliphs had remained in the capital and sent out armies of conquest from it, 'Ali placed himself at the head of his troops and set out from Madina in Oct. 656, never again to see it. He made Kufa his capital and after Mu'awiya's victory Damascus took its place. Madina now sunk, like its old rival Mecca, to the rank of a provincial town, unaffected by the current of the world's events. What pious old folks thought of this change is reflected in a characteristic tradition (Dinawari, p. 152 ff.) according to which several prominent Ansar tried to induce 'Ali to abandon his plan of leaving Madina: "What thou dost lose in the form of prayers in the mosque of the Prophet and the course between his tomb and his pulpit is of more value than what thou expectest to find in the Irak; reflect how Umar used to send his generals to war; there are still just as capable men amongst us as then!" But the Caliph replied: "The wealth of the state and the armies are in the Irak and attacks threaten from the Syrians, and I must be near them".

Madina with its venerable associations and the tomb of the Prophet could not of course become quite unimportant; on the contrary, its sanctity increased in the eyes of Muslims, the more the figure of Muhammad became important in their conceptions; but the life of the town became more and more remote from the real world in which actual history was being unfolded. Hither retired all who wished to keep aloof from the turmoil of political happenings, like 'Ali's son Hasan, after he had abandoned all his claims (Tabari, II, 9; Dinawari, p. 232). Husain also went there from Kufa, but left it again to make his desperate attempt to gain his rights, and it is significant that some of the Madina Ansar

went with him (Wellhausen, *Die Oppositionspartei*, p. 89). When he was slain, his wives and son were brought to Madina, where they lived in peace and took no further part in the fighting. Ali's son, Muhammad b. al-Hanafiya, resided in Madina (Dinawari, p. 308). It was not however only relatives and ardent followers of the Prophet, who preferred to live here in his city, but several of his former enemies, the Umayyads, also felt attracted thither by the quiet and easy life and would not go to Damascus (Lammens, *Études sur le Califat de Mouawiyah*, p. 35). In this way Madina gradually became the home of a new population, consisting of people who wished to enjoy undisturbed the great wealth which the wars of conquest had brought them. Life there became more and more luxurious until finally the holy city became so notorious (*At-ta'rib al-Aghani*, xii, 397, 400), that during a rising in the year 127 (745) the last Umayyad Caliph Marwan II could ask one of the participants in it how it was that the wives and singing-girls of Madina had not held him back from taking part in it (Tabari, ii, 1010). Such stories remind us of Doughty's description of the present inhabitants of Madina (*Travels in Arabia*, 3rd ed., p. 151: 'carding, playing, tipping in arak, brutish hump smoking, ribald firing'). This was the golden period of Madina about the glories of which the poets sang. Flourishing, well-watered gardens and meadows surrounded the town, and there were a number of splendid palaces built by wealthy Kurash, especially in the Wadi 'A'ali, of which traces can still be found (cf. Beistami, *Rihla*, p. 261 ff.; Lammens, *Mouawiyah*, p. 228).

Another section of the people of Madina was attracted thither by the quiet life, although for other reasons. Their object was not worldly enjoyments but they devoted themselves to the memories in the town of its sacred past, by collecting and studying the legal and ritual enactments dating from the Prophet, in so far as they were based on the words of Madina and the *al-hadith* there. The most distinguished representative of this group was Malik b. Anas (d. 179 = 795), the author of the *Muwatta*, who as founder of the Maliki school gathered many pupils around him (Goldfischer, *Islamwissenschaftliche Studien*, ii, 212 sq.). One of them, Ibn al-Zubayr, composed the first history of the town of Madina (100 = 814) but it has not survived.

Madina was now ruled by governors appointed by the Caliph, lists of whom are given by Tabari and Ibn al-Athir. The town was however no entirely unaffected by the wars of the first centuries after Muhammad. In the reign of Yazid, feeling in Madina, even among the Umayyads, was more or less hostile to the Caliph and many took the side of his rival 'Abd Allah b. Zuhayr in Mecca. The expedition of the governor 'Amr b. Sa'd, which Yazid ordered, was a failure. In 63 (681) the Madinese rebelled openly, appointing 'Abd Allah b. Hanzala as their leader and building a wall with a ditch to defend the town on the north. The Caliph sent an army under the leadership of Maslamah b. 'Ubayd which took up its quarters on the Hara N.E. of the town and fought the battle of the Hara, which ended in the defeat of the Madinese — according to the usual story, a result of the treachery of the Banu Haritha. That the inhabitants were abandoned to the ill-treatment of the Syrian troops is probably a malicious

libel (Wellhausen, *Das arabische Reich*, p. 98 sq.). Towards the end of Umayyad rule, in the year 130 (747/8), the Kharijite under Abd Hawam defeated the Madinese at Kulaid; but he was surprised by Marwan's troops and slain (Tabari, ii, 200 sq.; B.G.S., viii, 327). When the 'Abbasids became supreme, two 'Alid brothers, Muhammad and Ibrahim, sons of 'Abd Allah, made an attempt to fight for their rights. Muhammad who called himself al-Mahdi appeared in Madina in 145 (762/3) where he found not a few adherents, among them Malik b. Anas and Abu Hanifa. He endeavoured in various ways to imitate the example of the Prophet, used his sword, had the ditch dug by him round the town restored (see above) etc. The Caliph sent his relative 'Isa b. Musa with 4,000 men against him and when he bridged the ditch by throwing a couple of doors over it and entered the town, most of al-Mahdi's followers lost heart, as was usual with the supporters of the 'Alids, and when he renewed the hopeless struggle, he was mortally wounded. About 20 years later (169 = 786) another 'Alid arose, Husain b. 'Ali, against the 'Abbasids. After ravaging Madina he was driven out and slain at Fakhkh near Mecca. In spite of the harm he did to the town of the Prophet, he was celebrated by the 'Alid party as a martyr (Tabari, iii, 551 sq.; Ibn al-Athir, vi, 60 sq.). In the caliphate of Wathik, Madina suffered severely from the attacks of the Sulaim and the Banu Hilal. Bughit the elder [q.v.] came to their assistance in 230 (844/5) and imprisoned the Beduins. When he left the town again, the latter succeeded in breaking out of prison; the Madinese however discovered their escape and put them to death (Ibn al-Athir, vii, 12). Their love for Wathik was shown by their lamenting him every night after his death (*Ibid.*, vii, 21).

In the centuries that followed, Madina is only rarely mentioned by the historians, and what they tell us about it is of little interest as a rule. When the Fatimids became lords of Egypt and were threatening the holy cities in the Hijaz, a wall was at last built round Madina. This was erected in 364 (974/975) by the Buyid 'Adud al-Dawla but enclosed only the central part of the town. It was restored in 540 (1145/1146) by a vizier of the sons of Zang. But as a considerable proportion of the inhabitants lived outside the wall without protection from the attacks of the Beduins, the Atabeg of Syria, Nur al-Din Mahmud b. Zangī, in 557 (1162) built a second wall of greater extent with towers and gateways. The present wall, 35-40 feet high, was built by the Ottoman Sultan Sulaiman b. Salim the Magnificent (1520-1566) of basalt and granite (Sassanidi-Winscheid, p. 126). A trench was dug around it. The same Sultan brought a covered aqueduct from the south into the town. Finally the wall was raised to a height of 80 feet by Sultan 'Alid al-'Aziz, which height it has retained.

A feud between the governors of Mecca and Madina with a battle at Ihn T-Halifa is recorded for the year 601 (1203). The Meccan leader who had set out to besiege Madina was put to flight but obtained support from other Meccans, whereupon the Madinese abandoned further hostilities (Ibn al-Athir, xii, 134).

In 654 (1256) Madina was threatened by a volcanic eruption, known as the fire of Hujjat. It began on the last day of Dhu al-Hijja with a

slight earth-quake which increased in vigour each succeeding day. Then a glowing stream of lava burst forth which, as the chroniclers tell us, devoured rocks and stones but (fortunately) flowed to the east of the town and then continued its way northwards. The inhabitants sought protection in the Mosque of the Tomb, praying and confining their sins. The belief in the latter's inviolability, which was thus strengthened, was soon to be shattered by the conflagration described below.

Under the rule of the Turks Madina continued to lead a quiet life, little heeded by the outside world, and it is rarely mentioned, a circumstance much facilitated by the fact that the holy city could not be entered by non-Muslims. Radical changes only came about in the sixteenth century. In 1502, the Wahhābīs took the town, plundered its treasures and prevented pilgrimages to the Tomb of Muḥammad. An attempt to destroy the dome over the tomb failed, but the great treasures in pearls, jewels etc., presented by pious visitors to the mosque were carried off. It was not till 1813 that Muḥammad 'Alī's son Jusuf succeeded in retaking the town and at the treaty of peace in 1815 'Abd Allāh b. Sa'ūd recognised Turkish suzerainty over the holy places in the Ḥijāz. Muḥammad 'Alī however paid no attention to this, but sent another son Ibrahim to continue the war against the Sa'ūd and in 1818 he took Dar'iyā and raised it to the ground, whereupon he returned to Madina. The sacred cities once more belonged to the Turks and the Grand Sharif of Mecca even forbade pilgrims from Ibn Sa'ūd's territory to enter Mecca. This restoration of Turkish rule brought at least one important innovation: the building of the Ḥijāz railway from Damascus to Madina in 1908. It was primarily intended for pilgrims but was also of military importance and therefore suffered severely in the world war. Through the intervention of the Grand Sharif Husayn b. 'Alī b. 'Abd al-Mu'iz, the fighting and the intrigues in North Arabia became more and more involved. He first posed as a faithful servant of the Turkish Sultan but later he rebelled and on Nov. 6, 1916 had himself proclaimed king of the Ḥijāz and joined the English. After the peace which ended the world war the Turkish troops evacuated Madina in 1918. In the meanwhile a stronger opponent to Husayn had arisen in 'Abd al-'Azīz b. Sa'ūd, who had once more raised the Wahhābīs to a position of supremacy. Husayn's bold move in assuming the title of caliph found no support among the Arab chiefs, and the people of the Ḥijāz forced him to abdicate. Ibn Sa'ūd seized this opportunity, entered Mecca in October 1924 and forced Husayn's son 'Alī to leave the town. The two holy cities are therefore now both in the hands of the Wahhābīs, who are however now more tolerant and permit visits to the Mosque of the Tomb and other holy places and only forbid actual worship there.

In spite of the inaccessibility of Madina to all non-Muslims the reports of various modern travellers enable us to form a fairly clear picture of it, which can only be briefly outlined here. In keeping with the configuration of the ground, the plain on which Madina lies is divided into an upper southern part and a lower northern part, *al-'Uyūn* and *al-Madīna*, names found even in the earliest writers. Al-'Uyūn is reckoned to run to the above mentioned village of Ka'bi, 3 miles away, al-Madīna to the hill of

Uḥud. The oldest wall encloses the town proper the already mentioned later wall which is now partly in ruins encloses the western rather large suburb of al-Anbariya and "camp of the camels", *ṭawā al-munāṣṣa*, 400 yards broad lying between it and the town. Here is pointed out the traditional site of the *maṣṣa*, the Prophet's place of prayer, a tradition probably worthy of credence, as otherwise it would have been natural to locate it in the great mosque mentioned below. Along the south side of the wall runs the road of the funeral processions, *ḍarṭ al-Ḥanān*, which leads to the old general burial-place, *Baṭī' al-Ḥarāḍ* (so called after the plant *nitraria retusa*) in the east of the town. Among the thousands who are buried here are the little son of the Prophet, Ibrahim, his wives (whether also his daughter Fātima is disputed: see below), many of his companions, al-'Abdā, Muḥammad al-Bakir, Dja'far al-Sādiq, the already mentioned jurist, Mālik b. Anas, and many others. At the north-west corner of the town stands the castle built on to the town wall. There are several gates in the walls, including the Bab al-Shām in the north, the Bab al-Djum'a in the east, and the Bab al-Anbariya in the west. From a spring of fresh water in the village of Ka'bi an aqueduct runs into the town, first laid by Marwān when governor of Madina. It frequently fell into disrepair and was restored for example by several Ottoman sultans, on the last occasion by 'Abd al-Ḥamīd after the Wahhābīs had destroyed it. The damage not infrequently done by floods has already been mentioned. In 734 the Madinese were prevented for six months by an inundation from visiting the grave of Hāmra. The streets of Madina are clean but narrow and only the main streets are paved. The houses are well built of stone and a number have two stories. Several of them are surrounded by gardens, but the houses with gardens are mainly found outside the north and south wall, especially towards the south where vegetable gardens and orchards alternate with palmgroves and cornfields. The dates of which there are 70 varieties are, as in ancient times, one of the principal products. The pilgrim traffic is however the most important source of revenue for the inhabitants, who let their dwellings to the strangers and guide them to the sacred places and instruct them about ritual duties. The *ṣawwāḥir* here play the same role as the *ṣawwāḥir* in Mecca. Burton (ii. 189) gives the number of inhabitants as 16,000-18,000, in addition to 400 men in the garrison. Wavell (p. 63) in 1908 put it at 30,000, excluding soldiers and pilgrims, while Houtsma gave 60,000 including many foreign visitors. The results of the world war have of course altered these conditions in many ways. The population used to increase gradually by visitors settling often permanently in the sacred city. Of descendants of the old Ansar there are very few left in Madina; according to Burckhardt there were only ten families in his time. There are a number of Sharifs in the suburbs.

Madina possesses no sanctuary venerated from remote times like the Ka'ba; on the other hand it possesses compensation for this inimitable value in Madina eyes is the mosque which encloses Muḥammad's grave and is the goal of countless pilgrims. Some teachers even put this sanctuary higher than the Meccan one, but this view is not general, and the visiting of this mosque is not obligatory like the pilgrimage to Mecca.

and also may be undertaken at any time. According to unanimous tradition the Prophet was buried under 'A'isha's house, where also the two first caliphs found their last resting-place. Further, all the earlier stories agree that Muhammad soon after his arrival in Madinat had a mosque built, which he enlarged after the taking of Khaibar, and they are also agreed that the dwellings of his wives were close by so that 'A'isha's house with the grave could easily have been taken into the mosque. That there is nothing improbable in itself in a mosque having been built in the time of the Prophet is shown by the mention of a rival mosque, *Sura ix. 108* *et seq.* cf. *xiv. 36*. *Boi Castani, Amdat*, i. 432 *et seq.* has disputed with important arguments the correctness of the tradition and from various statements drawn the conclusion that originally on the site of the later mosque there was more probably only the *dhur* of Muhammad with a courtyard and various dwellings. If this is right, it is not known who built the mosque; but probably it was erected not long after Muhammad's death, for the rapidly increasing reverence for the Prophet must very soon have aroused the desire to bring his resting-place into touch with his religion. To this mosque, early built, can then be referred what tradition tells us of Muhammad's mosque: — a simple building of brick with pillars of palm stems and a roof of branches. According to the same tradition, 'Umar had it extended and after him 'Uthman who replaced it by a building of stone and mortar with a roof of oak. When Marwan was governor of Madinat, he had a *wasfiyya* of colored stones erected; but so important advance was made till the reign of Walid, who commissioned the then governor, afterwards caliph, 'Umar b. 'Abd al-'Aziz, in 87 (706) to adorn the building in greater splendour. For this 'Umar used Greek and Coptic builders, and the Byzantine emperor is said to have contributed 1,000 *mithqal* of gold and a large quantity of mosaic stones towards it. On this occasion four minarets were placed at the corners of the sanctuary and the walls covered with plates of lead. The mosque remained unaltered till the reign of al-Mahdi. After this Caliph had visited Madinat, it was rebuilt and extended in 162 (778–779) and its length was now 300 and its breadth 200 *ells*. In the following century another restoration was necessary and was carried through by al-Mutawakkil in the year 247 (861–862).

Of the mosque which thus came into existence there are very full descriptions by Ibn 'Abd Rabbih (d. 328 = 940), *Mukaddim* (375 = 985), Ibn Ishaq who travelled in the east in the years 378–381 (1182/83–1186/87), and also Vahbi. Of the many details given by these authors only a few can be quoted here. As is quite evident from several of these descriptions, the mosque had the form, always retained later, of an open courtyard covered with sand or gravel, *safa*, which was surrounded on all four sides by rows of pillars. In the eastern part of the southern pillared hall was the holy of holies, the tomb of the Prophet, with the tombs of 'Abd Bakr and of 'Umar. It is described by Vahbi (iv. 458) as a high building, separated at the top only by a space from the roof of the pillared hall. Regarding the relative positions of the three graves there were in his time different views. North of them, according to some traditions, was the tomb of Fajra while

according to others this was in the general burying ground. The part of the pillared hall lying west of the graves bore the name *al-Kawfa*, the garden, from an alleged utterance of the Prophet. The total number of pillars is said to have been 290; those in the southern part were stuccoed, with gilded capitals, the others were of marble. The walls were adorned with marble, gold, and mosaic. Along the southern border of the *Kawfa* ran a barrier, with which several highly venerated relics were associated: — the remains of the trunk of a tree, on which Muhammad used to lean, and especially his *minbar* or pulpit. According to tradition Mu'awiya wished to remove this; but immediately a vigorous earthquake began and he abandoned the idea and instead raised it by an upper structure five steps higher. Al-Mahdi later wished to remove this addition, but he was dissuaded from doing this as the nails had been driven into the old *minbar* (Ya'qubi, cf. Houtsma, ii. 283; Tabari, iii. 483; *Mukaddim*, ed. de Goeje, p. 82). According to the descriptions it had 8 steps and there was a slab of ebony over the seat which visitors might touch. The remains of the trunk were kissed and stroked with the hands, an interesting illustration of ancient Arabian religious customs. Among the various treasures of the mosque was the Madinat standard manuscript of the canonical text of the *Kur'an* prepared by 'Uthman. The mosque had 19 doors of which only four, two in the east and two in the west, were opened. There were three minarets, two at the corners of the north side and one at the southern corner.

While the Mosque of the Tomb escaped the volcanic eruption already mentioned (634–1156) it suffered in the same year from a fire due to the carelessness of a caretaker, which destroyed a part of it. An appeal to the caliph of Baghdad for assistance to rebuild it remained unanswered as the 'Abbasid dynasty was then tottering before its fall, which was to take place two years later. Only the roof was repaired in the year after the fire in makeshift fashion; the rubble was not even cleared away from the tomb but remained there for over two centuries. Several of the Mamluk Sultans showed some interest in the sanctuary, among them *Barquq* I, who, according to *Madjar al-Din* (Cairo 1283, p. 434), planned a railing round the tomb of the Prophet and had its roof gilt, while others sent workmen and materials, and notably al-Mansur *Khalil* in 678 (1279) to mark the site of the tomb built a dome over it covered with plates of lead. *Agha* Saif al-Din *Ka'it Bey* (873–890 = 1468–1495) was however the first to deal with the mosque in really energetic fashion and he had the minaret at the southern corner, al-Rab'iya, taken down and rebuilt. A great calamity then fell upon the mosque for, in a terrible thunderstorm in 826 (1431), it was struck by lightning and partly destroyed, and the library with its valuable manuscripts of the *Kur'an* perished. *Samhudi*, who lost his own library on this occasion, gives an account of the conflagration. The indefatigable Sultan, however sent a large number of workmen with tools and materials, and in 889 (1434) the building was restored and among other alterations the dome over the tomb was enlarged; he also presented the brass railing which surrounds the *maqbara*. On this occasion, the Sultan also presented to the town baths and a hypocaust for

them, an aqueduct and a water mill, as well as a large number of valuable books to replace those destroyed. Its misfortunes however were not at an end for in 898 (1492) it was again struck by lightning; the *Ri'āya* at the southeast corner was destroyed and had to be rebuilt. The mosque received its present form by an extension to the north, made by 'Abd al-Mu'izz in 1270 (1853-1854) which Burton saw before its completion. The many inscriptions which cover the walls, include various *Sūras* and formulae and the mystic prayers *al-Burda*.

In modern times we have descriptions by Burckhardt (unfortunately incomplete, as he was ill during his stay), by Burton (1853), a brief one by Wavell in 1908-1909 and a good one by al-Batānī (1910). In their main outlines they give much the same picture as the older ones. The mosque stands in the centre of the town proper, a little to the east. Al-Batānī gives the length from north to south as 385 feet, the breadth on the north side as 285 feet and on the south side as 220 feet. The court (*al-saḥn* or *al-harām*) is covered with sand or gravel and enclosed on all four sides by pillared halls, of which the largest on the south side encloses the actual *maḥḥal*. The pillars in this part are covered with marble with gilt ornamentations. All the pillars in the mosque, 327 in number, support arches on which rest little domes like divided oranges. Of the pillars 22 are in the eastern part of the southern hall (the *maḥḥal*), the sanctuary proper with the tomb of the Prophet. "The Garden", i.e. the area between the tomb and the *minbar*, is 70 feet long and 50 broad. The *maḥḥal* is enclosed on the south, where the mosque is extended by a row of pillars, by a brass grille with the valves already mentioned and the beautiful *miḥrab* of the Prophet with an indication of the direction of prayer. The present *miḥrab* is of marble with gilding, a gift of Murād III in 998 (1590). The *maḥḥal*, the holy of holies of the mosque, a quadrangle 50 feet long from north to south and 47 feet broad, is surrounded by a green polished brass railing through which a door, *Bāb al-Rahma* or *Bāb al-Wuḍūʿ*, leads to al-Rawḍa. It encloses an area which is called *al-ḥayḥa*; in allusion to 'Alī's house. It cannot be accurately described as it is covered with green silk and is not seen by visitors. The covering, which recalls the covering of the Ka'ba, is said to have been first presented by the mother of Hārūn al-Rashīd. Nūr al-Dīn Zangī is said to have cleared a new area around the older *ḥayḥa* to protect the tomb. In the *ḥayḥa* are the tombs of the Prophet and of the first two caliphs, according to the usual belief in the following order: the most southern is the tomb of Muḥammad with the head to the west, next him Abū Bakr with his head beside Muḥammad's feet and on the north 'Umar with his head beside Abū Bakr's shoulders. A fourth, empty grave is said to be intended for Jesus after his passion. On the north side of the large *maḥḥal*, another smaller one adjoins it, which, according to an assumption still disputed by many, contains the tomb of Fatima. Two doors on the east and west side connect it with the large *maḥḥal*. 100 hanging lamps are placed in this, the most sacred part of the mosque, and in addition in the Rawḍa there are considerable ones of crystal. In the court of the mosque, approximately oval, is a quadrangular area shut off by an iron grille, which is called Fatima's

garden. Of the 15 palms which grow there in the time of Ibn Iḥḥān, Burton saw only 12; al-Batānī mentions several small palms planted round a high one. Behind the boundary is the so-called 'Prophet's well'. The mosque has four *minarets* at the four corners and according to Burton a fifth in the centre of the west side, but this is not mentioned by al-Batānī. Five doors give admittance to the sanctuary: on the west the *Bāb al-Salām* and *Bāb al-Rahma*, on the north the *Bāb al-Majīdī*, on the east the *Bāb al-Jalālī* (or *al-Ḥayy*) and *Bāb al-Naḥḥ*. They are all closed at night. From the descriptions already quoted, the mosque was not impressive when seen from the outside, as the houses were built so thickly round it that an open view of it could not be obtained. Even the richly ornamented *Bāb al-Salām* only looked like the termination of a street running from the west. But this seems now to have been altered, as according to Masil, *Zur Zeitgeschichte von Arabien*, p. 34, all the houses in the immediate vicinity of the mosque were removed in 1916.

The immediate vicinity of the city of the Prophet is of course very rich in places which are associated with anecdotes and traditions of him. The most important of these is the hill of Uhud (q.v.) with the graves of those who fell for the faith there. It is rivalled by the village of Kubā' where Muḥammad on his arrival in his new home stayed from Monday till Thursday (Ibn Hishām, p. 335). The village, which was at that time occupied by the 'Amr b. 'Awf, is according to the Arab geographers 2 miles, according to Burckhardt, 3-4 hours from Medina; to be accurate it is about 3 miles. The surrounding gardens which are exceedingly rich in all kinds of fruit and vegetables extend for 4 or 5 miles (Burckhardt). Burton describes how the village appeared to him as he approached it: "a confused heap of huts and dwelling-houses, chapels and towers, with trees, between foul lanes, heaps of rubbish and yelping dogs". Tradition marks the spot where the Prophet's camel knelt (*al-maḥḥal*) and here also was the mosque mentioned in *Sūra*, ix. 109 built out of piety, as well as its counterpart, the *Maḥḥal al-Ḥayy*, destroyed by Muḥammad's orders (cf. Wāḥidī-Wellhausen, p. 411; Ibn Sa'd, *lib*, 32, 2; and above). The mosque of Kubā' with its simple minaret was in ruins in Burckhardt's time, but has since been replaced by a stone structure.

MADINAT AL-SALAM. [See BAGHDAD.]

AL-MADINAT AL-ZAHIRA, the capital

founded near Cordova by the famous 'Amir al-Hadi al-Man'ur [q.v.] in 368 (978—979). Because he did not wish to deal with state affairs in the palace of the Umayyad Caliphs in Cordova nor at the royal palace at Madinat al-Zahra', al-Man'ur decided to build a town which would include his palace and those of the principal court dignitaries. This town was built a short distance from Cordova on the banks of the Guadalquivir [q.v.]. Since the exact site of al-Madinat al-Zahira has not been discovered, one must be content, when trying to locate the site, with the very vague indications given by the Arab historians; indeed not one of the Arab historians has left any description of the 'Amirid town. According to Ibn Haam, in a passage of his *Tawarikh al-Hudud* (ed. Petrus, Leyden 1914, p. 104), it lay to the east of Cordova, but on the other hand some Spanish archaeologists think they have identified it on the south-west of this town. Al-Madinat al-Zahira must not be confused with the palace, al-'Amiriya, the name of a *manzara* or villa outside the city walls which was given to al-Man'ur by one of his Umayyad masters, the site of which seems to have been identified.

According to Ibn 'Idhari, the greater part of al-Madinat al-Zahira was finished in two years. Al-Man'ur settled there in 370 (980—981). He transported thither the different administrative offices and the treasury, and gave him round his palace in his courtyard, so that Madinat al-Zahra', the town of the Umayyad Caliphs, was almost unpopulated and practically deserted. The merchants also came to trade there; a few years after its foundation, al-Madinat al-Zahira had become a large town.

After al-Man'ur, al-Madinat al-Zahira, was the capital of his son and successor 'Abd al-Malik, who had a new palace built there. After his death his brother 'Abd al-Rahman, known as Sa'id, installed himself as well there. But he was soon defeated by Muhammad b. Hisham b. 'Abd al-'Aziz al-Mahdi [q.v.]. This usurper occupied the 'Amirid town and seized the treasures which were there. For three days he gave it over to the most thorough pillage. Having sacked the town he gave orders to fire it and to destroy it absolutely. (Ibn 'Idhari II, 390 [January 1000].)

MADINAT AL-ZAHRA', the ancient capital of the Umayyad Caliphs of Cordova, the ruins of which are still in existence about 3 miles to the west of this latter town, at the place called *Cordoba la Vieja*, on one of the last spurs of the Sierra Morena overlooking the valley of Guadalquivir [q.v.].

The western Arab historians give us a great deal of information on the foundation of this royal town, upon the period which marked its prosperity and upon the causes which led to its fall. It was the great Caliph 'Abd al-Rahman III al-Nasir [q.v.], who decided upon building it, and its construction was begun during the reign of this sovereign at the end of the year 325 (936). The chroniclers say that one of his consabines having left him a large sum of money, al-Nasir wished to utilize this sum for the payment of the ransoms of the Spanish Muhammadan prisoners of war in the kingdoms of Leon and of Navarre. As the envoys who had been sent for this purpose failed to find any prisoners whom they could ransom, the Caliph's favourite al-Zahra' is said to have advised him to employ the legacy to build a town to which she would give her name. This anecdote is without doubt legendary; at least in several points. The work of building the town was carried on for many years (from 13 to 40 years according to historians); it lay around the palace of the Caliph. Six thousand bown stones were used every day, not to mention other materials; the necessary marble was chiefly imported from Ifriqiya, and no less than 4,313 columns were required, if we may believe Ibn 'Idhari. According to the same author it was the crown prince al-Hakam himself who directed operations. The name of the chief architect, Ma'lum b. 'Abd Allah, has also been preserved.

The building of Madinat al-Zahra' engaged not less than 10,000 workmen. Account was taken in the planning of the town of the very steep slope of the site and al-'Idrisi gives a clear account of how this slope was utilized. The town was built on three terraces: the upper part was set aside for the palace and its appurtenances; the middle one was devoted to gardens; the lower one contained private dwelling-houses and the Great Mosque.

'Abd al-Rahman removed with all his court to Madinat al-Zahra', as he felt the Caliph's palace of Cordova which faced the cathedral mosque and overlooked Guadalquivir too small, and this became his favourite residence. His successors al-Hakam II and Hisham II lived there for the most part during their reigns, and further embellished the town of al-Nasir. It appears, however, to have very soon fallen into decay, especially from the time when it had as rival the residence of the 'Amirid Hisham al-Madinat al-Zahira [q.v.]. It was pillaged on several occasions by the Berber mercenaries who had rebelled against Cordova. The year 401 (1010) marked its final fall. A century and a half afterwards in the time of Idrisi, the walls alone remained and vestiges only of the palace. A few inhabitants still lingered in it.

A beginning was made in exploring and systematically excavating the ruins of Madinat al-Zahra'

about the year 1910, under the direction of the Spanish archaeologist, E. Velázquez Bosco. The first work done was the excavation of the double rampart dividing the upper terrace of the town from the middle terrace and from certain parts of the palace. A large number of carved stones have been brought to light.

AL-MADJARRA, the Milky Way (the place, path, road of moving).

The Name. It is probably taken in the first place from the Greek γάλαξ: *al-dā'ira al-galaktika* or *al-dā'ir al-galakti*, the circle or path which looks like milk. Other names are *ḥalq al-halīḥ*, the road of milk, as it has the colour of milk; *ḥalq al-ḥalīḥ*, the road of the place where there is milk; and hence metaphorically *ummi al-namī*, mother of heaven, who feeds the heavens as with milk; *ḥalq al-ḥalīḥ*, path of straw and dirt or *ḥalq al-ḥalīḥ*, path of the place where there is straw. Similarly the Milky Way is called in Persian *kāshkārān*, straw-puller, or *kāshkārān* or *ḥalq al-kāshkārān*, path of the strawpuller; in Turkish *ḥalq al-ḥalīḥ* or *ḥalq al-ḥalīḥ*, straw or fodder-thief. Whether names connected with straw go back to Greek or Oriental ideas is uncertain. Gaudel (op. cit.) holds the latter view. In the East the Milky Way is the hay, straw and meal, which Peter or Saint Vinnic (Venus) lost and is used by God to feed to heaven. Another Turkish name is *ḥalq al-ḥalīḥ*, path of the pilgrims.

Other Arabic names are *abwāb al-jamā'*, gate of heaven, and *al-ḥalq al-ḥalīḥ*, gap, probably from the idea that the Milky Way corresponds to a gap or split through which one can see the shining heaven. Another name is *ummi al-nuḥūḥ*, mother of the stars, because no part of the heavens is so rich in stars. The stars are also to have leprosy (*ḥalq al-nuḥūḥ*). Among the Kazan Tatars the Milky Way is called 'Path of the Wild Goose' and among the Altai Tatars 'Path of Hiss-Fox' (faded way).

The name *abwāb al-madjarra*, River of the Madjarr, is noteworthy. The Milky Way is regarded as a river; this is evident from the passages in

'Abd al-Rahmān al-Sūfī in his work on the constellations, in al-Bīrūnī in his *Kitāb al-Tafhīm* towards the end and in the *Chronology* (text, p. 345; transl., p. 348). In al-Kāwīmī in the *Cartography* (text, I, p. 37; transl., p. 18) and in many others. In these passages the constellation of Sagittarius or the eight stars forming the 20th station of the moon which are called the Ostriches *al-madjarra* are described. Four of the stars which lie on the Milky Way are called *al-madjarra al-madjarra*, the ostrich going to drink, the four others lie at the side of the river of the Milky Way and are called *al-madjarra al-ḥalīḥ*, the ostrich returning from drinking (cf. e.g. L. Ideler, *op. cit.*, p. 184 and Hyde, *Ullugh Beg's Tabular*, Oxford, p. 23).

Description of the Milky Way. A description of the Milky Way, the stars and constellations in it, is given by Ptolemy in the *Almagest* (Bk. VIII, Ch. 2) and the Muslim translators have borrowed from this. The editors have treated it in different ways. Al-Tūstī for example in his edition of the *Almagest* gives the description as fully as in Ptolemy; but he does not use the translation by al-Hadḥādī, as I was able to show. Ibn Shīr on the other hand, who gives a brief synopsis of the contents of the *Almagest* in the *Sūfī* (Hirāg) gives no such description; he deals here in the same way as he does with the Tables which he omits.

The very full treatment of the Milky Way is followed in Ptolemy by a description of the method of making a globe of the heavens on which the Milky Way is represented. Ibn Shīr, for example, took over this section word for word in a form which we also find elsewhere. It is therefore exceedingly probable that the Milky Way was represented on one or other celestial globe, of which a whole series is recorded. It does not seem to be on the extant globes (cf. H. Schmitt, *Die Kugel mit dem Schmelz*).

An independent description of the whole Milky Way as full as that in Ptolemy, I have not been able to find in Arabic works. A brief description is given by Abū Ḥanīfa al-Dīnawarī (in al-Maḥḥārī, *Kitāb al-Aḥwāl wa'l-Asḥān*, Haidarābād 1332, II, 9—12). The description of al-Dīnawarī leaves much to be desired and the text is not quite correct. The former is in keeping with 'Abd al-Rahmān al-Sūfī's verdict, according to which al-Dīnawarī was very well acquainted with the verses on the Milky Way but his astronomical knowledge was insufficient (it may be noted that 'Abd al-Rahmān mentions an Ibn Kunasa, while there is a Muhammad b. Kunasa in al-Maḥḥārī).

The anonymous writer mentioned in the *Bibliography* gives a brief description of it.

'Abd al-Rahmān al-Sūfī unfortunately only gives a description of one part of it. He mentions the part of the Milky Way between the great, the bright Milky Way (*al-madjarra al-ḥalīḥ*) and the falling Eagle (Lyra) (*ḥalq al-madjarra*, here at γ Cygni the Milky Way divides). 'Abd al-Rahmān follows this stretch up to ε Scorpī. In many cases the position of stars e.g. in the Ship is given from their position with respect to the Milky Way. Schjellerup has given details in the tables appended to the synoptic account, p. 544.

In the *Kitāb al-Tafhīm* of al-Bīrūnī we read 'al-Madjarra of the Arabs, *Kāshkārān* of the Persians and *Rāh Bihān* of the Hindus is an aggregation of a very large number of small stars.

They form an almost perfect large circle, which runs between Gemini and Sagittarius, sometimes narrow, sometimes wide, in some places it is dense, in others not. Aristotle thinks that the Milky Way consists of stars surrounded by vapour like the halo round the moon and the mist (in the sky) and the comets¹.

Theory of the Milky Way. On the nature of the Milky Way and the cause of its shining there are a number of views, which follow the same lines as those of the ancients (cf. O. Gilbert, *Die meteorologischen Theorien des griechischen Altertums*, Leipzig 1907, index, s.v. yāsa). I now give al-Karāfi's account of it.

Al-Karāfi (d. 1255-1286) who wrote a work on Optics ("Noteworthy consideration of what the eyes grasp in 50 questions or problems"), says in the 40th question: "Why do we see a black line on the moon? Is this an illusion or reality?" and continues:

"Connected with this question is that of the Milky Way which looks like a road in the sky. We are told: 1. It is the gate of heaven. 2. It consists of small stars which are crowded so closely together that the eye cannot distinguish one from the other. 3. It is said to be a vapour, which has risen from the earth and solidified under the rays of the fixed stars. One part forms a black burned body. This is the case in the centre of the Milky Way. A part lies in places which are far away from those in which there is burning; these are the two sides of the Milky Way. These places appear white. 4. Finally we are told that the Milky Way consists of something whose shape is inserted in the heavens and which is in some part of the earth, to which the way cannot be found and which cannot be reached².

Of these four views the second is nearest the truth.

The anonymous author of the Berlin manuscript also tells us very fully about the different views and the nature etc. of the Milky Way; here is the passage in question: "Learned men have many and varied views on the nature and substance of this belt. Some say that it is a part of the upper sphere and thicker and coarser than the rest of it. It is therefore visible, while the rest is not, as the latter is exceedingly fine. This corresponds to the opinion of the philosopher Diodorus (Diogenes)."

"According to Aristotle this consists of vapours which have collected together and ascended into the sky through the intermediary of the stars. As vapours are continually rising, they retain their shape. There is a contradiction in this if we assume that the belt is formed by rising vapours; they cannot possibly be always seen at one and the same place in the sky; nor can they be seen from all places on earth and they cannot maintain one and the same distance from the stars and the atmosphere."

"If the belt is always seen in the same way and has permanently the same form, if it is seen in all climates, if its distance from the stars and the atmosphere is always the same, this is a sure indication that the belt does not originate in vapours as these completely lack these qualities."

"Some learned men are agreed that the Milky Way, al-Madjarra, has its origin in the fact that small stars have become combined in this figure (al-shakl) and offer themselves jointly to the view.

On account of their smallness they do not look like shining stars as they are joined together and give their light together (the light of the single stars forming one whole). This is the origin of the shining and the figure which we see. This view is one which is intelligible and men adopt it."

"We say that the Milky Way is a limb of the sphere of the fixed stars. As it is a thick limb, which is thicker than the other limbs, it completely absorbs the light of the sun, corresponding to what the other limbs take up, i.e. as the stars do. This corresponds to the view of him who says that the latter are thick limbs of their sphere. Each limb takes up light in proportion to its density. But this density is the cause of light being reflected to us³."

"Many learned men attack the Aristotelian view — as was done even in ancient times — and regard the latter view (5.) as the most probable."

The anonymous writer therefore lays it down quite generally that the Milky Way cannot be in the ether; it has always one and the same form quite independently of the position from which it is seen and does not alter its position.

Abu 'l-Faraj (Bar Hebraeus) in his work ("Elevation of the spirits; on the shape of heaven and of the earth"; transl. by F. Nau, Paris 1899, p. 92 ff.) has a section on the vapour-stars⁴ (kashshat al-najm) and the Milky Way. He says: "In the heavens there are some white patches, vapour-stars. Some think these are a part of the Milky Way as like it they resemble clouds. They also think that they consist of a very large number of very small stars lying very close to one another, like the mane below the lion which is in the shape of an ivy leaf. Those who believe this also say that the whole Milky Way consists of very small stars joined together. The Milky Way is obviously neither smoke nor vapour in the air, as the Peripatetics say, since the moon and the planets experience no change in their light as they pass through the Milky Way (it must therefore lie outside the sphere of Saturn) but on the contrary rather affect the Milky Way⁵."

The following note may be added on patches of nebulae:

Among the nebulae known to the Muslims are the Magellan clouds which were observed by merchants in Makdshih. They saw there a white patch of cloud which never came down and never changed its position (al-Karāfi, *Adhwa al-Majsthar*, vol. II, p. 40).

At quite an early date Ibn al-Haitham thoroughly and fully proved that the Milky Way is not in the air, but in the heavens and at a distance which is very great in proportion to the diameter of the earth, from the absence of a parallax, e.g. from the fact that it has the same position with respect to the fixed stars at different points on the earth. The anonymous writer also points this out (E. Wiedemann, *Über die Lage der Milchstrasse nach Ibn al-Haitham*, in *Sitzber.*, xxix.,

1) According to this, the anonymous writer would believe that the fixed stars, the Milky Way etc. receive light from the sun, a view that is contradicted by the al-Haitham and others (cf. below).

2) In the tables and astronomical works only the vapour-stars (nebulae) mentioned by Ptolemy are given.

3) There is an error here! The Milky Way would have to be below the sphere of Saturn but above the atmosphere like the planets. — The alterations in the brightness of the Milky Way are phenomena caused by dusting.

1906, p. 113—115); 'Ali b. Ridwan however, challenged Ibn al-Haitham's view (Zotter, No. 232). Ibn al-Haitham replied to him and presumably others (E. Wiedemann, *Ibn al-Haitham, Ein arabischer Gelehrter*, in *Festschrift f. J. Neuberger*, Leipzig 1906, p. 173, No. 49 and 62; Ibn Abi Ujaifa, II, 104, 1 from below).

The Milky Way is mentioned in a whole series of verses, particularly by modern poets. I have published 22 of these in the *S.B.P.M.S. Zeitschrift* with the help of A. Fischer (Leipzig). Kowalski (Cracow), Heil (Erlangen) and Krenkow (Hockenheim).

(E. WIEDMANN)

MAJID AL-DAWLA, AND TALIB RUSTAM b. FAHR AL-DAWLA, a BRYID. After the death of his father Fahr al-Dawla (q. v.), Majid al-Dawla, who, according to the usual statement, was then four years of age, according to another eleven (while Ibn al-Athir, *al-Kamil*, ix, 48 says he was born in 379 [989/990] which does not agree with either of these statements) was proclaimed as successor under the regency of his mother Sayida. In 388 (998) Ka'bi b. Wadhwa' (q. v.) seized the two provinces of Djurdan and Tabarijan, to which was added by the treaty of peace Māmandirān also, and later he brought Gilin also under his rule. In 397 (1006—1007) Majid al-Dawla with the help of the vizier al-Khatib Abu 'Ali b. 'Ali b. al-Kasbi attempted to overthrow his mother but he was taken prisoner by his brother Shams al-Dawla (q. v.) and the Kandish Bahān Hamawān, whereupon Shams al-Dawla took control of the government. His rule did not last long, however; after a year Majid al-Dawla was released and again recognised as ruler, while his brother retired to his governorship of Hamadhān. In 405 (1015) the latter succeeded in seizing the town of al-Raiy; Sayida and Majid al-Dawla had to take to flight, but were soon able to return because Shams al-Dawla was prevented from following them by a mutiny in the army and had to leave the field. Sayida held the reins of government till her death (419 = 1028/1029), while Majid al-Dawla, who although extremely interested in learning, otherwise cared only for his sumptuous harem, paid no heed to affairs of state. After Sayida's death complete chaos reigned. In the beginning of the year 420 (1029) Sultan Mahmud b. Sabuktigin (q. v.) undertook a campaign into the 'Irāq. When Majid al-Dawla wrote to him and complained of

the rebellious spirit of his army, the Sultan sent a considerable body of troops against Raiy and ordered the commander to seize Majid al-Dawla. When the troops appeared the latter went to them and was at once seized along with his son Abu Dalaf. The Sultan himself then set out against Raiy, seized the town and had Majid al-Dawla sent in chains to Khirāthā.

MAJID AL-DIN. [See HIRAT AL-LAH b. MUHAMMAD.]

MAJID AL-MULK, ABU 'L-FADL AL-AD B. MUHAMMAD AL-HASAWIYKI, FINANCE MINISTER of the Saljuq Sultan Barkiyūrk. As early as 485 (1092—1093) we find Majid al-Mulk mentioned among the high officials, and in time he became more and more powerful, while Barkiyūrk's weakness and incapacity became more and more obvious. But as a Shi'i Majid al-Mulk became suspected of being the real instigator of the murders committed by the Isma'is and after the army Ruzayk (q. v.) had fallen a victim to Isma'ili fanaticism, the troops mutinied (Shawwal 492 = Aug./Sept. 1099) and demanded that Majid al-Mulk should be handed over to them. He offered to sacrifice his life and proposed that the sultan should have him executed to satisfy the soldiery. But Barkiyūrk wished to save him. After the soldiers had sworn not to slay Majid al-Mulk, but only to imprison him, he was handed over. In spite of their oath, the soldiers fell upon him and at once hewed him to pieces. — His *atsha* is derived from Barshishān, a village near Kuma; cf. Yāqūt, v. v.

(K. V. ZETTERSTERN)

MAJIDHUB (A., "attracted") denotes in the terminology of the Sūfis a person who is drawn by the Divine attraction (*al-qawḍiyya*), so that without trouble or effort on his part he attains to union with God. In other words, the *majidhub* experiences the ecstatic rapture of losing himself in God, and is thereby distinguished from the *salik* ("traveler"), who makes the journey to God, stage by stage, with conscious endeavour and purpose. The opinion favoured by *zāhid* and *derwish*, that the *majidhub* is superior to the *salik* finds expression in the saying: "One *qawḍiyya* (act of drawing) from God is equivalent to all the (devotional) work of mankind and *dhikr* (amal al-*salik*)"; but it is generally recognised that, whether *qawḍiyya* or *salik* (q. v.) predominate, both are needed in order to reach perfection. Those in whom *qawḍiyya* precedes *salik* and constitutes the predominant element in their spiritual life are called *majidhub* *salik*, while conversely those with whom *salik* comes first are known as *salik* *majidhub*. Although the terms *majidhub* and *salik* are employed by Hallaj (Massignou, *Parnet*, II, 905) and occur

frequently afterwards, their application in a narrower sense to those who copulate or acknowledge the moral and religious law is characteristic of the derwish fraternities, which, as is well-known, differ widely from each other in their theory and practice concerning this matter.

MADJID (A).

[See AL-LĪL.]

MADJIDHUR. In Arabic, Persian and Turkish literature the epithet *al-madjidh*, i.e. "the man possessed by a *ghinn*", "the madman", is pre-eminently associated with Kāis b. al-Mulawwah. (According to others, the name of his father is Mu'adh), the *madjidh* of the Banū 'Amr b. Sa'ad, the story of whose passion for Lailā, daughter of Sa'ad, a woman of the same tribe, is celebrated throughout the Muhammadan world. Kāis is said to have died about 80 A.H. (*Faṣṣāḥ*, Hāṣṣ 1283, ll. 172), but it seems doubtful whether he can be regarded as a historical person, and this view is supported by the statements of early Muslim authorities (*Aghṣāṭ*, l. 167—169; ed. Ibn Khallikān, ed. Waukenfeld, N° 103, p. 150, a, and Ibn Khallikān, *Muḥadditha*, ed. Quatremere, ll. 196, a, fr. 1001 = *Aghṣāṭ*, l. 169, a, G. foot, where *madjidh* is described as one of three persons who never existed), while Ibn al-Kalbi declared that the story of Madjidh and the poems attributed to him were fabricated by a man of the Banū 'Umayyā (*Ḥikāṭ*, l. 167, a, G. foot). Stripped of the picturesque details with which later poets have embellished it, the story is a simple one: Kāis meets Lailā amongst a party of women, falls in love at first sight and slaughters his camel to make a feast for her. His love is returned, but her father refuses to give her to him in marriage; and soon afterwards she becomes the wife of Ward b. Muhammad al-Ukālī. Kāis, estranged with despair, passes the rest of his days in solitude, wandering half-mad in the hills and valleys of Najd, making verses on the subject of his unhappy love, and only seeing Lailā at rare intervals until his death. The development of this love-tale of the Arabian desert into one of the popular themes of Persian romantic and mystical poetry was begun by Niẓāmī of Gwandj, in whose *Alisnāma* the *Lailā & Madjidh* occupies the third place. Of other poems bearing the same title, the best-known in Persian literature are those by Anar-Khānuṣ of Dihlī, Djāmī and Hāfiz; and in Turkish, by Hamid (see the abstract in Gibb, *History of Ottoman Poetry*, ll. 175—190) and Fuṣṣilī (*Ḥikāṭ*, in. 85—88; 100—104). — Sufi writers find in Madjidh a type of the soul which through tribulation, self-devotion and self-abandonment, aspires to be united with God.

Atkinson, *Lailā and Madjidh*, translated in verse from the Persian of Niẓāmī (London, 1836, 1894, 1903).

(R. A. NICHOLSON)

MADJIRĀ or **MODJIRĀ**, a term in prosody, meaning the vowel of the *raml* or the consonant which is repeated at the end of each line of a *bayt* (cf. *ḥafṣa*). (MONT. BEN CURENKA)

AL-MADJIRI, his full name was Abū 'l-Kāsim MAḤMAD b. AHMAD AL-FARĀBĪ AL-ḤĀIRI (the arithmetician). AL-MADJIRI AL-KURṬUBI (the Cordovan) AL-ANDALUSI (the Spaniard). We know little of his life. He was born in Madrid but in what year is not known. Various dates are given for his death, which must lie between 395 (1004) and 398 (1007). In Madrid he studied the science of mensuration under an authority on the subject, 'Abd al-Ḥāfir, who was also famous for his geometrical knowledge. Al-Madjiri later moved to Cordova where he lived in the reigns of Hishām II (350—360 = 961—976) and Hishām II (360—399 = 976—1009). He died before the outbreak of the fighting and confusion (*fitna*) which led to the fall of the 'Umayyads. From his place of birth and place of long residence he was given the two names al-Madjiri and al-Kurṭubi. Like so many others scholars, al-Madjiri is mentioned in laudatory terms by the biographers. He was the leader (*imām*) in mathematical knowledge, including mensuration. He surpassed his predecessors in knowledge of the doctrine of the spheres and the movements of the stars. He devoted particular attention to the observation of the heavenly bodies and made a special point of comprehending the *Almagest*. Whether al-Madjiri also dealt seriously with medicine we do not know but among his pupils were several who did. On the works on occult subjects ascribed to him, cf. below.

We are told of a journey to the east from which he brought back Greek and Arabic manuscripts which he adapted for the requirements of the west. Spanish astronomy was thus given a more independent position; for before the middle of the tenth century, as the survey given by Sanchez Perez shows, the Spanish representatives of astronomy and mathematics were of little importance either in numbers or ability. There were among them no scholars to compare with the Banū Mūsā, Thābit b. Qurra, Ibn al-Haytham, al-Baitān etc. But even after the time of al-Madjiri, Djābir b. Adal and al-Zarqālī are really the only two of distinction. Perhaps we should also mention the much used Abū 'l-Ḥasan al-Marrakushi, but his works are for the most part compilations.

In Cordova, where al-Madjiri lived for a considerable time, he founded — probably as a result of his journey — a school which produced a number of distinguished scholars, such as Ibn al-Samh (Suter, N° 194, also a physician), Ibn al-Saffar (Suter, N° 196), al-Kirmīnī (Suter, N° 203). Ibn Khaldūn (Suter, N° 227, also a physician), al-Zahrawī (mathematician and physician, (Suter, N° 190). These men spread and developed the teachings of al-Madjiri and his methods; al-Zarqālī also based his work upon them. — It is however questionable whether al-Madjiri owes his fame more to the widely circulated occult writings which are probably pseudographic or to his astronomical teaching, for his literary activity in this latter field was not great.

Of his astronomical works, his version of the book of tables (*zīj*) of Muḥammad b. Mūsā al-Khwarizmi, which is one of the earliest books of tables in Islam, is of special importance. He converted the tables which are based on the era of

Vālidjird into tables based on the Muhammadan era. He also to some extent replaced the meridian of Aru by that of Cordova, and he also gave the approximate positions of the planets for the beginning of the Hāġra. On the other hand, he did not notice a series of errors in the older book. Mention may be made of some other astronomical works of his: a work in which he gives a short method of equating the stars (*Ta'āl al-Kawākib*) in the tables of al-Battānī; a work on the astrolabe which survives in Latin; a translation of the planisphere of Ptolemy; the latter was translated into Latin in 1143 by Hermann Secundus of Tolosa. His interest in astronomy led al-Madjrī to deal with the principle of the transversal, in which he developed the views of Thābit b. Kurra. His *Fi Tamām 'Ilm al-'Adad* (On the Perfection of the Doctrine of Numbers) or *al-Mu'āmalāt* (On Business-calculations) is mathematical. Whether the *Kitāb al-Aḥḡār* (on stones) and the work on the procreation of animals are genuine, need not be discussed here.

It has also been suggested that al-Madjrī wrote the *Ishmā' al-Safā*; but his supposed occupation with a work of this kind may be traced to the fact that he either wrote a similar work or a supplement to it or that he edited it and then he or his pupil Kirmānī introduced it into Spain. Whether he inserted separate sections like those on minerals, plants and animals seems to be doubtful.

Two other works belong together in subject matter, *Rutbat al-Hakīm fi 'l-Kīmīyā* and *Ghāyat al-Hakīm fi 'l-Sifr*, "the Goal of the Learned in Magic", which are ascribed in the manuscripts to al-Madjrī, although he never mentions himself in them. E. J. Holmyard after a thorough study of the question does not believe they are by al-Madjrī, the main reason being that al-Madjrī died before the *ġina*, while these works were not written till after this period. The earlier biographers do not mention them among the works of al-Madjrī; and it may well be doubted whether works of this kind were in keeping with his mental attitude. Both the works deal with occult subjects. The *Ghāya* treats of talismans, amulets, etc. Hādī Khaltā, iv, 166, in dealing with the science of talismans (*Ilm al-ḡalamāt*), says that in it al-Madjrī expounded very fully but not always intelligently the principles of the science. The *Rutba* is of an alchemical nature; Hādī Khaltā, v, 230 sq. also quotes al-Madjrī among the alchemists. Holmyard, *op. cit.*, gives the gist of the book.

Bibliography: J. Sanchez Perez, *Biografías de matemáticos árabes* etc., Madrid 1921, p. 86, N° 84 (containing very full references). L. Perez quotes among other works: *Bull. de Bibliographies* etc., di B. Boncompagni, v, 1872, p. 427; this is a work which, like all by Steinschneider, contains a very full bibliography. It refers not however to Maslama but to Maḡlā Allāh. C. Brockelmann, *G. A. L.*, i, 243, N° 4; H. Suter, *Die Mathematiker u. Astronomen etc., Abhandlungen zur Geschichte der mathem. MADJURI. [See VANDURI WA-MADJURI.]

MADJUS (A.), the Zoroastrians. The Greek word μάγος (which itself renders an Iranian word; cf. old-Persian *magna*, new-Persian *magh*) passed into Arabic through an Aramaic medium. According to the Arabic lexicographers, *Maḡḡ* is a collective like *Yāḡḡ*; in the singular *Maḡḡ* is to be used; the religion of the Maḡḡ is called *al-Maḡḡiyya*. The lexicographers cite from the root *ḡ-m-g* a verb form (*maḡḡiḡa*) and a vii (*maḡḡiḡa*). In a poem, cited in the *Lisān* and the *Taḡ* al-'Arūs, the phrase *war maḡḡiḡa* is found; if we only could be sure, that this poem is really (as is asserted in the *Lisān*) a composition of Imru' l-Qais and al-Tawān al-Yazḡūrī conjointly, the word would already occur in the oldest Arabic literature extant.

In the lexica, the word *Maḡḡ* is derived from a proper name, *Maḡḡ Kūsh*, which name, according to them, is the Persian equivalent for Arabic *yaghār al-ghannān* ("with little ears"). This man, named Maḡḡ Kūsh, they say, is not the same as Zoroaster, but lived before him; and was the first who proclaimed the religion of the Magians. This is one instance of the many etymological and aetiological enormities of Arabic antiquarians (cf. *Lisān*, viii, 98 sq.; *Taḡ* al-'Arūs, iv, 245; Lane, *Lexicon*, s. v.). Incidentally, it may be noted that in Arabic literature the word *Maḡḡ* is also used to denote the peoples of Northern Europe, viz. the Scandinavians (cf. Dozy, *Recherches*, ii, 250 etc., Appendix N° xxvii, p. lxxvi.; *Revue neomanichéenne fontes arabice* ... colligit et ed. A. Seippel, i, Chirmania 1896).

In the *Qur'ān* the word *Maḡḡ* occurs once (xvii, 17); with this verse, ii, 59 and v, 73 are to be compared. In these three places the *Ahl al-Kitāb* [q. v.] are mentioned, but it is only in xvii, 17 that the name Maḡḡ is also found. In this same verse, however, the *Mushrik*'s also are mentioned, who, of course, can by no means be included in the term *Ahl al-Kitāb*. Now, in Muslim law, the Zoroastrians are, it will be seen, treated as if they belonged to the *Ahl al-Kitāb*, but this conception cannot be based on the *Qur'ān* verse xvii, 17. Also, the commentators (al-Buhārī, ed. Fleischer, p. 620; al-Zamakhsharī, *Kaṣṣab*, p. 901; al-Rasī, *Mufaṣṣṣ al-ḡibān*, iv, 554; al-Nasābūrī in marg. al-Tabarī, *Tafsīr*, ed. Cairo, xvii, 74 etc.) give nothing that can point to the fact of the Maḡḡ being, theoretically, *Ahl al-Kitāb*. The words of al-Rasī, who states that the Maḡḡ are those who do not follow a real prophet, but only a *muḡḡ*, might suggest, that he takes Maḡḡ to be a sect intermediate between the real *Ahl al-Kitāb* and the *mushrik*'s, the heathen. Al-Nasābūrī also says that the prophet of the

Madjūs — who, moreover, are dualists — is no real prophet but a *mutamadil*; the *musūrik*'s, on the other hand, have no prophet at all, nor a sacred scripture. In Arabic historical literature the Zoroastrian Persians are themselves occasionally called *musūrik*, e.g. al-Balādhurī, ed. de Goeje, p. 302, 303, 380, 387 (*musūrik*); p. 407 (*huffār*). Finally it must be added that the Kūra-verse xxii 17 seems to be a later addition to this Sūra (cf. Nöldeke-Schwally, *Gesch. des Qorān*, i. 214: the verse must be Madjūic).

In the *Hadīth*, which represents the theory of Muslim law, there is not very much to be found on the Madjūs in particular (cf. A. J. Wensinck, *Handbook of early Muhammadan Tradition*, s. v. *Madjūs*). The substance of the *Hadīth* concerning the Magians is, that they are to be treated like the *Ahl al-Kita*, and, in consequence, are bound to pay the *ḡizya*. Practically, the rising Muslim state power could not follow any other way. The subjection of Irān would have become impossible, had the Arabs considered the Zoroastrians as mere heathens, who were to be given the choice either of Islam or the sword. And, even before that time, dealing with the Zoroastrians of Bahrain in this rigorous way, would have been a grave political fault. This tradition, though it also hands down an account of how the prophet gave the Zoroastrians of Bahrain the choice of either Islam or death, reports, that 'Abd al-Rahmān b. 'Awf stated that the prophet had accepted the *ḡizya* from these Madjūs. This tradition was regarded as authoritative afterwards, and the other, stating that the prophet refused to consider Madjūs otherwise than as *musūrik*'s, was abandoned (cf. Abū Dawūd, xix. 29 = vol. ii. 30). 'Abd al-Rahmān b. 'Awf is said to have delivered his statement on an occasion when the Khalifa 'Umar felt doubtful whether he should accept the *ḡizya* from the Iranians, or not (cf. al-Balādhurī, ed. de Goeje, p. 267: the prophet, according to 'Abd al-Rahmān, had said: *summa zinim summat ahl al-kita*). There is a tradition relating that 'Umar, a year before his death, wrote to Iḡzā' b. Ma'ūya, regarding the Madjūs, instructing him, to put to death every sorcerer (*sāḥir*), to separate each Madjūs from his wife and children, and to forbid the practice of *samsama* (the muttering of Zoroastrian prayers, new-Persian *magi* or *magi*). Iḡzā' began to execute these rigid orders, and 'Umar refused to accept the *ḡizya* from the Madjūs, until 'Abd al-Rahmān b. 'Awf asserted that the prophet had accepted it from the Madjūs of Bahrain (Abū Dawūd, loc. cit.; Ibn Hanbal, *Musnad*, i. 190, 194; al-Bukhārī, *Sahīḥ*, Cairo 1304, ii. 144 *ayy*). Al-Balādhurī, moreover (ii. 145) cites the following answer given to a Persian ambassador: 'Our prophet has commanded us to fight you, until you serve God, and Him alone, or until you pay the *ḡizya*'. So here likewise the Madjūs are put on the same level as the *Ahl al-Kita*. The determination of the position of the Zoroastrians in respect of the Muslim state, is the main point of the *Hadīth* concerning them. Moreover, there is a tradition in al-Ḥirīdī, *Fawa'id*, lib. 42, regulating the hereditary portion of Zoroastrians (not altogether clear, however). Other, not very important traditional matter respecting the Madjūs is cited: *Liḡn*, viii. 99; *Lam*, *Liḡn*, s. v. *ḡizya*; the article *ḡANAKIVA*.

The traditions of the Muslim about Zoroaster

are in accordance with their idea of the Zoroastrians being a kind of inferior *Ahl al-Kita*. Al-Ṭabarī relates, that Zardūšt b. Isfīmān (Isfīmān is an adaptation of the Avestic *Spitamā*, the name of the ancestor of the family to which Zoroaster belonged) laid claim to the title of a prophet, after three years of the reign of king Bishtāsh (the Avestic *Wishtāspa*) had elapsed (i. 675 *ayy*); the same historian reports, on the authority of Highām b. Maḥammad al-Kalbī, that Zardūšt, who by the Madjūs is said to be their prophet, was, according to the learned men of the *Ahl al-Kita* an inhabitant of Palestine, and a servant of one of the disciples of the prophet Jeremiah. He committed a fraud against his master, who cursed him, so that he became leprous. Zardūšt then went to Adharbāidjān and began to promulgate the religion called Madjūsiya; afterwards he proceeded to Balḥ, where Bishtāsh resided. This king became a convert to the religion of Zardūšt, and compelled his subjects to embrace that religion also (i. 648; cf. al-Ṭabarī, *Histoire des rois des Perses*, ed. Zatauberg, p. 256).

Another tradition, likewise preserved in al-Ṭabarī's work, brings Zardūšt together with a Jewish prophet *ḡ* (vocalisation uncertain), who was sent to Bishtāsh, and, at his court, met with Zardūšt, and the sage Dīnānāsh (Avestic *Dīnānāsh*, the minister of Wishtāspa and son-in-law of Zoroaster). Zardūšt is said to have noted down in Persian the teachings which the Jew delivered in Hebrew. Bishtāsh, and his father Laḥrāsh (Avestic *Aurwān*) had been Sildans before *ḡ* and Zardūšt proclaimed their religion (Ṭabarī, i. 684, 683). These traditions aim at bringing the Zoroastrian faith into a certain connection with the Jewish religion: in the one, Zoroaster is an apostate Jew, in the other, he acts in agreement with a Hebrew prophet. In the *Hadīth* there is a saying of Ibn 'Abbās: 'when the prophet of the Persians had died, Iblis wrote for them the form of the Madjūs' (*Inna ahl Fāris lamna māta nahyuhum katāba lakum liliz al-Madjūsiya*; Abū Dawūd, *Kharāḡ*, lib. 29 = ii. 30). This isolated tradition might perhaps in some way be connected with the reports about *ḡ*.

Some Arabic authors, of course, had a better knowledge of Zoroaster and his religion, cf. for instance al-Balādhurī, ed. de Goeje, p. 331, where it is stated, that according to the Madjūs, Zardūšt came from Urmīya, and, especially, al-Shahrastānī, *Kitaḥ al-Milal* (ed. Couston, p. 182 etc.), whose scientific treatise, however, contributes nothing to the knowledge of the ideas about Zoroastrianism prevalent among the *Faḡh*'s. It is enough to say, that al-Shahrastānī whose information goes back to Iranian sources, gives a succinct, but, in general, correct account of Zoroaster and the Madjūs, whom he subdivides into three principal sects: the *Kapēmarāḡiyya*, the *Zarwānīyya* and the *Zardūštīyya*, the latter, according to him, properly the followers of Zoroaster. The Madjūs are, he rightly remarks, not *Ahl al-Kita*, but, like the dualists, only possessing something like an inspired scripture (*ḡanāḡat* *kitaḡ*, p. 179); before the rise of the Madjūsiya, the Persians professed the religion of Ibrāhīm (p. 180).

Respecting the treatment of the Zoroastrians during the Islamic conquest, the following data may be given:

1) al-Yaman. Muhammad had sent envoys to that country, who, among other things, had to collect the *ḡiyya* from those who preferred to remain Christians, Jews or *Madjūs* (al-Balādhuri, p. 69). The Zoroastrians of al-Yaman (the so-called *Abad*) were said to be descendants from the Persians of the army of Wahrit, who, by order of Khurraw I., carried back Saif b. Dhī Yasan to that country. Muhammad, when sending an army to al-Yaman against the pseudo-prophet al-Aṣwad, recommended its general, to try and win over to his side these Zoroastrians, who were treated tyrannically by al-Aṣwad. One of these *Madjūs*, Fairūs b. al-Dallamī, had already embraced Islam; the most distinguished man among the *Abad*, Dāghawāh (Dāghīya), also became Muslim, and, at his advice, the remaining *Abad* followed. They helped energetically to put down al-Aṣwad. So we see, that in al-Yaman the *Madjūs* were treated like *Ahl al-Kutub*, after which followed their spontaneous conversion to Islam.

2) 'Uman. There was a tradition that the prophet commanded Abū Zaid to take the *ḡiyya* from the Muslims of 'Uman, and the *ḡiyya* from the *Madjūs* of that country (al-Balādhuri, p. 77).

3) Bahra'in. In the year 5 (629/630) Muhammad sent out al-'Alī b. 'Abdallāh al-Hadramī to Bahra'in; most of the Arabs of that country embraced Islam; and so did Saḥabūt, the Persian *marzban* of Hadjar (the capital), and some other Zoroastrians. The greatest part of the *Madjūs* of the country, however, remained faithful to their religion, and had to pay the *ḡiyya*, like the Jews and the Christians, who, in Bahra'in, did not embrace Islam. Some Arabs criticized Muhammad, because he pretended to accept the *ḡiyya* only from the *Ahl al-Kutub*, and now accepted it from the *Madjūs* of Hadjar. On that occasion Sūra v. 104 was revealed (al-Balādhuri, p. 78 etc.). Here it can be seen, that in the oldest Islam it was by no means regarded as a matter of fact that the *Madjūs* were to be reckoned under the *Ahl al-Kutub*. During the Khilāfate of Abū Bakr an insurrection took place in Bahra'in, the *Madjūs* refusing to pay the *ḡiyya*. This rebellion was not put down before the khilāfate of 'Umar (ibid., p. 85).

4) Irān. Before entering upon the particulars of the state of the *Madjūs* in Irān, it may be remarked that in Armenia the *Madjūs* were treated like the Jews and the Christians. They were obliged to pay the *ḡiyya*, but enjoyed security for their persons and their possessions. In the capitulation of the town of Dabul (Dwin) to Ḥabīb b. Maslama, the Christians, Jews and *Madjūs* are comprised alike under these conditions. The *ḥanā'iz* and *ḡiyya* are also mentioned as remaining in the possession of their old masters; it may be assumed, that here under these words, which properly design Jewish and Christian sanctuaries, the fire-temples of the Zoroastrians are understood also (al-Balādhuri, p. 200).

In Irān, the regular treatment of the places which surrender themselves is the imposition of the *ḡiyya* and the *ḡharāḡ* (which, at this time, in most cases were identical terms for "tribute" in general, cf. *ḡiyya* and *ḡharāḡ*, but cf. al-Balādhuri, p. 314, where *ḡiyya* = capitulation and *ḡharāḡ* = ground-tax). Thus, the inhabitants are reduced to the state of *ḡhimmi*, as if they really were *Ahl al-Kutub*. This is the case e.g. on the

subjection of Mahrūd, Bāndandjūn (al-Balādhuri, p. 205), Hulwān, Ḳarmām (ibid., p. 301), Nihāwand (ibid., p. 306), Dnawar, Sirwān, Sarmān (ibid., p. 307), Hamadān (ibid., p. 309), Isfahān (ibid., p. 312 ff.), Ahwāz (ibid., p. 377: here the prisoners of war were released by order of 'Umar, to cultivate the land, under the obligation to pay *ḡharāḡ*), there being not enough Arabs for the purpose), Qandāl Sahr (ibid., p. 382), Qurrā, Arrādjan, Shūfār, Darābǧird (ibid., p. 388: at Darābǧird, the chief authority in the town was a Zoroastrian priest, a *ḡirbadān*), Tabas and Kuris (ibid., p. 403: they concluded a treaty with 'Umar, which later was confirmed by 'Uthmān b. 'Affān), Naisābūr, Nāsā (ibid., p. 404), Tās (ibid., p. 405), Hurāt, Bādǧhis and Bushandj (ibid., p. 405), Marw (ibid., p. 405 ff.). The term *ḡhimmi* *al-*... (*ḡhimmi*), often occurring in our source, must be understood as meaning a tribute; this appears from the last mentioned passage, p. 405 ff.

Not always, however, did the subjugation of the Iranian places come to pass without bloodshed. In Ray a massacre ensued, but there seem to have been no religious motives for it (al-Balādhuri, p. 317). If a town had offered a strong resistance, it might happen, that only a limited number of persons were included in the *amān*. This was the case at Sarakhs, where, according to the treaty, only 100 men were spared; the *marzban* had not included himself in the number, and was, accordingly, killed, while the women were made captives by the conquerors (ibid., p. 405). At Sās a similar event occurred; here the number of men, comprised in the *amān*, was 80, or, as others said, 100 (ibid., p. 378 ff.). At the conquest of Manadhir all the men were killed, and the rest of the population was taken captive (ibid., p. 378). But another stronghold, though resisting the Muslims vigorously, obtained a capitulation, by which its inhabitants became *ḡhimmi* (ibid., p. 317 ff.). A great slaughter was made at the conquest of Isfakhr, where 40,000 Iranians lost their lives; most of the nobles belonging to the *Ahl al-bayt* and the *ḡiyya* perished there, as it seems, not in the defence of the town, but after its capture (ibid., p. 389 ff.).

When the Zoroastrians were received as *ḡhimmi*, their religious practices must, of course, be respected. Thus al-Farrakhān paid the Muslims, on behalf of the inhabitants of Ray and Kumis, 500,000 *ḡhimmi*, while the Muslims promised, among other things, not to destroy any fire-temple (ibid., p. 318). When Ḳharabādjan was subdued and made tributary, the treaty, which its *marzban* concluded with the Arab commander, contained also the stipulation, that no fire-temple should be destroyed, and that the people of Shīr were not to be hindered in their dancing-festivals and other practices (ibid., p. 326). It goes without saying, that in the countries, inhabited by Zoroastrians, soon after the appearance of the Arabs, mosques also were built, destined in the first place for the religious worship of the conquerors; the *maḡḡid ḡhimmi*, which Sa'd b. Abi Waḡḡas constructed at al-Mada'in, was the earliest building of that kind in al-Sawād (ibid., p. 289). Under the Khilāfate of 'Uthmān, a *maḡḡid* was built at Ray, in which town later on, under the khilāfate of al-Manṣūr, a *maḡḡid ḡhimmi* was erected by order of the future khālifā al-Mahdī, in 158 (775) (ibid., p. 309). At Tawwāḡ, its conqueror 'Uthmān b. Abi

"Asi caused mosques to be erected for the Arab population, which he transported to that country (*ibid.*, p. 386); in Arradjin a *masjid* was built by the governor al-Hakam al-Hudjandini (*ibid.*, p. 392).

Already at the period of the conquest, there occur numerous conversions from Zoroastrianism to Islam. As T. W. Arnold (*The Preaching of Islam*, p. 177 etc.) observes, there were several reasons, why it was not very difficult for the Persians to exchange their religion for Muhammadanism. The *dhimya*, moreover, which the Zoroastrians were bound to pay, could no longer be required from those who had become Muslim. Soon after the battle of Qadisiyah some *dhimya*'s embraced Islam, and, consequently, became freed from paying the *dhimya* (al-Baladhuri, p. 265). The inhabitants of Ispahan, on the other side, being invited by al-Ash'ari, to accept Islam, preferred to give the *dhimya*, but some noblemen from the same town became Muslims, and had, therefore, only to pay the *kharaaj* (for their lands: *wa-unfa min al-dhima fa-atlamu*; *ibid.*, p. 312 sq.). The inhabitants of Karwin likewise became Muslim out of aversion to the *dhimya* (*ibid.*, p. 321), and so did those of al-Kahizian (*ibid.*, p. 323).

A Zoroastrian, who had become Muslim and then apostatized, forfeited, of course, his life; this happened e.g. with the *dhimya* of Naistab, who was killed by al-Mughira b. Shu'ba (*ibid.*, p. 345). Other instances of the progress of Islam, we find in the case of Adharbaidjan. When al-Ash'ari for the first time governed this country, he ordered the Arab settlers whom he himself had brought into this land, to invite the population to Islam. These efforts were successful; as al-Ash'ari, under the Khilafate of 'Ali, a second time became governor of Adharbaidjan, he found, that most of the population had become Muslim (*ibid.*, p. 328 sq.).

The conversion to Islam of some individuals seems to have been brought about chiefly by the admiration of the rapid successes of the Muslims (instances to be found in al-Baladhuri, p. 374, 381); a case of forced conversion is that of al-Harmastan [q. v.]. Converts to Islam, whose original name had a too pronounced Zoroastrian meaning, had to exchange that name for an Arab one: the Khulifa al-Ma'mun, e.g. appointed a certain Mayasda (comp. Fakhri, *op. cit.*, the Zoroastrian offering of food; the long *z* of the Arabic transliteration causes, however, a difficulty for this explanation) governor of Tabaristan, Ray and Damghan: this Mayasda had to change his name into Muhammad (*ibid.*, p. 339). Also the father of Hasan al-Basri [q. v.], who was one of the prisoners, taken after the conquest of Mada'in, altered his name, Fathr, to Yasar (*ibid.*, p. 344), although this Persian name could scarcely offend a Muslim ear: but, after he became a *mawla*, a change of name became necessary.

After the conquest, Zoroastrianism, for the time being, continued to exist in many parts of Iran, not only in countries which came relatively late under Muslim sway (e.g. Tabaristan, cf. ARVANDT II), but also in those regions which early had become provinces of the Muslim empire. In almost all the Iranian provinces, according to al-Mas'udi, fire-temples were to be found: "the *Madjūs*", he says (ed. Barbier de Meynard, iv. 86) "venerate many

fire-temples in Irak, Fars, Kirman, Sijistan, Khuzistan, Tabaristan, al-Djibāl, Adharbaidjan, Arran" (he adds also: "in Hind, Sind and Sin"). This general statement of al-Mas'udi is fully supported by the mediæval geographers, who make mention of fire-temples in most of the Iranian towns. The toleration, then, from the part of the Muslims, must have been greater in mediæval times than in modern ones. That, however, not all Zoroastrians felt happy under a non-Zoroastrian government, appears from the fact, that a number of *Madjūs*, the ancestors of the Parsis of to-day, emigrated to India. Their landing on the coast of Gujarat is said to have taken place in the year 716 of the Christian era.

Conversion to Islam may have been, in many cases, "peaceful and to some extent, at least, gradual" (Arnold, *loc. cit.*, p. 181). On the other hand, it is evident, that for a Zoroastrian, desirous to attain to some prominent position, conversion to Islam was indispensable. Among the well-known converts from Zoroastrianism may be cited Ibn al-Makaffa [q. v.], Saman Khudat, the founder of the dynasty of the Samanids [q. v.], the poet Dabaki [q. v.], etc.

Occasionally, the Muslim magistrates, it seems, assisted the Zoroastrian clergy against heretics: al-Shahrastani (*K. al-Milal wa'l-Nihal*, ed. Caumont, p. 187) relates, how Abu Muslim of Naishapur, on an accusation from the part of the *mawla*'s of the Zoroastrians, caused a sectarian to be killed. It seems, however, that this man, who had been a Zoroastrian, and now promulgated a new creed, held tenets calculated to cause disturbance.

A history of the relations between the Muslim state and the Persian Zoroastrians (for neither the Indian Zoroastrians, the Parsis, nor the internal history of the Zoroastrian community concern us here) can only be written, when the mass of Persian historical literature of the Middle Ages and modern times will be completely accessible. The position of the Zoroastrians has become worse in course of time. Their number seems to have greatly diminished by the disturbances which ensued after the death of Nader Shah (1160 = 1747), when the Afghans destroyed the Zoroastrian quarter at Kirman, and by the war between Agha Muhammad Khan Qajar and Lutf 'Ali Khan (see also KIRMAN). In modern times the number of Zoroastrians in Persia is estimated by v. Houtum-Schindler (1879) at 8,499 at all; by Browne (1887/1888) at 7,000—8,000 for Kirman, and Yazd and environs alone (but elsewhere (*A year among the Persians*, p. 370) he gives for Yazd and its environs alone 7,000—10,000) and for Eshkumabad 20—25. The *Encycl. Britannica* (1911) has the number 9,000 for the whole of Persia.

In 1854, there were in Yazd and its environs 6,658 Zoroastrians, of whom ± 25 were merchants, and the rest small husbandmen and labourers (Karaka, *History of the Persians*, i. 55). The same author gives for Kirman (in 1884, the date of the book?) no more than 450; for [Ilmān] ± 50 merchants, and a small number of humble position, who were employed as gardeners in the palace of the Shah. At Shiraz, some Zoroastrian families were found, who exercised the trade of shop-keepers. Further more, there are Zoroastrians at Kashan and Bushahr (v. Houtum-Schindler). The Gebers of Baku are Indian Parsis (cf. *ibid.*).

According to Browne, there are in Persia 5

dahmas (tower-shaped buildings, where the Zoroastrians deposit the bodies of the deceased, to be devoured by birds of prey); one South of Tihra, two at Kirmān, and two at Yazd. The number of fire-temple is given by v. Houtum-Schindler as 4 for Yazd, 18 for its environs, and 1 for Kirmān. Karaka (I. 60) knew (1884) in Yazd and its environs as many as 34 greater or lesser fire-temple. Van Houtum-Schindler says, that the social position of the Zoroastrians in those places, where there are only few of them (Tihra, Kāchān, Shiraz, Būshahr), was a tolerably good one, because they were respected as being honest traders. But at Kirmān their condition was less favourable, and at Yazd still worse. In the first half of the 19th century, the levying of the *ḡziya* was still a source of misery for all Persian Gebers, because they were helplessly exposed to the extortions of the government functionaries. However, even at the time van Houtum-Schindler wrote (1879), the Indian Pārsi, in virtue of a covenant with the Persian government, paid the *ḡziya* (valued at ± 920 *ḡziyān*) for their co-religionists, so that the extortions of the tax in collecting that tax came to an end. In 1882 the *ḡziya* of the Zoroastrians was abolished (Karaka, I. 74). For this, and other improvements, as also the foundation of schools, the Persian Zoroastrians are indebted to the "Persian Zoroastrian Amelioration Fund", a Parsi institution.

But, especially at Yazd, the situation of the Gebers, during the second half of the 19th century, was far from good. Browne relates, that at Yazd they were treated with more contempt than the Jews or the Christians; they were not permitted to ride on horse-back; fire-temple which had decayed, were not to be restored, etc. The then governor, 'Imād al-Dawla, had, it is true, put an end to some of the more serious iniquities, e.g. the putting into practice of the quaint maxim, that a Zoroastrian, who had become Muslim, acquired by that conversion a right to the property of his non-converted kinsmen. Although at Kirmān the treatment of the Gebers was better than at Yazd, Browne had heard of wrongs done to them, e.g. forced conversions to Islam of children and young girls.

The bibliography regarding the Persian Zoroastrians (and also the so-called Gabri, cf. especially K. Hadrav's *Introduction*, to O. Mann, *Die Mundarten von Kāmanar*, p. livii. 197) has been given in the article *KIRMAN*. (V. F. BECHNER)

AL-MADJUS. The historians of the Maghrib and of Muslim Spain give the generic name of *Madjus* "pagans, fire-worshippers" to the Scandinavian pirates known in England as Northmen (Norsemen) and also to the Normans of France who on several occasions in the middle ages attempted landings on the coasts and expeditions against the frontiers of the Muslim west.

The first invasion of Spain by Northmen was in 230 (844). In the month of Dhū'l-Hiddja 229 (Aug./Sept. 844), a fleet of 54 large vessels and as many small barks anchored before Lisbon [q. v.] and the forces they carried landed at the mouth of the Tagus. The Caliph 'Abd al-Rahmān II. warned by the governor of Lisbon, Wāḥib Allāh b. Ḥazm, gave instructions to the governors of his coast-provinces to prevent any surprise attacks. The Norman forces seized Cadix from Lisbon, then the province of Sidona (Shadhūna) and finally Seville [q. v.] which they took by storm

on Oct. 4, 844. It was not till November that they were forced to seek the shelter of their vessels by the Muslim armies sent against them. Other bands at the same time ravaged with fire and sword the whole coast from Lisbon to Tráfalgar and one of them reached a point in Africa where the little town Asila (Arrila [q. v.]) was founded soon afterwards, but took to flight on the approach of the Berbers of the region.

After this invasion, the leader of the Norse hordes seems to have sent an ambassador to the Caliph 'Abd al-Rahmān II. to propose a peace. The Umayyad sovereign agreed to his request and sent to discuss the terms of the treaty a diplomat of his entourage, Yaḥyā b. al-Hakam al-Bakri al-Ḥayyānī, known as al-Ghazālī. The latter reached Seville, where he entered a ship which after various adventures took him to the Norse leader. Al-Ghazālī returned to his master after an absence of 20 months. The account of his embassy has been preserved for us by Ibn Dihya, who got it from the vizier Tamīm b. 'Alkama, a friend of al-Ghazālī.

Fifteen years later, in 244 (858), Spain and the Maghrib again suffered a Norse invasion. We have accounts of it by Ibn al-Kūṭaybi, al-Bakri and Ibn 'Idhārī. It lasted several years, at least till 247 (861). The Northmen began by seizing the town of Nukhr in Morocco. They then appeared at the mouth of the Guadalquivir but without success; they then seized Algeciras where they burned the great mosque. They appear to have then had an encounter at sea with the fleet of the Caliph Muḥammad b. 'Abd al-Rahmān.

We have fuller details of the invasions which followed. In 355 (966), the Danes, who had come to the assistance of the first Duke of Normandy, made an expedition against Muslim Spain, on the interested advice of Richard I. This lasted three years. The invaders, always called *Madjus* by the Arab historians, appeared first at Kaṣr Abi Dānis (Alcazar de Sal) and landed in the country round Lisbon which they laid waste. The Caliph al-Hakam sent against them a fleet from Seville which met them in the estuary of the Tagus. At the same time a battle was fought on land near Lisbon in which the Muslims were defeated. The Danes then extended their efforts to Galicia and in 970 seized St. Iago da Compostella. In the next year, they again attacked Muslim Spain but they were much weakened by the losses they had suffered in the north of the Peninsula and they do not seem to have dared to land anywhere.

It is also to the *Madjus* (the name being accompanied by the more precise one of *الأردمانيون* = *Ardamani*) that the Arabs attribute the celebrated taking in the following century of the town of Barbastro (Barbūṭṭar) to the N. W. of Saragossa, on the borders of Aragón. The historian Ibn al-Hayyān wrote a detailed account of it, which is preserved by Ibn 'Idhārī. A Norman expedition, in which French knights shared, which was evidently led by Guillaume de Montreuil, succeeded in capturing Barbastro in 436 (1064). This success and the barbaric treatment inflicted on the population made a deep impression on Muslim Spain. In the next year the king of Saragossa, Almad b. Sulaimān Ibn Hūd al-Muḥtadīr, with an army reinforced by a contingent of cavalry sent by the Seville ruler, al-Muḥtadīr Ibn 'Abd al-Rahmān, recaptured Barbastro, where a weak garrison left

by the Normans on their return to France could offer only a brief resistance and was almost entirely wiped out.

Bibliography: The various invasions of Spain by the *Maġjūs* have been subject of a learned monograph by the Dutch Orientalist E. Dozy, *Les Normands en Espagne*, in his *Recherches sur l'histoire et la littérature de l'Espagne pendant le Moyen-âge*, 3rd edition Paris-Leyden 1881, vol. II, p. 250—371. At the beginning references are given to the earlier works by Werlauff, Muoyer, Kruse and Kunik. To the Arabic sources mentioned by Dozy may be added vol. III of the *Kitāb al-Diyār al-maġribī* of Ibn 'Idhārī, ed. E. Lévi-Provençal, Paris 1927, p. 176 sqq. Cf. also his *Histoire des Musulmans d'Espagne*, Leyden 1861, vol. IV, p. 125—126 and Kristoffer, *La première invasion des Normands dans l'Espagne musulmane en 844*, Lisbon 1893. (E. LÉVI-PROVENÇAL)

MADMUN is 1. in the legal institution of the *jamān* [q. v.] "surety", a term which occurs in the following connections: *madmun* 'anhu "debtor" *madmun* lahu or 'alāhi "creditor", *madmun* (hā) "pawn". For the parties to the agreement and the article in question in a bond, the rules hold which apply to all other contracts.

Bibliography: For details cf. the pertinent chapters in the Fiqh books and Sachau, *Muhammed. Recht*, p. 385 sqq.; Khallī, *Muhtasab*, transl. Santillana, II. 249 sqq.; Toruauw, *Moilem. Recht*, p. 139 sqq.; van den Berg, *Principes du droit musulman*, transl. France de Terzani, Algiers 1896, p. 101 sq.

2. In the chapters of the Fiqh books which deal with the law of obligations, *madmūn* is used for the thing for which one is liable or responsible, i. e. is bound to replace. In this way *jamān* comes to mean in the wider sense, "liability, obligation to restore" in contracts. This liability consists either in the producing of something identical (*mithl*) i. e. of a thing of the same quality and quantity (*ṣifāt wa-kawārim*), e. g. in edible things (*mithl*) which are measured by quality, weight, or number (*ṣifāt wa-maṭl wa-waṭ' dūd*) or in the value of the thing (*hima*) e. g. in non-edible things (*ṣifāt wa-kawārim*) which have a special individuality, and are therefore 'ain = species.

MADRAS Presidency, the southernmost province in British India, occupies the whole of the southern portion of the Peninsula with an area of 142,260 sq. m.; total population (1921): 42,318,935, of whom 2,810,488 (nearly 7%) are Muhammadans. The majority of these are Sunnis, 2,684,943 (95.60 per cent); Sh'īs: 54,114. The only Native State with a Muhammadan ruler is Banganapalle (255 sq. m.); population 36,692, of whom only 19% are Muhammadans. The language spoken by the majority of the Muhammadans of the province is Malayālam (1,108,365 i. e. 38% per 1,000; including almost all the Mappillas [q. v.]); Hindustānī, 335 per 1,000; Tamil, 209 per 1,000.

History. Southern India began to suffer early in the sixth century from plundering raids carried out by the Muhammadans established in the north, until the rise of the Hindu kingdom of Vijayanagar in 1336 erected an effectual barrier against

the southward expansion of Muhammadan power for more than two centuries. When in 1564 the four Sultans of the Muslim kingdoms of the Deccan, — Bidjāpur, Bidar, Ahmadnagar and Golkonda, — joined forces against this powerful Hindu state, in a single decisive battle (Tālikota, January 1565) they effected the ruin of Vijayanagar and utterly destroyed the capital, and its territories were for the most part incorporated in the kingdoms of Bidjāpur and Golkonda. In 1686 and 1687 Awrangzeb [q. v.] conquered these two kingdoms and made them part of the Mughal empire. After Āṣaf Dīsh, the first Nigām of Haidarābād, had made himself independent, in 1724, the Nawāb of the Carnatic [q. v.], also styled the Nawāb of Arcot (Arkāṭ) from the name of his capital, became his chief subordinate in the South of India. When in the middle of the eighteenth century the English and the French were in conflict with one another in Southern India, each espoused the cause of a different claimant for the office of Nawāb of the Carnatic. The support of British troops under the command of Robert Clive assured the success of Muhammad 'Alī (ob. 1795), but papers seized at Srīrangapatam after his capture in 1799 having proved that both he and his son and successor, though nominally allies of the British, had been in secret correspondence with Tipu Sultān [q. v.], Lord Wellesley, then Governor-general of India, declared them to be public enemies of the British Government, and in 1801 concluded a treaty with a grandson of Muhammad 'Alī, named A'ṣam al-Dawla, according to which he resigned the government of the Carnatic into the hands of the East India Company, but retained the titular dignity and received a considerable pension. The present representative of the family bears the title of Prince of Arcot and has the position of the premier native nobleman of Madras. The greater part of the existing Presidency of Madras consists of the territories annexed by Lord Wellesley.

MADRAS CITY, on the shore of the Bay of Bengal, in 3° 4' N. and 80° 15' E., is the capital of the presidency of the same name; population (1921): 526,911, of whom 113 in every 1,000 are Muhammadans.

MADRASA. [See MADJIS.]

MADRID. The present capital of Spain has kept the name it had in the Muslim period: *Maġrīṣ* (ethnic *al-Maġrīṣī*). Arab geographers describe it as a little town grouped round a strong fortress, with a khutba mosque, at the foot of the Djabal al-Sharīf, the Sierra de Guadarrama, and a dependency of the province of Toledo. It was especially known for its potteries. It had only an unimportant history, but gave birth to several famous Muslim scholars, among whom the most important was Abū 'l-Kāsim Maslama b. Ahmad al-Maġrīṣī, who lived in the second half of the fourth century and on whom cf. Brockelmann, *G. A. L.*, I. 243. Madrid was taken in 476 (1083) by King Alfonso VI. According to a Christian tradition, Ramiro II had previously held possession of it for a short time during his campaign against the Muslims in 327 (939). It was on the site of the old cathedral (*ġumra*) of Madrid that the king

of Castille had the church dedicated to the Virgin of the Almudena built.

MADURA, an island north of Eastern Java, with the sea of Java on the north and the strait of Madura on the south; a narrow strait separates it from the residency of Surabaya. For administrative purposes it forms a separate residency along with several small adjoining islands. From the geological point of view Madura is a continuation of the limestone hills of the residencies of Rēmbang and Surabaya in Java; it is doubtful whether the statement in the *Nagarakṛtāgama* (Ballad XV, verse 2; also the earliest mention of the island) that Madura only became separated from Java at the beginning of the third century A. D. is of any historical value. The ground is hilly, large parts of the country are not at all fertile. Although agriculture is becoming more and more important with the completion of irrigation works, the quantity of rice grown is quite insufficient for the wants of the dense and still rapidly increasing population; they have frequently to live partly or completely on maize. Every year many Madurese leave their land for a certain period to seek work in various ways in Eastern Java; the comparatively infertile nature of the soil has always forced the inhabitants to emigrate permanently to the Eastern residencies of Java and these are therefore with the exception of a few districts inhabited by a population which speaks Madurese. Of more importance for the Madurese than agriculture is the rearing of domestic animals (cattle, horses, goats and sheep). The Madurese cattle are probably the best in the whole archipelago; many draught animals and fat stock are annually exported. A very popular sport is bull racing; the beasts used for this are bred and looked after with the greatest care. The Madurese have a certain preference for the trade of a wandering pedlar; on the coast and on the islands the main source of livelihood is fishing and fish-breeding.

The population is closely related to that of Java; the customs at birth, marriage and death agree in general with those that prevail there. There are however striking differences. The Madurese is more heavily built, more energetic and enterprising than the Javanese; he is also less sophisticated. He is said to be faithful, reliable, economical and even avaricious. Dress, houses and farms of the Madurese look less cared for than those of the Javanese; the houses are not as in Java close together in settlements but are scattered. The Madurese are specially fitted for hard heavy work and less for occupations which require skill and application. Alcoholic beverages are much drunk, but little opium is taken. The language is also related to Javanese and much influenced by it; the literature consists mainly of translations and versions of Javanese works.

Islam is the generally prevailing religion. The Madurese have no tendency to fanaticism but as a rule they faithfully perform the principal duties of their religion; the great Muslim feasts are

duly observed. All receive the usual elementary religious instruction and many are not content with this only. We have no exact or reliable information as to the period of their conversion and the manner in which it came about; the stories given in the native sources do not agree. But as Madura has politically always been closely connected with Java (in the Hindu period it was subject to the kingdoms of Tūmapel and Madjapahit; at a later date it was under the adipati of Surabaya and then under the Sultan of Mataram) and as it is quite close to the district through which the new religion entered Java, it may well be assumed that between the first dissemination of Muslim ideas on Java and on Madura not a great deal of time passed. The complete conversion of the island to Islam seems to have taken place quickly and without difficulty. Hindu rule had never made a deep impression. According to native tradition Madura belonged to the Muhamadan coalition which overthrew the Hindu Javanese kingdom of Madjapahit. Until 1623 Madura (which was divided into five small states) formed part of the territory of the adipati of Surabaya. In this year it was acquired by Mataram and a Madurese prince appointed governor. When in 1678 a grandson of his, Truna Djaya, rebelled against Mataram, endeavoured to make Madura independent and even aimed at rule over Java, the ruler of Mataram sought the intervention of the Dutch East India Company. In 1679 Truna Djaya was taken prisoner; in 1705 Mataram recognised the ascendancy of the Dutch East India Company (which had existed in reality since 1683) over the eastern part of Madura and in 1743 over the whole island. The Company and after them the Dutch government for a considerable time always avoided intervention in the internal affairs of the island; as the rulers of Madura had repeatedly performed important services, they were treated — often to the injury of their subjects — less as servants of the Company than as independent allies. From the middle of the sixteenth century the power of the rulers was gradually limited; since 1885 the whole island has been directly under Dutch rule.

(W. H. KASHERA)

MADYAN SHU'AIB, a town on the east side of the Gulf of Akaba. The name is connected with that of the tribe of Midianites known from the Old Testament (Ex. i. Madian; Madian; in Josephus *Madiani*, & *Madiani* *χώρα*) but it can hardly be used without further consideration to identify the original home of this tribe, as the town might be a later Midianite settlement and besides it is difficult to fix the real home of such wandering tribes. In the Old Testament a town of Midian is not mentioned (not even in I Kings, xi. 18 where "Ma'on" should probably be read). On the other hand Josephus (*Archæology*, ii. 12, 3) knows *Madian* as a town on the Erythraean Sea as does Eusebius (*Onomasticon*, ed. Lagarde, p. 276); in Ptolemy (vi. 7, 4) it is mentioned as a town on the coast and called *Mediana* or *Medoema* while in another passage he gives it as an inland town under the name

Madiana, a difference which is explained by the actual position of the town. In Muhammad's time there is only one reference (in *Isha Ishak*) to the town of Madyan, when the Prophet sent an expedition under Zaid b. Haritha thither. There are occasional references in the poet Kutubiyir (in *Yâkûti*, d. 723), who speaks of the monks there and in the record of Muhammad b. al-Hanafiya's journey to Aila. In the geographers we find Madyan only as a town near the coast, six days' journey from Tabuk; it was the second station on the pilgrims' road from Aila to Medina and was a dependency of Medina. In the sixth century *Yâkûti* speaks of its position in a district rich in springs and watercourses, gardens and date groves and of its mixed population. *Ishakiri* says it is larger than Tabuk and describes from his own observations the spring there, from which Moses watered the flocks of Shu'aib (see below); it was now covered by a house which had been built over it. The town then began to decline gradually. In the 11th century Idrisi says it is an unimportant little trading centre with scanty resources; in the 15th century Abu 'l-Fida' says it was in ruins. Only in recent times has it been visited e.g. by Rüppell, Burton and Muir. The extensive ruins, which the Arabs call Magh'ir Shu'aib after the cave-tombs, lie about 16 miles east of the port of Ma'ana in 28° 28' N. Lat. in the southern part of the valley of al-Bad' which is rich in streams and palms and other trees. According to Burton the whole district between 29° 28' and 27° 40' is called *Arq Madyan*.

In the Qur'an following the Old Testament there are repeated references to Madyan as a people: for example in the stories of Moses' stay with them (xx. 42; xxviii. 21 sqq., 45), where his father-in-law (Jethro in the O. T.) is still anonymous, or in one of the stereotyped legends of prophets in which the Madyan are punished because they would not believe their prophet Shu'aib (vii. 83-91; xi. 85-98; xxi. 35 sq.). This Shu'aib was later identified with the father-in-law of Moses, for which there is no authority in the Old Testament. But perhaps the real truth is that Shu'aib had originally nothing to do with Madyan. In the older Sûras (xv. 78; xvi. 176 sq.; xxxviii. 12; l. 13) it is not the Midianites but the *Ashâb al-Ahla* (the people of the thicket) who are his enemies and it is therefore very possible that Muhammad only later combined an indigenous story of the people of the thicket and their Shu'aib with the Midianites of the Old Testament.

MAGNATIS, MAGNĀTIS, MAGNĪTIS, Lodestone and Compass.

I. The Lodestone and Magnetism

The lodestone is a widely disseminated mineral, and is therefore frequently mentioned by geographers and cosmographers, for example in the pseudographical *Petrology* of Aristotle, by al-Dimishqī, al-Kāzīmī, al-Fāhshī, Ibn al-Fakīh, al-Kalkashandī, etc. Of Amid and Hahadit, it is said that the lodestone is found there as a hard rock. According to Ibn Sīnā, the Indian is the best and al-Kāzīmī makes it come from India. Like the Greeks and Romans, the Arabs also discussed the properties of the lodestone and its effects on iron. They found that the lodestone can hold an iron needle (a ring), this a second, a third and so on, so that a chain is formed.

The power of attraction of the lodestone was defined. Most writers say that a lodestone can lift double its weight in iron, and one from Hahadit three times. Dīshūrī b. Hāyīm al-Safī possessed a particularly strong one. Dīshūrī b. Hāyīm ascertained that it could work through bronze. Other information is given by Shams al-Dīn al-Dimishqī, p. 73, or 85 of the work mentioned below (cf. also E. Wiedemann, *Beiträge*, II. 3: *Über Magnethismus*, S. B. P. M. S. Erlangen, xxxvi, 1904, p. 322).

Knives and swords rubbed on lodestone, according to Ibn al-Fakīh and al-Kalkashandī became themselves magoetic. They consist also, like needles, of iron which contains carbon, i.e. steel. They are stronger than the lodestone and do not lose their power of attraction as the former does.

It was noticed that in needles which floated on water the end rubbed pointed sometimes to the north and sometimes to the south, apparently according as it was rubbed with one or the other pole of the magnet; there appears to be no suspicion that the end not rubbed had also changed. Uṣā'id al-Ḥasān's statement that there are three kinds of lodestone is probably connected with the effects on the magnetised needle: one he says attracts, the second repels, and in the third one side attracts and the other repels.

The Arabs devoted much attention to the theory of these phenomena — with how little satisfactory results is evident from the remark of Ibn Ḥaytham: — "It is very annoying for us to feel that we do not know this with certainty (the cause of the attraction of iron), although we perceive it with the senses". Dīshūrī b. Hāyīm explains the power as a spiritual one, classing it with scents. Al-Tughā'ī includes the lodestone among the stones which contain spirits (see E. Wiedemann, *Beiträge*, xlv: *Zur Alchemie bei den Arabern*, S. B. P. M. S. Erlg., aliii, 1911, p. 82). Al-Kāzīmī seems to have dealt with its attraction through vacant space in a work which has not survived, entitled *Kitāb 'Ilā Dīshūrī Ḥadjar al-Maghṇāṣī* *h' l-Hadīd wa-fīhi Kāṣim ḥadīr h' l-Khalīf* (= "Book on the reason why the *Maghnāṣī* attracts iron: in it there is much discussion of empty space" (see Ibn Abī Uṣaybī'a, i. 320). Ibn Sīnā develops views which are very obscure in his *Kitāb al-Shifā'* (*Maḥṣnā* 2); Ibn Ḥazm is more lucid in his *Kitāb Taḥṣīl al-Ḥamāma f' l-Uṣṣā wa l-Uṣṣāf*. Al-Kāzīmī traces the attraction to a similarity of natures, through which love and at-

traction between them arose at the beginning of their existence. The Arabs are very fond in poetry and prose of comparing the effect of the magnet on iron to that of the lover on the beloved.

That there are many fables associated with this power of attraction is to be expected. Idols etc. of iron are said to be kept suspended in the air by lodestones (cf. E. Wiedemann, *Beitr.* xii: *Über Lampen und Uhren*, S. B. P. M. S. Erlg., i, 1907, Nr. viii., p. 207). Nails were drawn out of ships and they were thus caused to sink, as was the case with Sindbad's. According to al-Kāzīmī (*'Adjā'ib al-Maghṇāṣī*, i. 172) there are sulmanne mountains at Kūlūm which have this effect. Therefore, he says, the beams of ships in the Red Sea were bound together with ropes. The lodestone is said to be especially effective if it is kept for a time in goat's blood, which is of course false. The lodestone is occasionally used in medicine (cf. Ibn Sīnā and Ibn al-Baṭṭār, v.). In alchemy its name means "lion" and "he with the brilliant eye".

Besides the lodestone, which attracts iron, quite a number of other stones are given, which have the same quality with respect to other bodies, for example, gold is the magnet of quicksilver, etc. Numerous statements about such attracting bodies, which include a number of picots, are given in the *'Adjā'ib* of Shams al-Dīn Dimishqī (cf. the *Bibliography*) in the Arabic text p. 73—77, in the translation p. 85—89. Al-Kāzīmī also gives a number of such magnets under the word *Lāḥiq* ("picking, collecting") among the minerals.

II. The Compass

The Arabs of the East became acquainted with the compass through Chinese sailors, without however at first giving it a special name; there was considerable traffic between the Persian etc. ports and Southern China. Thence it came to Syria and then to the Mediterranean ports of Europe. The compass had very probably however already reached the north of Europe by the trade-routes of the Russian rivers as early as the eighth or ninth centuries. This explains why the compass was known earlier in the north than in the south of Europe and perhaps explains also why the Norsemen were able to undertake long voyages by sea (cf. R. Heunig, *Verhandl. der Gesellsch. deutscher Naturforscher etc.*, 84th Versammlung 1912, III., p. 95).

In deciding the direction by means of a magnetic needle, the Muslims used the end which pointed to the south; as Mecca lay to the south of most places in Syria etc. the *Qibla* [q.v.] corresponded almost exactly to the south.

The oldest passage in which the word *ḥarānīṣ* perhaps corresponding to "magnet" (*calamita*) occurs is given by Dory for the year 139 (854) in *Supplément*, II. 337 who found it in *al-Bayān al-Maghṇī* (*Histoire de l'Afrique et de l'Espagne*) edited by him. Serious objections have however been raised to interpreting the word as compass in this passage (*M. S. O. S.*, Berlin, v. 1—2, 1900, p. 268). From the fact that in narratives of travels of the ninth century A. D. and that in al-Mas'ūdī (923) the directions are given in the same way as on compasses, G. Ferrand concludes that the compass was already in use then. The next oldest absolutely certain reference is in the *Dīshūrī al-Hikmī* of 'Awfī; it is in his *Lubāb al-Aṭṭar* (ed. Browné and Mīrāṣ Muḥammad Kāzīmī). A

captain during a storm in the Red Sea or Persian Gulf finds his true course by means of a fish, of which we are expressly told that it had been rubbed with a maghnatis. A similar statement regarding the use of a magnetic fish at sea is made by al-Maqrīzī in his *Kitaḥ al-Khiṭaṭ* (Bulaq 1270, f. 240; Cairo 1324, i. 357; Z. f. Phys., xiv., 1924, p. 166).

A very full description of the compass and its use in the Mediterranean was given in 640 (142/43) by a certain Bāṭak al-Kahdījī in the *Kitaḥ Kama al-Taḥḥīṭ fī Ma'rifat al-Aḥḍār*. A needle which was rubbed with a "female" lodestone is placed diagonally through a rush or piece of straw etc. Sometimes a cross made of two straws is used. The arrangement is floated on water set to rotate by a lodestone held in the hand and moved in a circular direction; the latter is then quickly withdrawn. The needle places itself pointing to the south, which is the same as the kibla. The turning is probably regarded as magical, but it has a physical significance. By the turning the often very tenacious skin of the water is broken and the apparatus bearing the magnet is enabled to move freely. The turning is however not always done, but the needle with its support is simply placed on the water.

Al-Zarhūrī describes several forms of compass in a work on mechanical toys, for example a small beautifully painted fish, in which a magnetic needle is placed. In place of the fish, which might hurt the feelings of pious worshippers, a wooden disk with a *ṣuḥḥ* drawn upon it is also used. Finally an apparatus just like our compass is described. Two magnetic needles are placed symmetrically in the centre under a circular piece of paper. Under the centre of the paper a funnel is placed which turns on a point; the whole is enclosed in a cylindrical receptacle with a glass top and is called *ḥaṭṭ al-ḥilla* "vessel, box for the ḥilla", or *ḥaṭṭ al-ḥira*, "house of the needle"; according to Niebuhr the same name is still given to the compass. At the present day similar compasses are used along with a simple sundial. Another very full description is given by a certain Muḥammad b. Abī l-Ḥusn al-Ḥasani in his *al-Naḡm al-ḥarīḥī* (cf. E. Wiedemann in the Z. f. Phys., xiii., 1923, p. 113; there is a manuscript in Beirut in addition to those mentioned here. Whether the Cambridge one was written in 1103 or 1358 cannot be ascertained with certainty). The needle is fastened to a copper plate hollowed out or raised in the centre and placed on a copper stand. One end of the needle, no doubt the south end, has something put on it to mark it.

An important passage in an anonymous work "preparation of the bowl (*ḥimā*) to ascertain the kibla and points of the compass" is in a Berlin manuscript (Ahlwardt, N^o 5811). Here the point of the needle points south, the eye to the north. (The rubbing [*ḥaṭṭ*] of the needle explains the peculiar modern name *ḥimā* for the compass).

It would take us too far to deal here with the box compass proper which is called in Turkish e.g. *pasola* from the Italian. We will only note that on the rhomb-card the south is called *al-kibla* and also *al-ḥawā* (cf. thereon for example K. Foy, *Die Windrose bei den Osmanen und Griechen mit Benutzung der Bahriya des Admirals Pir-i-Reis vom Jahr 1520*, M. S. O. S., Berlin xi/2 1908, 234 sq.).

In the *Beiträge II.* the earlier literature is collected. This is also done in other works e.g. by Clément Mallet on the Compass. Of special importance are the works of A. Schück (*Der Kompass etc.*, Hambourg 1911, 1913 sq.), which also deal with the Bussola in China.

(E. WIEDEMANN)

MAGHRĀWA, a large confederation of Berber tribes, belonging to the Zanāta group and related to the confederations of the Banī Ifran (q. v.) and Banī Imīyan. These tribes, who led a nomadic life, in the middle ages roved over the country between the valley of the Chéllif as far as Tlemcen and the mountains inhabited by the Maḥyāna. They were easily converted to Islām and their chief Ḥāḍī b. Wazmār is to have gone to Madīna to the Caliph 'Uthmān and been confirmed by him in his rule over the Maghrāwa. This is why this confederation came to consider themselves clients of the Umayyads of Spain and supported, sometimes by force of arms, the cause of this dynasty in the Maghrib. This chief Ḥāḍī was succeeded by his son Ḥafṣ and he by his son Khazār, with whom the Arab amīn of al-Kairuān had to deal at the time of the rebellion of Maḥmūd in 122 (739). On his death his son Ma-

hammad after the early successes of Idris I in the Maghrib, brought him the submission of the Maghrawa and returned Tlemcen to him, which he had just taken from the Banū Ifran; the Maghrawa thus became one of the principal supports of the Idrisid dynasty at its beginning.

The grandson of this Muhammad b. Khazar, a contemporary of Idris I, also called Muhammad, resisted the Fatimids (q. v.). When the general of the Mahdi 'Ubad Allāh, Maṣala b. Habbā, had seized the Idrisid possessions in the Central Maghrib and placed over them the chief of the Mīkāsā Muṣā b. Abi 'l-'Afiya, the chief of the Maghrawa rebelled and brought under his flag a large number of Berber tribes. In 309 (921—922) he routed the army sent against him under Maṣala, whom he slew with his own hand. But the next year, the Maghrawa, faced with a new Fatimid offensive, had to take refuge in the region of Sijilmāsa. But some time afterwards, the Umayyad Caliph of Cordova 'Abd al-Rahmān III al-Nāṣir, wishing to annex the Maghrib to his dominions, summoned the Maghrawa to his assistance and with the help of Muhammad b. Khazar was able to bring under his sway all the central Maghrib except the region of Tāhert. The son of the Maghrawid amir al-Khair b. Muhammad was installed as governor in Oran. The Banū Ifran and Muṣā b. 'Abi 'l-'Afiya also joined the Umayyads (first half of the tenth century). But all these submissions to the wishes of the Umayyads were only dictated by self-interest and when Muhammad b. Khazar died at al-Kairawan in 350 (961) he had become the vassal of the Fatimid sovereign al-Mu'izz.

The successor of 'Abd al-Rahmān III in the caliphate of Cordova, al-Hakam al-Mustansir, like his father summoned the Maghrawa to their old allegiance; their chief Muhammad b. al-Khair b. Khazar thereupon threw off Fatimid suzerainty. Knowing the enmities that this defection was going to cause him, al-Mu'izz invited Ziri b. Manād, chief of the Sanhādja to attack the chief of the Maghrawa. A battle was fought in 360 (970—971) between the Maghrawa and the Sanhādja commanded by Bologgin b. Ziri: the Maghrawa were completely routed, but a little later they were able to take their revenge, owing to the assistance of Dja'far b. 'Alī b. Hamdūn, lord of al-Matla and al-Zab. Next year Bologgin b. Ziri in the name of the Fatimids led a great expedition against the Zanata and subjected them completely in the Central Maghrib. The Maghrawa had once again to take refuge in Sijilmāsa and, after the return of Bologgin to Ifrīkiya, they definitely abandoned central Maghrib and settled in Morocco. It is from this time that two of their families were able to found two short-lived kingdoms, that of the Banū Ziri b. 'Atiya at Fās and that of the Banū Khazrūn at Sijilmāsa and at Tripoli.

The Maghrawa of Fās. After the defeat suffered by the Maghrawa in the central Maghrib, the descendant of Khazar, Muhammad b. al-Khair, crossed the sea to seek the help of the famous 'Amirid Ḥājjib al-Manṣūr b. Abi 'Amir (q. v.). The latter sympathised with him in his troubles and sent an expedition to the Maghrib under Dja'far b. 'Alī b. Hamdūn. The Spanish army with contingents from the Banū Ifran and the Maghrawa took up a position near Ceuta and in view of its strength Bologgin b. Ziri refrained from attacking it and set out to subdue all Morocco.

In 373 (983—984) the Maghrawa, after the departure of the Spanish governor Ibn 'Asqalādja, were chosen by al-Manṣūr to rule Morocco in his stead. In 377 (987—988) the ḥājjib appointed as his vassal to rule the western Maghrib, the amir of the Maghrawa, Ziri b. 'Atiya b. 'Abd Allāh b. Khazar. The latter made Fās his residence and settled his tribe around the town. By orders of al-Manṣūr he waged war on the Sanhādja and notably increased his dominions towards the east. In 382 (992) he made a journey to Cordova on the invitation of the ḥājjib. In spite of the assertions — frequently contradictory — of the historians, it seems that the reign of Ziri b. 'Atiya was rather troubled and that changes of fortune placed on the throne of Fās sometimes the Maghrawid prince and sometimes his Ifranid rival Yaddū b. Ya'la. On his return to Fās, Ziri found his place occupied by Ibn Ya'la and it was only after a murderous struggle that he succeeded in regaining his throne. But, finding Fās not sufficiently central in position, he decided, like his Spanish overlord, to build a capital for himself and the principal chiefs of his confederation. In 384 (994) he laid the foundations of the town of Wadīda (Oujda) and came with his court to live there. At the same time he tried to throw off the suzerainty of Cordova and relations were finally broken off between him and al-Manṣūr. Ibn Abi 'Amir sent against him an expedition under the freedman Wādih; a battle was fought on the banks of the Wādī Rdāt and the Spanish army defeated. The ḥājjib then sent another force under the command of his own son 'Abd al-Malik al-Muraffar. On this campaign Ziri was twice routed in 387 (997). He sought to take refuge in Fās, but the inhabitants prevented him entering it and 'Abd al-Malik soon afterwards entered the capital. Ziri had to go to the Sahara; later he tried to create a principality for himself in the land of the Sanhādja. He laid siege to their capital Ashir (q. v.) but before he could take the town, he died of the consequences of an old wound in 391 (1000—1001).

On the death of Ziri b. 'Atiya, the Maghrawa proclaimed his son al-Mu'izz; he began his reign by endeavouring to regain the favour of al-Manṣūr b. Abi 'Amir. The latter recognised him, and his successor 'Abd al-Rahmān al-Muraffar appointed him governor of Fās and western Maghrib in 393 (1002—1003). He received from Cordova letters of investiture for all Morocco, except the land of Sijilmāsa, which was kept for the Banū Khazrūn. Morocco seems to have had peace and a certain degree of prosperity in the reign of al-Mu'izz, who died in 417 (1026) or 422 (1031).

His successor was his cousin on the father's side Ḥamāma b. al-Mu'izz b. 'Atiya. He took advantage of the anarchy then prevailing in Spain to strengthen his position. He surrounded himself with literary men and legal authorities. But in 424 (1032—1033) the pretender of a rival dynasty Abu 'l-Kamil Tamīm b. Ziri al-Ifrani marched from Seville on Fās. Ḥamāma took the field against him with the Maghrawa but they were defeated. Tamīm entered Fās the same year and persecuted the Jewish population. As to Ḥamāma, he reached Wadīda (Oujda) and Tenez and gathered there considerable forces, with which he marched on Fās in 429 (1037—1038). Tamīm had to withdraw from Fās and returned to his own capital, Seville (q. v.).

Hamāma then continued to reign till his death, which probably took place in 431 (1039—1040).

After him the power passed to his son DĪNĀ. Quickly suppressing a rebellion by one of his cousins, he devoted his reign to the embellishment of Fās which was then beginning to become a great city, with a large population and a busy trade. This prince died in 452 (1060).

The successor of DĪNĀ b. Hamāma in Fās was his son al-Fuṭūḥ, but on his accession his right to the throne was disputed by his brother 'Adīsa. He made himself master of part of the capital, the "bank" (*ṣidra*) of al-Ḥarawiyin, while al-Fuṭūḥ established himself on the opposite bank, that of al-Andalus. The two brothers fought in the town itself and the inhabitants were divided into two camps. Morocco was engulfed in anarchy, and it was only after three years of fighting that al-Fuṭūḥ was able to reign undisputed in al-Fās, after 'Adīsa had been killed. A gate of this city pierced in the south-west wall still bears his name; another in the north wall bears the name of his brother in a slightly corrupted form (*Bab 'Adīsa*).

Al-Fuṭūḥ was driven from his capital in 454 (1062) by the Hammāḥid sovereign Bologgīn b. Muḥammad. This was the time when the Almoravids were beginning to invade Morocco. After the departure of al-Fuṭūḥ, the Maghrāwa appointed one of his relatives to succeed him, Mu'annas (or Mu'annasir) b. Hammāḥ b. al-Mu'izz b. 'Atya, who was proclaimed in 455 (1063) and took up the struggle against the Saharan invaders. He succeeded in defeating one of the lieutenants of Yūsuf b. Taḥfīṭ and retaking Fās, which he had lost. The Almoravids having laid siege to the city, the amir of the Maghrāwa attempted a sortie in the course of which he met his death (460—1067—1068). The people of Fās then proclaimed his son Yamin. But the capital was taken by Yūsuf b. Taḥfīṭ two years later and the young ruler put to death along with a large number of Maghrāwa and Banū Ifrā. This was the end of the dynasty of the Maghrāwa of Fās. This city, which had enjoyed a certain amount of prosperity under the early members of the dynasty and had been extended by them, later suffered a great deal, according to western historians, from their tyranny and exactions.

According to Ibn Khaldūn, in the period of the decline of Maghrāwa power in Fās, there was at Aghmat, at one of the entrances to the Great

Atlas on the plain of Marrākush, a little dynasty of amirs belonging to the same confederation. The last of these chiefs who flourished about 450—460 (1058—1067) was called Laggūl b. Yūsuf b. 'Alī. He was defeated and slain by the Almoravids when they made their successful thrust to the north of Morocco.

The Maghrāwa of Sijilmāsa (Banū Khazzrūn).—At the instigation of the ḥājjib of Cordova, al-Manṣūr Ibn 'Amir, a Maghrāwa chief in 366 (976/7), had taken Sijilmāsa [q. v.] which for over two centuries had been governed by amirs of the Miknās branch of the Banū Midrār. This chief who was called Khazzrūn b. Faḥḥ b. Khazar, proclaimed the suzerainty of the Umayyads of Spain in Sijilmāsa and sent to Cordova the head of the last Midrār ruler al-Mu'azz b. 'Ith. Khazzrūn received from al-Manṣūr the governorship of the town and kept it till his death. He was succeeded by his son Wāḥidūn. The latter had to defend himself against the invasion of the Sanhādja in western Maghrīb and in the end was confirmed in his governorship by the Umayyads in 390 (999) after a period of disgrace. On the fall of the Spanish caliphate he proclaimed himself independent, seized the region of Dza (Dzā'a) and in 407 (1016—1017) took Sufra (Sefron [q. v.]) and the valley of the Wādī Malwya (Molouia). His son and successor Ma'ūd was defeated, deprived of his lands and slain by the Almoravids in 445 (1053—1054). Ten years later, the last of the Banū Khazzrūn, who still held out in Sufra, were in their turn scattered.

On the Maghrāwid dynasty of Tripoli in Barbary cf. rayvot.

MAGHRIB, the name given by Arab writers to that part of Africa which modern writers on geography call Barbary or Africa Minor and which includes Tripolitania, Tunisia, Algeria and Morocco. The word "Maghrīb" means the West, the setting sun, in opposition to "Mashrīq", the East, the rising sun (Levant), but as Ibn Khaldūn remarks, the general denomination was applied to a particular region. The extent of this area, moreover, varies according to different authors. Some Oriental writers include in the Maghrīb not only Northern Africa but also Spain; the majority, however, reserve the name Maghrīb for the first of these countries. But they are not in agreement upon the boundaries to be assigned to it on the East. On the other hand they are in agreement about the Northern, Western and Southern boundaries. To the North, Maghrīb is bordered by the "Roman Sea" (Mediterranean). To the West it extends as

GENEALOGICAL TABLE OF THE MAGHRĀWA OF FĀS

far as the "Surrounding Sea", also called the "Green Sea", the "Sea of Darkness", and by foreigners called, according to Ibn Khaldūn, Okeanos or Atlant (Atlantic Ocean), which stretches from Tangier to the desert of Lemtūna (Abu 'l-Fida') or only, according to Ibn Khaldūn, as far as Asafi (Saffi) and Deren (Great Atlas). To the South it stretches as far as the barrier of moving sands, separating the country of the Berbers from the land of the Negroes, that is to say the Erg [cf. 'akari] and as far as the rocky region called "hammada" (Ibn Khaldūn). Some districts situated outside this limit, such as Būia, Tamentit, Gūmara, Ghadames, Fezzān, Waddān, are sometimes considered as belonging to Maghrib although they are in reality countries of the Sahara. As regards the Eastern boundary, certain authors made it extend as far as the sea of Kūlrum (the Red Sea) and thus include in the Maghrib, Egypt and the country of Barka [see the article BARKA]. Others, whose opinion is adopted by Abu 'l-Fida', make it coincide with the actual frontier of Egypt, from the oases as far as the "Akabul" which is on the sea between Barka and Alexandria (Akabat el-Kebira). Ibn Khaldūn does not accept this delimitation, because, he says, the inhabitants of the Maghrib do not consider Egypt and Barka as forming part of their country. The latter commences only at the province of Tripoli and encloses the districts of which the country of the Berbers was composed in former times. Ibn Sa'id and the later Maghribi writers such as al-Zaylati and Abu Ra's limit themselves to reproducing with a few variations in detail, the boundaries of Ibn Khaldūn. As to Yāqūt he confines the Maghrib to the country stretching from Miliana to Sūs (ed. Wüstenfeld, iv. 513).

Confined within the sixth "clime" the Maghrib is divided into several regions. Ibn Hawqal (*Description*... transl. de Slane, *J. A.*, 1841) distinguishes two of them: the Eastern Maghrib from the frontier of Egypt as far as Zawila in Tripolitania and the Western Maghrib from this point to Sūs al-Akṣā; but the division commonly accepted is that into three regions, Ifriqiya, Central Maghrib and Farther Maghrib (Abu 'l-Fida', Ibn Khaldūn etc.). Ibn Sa'id adopts a slightly different division. Ifriqiya, outer Maghrib, and further Sūs. Ifriqiya stretches from Kays Ahmed near Misrata (Ibn Sa'id) to Bougie, Central Maghrib from Bougie to Mulāya (Ibn Khaldūn), Farther Maghrib from Mulāya to Asafi and to Deren, to which must be added al-Sūs which forms as might be said, according to Ibn Khaldūn, an island or country detached from all others and surrounded by sea and mountains.

AL-MAGRIBI, the name of several

visiers.

1. 'Alī z. AL-ḤUSAYN, ABU 'L-HASAN. Like his father, 'Alī was one of the intimate friends of the Ḥamdānī Saif al-Dawla of Ḥalab. He had also great influence with his son Sa'd al-Dawla, but when a cloud came over their friendship, 'Alī left Ḥalab and went to al-Rakka to Bakdīr, who had been one of Saif al-Dawla's Mamliks and persuaded him to enter into negotiations with the Fātimid caliph al-'Aziz bi-'l-lāh [q. v.] with whom 'Alī had had relations for a long time. When Bakdīr had been given the governorship of Damascus by al-'Aziz, at the suggestion of 'Alī whom he had made his vizier, he set out against Ḥalab but was defeated in Safar 381 (April 991) whereupon 'Alī fled to al-Rakka. When Sa'd al-Dawla took this town, 'Alī fled to Kufa, from whence he wrote to al-'Aziz and asked permission to come to Egypt. In Dhu'l-Ḥijja I of the same year (July-Aug. 991) he reached Egypt and by his advice the caliph sent an army in 383 (993-994) under Mangūṭegīn, then governor of Damascus, against Ḥalab where Abu 'l-Faḍl II, son of Sa'd al-Dawla, had now succeeded his father. 'Alī, who took part in the campaign as Mangūṭegīn's secretary, was bribed by 'Alī, the leader of the Ḥamdānids and persuaded Mangūṭegīn to retire, pretending that he lacked supplies. When the Caliph heard of this, he ordered Mangūṭegīn to resume the siege without delay and dismissed 'Alī at once, who therefore returned to Egypt. 'Alī made himself very popular with the caliph al-Ḥākim, who succeeded his father al-'Aziz in 386 (996) as did his son al-Ḥusayn also. After a few years, however, he was sacrificed to the suspicions of al-Ḥākim and on the 3rd Dhu 'l-Ḥijja 400 (June 18, 1010) 'Alī was executed along with his brother Maḥammad and two sons.

2. AL-ḤUSAYN z. 'Alī, ABU 'L-KASIM, called "al-nasir al-Maghribi", son of the preceding, was born in Egypt on the 13th Dhu 'l-Hijja 379 (June 19th, 981). In 400 (1010) when his father was executed, al-Ḥusayn fled from Egypt to al-Rakka to Ḥassan b. al-Maḥarrī, amir of the Banū Tāyī, and induced him to forswear his allegiance to the Caliph al-Ḥākim and pay homage to the 'Alid amir of Mecca, Abu 'l-Faṭṭḥ al-Ḥasan b. Dī'far. The latter came to al-Rakka and was proclaimed caliph. But when Ḥassan was bribed by al-Ḥākim Abu 'l-Faṭṭḥ had to return to Mecca while al-Ḥusayn sought refuge with Fakhr al-Mulk, vizier of the Bayid Bahā' al-Dawla. Although as an Egyptian he was subject to the 'Abbāsid Caliph al-Kādir, he was permitted to accompany Fakhr al-Dawla to Wasil and remained there till his death. He then went to al-Mawṣil where the 'Uḡailid Karwāsh took him into his service as secretary. In 414 (1023) the Bayid governor of Iraq Muḥarrir al-Dawla appointed him vizier. But the very next year he quarrelled with the Turkish mercenaries and fled to Karwāsh. But as he quarrelled with the 'Abbāsid Caliph on some trifling matter, he had to leave al-Mawṣil in the same year. He then went to the court of the ruler of Diyar Bakr, Naṣr al-Dawla [cf. MARWANID] who gave him a sanctuary. Al-Ḥusayn died at Maṣyāṣīrīn on 13th Ramaḍān 418 (Oct. 17, 1027) and was buried in Kufa.

3. MUḤAMMAD b. DĪFĀK b. MUḤAMMAD b. 'ALL, Abu 'L-FARAJ, grandson of a brother of the preceding. When Abu 'L-Faraj grew up, he left Egypt and went to the 'Irāq where he lived for a time. After various vicissitudes he returned to Egypt and was appointed head of the *Diwān al-Qinnā* by the vizier al-Bārīzī. He held his office till the dismissal of al-Bārīzī; the latter's successor had him arrested. While Abu 'L-Faraj was still in prison, he was himself appointed vizier on 25th Rabi' II, 450 (June 21, 1058) and given the title "*al-Wazir al-ajall al-kamil al-azhad* *ṣafī* *amir al-mu'minin wa-khalīfatuhu*". After a few years (9th Ramaḍān 452 = Oct. 7, 1060) he was dismissed and given the control of the chancery (*Diwān al-Inshā'*). He died in 478 (1085—1086).

MAGES. [See MARIJA.]

MAGNESIA (MAGNĒSIA, MANISSA), the ancient *Magnesia ad Sipylum*, the capital of the Sandjak (now wilāyet) of Sarrukhān in the wilāyet of Smyrna, on the northern slope of the Magnesia Dagh Sipylus mountains, and two miles to the south of the river Gediz and 20 miles N. East of Smyrna. The town, celebrated in Greek and Roman antiquity, was occupied by the Turcoman Aqur Sarrukhān in the year 713 (began 28th April 1313) and was the capital of his principality and of that of his son Sulaimān, who was buried there with his father in the *ṭarḥ* of the family.

Yildirim Sultan Bayazid seized it in the year 792 (began 20th Dec. 1389). Tamerlane collected his treasures there in the year 1402; after the restoration of the Ottoman power, the town saw the rebellion of Burkladje Mustafa, a partisan of the Shakh al-Din al-Din at the end of 1416; Murād II made it one of the first towns in his kingdom and built a palace there in 1444 which is now in ruins. Murād III also contributed to beautifying Magnesia with the Murādiyya mosque built in 1591. In 1633 the town was sacked during the rebellion of Elyas Paṣha. In 1890 Cochet put the population at 35,000.

MAHALLA, an Arabic word which, like *maqall* from the same root, originally means a place where one makes a halt. Mahalla thus came to have the special meaning of a quarter of a town, a meaning which has also passed into Turkish (e.g. the *Yeni Mahalle* quarter in Constantinople), into Persian and Hindīstān (where the popular pronunciation is *maḥalla*); the term formerly applied to a quarter of a town used to be *dar* (as in old Baghdad). The *maḥalla*s are often under the administration of a special official called *muḥallī*. In Egypt the word *maḥalla* is frequently found as the first element in the names of towns and villages. Here the primitive meaning of place,

locality has been preserved, while quarters of a town are rather called *khiṭṭa* especially in al-Fustāt and Alexandria. According to the *Maḥallat al-Buldān*, there are about 100 places in Egypt called al-Mahalla; 'Alī Paṣha Muḥarrak gives over 30 in *al-Khiṭṭat al-afḍala* (xv. 21 sq.) in addition to the large town of al-Mahalla al-Kubrā [q. v.]. (J. H. KRAMERS)

MAHALLA AL-KUBRĀ or MAHALLA KABIR is the modern name of an important town in the Delta of the Nile at some distance to the west of the Damietta arm, north-east of Tanta. It lies on the Tar'at al-Miṣrī canal, a branch of the Bahr Shubra.

In view of the large number of Egyptian geographical names compounded with *Mahalla*, the identification of the town with the names mentioned by earlier Arabic writers is a matter of some difficulty. Maasero and Wiet identify it with the Coptic Tishairi (Amelinus, *La géographie de l'Égypte à l'époque copte*, Paris 1893, p. 262), but this identification is rendered doubtful by the fact that al-Mahalla is a purely Arabic name (and it also remains to be proved that it is a rendering of the Coptic name just mentioned), and because the work of Abū Sallū on the Christian buildings of Egypt makes no mention of this town. The earliest author who knew a town called al-Mahalla or al-Mahalla al-Kabira is al-Maḥdī (p. 55, 194, 196, 200); he tells us that it was a town of al-Rif built in two parts, one called Sandafā (or Sandafā), but the statement that the town was situated on the river by Alexandria (p. 200) seems to be an error. Al-Bakrī seems to know the same town under the name Mahallat Maḥrūm (*Kiṭāb al-Maḥallat wa 'l-Mamālīk*, Beir. Mus. MS.). Idri'ī, *Description de l'Afrique*, p. 158, calls the town simply al-Mahalla and knows a canal called after it. Yāqūt's statements are confused, for he speaks of a town called Mahallat Daḥalā and of another Mahallat Sharḥiyyūn (iv. 428), both of which seem to refer to the same place. Mahallat Sharḥiyyūn in Yāqūt — which he also calls Mahallat al-Kubrā — forms one town with Sandafā and on the other hand he says that Mahalla Daḥalā between al-Kāhira and Dimyāt is the largest of the Mahalla that he knows (cf. also Abū 'l-Fidā', ii. 160), while the geographer al-Dimashqī (p. 231) knows Mahalla Daḥalā as the capital of the Kūm of Daḥalā; Ibn Daḥmāz (v. 82) says that the governorship of this town was regarded as "the little vicariate" (*al-wilāyat al-sughra*).

The name Mahallat Sharḥiyyūn is again found in al-Makrizi (ed. Wiet, iii. 207). It is clear from these writers that the town was an important commercial centre from the tenth century onwards. It does not seem however to have played any considerable part in history, although 'Alī Paṣha Muḥarrak quotes some events that took place there, from al-Makrizi and al-Djāhizī. In Egypt in the 12th century the town had to give way to Tanta, which became the capital of the *muḥallat* of al-Gharbiya, while al-Mahalla became the capital of a smaller administrative area; 'Alī Muḥarrak estimates its inhabitants at 30,000, while the 1928 Baedeker only gives it 35,500. It is at present a centre of the cotton trade; raw cotton is there cleaned in the factories. Of the many individuals who bear the *nishā* al-Mahallī, the most celebrated is Djalāl al-Din al-Mahallī [q. v.] who was born here.

(J. H. KRAMER)

MAHARI or **MAKARI**, a negro tribe also called *Kotoko*, living on both banks of the Lower Logone below Musgu and on both banks of the Lower Chari from Lake Chad to Fort Lamy and Küsséri.

They are usually divided into three groups: the Lagwere on the Logone, where they are mixed with Musgu, the Semair at Küsséri and the Songwal Kwe at Gulfei. These natives do not seem to be autochthonous; the first occupants of the country according to tradition were the Kerebina, who are perhaps related to the ancient people of the Sao or Sô. As a rule, tall and slim, lank and bony, they have a narrow head and dark skin; they make three parallel cicatrices on the forehead, the middle one of which runs from the top of the nose to the roots of the hair. They speak languages akin to the Sao, Kuri and Buduma. They are nearly connected with the Musgu, with whom they form the Massu group. The Kanuri have passed on to them the Muslim religion and a certain degree of civilization.

The Makari or Kotoko are agriculturists and fishermen; they grow different kinds of millet, soaze earthenware and grind their corn with a quern. Fishing provides them with an abundant supply of food; they follow it in large pirogues, about 40 feet long and two to four feet wide. These crafts which are propelled by poles or paddles, have a flat bottom and a raised bow and stern; they are built of strong planks bound together with fibre passed through holes which after being tied, are caulked with various barks. This is how they come to be described as sewn. They carry 25 to 30 persons. The Kotoko fish with a large net mounted on two forks placed in different directions at the front and manoeuvred by a lever. This net is lowered to touch the bottom, then a little pirogue rowed by children drives the fish towards the fishing boat by striking the water with poles. The apparatus is lifted as soon as the fish have entered it.

The homes of the Makari are built of clay, are fairly large and comparatively comfortable. The walls are about 6 feet high; they have an elliptical door about 5 feet high; the roof is of straw and hemispherical in shape. Inside is a bed of clay, shelves of clay to hold household utensils and the fireplace. Sometimes there is also a bed made of thongs of hide laced round a framework.

There are few isolated homes in the Makari country; they are generally grouped in villages of which the most important are Logone, Gana (Little Logone), Karnak, Logone or Logone Berni (Great Logone) and Küsséri. They used all to be surrounded by circular ditches and clay walls pierced by several narrow gates. These defences were intended to protect the inhabitants from the frequent attacks of their neighbours.

The population includes smiths, potters, weavers and a few traders. There are a few Arabs among them. Politically the Makari belonged to the ancient empire of Bornu (q. v.). They were divided into several small vassal states; that of Karnak Logone showed more independence.

MAHBÛB, the name given in North Africa and Egypt (cf. Dozy, *Supplément*, s. v.) to the Turkish gold sequin, contraction for *HERMAHÛB* (q. v.).

MAHDĀWIS, the followers of Saiyid Muhammad Mahdī, of Hawuzar, near Banares, 847—910 (1445—1504), who declared that he was the promised Mahdī (q. v.) and by his preaching gained a number of adherents in Ahmadiyābād (q. v.) and other parts of Gujjarāt. His followers credited him with the power of working miracles, raising the dead, healing the blind and the dumb, etc. For a time they were allowed to profess their faith unmolested and add to their number by proselytizing, but in the reign of Muḥammad I, Sultan of Gujjarāt (1515—1526) they were persecuted and many of them put to death. Awrangzeb (q. v.) also persecuted them when in 1645 he was governor of Ahmadiyābād. In consequence of these persecutions, the Mahdāwis to the present day practise *hilya* (q. v.) and wish to pass as orthodox Muslims; their exact number is therefore uncertain, but they are found in small groups in most parts of Gujjarāt, in Bombay, Sind, the Dakkan (q. v.) and Upper Hindustān. They believe that Saiyid Muhammad was the last *Imām*, the promised Mahdī, and in consequence of his having come, they are said by their religious opponents neither to repent for their sins nor to pray for the souls of their dead. They observe certain ceremonies peculiar to themselves at marriages and funerals. By their enemies they are styled *Ghāir-Mahdīs*, i. e. those who do not believe in a Mahdī who is still to come; but the Mahdāwis themselves apply this designation to other Muhammadans as having failed to recognise the Mahdī who has already appeared.

(T. W. ARNOLD)

AL-MAHDĪ (A.), means literally "the guided one", and, as all guidance (*hudā*) is from Allāh, it has come to mean the divinely guided one, guided, that is, in a peculiar and individual way. For Allāh, in the intense and immediate way of Islam, is guiding every one and everything in the world, whether by the human reason or by the instincts of the lower animals, to a knowledge of Himself and to what is needed for their existence and continuance (*Lisān*, xx. 228, foot). One of His names is *al-Mahdī*, "the Guide" (*Kur'ān*, xxii. 53; xxv. 33), and the idea of His guidance is reiterated in the *Kur'ān*. For a statement of its different kinds see Rāḍī on *Kur'ān*, i. 5 (Fleischer's ed., i. 8, li. 21 sqq.); *Mufradāt*

of al-Rāghib al-Isfahānī, p. 560 of ed. Cairo 1324; *al-Mahdī al-ʿāmin* of al-Ḡharālī, p. 80 of ed. Cairo 1324. But it is singular that the word *mahdī* (the passive participle of the I Stem) never occurs in the Qurʾān and that the passive of that stem occurs only four times. In the usage of the Qurʾān, the VIII stem, *istadda*, strictly "he accepted guidance for himself", is used as a quasi or reflexive passive. Thus the man whom Allāh guides is not simply "guided" but reacts himself to the divine guidance.

There seems to be no original authority for the vocalisation *al-Mahdī* which Edward Pococke gave as N^o. xvi. of the Signs in his *Porta Moisi*, ii. 263 of ed. 1635, with the meaning "director"; cf. Lane's note in the *Supplement* to his lexicon, p. 3042 c. Margoliouth (article cited below, p. 337a) suggests that it may mean "the giver" and refers to traditions (see below) of the Mahdī bestowing uncounted wealth; but there does not seem to be any oriental authority for this epithet. Also, the verb used in these traditions is *ʿafa*.

But one who is *mahdī*, or *al-mahdī*, is in a different position; he is absolutely guided. It is used of certain individuals in the past and of an eschatological individual in the future. Thus the *Lisān* (xx. 229, l. 9 from below) quotes from a tradition "the usage of the khalīfas who followed the right way and were guided" (*sunnaṭu l-khalīfa al-raḥimīn al-mahdīyīn*), meaning the first four khalīfas, and goes on to state that it is applied especially, as a name, to the Mahdī of whom the Prophet gave good tidings that he would come in the End of Time. There are many other instances of the non-eschatological application of the term *mahdī* to historical personages. Goldziher (*Vorlesungen*, p. 267, v., note 12, 2) has gathered a number of such cases: Thus Ḍarrī (*Nasāb al-ʿArab*, N^o. 104, v. 29) applies it to Abraham and Ḥasan b. Thābit (*Dirāʾat*, ed. Tunis, 24, 4) to Muḥammad; see, too, Ibn Saʿd (xi. 94, 3). It is often applied by Sunnites to ʿAlī, in distinction even to the other three khalīfas; thus in *Uṣṣalāḥ* (iv. 31, 2) he is *ḥakīm al-mahdīyīn*, and Sulaimān b. Surād calls Ḥusain, after his death, "Mahdī son of the Mahdī" (Tabarī, *Taʾrīkh*, ed. Leyden, Ser. II. 546, 11). Farazdaq and Ḍarrī applied it as an honorific even to the Umayyad khalīfas. As applied by the pious to ʿUmar II, the Umayyad (Ibn Saʿd, v. 245, 3), it seems to have been more than an honorific; he was regarded as a real *mawjūd* [q. v.] and under peculiar divine guidance. In the view of later Islām he was the first of these "renewers" of the Faith and the eighth and last of these would be either the Mahdī, a descendant of the Prophet, or ʿIsā (*al-mawjūd al-muʿtadī*), according to the two positions; cf. article 183. See on the whole question of the *Mawjūd* and his relation to the Mahdī: Goldziher, *Zur Charakteristik . . . al-Sayyid*, in *S. B. Ak. Wien*, lxxx., p. 10 199. It is characteristic of Islām to take a very pessimistic view of human nature; men always fall away from the faith and have to be brought back. This will be so especially towards the end of the world. Men will become thoroughly secular and Allāh will leave them to themselves. The Kaʿba will vanish, and the copies of the Qurʾān will become blank paper, and its words will vanish, also, from the memories of men. They will think only of poems and songs. Then the end will come.

In a similar heightened sense the term Mahdī was applied by Ibn al-Taʾwīḍī (*Dirāʾat*, ed. Margoliouth, p. 103, 5, 6) to the ʿAbbāsīd khalīfa al-Nāṣir (A. H. 575—622); he is the Mahdī and no other eschatological Mahdī need be looked for. In a narrower but more true etymological sense it came to be applied to converts to Islām; Allāh had guided these to the right Way. For such, Turks use the more Qurʾānic term *mahdī*; see above for the distinction. Goldziher (p. 268) gives cases. In a heightened sense, also, the term was applied very early (A. H. 66) to Muḥammad b. al-Ḥanafīya, a son of ʿAlī by another wife than Fāṭima. After the death of Ḥusain at Karbala, Mukhtār b. Abī ʿUbad put forward this Muḥammad as a claimant of the khalīfat and called him "the Mahdī, son of the legate (*al-mawjūd*)", a term applied to ʿAlī by those who asserted that the Prophet had bequeathed the headship of the people to him (Tabarī, *Taʾrīkh*, ii. 534). This was after the deaths of Ḥasan and Ḥusain, the two sons of ʿAlī by Fāṭima, the daughter of the Prophet, and shows a different drift as to the inheritance of the Imāmate from that of the Shīʿite legitimists. This Muḥammad was heir as the son of ʿAlī and not as possessing the blood of the Prophet. He seems himself to have declined the dignity thus thrust upon him but, *malgré lui*, he became the founder of the Kaisāniya sect which looked for his return from his grave in Mount Raḍwā, where he remains undying. This was maintained by the poet Kuthayrī (d. 105 = 723) and by the Saiyid al-Himyari (d. 173 = 789; *Aghāni*, viii. 32; cf. Masʿūdī, Paris ed., v. 180 192). Muḥammad thus became an "expected Mahdī", *mahdī muntazar*, like the Hidden Imām of the Twelver Shīʿites. For the position of the Kaisāniya see Shahrestānī's *Milal wa-Nihāl*, ed. on margin of Ibn Ḥatm, i. 196; Mukhtār, designated with Muḥammad, eventually founded the Mukhtāriya sect which was strict Shīʿite and upheld Ḥusain b. ʿAlī (Shahrestānī, p. 197). The whole episode is interesting as showing the extreme fluidity of the religious-political parties at the time. It also shows very clearly how the term *mahdī* gradually hardened from being a general honorific into a special designation, and even a proper name, for a restorer of the Faith in the last days.

The Hidden Imām of the Twelver Shīʿites, whose return (*raʿīʿa*) is awaited, is also called, by the Shīʿa, al-Mahdī. But his status is entirely different from that of the future restorer looked for by the Sunnites. The very essence of Sunnite Islām is that the Muslim people shall rule itself and can attain truth and certainty by its own exertions. When, at any time, its qualified scholars (*mawjūd*) have applied the three *uṣūl* — Qurʾān, *Sunna*, *ʿIyān* — to any point of Islām and have come to an agreement (*ijmāʿ*) on it, that point is assured and the acceptance of it as of faith is binding on all Muslims. The idea of an absolute Mahdī, therefore, as an infallible guide, suggests too much that *taḥdīd* [q. v.], which the later Sunnite theologians rejected. Sunnite Islām, as Goldziher has taught us, is a recoil against the idea of blind submission to any human teacher. Even ʿIsā, as restorer, is called *mahdī*, which is much less emphatic in its suggestion of infallibility. Yet the masses demanded an absolute restorer and it was among the masses that the belief in a Mahdī was, and is, strong. To return — the

Mahdī, or 'Isā when he comes as a restorer and ruler, will restore and apply that Consensus of Islām which has been reached by the successive generations of *mudjtahid*'s. Thus the Muslim people not only rules itself but is also the ultimate and infallible interpreter of the revelation through the Prophet. The Shi'ites, on the other hand, admit no such authority either in the Muslim people or in their own *mudjtahid*'s; by *Kar'ān*, *Sunnah*, *Ḥadīth* and *Ijmā'* no certainty can be reached. Certainty can only be gained from the instruction (*al-ḥim*; cf. Goldziher's *Streitschrift des Gasālī gegen die Bāṭinīya-Sekte*, passim) of the hidden *Imām* who is divinely protected (*ma'jūm*) against all error and sin and whose function it is to interpret Islām to men. The *mudjtahid*'s of the Shi'a are his intermediaries with men; but they in their intermediation may err. When the Hidden *Imām* returns he will rule personally by divine right. He is called a Mahdī, but it is in a different sense from any Sunnite use of that term. The idea of protection against error and sin (*ḥimā*; see article above, II, p. 543) seems to have been introduced into Sunnite Islām from the Ma'tasilite system by Fakhr al-Dīn al-Rāzī (d. 606 = 1209; see, further, Goldziher in *Isl.*, III, 238-245), but there it has been limited strictly to prophets. No "successor" (*khālifa*) can enjoy it and the Mahdī, for those Sunnites who expect him, is strictly an ultimate *khālifa* of the Prophet. For those Sunnites who look to 'Isā to play the part of the Mahdī he will not return as a prophet in his own right. It will not be a return (*radf'a*) in his case but simply a "descent" (*nuzūl*) and he will rule according to the law (*shari'a*) of Muḥammad; see article 'Isā above, II, p. 525. As all Shi'ite sects agree on this status of their *Imām* it is unnecessary to go into further details on them; see in general, article *SHI'ISM*.

Another important point of difference between Shi'ites and Sunnites as to the Mahdī is that he is an essential part of the Shi'ite creed but not of the Sunnite. That there will be a final restorer of the faith all Sunnite Islām believes as a part of its eschatology, but not that he will be called Mahdī. There is no mention of the Mahdī in either of the two *Ḥadīth*'s, of Muslim or of Bukhārī. Similarly Sunnite systematic theologians do not deal with him. The *Mawāḥiḥ* of al-Idrīsī has nothing on him; nor, indeed, on any of the Signs of the Hour (*āḥrāt al-ā'a*; cf. article *ḤIYAMA*). Nasafī in his *Al-Ḥadīd* has, of these, only al-Dajjāl (see article above, vol. I, p. 886) and the Descent of 'Isā; Taftazānī, in his commentary, gives ten Signs but not the Mahdī. Even al-Gharālī, a popularizing theologian, has nothing on the Signs in the last Book of his *Ḥikma*, that on eschatology, and has only a slight allusion in the Book dealing with the *Ḥadīd* (ed. 1334, L. 218; *Ḥikma*, the commentary of the Sayyid Murtazā, IV, 279) to the coming of al-Dajjāl, the descent of 'Isā and his slaying of al-Dajjāl; there is no mention of the Mahdī either in the text or in the commentary. Al-Gharālī's whole point in this passage is to stress the final falling away from the faith of all men to which reference has been made above.

It was, then, in the hearts of the Muslim multitude that the faith in the Mahdī found its resting-place and support. In the midst of growing darkness and uncertainty — political, social, moral, theological — they clung to the idea of a future deliverer and restorer and of a short millenium before the

end. This belief is, therefore, expressed in a multitude of later traditions, often expansions and expositions of better authenticated and older traditions, and often linking themselves to old stories of inter-tribal and inter-dynastic conflicts in the civil wars after the murder of 'Uthmān. We, therefore, find among them references to historical movements and sects which had failed in their time but had left remains, if only a name, to add to the confusion of this eschatological picture. These are gathered up in later edifying collections, such as the *Tadhkirah* of Abū 'Abd Allah al-Kurṭubī (d. 671 = 1272; Brockelmann, *G. A. L.*, I, 415) which we have in a *Muḥḥṭaṭ* by al-Shāṭirī (d. 973 = 1565; Brockelmann, II, 335; ed. Cairo 1324) and the *Majma' al-Anwār* of a modern writer, Ḥasan al-Idrīsī al-Hamawī (d. 1303 = 1886; Brockelmann, II, 486; many editions).

But the clearest presentation of the alleged basis for this belief is given by Ibn Khaldūn (d. 808 = 1406) in his *Muḥḥṭaṭ* (ed. Quatremère, II, 142 sqq.; Bulaq, folio ed., 1274, p. 151 sqq.; transl. by De Slane, II, 158 sqq.): "A section on the descendant of Fāṭima and what the people hold as to him and on clearing up the obscurity as to that. It has been commonly accepted (*majhūl*) among the masses (*al-kāfā*) of the people of Islām, as the ages have passed, that there must needs appear in the End of Time a man of the family of Muḥammad (*min ahl al-bayt*) who will aid the Faith (*dīn*) and make justice triumph; that the Muslims will follow him and that he will reign over the Muslim kingdoms and be called al-Mahdī. The appearance of al-Dajjāl and of the other Signs of the Last Day (*āḥrāt al-ā'a*), which are established in sound tradition (*al-ḥadīth*) will come after him. 'Isā will descend after his appearance and will kill al-Dajjāl or will descend along with him and aid him in that killing; and in Worship 'Isā will follow the Mahdī as his *Imām*. In support of this position traditions are used which some authorities on tradition have alleged and which others have disputed and often opposed with other narrations. The later *Shāfi*s have followed another course and method of proof in the case of this descendant of Fāṭima and often seek support, as to that, in the mystical "unveiling" (*kashf*) which is the basis of their method."

This is a very careful statement of the strictly popular drift in Ibn Khaldūn's time, a drift with which he evidently had no sympathy. He goes on to give formally 24 traditions bearing upon this restorer and adds six variants, criticizing the authenticity of them all. In only 14 of these is this restorer named Mahdī. For references to traditions on the Mahdī in Ahmad b. Hanbal's *Musnad*, Abū Dā'ūd's *Sunan*, Tirmidhī's *Ḥadīth* and Ibn Mādjā's *Sunan*, see Weninck's *Handbook of early Muhammadan Tradition under MAHDĪ*; in the *Majma' al-Sunna* of al-Baghawī, see II, 134 of ed. Cairo 1318 and in the *Mishkāt al-Majma' al-Sunna*, see p. 399-401 of ed. Dīhlī 1327. All these, however, have only a certain number of the mass of traditions quoted by Ibn Khaldūn. In the *Tadhkirah* of al-Kurṭubī, on the other hand, there is (p. 117-121 of ed. Cairo 1324) a further mass of luxuriant detail which Ibn Khaldūn had evidently disdained to incorporate; cf. his later reference to the town Māssa, p. 173, l. 7. In the *Tadhkirah* the Prophet, for example, foretells the future conquest and re-conquest of Spain by name. Al-

Qurṭubī died in 617 (1272) in the first years of the Nasrīds of Granada when Granada was the only part of Spain left to the Muslims. He and those around him felt grievously the need of such a restorer and Mahdī, and detailed traditions sprang up as to his coming. The situation called for a mightier and more specific champion of Islām than 'Isā whose business strictly was to kill al-Daḍḍajāl. Devotion, also, to the blood of the Prophet, of whom the Mahdī was to come, and which was so strong even in the Sunnite Maghrib, may have helped this. Al-Qurṭubī's Mahdī was to come from the Maghrib as opposed to the earlier ones who were to come from Syria or Khurāsān. He will come from a place in the Ḍjabal of the Maghrib, on the shore of the sea, called Māma; they will swear allegiance to him there and again, a second time, at Mecca. Here the tradition joins and attempts to explain an earlier one, given by Abū Ḥamad and quoted by Ibn Khaldūn (p. 148; see, also, below), telling of an expedition against Kalb and of the booty of Kalb, thus linking up with the earliest inter-tribal conflicts. This western Mahdī will also kill al-Sufyānī who is supported by Kalb. This is not the place to enter upon the story how the Marwānīd branch of the Umayyads supplanted their cousins, the Sufyānīds. But from the mystery connected with the voluntary abdication and speedy death of Mu'āwīya II, the succession of Marwān b. al-Hakam and the sudden death or assassination of Walid b. 'Uthā b. Abī Sufyān (*fu'na wa-ḥafā mayyis**, Ma'ādī, Paris, ed., v. 170) at the burial of Mu'āwīya II, there seems to have sprung an Imāmite party among the Umayyads (*ḥawā al-Umayyā min al-Imāniyya*, al-Ghazālī in Goldziher's *Streitschrift*, p. 12 of the Arabic text); yet this Walid appears later alive in Tabarī's narrative. In the account of Khālid b. Yazid in the *Aghāni* (xvi. 88) there is a story that he was the first to start this (*waḍa'a ḥabaru al-Sufyānī wa-kabharahu wa-ardā an yakhḍu l-l-ḥakīm fī l-ḥaḥ**, although that is also denied and a more general and earlier origin is asserted. In the civil war at the rise of the 'Abbāsīds one of the "white", i.e. Umayyad, revolts was in support of the claims of "the Sufyānīd of whom there used to be mention" (*wa-kān al-ḥakīm l-Sufyānī ḥaḍḥi kāna yuḥḥarnu*, Tabarī, *Ta'rikh*, Cairo ed., ix. 138, anno 132; Ibn al-Athīr, *Kāmil*, v. 207 of ed. Cairo 1301). Apparently the Sufyānīds continued to assert their claims in the under-ground Imāmite fashion against the Marwānīds and, later, the 'Abbāsīds, supporting themselves with traditions, as all the parties did. The details are exceedingly obscure for this was one of the lost causes of Islām and has left only a name and that name under the general opprobrium which fell upon the Umayyads in all later Islām, Sunnite and Shī'ite. An earlier stage in this appears in a tradition quoted by Tabarī (d. 224 = 838) in his commentary on Qur'ān, xxxiv. 50 (Part xxii., p. 63 foot). The Prophet mentioned a *disension* (*fitna*) which would arise between the East and the West. Then there would come forth al-Sufyānī from the Dry Wādī (*al-wādī l-yābī*); otherwise unknown; in Yāqūt, iv. 1000, "the Wādī of Yābī: from a man; it is said that al-Sufyānī will come from it in the End of Time" "in that outburst of his", or "when his time comes" (*fī fawrihī ḍālik*). Much is said of the armies he will send out and the destruction he

will spread, slaying 300 chiefs of the Banu 'l-'Abbās until Ḍjibrīl is sent against him and destroys him. His appearance, thus, for Tabarī, is not eschatological and there is nothing about the Mahdī and the End of Time. But in an apocalypse incorporated by Muḥyī 'l-Dīn Ibn 'Arabī in his *Muḥaddarat al-Abrār* and studied in detail, historically and astrologically, by Richard Hartmann in his *Islamische Apokalypse aus der Kreuzzugszeit* and dated by him about 376 (1180), this tradition is used, expanded and brought into the eschatological picture, and al-Sufyānī is finally killed by the Mahdī. A hundred years later al-Qurṭubī expands it still further and calls al-Sufyānī Muhammad b. 'Urwa. For other references on al-Sufyānī see Goldziher, *Streitschrift*, p. 52, note 1; Snouck Hurgronje, *Der Mahdī, in Verspreide Geschieden*, i. 155; De Goeje, *Frag. hist. ar.*, ii. 526; Van Vloten, *Recherches sur la domin. ar.*, p. 61; Lammen, *Le califat de Yazid*, i. 17; *Mo'awīya II ou le dernier des Sufyānīds*, p. 43.

It is obviously impossible to give in detail the traditions bearing on this restorer, but their types can be indicated and some recurrent characteristics. The great majority are put directly in the mouth of the Prophet, a very few go back to 'Alī. If there remain of the world a single day Allāh will lengthen it until he sends this restorer; the world shall not pass away; the Hour shall not come until then. He will be of the People of my House (*min ahl bāit*); of my kindred (*min 'itri*); of my Nation (*min ummati*); of the offspring of Fātima (*min walad Fātima*); his name will be my name and his father's name my father's name. He will resemble the Prophet in disposition (*ḥuḥ*) but not in appearance (*ḥaḥ*); this is put in the mouth of 'Alī. He will be bald of the forehead, hook-nosed, high-nosed. He will find the world full of evil and oppression and ungodliness; if a man say: "Allāh! Allāh!" he will be killed. He will fill the world with equity and justice; he will beat men until they return to Allāh (*al-ḥaḥ*). The Muslims will enjoy under him a prosperity the like of which has never been heard of; the earth will bring forth its fruits and the heavens will pour down its rain; money in that day will be like that which is trodden under foot and will be uncounted; a man will stand up and say: "O Mahdī, give to me", and he will say: "Take!" and he will pour into his robe as much as he can carry. It is suggested that this is a *tafsir*, legitimate or illegitimate, of a tradition in the *Sahīh* of Muslim: "There will come in the end of my nation a khalīfa who will scatter wealth, not counting it". See many references for this munificent khalīfa and the abundance of money in the last days in Weisbach, *Handbook of Tradition*, p. 1006, foot. But in this tradition, as in all Muslim and Bukhārī, there is no mention of the Mahdī. Again: the Mahdī is of us, the People of the House. Allāh will bring him suddenly and unexpectedly (*ḥaḥ yuḥḥiḥu-l-lāh fī ḥaḥ*). He will rule five, seven, nine years. There are frequent allusions to his coming in a time of disensions (*fitan*). These will be such that it will take a voice from heaven to still them, saying: "Your Amīr is so-and-so" (Ibn Khaldūn, p. 162). This is very like an ironical comment, but it is cited as a simple foretelling. In these earlier traditions he will come from the East (al-Mashrik; Khurāsān), from beyond the River (Oxus); in later times (e.g. Qurṭubī

and Ibn Khaldūn, p. 171—176) he was to come from the wide, unknown, lands of the Maghrib. The original Black Banners (*raʾyāt sūd*) tradition about the 'Abbāsids, apparently forged to lead them to support the 'Alids, does not mention the Mahdī (Ibn Khaldūn, p. 153), but in an evidently later form there is added, "for he is the khalīfa of Allāh, the Mahdī" (Ibn Khaldūn, p. 159). One long tradition (Ibn Khaldūn, p. 148) may be given entire as an illustration of a type and because of the later expansion and use of it by Ḳurṭubī: "There will arise a difference at the death of a khalīfa and a man of the people of al-Madīna will go forth, fleeing to Mecca. Then some of the people of Mecca will come to him and make him go out (apparently rise in insurrection) against his will and they will swear allegiance to him between the *Rukn* and the *Maḥṣan*. And an army will be sent against (or, "to", *ilā*) him from Syria but will be swallowed up in the earth in the desert (*al-baḥdā*) between Mecca and al-Madīna. Whenever the people see that, the *Abdāl* ("Substitutes" or "Nobles") of Syria and the *Aḥbāb* ("Companions" or "Secretaries"; see Lane, p. 2059) of al-ʿIrāq will come to him and they will swear allegiance to him. Thereafter there will arise a man of Quraysh with maternal grandfathers of Kalb. So he will send against them an army and it will overcome them and that will be the expedition (*duʿā*) of Kalb. And oh! the disappointment of those who will not have part in the booty of Kalb! He will divide the wealth and rule over the people according to the *sunna* of their Prophet and he will subject himself to the support of Islām. He will remain seven or nine years and then die and the Muslims will pray over him". This is evidently an echo of the early 'Alid conflicts and is not eschatological nor does it mention the Mahdī. But its motifs of the *Abdāl* and of the earth swallowing up in the desert (*al-baḥdā*) re-appear in other traditions which are concerned with the End of Time (p. 156, 161) and it is worked into al-Ḳurṭubī's tradition of the Mahdī from the Maghrib. Again, in a tradition evidently eirenic between the 'Abbāsids and the 'Alids, the Muslims are exhorted to "turn to the youth of the tribe of Tamīm (*alāikūn bi-l-fata-l-tamīmī*) for he will come from the East and will be the standard-bearer of the Mahdī" (Ibn Khaldūn, p. 162). But it is plain, too, that the doctrine of the Mahdī arose late and was not generally received. Thus the doctrine of al-Dajjāl is fixed in all Muslim eschatology, official and popular, but a tradition tries to assert that belief in the Mahdī is more of Faith than belief in him: "Whoever denies the Mahdī is an unbeliever but whoever denies al-Dajjāl is only a denier" (Ibn Khaldūn, p. 144). On the other hand a tradition asserts that there is no Mahdī but 'Isā. The upholders of the Mahdī tried to turn this by saying that it means that no one ever spoke in the cradle (*maḥd*; Ḳurʿān, iii. 41) except 'Isā (Ibn Khaldūn, p. 163; Ḳurṭubī, p. 118). For al-Ḳaṣṭānī, another restorer who is not mentioned in any of the collections of traditions used above, see article *Ḳaṣṭān*, above, vol. II, p. 630a and Snouck Hurgronje's article *Der Mahdī*, p. 12 (*Verspr. Geschr.*, i. 156).

The later, therefore, we go and the more popular are our sources the more fixed do we find the belief in the eschatological Mahdī. The more, too,

the Muslim masses have felt themselves oppressed and humiliated, either by their own rulers or by non-Muslims, the more fervent has been their longing for this ultimate restorer of the true Islām and conqueror of the whole world for Islām. And as the need for a Mahdī has been felt, the Mahdīs have always appeared and Islām has risen, sword in hand, under their banner. It is impossible here to give the history of these risings. See for details upon them the article *Mahdī* by Margoliouth in Hasting's *Encyclopedia of Religion and Ethics*, viii. 336—340 and Goldziher, *Verlesungen*, p. 231, 268, 291. For the Sudanese Mahdī, see especially Snouck Hurgronje's article *Der Mahdī*, reprinted in *Verspr. Geschr.*, i. p. 147—181. This contains, also, a fundamental discussion of the origin and history of the idea of a restorer in Islām; see also beneath, s.v. MUHAMMAD AḤMAD.

Bibliography: has been given in the course of the article. The three important treatments of the subject are undoubtedly those by Snouck Hurgronje, Goldziher and Margoliouth.

(D. B. MACDONALD)

AL-MAHDĪ, ABU 'ABD ALLĀH MUHAMMAD, an 'Abbāsīd Caliph. His father was the Caliph al-Manṣūr, his mother was called Umm Mūsā bint al-Manṣūr b. 'Abd Allāh and belonged to the family of the old Himyarite kings. When the governor of Khurāsān 'Abd al-Djabbār b. 'Abd al-Rahmān [q.v.] rebelled, the Caliph sent his son Muhammad al-Mahdī with an army against him; the real commander was Khazim b. Khuzaima. After taking 'Abd al-Djabbār prisoner, al-Mahdī by his father's orders undertook an expedition against Tabaristān which had to submit to him [cf. DABČVA]. In 144 (761—762) he returned to the 'Irāq where he married Raita, the daughter of the Caliph Abu 'l-'Abbās al-Saffāh. For the next few years he lived in al-Ray. 'Isā b. Mūsā had long been designated as successor to the throne but he was persuaded by al-Manṣūr to waive his rights in favour of al-Mahdī, and after the death of al-Manṣūr in Dhū 'l-Hijja 158 (Oct. 775) al-Mahdī was recognised as Caliph. He made himself very popular by his liberality and gentleness, although several cruel deeds are credited to him. For example he had the son of the vizier Abū 'Abd Allāh Mu'awiya b. 'Uḥaid Allāh [q.v.] executed on a mere suspicion and another vizier Ya'qūb b. Dāwūd who had fallen into disfavour with him was thrown into a prison so dark that he lost the use of his eyes. In 160 (776—777) a rebellion broke out in the always unruly Khurāsān; the leader of the rebels, Yūzaf b. Ibrāhīm, was however defeated and taken prisoner whereupon the Caliph had him executed in the cruellest fashion. The war against Byzantium was continued under al-Mahdī. In continual raids to plunder and devastate the marches, the two opponents sought to do each other as much harm as possible; there was however never any thought of permanently occupying any territory temporarily conquered. On the whole the advantage lay with the Muslims and in the early stages they advanced as far as Angora. Michael Lachanodrakon however with a Byzantine army advanced against them, destroyed the fortress of al-Hadath [q.v.] which however was soon rebuilt, and laid the land waste as far as the Syrian frontier (162—778/779). In the following year al-Mahdī equipped a great expedition in which his son Hārūn took part against

the Byzantines and in 165 (782) Hārūn took the field again, accompanied by the Caliph's favourite al-Rabī' b. Yūnus, later vizier. This time the Muslims penetrated to the Bosphorus and the Empress Irene was forced to make a three years' truce and to promise to pay an annual tribute. In Ramaḍān 168 (March/April 785), however, the truce was broken by the Byzantines and hostilities lasted till the death of al-Mahdī, without however any decision being reached. In his reign appeared the sectarian fanatic al-Muḥanna', who gave the Caliph's troops much trouble and sustained a long siege in a fortress in the region of Kaṣṣab, till finally he poisoned himself in 163 (779/780) in order not to fall alive into the hand of his enemies. In other parts of the empire also, heretics, especially real or alleged Manichaeans (*Zindīq*), were treated with the utmost severity. Al-Mahdī acquired great merit by his work for the peaceful development of his empire; new roads were laid down and the postal system improved; trade and industry reached a prosperity hitherto unknown and scholars were richly rewarded. At the same time there appeared an undesirable tendency to extravagance, which in the end was to prove really fatal, and with al-Mahdī began that expenditure of the revenues on useless luxury, which contributed not a little under his successors to the ruin of the 'Abbāsid empire. In time the Caliph fell under the control of his courtiers and in particular allowed himself to be guided by his chamberlain al-Rabī' b. Yūnus and especially by his wife al-Khaṣarūn, formerly a slave who was the mother of two sons, Muṣā and Hārūn. As early as 160 (776) homage had been paid to the former as successor designate under the name of al-Hādī in place of 'Isā b. Mūsā [q.v.] and six years later al-Mahdī had his younger son Hārūn proclaimed as successor to al-Hādī. But as Khaṣarūn preferred Hārūn and he was also supported by the Barmecides, the Caliph decided to alter the succession in favour of him; al-Hādī, who was then in Djuḡdān refused to agree. Al-Mahdī thereupon set out to discuss the matter with him in person, but died suddenly on the 22nd Muḥarram 169 (Aug. 4, 785) in Māsbadhūn at the age of 43. As a ruler he was undoubtedly one of the best among the 'Abbāsids.

AL-MAHDĪ. [See IEN TUMART.]

AL-MAHDĪ. [See MUHAMMAD AHMAD.]

AL-MAHDĪ, MUHAMMAD b. HISHĀM b. 'ABD AL-DJABBĀR b. 'ABD AL-RAḤMĀN AL-NĀSIR, ABU 'L-WALID, eleventh Umayyad Caliph of Spain. He held power on two occasions, first as successor to Hishām II, al-Mu'ayyad [q.v.], and again after Sulaimān b. Ḥakam al-Musta'in [q.v.], in the period of general rebellion which at the beginning of the ninth century immediately preceded the establishment through Muslim Spain of petty independent rulers, the *Mulūk al-Tumā'il*.

The third of the 'Amirid ḥājjib, 'Abd al-Raḥmān b. al-Manṣūr, surnamed Sanchol, from the moment he succeeded his brother 'Abd al-Malik al-Muḥaffar abandoned himself to all sorts of excesses and was able to take advantage of the weakness of the titular caliph, Hishām II al-Mu'ayyad, to get himself designated heir-presumptive. This decision at once aroused the indignation of various members of the caliph's family, thus excluded from the throne; they arranged that one of their number, Muhammad b. Hishām b. 'Abd al-Djabbār, a great grandson of 'Abd al-Raḥmān III al-Nāsir, who had many followers among the people of Cordova should head a rebellion. Advantage was taken of an expedition, which 'Abd al-Raḥmān Sanchol, following the example of his father and brother, was to lead in person against the Christians of Galicia, to raise the standard of rebellion. On the 16th Jumādā II, 399 (Feb. 15, 1009) Muhammad b. Hishām attacked the palace of Cordova where the caliph Hishām was with a small number of followers who had remained faithful to him. He captured the palace and at once took steps to make Hishām sign his abdication and had himself proclaimed caliph. The whole population of Cordova was in arms and plundered the 'Amirid town Madinat al-Zahira [q.v.]. All the treasure accumulated there including a vast sum in money was seized and brought to the new caliph who to destroy 'Amirid power for ever, demolished completely and set fire to the town which the great ḥājjib al-Manṣūr had built only a few years before. At the same time, Muhammad b. Hishām who had adopted the honorific *laqab* of al-Mahdī took steps to meet the counter-attack certain to be made by 'Abd al-Raḥmān Sanchol. Warned of what had happened in Cordova and of the destruction of al-Madinat al-Zahira, the ḥājjib, full of anxiety, pitched his camp at Kal'at Rabāḥ (Calatrava [q.v.]) and endeavoured to secure the fidelity of his troops who were mainly Berbers. He was soon forced to witness their defection and went to Cordova in the hope of finding new partisans there. But on the way back he was captured by emissaries of al-Mahdī in a monastery of the Sierra Morena and executed at the end of Jumādā II, 399 (March 1, 1009). His body was crucified in Cordova.

Muhammad al-Mahdī, once the power was in his hands, soon alienated the principal Berber chiefs of his army as well as his relatives of the Umayyad house. A rebellion against him was planned by his adversaries. The Berbers put at their head an Umayyad pretender, Hishām b. Sulaimān b. al-Nāsir, whom they proclaimed caliph with the title al-Rashid, and laid siege to Cordova. Al-Mahdī made a sortie, routed them and the pretender was killed. The Berbers then chose a new Umayyad prince, Sulaimān b. Ḥakam, and at the same time appealed for assistance to Sancho Garcer

and his Christians. In spite of all the efforts of al-Mahdī, the blockade of Cordova became more and more strict. He then tried to put on the throne the caliph Hishām II b. al-Mu'ayyad whom he had himself deposed and then given out that he was dead, but this was in vain. On 16th Rabi' I, 400 (Nov. 7, 1009) the palace of the caliph was in the hands of the besiegers. Al-Mahdī's only hope was to hide himself. The pretender of the Berbers, Sulaimān, received the oath of allegiance at al-Cordova and assumed the honorific title of al-Musta'in bi'llāh.

In the following month al-Mahdī was able to leave Cordova secretly and seek refuge in Toledo where he was well received by the inhabitants. He then sought and obtained an alliance with the Catalans (*Ifranjī*) who marched with him on Cordova in Shawwāl 400 (May-June 1010). The town was taken and the second reign of al-Mahdī began with a bloody persecution of all the Berbers in Cordova. To avenge the wrongs of their fellow-countrymen in the capital, the Berbers in the army of Sulaimān al-Musta'in returned to besiege the city. Al-Mahdī, betrayed by his servants, was slain during the siege in the palace in Cordova by some 'Amirid slaves on the 8th Dhū'l-Hijja 400 (July 23, 1010). His first reign lasted nine months, the second less than two.

MAHDĪ KHĀN, MĪKẖ MUḤAMMAD MAHDĪ

ASTARĖKHĀDĪ B. MUḤAMMAD, historian of Nādir Shāh of Persia, whose deeds he recorded in the *Tārīkh-i Djahān Guḡāy-i Nādir*; this work written in Persian is an excellent complement to those by James Fraser and Jonas Hanway on the conqueror. In it Mahdī Khān details the life of Nādir from his birth to his death while other Persian writers only deal with periods of it (e.g. Muḥsin b. Hanīf records only the expedition to India in his *Djahān-i Samān*; 'Abd al-Kārim Kashmūrī in his *Bayān-i Wāḡ* confines himself to the period from this expedition to 1784). W. Jones in his introduction to the *Tārīkh* of Mahdī Khān says that "the narrative of these perpetual rebellions... is somewhat dry and fatiguing"; as to the boundless praise which he bestows on the author's style, especially the descriptions of spring at the beginning of each year, it is exaggerated; in these descriptions all the images used had been employed to satiety for years before. It is true that some works of the period are still more hackneyed. Mahdī Khān himself gives free rein to this vexatious tendency in another version of history of Nādir which comes down to the year 1748, only: *Durr-i Nādir*, in a style uniformly artificial and elaborate. Malcolm (*History of Persia*) reproaches Mahdī Khān with having been too flattering to Nādir; he recognises however that

the historian has spoken frankly of the cruelties which were a blot upon the latter part of the reign. Mahdī Khān was Nādir's secretary. This is revealed not only in the accuracy of his details but in certain statements also. Mahdī, for example, says that he was with the prince when the latter received news of the birth of a grandson (transl. Jones i. 191); at the end of his reign Nādir sent him on a diplomatic mission to the Sulṭān of Turkey (ii. 179). H. Brydges (*Abd-er-Razzak, History of the Kajars*, London 1833, p. clxxxi, note) also credits him with secretarial duties. Besides his historical works, Mahdī Khān compiled his celebrated Eastern Turkish-Persian dictionary entitled *Sanglāk* (1173 = 1760) a valuable thesaurus enriched with examples taken from the Turkish classics (Mir 'Alī-Shīr, *Bāhur-Nāma* etc.); the publication of this work of which there are two abbreviations is highly desirable.

MASSÉ)

AL-MAHDĪ LĪ-DĪN ALLĀH AḤMAD, a title and name of several Zaidi Imāms of the Yaman.

About 250 years after al-Hādī Yahyā, the founder of the Zaidiyya [q.v.] dynasty of the Yaman, his direct descendant, the Imām al-Mutawakkil 'alā 'lillāh Aḥmad b. Sulaimān had, between 532 and 566 (1134—1170), restored the kingdom to its extent in al-Hādī's period, with Ṣa'da, Najrān and for a time also Zabīd and San'a'. A generation later (593—614 = 1197—1217) the hill country from Ṣa'da to Ḥamār was again ruled by one man, al-Manṣūr bi'llāh 'Abd Allāh b. Ḥama, not a descendant of al-Hādī but of a Rassid, i.e. one of the family of al-Hādī's grandfather, al-Kāsim b. Tabāḥabī, the spiritual founder of the Zaidiyya of the Yaman. Al-Manṣūr was twice able to enter San'a'; he was also recognised as Imām by the Kaspīd Zaidīs, the Nektawī; but even before his death his power had become restricted by the last Ayyūbid Sulṭān of the Yaman, al-Malik al-Mas'ūd, once more to the land of Kawkāhān. After his death his sons, first Muḥammad 'Izz al-Dīn, then the Imām Aḥmad al-Mutawakkil tried their fortune in the south, while one of al-Hādī's descendants and his namesake al-Hādī Yahyā b. al-Muḥsin created a petty imāmate around Ṣa'da. An attempt to unite the divided forces of the dynasty was made by

a. **AL-MAHDĪ LĪ-DĪN ALLĀH**; his full official title, one previously met with among the Zaidīs, was al-Mahdī Lī-Dīn Allāh, Aḥmad b. al-Ḥusain b. Aḥmad b. al-Kāsim b. 'Abd Allāh b. al-Kāsim b. Aḥmad b. Ismā'il Abu 'l-Barakāt. The uncertainty about his genealogy, that occurs may be explained from the fact that, as is also found in the superscription and signature to his *Khatīfat al-Kur'ān* (see *Bibl.*) there is a jump from Ismā'il Abu 'l-Barakāt to Ismā'il al-Dhādī (cf. de Zambaur, *Table B.*); he himself expressly says that his genealogy meets that of al-Manṣūr in al-Kāsim b.

Ibrāhīm, i.e. that he was a Rasūl. His reign of ten years during which the Yaman was harassed by plague and famine does not reveal a great ruler nor even any real and consistent authority, but gives a remarkable picture of conditions in South Arabia, when for want of a definite line of succession, success alone decided how far an 'Alid pretender was able to hold his own among his kinsmen and with any forces he could gather to make a stand against foreign foes. In 646 (1248) Aḥmad had himself proclaimed Imām in the fortress of Thula in the highlands of Ḥaḡūr, north-west of Sa'na', by arrangement with the Banū Ḥamza, i.e. the family of the late Imām al-Manṣūr, and with the benevolent tolerance of Asad al-Dīn Muḥammad b. al-Ḥasan, the brother's son of the first Rasūlīd Sulṭān, al-Malik al-Manṣūr Nūr al-Dīn 'Umar b. 'Alī b. Rasūl. But he was defeated by Nūr al-Dīn and besieged in Thula, and in 647 (1250) we find him having to fight with the Banū Ḥamza who had again deserted him. He was saved by the death of Nūr al-Dīn who was killed by his own Mamlūks in Zabīd, an event which is probably connected with contemporary Mamlūk attempts on the Egyptian Ayyūbids; Asad al-Dīn who wished to make his governorship in Sa'na' independent, is also accused of instigating it. The latter continued active under Nūr al-Dīn's son and successor al-Muḥaffar Yūsuf, rebelling and suing for peace alternately, sometimes on the side of the Imām and sometimes intriguing against him. Al-Mahdī, who in the meanwhile had bound Shams al-Dīn Aḥmad, son of the late Imām and chief of the Banū Ḥamza, to joint action with him, took Sa'na' in the beginning of Dhu'l-Ḥijja 1048 (July 1250); although harassed by Asad al-Dīn who held the fortress of Bīrāḡ, he was able to extend his rule to the south as far as Dhamār. But before a year had expired al-Mahdī had to abandon Sa'na'. Asad al-Dīn indeed sold him the fortress of Bīrāḡ but it was just on account of this that the final breach occurred between them. Asad al-Dīn again went over to al-Muḥaffar who had the governorship of the Yaman granted him by the Caliph al-Musta'īn, who is even said to have sent assassins (*Sira*, see *BIN*, fol. 237r) against the Imām. In a thoroughly Zaidī fashion, however, his fate was decided not by foreign foes but by the Zaidīs themselves. He quarrelled with his ablest and most ardent supporter, Shaikh Aḥmad al-Rasāz. With the help of the Rasūlīds, Shams al-Dīn made himself Imām of the Zaidīs in 652 (1254) in the old capital of Sa'na'. Al-Mahdī was again confined to his original territory. The very next year a Zaidī assembly pronounced his deposition, as unworthy. Of the 10,000 infantry and several hundred horsemen of the earlier fighting, he had still 2,000 infantry and 300 cavalry, but these also left him in the decisive battle of Wādī Shuwayḥ, which runs from Sa'na' parallel to the northwest to the Wādī Kharrāb. He was slain at the age of 42, his head sent round as a trophy and treated shamefully but finally buried with his body in the little Wādī of Qhū Bis (Dhūbaḥ). His inglorious end did not prevent his tomb from becoming a wonder-working shrine of grace; his biographer tells him the "martyr on the path of Allāh and the commander of the faithful" and many miracles are recorded of him even from his lifetime. His assassination at the beginning of 656 (1258) falls

in the same year as the execution of his old enemy, the last 'Abbāsid Caliph, al-Musta'īn. Legend says that the messenger who was to carry the news to Baghdād learned on the way that the caliph had met his fate on the same day.

While in his *Dawā* (see *BIN*) al-Mahdī collected the usual Zaidī arguments with the regular sayings from the Qur'ān and ḥadīth practically in the traditional form as a general appeal to support the Zaidī cause and himself, his *Aḥlīya* is a passionate personal protest against his deposition and an attempt to bring back his enemies especially Shams al-Dīn Aḥmad, to the loyalty they had sworn to him. This, he reproaches them, was an unrighteous as the recognition of Muḥammad's authority as a Prophet by the Umayyads.

The Shams al-Dīn Aḥmad above mentioned, who adopted the official title of al-Mutawakkil and recognised the Rasūlīds as his overlords, was at once challenged by a rival Imām in the person of Abū Muḥammad al-Ḥasan b. al-Wahhāz. The position remained the same for the next 50 years. The *Tatimmat* gives nine men, the last being al-Nāṣir Saḥb al-Dīn Muḥammad b. 'Alī, who succeeded in obtaining some recognition as Imāms in the period between al-Mahdī Aḥmad b. al-Ḥamza and

A. AL-MAHDĪ LI-DĪN ALLĀH AḤMAD b. YAḤYĀ a. AL-MURTAḌĀ b. Aḥmad b. al-Murtaḍā b. al-Mufaḍḍal b. Maṣūir b. al-Mufaḍḍal b. al-Ḥudjūdī b. 'Alī b. Yaḥyā b. al-Ḥasim b. Yūsuf al-Da'ī b. Yaḥyā al-Manṣūr b. Aḥmad al-Nāṣir. The last named ancestor was the son and second successor of Yaḥyā al-Ḥudjūdī. After the death of al-Nāṣir Saḥb al-Dīn, a ḡaḡī 'Abd Allāh b. al-Ḥasan al-Dawwārī worked with a few partisans on behalf of his sons who were still minors. But the 'Ulamā', anxious to consolidate the power which was gradually breaking up, placed in the mosque of Dhamār al-Dīn in Sa'na' three claimants: 'Alī b. Abī 'I-Faḍl, al-Nāṣir b. Aḥmad b. Muḥammad and Aḥmad b. Yaḥyā b. al-Murtaḍā and these three were to decide on one of their number. The choice fell on Aḥmad b. Yaḥyā, the youngest of them. In spite of his objections, he had to give in to their argument that "one who has gone deeply into learned problems with their subtle points, cannot be incapable of conducting worldly affairs". They at the same time promised him their advice and support (*Tatimmat*, fol. 72a). But on the very night on which he was proclaimed, the ḡaḡī al-Dawwārī succeeded in getting homage paid to his candidate (end of 795 = 1391). Aḥmad b. Yaḥyā and his adherents at once left the town in a hasty and withdrew to the hills to the Banū Shihāb, a clan of the Ḥamzānids. His abode was betrayed by one of the Shihāb. Fighting went on for 13 days in which the enemy lost about 50 men and the Imām 10. The latter then went farther into the mountains and his claims were recognised in Anīs also. Among his special supporters were al-Ḥādī b. al-Mu'ayyad, son of a former Imām, and Ibn Abī 'I-Faḍl. He was also asked by people in Sa'na' to receive their homage. But he was surprised by his enemies and as he would not interrupt his ritual ablutions and prayers to fight, he surrendered under a promise that no harm would befall him. In spite of this, as the *Tatimmat* tells us, which is however much biased in his favour, 80 of his men were massacred, he himself was taken to Sa'na', where he was kept a prisoner for 7 years

and 3 weeks (794–801). Liberated with the help of his wardens, he lived a further 40 years, "tossed up and down the country", devoting himself entirely to learning until he died in Zafar (end of 480 = 1437) of the plague in the Yamau, which had already carried off with many nobles including the rival Imām 'Alī b. Ṣāliḥ al-Dīn. According to the *Ta'limma* (fol. 75a) Ibn al-Murtada was born in 775 (1373) in Dhamār, according to other sources (see Rieu, in *Brit. Mus. Cat. Suppl.*, No. 365) in 764 (1363) at Aḥsā.

The choice of Ibn al-Murtada as Imām was a mistake, inasmuch as he lacked the necessary military and administrative ability. On the other hand he had another qualification in perfection. As a result of a careful education and a thirst for learning from his youth upwards, he wrote a great deal, dogmatic, legal and polemical; he was also a poet and worked at grammar and logic. The kindness of his wardens, who supplied him with ink and paper, enabled him to compose the law book *al-Asḥār fī Fiqh al-A'imma al-aṭṭar* (Berlin MS. 4919) on which he wrote a commentary. His most valuable work is still his theological and legal encyclopaedia, *al-Baḥr al-ṣāḥḥāh* (Berlin MS. 4894–4907) on which he likewise wrote a commentary. Although not the work of an original scholar, it is a rich and well arranged compilation, which deserves attention, if only for the part of the introduction which compares the various religions, as the distinctions between them are seen from quite a different point of view to that of Aḥwāl or Shahrastānī.

About 80 years after al-Mahdī Ahmad b. Yahyā, from 922 (1516), the Turks had begun to occupy Yaman and to hold it with varying fortunes (see Kūth al-Dīn al-Makki, *al-Baḥr al-Yamānī fī l-Faṭḥ al-'Oṭmānī*, in S. de Saey, in N.E., iv. 412–504, and A. Roigiers, *Histoire Yemenite sous Hassan Pascha*, Leyden 1838). In his struggle with them al-Manṣūr bi'l-lāh al-Kāsim b. Muḥammad, a descendant of al-Hādī in the 17th generation, was able about 1000 A.H. to restore the present Imāmate in Sa'nā (see A. S. Tritton, *The Rise of the Imams of Sa'nā*, Oxford 1925). Of his sons, Muḥammad al-Mu'ayyad succeeded him. Even in his reign but still more after his death in 1054 (1644), when his successor Ismā'īl, another son of al-Kāsim, was making his way with difficulty against his many brothers and nephews, one of al-Kāsim's grandsons began to come to the front, afterwards the Imām.

c. AL-MAHDĪ LI-DĪN ALLĀH AHMAD b. AL-HAẖM b. AL-KĀSIM. His father was not Imām but distinguished himself in the wars against the Turks and was also a scholar. In 1049 Ahmad appeared in the hills of Waḥāb; in 1051 he besieged Dhamār without success; in 1053 he was in Mecca with many members of his family on the pilgrimage. Just at the accession of Ismā'īl, he set out with another cousin against Sa'nā. At first he came to terms with the Imām, but then fought in different places for his own hand, e.g. at Thula and again in the Djebel Waḥāb. In 1070 he won Hadramawt for Ismā'īl, to which the Zaidīs had been summoned by the disputes for the throne. When in 1087 (1676) on the death of Ismā'īl he himself assumed the Imāmate, a nephew, al-Kāsim b. Muḥammad al-Mu'ayyad, proclaimed himself Imām and was recognised particularly in the remoter territory in the south towards al-Tihāma in Zabīd. A Zaidī assembly of leading Sharifs and 'Ulamā met, at

which Ahmad was with some difficulty recognised as the legitimate Imām. Although this did not mean that he enjoyed the authority of a sovereign, since his rivals and the other amirs remained as independent as before, yet peace and security reigned in the country. But Ahmad b. al-Ḥasan died soon afterwards in 1092 (1681) in al-Ghira near Shihām which had been built by the first Turkish conqueror Hasan Pascha. After the short and weak reign of his son al-Mutawakkil Muḥammad (to 1097 = 1686), family feuds broke out again. Among the later Imāms of this Qasimid dynasty another Ahmad b. al-Ḥusain b. al-Kāsim (from 1221 = 1806) again bore the official title of al-Mahdī li-Dīn Allāh.

AL-MAHDĪ 'UBAID ALLĀH, first Fātimid Caliph (297–322 = 909–934). His origins are obscure. He is also known as Sa'īd, and is believed to have been the grandson of the celebrated Persian sectarian 'Abd Allāh b. Maṭīn al-Kaddāh (the oculist), the Ismā'īli leader; but he claimed to be a true descendant of the Prophet through his daughter Fātima. By some he was supposed to be the brother of the twelfth Imām; according to others, the son of one of the strange "hidden" Imāms of the Ismā'īlīs. His spectacular rise to power was coincident with a sudden outburst of Shi'ite fervour centred in the vexed question of the legitimacy of the Caliphate, involving the mystical doctrine of the Imāmate and the appearance of a long-expected Mahdī (q.v.). It was the culmination of Ismā'īli propaganda and was in alliance with the Karmāṭian heresy of Arabia. Throughout the history of these times one can discern how in reality such zealous schismatics traded their esoteric doctrines and allegorical interpretations to the advancement of their own private political ends.

North Africa witnessed the crucial stages of the Fātimid rising; the prime instigator being apparently a Zāī, Abi 'Abd Allāh al-Shā'ī (q.v.), who proclaimed himself the precursor of the Mahdī. An ambitious factionist of undeniable ability and or-

gaining genius, in the end his own astuteness and love of power brought about his undoing. Nevertheless it was to him that 'Ubaid Allāh owed his throne and title. While the former was sowing the seeds of sedition amongst the Berber tribes of North Africa, 'Ubaid Allāh was making his way with his family from Salamiya in N. Syria to Kairawān (902 A. D.). In passing through Egypt disguised as a merchant he narrowly escaped imprisonment at the hands of a suspicious governor. Perhaps judicious bribery helped him on his way until he found himself with his son thrown by the Beni Midīr, supporters of the 'Abbāsids, into a dungeon in Sidjilmāsa. Meanwhile his generalissimo was operating elsewhere in his favour with the help of the wild Beni Kitāma whose services he had enlisted. A victorious entry into Sidjilmāsa marked the release of 'Ubaid Allāh — though there are suspicions that the real prisoner was slain before the surrender — and his proclamation as the true spiritual head of Islām, al-Mahdī, Commander of the Faithful. The Aghlabid monarch Ziyādāt Allāh III was overthrown and driven into exile in Egypt; while on Jan. 15, 910 A. D. (39th Rabi' II, 297) the new Mahdī and his son made their triumphal entry into Raqqāda.

Following his elevation to supreme control 'Ubaid Allāh entered on a policy of extending the bounds of his dominions. Not only had he enemies on all sides; even within his own camp lurked traitorous allies and fickle adherents. Those who had raised him from the dungeon found very soon that he was now their master. The estrangement between him and his chief supporters is said to have originated in the disappointment felt by the latter that he was incapable of working the miracles expected of such a divine personage. Abū 'Abd Allāh was forced to play a subordinate part, and becoming embittered thereby, began spreading sedition amongst the unsettled Berber tribesmen. But the Mahdī was quite capable of dealing with the situation. A Shaikh of the Kitāma Berbers, heading a deputation asking for clear proofs of his spiritual claims, was summarily beheaded. Shortly after this he waylaid Abū 'Abd Allāh and his brother 'Abd al-'Abbās and had them assassinated (298 = 911). The other brother Abū Zaki was sent to Kairawān with a letter ordering his execution. As the Mahdī himself said in justifying such acts against quondam supporters: "Satan caused them to slip and I have purified them by the sword". Riots ensued, but the bold handling of the populace by the Mahdī and his personal courage averted disaster and firmly established the secular power, if it did not demonstrate the spiritual virtues, of the Fatimid dynasty.

'Ubaidallāh's foreign policy led him to despatch Hāsān b. Kulāb of the Beni Kitāma as governor to Sicily in order to further the Fatimid cause. The Huwara and Luwata tribes of Tripolitans were vanquished, while the Mahdī's forces were also victorious against Muhammad b. Khazar at Tiharet. But following Abū 'Abd Allāh's death, the Beni Kitāma, who were murmuring against the Mahdī, were attacked in April 912, chiefly by their old enemies, the people of Kairawān who never liked their savage manners. The Beni Kitāma rose in a general revolt and appointed a new Mahdī, named Karīb; but after considerable fighting they were defeated. The Tripolitans were also involved in a struggle with the Berbers (300 A.H.).

But the most important events of this reign were the attacks on Egypt. The Mahdī's son, Abū 'I-Kāsim, was sent in command of the forces; while a fleet operated under Khubasa. Tripoli, Barka, and then Alexandria (302 = 914) were taken, until the victorious army was checked outside Fustāt by the eunuch Mānis, the Egyptian commander. A second expeditionary force (916 = 917) repeated the feats of the previous one and devastated the Delta and ravaged the Faiyūm, only to be checked once more at Old Cairo, while the fleet of 80 vessels was destroyed at Rosetta (307 = 920) by the Khalifa's smaller but more efficient fleet under Greek mariners. Once more the Fatimid ranks had to withdraw. Nevertheless the dominion of the Mahdī extended from the borders of Egypt to the confines of the Idrisid stronghold in Morocco. His fleets spread terror throughout the Mediterranean, Malta, Sicily, Sardinia, and the Balearic Islands felt his influence; while his secret-service agents were to be found throughout Andalusia. A revolt in Sicily in favour of an Aghlabid prince Ahmad b. Ziyādāt Allāh affected his sway in that island, but his administration generally was strong and secure, albeit rigorous and unmerciful. The year 926 found him taking up his residence in the new city he had founded on the Tunisian coast, named after himself al-Mahdiyya [q. v.] (the "Africa" of Froissart). This became his capital instead of Kairawān (16 mls. distant). The new town was founded in 303 (916) and was situated on a projecting peninsula called Djastrat al-Fār. It was strongly fortified with high and massive walls, and colossally heavy gates, enclosing the palace and the royal barracks. A natural harbour was improved to shelter 100 vessels of war. On the mainland lay the faubourg of Zawila intended as a place of residence for traders and the general public. After a reign of 25 years 'Ubaid Allāh died on the 4th March 934 (14th Rabi' I, 322) at the age of 63, and was succeeded by his son Abū 'I-Kāsim under the title of al-Kā'im bi-Amrallāh.

AL-MAHDĪ, a dynasty of Zabīd in the Yaman. When the founder of the dynasty, 'Alī b. Mahdī [q.v.], died in the middle of 554 (1159) soon after the taking of Zabīd, the power of the dynasty which had been concentrated in his personality, was seriously threatened, especially as his sons Mahdī, 'Abd al-Nabī and 'Abd Allāh quarrelled. It is not quite clear whether Mahdī at first obtained the throne (so 'Omāra in Kay [see *Bibl.*], p. 129) or whether he ruled jointly with 'Abd al-Nabī, the latter taking charge of civil and the former of military affairs (so Khazradj in Kay, p. 294). In any case, in the wars abroad we find Mahdī appearing as conqueror of Lahīj in 556 and of Djanul in 558. He died, at the end of 558 or beginning of 559 (end of 1163) in Zabīd. 'Abd al-Nabī now became sole ruler but although driven from power for a brief period by 'Abd Allāh he was able to consolidate his position and in continual fighting was able to retain the kingdom in Yaman and the great treasure which his father had accumulated. His power extended from al-Tihāma over the mountains of Dhu 'l-Kalā and the towns south of Djanul and Ta'izz. He celebrated his victories in poems, for example that in 560 (1164) over Wahhā, son and successor of Ghānim b. Yahyā of the Ḥasanid branch of the Sulaimānids, who after being driven out of Mecca had founded a dynasty in the mountains around Zafār and Ta'izz. When 'Abd al-Nabī besieged 'Aden in 568 (1172) the Zurā'idis there [cf. BANU 'L-KARĀM] obtained the support of a great coalition led by the Hamdānids 'Alī b. Ḥatīm in Sa'nā' which included the Yām tribes related to the Hamdānids and Zurā'idis. 'Abd al-Nabī suffered an annihilating defeat in 569 at Ibb and again farther south near Ta'izz. Although 'Alī b. Ḥatīm could not carry the war into al-Tihāma as the Beduins would not follow him, 'Abd al-Nabī had to give up the siege of 'Aden. On his return to Zabīd, he met a stronger enemy and thus met his end. In the same year the Ayyūbid Tūrānshāh, sent by his brother Salāḍin, invaded Yemen. Guided by the Sulaimānid al-Kāsim, the brother of Wahhā who had fallen in battle, Tūrānshāh took Zabīd after two days' fighting on 9th Shawwāl 569 (May 14, 1174). 'Abd al-Nabī and his two brothers Ahmad and Yahyā were thrown into prison. Nine months later when Tūrānshāh on his campaign of conquest in the mountains of the Yaman was at Dhu 'l-Jibla west of Ibb, he heard of troubles in al-Tihāma and had all three brothers executed in Zabīd.

AL-MAHDĪYA, a town on the east coast of Tunisia, is the "town of Africa" of the European historians of the Middle Ages. It is built between Sousse and Sfax on a small peninsula more than a mile in length and less than 500 yards in breadth, which terminates the cape of Africa and is connected to the mainland by a narrow isthmus "much as the hand is joined to the wrist". The site was without doubt occupied by a Phoenician factory and by a Roman settlement, which it has not been possible to identify. Its name comes from the Shī'ī Mahdī 'Ubaid Allāh, who in 300 (912) founded and fortified it, after having consulted the oracles and foretelling the dangers which would threaten the Fātimid dynasty. A rampart of rubble of which a few towers are in existence ran along the coast towards the south; the wall protected the port, an ancient Phoenician harbour excavated out of the rock, which the ships entered under a large gate flanked by two strong defensive works. A little farther on, towards the point was the naval arsenal. From the side of the isthmus, the rampart, which is very strong and strengthened by round and square towers, had a wall in front of it and was pierced by a gate which still exists. Flanked by two salients with inclined sides entrance is gained under an arch 45 yards in length (*al-ḥiṭṭa, al-haḥḥā*). The highest point of the peninsula is occupied by an old Turkish *ḥaḥḥa*, built on the probable site of the palace of Mahdī. In front towards the west, probably lay the palace of his son al-Kāim. The town owes to the Fātimids also a great mosque built near the sea, of which considerable remains still exist, notably an ornamental porch. A customs-house was at hand (*dār al-muḥāsahhā*); beyond the peninsula the suburb of Zawla (ancient Zella?) of which the site is still known and where remains have been found, amongst other things glass-ware.

The Mahdī 'Ubaid Allāh after leaving Raḡkāda near al-Kairawān, came to live at al-Mahdiyya in the year 308 (921). Having become the capital of the empire, the town prospered. It was, according to 'Idhārī, the richest city in Bīrḥārī. The son of 'Ubaid Allāh, al-Kāim, was besieged there for over five months (January–September 945) by Abū Yazīd, "the man with the axe", a Khurijī agitator, who starting from Tawwaz made himself master of the whole of Ifrīkiya. The failure of the blockade of al-Mahdiyya was the first stage in the downfall of the heretic. More than a century after, al-Mahdiyya, which had been the refuge of the Fātimids when in danger, served also as an asylum to their unconquered vassals, the Zirid Amirs, the victims of the Hilālī invasion. In the year 449 (1057) the Zirid al-Mu'izz abandoned al-Kairawān for al-Mahdiyya. From that place he and his successors set themselves to recover the lands they had formerly ruled. From there they also turned their activities to the sea. Al-Mahdiyya, where the corsairs were now equipped, became and was to remain

down to modern times the most active centre of Tunisian piracy. The expeditions of the Muslim corsairs provoked attacks from the Normans of Sicily, Pisan and Genoan raids on the town along the coast. In 1087, al-Mahdiya fell into the hands of the combined Christian forces. The Normans again took it in 1148. Then they were blockaded in it by land and by sea during the conquest of Ifrikiya by the Almohad 'Abd al-Mu'min. Having become once more a Muslim town, it was retaken and pillaged in 1180. Then it concluded with William II, the King of Sicily, a treaty of peace. The Normans were able to trade with it. During the ruinous campaigns of the B. Ghaniya [q.v.], Almoravid Amirs, al-Mahdiya was for a short time in the hands of an adventurer 'Abd al-Karim al-Ragragi who took the title of Caliph. These troubles led to the installation in Ifrikiya of a governor of the Almohad family of the B. Hafsi. Al-Mahdiya was henceforth one of the principal towns of the kingdom of the Hafsiya. Its government was generally confided to one of the sons of the sovereign of Tunis.

The persistent activity however of the Corsairs provoked in the year 1390 a new Genoan expedition supported by Charles VI, King of France, who sent his galleys and his knights against "cette malheureuse forte ville d'Afrique" (Froissart). Al-Mahdiya resisted but was forced to pay a tribute to the Christians. In 1539, after the conquest of Tunis by Charles V, the town received a Spanish garrison. In the following year the corsair Dragut took it by surprise. Taken prisoner by the fleet of Andrea Doria, then released, Dragut came back and installed himself in al-Mahdiya. On the 8th September 1550, Doria seized the town from Dragut "prince of Africa", after a memorable siege. Charles V offered the charge of it to the Knights of Malta but they refused it, so he ordered it to be dismantled. Al-Mahdiya, after falling once more into the hands of the Muslims, arose from its ruins and remained under Turkish rule until the sixteenth century, the nest of corsairs, the terror of Christian merchants that it had been for nearly 900 years. It is now a quiet little town of about 10,000 inhabitants, who live by fishing and by the product of their oil-works.

AL-MAHDIYA, formerly called AL-MA'MURA, a town of Morocco, on the Atlantic coast at the mouth of the Wadi Sabu (Sebou), built on a rocky promontory which dominates the valley of the river. Situated on the southern extremity of the plain of Gharb and 20 miles to the North East of Salé (Sala) it enjoys a geographical position of the first importance. A port is shortly to be created here for ships of heavy tonnage, which cannot sail up the Wadi Sabu as far as the river port of Kenitra (Ar. al-Kunaitira, "the little bridge") situated 6 miles as the crow flies from the mouth of the river.

It is generally agreed that the site of al-Mahdiya corresponds to that of one of the earliest Phoenician settlements founded by Hanno in the fifth century B.C. on the Atlantic coast of Morocco: — the factory of Thymisteria. Nothing is known of the later history of this foundation and we have to wait till the fourth century A.D. (tenth A.D.) to get the first mention in Arab writers of the town at the mouth of the Wadi Sabu under the names al-Ma'mura ("the populated, the flourishing"), Halik ("the mouth") al-Ma'mura or Halik Sabu. According to the chronicler Abu l-Kasim al-Zayyani [q.v.] the modern town was founded by the short-lived dynasty of the Banu Ifren [q.v.] which settled on the Atlantic side of Morocco at the end of the tenth century of our era. In the second half of the XIIth, the Almohad Sultan 'Abd al-Mu'min built there one of his dockyards for his navy (*dār al-jihāz*). Later, down to the XVIth century, al-Ma'mura's history is obscure — it was a small trading centre to which European ships came for the products of the country.

Al-Ma'mura, when the Christians of the Iberian peninsula made their offensive against Morocco, was one of their first objectives; on June 24, 1515 a large Portuguese fleet anchored at the mouth of the Wadi Sabu and a landing force of 8,000 men occupied the town without a blow being struck. The Portuguese made themselves a strong base in al-Ma'mura, built fortifications there, remains of which still exist, but they were only able to hold it for a short time. The Muslims drove the Christians out of al-Ma'mura at the end of the same year, inflicting very heavy losses upon them.

Al-Ma'mura re-enters history when at the end of the XVIth century it became a formidable nest of European pirates, who under the leadership of an English captain, Mainwaring, practised piracy along the whole Atlantic coast and became a terror to the seafaring centres of Europe. This state of things was put an end to when Spain, which in 1610 had occupied the port of Larache (al-'Arāsh, q.v.), a little farther north, made a landing at al-Ma'mura in August 1614, after negotiations with the Moroccan ruler, the Sa'dian Mawlay Zaidan. The town was taken and the Spanish fleet withdrew leaving a strong garrison of 1,500 men. The captured town was given the name of San Miguel de Ultramar.

The Spanish occupation of al-Ma'mura was to last 67 years, during which it was several times fiercely attacked by the Muslims, particularly the "volunteers of the faith" (*Muhammadīn*), who mobilised to drive the Christians from the various points on the coast where they had established themselves under the active leadership of the chief al-Ayāsh of Salé. The principal attacks on San Miguel de Ultramar were delivered in 1628, 1630

and 1647. In 1681 (1092 A.H.) the 'Alawid Sultan Mawlay Ismā'il [q.v.] laid siege to the town and finally took it by storm. He then gave it the name of al-Mahdiyya; the name of al-Ma'mūn only survived as that of the great forest of cork-oaks which lies between Salé and the lower valley of the Wādī Sabāh. — It may be noted that for a few years at an earlier date the name al-Mahdiyya had been borne in Morocco by the little military station founded by the Almohad Caliph 'Abd al-Mu'min on the site of the future Ribat al-Fath (Rabat), on the south bank at the mouth of the Wādī Salā (the modern Wādī Bu-regreg) (cf. the article RABAT). Al-Mahdiyya was occupied by French troops in 1911.

Considerable remains survive at al-Mahdiyya, dating from the brief Portuguese occupation, the Spanish occupation or from the date when it was definitely retaken by the Muslims. Around the citadel (*qasba*) runs a continuous rampart with a ditch. These defences are entered by two gates; — one very massive, with two Arabic inscriptions, dates from the XVIIth century. The other, a simple postern, dating from the Spanish occupation, opens on the steep slope which runs down to the river. Inside beside a few hovels and a little mosque are the ruins of the Muslim governor's palace of the XVIIth century. Between the foot of the citadel and the bank of the Wādī Sabāh for a length of 200 yards and a breadth of about 40 may still be seen buildings consisting of a series of square chambers completely isolated from one another and each protected by a double wall. These were probably granaries, which need not be earlier than the end of the XVIIth century, and are not, as has been suggested, of the Phoenician period.

MĀHIYA (A.), technical term in metaphysics, quiddity; frequently used as equivalent of *ḡawhar*, substance. Abū Hanīfa, Dīrār (and al-Nadīdār) used it to designate the pure divine essence; cf. 'Abd al-Kāfir al-Baghādī, *al-Farq bain al-Firāq*, p. 201—202; al-Shahrastānī, *Kitāb al-Mīl wa'l-Niḡāl* Cairo, I. 114; *Kitāb al-Bad' wa'l-Ta'wīl*, ed. and transl. Huart, i. 85. On the question whether the quiddity is identical or not to existence (*wuḡūd*) cf. Dīrjānī, *Sharḥ al-Mawāḥiḥ*, Cairo, p. 92.

(L. Massignon)

MAHKAMA. [See MEKEME.]

MAHMAL (or more correctly: MAHMIL, A.), the name of the splendidly decorated empty litters, which since the XIIIth century have been sent by Maḥammadan princes on the Hajj to Mecca, to display their independence and claims to a place of honour at the ceremony. The camel which bears the mahmal is not ridden but led by the bridle. It goes at the head of the caravan and is regarded as its sanctifying element. What extravagance the rivalry of princes led to is shown by the mention of a mahmal adorned with much gold, pearls and jewels, which was

sent in 721 (1321) from the 'Irāk to Mecca (*Die Chroniken der Stadt Mekke*, ed. F. Wüstenfeld, II, 1859, p. 278). The mahmal which is most esteemed, that which accompanied the pilgrim caravan from Cairo, is described by Lane as a square wooden framework, with a pyramid at top and covered with black brocade richly worked with inscriptions and ornamental embroidery in gold, in some parts upon a ground of green or red silk; it is bordered with a fringe of silk and silver balls are fixed to the corners and to the top of the pyramid. On the front of the pyramidal roof is a view of the Ka'ba embroidered in gold. In the brief description given by Burckhardt of the Egyptian mahmal it is added that it is decorated with ostrich feathers. According to him there was only a prayer-book in the empty interior, which on its return was exhibited in Cairo and kissed by the people; according to Lane on the other hand there are two silver receptacles in the mahmal which contain two Qur'āns, one in a scroll, the other in book form. The mahmal is carried by a fine tall camel, which after the pilgrimage is spared any further work. On their arrival in Mecca the mahmals are hailed with joy and led through the crowded streets in a solemn procession after which they go with the pilgrims to 'Arafāt where they occupy a position reserved for them. It used to be generally supposed that the covering of the Egyptian mahmal was used to cover the tomb of Muhammad or the Ka'ba but this is wrong; the *kinā* is of course taken to Mecca with the great pilgrim caravan but it has nothing to do with the mahmal.

According to Maḥrīn the custom of sending a mahmal to Mecca was first introduced in 670 A. H. by the Mamlūk Sultan Balbars but others attribute it to the Sharīf Abū Numayr; it is also said that it was a princess going on the pilgrimage in a splendid litter that gave Balbars the idea of sending one with the pilgrim caravan. This is however only a story; and it is a much more important question whether the custom did not arise at an earlier date and whether it did not originally have a direct religious significance. It is natural to recall the portable sanctuaries of the Arabs and the mahmal particularly reminds one of the description which Muṣil (*Die Kultur*, 1910, p. 8 *sq.*) gives of the "Abū Zhur al-Markab" of the Riwāla tribe: a framework of thin pieces of wood adorned with ostrich feathers which is fastened on to the saddle of a pack-camel and is the visible centre of the tribe. This would at any rate lead us to the practical significance of the later mahmal, a visible sign of independence and claim to suzerainty of the various Muslim states. It is just this significance which gives the mahmals a certain historical interest as political changes and rivalries are reflected in them in course of time. There have occasionally been rulers who by sending mahmals gave expression to their endeavour to obtain recognition as sovereigns and protectors of the sharīfs, only to be soon driven from power again by others. That the Egyptian mahmal came to obtain a place of honour, that from Syria being the only other at all comparable to it, was a result of the political influence of the Mamlūk Sultans. It is noteworthy that Ottoman rule made no alteration in this respect and an attempt to send a mahmal from Constantinople met with no success. In 1807 an interruption was

caused by the conquest of Mecca by the Wahhābīs who forbade this empty pomp so hateful to them; but this ceased when they were driven out and Muḥammad 'Alī's rule again gave the Egyptian maḥmal pride of place.

After the World War the sending of a maḥmal from Syria stopped. Difficulties arose between the Egyptian government and King Husain (1915—1924) regarding the powers of the heads of a field-hospital which was to accompany the maḥmal as well as regarding the ceremony of its reception, which twice resulted in the maḥmal not being sent.

When Ibn Sa'ūd had become king of the Hijāz, long negotiations took place over the maḥmal. The Wahhābī ruler insisted on the music which usually accompanied the maḥmal being omitted and all sort of superstitious customs being dropped; he also protested against the armed escort as a denial of his sovereignty. The attempt made in 1926 to harmonize the demands of the two sides came to nothing; a fight broke out between the Iḥwān of Ibn Sa'ūd and the Egyptian soldiers which was only stopped by the personal intervention of Ibn Sa'ūd. Since then the Egyptian government has not sent a maḥmal, but neither does it any longer send a new *ḥijma* for the Ka'ba to the Ḥaddj.

(Fa. Buhl.)

MAHMÜD I, twenty-fourth Ottoman Sultān, reigned 1143—1168 (1730—1754). He was born on the 3rd Muharram 1108 (Aug. 2, 1696), the son of Mustafa II — the *Sifill-i 'Osmānī* gives the date 7th Ramaḍān 1107 (April 10, 1696) — and had spent his life in seclusion up to his accession. He came to the throne through the mutiny of the Janissaries under Patrona Khalil, a mutiny which cost the grand vizier Ibrahim Paṣha, the Kapudan Paṣha and the Kiaya Beg their lives, and forced Sultān Ahmad III to abdicate in favour of Mahmūd; these events took place on the 17th Rabi' I, 1143 (Oct. 1, 1730). The mutiny, which really had the sympathy of most of the 'ulama' and seems to have been in the nature of a social revolution (Jorga), was only suppressed after some time through the efforts of the Kilar Agha Beṣhir; before its suppression a certain number of appointments to important offices dictated by the rebels had to be conceded and the many palaces built in the luxurious reign of Ahmad III were allowed to be pillaged. After the Janissaries had been pacified by considerable largesse on the accession of the Sultān, Beṣhir Agha succeeded in plotting the death of Patrona Khalil, who was assassinated on Nov. 15, 1730. The Kilar-aghā continued to exercise a preponderating influence on affairs of state; the Sultān, who was by nature more interested in literature and in the erection of more or less useful buildings, did nothing to throw off this influence, which on the whole was for the good of the state. One of the consequences

of this system was the very frequent changes of grand viziers — there were no fewer than 16 in Mahmūd's reign — but the state possessed a number of able men who worked for the good of the empire in the offices of grand vizier, *re'is efendi* and *k'aya beg*. The state finances were kept in good order, as much by the confiscation of any great fortunes amassed by high officials as by a financial system which made no distinction between the public treasury and the personal revenues of the Sultān. The situation abroad was also favourable, especially after the peace of Belgrade in 1739, which secured to Turkey a fairly long period of peace in Europe.

At the beginning of the reign, Turkey was at war with Persia. The campaign of 1731 was favourable to the Turks, who reconquered Kirmānshāh and took Hamadān (battle of Koridjān, Sept. 15), Urmīya and Tabriz; however, by a peace signed on Jan. 10, 1732 by the *ser-asker* and grand vizier Topal 'Oḥmān Paṣha, Turkey gave up Tabriz and Hamadān. This peace neither pleased the powers in Constantinople, who replaced the grand vizier by Hekim Zāde 'Alī Paṣha [q.v.] nor Tahmāsp Quli Khān, who on his return from Herāt had dethroned Shāh Tahmāsp and was making new preparations for war. On Oct. 6, 1732, the Porte issued a formal declaration of war and in December a Persian army invaded Mesopotamia, took Kirkūk and laid siege to Baghḍād; the great battles of this campaign were those of Duldjailik on the Tigris, where the Persians were defeated (July 19, 1733), and that of Kirkūk, where a week later the Turks suffered a defeat which involved the death of the *ser-asker* Topal 'Oḥmān Paṣha. In the same year, the Persian war produced a conflict with Russia, provoked by the Khān of the Crimea's march through the Caucasus to reinforce the Turkish troops fighting against Persia. Russia declared she could not allow the passage of the Tatars through the country of the Kumuk and the Kaitak, which she regarded as under her authority; the Khān's force was therefore held up and several battles were fought in Daghestān between Turks and Russians. The negotiations opened at Constantinople showed more and more that a war with Russia would be inevitable and they were finally broken off by the siege and capture of Azof by the Russians in March 1736. Meanwhile the war with Persia, which had ceased in 1734 on an armistice being concluded by the Paṣha of Baghḍād, had been resumed in 1735 when Ahmad Kōprillā was appointed *ser-asker*. The campaign was unfortunate for the Turks. They lost a number of towns in the Caucasus; however the development of affairs in Persia where Tahmāsp Quli, afterwards Nadir Shāh, proclaimed himself king on Dec. 1, 1735 in his camp on the Caucasian front, was favourable to the peace negotiations which were begun at this time. These negotiations ended in a peace signed at Constantinople on Oct. 17, 1736; the frontiers of the two countries remained as they had been fixed in the time of Murād IV. In the same year a Russian army invaded and laid waste the Crimea, although negotiations still went on, first at Constantinople and then in the country. Austria, posing as mediator, took an active part in these negotiations, which were finally broken off at the Congress of Niemirow in Aug. 1737, when it became evident that Austria was really Russia's ally, so that Turkey had to

deal with two adversaries. The war began badly for the Turks who lost Nish to the Austrians and Oczakow to the Russians. Nish however was won back in Oct. 1737. During the next two years fortune was rather on the side of the Turkish armies under the grand vizier Yegen Muhammad Paşa. The conclusion of the war was marked by the appearance of the forces of the grand vizier Hâdîdî Muhammad before Belgrade in July 1739. It was before this town that the famous peace of Belgrade (Sept. 18) was negotiated with the assistance and mediation of the French Ambassador, the Marquis de Villeneuve, by which Turkey again obtained possession of the town. Russia was included in the same treaty and had to promise to demolish the fortifications of Azof.

This ending of the war in a way very advantageous to the Porte was followed by a long period of peace with the states of Europe, which, as a result of the Seven Years' War, had no time to devote to plans for the partition of Turkey. From 1743 to 1746 there was a new Persian war. It began through the demands of Nâdir Shâh to have the Persian Shî'a recognised as a fifth *Mazhab*, that of the *Djafariya*; the Porte at first gave an evasive answer but after they had become convinced that Nâdir Shâh intended to make himself lord of Mesopotamia, the Shaikh al-Islâm gave a *fatwâ* against the recognition of the *Djafariya*. In 1743 Nâdir Shâh took Kirkük and laid siege to al-Mawsil, only to be forced to raise it after a while. In the following year the scene of hostilities shifted to the Caucasus. The Porte then attempted to support a Persian pretender of the Safawid family, whom it sent off with great pomp to Kars; in 1746 the Turkish ser-asker, the former grand vizier Yegen Muhammad, fell in the battle of Murâd Tepe in Kurdistan. During all this time, peace negotiations were going on in Constantinople and conducted through the Turkish commander-in-chief. During these negotiations Nâdir Shâh had dropped his demand for the recognition of the *Djafariya* and finally agreement was reached on the basis of the frontiers of Murâd IV (Sept. 4, 1746). In July of the same year the all powerful Beshir Agha died at the age of 96; in spite of the efforts of the grand vizier al-Saliyid Hasan Paşa, his successor Beshir Agha the younger succeeded in procuring the same influence in affairs. This new regime only lasted till 1752 when there was reason to fear a new outbreak of discontent among the Janissaries and the 'ulama' also; the Sultân seems therefore to have decided to sacrifice the Kizlar Agha by having him treacherously assassinated along with some other favourites (July 10, 1752). Two years later, on Friday, Dec. 13, 1754, Mahmûd himself died suddenly on his way from the mosque; he was buried in the Yeni Djami'.

The Sultân left a pleasing memory behind him; it is even said of him that he took a personal part in the affairs of state (*Sijill-i 'Othmânî*, l. c.) although the sources give little evidence of this. He did not continue the splendours of the court of his predecessor, respecting public feeling which had led to the latter's fall. Mahmûd is especially celebrated for the large number of buildings he had erected; in Constantinople he built no less than four *cehennem* and he began the building of the Nûr-i 'Othmânî mosque. This activity was equally displayed in the provinces. This Sultân also acquired considerable merit by founding four

libraries in the capital, those of Aya Sofia, the Walide Djâmi'i mosque, the Fatih mosque and the Çalata Serâyi. The reign of Mahmûd is further marked by the display of a very skilful diplomatic activity by the Porte, conducted by several very able *re'is efendis*, like Râghib Paşa [q. v.]. They had profited by the lessons of European diplomats and also by the advice of the famous French renegade Bonneval, who lived in Constantinople from 1729 till his death in 1747 and introduced several useful reforms into the army. But in spite of appearances, the Ottoman empire was far from being a strong power as the historian Djewdet Paşa (*Ta'rih-i Djewdet*, 1302 ed., i. 63) has very justly remarked; therefore, in the period of anarchy that followed in Persia the death of Nâdir Shâh, the Porte consistently declined to interfere in Persian affairs. From time to time minor revolts contributed to weaken the strength of the empire; besides the always dangerous Janissaries, there were several risings in Anatolia (e.g. Sarf Beg Oghlu in Aidin in 1739). It was also in the reign of Mahmûd I that the Wahhâbîs first began to give trouble to the government. In Egypt the Mamlûk begs succeeded in ruling the country in practical independence, in spite of the energetic steps taken by Râghib Paşa, when the latter was governor of this province. As to foreign relations, it is interesting to note that it was in this reign that France, which became very influential after the peace of Belgrade, succeeded in 1740 in obtaining the celebrated capitulation which became in time the most important document on the extra-territorial rights of foreigners in Turkey.

Bibliography: The principal Turkish sources are the imperial historiographers *Ta'rih-i Sâmi ve-Shâhîr ve-Sâhîr*, Constantinople 1198 (years 1143—1156), *Ta'rih-i 'Isal*, Constantinople 1199 (year 1157—1165) and the beginning of the *Ta'rih-i Wâqif*, Constantinople 1219 (beginning in 1166); then there are the reports of certain embassies like the *Ta'rih-i we-Tawfiq* of Râghib Paşa on the peace negotiations with Nâdir Shâh in 1736, a manuscript which was used by von Hammer. There are also several works still in manuscript on the history of the reign of Mahmûd I, noted by Babinger, *G.O.W.*, Leipzig 1927, p. 332. The same author (*op. cit.*, p. 289) also quotes a series of monographs in Turkish which deal with the wars of Nâdir Shâh. For these wars, a complementary source is the biography of Nâdir Shâh by Mahdi Khân and Hanway, *A Journal of Travels from London through Russia into Persia*, 1753. — General sketches of the reign of Mahmûd I are given in von Hammer, *G.O.W.*, Pesth 1836, iv. 266—482; Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, v., Götting 1857, p. 629—847; Jorga, *Geschichte des Osmanischen Reiches*, Götting 1911, iv. 409—462. (J. H. KRAMERS)

MAHMÜD II, the twenty-ninth sultan of the Ottoman Empire, reigned from 1808 until 1839. He was the son of 'Abd al-Hamid I and was born on the 20th July 1784 (13th Ramadan 1199, cf. *Sijill-i 'Othmânî*, i. 73). He succeeded to Muḥammad IV on July 28, 1808, directly after the tragic events, which had led to the assassination of Salim III [q. v.]. Mahmûd himself had a narrow escape from the fate of Salim. Until his coming to the throne he had lived in seclusion and during the preceding year his intercourse with the

dethroned sultan had undoubtedly exercised a great influence on Mahmud's ideas, making him appear afterwards as Selim's avenger.

The grand-vizierate of Mustafa Bairakdar Pasha, the consequence of the latter's victory, lasted only until November 1808; a revolt put an end to his reformatory tyranny and to his life. The next years were taken up by the war against the Russians, who had occupied the Danubian principalities in December 1806. Endeavouring to continue their conquests on the southern side of the Danube, the Russians met with more resistance from the Turks than had been expected; it was, however, due principally to the increasing danger of a Franco-Russian war, that the Turks obtained the peace of Bucarest, signed on May 28, 1812, and negotiated, on the part of the Turks, by Ghâlib Efendi. By this peace, Turkey had only to cede Bessarabia to Russia. In the meantime the new sultan had inaugurated a policy of internal consolidation of the empire, a policy which lasted until the Greek revolt in 1820 began to absorb all the strength of the state. He put an end to the almost independent position of the *ayans* in Rumelia and to that of the numerous *derebey*s in Anatolia, especially to the families of the Kara Oghlân Oghlu in Sarukhân and Aidin and of the Çapan Oghlu in the region of Kaizariye [cf. DERRBY]. The sultan's authority was equally reestablished in southern Mesopotamia after the death of Sulaiman Pasha of Baghdad in 1810. The aid of Muhammad 'Ali Pasha of Egypt had to be invoked to repress the Wahhâbi power in Arabia; Mekka and Medina were reconquered in 1813 by Tâsun Pasha [cf. *REVUE*]. In Serbia it was only after years of trouble that an arrangement could be attained, which left Miloš as supreme *knez* of this principality. The submission of Bosnia only took place after 1821. On the contrary 'Ali Pasha of Yanina succeeded in keeping his strong position during this period; not till 1820 were the Turkish troops able to lay siege to Yanina. In Constantinople the sultan took severe measures to maintain order, especially against the dangerous element of the Janissaries.

During this time the diplomatic difficulties with Russia, relating to the interpretation and the execution of the peace treaty, continued, especially with regard to the regime in Moldavia and Wallachia. These difficulties were to become a real danger after the Greek insurrection had broken out.

This insurrection, being in a way a consequence of the autocratic regime of 'Ali of Yanina, and secretly favoured by Russia, began in 1820 with the appearance of Alexander Ipsilanti in Rumania and a feeble revolt in Morea, instigated by Demetrios Ipsilanti. The first reactions on the Turkish side were numerous executions at Constantinople, including that of the Greek patriarch. Then Turkish troops entered Rumania, where Ipsilanti was easily beaten. As this military action provoked sharp protests from Russia, whose ambassador Stroganow left Constantinople, the Turkish troops were soon withdrawn for the greater part. But in 1822 the insurrection in Morea spread quickly; Tripolizza and Corinth fell into the hands of the insurgents. In the same year 'Ali of Yanina was murdered. In May 1823 the Acropolis of Athens was surrendered by the Turks; the latter, however, remained on the whole stronger than the Greeks. In order to avoid all difficulties with Russia, the

Porte had evacuated in 1823 the whole of Rumania, while declaring that, henceforward, she would suffer no more foreign intervention in her internal affairs. But Russia continually came forward with new claims (e.g. the division of Greece into three principalities, after the model of the principalities on the Danube); at the same time the other European powers no longer remained indifferent towards the Greek affairs, partly because public opinion began to be influenced by the philhellenic movement, and partly because they feared that Russia might gain too much profit from the weakness of the Ottoman Empire. In these years Turkey had even to sustain a war with Persia occasioned by Persian incursions into Kurdistan; this war was ended by 1823. During the years 1824 and 1825, while Turks and Greeks were waging a guerilla war by land and sea, and while amongst the Greeks there reigned complete anarchy, nothing decisive happened. The situation was only changed by the death of Alexander I of Russia (December 1, 1825) — which brought to the throne Nicolas I, much more inclined to make short work of the Turks — and by the combined action in Morea of Egyptian and Turkish troops under the command of Ibrahim Pasha, son of Muhammad 'Ali. This action was crowned by complete success, for Morea was entirely subdued, and on April 23, 1826 the fortress of Missolonghi capitulated after a siege of more than six months.

The Turkish successes encouraged the sultan to realise his long considered project to form a new army, trained and equipped after the European fashion. These new troops were recruited from the Janissaries. Their inauguration took place on June 4, 1826 and occasioned, ten days afterwards, the revolt of the Janissaries which ended in the complete and bloody extermination of these once famous troops (June 16). The extermination of the Janissaries is an act that will always be connected with the name of Mahmud II; it made a formidable impression in the whole country and the reform party — who spoke of it as the *wak'a-i bahariye* — considered it as the beginning of a new era of prosperity. The first consequences, however, were disastrous; the strength of the empire was weakened to a degree, which made itself felt more and more in the development of the relations with Russia. Hoping to get rid of the everlasting demands of Russia, the Porte had given still more concessions by the convention of Akkerman (September 25, 1826), but soon afterwards followed an agreement between Russia, Great Britain, France and Prussia with regard to the Greek question (July 7, 1827), which prevented the Turks from the suppression of the insurrection. Though directed, since the beginning of 1827, by the fanatical Pertev Efendi as Re'is Efendi, Turkish diplomacy was powerless against this new intervention. One of the consequences of the agreement of the powers was the destruction of the Turco-Egyptian fleet in the Gulf of Navarino, on October 10, 1827, without previous declaration of war, by the English, French and Russian naval forces. Subsequently the diplomatic relations with these countries were broken off, but, when war actually broke out, it was only with Russia.

The Russian war, inaugurated by a declaration of war by Russia (May 7, 1828), was particularly disastrous for Turkey. The Russians immediately

occupied Rumania and crossed the Danube, while on the Oriental front they took Kars and Akhalcik in the Caucasus. In 1829 the debacle was completed by the occupation of Adrianople by General Diebitch, on August 19. Thus, by the peace treaty of Adrianople of September 14, 1829, the Porte was obliged to make all the concessions required of her. Russia gave back nearly all her conquests, but obtained the payment of a heavy war indemnity. As to Greece, Turkey had to accept the decision of the great powers, which meant absolute independence. In the following years the new frontier and the future relations between Turkey and the new state were regulated by special conventions.

The principal political facts of the nine last years of Mahmud's reign were the conflict with Muhammad 'Ali of Egypt and the Russian intervention, which was its consequence and put Turkey in a state of dependence on Russia. The activity of Muhammad 'Ali [q. v.] began in 1831 with the invasion by Ibrahim Pasha of the territory of the pasha of Akko; this town was besieged and fell in May 1832. Within a short time Damascus and Aleppo also submitted to Ibrahim. The military measures of the sultan were unable to stop the advance of the Egyptian troops, who marched from Syria into Asia Minor; the Turkish General Rashid Pasha was beaten by them in the battle of Konya (December 21, 1832) and was himself made a prisoner. The Porte then was obliged to accept the aid offered by Russia and the mediation of France, the result of which was an agreement, concluded on April 8, 1833 at Kutahya, with Ibrahim Pasha; Muhammad 'Ali had to be recognised as pasha of Syria while the province of Adana was given to Ibrahim. In the meantime Russian troops had been landed in the Bosphorus. These were only withdrawn after the conclusion of the notorious treaty of Hünkâr İskelesi, signed on July 4, 1833 between Turkey and Russia. The treaty was a defensive alliance and contained a secret clause by which Turkey undertook to prevent any eventual enemies of Russia from entering into the Black Sea. Thus Turkey became still more politically linked to Russia, without the other powers being able to hinder this.

On the other hand Mahmud continued with tenacity the consolidation of his authority in the interior. The principal agent of this policy was the former grand-vizier Rashid Pasha, appointed governor of Siwas after his return from Egyptian captivity. He succeeded in establishing order in eastern Anatolia and in Armenia, especially by subduing the Kurdish tribes. After his death, in 1836, he was replaced as ser-asker by Hafiz Pasha. The latter, unlike Rashid, was in favour of the introduction of modern tactics into the Turkish army; in his successful expeditions in the north of Mesopotamia he was accompanied by the Prussian lieutenant von Molke, one of the army instructors who had been sent by the King of Prussia. These military measures of Mahmud had also in view the strengthening of the frontier on the Syrian side, in order to be prepared for a new conflict with Muhammad 'Ali. This event happened only after 1838, when Khuraw Pasha [q. v.], the zealous reformer and ancient enemy of the Egypt, came again into power as president of the new Turkish cabinet. The next

year Hafiz Pasha, appointed again as ser-asker in Kurdistan, crossed the Euphrates and occupied Aintab, but he was completely beaten by the Egyptians under Ibrahim Pasha, in the battle of Nizib, on June 24, 1839. This battle left Turkey again in a desperate condition, just a week before the death of Mahmud himself.

During the same period the sultan had to suppress dangerous and repeated revolts in Albania and Bosnia; the situation in Serbia had remained quiet after a *khatt-i sharif* of 1830. In 1837, the situation in the interior had become sufficiently stabilised for Mahmud to undertake a journey in his European provinces, which journey was an unheard of breach with the traditional customs of the Ottoman rulers. It was to be one of his last public acts. Mahmud died on July 2, 1839 at Constantinople in his palace of Candilja, above Scutari.

It is quite clear, from the many descriptions we possess of this sultan, that he was a strong personality, who made his own ideas prevail in the government of his empire. In his immediate entourage only few first rate men were to be found. But the task which Mahmud had set himself, of reforming the empire after the European model was nearly super-human in the extremely unfavourable political circumstances that prevailed during his reign. To which must be added the enormous difficulties presented by the traditional institutions and views existing in all ranks of the Turkish people of those days (cf. e.g. the severe judgement by von Molke, p. 434 *seq.*). Mahmud has often been compared, as a reformer, with Peter the Great, though the conditions were quite different. On the other hand he has been blamed for having commenced his reforms where he should have finished ("par la queue"), for demolishing things existing without being capable of constructive activity; especially in Turkey of to-day Mahmud is judged severely (cf. Halide Edib, *Memoirs*, London 1926, p. 237 *seq.*). It is very probable, however, that without the drastic measures of this sultan, the following period of the *Tanzimat* [q. v.] would have been an impossibility (cf. Rosen, l. 300 *seq.*). The most important reform was that of the army; it brought about the extermination of the Janissaries, but the formation of an army after the European fashion did not succeed till much later; the most zealous reformers, such as Khuraw Pasha, had only very vague ideas about what it really meant. The most useful work was done by the Prussian military instructors. By sending young officers to military schools in Western Europe, Mahmud prepared, however, a more efficient re-organization. In the government system there gradually developed a cabinet of ministers of state after the Western fashion; at a certain period in 1837, the ancient title of *padî-i şâhan* was even temporarily abolished, and the ministers received the new title of *wakil*. Moreover, by a *firman* of October 1826, Mahmud had opened the way to the development of a better and more dignified position of the state functionaries; this *firman* abolished the sultan's right of confiscating the possessions of the functionaries after their death. It was, however, a long time before a new corps of real and loyal functionaries came into existence. The men whose services Mahmud was obliged to use were too often highly corruptible, a circumstance of which the other powers,

especially Russia, took advantage in a large degree.

MAHMUD II lies buried in the *türbe* that bears his name; it was constructed in Stambul on the Diwan Yolu by his son and successor 'Abd al-Majid.

Bibliography: The Turkish historical works deserve more attention than has been paid so far to them. The more accessible ones are: Djawdat Pasha's *Ta'rikh*, Constantinople 1303, vol. ix—xii, comprising the period from 1223 to 1241, and its continuation, the *Ta'rikh* of Ahmad Lutfi, Constantinople 1290—1306, vol. i—vi, comprising the period from 1241 to 1255. Other printed sources are: Ahl Bakr, *Wak'at-i 'Izzade*, Constantinople 1332; *Ta'rikh-i 'Asfi*, Constantinople n.d.; Mahmud As'ad, *Uv-i Zafar*, Constantinople 1243, a monograph on the extermination of the Janissaries; Mahmud Thuriyā, *Nakhat al-Wak'at*, Constantinople (cf. also Babinger, *G. O. W.*, p. 387). European general treatments of this period: Zinkeisen, *Geschichte des Osmanischen Reiches in Europa*, vii., Gotha 1863, p. 561 sqq. (until 1812); Rosen, *Geschichte der Türkei*, Leipzig 1866, vol. 8 (after 1826); Jorga, *Geschichte des Osmanischen Reiches*, v., Gotha 1913, p. 182—387. A valuable contemporary source is H. von Moltke, *Briefe über Zustände und Begebenheiten in der Türkei*, Berlin 1883. (J. H. KRAMERS)

MAHMUD I, NĀSIR AL-DIN, was Sulṭān of Bengal from 1446 to 1460. When the ferocious tyranny of Shams al-Din Ahmad Shāh, grandson of the usurper, Rājā Khān, or Ganesh, could no longer be borne, he was put to death, and Nāsir Khān, one of his amirs, seized the throne, but after a reign of one week was slain by his amirs, who would not submit to one of their own number. Their choice fell on Mahmūd, who was a descendant of Ilyās, the founder of the old royal house, and he was raised to the throne. He reigned with justice and clemency for twenty-six years, and restored and beautified the city of Gaur. On his death in 1460 he was succeeded by his son Bārhaq Shāh.

MAHMUD II, NĀSIR AL-DIN was the third of the Habashī, or African Sulṭāns of Bengal. He succeeded his father in 1494, but was a mere puppet in the hands of one minister after another. His first minister, an African entitled Habashī Khān, was slain by a rival, another African known as Malik Badr the Madman, who afterwards slew Mahmūd, he having occupied the throne for no more than six months, and usurped the throne.

Bibliography: See MAHMUD I of Bengal. (T. W. HAIG)

MAHMUD III, GHUYATH AL-DIN, was one of the eighteen sons of 'Alā' al-Din Hussain Shāh of Bengal. He remained loyal to his eldest brother, Nāsir al-Din Nusrat Shāh, throughout his reign, but after his death slew his son, 'Alā' al-Din Firuz Shāh, in 1535, and ascended the throne. During a troubled reign of five years he never ruled the whole of Bengal. Shīr Khān Sur, who ultimately ascended the throne of Dīhlī, was already powerful in Bihār, and allied himself to Mahmūd's rebellious brother-in-law, Makhdūm-i

'Ālam, who was governor of Hājīpur. Shīr Khān defeated an army sent against him by Mahmūd, but Makhdūm was less fortunate, and was slain in another battle. Shīr Khān then forced the Teliyāgarhi defile, invaded Bengal, and besieged Mahmūd in Gaur in 1537. Mahmūd appealed to Humāyūn Shāh of Dīhlī for aid, and Shīr Khān was recalled to Bihār by a rebellion in that province, but left his son Djalāl Khān to continue the siege of Gaur. In April, 1538, Mahmūd was forced to evacuate Gaur, and fled, leaving his capital and his sons in the hands of Djalāl Khān. Shīr Khān, returning from Bihār, then pursued Mahmūd, overtook him, forced him to a battle, and defeated him. Mahmūd was wounded and fled, and nothing more is known of him.

MAHMUD, SHIHAB AL-DIN, the fourteenth king of the Bahmanī dynasty of the Dakan, was raised to the throne at the age of twelve on the death of his father, Muhammad III, on March 22, 1482, and remained under tutelage throughout his reign of thirty-six years. The ascendancy of his first minister, Malik Hasan Bahri, Niẓām al-Mulk, who had been responsible for the death of Mahmūd Gāwān [q.v.] was distasteful to the Foreign amirs of the kingdom, at the head of whom was Yūsuf 'Adil Khān of Bidjapur, and the assassination of this minister, ordered by the young king, embittered the relations between him and the Dakani party, which attempted to dethrone him in 1487. The plot was discovered and frustrated, and was followed by a massacre of the Dakanis, ordered by the king. But the youth could not stand alone, and was completely dominated by his next minister, Kāsim Barid al-Mamālīk, a Turk. In 1490 Ahmad Niẓām al-Mulk, governor of Djunār and son of Malik Hasan Bahri, proposed to Yūsuf 'Adil Khān and Faṭh Allāh 'Imād al-Mulk of Berār that they should proclaim their independence of the king of the Dakan, and both accepted the proposal. In the numerous wars of the reign Mahmūd was no more than a figure-head, being carried into the field by his minister, who issued orders without any pretence of consulting his nominal master's wishes. Mahmūd made more than one attempt to free himself from the control of Kāsim Barid al-Mamālīk, and of his son Amir 'Alī, who succeeded him in 1504, but each attempt resulted only in the tightening of his bonds. In 1512 Sulṭān Kūlt Kūlb al-Mulk, who had been appointed governor of Telīngāna in 1494, followed the example of the other provincial governors and declared himself independent, and in 1518 Mahmūd died, worn out with debauchery. Four puppets followed him on the throne of Bidar, and his line was finally extinguished in 1527, when Amir 'Alī Barid al-Mamālīk assumed the royal title in Bidar.

'Umar, *Zafar al-Walīk bi-Shahzāda wa-Aḥlā*, ed. E. Denison Ross under the title of: *An Arabic History of Gujarat*, London 1910. (T. W. HAIG)

MAHMUD, *Nasir al-Din*, Sultan of Delhi, was the son of Shams al-Din Iltutmish by the daughter of Kutub al-Din Albak [q. v.]. In 1246, when the nobles at Delhi were growing weary of the sloth, incompetence, and tyranny of Mas'ud, Mahmud, then about 18 years of age, was governor of Bahraich, and hastened secretly to the capital when he learned that the throne was likely to become vacant. On June 10, 1246, Mas'ud was deposed and thrown into prison, where he died shortly afterwards, and Mahmud, his uncle, was enthroned in the Green Palace. He was an amiable and pious prince, with a taste for calligraphy, which he displayed in making copies of the *Kur'an*, but as a ruler he was a mere cipher. He was well served by Ghiyath al-Din Balban, whose daughter he married, and who ultimately succeeded him on the throne. Balban restored the royal authority in the Pandjab, the Dugh, Mewat, Multan, Nagaur, and northern Malwa, but his enemies had been busy during his absence from court, and on his return attempted to assassinate him. He frustrated this design, but was banished from court. The nobles soon grew weary of the arrogance of the eunuch Raihan, who had supplanted him, and Balban and other nobles assembled their troops at Bhatinda, Raihan and the king marched against them, but as most of the nobles in the royal camp were in sympathy with Balban, who hesitated to attack the king, serious hostilities were avoided, and the royal army retreated. The nobles at court now prevailed upon the king to dismiss Raihan, who was banished, first to Budain, and afterwards to Bahraich, a reconciliation between the king and Balban was effected, and they returned together to Delhi in January, 1255. Raihan was soon discovered to be in communication with Kutub Khan of Bayana, who had secretly married the king's mother, and the eunuch was captured and put to death. In 1256 Mahmud and Balban marched against Kutub Khan, who fled, and when he was pursued, in 1257, into Simur, again fled and took refuge with Khablu Khan, the rebellious governor of Multan and Uch. Balban marched against the rebels, but they evaded him and marched on Delhi. Finding, however, that preparations had been made to receive them, and that Balban was menacing their retreat, they fled, and in 1259 joined an army of Mughuls which was invading the Pandjab. It was feared that the Mughuls would attack Delhi, but they retired without crossing the Sutlaj. Order was then again restored in the Dugh, and in the following year the Meos of Mewat expiated by a terrible punishment a long series of crimes. Their country was ravaged, and 250 of their principal men were brought to Delhi and put to death with torture. In a second expedition 12,000 of them, men, women, and children were put to the sword. Meanwhile negotiations had been in progress with Hulsag Khan at Tahriz, and in 1260 a Mughul envoy reached Delhi and promised, in his master's name, that raids into India should cease. At this point a hiatus of nearly six years occurs in the history of the Muslims in India, and the next fact which is recorded is that Mahmud died on Feb. 18, 1266, and was succeeded by Balban.

G. S. A. Ranking; Nizam al-Din Ahmad, *Tahsil-i Akhbari*, text; all in the Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Kaim Firishah, *Gulshan-i Ibrahim*, Bombay lith. ed. of 1832. (T. W. HAIG)

MAHMUD II, *Nasir al-Din*, was the grandson of Firuz Shah, of the Tughluq dynasty, and was placed on the throne of Delhi on March 8, 1393, on the death of his elder brother Humayun (Sikandar Shah) and was never more than a puppet in the hands of intriguing ministers. The eunuch Sarwar, deputed by him to quell a Hindu rebellion in Awadh, received the title of Sultan al-Shark, and never returned to Delhi, but established his independence in Jhawnpur. Another *amir*, Sarang Khan, became virtually independent in the Pandjab, and the minister Sa'adat Khan, resenting his supersession by Mukarrab Khan, set up Mahmud's cousin Nugrat as a rival king within the narrow limits of the kingdom of Delhi. In 1398 Mallu, the brother of Sarang Khan, murdered Mukarrab Khan and assumed complete control of Mahmud, who conferred on him the title of Ikbil Khan. Nugrat Shah was then driven into the Dugh, but the kingdom of Delhi was in a state of utter confusion when, in October, 1398, news was received that the *Amir Timur* [q. v.] had crossed the Indus and taken Multan. He reached Panipat on Dec. 2, and meanwhile the capital had been filled with fugitives, fleeing before him. The resources of the kingdom were so restricted that no adequate preparations could be made to resist him, and Mahmud and Mallu were filled with terror; but such troops as could be collected were assembled within the walls, and on Dec. 15, the king and his minister marched forth to meet the invader, who had crossed the Djanna from his camp at Loni. They were utterly defeated, and fled by night, Mallu to Baran in the Dugh, and Mahmud to Gujjarat, and afterwards to Malwa. Timur left Delhi on Jan. 1, 1399 when his work of plunder, devastation, and bloodshed was finished, and Mahmud's rival, Nugrat Shah, occupied the ruins of the capital, but was expelled by Mallu, and driven into Mewat, where he shortly afterwards died. Mallu returned to Delhi in 1400, and in 1401 was rejoined by Mahmud. In 1402 Mallu, carrying Mahmud with him, marched to Kannauj to attack Ibrahim Shah of Jhawnpur, but Mahmud, weary of the domination of Mallu, fled and joined Ibrahim, who, however, received him so ill that he again fled, and established himself in Kannauj. Mallu then made a fruitless attempt to recover Gwalior, and returned to Kannauj in order to recapture Mahmud, but was baffled by the strength of its defences and returned to Delhi. He attempted to subdue Khidr Khan of Multan, but was defeated and slain by him in November, 1405. After his death Dawlat Khan Lodi became the virtual ruler of Delhi, and at his invitation Mahmud returned to his capital. The rest of his reign was spent in attempts to re-establish his authority in Samana, Sambhal, and Baran, and to punish Ibrahim of Jhawnpur for his reception of him when he had fled from Mallu; but he was obliged to conclude an inglorious peace with Ibrahim, and his success in other directions was neutralized by the advance of Khidr Khan, who pretended that Timur had appointed him his viceroy in India, and in 1406 stripped Mahmud of all his possessions beyond the walls of Delhi except the Dugh, Rohtak, and

Sambhal. In 1409 and 1410 Khidr Khan captured Rohilk, Narnaul, three towns to the south of Delhi, and Firūzbād, and besieged Mahmūd in his capital, which was only saved by a famine which compelled the invader to retire. In 1413 Mahmūd died, the last of his line, at Kaithal, after a nominal reign of twenty years.

Bibliography: 'Abd al-Kādir Badā'uni, *Muntakhab al-Tawārīkh*, text, and translation by Ranking; Niẓām al-Dīn Ahmad, *Tadhkirat-i Akbari*, text, all in the Bibliotheca Indica series of the Asiatic Society of Bengal; Muhammad Kāsim Firāhī, *Gulshan-i Ibrāhīmī*, Bombay lith. ed. of 1832. (T. W. HAIG)

MAHMUD, SHAH SHARQI, succeeded his father, Ibrahim Shah, on the throne of Dĥawnpur in 1436. In 1443 he obtained permission from Mahmūd I of Mālwa to punish Nasir Khān, governor of Kālpī, which was a fief of Mālwa, for breaches of the law and customs of Islām committed by him, but Mahmūd of Mālwa repented of his complaisance, and war broke out between Mālwa and Dĥawnpur. Hostilities, which were indecisive were terminated by a compromise. In 1452 Mahmūd Sharqi, on the invitation of some disaffected nobles, attacked Dĥlī in the absence of Bahadur Lodi, but was defeated and compelled to retreat to Dĥawnpur. The foolish act of aggression served only to arouse in Bahadur a sense of the danger to Dĥlī of the existence of an independent kingdom in Awadh and in 1457 he marched to attack Mahmūd, who, however, died before he could meet him in the field.

Denison Ross under the title of: *An Arabic History of Gujarat*, London 1910; Muhammad Kāsim Firāhī, *Gulshan-i Ibrāhīmī*, Bombay lith. ed. of 1832; Niẓām al-Dīn Ahmad, *Tadhkirat-i Akbari*; 'Abd al-Kādir Badā'uni, *Muntakhab al-Tawārīkh*, text and translation by Ranking, all in the Bibliotheca Indica series of the Asiatic Society of Bengal. (T. W. HAIG)

MAHMUD I, SAIF AL-DIN, BEGARHA, the greatest of the Sultāns of Guĥarāt, was a younger son of Muhammad I. Karīm, and was born in 1444. In 1453 the nobles dethroned his nephew, Dāwūd, a vicious and depraved youth, and placed Mahmūd on the throne. The boy immediately displayed great courage and resource in the suppression of a serious conspiracy and rebellion at the beginning of his reign, and in 1461/1462 he marched to the assistance of the youthful Niẓām Shāh of the Dakan, whose dominions had been invaded by Mahmūd I of Mālwa. He compelled the invaders to retire and frustrated a second attempt to invade the Dakan. In 1466/1467 he attacked and defeated the Rājā of Gīrnār in Kāthiawār, which had been independent since the capture of the fortress by Muhammad b. Taghluq of Dĥlī in 1348, and reduced him to the position of a vassal. In 1470 he again invaded Gīrnār, and on Dec. 2, captured the Rājā's stronghold and compelled him to accept Islām, thus putting an end to the Chāḥāsama dynasty, which had reigned in Gīrnār for about 1,000 years. The Rājā became an amir of Guĥarāt, and received the title of Khān-i-Jahān, and Mahmūd founded, near Gīrnār, a new fortress, which he named Musafīr-shād. He then invaded Kāthi and suppressed a rebellion in that province, carrying its leaders, who were com-

pelled to accept Islām, to Musafīr-shād as hostages. In 1472 he crossed the Rann and marched into Sind, to assist Dĥām Nandā (Niẓām al-Dīn) who was beset by rebels. He crushed the rebellion, and after his return marched to Dwarākā, to punish the Rājā, Bhīm, who had plundered a ship belonging to a Muslim merchant. Dwarākā and Bhāt Shankhodhar, the robber chief's stronghold, were taken, and a Muslim governor was appointed to manage the small state. Bhīm himself was captured and executed. Mahmūd's next expedition was against some Malibāri pirates who had harassed the coast near Khambāyat (Cambay), and whose depredations were checked by the capture and execution of some of their number. Rājā Pādā of Cāmpāner had long encouraged brigandage in the kingdom of Guĥarāt, and Mahmūd now retaliated by raiding some districts of his state. On his return to Ahmadābād he discovered a plot to depose him, formed by some of his nobles, who were weary of his ceaseless activity, but the malcontents, who were well aware of the dangers which threatened the kingdom, were brought to their senses by his threat to perform the pilgrimage to Makka, leaving his young son as regent. After restoring order in various districts of his kingdom he marched, in December, 1482, to settle accounts with Cāmpāner. The fortress fell, after a siege of two years, at the end of 1484 and the Rājā and his Minister, having refused, after five months' imprisonment, to accept Islām, were put to death. In 1491 Mahmūd was disturbed by acts of piracy and aggression committed against his subjects by Bahādur Gīlāni, a rebel in the Konkan, and his protests compelled the nobles of the distracted kingdom of the Dakan to unite for the purpose of crushing the rebel. In 1507 Mahmūd's fleet, under Malik Ayyaz of Dĥlī, participated with that of Malik Adraf Kānsūh, of Egypt, in the victory over the Portuguese fleet, in which the gallant young Lourenço de Almeida, son of the viceroy, was slain, and later in the same year he invaded Khāndeśh and placed on the throne of that kingdom his daughter's son, 'Alam Khān, whose father was descended from the ruling family of Khāndeśh, and who ascended the throne under the title of 'Adil Khān. In this campaign he was opposed by Niẓām Shāh of Ahmadānagar. In 1511 a mission from Shāh Ismā'īl Safawī of Persia arrived in Guĥarāt for the purpose of inviting Mahmūd to accept the Shī'a faith, but he refused to see the heretics. He had now been ailing for some time, and, on Nov. 23, 1511, he died, at the age of sixty-nine (lunar) years, after a reign of rather more than fifty-three years. He was a tall, burly man, of commanding appearance, and was, besides being an able administrator, both warlike and chivalrous. His nickname of Begarha has been variously explained, but it undoubtedly had reference to his capture of the two great fortresses (*garh*) of Gīrnār and Cāmpāner. His elder brother had died of poison, and strange stories are told of his precautions against a like fate. He is said to have gradually absorbed poisons into his system until he was so impregnated with them that a fly settling on his hand instantly died. Butler refers to this strange prophylactic treatment in the lines:

"The King of Cambay's daily food
Is asp, and basilisk, and toad".

He was also distinguished by his voracious ap-

petite. His daily allowance of food was between twenty and thirty pounds' weight, and before going to sleep he placed two pounds, or more, of boiled rice on either side of his couch, so that he might find something to eat on whichever side he awoke. When he rose in the morning he swallowed a cup of honey, a cup of butter, and from 100 to 150 bannans.

(T. W. HAIG)

MAHMUD II of Gujjarāt, was the sixth son of Muzaffar II, on whose death his eldest son, Sikandar, was raised to the throne, but was assassinated on July 12, 1526. The minister then placed on the throne Mahmud, who was an infant, in order that he might rule in his name, but Bahadur, the second son of Muzaffar, who had been absent at Dihli and Dwarapūr, hastened back to secure his birthright, and on July 12, ascended the throne at Ahmadābād and marched on to Chimpāner, where his infant brother was. He entered the fortress without opposition, and Mahmud was dethroned and secretly murdered within the year.

(T. W. HAIG)

MAHMUD III, SA'AD-DIN, of Gujjarāt, was the son of Latif Khān, third son of Muzaffar II. On the death of Bahadur Shāh Muhammad Shāh Fāruki of Khāndesh was offered the crown of Gujjarāt, but died on his way thither. The choice of the nobles then fell on Mahmud, the heir male, but his cousin, Malārak II of Khāndesh, in whose custody he was, and who had himself expected no offer of the crown of Gujjarāt, refused to surrender him, until an army from Gujjarāt compelled him to do so. The prince was escorted back to his country, and on Aug. 8, 1537, was enthroned as Mahmud III, being then only eleven years of age. For the first three or four years of his reign he was a puppet in the hands of powerful ministers, and when he escaped from tutelage proved himself to be weak and inefficient. His attempt, in 1546, to recover Diū from the Portuguese, was a miserable failure, brutally avenged by him on the few Portuguese prisoners in his hands. In 1549 he retired to Mahmūdābād, where he lived in slothful luxury, ruining his constitution with drugs. On Feb. 15, 1554, he was stabbed, as he lay in a drunken stupor, at the instigation of an attendant named Bakhān al-Din, who attempted to usurp the throne, but was slain by the nobles. The discovery of an heir was no easy matter, for Mahmud, dreading an heir as a possible competitor, had taken the barbarous precaution of procuring an abortion whenever a woman of his harem became pregnant. The choice of the nobles ultimately fell on a young prince entitled Raḡī al-Mulk, the great-grandson of Shākar Khān, a younger son of Ahmad I, and he was raised to the throne under the title of Ahmad II.

(T. W. HAIG)

MAHMUD I, KHALAJI, of Mālwa, was the son of Malik Mughith, sister's son to Dillawar Khān, the first independent Sultan of Mālwa. On May 12, 1436, Mahmud caused his cousin, Muhammad Ghūri, a debauched and barbarous prince, to be poisoned, frustrated an attempt to enthrone his young son, Mas'ūd, and offered the crown to his own father, Mughith, who refused it, whereupon Mahmud himself ascended the throne. He was beset by difficulties, and after quelling a rebellion raised on behalf of Ahmad, a Ghūri prince, repelled an invasion by Ahmad I of Gujjarāt, who attempted to restore Mas'ūd to his father's throne. A pretender was set up in Candari, and died while Mahmud was besieging the fortress, but he was obliged to turn immediately against Dongar Singh of Gwāliyar, who had taken advantage of the disturbed state of Mālwa to invade the country. He expelled the Hindās and returned to Māndū, whence he was summoned, in 1440, by a faction among the nobles of Dihli, who offered him the throne. He marched to Tughlakābād, but his partisans failed him, and he was met by the army of Muhammad Shāh the Saiyid, under Bahāni Lodi. After some indecisive fighting he agreed to retire, assenting the more readily owing to news of a serious rebellion in Māndū. On his return he found that the rebellion had been suppressed by his father, and in 1442 he invaded Mewar to punish the Rānā for the assistance which he had given to the pretenders who had troubled the early years of his reign. He had considerable success in the campaign, but retired without attempting to besiege Citor. On his return to Māndū he quarrelled with Mahmud Shāh Sharḡi [q. v.] of Dwarapūr, regarding Nasir Khān, the turbulent ruler of Kālpī, but after an indecisive campaign the two kings made peace on the basis of a compromise. In October, 1446, he again invaded Mewar, extorted some tribute from the Rānā, established his own authority in Ranthambhor, compelled Aḡhā Khān of Riyāna to do homage and pay tribute, and collected tribute from the Rājā of Kota. He left a force to besiege Citor, but the siege was not formed. In 1450 he invaded Gujjarāt to establish his claim to the allegiance of Kanak Das, Rājā of Chimpāner, but gained nothing except an instalment of tribute from the Rājā, and in the following year he suffered a severe defeat during a second invasion of Gujjarāt. In 1451 he subdued the turbulent Hira Rājputs on his northern frontier, and later in the year invaded Berār and besieged Māhūr, but retired when the Bahmani king marched to his relief. In 1455 he again invaded Mewar, recaptured Ajmer, collected tribute from minor chieftains, and harassed and plundered large tracts in Rājputānā. In 1461 he was induced to invade the Dakan, where he defeated the army of the boy-king, Nizam Shāh, and besieged him in his capital, but was obliged to retire by the news that Mahmud I of Gujjarāt was marching to the assistance of Nizam Shāh, and suffered severely at the hands of the Korkū of the Malghat during his retreat. He invaded the Dakan in the following year, but before he could effect anything was again obliged to retire by Mahmud I of Gujjarāt. In the same year Khurā, a fortress of Berār held by him, was taken by the officers of the Bahmani king, but he succeeded in recovering it. In 1466 he again invaded Mewar, but though he defeated Rānā

Kumbha in the field he failed to take his capital by surprise, and returned to Māndū. In 1468 he marched to Cānderi, and his officers captured and destroyed the fortress of Karāhā. On his way back to Māndū he suffered severely from the heat, and on June 1, 1469, he died, at the age of sixty-eight. He was the greatest of the Muslim kings of Mālwa, and under him the kingdom reached its greatest extent. The "column of victory" at Citor is said to commemorate Rānā Kumbha's victories over Maḥmūd I of Guḍjarāt, and Maḥmūd I of Mālwa, but if this be so it is more mendacious than most lapidary inscriptions, for the successes of Mewār against Mālwa were gained by Sangrama against Maḥmūd II, not by Kumbha against Maḥmūd I. Maḥmūd's fame had reached distant Egypt, for he received an envoy from the phantom 'Abbāsid Khālifa, who formally recognized him as Sulṭān of Mālwa. He was a zealous Muslim, and restored the use in all public offices of the inconvenient lunar calendar of Islām, and, while he gloried in his successes against the "infidels", was careful to excuse himself for his attacks — often unjustifiable — on sovereigns of his own faith.

(T. W. HAIG)

MAHMUD II, 'ALĀ' AL-DIN, Khālifa, of Mālwa, was raised to the throne on May 2, 1511, on the death of his father, Nāṣir al-Dīn Khālifa. The early days of his reign were disturbed by rebellions on behalf of his brothers, and of other pretenders, and he was once driven from his capital, but was enabled to return and expel the rebels by the assistance of Medni Rāy, with a force of Rājapūts. The king soon had reason to repent of having accepted their aid, for Medni Rāy assumed the place of minister, and the dominance of the Hindūs alienated and disgusted all the Muslim nobles of the kingdom. Bihḍat Khān, governor of Cānderi, openly espoused the cause of a pretender, and Maḥmūd, while engaged in correspondence with him, was disturbed by news of a revolt in his capital and of the invasion of his kingdom by Muḥaffar II of Guḍjarāt, but the revolt was suppressed, and the invader was recalled to Guḍjarāt by domestic disturbances. After protracted negotiations the pretender fled, and Bihḍat Khān received Maḥmūd at Cānderi and endeavoured, but in vain, to free him from the influence of the Hindūs. Maḥmūd returned to Māndū early in 1514 and fell entirely under the control of the Rājapūts, at whose instance he put to death many of the Muslim nobles of the kingdom. The arrogance of the Hindūs at length became intolerable, and in 1517 Maḥmūd fled to Guḍjarāt and sought aid of Muḥaffar II, who led an army into Mālwa to restore his authority, captured Māndū, and massacred the Rājapūts who had held it. The rest of the Rājapūts in the state established themselves on its northern border and transferred their allegiance to Rānā Sangrama of Citor. Muḥaffar retired to Guḍjarāt leaving 10,000 horse to assist Maḥmūd, and Maḥmūd besieged Gāgrawn, held by Hemkaran

for Medni Rāy. The Rānā marched to its relief, and Maḥmūd, turning aside to meet him, suffered a severe defeat, and was wounded and captured. Sangrama received him courteously, but compelled him to surrender his crown jewels. He might now have annexed Mālwa, but, fearing to arouse the hostility of every Muslim ruler in India, made a virtue of necessity, and replaced Maḥmūd on his throne. A few years later Maḥmūd harboured and encouraged Čānd Khān, brother of Bahādur Shāh of Guḍjarāt, and a pretender to his throne. Bahādur invaded Mālwa and besieged Māndū. Maḥmūd's sloth and negligence infected his army, and on March 17, 1531, Bahādur captured the city, and Maḥmūd appeared before him. Mālwa was annexed to Guḍjarāt, and Maḥmūd and his family were sent towards Čāmpāner, to be imprisoned there. On April 12 the camp was attacked by a force of Bīlīs and Kolīs, and Maḥmūd's guards, fearing a rescue, put him to death. His seven sons were conveyed to Čāmpāner, and nothing more is known of their fate.

MAHMUD B. ISMĀ'IL. [See IBN KẖADĖR ŠIMĀWNA.]

MAHMUD B. MUHAMMAD B. MALIKSHĀH, a Salḡūq ruler in the 'Irāk (511—525 = 1118—1131), ascended the throne as a boy of 13, being the eldest of his father's five sons. To his misfortune, his trusted advisers only troubled about their own interests and made the young Sulṭān take various steps which were fatal to the prosperity of his reign. Anuṣharwān in al-Bondarī mentions no fewer than ten such fatal mistakes; the result was that even in the early years of his reign several ambitious Turkish emirs were in open rebellion while his father's Great Hādīb 'Alī Bār, who, during the latter's illness, had had and still retained control of the vast treasures which the latter had hoarded up, dissipated them in a very short time and let the young Sulṭān lead a gay life. Especially dangerous to him were the atābegs of his brothers Mas'ūd and Toḡhril, who found the opportunity a favourable one to dispute the sālṭānate on behalf of their infant protégés. The result was that in 513 (1119) Sandjar, the Sulṭān's powerful uncle, was forced to interfere and marched on al-Rāy after an attempt to appease him had failed. Maḥmūd was then forced to allow matters to come to an open fight but his troops were defeated at Sēwa [q.v.] and nothing was left for him but to go to the victor and accede to the demands made by him. Fortunately Sandjar, whose mother was Maḥmūd's grandmother, was favourably disposed to his nephew and announced himself content to add to his territory a few districts, e.g. al-Rāy, but otherwise received Maḥmūd in a friendly fashion and even gave him one of his daughters in marriage. Thereupon he retired and left Maḥmūd without his help to make the best of the difficulties that faced him in the 'Irāk. These were bad enough, for the Atābeg of Mas'ūd, whom Ibn al-Athīr calls Aiyahā Djuyyāsh-beg (cf. *Recueil*, ii. 132, note), in conjunction with the unruly Malik al-'Arab Dubais [q.v.] was plotting to proclaim his protégé Sulṭān. The plan failed however: Aiyahā's troops were routed at Asādābād (514) and Mas'ūd's unlucky vizier, the celebrated Arabic poet al-Ṭaḡhrā' [q.v.], was captured and soon afterwards put to death on the pretext

that he was an infidel. The two brothers readily made friends again as Mas'ūd was still a mere child; Aiyaba escaped, was afterwards pardoned by Mahmūd, but lost to Aḥsonkor al-Bursukī [q.v.] the governorship of Mōsal which he had previously held. Dubais was preparing the Sultān still further trouble and soon found this opportunity, because Toghril, who with his Atibegs had meanwhile been given the province of Arrān as *iqṭā'* could not withstand the Georgians there, who had taken Tiflis in 515 (cf. Brosset, *Histoire de la Géorgie*, I. 365; Matthias of Edessa, ch. 230—232; Ibn al-Fārīḡ in Ibn al-Kāḡanīst, ed. Amédroz, p. 205), and came to the Irāk to seek help from Mahmūd. The latter himself took the field against the Georgians without doing much and Toghril, who had now returned to his province, soon received a visit there from Dubais, who persuaded him to set out to the Irāk against the caliph al-Mustashīd. As they had no success in this enterprise, they went to Sandjar to lodge complaints against the Caliph and Mahmūd. Sandjar thereupon went to al-Ray and sent an invitation to Mahmūd to come to answer the charges (522 = 1128). Mahmūd was received with honours and instructed to restore Dubais to his territory in Hilla while Toghril and Mas'ūd who was also with him, went off with Sandjar. Mahmūd however did not find the caliph inclined to tolerate Dubais in his neighbourhood, and the Sultān withdrew his claims for a sum of 100,000 dinārs and went to Hamadhān. There had been trouble between Mahmūd and the Caliph before and in 520 (1126) for example there had been open fighting in the streets of Baghdād between the Arabs and the Sultān's Turkish troops. In all these circumstances Mahmūd proved unequal to his task; while he left the business of government to his viziers, among whom al-Sumairamī and al-Dargazīnī (or al-Anasibūdī as Ibn al-Aṭhīr always has it) were the most prominent, he spent his time with his hawks and hounds, which, according to Mirkhwān, were 400 in number and wore jewelled collars and coverings embroidered with gold. It became worse when he devoted himself to sensual pleasures and as a result of his sexual excesses fell ill and died at Hamadhān at the early age of 27 (Shawwāl 25, 525 = Sept. 10, 1131). Nevertheless he was by no means an insignificant figure; he had a good acquaintance with Arabic and was celebrated in a long panegyric by Hama-Baiha [q.v.]. Ibn al-Aṭhīr lauds his gentleness and emphasises that he never, as Sultāns usually did, laid violent hands on the property of his subjects.

Bibliography: in the article SELJUKS; cf. also Ibn Khallikān, *Wafayāt*, Cairo 1299, II. 519 *sq.*

MAHMŪD of Ghazna, one of the most famous of Muslim conquerors, was the elder son of Subuktigīn and was born in 969 A.D. In 994 Nūḥ II of Bukhārā appointed Subuktigīn governor of Khurāsān, as a reward for assistance received from him, and Subuktigīn appointed as his deputy his son Mahmūd, who took Nishāpūr from the Ismā'īlī heretics and made it his capital. On his death in 997 Subuktigīn left his throne to his younger son, Ismā'īl, but Mahmūd marched to Ghazna, defeated his brother, and ascended the throne in 999. Begīstān, an *amīr* of Manṣūr II of Bukhārā, attempted to deprive Mahmūd of the government of Khurāsān, but failed, and the Sā-

mānid dynasty was shortly afterwards extinguished, its dominions being divided between Mahmūd and Ilak Khān of Kashghar. The *Ala'ud-Dīn* al-Kāḡir now recognized Mahmūd as king of Ghazna and Khurāsān, and conferred on him the title of Amīn al-Milla, and later that of Yamīn al-Dawla, from which his successors are sometimes known as the Yamīni dynasty. Mahmūd now made a vow to invade India and chastise the infidels every year of his life, and during the remaining thirty years of his life led no fewer than seventeen raids into India. After an expedition in the year 1000 he defeated and captured Djaipāl I. of the Panḍjāb in 1001, and took the town of Uṇḍ. Djaipāl was released on promising to pay tribute, but would not survive his disgrace, and burned himself to death, leaving his kingdom to his son, Anandpāl. Mahmūd received the title of Gh̄iār, and in 1003 subdued Sīstān. Khālaf b. Aḥmad, whom he defeated, saved his life by addressing his conqueror as "Sultān", a title which so pleased Mahmūd that he bore it ever afterwards, being, it is said, the first Muslim sovereign to do so. In 1004 he invaded the Multān state, and besieged its ruler, Dāwūd, who had adopted the Carmathian heresy, for seven months in his capital. Dāwūd saved his kingdom by abjuring his heresy and undertaking to pay tribute, and Mahmūd returned to his dominions in time to meet Ilak Khān, who had invaded them, near Balḡh. He defeated the invader and put him to flight, but while he was thus engaged Sukhpāl, a son of Anandpāl, who had accepted Islām and received the title of Nawāsī Shāh, revolted and rebelled. Mahmūd marched towards Bhera, Sukhpāl's capital, but before his arrival there his officers had captured Sukhpāl, who was compelled to disgorge 400,000 *dirhams*, and was imprisoned for life. Mahmūd then invaded the district of Gh̄iār, conquered it, and compelled the inhabitants to accept Islām. Meanwhile the princes of India had formed a confederacy to defend their country and their religion, and when Mahmūd crossed the Indus in 1008 he was met at Uṇḍ by a great army composed of the troops of Anandpāl and those of the Rājās of Uḍḡain, Gwāliyar, Kālingjar, Kannawḍj, Dillī, and Adjmar. Their combined forces nearly succeeded in defeating Mahmūd, but after a hotly contested battle he won the day, and the Hindus fled. The Rājās lost faith in each other, and the confederacy was dissolved. Mahmūd pressed on to the fortress of Bhawan and the temple of Negarkot or Kangra, the gates of which were opened to him after a siege of seven days. The enormous plunder which the temple yielded whetted Mahmūd's appetite for further exploits of the same nature. In 1009 he again invaded the Panḍjāb and plundered the country and slaughtered its inhabitants. Anandpāl, who dared not attack him, purchased peace by the payment of an indemnity, a promise of tribute, and an undertaking to allow him unrestricted passage through the Panḍjāb in future. Dāwūd of Multān had by now relapsed into heresy, and in 1010 Mahmūd invaded his kingdom, took his capital, and after slaughtering and mutilating great numbers of his heretical subjects sent him to end his days as a prisoner in Gh̄iār. In 1011 Mahmūd marched through the Panḍjāb to the plunder of the wealthy temple of Thānesar. The Rājās fled, and Mahmūd plundered the temple, the city and the kingdom, and carried off the idol Čakravartin,

with much booty and large numbers of captives, to Ghazna.

In 1012 Mahmūd's officers subdued Ghardjistān, and he compelled the Khalifa al-Kādir to cede to him those districts of Khurāsān which he had not yet occupied, but the Khalifa returned a stern refusal to Mahmūd's demand for Samarkand, and Mahmūd was obliged to apologize for his presumption.

Anandpal had now died and had been succeeded by his son, Trilokanpal, a weak monarch who committed the management of his affairs to his son, Nidar Bhm, or "Bhm the Fearless". Bhm reversed the submissive policy of his grandfather, and in 1013 Mahmūd was obliged to invade the Panjāb in order to keep the road to Hindustān open. In the spring of 1014 he defeated the Hindū prince in the Margala Pass, captured the fortress of Nandana, and pursued him into Kashmir, but was unable to come up with him, and was obliged to return. A second invasion of Kashmir was equally unsuccessful; he failed to take Lohkot, and in the spring of 1016 he retired, with heavy loss, from his only unsuccessful campaign in India, losing, on his way, many of his men in the flooded Dikhām. In the same year he marched to Khurāsān to avenge the death of his sister's husband, Abu 'l-'Abbās Ma'mūn, who had been slain by rebels. He crushed the rebellion and appointed one of his own officers, Al-Futūh, to the government of his new conquest. In the autumn of 1018 he set out on his long meditated expedition into Hindustān, whither Trilokanpal and Nidar Bhm had retired. He crossed the Dhamna on December 2 and received the submission of the Rājā of Baran, 10,000 of whose subjects accepted Islām. He next defeated Rājā Kulānd of Mahāban, who to avoid disgrace stabbed his daughter and son, and then himself. He sacked and destroyed the splendid cities of Mathurā and Bindrāban and, leaving the greater part of his army there, marched with a picked force, to Kannawā, defended by seven forts on the Ganges. Its ruler, Rājāyāla, fled, leaving his capital undefended, the seven forts were plundered in one day, and the city was sacked. Aunī, further down the Ganges, shared its fate, and Madjhāwan, "the Fort of the Brahmins", was plundered after its defenders had been slain to a man. Rājā Cand of Sharwa fled, but this city was sacked, and he was overtaken and defeated on January 6, 1019. Mahmūd then set out on his return march to Ghazna with a large number of elephants, 3,000,000 *dirham's*, much other plunder, and captives so numerous that slaves were to be had for two or three *dirham's* each. On his return he founded at Ghazna his great mosque, the "Bride of Heaven". Rājā Nanda of Kālingjar and the Rājā of Gwāliyar had marched to Kannawā after Mahmūd's retreat, and had punished Rājāyāla for his cowardly desertion of his capital by putting him to death. They were attempting to form a new confederacy of Hindū princes when Mahmūd, in 1019, invaded Hindustān to frustrate their design. He defeated Trilokanpal on the Rīnganga and then turned to confront Rājā Nanda, who was marching to meet him with a great army, at the sight of which even Mahmūd quailed. Nanda, however, was smitten with a sudden panic and fled in the night, leaving his camp to be plundered by Mahmūd, who obtained, with much other booty, 580 elephants, in addition to 270 already taken

from Trilokanpal. Then, fearing lest his retreat through the Panjāb should be cut off, he returned to Ghazna. In 1021 he resolved to provide himself with a base for future raids, and having invaded Swāt and Bajawr and compelled the inhabitants to accept Islām he attacked, but again failed to capture, the fortress of Lohkot, and, raising the siege, marched into the Panjāb. Trilokanpal was dead, and Nidar Bhm fled and took refuge with the Rājā of Adjmar, where he died in 1026. Mahmūd was thus able to annex the Panjāb, and brought it under his own sway. In 1022 he again invaded Hindustān and attacked the fortresses of Gwāliyar and Kālingjar, but left their rulers in possession of them on their promising to pay tribute. On his return to Ghazna he mustered his army, and in 1023 invaded Transoxiana to establish his authority there. The smaller chiefs hastened to pay him homage, the ruler of Samarkand was brought before him in chains and was sent as a prisoner to Kālingjar, as were also the chiefs of the Saldjūk tribe, 4,000 families of which Mahmūd, though he was apprehensive of their power, transported into Khurāsān. In 1025 Mahmūd set out on the most famous of his raids into India, the expedition to Somnāth. The insolent boasts of the Brāhmins had annoyed him, but it was the reputed wealth of the temple that prompted the enterprise. He crossed the Indian desert after elaborate preparations, plundered both Adjmar and Anhilwāra, and reached Somnāth in the middle of January, 1026. Within two days his troops had stormed the ramparts and entered the city, but the temple was more strongly defended, and while he was attacking it he learned that the Hindū princes of Gujjarāt, who had fled before his arrival, had rallied to the defence of the idol, and were before the city. Leaving a force to continue the siege of the temple, he marched against them, and, after a battle in which he narrowly escaped defeat, put them to flight. Their defeat sealed the fate of the temple, which was almost immediately captured. Mahmūd plundered it of its vast treasures and broke up its idol, a huge *lingam*. From Somnāth he marched to punish Param Deo, Rājā of Anhilwāra, for the attempt to relieve the temple, but the Rājā fled, leaving his stronghold and its treasures to the conqueror. It is said that Mahmūd was so captivated by the beauty and climate of Gujjarāt that he was with difficulty dissuaded by his officers from making Anhilwāra his capital, and leaving Ghazna to his son, Mas'ūd. On his return march through the Sind desert his army suffered severely, and after crossing the desert was harassed by the Džats, but succeeded in reaching Ghazna with its spoils. In 1027 Mahmūd undertook his last expedition into India, in order to punish these Džats. He collected a flotilla of boats at Multān, and, owing partly to their superior construction, defeated the Džats in a naval battle on the Indus, and carried off their families, which they had removed for safety to islands in the river.

The remainder of Mahmūd's life was devoted to the western provinces of his empire. He wrested Trāk, Ray and Isfahān from the Buwayhids, invested his son Mas'ūd with the government of the newly conquered territory, and employed himself in establishing order and security on the caravan routes throughout his wide dominions, and in extirpating the heretics whom the Shi'a Buwayhids had tolerated. In 1029 he returned from Ray to

Balkh, and marched in the spring to Ghazna, where, on April 30, 1030, he died, at the age of sixty-three, worn out with the labours of forty years.

Mahmūd was far from being the zealous champion of the faith depicted by Muslim historians. Occasionally he encouraged, and even compelled Hindus and others to accept Islam, but the propagation of the faith was never the primary object of any of his campaigns. Temples were attacked rather because they contained treasure than because they contained idols, and he did not hesitate to employ bodies of unconverted Hindus, even against his brethren in the faith. He has been described as miserly but he loved money chiefly as the source of power. He adorned Ghazna with noble buildings and his court was in that age the chief resort of poets and men of learning, and was adorned by al-Uṭbī, al-Būnī, 'Unṣurī, Asadī, 'Asjdjād, Minūshihri, Firdawsī, and many other poets and men of letters. His scurvy treatment of Firdawsī is to be attributed rather to the malice of a personal enemy than to the meanness of the king, and the poet's mode of resenting it placed him beyond the pale of forgiveness. Mahmūd was one of the great figures in Islamic history, and though his warlike career left him no leisure for the acquisition of learning he knew how to appreciate and reward literary merit in others.

(T. W. HAIG)

MAHMUD GAWAN, 'IMAD AL-DIN, Khwādja, was born in A.D. 1405, of a family which had long held high office in the small principality of Gūlān, and is said to have taken the name of Gawān, by which he was afterwards known in India, from Kāwān, his birthplace. He received a good education and as a young man made the pilgrimage to Mekka. While he was there his family fell into disgrace, so that he could not safely return home. Refusing offers of employment in other parts of Persia he became a merchant, and in 1455 sailed from the Persian Gulf for India, and landed at the port of Dāhhol. Thence he proceeded to Bidar, the capital of the Bahmanī kings, and was well received by 'Alī al-Dīn Ahmad II, who was then reigning. He received the command of 1,000 horse and was sent to quell the rebellion of Djalāl Khān in Telingāna. His conspicuous success secured his position as one of the leading nobles of the kingdom, and after the death of Ahmad II in 1457 he received from his son and successor, Humāyūn, the title of *Malik al-Tajār* ('Chief of the Merchants'), then highly esteemed. During Humāyūn's short reign he was employed in suppressing rebellion and restoring order in Telingāna, and on the king's death, in 1461, was associated by his widow with herself and Khwādja Djalāl the Turk in a council of regency. The foreign enemies of the kingdom took advantage of the childhood of the new king, Niṣām Shāh, and Mahmūd Gawān bore an honour-

able part in repelling the invasion of the Rājās of Ura, who was forced to pay a large indemnity. Mahmūd Khaldjī I of Mālwa next invaded the Dakan, defeated the army of Niṣām Shāh, and menaced the existence of the state. Mahmūd Gawān succeeded in enlisting the aid of Mahmūd I, Begarlu, of Gujjarat, and with his help defeated and expelled the invader. Niṣām Shāh died in 1463, and the kingdom was governed for his younger brother, who succeeded as Muhammad III, by the same council of regency, but the arrogance and ambition of Khwādja Djalāl the Turk so aroused the suspicions of the queen-mother that she ordered her young son to put him to death. She shortly afterwards retired from public life, leaving Mahmūd Gawān, now entitled Khwādja Djalāl, sole regent. In 1469 he was sent to subdue the Konkan, and to suppress the pirates of that region, and, in a series of campaigns extending over three years, conquered the country and captured Goa, then one of the principal ports of Vijayanagar. On his return to Bidar he was received with great honour and his position as first noble of the kingdom was assured. In 1472 he brought the siege of Belgaum to a successful conclusion, but the chief service which he rendered to the Bahmanī kingdom was the reform of its administration. It had originally been divided into four great provinces, Gulbarga, Dawlatābād, Berār, and Telingāna, to which the name of *paraf* was given, and the power of the *parafdar*, or provincial governor, was almost absolute. He collected the revenue; raised, paid and commanded the army; and appointed all officials, his responsibility to the king being limited to maintaining order, keeping the people contented, remitting to the capital the quota of revenue due, and joining the king, when summoned, with the contingent of troops which he was bound to supply. Even in the early days of the kingdom rebellions raised by provincial governors had not been unknown, but the system had worked well on the whole so long as the limits of the kingdom were comparatively narrow, and the kings were energetic; but the kingdom now stretched from sea to sea, the provinces were unwieldy and the defects and dangers of the old system were apparent to all. Mahmūd Gawān divided each of the original *parafs* into two, so that their number became eight. Berār was divided into the two *parafs* of Gāwli and Māhār; Dawlatābād into Dawlatābād and Dūnnār; Gulbarga into Gulbarga and Bidjāpūr; and Telingāna into Warangal and Rājāmahendri. The powers of the *parafdars* were at the same time curtailed. These reforms were resented by all the old *parafdars*, and by none more than by Malik Hasan Bahri, Niṣām al-Mulk, *parafdar* of the great province of Telingāna, who was posted to the new *paraf* of Rājāmahendri, and found his power, his influence, and his emoluments reduced by more than half. He was the leader of the Dakani party and Mahmūd, though he had done all in his power to end the strife between the Dakanis and the Foreigners, was a foreigner, and was regarded by all as the leader of the Foreign party. In 1481, the royal camp being then in Telingāna, Hasan Bahri took advantage of the absence of Mahmūd's chief supporter, Yūsuf 'Adil Khān the Turk, who had been sent on an expedition into the eastern provinces of the kingdom of Vijayanagar, to compass the downfall and death of Mahmūd. The minister's

confidential secretary was induced, by misrepresentation, to affix his master's seal to a folded paper. The paper was blank, and the conspirators wrote, above the seal, a treasonable letter to the Rājā of Uṛṣa, inviting him to invade the kingdom. The letter was shown to the king when he was drunk, and he at once summoned Mahmūd, who, though warned by his friends that mischief was afoot, insisted on obeying the order. He was asked by the king what was the punishment of treason and unhesitatingly replied, "Death by the sword". He was then confronted with the letter, and though he declared it to be a forgery the king paid no heed to him, but bade the executioner do his office, and withdrew. Mahmūd knelt down and repeated the symbol of his faith, and the executioner, *Djawhar* by name, struck off his head. An order for the plundering of his camp was then issued, and his followers were dispersed. The king was much disappointed by the examination of his late minister's affairs. He had, throughout his official life continued his mercantile transactions, and lived frugally on his profits. His great official emoluments were expended on the troops and establishments which he maintained and on public works, and the balance was disbursed in alms, in the king's name as well as in his own. Muhammad III understood, too late, the value of the servant whom he had so summarily put to death, and his remorse was bitter. Mahmūd was a great statesman and public benefactor. Learned himself, he was a munificent patron of learning, and built at Bidar a magnificent college, the ruins of which are still to be seen. The only private property which he left at his death was a splendid library. He is one of the foremost figures in the political history of India, and his death was the cause of the fall of the dynasty which he had served so well, for it destroyed the confidence of the nobles in the town, and hastened the advent of the day when the provincial governors proclaimed their independence.

(T. W. HAIG)

MAHMUD PASHA, grand vizier in the reign of the Ottoman Sultān Muhammad II, often called Well Mahmūd Pasha. He was born in Aladja Hījar (Krupewata) in Serbia, of Christian parents; according to Chalcocondyles, his father was Greek and his mother Serbian. Taken in his youth to Adrianople, he was brought up at the court of Murād II, and began his public career on the occasion of the accession of Muhammad II in 1451. Soon afterwards he became Beglerbeg of Rūm-īl; according to the historian Ramadān Zāde Mehmed (Kāḍuk Nishāndjī) he had been also *Kāḍ'asker* [q. v.]. As Beglerbeg, he took part in the capture of Constantinople. After this event he was appointed grand vizier in 1453; the office had been empty since the execution of Çendereli Khalīl Pasha. As grand vizier, Mahmūd Pasha frequently accompanied the Sultān on his campaigns but in 1456–1458 he was appointed to conduct the operations against the Serbs, while the Sultān

conquered the Morea; in 1459 Muhammad himself advanced against Serbia which was completely subdued; during this war Mahmūd Pasha's brother was the leader of the Turcophil party in Serbia. In 1460 and 1461 the grand vizier took part in the expedition against Sinope and Trebizond as commander of the fleet while Muhammad led the army by land. The capture of Trebizond was mainly due to Mahmūd Pasha; he was related to a high dignitary of the court there so that some Greek authors talk of treachery (Fallmerayer, *Geschichte der Kaiserthums Trapezunt*, p. 279). In 1462, Mahmūd accompanied the Sultān against the Voivod of Wallachia, Vlad Dracul and in the following year as commander of the fleet he was sent to conquer Lesbos and forced the Duke of Lesbos to capitulate. In the same year he drove the Venetians out of the isthmus of Corinth. In the Bosnian campaign of 1464, Mahmūd prepared the way for the Sultān's advance by taking the principal towns of the country. In the war that followed with Matthias, king of Hungary, Mahmūd forced the latter to raise the siege of Zvornik. In 1466 he aided the Sultān in the campaign which was to put an end to the power of the Karamānoghlu and defeated the Karamanid Ishāk Beg near Liranda. The latter himself escaped and this fact combined with the too humane treatment which the governor wished to apply to the people of Konya and Liranda and the intrigues of the second vizier Rūm Muhammad Pasha, brought the Sultān to dismiss him on the return march to Constantinople. Mahmūd Pasha then governed the sandjak of Gallipoli for some time. In 1472 he again became grand vizier. The Sultān wished in that year to send him against Uzun Hasan but was persuaded by Mahmūd to send Ishāk Pasha in his place; in the following year he accompanied the Sultān against the Ak-Koyunlu, who were finally routed after the Ottomans themselves had suffered the defeat of Beg Bazar. In the same year Mahmūd was again dismissed; the reason alleged was a lack of zeal in the pursuit of the fugitives. He then retired to the village of Khāss Koy near Adrianople. Next year he came to the capital on the occasion of the funeral of Prince Muṣṭafā; this opportunity was taken to calumniate him to the Sultān on account of the intimacy which had existed between Muṣṭafā and Mahmūd Pasha. This was sufficient to get him imprisoned in the castle of Yedi Kule and executed a few days later in Rabi' I, 879 (July–Aug. 1474).

MAHMUD PASHA was one of the most popular grand viziers. His name still survives in the mosque which he built at Stambul in 863 (1463–64) on a site originally occupied by a church; in the mosque is the *türke* of the founder. He also erected a *medrese*, a *meḥeme*, a *meḥtē*, a well and a *hammām*. There is a legendary story entitled *Menāḥil-nūm-i Mahmūd Pasha*, in which his unjust execution is specially emphasised (printed in Fe. Dieterici, *Chrestomathie Ottomane*, Berlin 1854); the historian Sadī al-Dīn in his *Taḥf al-Tawārīkh* (I. 557) also devotes a chapter to the *Wāḥṭ-i Mahmūd Pasha*. Mahmūd Pasha was the patron of a number of men of letters and scholars, who dedicated their works to him. He was himself a poet but it is uncertain whether he wrote under the *ṭibḥallu* of 'Adnī or 'Adlī. There is a *Diwān* of 'Adlī (printed Constantinople 1308) which is generally attributed to Sultān Bīyazād II but Gibb

(*Hist. Lit. Poetry*, II. 25 ff.) thinks it should be attributed to Mahmūd Pasha.

(J. H. KRAMERS)

MAHPAIKER. [See KÖSEM.]

MAHR (A.), Hebrew *Mohar*, Syriac *Mahrā*, "bridal gift", originally "purchase-money", synonymous with *ṣadq* which properly means "friendship", then "present", a gift given voluntarily and not as a result of a contract, is in Muslim law the gift which the bridegroom has to give the bride when the contract of marriage is made and which becomes the property of the wife.

1. Among the pagan Arabs the mahr was an essential condition for a legal marriage and only when a mahr had been given did a proper legal relationship arise. A marriage without a mahr was regarded as shameful and looked upon as concubinage. In the romance of 'Antar the Arab women, who are being forced to marry without a mahr, indignantly reject such a marriage as a disgrace. Victors alone married the daughters of the conquered without giving them a mahr.

In the pre-Islamic period, the mahr was handed over to the *wālī*, i.e. the father, or brother or relative in whose guardianship (*walā*) the girl was. Here the original character of the marriage by purchase is more apparent. In earlier times the bride received none of the mahr. What was usually given the woman at the betrothal is the *ṣadq*; the mahr, being the purchase price of the bride, is given to the *wālī*.

But in the period shortly before Muḥammad, the mahr, or at least a part of it, seems already to be given to the woman. According to the Qur'ān, this is already the prevailing custom. By this amalgamation of mahr and *ṣadq* the original significance of the mahr as the purchase price was weakened and became quite lost in the natural course of events. There can be no doubt that the mahr was originally the purchase price. But the transaction of purchasing in course of long development had become a mere form. The remains, however, as they survived in the law of marriage in Islam, still bear clear traces of a former marriage by purchase.

2. Muḥammad took over the old Arab patriarchal ceremony of marriage as it stood and developed it in several points. The Qur'ān no longer contains the conception of the purchase of the wife and the mahr as the price, but the mahr is in a way a reward, a legitimate compensation which the woman has to claim in all cases. The Qur'ān thus demands a bridal gift for a legal marriage: "And give them whom ye have enjoyed their reward as a wedding-gift" (lit. *farīḡa* "allotment of property", Sūra, iv. 28) and again: "And give the women their dowries voluntarily" (Sūra, iv. 3) cf. also Sūra, iv. 29, 38; v. 7; ix. 10.

The bridal gift is the property of the wife; it therefore remains her own if the marriage is

dissolved: "And if ye wish to exchange one wife for another and have given one a talent, take nothing of it back". Even if the man divorces the wife before he has cohabited with her he must leave half the mahr with her (Sūra, ii. 237—238).

Down into the Muslim period the wife was considered after the death of the husband as part of his estate; the heir simply continued the marriage of the deceased. Such levirate marriages are found in the Old Testament also. Muḥammad abolished this custom, which still remained in his time, by Sūra, iv. 23: "O ye, who are believers, it is not permitted to you to inherit women against their will".

3. There was an ample store of traditions about the mahr and these pave the way for the theories laid down by the jurists in the fiqh-books. From all the traditions, it is clear that the mahr was an essential part of the contract of marriage. According to a tradition in Bukhārī the mahr is an essential condition for the legality of the marriage: "every marriage without mahr is null and void". Even if this tradition, so brief and to the point, is not genuine, a number of traditions point to the fact that the mahr was necessary for the marriage, even if it only consisted of some trifling thing. Thus in Ibn Maḡḡa and Bukhārī traditions are given, according to which the Prophet permitted a marriage with only a pair of shoes as mahr and approved of a poor man, who did not even possess an iron ring, giving his wife instruction in the Qur'ān as mahr.

A few ḥadīths endeavour to show that the mahr must be neither too high nor too low. From the traditions we also learn what mahr was given in particular cases in the Prophet's time: for example, the bridal gift of 'Abd al-Raḥmān b. 'Awf was an ounce of gold, that of Abū Huraira of 10 ṭūḡiya and a dish, that of Shāhā b. Sa'd an iron ring.

In the ḥadīths we again frequently find the Qur'ānic regulation that in a divorce after cohabitation the woman has the right to the whole mahr.

4. According to Muslim fiqh-books, marriage is a contract (*uḡd*) made between the bridegroom and the *wālī* of the bride. An essential element in it is the mahr or *ṣadq*, which the bridegroom binds himself to give to the bride. The marriage is null without a mahr. The jurists themselves are not quite agreed as to the nature of the mahr. Some regard it practically as purchase-money (e.g. Khallī: "the mahr is like the purchase-money") or as an equivalent (*ʿimāq*) for the possession of the woman and the right over her, so that it is like the price paid in a contract of sale, while other jurists see in the mahr a symbol, a mark of honour or a proper legal security of property for the woman.

All the things can be given as mahr that are things (*maṭ*) in the legal sense and therefore possible to deal in, that is can be the object of an agreement. The mahr may also — but opinions differ on the point — consist in a pledge to do something or in doing something, e.g. instructing the woman in the Qur'ān or allowing her to make the pilgrimage. The whole of the mahr can either be given at or shortly after the marriage or it may be paid in instalments. When the latter is the case it is recommended to give the woman a half or two-thirds before cohabitation and the rest afterwards. The woman may refuse to allow consummation of the marriage before a part is given.

Two kinds of mahr are distinguished:

a. *Mahr musammā*, "definite mahr", the amount of which is exactly laid down in the wedding contract.

b. *Mahr al-mithl* in which the amount is not exactly laid down, but the bridegroom gives a bridal gift befitting the wealth, family and qualities of the bride. This *mahr al-mithl* is also applied in all cases in which nothing definite about the mahr was agreed upon in the contract.

The mahr becomes the property of the wife and she has full right to dispose of it as she likes. In the case of any dispute afterwards as to whether certain things belong to the mahr or not, the man is put upon oath.

The Shar'fā lays down no maximum or minimum for the amount of the mahr; but limitations were introduced by the various law-schools; the Hanafis and Shāfi'is insist upon 10 dirhems as a minimum and the Mālikis three dirhems. The difference in the amount fixed depends on the economic conditions in the different countries where the madhhab in question prevails.

If the man pronounces a divorce, the mahr must be paid in every case if cohabitation has taken place; but the bridegroom may withdraw from the marriage before it is consummated; in this case he is bound to give the woman half the mahr.

MAHRA, a land on the southeast coast of Arabia on the Indian Ocean between Ḥaḍramūt, the coast of which is inhabited by the Ka'abī (Ge'ez), and Zafār; the Arabs however and modern geographers include Zafār itself, formerly the town only and now the country, the old frankincense region [see ZAFAR], in Mahra, so that Mahra may be said to be the country between Ḥaḍramūt and 'Omān (cf. al-Iṣṭakhri, *B. G. A.*, i. 12, 27; Ibn Hawkal, *ibid.*, ii. 17; al-Mukaddas, *ibid.*, iii. 53; Yāqūt, *Muḥḥaḥḥat*, iv. 700; al-Idrisi, ed. Jaubert, Paris 1836, i. 48; Ibn Khaldūn [in Kay, *Yaman*, London 1892, p. 132]). This connotation of Mahra seems to have been already known to the Greeks of the fourth century B.C.; Theophrastus, *Hist. Plant.*, ix. 4, 2, numbers among the lands of Arabia which yield spices, along with Saba', Ḥaḍramūt and Katabān, a fourth, *Maḥarā* (var. *Māra*). A satisfactory identification of this land, which would also explain the name has not been made. Of the various attempts to explain it, given in the article SABA', in Pauly-Wissowa, *Realencycl. der klass. Altertumswiss.*, coll. 1331 sqq. [cf. the article SABA', iv., p. 62] that which suggests *Maḥarā* is a corruption of *Maḥarā* (*Maḥarā*) which Strabo, vi. 768 gives with the three

South Arabian kingdoms above mentioned, following Eratosthenes — these two authors represent one original source; Eratosthenes and Strabo are two different sources — is certainly wrong. The identification of *Māra* with Mahra proposed by A. Sprenger, *Die alt. Geographie Arabiens*, Berne 1875, p. 92, 263, 266, without however any attempt at proving it and also adopted by Fr. Hommel, *Ethnologie und Geographie des alten Orients*, Munich 1926 (I. v. Müller, *Handbuch der Altertumswissenschaft*, Sect. iii., Pt. i., vol. 1) p. 137, is worthy of attention. It was naturally to be expected that the botanist Theophrastus, whose duty it was to give as full a list as possible of lands in Arabia producing aromatic plants, should mention the real land of frankincense, Zafār or in a wider sense Mahra, including Zafār. On the other hand, it is not to be denied that the mention in Theophrastus of a Mamali or Mali, which is quite unknown, after three well-known names, is remarkable, as it must of course be an important country, fit to be compared with Saba', Ḥaḍramūt and Katabān. Simply for this reason E. Glaser's various attempts to identify it (*Sitzber. der Gesellschaft und Geogr. Arabiens*, ii., Berlin 1890, p. 3, 35 sq., 40, 132, 153 sq., 217), not one of which is tenable (cf. *Realencycl.*, s.v. Saba', col. 1333 and here SABA', iv., p. 52), may be discarded. The passage in Theophrastus has been wrongly interpreted as mentioning Mamali only as the home of the cinnamon plant (see SABA', iv., p. 52 and the literature there given to which may be now added: Hommel, *Ethnologie* [= *Grundriss*], p. 517, note 2). Although Mahra is not suggested without certain inherent probability, the question still arises how has it come to be called Mamali or Mali, which must remain more or less a puzzle. As the first two letters in Mahra and Mali are the same, it may be supposed that there is a corruption in the third letter of Mali. The name seems to conceal the Greek transcription of Mahra, which in the form MAPI (from MAPA), was corrupted to MAAL, because it was of course unintelligible to the Greek copyists, or it might have been altered by a learned editor with gemination of the first syllable to MAMALI, especially as this form might seem to him to be superficially supported by the *Maḥarā* *Maḥarā* in Ptolemy, iv. 7, 5. A further corroborating factor is that Theophrastus' description of the hilly country, where the *Libanotis* grows, with the *ῥοζοὶ ὑψηλοὶ καὶ δασυὶ καὶ νεφελῶν*, from which rivers pour down to the plain and which was visible to sailors from the coast, agrees very well with the description of the *χώρα Λιβανωτῶνδος ἐπὶ τοῖς καὶ ὄρεσιν* of the land of Zafār (q.v.) in the *Periplus Maris Erythraei* § 29 (cf. the *ῥοζοὶ ὑψηλοὶ καὶ περὶ τοὺς καὶ ὄρεσιν* § 32, very probably the Kaḥ mountains), and also recalls Carter's statement that nowhere else in South Arabia is there so much running water as in the frankincense country. This undeniable agreement is not affected by the fact that, according to Theophrastus, the frankincense country mentioned by him was in possession of the Sabaeans. The fact that he mentions this land as a fourth with Saba', Ḥaḍramūt and Katabān and at the same time says that the Sabaeans were lords (*ἀρχοὶ*) of this frankincense country, suggests that the country which was quite a considerable distance from their original home, had passed to Saba' by direct conquest or automatically with the occupation of the

whole territory of some formerly independent power. This may have been either its ancient rival Katabān, which, although still an independent kingdom, no longer exercised sovereign rights over the frankincense country and about two centuries later lost its independence to Saba, or the ancient kingdom of Hadramūt, which with the frankincense country was in the time of Juha a part of the Sabaeen kingdom, already ruled by the Himyars (according to Pliny, *Nat. Hist.*, xii. 52 sq.; see SABA) and to which, certainly in the time of the Periplus, i.e. in the Himyar period of the early centuries A.D., long after the beginning of the dissolution of Sabaeen rule, the frankincense country belonged, but it may however have also done so before Saba became a great power. Hommel assumes (*op. cit.*, p. 140 and notably p. 655) quite a close ethnic connection between the Hadramitis and the Minaeans and he definitely says that the Hadramūtī Minaeans were those who took possession of the frankincense land, which geographically also appears most natural. No convincing argument can be brought against the evidence of Theophrastus that in his time or in that of his authority, perhaps Androsthenes (cf. *Realencycl.*, s.v. Saba, col. 1306), the frankincense country was not independent, but belonged to Saba, so that the latter was already a great power, which possessed the hegemony of South Arabia and numbered its weaker neighbours among its feudatories. The frankincense land only became independent early in the Christian era. That the campaigns of the Sabaeans extended considerably to the east may be deduced from the Širwāh inscription (Glaser, N^o 1000) (cf. Hommel, *op. cit.*, p. 658 sq.). On the unjustified alteration in the text (Saba) in Theophrastus, see SABA, iv. 6* (to the literature there quoted may now be added: Hommel, *op. cit.*, p. 516 sq. and 653 sq. [in addition to 138]). To support the assumption that the Katabānians occupied the frankincense land, it is not necessary to presume Gebban as a later name of Katabān (in allusion to the Gebbanitae in Pliny, vi. 153; cf. MA'IN; on Glaser's chronological error in the period of Katabānian occupation of the frankincense country, see ZAFAR, N^o 4). The expression *Yamanat* in the longer titles of the south Arabian kings of the last epoch means, according to Hommel in *Handbuch der altarabischen Altertumskunde*, ed. by D. Nielsen, Copenhagen-Paris-Leipzig 1927, p. 96, note 5, "perhaps the frankincense coast as the 'southland' of Hadramūt"; it might well be interpreted as a general name of the southern coastlands, at a later date still included in Yaman, in contrast to the lands of Saba, Dhū Raidān and Hadramūt preceding it in the title.

Sprenger's remark, *Das Leben und die Lehre des Moḡammad*, Berlin 1865, iii. 437: "The Mahrites were called Sachalites by the Greeks", is misleading; the land around the Sachalite Gulf is in the conception of the author of the Periplus and of Ptolemy not only Mahra, but also the land lying east of it and especially the part of al-Shūhr in the wider sense lying west of it, the land of the Ka'ūti (cf. the article KAHARITAI in *Realencycl.*). [The *regio trifera* in Pliny, xii. 52 (vi. 161) is probably to be understood as Zafār in the narrower sense but may include Mahra to which alone Glaser refers it (*Die Abessinier in Arabien und Afrika*, Munich 1895, p. 125; see at the beginning). The Ḳ' Aaḡāḡ used in Herodotus, ii. 73, in

the story of the phoenix is practically a reference to Mahra (Hommel, *op. cit.*, p. 138) although it is not mentioned by name. On the 'Aḡāḡāḡ in Stephanus, see below].

The inscriptions which, according to Pliny, *Nat. Hist.*, vi. 150, are inscribed on stone pillars on an island off the South Arabian coast (cf. the article RHINNEA in the *Realencycl.*) cannot, as Ritter for example (*Exerkunde*, Vol. viii, Sect. 1, Pl. xii, Berlin 1846, p. 290) thought, be attributed "to the Mahri who were settled in the neighbourhood of Kane" but were probably Minaean (or Nabataean). The position of the emporium of Kāw, which according to the *Periplus*, § 27 and Pliny, vi. 104 belonged to the frankincense country and is also mentioned by Ptolemy, vi. 7, 10 cannot be definitely ascertained. Recently several scholars, following Glaser, *op. cit.*, p. 175, C. Landberg, *Arabica*, iv., Leyden 1897, p. 75 sq. and *Études sur les dialectes de l'Arabie Méridionale*, i. (Hadramūt), Leyden 1901, p. 196 and earlier writers (see the list in *Realencycl.*, s.v. Saba, col. 1330), have again expressed the view that this port is probably to be located at Hīḡ al-Ghurāb (Nielsen in *Handbuch*, *op. cit.*, p. 8) while Sprenger, *Geographie*, p. 82 sq. had placed it at Bāl-Hāf. Since Sprenger, nothing new has been produced in favour of the old view and against his localisation. In favour of the latter is the description in the *Periplus*, § 27 according to which two uninhabited islands, the 'Oplao ḡaww ('Bird Island') and Ṭawāḡ were 120 stadia distant from Kane. These, according to Sprenger, are the islands of 'Halany and Gibus, also called al-Sikka" (to be written: Hūllāniya and Kanbūa also called Sakḡa; see Landberg, *Arabica*, iv. 66). Their mention makes certain the reference to Bāl-Hāf as the opposite point on the coast from which they are 110 and 130 stadia distant respectively, but not to Hīḡ al-Ghurāb which, according to Carter, is only a mile from Hūllāniya. Landberg himself tells us that the island of Kanbūa seems never to have been inhabited. The distances from Kane adduced by Glaser from Ptolemy, which besides varying in the manuscripts, naturally yield nothing really convincing in favour of Hīḡ al-Ghurāb (particularly of 'Ra' al-'Aḡida, the equivalent of Cape Kane, west of Kane", according to Glaser, *op. cit.*, p. 216; but this promontory of al-'Aḡida is at Bāl-Hāf); these measurements can equally well be made to fit Bāl-Hāf. H. v. Maltzan, *Reise nach Südarabien*, Brunswick 1875, p. 225 sq. who could not yet have known of Sprenger's view, had already called attention to the *ḡaww* (he transcribes it Kane) occurring in the (third) smaller inscription of Hīḡ al-Ghurāb (a reproduction in Landberg, *Arabica*, iv., Pl. ix.), and connected it with "Cane Emporium"; J. H. Mordtmann, *Z. D. M. G.*, xxxix. (1885), 233 likewise explained it as Kāw, the harbour of the citadel of al-Ghurāb. Even if we readily grant that the uncertain word in the text of the inscription, most recently and probably definitively published and translated by B. Misker in *W. Z. K. M.*, xxiv. (1927), p. 72, really reproduces the name Kāw, this does not prove, as Sprenger, *op. cit.*, p. 83 has pointed out, that the ancient seaport lay on the present rocky point of Hīḡ al-Ghurāb. It must also be remembered that the names of many Arabian harbours have in course of time been transferred to other places in the vicinity, e.g. Zafār [q. v., N^o 4] and Mīrbāt. Landberg's

objection (*Arabica*, iv, 76) that the *Periplus*, if Kanā had been Bil-Haf, would not have said (§ 29) that after Kane came another gulf running far inland, the *Σαχαίρε*, but would have mentioned the harbour of Bir 'Alī to the east of it, is not a cogent one. The *Periplus* gives a list of the most important gulfs of South Arabia and the comparatively small bay of Bir 'Alī might easily be overlooked behind the broad Sachālitō gulf which runs far inland, especially as the use of the term *Σαχαίρε* is a fairly elastic one (cf. the article *TOBARIAT* in *Realencycl.*) and the list of the places on the coast in this *Periplus* is not a rule scientifically complete and exact but sometimes even gives wrong names (e.g. *Mérya*), to say nothing of the fact that in many places on the South Arabian coast, the harbourage conditions have changed since ancient times. Landberg himself (*op. cit.*, p. 65) observes that the promontory of Hijn al-Ghurāh must have had a different appearance in earlier times. M. Hartmann, also, who had previously, *Die arabische Frage (Der islamische Orient*, ii.), Berlin 1909, p. 175, 571 declared for the older view, said later in the very same work, p. 418, 614 that he had now adopted Sprenger's opinion. The *Periplus* inscription is still not sufficient ground for the conclusion that the identification of Kanā with Bil-Haf should be rejected in opposition to Sprenger, who himself appreciated the force of this evidence. The form of the name used by Sprenger, Bil-Haf (Bil-Haf), is incorrect however (as also is Glaser's Bil al-Haf; cf. Landberg, *Haframūt*, p. 105); Bil is equivalent to Ibn, but Sprenger rightly recognised that in this name there is preserved a memory of a son of al-Haf, the son of Kudā's and successor of the Mahra (al-Bakri, i, 19; *Ta'j al-Arab*, iii, 351; see below).

The Arab geographers had no accurate knowledge of Mahra, not of Haframūt; modern explorers have found out much more about these regions. Al-Hamdānī, *Sifa Dīwān al-Arab* (ed. D. H. Müller, Leyden 1884), p. 45 mentions al-Aḥḥ — which Landberg (*Haframūt*, p. 158, wishes to restore to al-Aḥḥ from manuscript preferences — as the capital of Mahra, which, according to Glaser, *Abschiss*, p. 87 stretches to the district lying roughly between Damhāt and Rās Darbat 'Alī, almost in the centre of the modern coast region of Mahra. On p. 53 he says, as do Ibn al-Muḥallab and others after him, that the Mahra people also inhabit Soqatra (on the conversion to Christianity of the mixed population of Soqatra, see Yāqūt, *Mu'jam*, iii, 102; al-Muḥallab, *Murūj*, iii, 36 *sp.* etc.; further particulars in the article *soqatra*). On p. 51 *sp.* he talks of the Mahra tribes and their fighting and on p. 86 *sp.* of the road from Haframūt to Mahra and tells us about the tomb of the Prophet Hūd. This sanctuary on the frontier between Haframūt and Mahra is still held in particular veneration and is much visited by the inhabitants of these two lands (a text from Haframūt showing this is given in Landberg, *Haframūt*, i, 432 *sp.*). — The Arab geographers include Mahra in the Yemen, e.g. Yāqūt, *Muḥallab*, p. 394; see the reference to the Mikhlāf Mahra in Yāqūt, *Mu'jam*, iv, 700; who in this, his main reference, also repeats the view that Mahra is the name of a tribe and that the correct form is Mahara (a Balād Maharā in Mahra is mentioned on iv, 697). It is sometimes more accurately defined as "the extreme (furthest) Yemen", e.g. Yāqūt, *Mu'jam*,

i, 280; ii, 510 (= *Muḥallab*, p. 166); iii, 366; iv, 345, 495; *Muḥallab*, p. 415. The Arabs speak of a Naḥḥ to the land of the Mahra (Yāqūt, *Mu'jam*, i, 280; iii, 681; iv, 345, 495, 697; *Muḥallab*, p. 394, 415; cf. al-Muḥallab, *op. cit.*, p. 98; al-Tahiri, ed. de Goeje, i, 1980). This is the Naḥḥ (or Naḥḥi) which Carter also mentions as a district in which the frankincense especially flourishes, the highland country about two days' journey north of the coast within the latitude which Carter has also defined, although too narrowly (cf. *saḥā*). The Mahra are also said to be inhabitants of the coastland of al-Shīhr [q.v.], for example by al-Mas'ūdī, i, 333 and Yāqūt, *Mu'jam*, iv, 387 and we find the land of Mahra is called al-Shīhr (al-Iḥḥi, *op. cit.*, p. 25 = Ibn Hawkal, *op. cit.*, p. 32 *sp.*; al-Iḥḥi, i, 48; Ibn Khaldūn, ed. Kay, *op. cit.*, p. 132; cf. al-Hamdānī, *Sifa*, p. 51 and al-Bakri on *al-Aḥḥ*; the statement in Rømmel, *Aufschlüsselung Arabische Descriptions*, Göttingen 1802, p. 32 *sp.*, is obscure). Al-Shīhr however in the later and modern use of the name is applied to the coast not only of Muḥallab proper but of the land of Zafar also, that is of the frankincense country generally, i.e. the "frankincense coast" which is identified by many modern writers with the Mahra country but at the same time includes the part of the Haframūt which adjoins on the west (cf. Ibn Khaldūn, *op. cit.*, p. 132), i.e. in general the name of the shores of the Gulf of the Moon, finally in a still wider sense, the name of the whole coast between 'Aden and 'Omān.

Al-Iḥḥi, *op. cit.*, p. 25, and almost in the same words, Ibn Hawkal, *op. cit.*, p. 32, also al-Mas'ūdī, i, 333 *sp.*; al-Iḥḥi, i, 48, 150; Abu 'l-Fida' (see Rømmel, *op. cit.*, p. 33); Ibn Khaldūn (*loc. cit.*) describe Mahra as a desert in which there are no palms and no agriculture and the inhabitants therefore are not acquainted with bread. Carter, like these Arab writers, also emphasises the contrast between the frankincense region and the dreary desert west and east of it and more recent travellers like Beni agree with him. The only possessions of the inhabitants, according to these authorities, are goats and very fine camels, particularly renowned for their swiftness, mentioned also by al-Hamdānī, *op. cit.*, p. 100, 201; Ibn Hishām, *Sifa*, ed. Wüstenfeld, p. 963 and the poets as well as the *Lisān al-Arab*, vii, 36; *Kāmil*, i, 455 and *Ta'j al-Arab* (*Mahriya*); the *Lisān* quotes three plural forms: *Mahāriya*, *Mahāriya*, *Mahāriya*; on the first cf. Howell, *Grammar*, i, 997, 1000. The camel which Muhammad chose for himself out of the booty after the battle of Badr had been purchased in Mahra; his governor in the Yemen procured Mahra camels for the Caliph Sulaimān b. 'Abd al-Malik (714—717) (al-Kāsimī, *Aḥḥi*, ed. Wüstenfeld, ii, 41). Ibn Hawkal (*ibid.*); Ibn Khaldūn, *op. cit.*; cf. al-Iḥḥi, i, 48) adds that the Mahra live on meat, milk and its products, and fish (cf. al-Muḥallab, *op. cit.*, p. 100) and that they also feed their camels and goats on fish. Yāqūt, *Mu'jam*, iv, 700, records a note that the Mahri camels do not take their name from the land but from the ancestor of the Mahra's, Mahra b. Haidān (cf. al-Iḥḥi, also *Lisān*, *Kāmil* and *Ta'j*, *loc. cit.*, and Rømmel, *op. cit.*, p. 33). According to Landberg, *Haframūt*, p. 87, and others the Mahri riding camels have for long had a bad reputation, as they are really not swift; the best of this kind are said to be those of the Banū

Ṣubayh (N.E. of 'Aden) and of the Ṭihyān. It is doubtful whether we may assume with Landberg that their fame takes us back to a period when the Mahra occupied a great part of South Arabia. In any case, L. Hirsch, *Reisen in Süd-Arabien, Mahra-Land und Hadramaut*, Leyden 1897, p. 77 refers to the "celebrated Mehri riding-camels" which in his time were called *maṣīra* in al-Shihr.

The above mentioned authors and al-Mukaddasī, *op. cit.*, p. 98 also record that there was frankincense in the country which was exported. Al-Idrīsī lays stress on the commerce which was one mode of livelihood of the Mahra. Parts of their land are also reckoned to 'Omān. In 226 (840) Mahra was for a short time tributary to 'Omān. Ibn al-Muḍawwir, who visited Mahra and Soqatra in 618 A. H., says that the Mahra also inhabit the mountainous country of Zafār and the islands of Soqatra [q.v.] and Maṣra. In the division of the Yemen into two parts, Ṭihāma and Naǧd, according to al-Mukaddasī, *op. cit.*, p. 53, 70, Mahra with the town of al-Shihr is a dependency of Naǧd (see Sprenger, *Die Pers- und Reiserouten des Orients, Abhandl. für die Kunde des Morgenl.*, iii. 3, Leipzig 1864, p. 109).

Yāqūt (e.g. *Muḍjam*, i. 154, 280; ii. 175, 330 [= *Muḥṭarib*, p. 166], 881; iii. 366, 681, 691; iv. 345, 495 [= *Muḥṭarib*, p. 394], 697), mentions places in or near Mahra and distances on roads from and to Mahra are given by Yāqūt *Muḍjam*, iv. 626, 700; al-Isṭakhṛī, *op. cit.*, p. 27 sq. (= Ibn Hawqāl, *op. cit.*, p. 17, 33 sq.). — According to Ibn Khaldūn, *op. cit.*, p. 132, Hadramūt and al-Shihr (Mahra) were under one king; in older times however, al-Shihr had been the land of the 'Ad, the predecessors of the Mahra who had come from Hadramūt. In the legends of the 'Ad and the prophet Hūd, a part is played by the land of Mahra, pone in water, which adjoined the country of this mythical people (al-Tabarī, ed. de Goeje, i. 233 sq.); the Mahra call the interior of their country al-Aḥḡāf (cf. Landberg, *Hadramaut*, p. 157), where according to tradition (see al-Mas'ūdī, iii. 106, 271 etc.) the home of the 'Ad was located (cf. WABER). Malik b. Hinnar al-Shihri is said to have been the first of the Kaḥḥānīs to settle there and he was succeeded by his son Kuḍā'a, whose possessions were limited to Mahra and he in turn by his son al-Hāf, whose great grandson was Mahra b. Haldān b. 'Amr (Yāqūt, *Muḍjam*, iv. 700; Ibn Khaldūn, *op. cit.*, p. 132 etc.; cf. above). In the early days of Islam (year 12 A.H.), Mahra was one of the rebellious districts against which Abū Bakr and his generals had to wage war; al-Tabarī, i. 1884, 1929 (on the subjection of the Masallima), p. 1963, 1976 sq. (al-'Arifīya's campaign against Mahra), p. 1980 sq. (victorious campaign of al-'Ikrima against Mahra); the conquest of Mahra was much facilitated by schisms among the enemies of Islam in the country. The Mahris participated in the great campaign of conquest which began under the Caliph 'Umar I. and some settled with other South Arabians in al-Fusāt where a street (*Khalīfat mahra*) bore their name (cf. F. Wüstenfeld, *Die Geographie u. Verwaltung von Ägypten nach dem Arabischen des Abū 'Alī Ḥāfiḍ Ahmed ben 'Alī al-Galacandhī f. Aḥḡ. Aḡl. Gr. d. Wia. in Göttingen*, xxv., 1879, p. 51 sq.; al-Kalīghandī, *Saḥāb al-Shihr*, iii, Cairo 1914, p. 331).

Of modern explorers F. Fresnel was the first to bring back accurate information about Mahra.

In 1837 he obtained some information about conditions along this coast through his intercourse in Djidda with merchants from Hadramūt or Mahra (in *Journ. dt.*, 3rd Ser., 1838, vol. v. 507 sqq., vol. vi. 529 sqq.); he gave an account of Gishin, the capital of Mahra and the Sulṭān whose authority did not extend beyond the walls of the city. His description of the boundaries of the country was incorrect. Much more detailed and accurate were the topographical data collected by Captain S. B. Haines, who was appointed in 1834 to make an astronomical and nautical survey of the South Arabian coast from Bāḥ al-Mandab eastwards (as far as Rās al-Hadd). In his *Memoir of the South and East Coast of Arabia* (in *J. R. Geogr. Soc.*, London 1845, xv/1. 104 sqq.), he describes the western boundary of Mahra, the Wādī Maṣīle, which is rich in water and well tilled by the Mahra and contains many villages lying among palm-groves. He then gives his short notes on the town of Sehūr east of the Wādī and corroborates Fresnel's account of Gishin about which he is the first to give fuller details. C. Niebuhr, *Beschreibung von Arabien*, Copenhagen 1772, p. 287, had already mentioned "Keschin" and the independent shaykh there, who was also lord of Soqatra; he also gives a plan of the harbour from a drawing by an Englishman, whom he had met in Bombay (Pl. xvii.). Haines observes, like later writers, that Gishin is only a wretched little village of at most 300—400 inhabitants, which consists mainly of reedhuts and has only a few stone houses and that the trade there is very slight. He also gives some details of the Mahra people and its tribal divisions, its customs and dress, and in confirmation of Fresnel's observations their attitude to Islām, which only the chiefs profess, while the people are indifferent to the Korān and are not even able to perform the daily ṣalāta. He ends by giving the promontories and villages on the coast east of Sehūr as far as the eastern frontier of Mahra towards Zafār. The English officers cooperating in this survey of the coast visited only a few points on it, which were practically confined to the Gulf of Gishin because their duty was really confined to surveying the coast west of Mahra. Valuable information about the Mahra is given in H. J. Carter's *Notes on the Mahra Tribes of Southern Arabia with a Vocabulary of their Language*, in *J. R. A. S.*, Bombay Branch, July 1847, vol. ii, p. 339 sqq. Malzan combined ethnological research with his study of the Mahra language (in the introduction of his edition of *Adolph von Wredde's Reise in Hadramaut*, Brunswick 1873 [the preface is dated 1870], p. 18 sqq., and 28 sqq., and in his article cited below) but regarding the country itself which he never entered, he knows no more than the English naval officers. The extracts in Ritter, *op. cit.*, xii. 625 sqq., and 635 sqq. he says, are sufficiently accurate according to his own information. The coastlands east of Wādī Maṣīle to Rās al-Hadd, i.e. Mahra, Zafār and 'Omān he however calls the great "terra incognita of Oceanic Arabia", "The names Mahra and Gāra (also written Gara)" by which the two countries on the coast are distinguished, he described as "not clearly defined" (*op. cit.*, p. 28). We now know that these are the Mahra and Kaṣī (the hill-people of Zafār) and the language of the latter is Kaṣawī (Gawī) or Shawawī, in modern times also called Ḥakīlī, or Shehrāṭ (cf. ZAFAR). Malzan recognised

that the two peoples are fundamentally different in language, mode of life, and religion from the people of Central Arabia.

Glaser, *Shi'ar*, II, p. 26, wrongly identifies *Mawala* in Strabo, xvi, 768 (quoting Eratosthenes) with Mahra (*Realencycl.*, s.v. *Saba*, 1334-1339). On p. 20 he gives the land of Hadramūt (after the fall of the "Abyssinian-Arab kingdom") too great an extent (as far as Mirbat). On his note that the *Tasapras* of Ptolemy are the hill-peoples of all Mahra cf. *Realencycl.*, s.v. *IGRAPITAL*. — As a result of the enquiries made by him on his travels in Arabia, he states (*Afghanistan*, p. 87) that there are now three different divisions of the Mahra tribes: the eastern is called *Shehar* or *Zair* and inhabits, according to his information, the coast from Rās Nās (55° 17' East Long. from Gr.), according to another authority from the island of Maḡra, to Rās Darbat 'Alī (53° 3' East Long.); the western that to which the name Mahra is generally applied, stretches from Rās Darbat 'Alī to *Shūḥ*, while the third group inhabits *Sokotā* (cf. above on *al-Maḡḡar*). — L. Hirsch gives not a little new and valuable information about the people of the southwestern coast. His account of Mahra is based on his ten days' stay (1893) in *Gishin* (or *Gishin*; transcribed *Gishin* or *Gishin*; Hirsch writes sometimes *op. cit.*, p. 48, 50, 52-53) *Gishin* and sometimes *Kishin*, like W. Hein and others [p. 2 etc.], he gives "Kishin" in the Index as the Mahri pronunciation which is also given by Jahn [see below]. Of the wretched little capital of the country, he tells us, practically agreeing with Haines before him and Hein and Bent after him, that it consists almost entirely of isolated mudhouses in a ramous condition and a few ragged tents and reedhuts which, being scattered aimlessly over a wide area, leave irregular wide open spaces between them. Even the palace of the Sulṭān whose rule over *Gishin* and *Shūḥ* and other places on the coast is quite nominal, as he can do nothing without the approval of his Beduins, is a broken down mud building; there is said to be only one building in the town that is kept clean, the house of another Sulṭān. According to Hein, the most imposing of the mud houses, which are not built according to any system, is that occupied by the reigning Sulṭān's bodyguard. There is nothing like a regular market or regulated trade there. Even the most rudimentary necessities of life are acquired by barter and money is unknown. From the government buildings a little mosque may be seen. While Maitzner, corroborating Frowel and Haines, pointed out (*Ward's Reise*, p. 29), that the Mahra have long been distinguished as heretics from the great majority of the orthodox and indeed can hardly be called Muslims at all, Hirsch says that at least in *Gishin* and *Shūḥ*, the Mahra are no less attached to Islam than any other Arabs; he saw them regularly performing their *ḡalāt*. This contradiction may perhaps be explained by the observation already made by Haines on the same question. According to Hirsch the ruling Sulṭāns or *Shaykhs* are pure Arabs and not Mahra's. In any case the attitude to Islam of Beduins living north of the coast territory is quite superficial. The Sulṭān of *Gishin* belongs to a dynasty which has also a kind of suzerainty over *Sokotā*. The Mahra coast, like *Sokotā* is under British suzerainty. Hirsch (p. 76 *op. cit.* and on his map) gives the names of several places on the coast east of *Gishin*. Th.

Bent (*Southern Arabia*, London 1900, p. 280) notes the striking contrast between the sandy plain of *Gishin*, which he did not succeed in reaching, and the fertile stretch of the coast of *Zafar*. Shortly before his arrival in *Zafar* (in the winter of 1894—1895) the wāḡ residing in *al-Hafa* had been fighting with the Mahra tribes. The coast-town of *Rakhayt*, west of *Rasūt*, has a little fort to defend it from the Mahra. Bent gives a more detailed account of the Mahra who live in *Sokotā* [q. v.]

The statement in A. Jahn (*Südarabische Expedition der Vienna Academy of Sciences*, III, 1902, *Die Mehri-Sprache in Südarabien*), p. 1: "The Mehri is the language of the South Arabian coast between *Hawāḡ* and *Dafar* which is called *bilād mahra* by the Arabs" — is misleading. *Hawāḡ* lies roughly in the centre of the Mahra coast in 50° 9' East Long., N. E. of the capital *Gishin*. — W. Hein, who was sent out by the Vienna Academy to continue the work of collecting specimens of the language begun by the South Arabian expedition, arrived in *Gishin* with his wife in 1902. During his stay of 66 days, during which his work was much impeded as he was interfered most of the time; he collected, among other information, statistical and topographical data for the adjacent parts of the coast and also for the interior (see his article, *Ein Beitrag zur Statistik Südarabiens*, in the *M. Geogr. Ges.*, Vienna 1903, p. 219 *op. cit.*). In D. H. Müller's preface to vol. IX of the South Arabian Expedition, introductory remarks to W. Hein's record of his journey are given (p. viii, *op. cit.*). According to him *Gishin* is the name of the whole stretch of country along the coast from Rās *Shirwā* to Rās *Dardja* for a breadth of 5 to 15 miles. About 2 miles to the north of the coast a ridge runs parallel to it. Immediately on the coast lie the *dhura* fields of the district of *Maghlol*, behind it, the centre *Gishin*, the district of *Rihbet*, in which the Sulṭān lives, east of it the most important district *Yentuf*, west of *Rihbet* *Sellā*, the western boundary of which is the *Wādī Ghahuri*. Further inland lies *Durūb*, where prominent Sulṭāns have their homes. Hein clears up many statements by Hirsch and gives further topographical details about the surroundings of the capital. *Gishin* has an area of about 80 square miles. Hein estimated the permanent population at 2,386; Hirsch put that of the capital and its immediate neighbourhood at about 500.

From the results of exploration so far, it appears that the country of Mahra stretches from *Wādī Maḡḡ* eastwards to Rās *Darbat 'Alī* i. e. from 51° 13' to 53° 3' East Long. and between 16° and c. 17° 30' N. Lat. The Mahra rule the lower course of the main *wādī* which runs through *Hadramūt*. No European has yet penetrated into the interior of the country, their presumed original home; it was however equally unknown to the Arab geographers.

In the coast district of *al-Shīr* (Mahra to *Omā*) old south Arabian dialects are still spoken, which differ essentially from Arabic and indeed from Semitic in general. The Mahra as a rule speak very little Arabic. *Al-Iḡḡar*, *op. cit.*, p. 25; *Im Hawāḡ*, *op. cit.*, p. 32; *al-Idrīs*, I, 48, 250 who identifies it with the old Himyarite language; *Im al-Maḡḡar* [cf. *Sokotā*], *Abu 'l-Fida* (see *Rommel*, *op. cit.*, p. 33) and others describe it as unintelligible to Arabs. *Al-Handān* also (*Sifa*,

p. 134) calls their language a jargon and al-Mas'ûdi, l. 333, points out differences between it and Arabic. Fresnel was the first, apart from early vague reports of a peculiar language in Haḍramût, to establish the existence of a hitherto unknown language quite different from Arabic "in the interior of Yemen towards Haḍramût". He had become acquainted with it from natives who called it Ekhili. This name however he gave (*Note sur la langue Hâmnyrite*, *J.A.*, 1838, 3^e Ser., vi. 79 *seqq.*) not only to Mehri or what he considered as such but to other South Arabian dialects and, as Maltzan has already pointed out, to Hîmyarite also, although we must confess that this (or Sabaeen) has several features in common with Mehri. Ritter, *op. cit.*, ii. 46 ff., 254 and others followed Fresnel's error, including Sprenger, *Das Leben und die Lehre des Mohammed*, iii. 437; it is however quite an old mistake; it was made by Ibn Duraid (see Wüstenfeld, *Genealogische Tabellen*, Register, p. 280) whom Sprenger follows (on al-Idrîsî see above). Hains (see above) said that the language of the Mahra was strange to the Arabs. With these earlier and recent statements may be compared Landberg's observation given by Hommel, *Ethnologie*, p. 153, that, "according to the statements of Arabs, Beduin tribes of the great desert of el-Rûh el-khali north of Haḍramût and the frankincense coast speak a language which the ordinary Arabs do not understand"; this, according to Hommel, could best be explained if a Mahra dialect were spoken there. M. v. Oppenheim (*Vom Mittelmeer zum Persischen Golf*, Berlin 1900, ii. 332) was told that in el-Rûh el-khali lived people who spoke a language unintelligible to the Arabs and he supposed that this was Mehri. After Fresnel, Carter (see above) studied Mehri and particularly Maltzan (*Über den Dialect von Mahra*, *Z.D.M.G.*, xxy. [1871], 196 *seqq.*; *Dialectische Studien über das Mekri*, *ibid.*, xxvii. [1873], 225 *seqq.*; *Dialect von Mahra*, *ibid.*, p. 252 *seqq.*). He was the first to give scientific proof of the difference between this language and Arabic in vocabulary and grammar. He also classed Mahra and Kari together as Ekhili and describes it as a modern dialect of old Hîmyarite, from which he said it was descended through an unknown intermediary. He called attention to the similarity with Ethiopic and its modern forms, Ge'ez and Amharic, and presupposed a homogeneous group distinct from Kur'anic Arabic (see also his edition of Wrede's *Reise*, p. 30 ff.). In Sprenger's belief (*Geographie*, p. 268), the Semites of Ethiopia are of Mahri origin.

Maltzan's studies in spite of their defects were most valuable preliminary work. Glaser was the first to define more accurately the limits within which Mehri was spoken (*Abscissur*, p. 87). Fresnel, Maltzan and Glaser had not been in Mahra or Zufâr, but they ascertained the existence of the two dialects. Fresnel in Djidda, Maltzan and Glaser in 'Aden (Glaser, *Abscissur*, p. 184). The latter states (*Shiwa*, ii., p. 96) that the Hakili live east of Haḍramût and western Mahra (on the form of the word cf. Hommel, *Ethnologie*, p. 235), and their language is called Shehrî, while the dialect of the territory west of it is "Mahri (certainly not Ekhili)", similarly on p. 178 *sq.* In his *Abscissur*, p. 185, also he identifies the Kari people with the Hakili (as does Hommel, *op. cit.*, p. 153, who says: "Jari (villages) is the Arabic name for the native tribe of Hakili, whose language

is called Shehrî"). Hakili is the name given by Glaser (*Shiwa*, ii., p. 95) to the inhabitants of Mahra whose tribal name in the form Ekhili, Fresnel took for the name of the language spoken there and thus introduced it into European philological literature. Landberg's opinion (*Arabica*, v., Leyden 1898, p. 153) that the name Ekhili is "toute à fait juste à côté de la vraie forme Hakili", is contradicted by Hirsch's testimony (*op. cit.*, p. 32; from Schût) that the name Ekhili applied by European scholars to Mehri is unknown there and simply means "barbaric, unintelligible". Hommel records (*op. cit.*, p. 153) that Glaser had interesting specimens of the Kari dialect and of Mehri and Sokhri; but these have not been published.

Glaser (cf. *Shiwa*, ii., p. 20, 96, 181 *sq.*, 246, 503; *Abscissur*, p. 84 *seqq.* and Hommel, *Ethnologie*, p. 12, 148, 150 *seqq.*) further developed these ideas of Maltzan on the South Arabian-Ethiopic group of languages. According to the latter, the Ethiopic alphabet came from the Axum inscriptions and that of the later literature in the Ge'ez language from a variety of the alphabet of the South Arabian inscriptions, once common in the Mahra country and the frankincense land in general was the ancestral home of the Semitic Abyssinians and Amhâra. Against the view that the name of the latter is a plural of Mahra, it is sufficient to quote the form Amkhar (Hommel, *op. cit.*, p. 152, N^o 182). There is no reason to doubt contacts between Mehri and Ethiopic (Hommel, p. 153). That in ancient times members of the people called Habashat in the South Arabian inscriptions (cf. Glaser, *Shiwa*, l., p. 25—27 and *Abscissur*, p. 28) were settled in Arabia is suggested by the mention of the 'Aḥḥimol in Stephanus Byzantinus i.v. from Uranus' *Arabica* (μῆρα τοῦ Ἰσλαίου Καρραδῶν, 'Aḥḥimol) and the 'Aḥḥimol in Ptolemy, vi. 7, 11 (in Zufâr, q. v.). From the first passage, Glaser, *Abscissur*, p. 88 has concluded that the Aḥḥimol lived east of Haḍramût, while in *Shiwa*, l., p. 26 he had previously supposed that by the land of the Aḥḥimol was understood the whole coast from eastern Haḍramût to Mahra and islands lying off it: his further identification, which however had been suggested by his predecessors, of the Aḥḥimol with the Abyssinians (cf. *Satirische Denkmäler* by J. H. Moedtmann and D. H. Müller, Vienna 1883, p. 40, where attention is called to the Abḥashân of the inscriptions) is however worthy of attention. C. Conti Rossini in his article *Saghi Habashat* (*R. R. A. I.*, Vol. xv., Ser. 5^a, 1906, p. 39—59) has however shown that the old home of the Habashat of the South Arabian and Axumite inscriptions was in the southwest of Arabia and on the plains along the coast west of Senâ, roughly between Luhayn and Zaid. In the Aḥḥimol of Uranus, Rossini rightly sees only an isolated section of this people or a military settlement. Glaser moreover (*Shiwa*, l., p. 27) had at once identified the people Ḥashar mentioned in the Monumentum Adulianum (cf. D. H. Müller, *Epigraphische Denkmäler aus Abscissur*, *Denkschr. Ak. Wien*, xliii., p. 5, 739), with the Mahra and the people of the islands off the coast, which cannot at all be considered proved. In any case one cannot draw any deductions from the spread of Mehri regarding the extent of an old Habasha kingdom (with Glaser, *Shiwa*, p. 179) nor assume that as late as 100 B.C. the kings of Habashat

were established in the land of Mahra (Hommel, *Ethnologie*, p. 151).

D. H. Müller and his collaborators were the first to collect and investigate texts in the Mahra language in a systematic and comprehensive fashion. In Vol. IV of the *Südarabische Expedition*, Vienna 1902, *Die Mehri- und Soqotri-Sprache* (I) he published Biblical texts, stories, poems and proverbs, which he collected for the most part on the Swedish steamer placed at the disposal of the expedition from the mouths of natives, who had been taken on board in 'Aden and Soqotri. For Mehri in particular, he had a single authority, the same man as Jahn had. In the third volume of the same collection appeared *Die Mehri-Sprache in Südarabien* by A. Jahn, texts and glossary, Vienna 1902. On these two works cf. the brief review by Glaser, *Zwei Wiener Publikationen über den habaschisch-äthiopischen Dialekt in Südarabien*, *Beilage der Münchener Allgemeinen Zeitung*, 1902, No. 186 and 187 of 15th and 18th August, and the very thorough and expert criticism by Landberg, *Die Mehri-Sprache in Südarabien... von A. Jahn und D. H. Müller*, *Kritisch beleuchtet*..., Leipzig 1902 (Vol. II, ed. by D. H. Müller, *Soqotri-Texte*, Wien 1905, forms Vol. VI, of the collection).

The already mentioned traveller W. Heis had in 1902 in Gishin with the assistance of various natives collected Mehri and Hadrami texts. He died in 1903 before he was able to put his material into its final form; D. H. Müller edited and published it in vol. IX of the collection (*Mehri- und Hadrami-Texte*..., Vienna 1909). Some of these texts are also included in vol. VII, *Soqotri-Texte* (III) by D. H. Müller, Vienna 1907 and supplied with Soqotri and Soqotri parallels.

M. Bittner's grammatical studies in Mehri are full of matter and excellent in method (see *Bibl.*). The modern South Arabian dialects in spite of some features in common with Sabaeen cannot be explained as daughter-languages and the last surviving relics of the South Arabian language which is found in the Sabaeen and Minaean inscriptions (Jahn, *op. cit.*, p. 1; see also Soqotri). In them, especially Mehri and Soqotri, we can at most recognize with Hommel, *op. cit.*, p. 152 "a daughter language of south Arabian dialects formerly spoken there (in Mahra-land and on Soqotri)", a pronouncement to which Maltzan had already come very near. On the other hand Glaser went too far when he described Mehri and Soqotri as remains of the oldest "Pentite" Arabic or (*Das Weisheitsbuch und Soqotri*, *Beilage der Münchener Allgemeinen Zeitung*, 1899, No. 120 and 121) of May 27 and 29) as descendants of the old language of Hahab from which Ethiopic and Amharic are also said to come (see Hommel, *op. cit.*, p. 153, note 4 and 5 and in Niebuhr's *Handbuch*, p. 91).

According to Vollers (*Z. A.*, xlii, 223) the South Arabian dialects go back to the time of the settlement from 'Omair, the immigrant Arab, not long before the coming of Islam, had occupied Mahra from 'Omair and influenced its language by their dialect. So early as al-Mas'udi, i. 333 we find the Mahra described as a mixed people. Glaser (*Söhne*, II, p. 188 and 96) also speaks of the influence of eastern and north-eastern peoples on the Mahra language, but he wrongly ascribes to Parthian and Indian elements "the notable corruption of the Arabic language in the district of Mahra Thir".

hypothesis is in any case sufficient to help to explain the similarity of 'Omair to the neighbouring dialect of Zafar. As regards Mehri, the possibility of older and deeper causes for its fundamental divergence from Arabic must be taken into consideration. That the foundations for the modern South Arabian dialects were laid not much before the coming of Islam is not probable. The Mahra may, as has already been suggested, be the remains of an original population, which was driven into the inhospitable south from more habitable territory by later immigrations of Arab tribes. Even now, as Glaser, *Söhne*, p. 187 tells us, the whole area in which Mahra is spoken is becoming more and more Arabic because no foreign people is now predominant in these regions, but traders who are mainly Arab. The cultural level of the Mahra is very low. They have never played a part of any note in history.

Bibliography: The Arab authors and the modern travellers, whose works come into consideration have been mentioned in the context with bibliographical references (Fresnel, Haines, Carter, Maltzan, Sprenger, Glaser, Hommel, Landberg, D. H. Müller, Hirsch, Hein, Jahn). We may further add: Hein, 1. *Vorläufiger Bericht über die Reise nach Aden und Gishin*, in *Anz. Akad. Wien*, xxxix, 1902, of 18th June, 2. *Südarabische Literatur*, *M. G. G. W.*, lvii, 1914, p. 32 sqq.; and to the literature on the language: Ewald, *Über die himjarische Sprache*, in A. Hofer's *Zeitschrift für die Wissenschaft der Sprache*, I, Berlin 1846, p. 311 sqq.; and especially M. Bittner, 1. *Studien zur Laut- und Formenlehre der Mehri-Sprache in Südarabien*, I—V, *S. B. Ak. Wien*, cxiii, 1911—1915, 2. *Neues Mehri-Material*, *W. Z. K. M.*, xiv, 70 sqq.; also N. Rhodokanakis, *Zur Formenlehre der Mehri*, *S. B. Ak. Wien*, cxv, 1916; Jahn, *Grammatik der Mehri-Sprache*, *ibid.*, cl, 1905.

(J. TRATCH)

AT-MĀ'IDA (A), the Table, title of the fifth Sūra of the Qur'an.

AL-MAIDANI AḤMAD B. MUHAMMAD ABU 'L-FADL, Arabic philologist born in Maidān Ziyād, a quarter of Nisabūr, pupil of the Qur'an exeget and philologist 'Alī b. Aḥmad al-Wāḥidī, teacher of Sam'ān among others, died in his native town on 25th Ramaḍān 518 (Oct. 27, 1124). His principal work, the great collection of proverbs *Maḥḥad al-Aḥḥad*, exists in numerous MSS. (listed by Hidayat Humm in *Cat. Buhār*, No. 400, also Paris, No. 5861, 6512, 6702), pr. Bulāq 1284, Cairo 1310, lith. Teherān 1290, with Lat. transl. by G. W. Freytag, *Arabian proverbs*, Bonn 1838—1843; synopsis *al-Durr al-muntazzah* by al-Kāsim b. Muḥammad al-Bakrāḥī († 1169 = 1756), Berlin, Ahlwardt, No. 8672, anonymous metrical version by an Ottoman, Gotha 1250, do. with commentary by Ḥurūḥim al-Aḥḍāb al-Bairūtī entitled *Forūḥ al-Liḥāḥ fī Maḥḥad al-Aḥḥad*, Bairūt 1312 (1895). His Arabic-Persian Dictionary *al-Sam' fī 'l-Aḥḥad* is arranged in subjects in the following categories: a. technical terms of fight, b. living, c. heavenly, d. earthly things, finished on 14th Ramaḍān 497 (Jun. 11, 1104), in many MSS. (s. *Cat. Lugd. Bat.*, I, No. cv.; Brockelmann, *G. A. L.*, I, 284; also Paris, No. 5883, 6592, *Cambr. Suppl.*, No. 750, *Brit. Mus.*, Or. 6241, ascribed to Thā'ibī, and in a very different form *ibid.*; s. *Oriental Studies*... to E. G. Browne, p. 149, No. 88), lith.,

along with al-Tha'libi's *Sirr al-Adab fi Maḡāziri 'Ulam al-'Arab*, Teherān n.d., s. Weijers, *Orientalia*, I. 368 sqq.; two anonymous commentaries thereon Leyden, N^o. cvi., cvii. (s. Weijers, *op. cit.*, I. 371 sqq.); a synopsis prepared by his son Abū Sa'īd Sa'īd († 539 = 1144; s. Suyūṭi, *Bughyat*, p. 254) in the order of al-Djāwharī's *Ṣaḡḡ* entitled *al-Asmā fi 'l-Asmā* is perhaps in Leyden, N^o. cviii. Besides a grammar *Nuḡat al-Tarf fi 'l-ilm al-Sarf* (Brit. Mus., Or. 5964; pt. Istanbul 1299), a syntax with Persian notes *al-Hādī li 'l-Shādī*, with anonymous commentary on the verses Leyd. clxii. (also Paris, Schefer, N^o. 6066), and minor grammatical treatises (Leyden, N^o. clxviii., Paris, N^o. 4000), he wrote a critique of al-Djāwharī's *Ṣaḡḡ*, mainly based on al-Aḡharī's († 370 = 980) *Takḍīb al-Luḡa*, entitled *Kaid al-Aḡḡb min al-Fawā'id*, Berlin, Ahlwardt, N^o. 6942.

Bibliography: al-Anbārī, *Nuḡat al-Aḡḡb*, p. 466; Yāqūt, *Iṣṣāḡ al-Aḡḡb*, II. 107; Ibn Khallikān, *Bulāḡ* 1299, p. 157; al-Suyūṭi, *Bughyat al-Wuḡūḡ*, p. 155; Quatremère, *Mémoire sur la vie et les ouvrages de M. J. A.*, Ser. 2, vol. 1, 1828, p. 177—233 (mainly extracts from the *Madīma al-Aḡḡb*; s. do., *Précis des arabes de M.*, ibid., March 1838, p. 211 sqq.). (C. BROCKELMANN)

al-MAIL (أ), the inclination, a factor which plays a very important part in astronomy.

The first inclination (*al-Mail al-awwal*) is an arc of the circle which goes through the two poles of the equator and one degree (point) of the ecliptic, namely the arc which lies between this point and the equator. This circle is perpendicular to the equator. The second inclination (*al-Mail al-thānī*) is an arc of the circle, which goes through the two poles of the ecliptic and a point of the ecliptic, namely the arc which lies between this point and the equator. This circle is perpendicular to the ecliptic.

In the figure let *ac* be the ecliptic, *ae* the equator, *be* perpendicular to *ae*, *bd* perpendicular to *ac*, then *be* is the first and *bd* the second inclination. For the calculation it is important that we should have a right angle in each of the two spherical triangles, *abe* and *abd*. The first inclination is also called *Mail al-falak mu'addil al-mahūr*, inclination towards the equator.

Of special importance is the obliquity of the ecliptic, i.e. the inclination of the plane of the ecliptic to the equator; it is equal to the first inclination in the solstitial points. It is called *Mail falak al-jurūdī*, inclination of the ecliptic, *al-Mail al-a'zam*, the greatest inclination, *al-Mail kulluhu* or *al-Mail al-kullī*, the whole inclination. To distinguish it, the inclination of any degree is called *al-Mail al-dunā'ī*, the degree-inclination.

If it is a question not of points on the ecliptic but of some star, the arc corresponding to the first inclination is called *sa'f*, "interval" that corresponding to the second "arḡ", "width". We speak in the first case quite generally of declination, in the second of latitude.

The obliquity of the ecliptic is one of the fundamental magnitudes of the solar system. It was therefore continually being calculated anew and almost always so as to obtain the altitudes of culmination α_1 and α_2 of the sun at the summer and winter solstices. The sun is at these times at the same distance from the equator, north in one case and south in the other. The obliquity of the

ecliptic is the $\frac{\alpha_1 - \alpha_2}{2}$. It should be mentioned

that Muḥammad b. Ṣābit (c. 875) claims to ascertain the magnitude from three different points (O. Schirmer, *op. cit.*, p. 52).

The first method was that used by Hipparchus, Ptolemy and Eratosthenes, using the most varied instruments, the two rings, the quadrant and the armillary spheres. In the Muḥammadan period these observations were continued with larger and larger instruments and account taken of the fact that the sun does not always enter the solstices in question by day but may do so at night, that the heavens may be obscured at the time etc. From observations made before and after the time in question the value has to be obtained by interpolations. This is how al-Khujandī, for example, worked (on the instruments used, cf. e.g. E. Wiedemann and Th. W. Juybnoll, *Avicenna's Schrift über ein von ihm erfundenes Beobachtungsinstrument*, *Acta orientalis*, v., 1926, p. 81—167). The values ascertained have been calculated by O. Schirmer (O. Schirmer, *Studien zur Astronomie der Araber*, *S. B. P. M. S. Exl.*, lviii., 1926, p. 30—90). From the measurements, it was found that the obliquity of the ecliptic decreases in course of time, i.e. that the plane of the ecliptic approaches the plane of the equator. A conspectus of the views of Muslim scholars on this question has been given by O. Schirmer (*op. cit.*).

Further expressions used in this connection are *al-sūf al-mā'il*, the inclined horizontal; it means any horizontal, except that of the equator, i.e. the horizontal inclined towards the horizontal of the equator. *Ḥaṭṭ mā'il 'an ḥaṭṭ al-istiwā'*, i.e. the line which is inclined towards the equator; this is a line (a circle) which lies parallel to the equator on the globe of the earth either north or south. *Falak mā'il 'an falak mu'addil al-nahār* has a corresponding meaning on the globe of the heavens; *irṭifā' alluḡḡi li mail li-samā'ihi*, third altitude in the first vertical i.e. the vertical which goes through the eastern and western points of the horizontal. (E. WIEDEMANN)

MAIMANA, situated at 36° N. and 64° 45' E., was formerly known as al-Yahūdīn, al-Yahūdīya (Yāqūt also calls it Yahūdān al-Kubrā), but the name was changed to Maimana, "the auspicious town", for the sake of good omen. It is at present the capital of the little province of Almāz in Afghān Turkistān on the trade route between Herāt and Balkh. Afghān Turkistān includes the western Khānates of Sar-i-pul, Shībarghān, Andkhūi and Maimana, sometimes classed together as the Čāḡār Wilāyat. Dost Muḥammad took this territory from Bakhārā in the year 1855; the sovereignty remained in dispute between Kābul and Bakhārā, till it was settled in favour of Kābul by the Anglo-Russian agreement of 1873.

The low spurs and offshoots of the Band-i Turkistān range subside gently into the Oxus plains and this favoured part of Afghānistān is

rich in agricultural possibilities. Until Maimana was visited by Professor Vambéry in 1863, but one European, Captain Surling, had set foot within it. According to Vambéry, the place consisted of some fifteen hundred mud huts and a dilapidated brick bazar. Its inhabitants are Uzbeks with a sprinkling of Tadjiks, Heratis, Jews, Hindus and Afghans. Trade is now considerable and Maimana is renowned for its carpets and other stuffs made partly of wool and partly of camel's hair. It traffics with Persia and Baghdad in raisins, aniseed and pistachio nuts. Horses are good, plentiful and cheap.

(R. B. WHITEHEAD)

AL-MAIMANDI, SHAHSHU L-KUTĀB L-KĀHIM AHMAD B. HASAN, the famous wazir of Sulṭān Mahmūd of Ghazna, was a foster-brother of the Sulṭān, and had been brought up and educated with him. Hasan, the father of Ahmad, was the 'Amīl of Bust under Subuktigīn; but on a charge of misappropriation of the revenue, he was put to death. In 384 (994), when Amīr Nūh b. Manṣūr the Sāmānid conferred on Mahmūd the command of the troops of Khurāsān, Mahmūd put Ahmad at the head of his correspondence department. After this Ahmad rapidly rose in the service of his master, and occupied in succession, the posts of *Mustauf* (i.e. *Mamluk*) (Accountant General), *Sāhib-i Dīwān-i Aḥd* (Head of the War Department), and 'Amīl of the provinces of Bust and Rūghhād. In 404 (1013), Sulṭān Mahmūd appointed him wazir in place of Abu 'L-Abbās al-Faḥlī. Ahmad al-Astarīnī. For twelve years, Ahmad managed the affairs of the growing empire of Sulṭān Mahmūd with great tact and diplomacy. Ahmad was very strict and exacting, and did not tolerate any evasion of duty or departure from the usual official procedure, with the result that many of the dignitaries of the Empire became his enemies and worked to bring about his ruin. He was disgraced and dismissed in 415 (1024), and sent as a prisoner to the fort of Kālingjar, in the southern Kashmir hills. After his accession to the throne, Sulṭān Mas'ūd, whose cause Ahmad had always supported, re-appointed him wazir in 422 (1031). Ahmad died in Muharram, 424 (December, 1032).

Ahmad is considered to be one of the greatest of Oriental wazirs. He was a learned man, encouraged scholars and showed great respect to them, and ordered all official correspondence to be carried on in Arabic instead of Persian.

Bibliography: al-Uṭṭī, *Atṭaf al-Yamīni* (Lahore ed.), p. 266-274; *Al-Bihar 'L-Wazir* (India Office MS., No. 1569), fol. 89^a-106^a; and scattered notices in *Tārīkh-i Mas'ūd* of Balḥist. (M. NĀSIR)

MAIMUNA, the last wife that Muhammad married. She was the daughter of al-Harith of the Hawāzin tribe of Sā'ū'a and a sister-in-law of 'Abbās. After she had divorced her first husband, a Thaqifi, and her second, the Kuraishi Abū Rukm, had died, she lived as a widow in Mecca where the Prophet wooed her, primarily no doubt for political reasons, on the 'wars' allowed him in the year 7. His wish to marry her in Mecca was refused by the Maimana in order not to prolong his stay there; the marriage therefore took place in Saif,

a village north of Mecca. Her brother-in-law 'Abbās acted as her guardian at the ceremony. The question whether the Prophet on this occasion was still in the *ḥijāb* or not is a much disputed and variously answered question. The bridal gift is said to have been 500 diḥama. Maimuna survived the other wives of the Prophet and died in 61 (681) in Saif, where she is said to have been buried on the spot where she was married.

MAIMUNI. [See **IBN MAIMUN.**]

MAISÂN, the name of a district in southern Iraq.

The origin and significance of this name, which fell into disuse in the late middle ages, is unknown. There is no certain trace of it in the cuneiform inscriptions; for the Babylonian *Misā*, which Hommel (*Zeitschr. f. d. Geogr. d. alt. Orient*, Munich 1906, p. 261; 263) identifies with it is as little worthy of serious consideration as the Old Testament *Misphā* (*NBZ*, Gen. x. 30) which Biblical exegists

frequently quote. Maisân first appears in the form *Mesēn* in Strabo in the first century A.D. Ptolemy gives *Maisān* (μαῖσαν) as the name for the innermost part of the land of the Persian Gulf. The word is certainly not Greek; the meaning "middle land", the land between two rivers, may be dismissed as a fanciful etymology. The territory of Mesene is in the cuneiform inscriptions the region of the southern Kaldai states, especially the most southerly Bit-Yakin; at the same time we find in them the term the sea-land (*mat-fimili*) as almost identical with Bit-Yakin; the part of Mesene between the Tigris and Khūzistan was in the Babylonian period the home of the nomadic Aramaic tribe of Gambulu; cf. Streck, *Assyrienspal*, Leipzig 1916, iii. 778, 783, 796-97.

In classical literature Mesene is usually absolutely synonymous with *Charakene*. Mesene or Charakene appears in the second century A.D. (after ca. 129) as a small independent kingdom founded by a certain Hypsacines, our knowledge of whom is practically limited to his coinage. After an existence of three and a half centuries Ardashir I put an end to this kingdom shortly after his accession, between 224 and 227 A.D.; for Arabic sources for this event, see Nöldeke, *Gesch. d. Araber und Perser zur Zeit der Sasaniden*, Leyden 1879, p. 13 (Tabari, i. 818). In the strict sense of the word, Charakene is only the delta of the Euphrates and Tigris before the junction of the two streams, the land on the north was Mesene; we have no information about the eastern and western frontiers of Charakene. Perhaps, as Weissbach suggests (see *Bibl.*), Mesene was only later conquered by the rulers of Charakene and its name transferred to this southern district.

The Talmud knows Mesene as *Misān* (and *Misān*), Syriac literature as *Maishān*. Among the Persians we have *Misān* and the Armenians *Misān*; cf. thereon Schaefer, *op. cit.*, p. 11. The Arabs took the word over as *Maisân*; but we occasionally also find *Maishān* (e.g. Tabari, iii. 1980, 5). The old name Mesene is perhaps concealed in that of the little town of Mashān, which, according to the Arab sources, was near Bayra and was celebrated as the birthplace of the Maḥmāna

poet Hariri (q. v.; Vākūt, *Mu'djam*, ed. Wüstenfeld, iv. 536; Vākūt, *Irshād al-Arib*, ed. Margoliouth, vi. 167; Karwini, *Āḥār al-Bilād*, ed. Wüstenfeld, p. 308).

As in the case of Mesene-Charakene, we have no exact information about the mediaeval Arab Maisân, which would enable us to define exactly the area and boundaries of the district. According to Vākūt, iv. 714 and Karwini, p. 310, Maisân is "an extensive district with numerous villages and palm groves between Basra and Wasit, the capital of which is also called Maisân". This district formed the sixth in the old Sāsānian division into *usūd*, which was taken over by the Arabs (q. v.) and was called *Shah-i Bahman* or "the Tigris district"; the name Furāt-Basra is also found. It was divided into four divisions (*farāḡ*, q. v.) namely, Bahman Ardashir, Maisân, Dastimaisân and Abas-Kubādī; according to Kudāma (*B. G. A.*, vi. 236, 12), these four divisions of the Tigris district later passed into the administrative district of Basra. All four *farāḡ* are to be located on the east side of the Tigris. Bahman Ardashir, the capital of the district of the same name, lay on the left or north bank of the Tigris, opposite Uballa on the west or south side of the river (the latter roughly on the site of the modern 'Ashshār, the port of modern Basra). The second division, Maisân in the narrow sense, must have been that in which stood the capital of the whole district of the same name. *Al-Madhār* however usually figures as such in the Arabic sources; it may be supposed that this was the successor of an older town called Maisân. The locality of *al-Madhār* cannot be exactly fixed (see below); it lies on the east bank of the Tigris, about thirty miles (as the crow flies) north of Kurna. Dastimaisân also is to be sought east of the Tigris, in the region of *al-Madhār*, probably south or south-east of it. As to the fourth division, Abas-Kubādī, a name, which Marquart, *op. cit.*, p. 41 and Herzfeld, *ibid.*, xi. 150 would emend to *Isādh-Kawādī* (Kubādī), relying on Hamza al-Isfahānī (*Ṭarīkh*, ed. Gottwaldt, p. 37), this also must be placed east of the Tigris not too far from *al-Madhār*. A reference in Kudāma (p. 235, 25 *sq.*) agrees very well with this, according to which the four divisions of the land of Maisân lay east of the Tigris.

Even under the Sāsānians there was a separate Nestorian ecclesiastical province of Maishān, which was again divided into four subdivisions, the bishoprics of Perī de Maishān, Karkhā de Maishān, Beth Raimā and Nehar Gāl (Gūr); cf. especially Sachau, *op. cit.*, p. 48 *sq.*; Marquart, *op. cit.*, assumed it as certain that these four dioceses must correspond to the four political divisions of the district of Maisân. This view in itself probable and first found by Sachau, p. 49 as worthy of consideration is untenable, as Schaefer, *op. cit.*, p. 29 *sq.* has shown. Perī de Maishān is certainly identical with Bahmān; but the second bishopric Karkhā de Maishān does not correspond to the *tasūd* of Maisân or *Madhār* but is to be located much further south in the district of the modern Muhammara. Beth Raimā very probably lay not on the east but on the west bank of the Tigris at some distance N. E. of Basra, so that it does not even come into consideration as the equivalent of one of the four Arab divisions. Nehar Gāl (Gūr) may be equated to *Nahr Dīr* of the Arab geographers (see Sachau, *op. cit.*, p. 51; Schaefer, *op. cit.*, p. 37). This is to be sought towards Khūzistān somewhere in the

neighbourhood of Huwaira (see below). Whether the fourth *tasūd* Abas-Kubādī corresponds to it cannot be settled.

If then the capitals of all four divisions of the Tigris district are to be located on the east bank of the river, the lands on the west bank, also included in the *sawād* must have belonged to the same district as did the whole delta down to the Persian Gulf; for there is no district to which only the doubtful western and southern divisions might be allotted. In the Sāsānian period, according to the Turfan fragments (cf. Schaefer, *op. cit.*, p. 28), the term Maisân was usual for the whole of southern 'Irāk (or Mēshān) and this remained the case under the Arabs. But according to the Muslim sources, it does not seem to have been limited to the south proper but to have extended a considerable distance northwards. The quotations above given from Vākūt and Karwini show that Maisân was considered to stretch northwards to Wasit (q. v. and vol. I, p. 676, ii, art. KASKAR); indeed it is most probable that the extreme N. E. frontier of the area known as Maisân lay in the vicinity of the modern Kūt al-Amīra (q. v.; the *Mādhar* of the Arab geographers; cf. 969 *sq.*; Streck, *Babylonien*, ii. 310 *sq.*). The district of Kaskar also stretched up to here and seems in the main to have included lands east of the Tigris (cf. KASKAR). To avoid misunderstandings it should here be expressly mentioned that for the Arab period, of the present course of the Tigris only the *Shatt al-'Arab* and the stretches as far as *al-Madhār* come into question; in those days the Tigris bed corresponded with that of the *Nahr al-Gharraf* (*Shatt al-Jaiy*) which was the western boundary of the district of Kaskar. For further details of the hydrography of Maisân, see below. Maisân is occasionally used as synonymous with Kaskar; cf. Schaefer, *op. cit.*, p. 14, 17 *sq.* Maisân probably stretched to the east as far as the alluvial land of the *sawād*, up to the frontier of Khūzistān in places beyond the present frontier of 'Irāk. At least Huwaira (the modern Hawira (q. v.)) which is now on Persian soil, is expressly mentioned as a town belonging to Maisân.

The swamp regions, *al-Baṭīḥ*, for the most part came within the area of Maisân. On this cf. *AL-BATĪḤA* and the articles on *al-Baṭīḥ*, *al-Haltā* and *al-Djāzīr* by 'Alī Shārki in the periodical *Lughat al-'Arab*, iv. (Baghdād 1927), p. 375-384, 474-477, 526-530 and vi. 277-279; also Ḥāshim al-Sa'dī, *Ḍiḡḡat al-'Arab*, Baghdad 1927, p. 40, where the more important of the swamps (*ḥūr*'s) are given. In modern times the practically synonymous name *al-Ahmār* (plur. of *ḥūr*) is used for *al-Baṭīḥ* (see 'Alī Shārki, *op. cit.*, iv. 376). The two specifically 'Irākī words *ḥūr* and *ḥāḥ*, which are very often used indiscriminately in European works, especially on maps (usually the one form *ḥūr*) (cf. *AL-BATĪḤA* where *ḥūr* is wrongly given for *ḥāḥ*), have to be carefully distinguished. For *ḥām* (older alternative *ḥāḥ*), popularly *ḥūr* = "permanent swamp, temporary lake, land liable to inundation" (cf. *B. G. A.*, ed. de Goeje, iv. 370; G. le Strange, *J. R. A. S.*, 1895, p. 298) and *al-ḥāḥ*, popularly *ḥāḥ* = "arm of a river, creek, lagoon-like gulf", cf. especially the remarks of Père Anastase-Marie, the editor of the Baghdad periodical *Lughat al-'Arab*, in M. Lidzbarski, *Das Faramān-buch der Mandatier* (Gießen 1915, p. 145).

One of the divisions of the Tigris district was called, as already mentioned, *Dast-i Maisân*. The

name is also vocalised *Dasta* and *Dasta-Maisân* in our Arabic texts. Ibn Khallikân always writes the Persian form *Dast-i Maisân*; cf. *Marâṭib al-Iqbal*, ed. Juybnoll, v. 468. *Dast*, *dast* can here only be the Persian *dāst* = "plain". Schaefer's assumption, *op. cit.*, p. 34, that *Dast* represents an abbreviation of the Pahlavi *Daskert* (Arabic *Daskara*, q. v.) seems to me hardly tenable. Why this division in particular was distinguished as the "plain of Maisân" from Maisân proper (especially from the second division of the district), is however not apparent. Could it here have been a more level plain, less filled with swamps? In any case, it is not correct to equate *Dast-i Maisân* without more ado to Maisân (as does G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 43). Yāqūt (ii. 574) thus defines *Dast-i Maisân*: "It is an important district between Wāṣiṭ, Bagra and al-Ahwāz [q. v.] (= Khūzistān, q. v.) lying near to the last-named. The capital is Basūmā; *Dast-i Maisân* is not identical with Maisân but is connected with it; it is also said that it is a district with the capital al-Ubulla and Bagra belonging to it". Nothing further is known of Basūmā, here mentioned as the capital of *Dast-i Maisân*; the form in which the name is handed down varies (see the variants in the *Marâṭib*, ed. Juybnoll, v. 468); it is apparently identical with Basūmā, which al-Makaddasī (*E. G. A.*, iii. 114, 1) details among the places of the district of Wāṣiṭ (cf. Tabari, iii. 1958, 22; *Z. D. M. G.*, xxix. 660; xxix. 26).

From the rather general remarks in Yāqūt the boundaries of the district of *Dast-i Maisân* cannot unfortunately be ascertained. We are brought a step forward by a note in Ibn Rosta (*E. G. A.*, vii. 94, 22) which expressly states that a place named 'Abdāsī, frequently mentioned in Arabic sources, is in *Dast-i Maisân*. When Yāqūt in another connection (iv. 275, 2-3) mentions 'Abdāsī alongside of *Dast-i Maisân* (i. e. distinguishing the two), as a division of Kaskar, this probably is an inaccuracy. From the passage of Ibn Rosta quoted it is further evident that 'Abdāsī must have been above al-Maghār in the direction of Wāṣiṭ. In keeping with this is an itinerary given by Ḥudāma (*E. G. A.*, vi. 126, 2-3), according to which a road from Wāṣiṭ via Bāḡhibin (5 farsakhs S. or S.E. of Wāṣiṭ; cf. Yāqūt, i. 461) to Bagra passed successively through 'Abdāsī (= 'Abdās) and al-Maghār. The distance of Bāḡhibin from 'Abdās is put at 5 stages (*sikks*), and from 'Abdās to al-Maghār at 8; cf. also Streck, *Babylonien*, I. 13-14. As a *sikka* on the average may be put at 4-5 miles (see Streck, *op. cit.*, p. xv) the distance from Bāḡhibin to 'Abdās may be estimated at 30-40 miles; from Bāḡhibin to Wāṣiṭ was about 15 miles. To this location of 'Abdāsī agrees very well a note in Ibn Hawqal (*E. G. A.*, ii. 159, 22) who says that the date-palm groves of the district of Bagra stretched without interruption for over 20 parasangs = 150 miles from 'Abbadān (then away to the south on the sea-shore; q. v.) as far as 'Abdās (!); the latter must therefore mark the northern limit of the then district of Bagra. From the passages mentioned we have to look for 'Abdās a fair distance to the north of al-Maghār, probably rather near the bank of the eastern arm of the Tigris which was dry in the middle ages. The position given to 'Abdās by G. Le Strange in his map to Ibn

Serapion (*J. R. A. S.*, 1895) and in *The Lands of the Eastern Caliphate* (map ii.) — south of al-Maghār on the left bank of the Tigris (in map ii.) or on the right bank opposite al-Maghār — seems untenable. For further reference to 'Abdāsī (with the variants 'Abdās, 'Abdās or 'Abdās; according to Ḥamm al-Iṣfahānī in Yāqūt, iii. 603, 20, a Persian word) see *E. G. A.*, iv. (glossary), p. 94.

The approximate identification of the position of 'Abdāsī, which we have obtained, gives us a clue to that of *Dast-i Maisân*. This must have been above Maisân proper (with al-Maghār), and have comprised roughly the most northern part of the whole district of Maisân in the wider sense. It should be noted that the order in which the four divisions of the Tigris district are officially given (Bahman Ardāshir, Maisân, *Dast-i Maisân*, Abas-Kubādī; see above) is apparently that from south to north or rather north-east. To the east *Dast-i Maisân* extended as far as Khūzistān. But it should not be forgotten that the eastern frontier of Maisân during the caliphate must have undergone changes as a result of several alterations in the organisation of the provincial administration (cf. Schwarz, *op. cit.*, p. 290, 291); this explains the apparent contradictions in our sources, in which one and the same place is sometimes put in the Irāk, sometimes in Ahwāz (q. v.) (Khūzistān, q. v., 'Arabistān; see 'ARABICA).

When we know definitely that *Dast-i Maisân* was separated by the division of Maisân from that of Bahman Ardāshir to which Ubulla belonged, it appears rather remarkable that in Ibn Khordādhbih as well as in Yāqūt (cf. Streck, *op. cit.*, p. 16, 19) *Dast-i Maisân* is equivalent to Ubulla. If this is not simply a mistake, it might at most be explained, as Schaefer does (*op. cit.*, p. 35), by saying that under the 'Abbasids the headquarters for the collection of taxes for *Dast-i Maisân* was moved to Ubulla. The whole system of division into sawād, originally simply made for convenience in taxation, had lost any practical importance, at least under the later rulers of this dynasty. We are further definitely told that the Tigris district later passed under Bagra, where no doubt some of the officials of the old administrative district were moved to towns near Bagra like Ubulla.

A part of *Dast-i Maisân* was known as *Djūkhā*. It must have lain to the west of the modern course of the Tigris roughly from al-Maghār to 'Abdās. Ibn Rosta (*op. cit.*, p. 95) tells us that in *Djūkhā* between the two towns just mentioned, a part of the Tigris water used at one time to collect into swamps, before the river altered its bed in the direction of Wāṣiṭ. From the accounts of the campaigns of the Eshārids in the Umayyad period when the *Djūkhā* was a favourite place for these rebels to assemble (see vol. ii., p. 905^b), it is evident that this district must have occupied the position here sketched out for it; cf. Wellhausen, in *N. G. W. Göt.*, N. S., vol. v., n^o. 2 (1901), p. 22. Whether al-*Djūkhā* stretched as far as the Nahr al-Gharraf (Shatt al-Hay) and even beyond it, we do not know. There is a Tell *Djūkhā* at some distance from the west bank of the Nahr al-Gharraf, to be exact in 45° 52' E. Long. Greenw. and 31° 45' N. Lat. It is possible that the mediæval name of the division *Djūkhā* has survived in that of this mound, which conceals the ruins of the very ancient, not unimportant town of *Umma* (ideographically written *Gish-Umma*).

For Umma, which is mentioned in inscriptions as early as 3200 B. C., and disappeared from history even before the time of Hammurabi, see Hommel, *op. cit.*, p. 354—355, 1019, 1102 (Index) and Unger in the *Reallexikon der Vorgeschichte*, xv. (1928), p. 3—4. Names like Dīrkhā, Dīrkhā, Dīrkhā are found elsewhere in the mediaeval geographical nomenclature of 'Irāk and Khirāsān; see Vākfī, i. 669, 75—105; ii. 143, 144, 1; iii. 15, 13; cf. on Dīrkhā (Dīrkhā) also Schaefer, *op. cit.*, p. 23.

In southern 'Irāk, to which the district of Maisan of the Arab middle ages roughly corresponds, in course of time far reaching changes have taken place in the appearance of the country. The history of the hydrography of this area is thus a very complicated problem and the solution of topographical questions especially difficult. The first thing to note in this connection is the fact that the Persian Gulf, the Khalij al-Basra or al-Faris, as the modern inhabitants of al-'Irāk call it (cf. Hashim al-Sa'di, *op. cit.*, p. 20, 41; 'Abd al-Razzak al-Hamzi, *op. cit.*, p. 115; *Lughat al-'Arab*, iii. 58, and the article NAHR AL-FARIS), stretched much farther north in ancient times and the middle ages than it does to-day. In the Babylonian period it was a lagoon almost as wide as a sea called *Nāru Murrat* (see Streck, *Assur-kanipal*, Leipzig 1916, iii. 796) and stretched northwards nearly as far as 31° N. Lat. The lagoon must have stretched from Kurna in a westerly direction indicated by the later course of the Euphrates or the modern swamps (*dhār's*) of Abū Kelām and al-Hammār, as far as the region of the mound of ruins of Abū Shahrain (c. 12 miles S.W. of al-Mukayyir-ūr). Abū Shahrain, the ancient Eridū, certainly lay on the shore of this lagoon as we know from inscriptions found there; cf. Langdon, *Ausgrabungen in Babylonien seit 1918* = *A. O.*, xxvi. (1928), p. 3—4; Weissbach's objections to the equation Abū Shahrain = Eridū (in Pauly-Wissowa, *op. cit.*, vi. 1205) are now disposed of. From Kurna the lagoon probably sent an arm to the east as far as the Kārūn. The land south of Kurna beyond Bagra on both sides of the broad arm of the sea now marked by the bed of the Shatt al-'Arab was probably only partly under water in ancient times (cf. Herzfeld, in Sarre-Hersfeld, *Archäolog. Reise im Euphrat und Tigrisgebiet*, vol. I. Berlin 1911, p. 251), although it was probably exceedingly swampy. In any case in the Sargonid period, the Euphrates, Tigris, Kerkhā, and Kārūn all entered the sea or rather the lagoon running up from it by separate mouths. Cf. also al-BATTHA and ii. p. 777.

If then the question of the extent of the advance of the delta since the beginning of the historical period can be approximately answered, it hardly seems possible to allot accurately the increase in land to each century, as we do not know if the sea always retired at a constant rate. In the middle ages 'Abbasid (q. v. and below) in 48° 22' E. Long. Greenwich and 10° 12' N. Lat., c. 45 miles in a direct line from Bagra, was still regarded as the most southerly town of the 'Irāk. According to Ibn Battūta's *Travels* (ed. Paris, ii. 18) in the first half of the 13th century, it was already an hour's journey from the coast. This distance has now increased to over 20 miles. In the last 50 years there has been an average increase of land of at least 2½ miles a century. For further information on the

steady formation of land by alluvial deposits at the north end of the Persian Gulf cf. SHATT AL-'ARAB; S. Genthe, *Der Pers. Meerbusen*, Marburg 1896, p. 54 sq.; *The Persian Gulf* (= *Handbook of the Historical Section of the Foreign Office*, No. 76, London 1920), p. 13; Hashim al-Sa'di, *op. cit.*, p. 51—52. Since the last century the most southerly settlement immediately on the sea has been the telegraph and lighthouse station of Fao; on this cf. below.

On the hydrographical conditions in Southern 'Irāk, especially the course of the Euphrates and Tigris and the canal systems connected with them, as well as the swamps there (al-Battha [q. v.] or al-Bat'ih), we have a full and lucid description of the beginning of the tenth century in the part of the *Geography* of Ibn Serepion that has survived to us; see the pertinent passages in Le Strange's edition, in *F. R. A. S.*, 1895, p. 9—10 (sect. i—ii), 28—30 (sect. xiii—xvi), and translation and notes on p. 33 sq., 46 sq., 296—311.

The Tigris, probably, was in ancient times forked at the site of the modern Kūt al-'Amīra [q. v.], the Mādharayā of the mediaeval Arabic sources (see above), into an eastern and western arm. For four centuries the main body of the Tigris has used the eastern bed running via 'Amāra to Kurna, while the western arm, a more canal-like channel only navigable at high water, has connected it with the Euphrates. This western arm is in modern European literature known as *Shatt al-Haiy*. This seems to be a name coined by European travellers, apparently first found in the last decades of the 18th century (in Beauchamp; see Ritter, *Erkenntnis*, xi. 973). *Shatt al-Haiy* = "river of al-Haiy" was and still is the name given locally to the northern stretch of the river reaching as far as Haiy; but its whole course is usually called in the 'Irāk *Nahr al-Gharraf* (cf. the quotations noted below from the works of Hashim al-Sa'di and 'Abd al-Razzak al-Hamzi; Vākfī (ii. 533, 3 sq.; iii. 781, 3) already knows *Nahr al-Gharraf* as the name of one of the five arms of the Tigris and of a district belonging to it. The *Nahr al-Gharraf* was at one time called *al-Mawrah*; cf. *Lughat al-'Arab*, i. 51. At the little town of al-Haiy the *Nahr al-Gharraf* divides into five channels of which only the western *Shatt al-'Amī* (or *Amī*; on the name cf. above ii. 777) is now quite dry; cf. *Lughat al-'Arab*, i. 51, with note and correction on p. 225 sq. Four miles above Shatra the main western arm also divides into two channels: the large *Nahr al-Shatra* in the west, which enters the Tigris at Nāziyye (Nāziyye, see KUT AL-'AMARA), the capital of the *limes* of Muntafiq—for some years joined by a branch line to the station of al-Mukayyir-ūr (Ur-junction) on the Baghdad-Bagra railway—and the smaller eastern *Nahr Bad'a* (*Bad'a*) said to have been originally dug out by the Muntafiq which enters the Hās al-Hammār somewhat east of Sūk al-Shiyakh [q. v.].

On the *Nahr al-Gharraf* (*Shatt al-Haiy*) and the territory through which it flows, of which now as in the Turkish period, the northern part (including al-Haiy) belongs for administrative purposes to the *limes* of Kūt (al-'Amīra) and the southern to the *limes* of al-Muntafiq, cf. vol. I, p. 676; ii. 513 sq. and KUT AL-'AMARA; and Streck, *Babylonien*, ii. 311 sq.; *Lughat al-'Arab*, i. 51 sq., 152, 217, 219,

222—226; Hishim al-Sa'idi, *op. cit.*, p. 17, 25, 142, 144 sq., 147, 159, 162 sq.; 'Abd al-Razzak al-Hasanî, *op. cit.*, p. 41 sq.; 168, 109—113, 130. Here we may emphasise once more that the whole river and canal system of the Nahr al-Gharrâf, especially the wide area between the Nahr al-Gharrâf in the west, the Tigris in the east and the Euphrates in the south have only been very insufficiently explored as yet. The accounts of the older travellers are given in Ritter, *Erdkunde von Asien*, xi. 935 sq.—973, 998 sq.; cf. also H. Petermann, *Reisen im Orient*, Leipzig 1861, ii. 82, 138—139; E. Sachau, *Am Euphrat und Tigris*, Leipzig 1900, p. 60—80 (with map ii.) and A. Lindeskerke-Beaufort, in *Babylonien*, vii, Paris 1922, p. 110—116.

The information of the Tigris at Mādharayā (or Kūf al-Awra) is certainly very old, and may be assumed for the old Babylonian period at least. The ruins of Tellō (the old town of Lagash), N.E. of al-Shāra, and of several neighbouring mounds of ruins (like al-Hilba, Serghul) are at a short distance to the east of the modern Nahr al-Gharrâf, on an arm (canal?) of older bed of it. It is possible that the western bed of the Tigris, Nahr al-Gharrâf, is of artificial origin (cf. above ii, p. 513 sq.) and was a canal dug at a remote period planned to give a convenient connection with the Euphrates. The western arm of the river was in all probability the regular course of the Tigris in the Babylonian period (cf. also the sketch map in Melissar, *Babylonien und Assyrien*, vol. i.); it is only since the last centuries B.C. that the main channel of the Tigris, for reasons not known to us, must have made its way into the eastern modern river bed. Under the later Sāsānians another change took place, originally connected with the great extension of the swampy area of the Baṭṭha. According to a note in Yāqūt (i. 669, 3), the Tigris had already ceased in the reign of Bahram V Gur (420—438) to flow in the direction of al-Madhār and instead of this had chosen the route of the arm that runs towards Karkar. In any case bustlings of dams which took place, especially in the reigns of Kābūsh Pērōz (457—484) and Khvāzīm II Parwēz (590—628) (cf. i., p. 676), considerably furthered this development. It is certain that at the beginning of Muslim rule, the Tigris was using the western bed exclusively. The eastern was quite dry as far as al-Madhār, and only after this town did it contain water again. On the state of the river in the middle ages cf. especially the descriptions in Ibn Rosta (*B.G.A.*, vii. 94, 22 sq.) and thereon G. Le Strange, in *J.R.A.S.*, 1895, p. 300 sq. and Schaefer, *op. cit.*, p. 21 sq.; see also Le Strange, *The Lands of the Eastern Caliphate*, p. 27—28 and above i., p. 669 sq.

In the early decades of the ninth (9th) century the Tigris was still flowing in its western bed; but in the next century it again altered its course and sent the mass of its water to the eastern bed, so that this again became the usual route for navigation. It was used as such, as we know from European travellers (see Le Strange, *The Lands etc.*, p. 28 sq.) at least since the middle of the 11th century; the eastern arm has remained the Tigris proper to the present day.

The stretch of the eastern Tigris which alone was filled with water in the middle ages, south of al-Madhār, the *Didjlat al-Awra* (cf. below), joined the Nahr Abi 'l-Asad, which flowed out of the Baṭṭha, according to Ibn Serapion, probably

a little below the modern Kurnā; cf. i. 676, 969 sq., ii. 119. Yāqūt's account differs seriously from Ibn Serapion's description of the Lower Tigris. How far Yāqūt, who lived 300 years after Ibn Serapion, reflects an alteration in the river system, it is impossible to say. According to Yāqūt (ii. 553, 3 sq.; cf. thereon Streck, *Babylonien*, i. 39—40 and above i., p. 676), the Tigris after passing Wāsi divided into five arms, which reunited at a place called al-Majāra. This Majāra (var. Maṭāra and Maṭār in *B.G.A.*, ii. 53, 14; iii. 161, 2) lay a day's journey from Baṭra i.e. about halfway between this town and Kurnā.

These five arms of the Tigris were, he says, the Nahr Sāsī, Nahr Gharrāf, Nahr Daḡla, Nahr Dja'far and Nahr Maisān. Sāsī is mentioned in another passage in Yāqūt (iii. 11, 10) as a place above Wāsi. Gharrāf has already been mentioned as the usual modern name for the western arm of the Tigris (Shāṭ al-Haṭṭ). The Nahr Daḡla (apparently the Aramaic form of the Arabic *Didjla*) flowed, according to Yāqūt, (iv. 830, 22; or v. 838, 2) near the Nahr Abi 'l-Asad and east of the Nahr *Tha'fur*. The latter was (see Yāqūt, v. 838, 2) between Wāsi and Nahr Daḡla. The Nahr Maisān, finally, seems to be identical with the *Didjla al-Awra* from al-Madhār to the mouth of the Nahr Abi 'l-Asad (cf. also Yāqūt, i. 603, 4).

The bed of the upper *Didjlat al-Awra* which seems to have been dammed at al-Madhār was apparently also fed by the waters of the Nahr Abi 'l-Asad. The Arab geographer Qādīmā (*B.G.A.*, vi. 231, 2—4) says, "After leaving the Baṭṭha, the Tigris divides into two arms, the one of which goes to Baṭra and the other to al-Madhār". On the banks of the Nahr Maisān, "between al-Madhār and Baṭra", lay the village of al-Bazāra (Yāqūt, i. 603, 4).

As to the Euphrates, we are told that in the middle ages it poured its waters into the Baṭṭha in two channels below Kūfa and Hilla, like the main body of the Tigris in the west; cf. especially Ibn Serapion, ed. G. Le Strange, in *J.R.A.S.*, 1895, p. 10, 18 sq. (and p. 47, 260); G. Le Strange, *The Lands etc.*, p. 74 and above ii., p. 513, 29; art. AL-FURKĀT.

The Nahr Abi 'l-Asad, which runs out of the Baṭṭha and is often described by the Arab geographers as the eastern section of the (western) Tigris (cf. above and Yāqūt, iv. 830, 22) might with a certain amount of justice also be claimed as the last stretch of the Euphrates. It is in this sense that Yāqūt (iv. 561, 22) says that al-Majāra, mentioned above, is "on the bank of the Tigris and of the Euphrates at the junction of the two". On the alterations in the lower course of the Euphrates in the later middle ages down to the 17th century we have very little information (cf. AL-FURKĀT), but we may assume that since about the 14th century, at latest since the beginning of the 15th, the whole volume of the Euphrates no longer disappeared in the swamps but a portion ran in a definite channel which roughly coincided with the course of the modern bed, and ultimately used the channel of the Nahr Abi 'l-Asad and thus effected a direct communication with the Eastern Tigris. From the reports of European travellers (see G. Le Strange, *The Lands etc.*, p. 28 sq.) it is evident that at the junction of the two rivers there stood since at least the middle of the 17th century a castle named al-Kurnā (now a small

town; see also below, iv. 364). Since the great scheme for regulating the Euphrates was carried out by Willocks in the first decade of this century (cf. ii., p. 515 and SHATT AL-ARAB) only a small and insignificant arm of the Euphrates now flows out at Kurna while its main arm cuts through the swamps of al-Hammir in a new channel and enters what is now called the Shatt al-Arab above Karmat 'Ali (c. 10 miles N. of Basra). On this modern Euphrates channel called after Karmat 'Ali (popularly Karmat and Garmat 'Ali) cf. Hāshim al-Sa'di, *op. cit.*, p. 20, 89, 36, 10, 159; 39; 'Abd al-Razzāk al-Hamānī, *op. cit.*, p. 69, 2; *Lughat al-'Arab*, i. 365, 2; iv. 527, 3; *Metopotamia* (Handbook of the Foreign Office, No. 63), London 1920, p. 6, 52 19, 55 and cf. ii., p. 515.

The Eastern Tigris from al-Madhār to its mouth on the Persian Gulf bore in the middle ages the name of *Didjlat al-'Awrā'* = the 'one-eyed Tigris' (on this cf. above, ii. 777); cf. especially Ibn Rosta (*B. G. A.*, vii.), p. 94 29, and Ibn Serāpīm (*J. R. A. S.*, 1895, p. 28, 299-303); Streck, *Babylonien*, i. 41-42; G. Le Strange, *The Lands etc.*, p. 43; Schaefer, *op. cit.*, p. 21-23 and cf. i., p. 676, 969 29; ii., p. 513 29. Yāqūt (iv. 830, 22) however limits the name *Didjlat al-'Awrā'* to the stretch from al-Madhār to the sea, i. e. the combined Euphrates and Tigris. At the same time we find other special names for this last section among the Arab authors of the middle ages like *Didjlat al-Basra* (the Tigris of B.), Fārij al-Basra (cf. e. g. Yāqūt, iii. 931, 10), Bādhawād (Yāqūt, i. 462, 11). A specifically Persian name is Bahmanāshir = the river of the district of Bahman Aīdashir (cf. ii., p. 777; see Yāqūt, i. 770, 20).

Even in the Babylonian period the lower Tigris seems to have had a special name, *Surrūp*; see Meissner, *op. cit.*, p. 5. For nearly two centuries the combined Euphrates and Tigris has been known as *Shatt al-'Arab* = 'the river of the Arabs', because its banks, although since 1640 (with interruptions) they have been in parts incorporated in the Persian kingdom, are almost exclusively inhabited by Arab tribesmen. (The name *Shatt al-'Arab* is found in the middle of the 11th century in Nāṣirī Khuraw (*Sefirname*, ed. Schaefer, p. 89) but this is the only early occurrence). In its lower half the *Shatt al-'Arab* has since that date formed the often contested frontier between Persia and Turkey or (since the World War) the Kingdom of Iraq; about an hour's journey above (or west of) Muḥammara, the eastern bank becomes Persian. Cf. also the article SHATT AL-ARAB and *The Persian Gulf* (Foreign Office Handbook, No. 76), London 1920, p. 13, 54.

The stretch of the *Didjlat al-'Awrā'* corresponding to the modern *Shatt al-'Arab* in the middle ages sent out numerous canals on either side; the very complicated canal-system of the country round Basra was especially celebrated. The most important canals on the west bank were the Nahr Ma'kil (still to-day the name of a small village, an hour above al-Ashbār) and the Nahr Ubulla (apparently the modern Nahr al-Ashbār) which united at the town of Basra and connected it with the Tigris. The mediaeval Nahr Abi l-Khaṣṣ, c. 15 miles south of Basra on the west side, may also be mentioned; this still exists to-day and has given its name to a district and its capital (belonging to the sanjak of Basra); see Cuneo, *op. cit.*, p. 23; 'Abd al-Razzāk al-Ḥasānī, *op. cit.*, p. 118. Of the canals

on the west bank the most important was the Nahr Bayān (cf. Schwarz, *Iran im Mittelalter*, p. 311, 390-391). The Nahr Bayān formed an artificial channel connecting the Tigris and the Karūn; we have also mediaeval references to a similar communication between these two rivers. Another canal still in existence on the west side is the Nahr Kaiyān (Bayān?; modern Riyān) north of the Nahr Bayān. The most northern canal on the east side which left the Tigris about the neighbourhood of the modern Kurna, was called Nahr al-Mubarak, not Nahr al-Madhār (cf. thereon de Goeje, in *J. R. A. S.*, 1895, p. 749; emendation to *J. R. A. S.*, 1895, p. 30, 2, 307, 308 and Streck, *Babylonien*, i. 41). Generally speaking, there are not now so many canals in the *Shatt al-'Arab* as there were in the middle ages. The best account of conditions in the caliphate is that of Ibn Serāpīm: see the text in *J. R. A. S.*, 1895, p. 29-30 (thereon p. 303-311); cf. also Streck, *Babylonien*, i. 42 and G. Le Strange, *The Lands etc.*, p. 46-48. Cf. particularly the article *al-Basra wa-Anḥarūha*, which gives a list of old and new names of canals, in *Lughat al-'Arab*, iii. (1913), p. 57-68, 128-132 and p. 673-674 (additions) and p. 700-704 (indices); al-Nabbānī, *al-Tuḥfa al-Nabḥiyya fi Tarīkh al-Diyār al-'Arabīya*, 2nd ed., Cairo 1342 (1923), ii. 15-53.

After the hydrography of the district of Maisān, we may now deal briefly with the more important places in it. The mediaeval Arab geographers give as its capital the already frequently mentioned al-Madhār on the eastern bank of the Tigris, 4 days' journey from Basra. The Shī'a inhabitants according to Yāqūt (vi. 468) had a splendid mosque here with the tomb of 'Abd Allāh b. 'Alī who fell at Karballā in the year 680; on this see the references in Wāstenfeld, *Geologische Tabellen der arab. Stämme, Register* (1853), p. 8 and Yāqūt, vi. 506; cf. also HAWITZ. This sanctuary still survives and it enables us — which has not been noticed before (hence, for example, the inaccurate locations by G. Le Strange in *J. R. A. S.*, 1895, p. 300 and in *The Lands etc.*, p. 42) — to define quite exactly the site of al-Madhār. The name al-Madhār is no longer known on the spot; as of the old town the highly revered 'Alid sanctuary is all that remains, the place is now called simply 'Abd Allāh b. 'Alī. Keppel, who passed here on his way up the river in 1824, speaks erroneously of 'the residence of Sheikh Abdillā bin Allī, an Arab chief'; cf. his *Personal Narrative of a Journey from India to England* (London 1827), i. 91. According to Chesney's map (*see Expedition for the Survey of the Rivers Euphrates and Tigris*, London 1856, Atlas, Pl. 2.), 'Usair and 'Abd Allāh are only 10 miles apart in a direct line, a figure which has however to be doubled when allowing for the many windings of the river if one goes by boat. The traveller Schiaffī, who in 1862 went down the Tigris on a steamer, took two hours to go from 'Abd Allāh b. 'Alī to 'Usair; cf. his *Reisen im Orient* (Winterthur 1864), p. 137; Rich took six hours to ascend (Ritter, xi. 945). On my own journey in March 1927 I visited 'Abd Allāh b. 'Alī; the steamer covered the distance from here to 'Usair with the river in favourable condition in not quite three hours. 'Abd Allāh b. 'Alī lies on a slight eminence ten minutes from the left bank of the Tigris, which describes a curve here. The mosque of the tomb with its dome

visible from a long distance off stands within the south side of an oblong court, to which entrance is given by a door in the slightly built north wall. The *Maḥṣūn*-poet al-Ḥarīrī, born in Maḥṣūn (near Basra) is said by Yāqūt (iv. 468) to have died in al-Maḥṣūr. As Ibn Rosta (*B. G. A.*, vii, p. 95, 2) tells us, the tides came up as far as al-Maḥṣūr; this agrees with Schäffli's observation (*op. cit.*). The tide indeed is sometimes perceptible as far up as the town of Kal'at Salih, farther north; cf. Ḥāshim al-Sa'dī, *op. cit.*, p. 39, 2; cf. also *The Persian Gulf Pilot*, London 1898, p. 295. Opposite al-Maḥṣūr, on the west bank was the little town of al-Hāṭir (Yāqūt, iv. 947, 8).

When Yāqūt observes in one passage (iv. 714) that the capital of Maṣān was also called Maṣān, he can only be referring to al-Maḥṣūr, the centre of the district of Maṣān in the narrower sense, not perhaps, Furāt Maṣān, for which we also find an abbreviated form Maṣān. The name al-Maḥṣūr probably first came into existence in the Muslim period, perhaps for a new foundation on the site of the old town of Maṣān.

As to Kal'at Salih already mentioned on the left bank of the Tigris which like 'Abd Allāh b. 'Alī belongs to the land of 'Amāra, see Ḥāshim al-Sa'dī, *op. cit.*, p. 151; 'Abd al-Razzāq al-Ḥamānī, *op. cit.*, p. 123—124 and *Lughat al-'Arab*, iv. 377, 4, 378, 4, 536. This town of modern origin a couple of hours' journey below 'Abd Allāh b. 'Alī has now about 3,000 inhabitants (including many Mandaeans). The site of al-Maḥṣūr cannot be marked by Kal'at Salih for al-Maḥṣūr was certainly of moderate extent and the 'Alid mosque is to be sought within it and not in its vicinity.

As to 'Usair already mentioned (now usually pronounced 'Aṣīr), south of 'Abd Allāh b. 'Alī on the west bank of the Tigris, it is especially mentioned that it belonged to the district of Maṣān; see Yāqūt, iv. 319, 714; Kāẓimī, *Aḥṣā' al-Bilād*, ed. Wüstenfeld, II. 310. The proper name of this place with the alleged tomb of Ezra ('Uzair) in the middle ages was, according to Arabic and Jewish sources, Nahr Samura (popularly Simmura); cf. e.g. Yāqūt, iv. 840, 2. Cf. on 'Usair especially D. S. Samson, *op. cit.* (see *Bibl.*); J. R. Ghazima, *op. cit.* (see *Bibl.*), p. 189 27 and the article 'USAIR.

The town of 'Abdast ('Abdast etc.) to the north of al-Maḥṣūr has already been discussed. On the town of Hawwa (now Hawra) also belonging to Maṣān see above I, p. 676 and art. HAWRA; to the bibliography may now be added: Layard in *J. E. G. S.*, xvi, (1846), p. 34—36; J. de Morgan, *Mission scient. en Perse, Étude géograph.*, II, Paris 1893, p. 278 and Schwarz, *Iran im Mittelalter*, p. 392 27; *Lughat al-'Arab*, vi. 277 27. An extensive swamp (*ḥaw*) (*cf.* I, p. 876) takes its name from this town, the water from which flows into the Tigris a little south of Karna; cf. Ḥāshim al-Sa'dī, *op. cit.*, p. 21, 2.

The modern towns of importance on the Nahr al-Ḥarīrī (Shatt al-Hay) are of recent origin and are still developing. They are from north to south: Hay (Kūt al-Hay), a town with 9,000—10,000 inhabitants (*cf.* above and I, p. 676; *Lughat al-'Arab*, I. 152, 224); Kal'at Sikkar with 1,500 and Shatra with 7,000 inhabitants; on these three places cf. Cuinet, *op. cit.*, III. 290, 310 27, 312—313 (where Kal'at Sakar is wrongly given for

Kal'at Sikkar); Sachau, *Am Euphrat und Tigris*, Leipzig 1900, p. 69 27; 'Abd al-Razzāq al-Ḥamānī, *op. cit.*, p. 111—113; 130 27; Ḥāshim al-Sa'dī, *op. cit.*, p. 147, 162—163.

At the spot which up till some two centuries ago was regarded as the junction of the Euphrates and Tigris stands the little town of Karna (Karna, Gurna) with 2,000 inhabitants. It is not known to have existed in the middle ages; on it cf. above and Mignan, *Travels in Chaldæa*, London 1829, p. 284 27; Ritter, xi. 1018—1023; Cuinet, *op. cit.*, III. 211 27; 'Abd al-Razzāq al-Ḥamānī, *op. cit.*, p. 119; Ḥāshim al-Sa'dī, *op. cit.*, p. 156; *Lughat al-'Arab*, III. 57. Halfway between Karna and Basra must have stood al-Majra where, according to Yāqūt, the two arms of the Tigris, or the Euphrates and Tigris met in the middle ages; cf. above. About 3 hours' journey above Basra on the right bank of the river is the little village of Karna 'Alī, where as already mentioned, the main stream of the Euphrates flows into the Tigris or the Shatt al-'Arab.

In the Muslim period, Basra was the largest and most important town in the old district of Maṣān and in practice its capital, although under the 'Abbāsids, al-Maḥṣūr may have for a considerable period been regarded as the official capital. On Basra, mediæval Basra, modern Basra and al-'Ashshūr, cf. the article BASRA.

Al-'Ashshūr stands approximately on the site of Uballa which as a suburb and port on the Tigris for the mediæval Basra was of some importance. In our sources we are expressly told that Uballa lay north of the canal which bore its name, partly on an island, which was formed by the Tigris and the two canals of Nahr al-Ma'kil and Nahr al-Uballa which joined one another at Basra. The modern Nahr al-Khōra which leaves the Shatt al-'Arab about one hour south of al-'Ashshūr, cannot be the Nahr al-Uballa (in spite of *Lughat al-'Arab*, III. 63). The modern al-'Ashshūr, the principal commercial centre of southern Iraq, is only a little inferior to Basra as regards numbers of population. The two together have now a population of 50—60,000. On Uballa, the ancient *Amōryon lucipos* (s. Panly-Wissowa, *Reallex. der Klass. Altertumswiss.*, Suppl.-Bd., I. 111), cf. G. Le Strange, *J. E. G. S.*, 1895, p. 306 and *The Lands etc.*, p. 47; Dronin, *a. u. O.* (s. *Litt.*), p. 9; Sachau, *Abh. Fr. Ak. W.*, 1919, No. 1, p. 20, 51 27; *Trl.*, xi. 151; *Lughat al-'Arab*, v. 477; *cf.* v. 200, 2 and the art. AL-UBALLA.

Opposite al-'Ashshūr, on the east bank of the Shatt al-'Arab stands the little town of al-Taṭūma (*cf.* *Lughat al-'Arab*, III. 129, 2, 230, 2; 'Abd al-Razzāq al-Ḥamānī, *op. cit.*, p. 118; Ḥāshim al-Sa'dī, *op. cit.*, p. 156, 2). On its site or at least somewhere in the neighbourhood, there was already in ancient and mediæval times an important harbour, known to Pliny as *Foyat* (*cf.* also Dronin, *op. cit.*, p. 8). In the Talmud (see Berliner, *op. cit.*, p. 44) and in Syriac sources it is called *Perat de Maḥṣān*, in the mediæval Arab authors *Furāt Maṣān* or *Furāt al-Basra*. In Syriac and Arabic texts we also find *Perat* or *Furāt*, without the addition of Maṣān; with *Furāt* = Euphrates the name has no connection. When the first Sāsānīan king Ardashīr I refounded the city it received from him the new name of Bahman-Ardashīr, shortened to Bahmanshīr; see Hamza al-Iṣṣāḥānī, *Tārīkh*, ed. Gottwaldt, p. 37 27, 46 and *Trl.*, xi. 149. Cf. the above mentioned

specifically Persian name of the *Didjlat al-'Awra'* and *Bamahir* (= *Bahmanhir*) as a name of an arm of the Kârin (cf. B., p. 777). That *Furât Maisân* was opposite *Uballa* on the left bank is quite clear from the Arabic references: cf. Wellhausen, *Abh. G. W. Göt.*, N. F., v., N° 2 (1901), p. 34 and Schaefer, *op. cit.*, p. 31. The identification of *Furât Maisân* with the modern *Bagra* or even with old *Bagra* (Berlin, *op. cit.*), which has been championed by different scholars (Nöldeke in *S. B. Ak. Wien*, 1893, *Abh. ix.*, p. 18; Marquart, *op. cit.*, p. 41; Sachau, *Abh. Pr. Ak. W.*, 1919, N° 1, p. 49; only suggested as a possibility by Herzfeld in *Sarre-Hersfeld, Archiol. Reise im Euphrat- und Tigrisgebiet*, i. 251) is therefore untenable. *Perât de Maishân* was the see of the Nestorian metropolitan which was later moved to *Bagra* (first certain reference in 893); cf. Sachau, *op. cit.*, p. 49 and Schaefer, *op. cit.*, p. 31 *sq.* The old name of the diocese *Perât de Maishân* was still frequently used in place of *Bagra* even after the transfer of the episcopal see. If we have on one occasion, c. 900 A.D., a mention of a bishop of *Maishân* simply, we should refer it to *Perât de Maishân* rather than to *Karkh de Maishân* (so Sachau, *op. cit.*, p. 30) because the abbreviation *Maishân* for *Perât de Maishân* is found elsewhere in Syriac literature (cf. Schaefer, *op. cit.*, p. 32-33). As to the coins of the Omayyad period of the mint of *Maishân*, this is probably to be explained also as *al-Furât Maisân* and not as *Karkh Maisân* (so Mordtmann, *Z. D. M. G.*, xxxiii. 126) or *Maishân* (*al-Madhâr*) as Schaefer, *op. cit.*, p. 34 thinks. *Abu l-Fida'*, *Taqwîm al-Buldan* (ed. Reinaud, p. 296), also is obviously thinking of *Furât Maisân* not *Maishân* (*al-Madhâr*) when he says "*Maishân* is a little town in the lower part of the land of *Bagra*".

* On the east bank of the *Shatt al-'Arab* about where the *Eulamas* or *Dudjail* (the modern *Kârin* [q. v.]) joins it, Alexander the Great built a new town on the site of an older settlement, which he called *Alexandria* after himself. After its restoration by one of the Seleucids, it was known as *Antiocheia*. When *Spasines* (*Hysposines*) created a kingdom of his own in *Mesene-Charakene*, *Alexandria-Antiocheia* became his capital and was known as *Ḫḫḫḫ Ḫḫḫḫ*; under this name (Aramaic *Karkhā Aspasinā* or simply *Karkhā*) it is mentioned in the Palmyrene inscriptions. Another refoundation of the town is ascribed to *Ardashir I.*, hence its official designation in the Sasanian period as *Astāribādh Ardashir* (also abbreviated to *Astāribādh*); cf. Nöldeke, *Guck. d. Arab. und Pers. im Zeit der Sasaniden* (Leyden 1879), p. 14; Marquart, *op. cit.*, p. 41; Herzfeld, *ibid.*, xi. 150; *Hama al-Jafāhān*, *op. cit.*, p. 47, gives the (corrupt) form of the name *Inghā Ardashir*. The older name *Karkhā* more exactly defined by the addition "*of Maishân*" remained in existence. The Syriac texts always write *Karkhā de Maishân*. There was a Nestorian bishopric here, which seems soon to have disappeared under Islam; see Sachau, *op. cit.*, p. 49-50 and Schaefer, *op. cit.*, p. 33. The Arabs took over the Syriac name as *Karkh* [q. v.] *Maishân*; cf. e.g. *Yāqūt*, iv. 307, v. The Persian traveller *Nāṣiri Khuraw* who visited the 'Irāk about 443 (1051) (cf. his *Safar-nāma*, ed. Schefer, p. 89) mentions, besides *Bagra*, in the district of *Maishân* a place called "*Akr Maishân*, probably an inaccurate reproduction of *Karkh Maishân*. The site of *Karkh*

Maishân is usually sought on that of the Persian port of *Muhammara*, which has only arisen since about 1812, or at least in its immediate neighbourhood; cf. Andreas in *Pauly-Wissowa, Realencykl.*, i. 1394 *sq.*; Drouin, *op. cit.*, p. 7; Herzfeld in *Sarre-Hersfeld, Archiol. Reise*, i. 251; Sachau, *op. cit.*, p. 50; Schaefer, *op. cit.*, p. 33. This identification does not have been absolutely certain: *Karkh Maishân* is perhaps to be located farther to the north; cf. e.g. the objections of Mordtmann in *S. B. Bayr. Ak.*, 1875, vol. ii., Suppl. Heft, iii., p. 14. Cf. also on *Alexandria-Charax Spasinu-Karkh Maishân* the important article "*Alexandria*" by Andreas in *Pauly-Wissowa, Realencykl.*, i. 1390 *sq.* and the article *Charax Spasinu* by Weishäup, *ibid.*, iii. 2122; Drouin, *op. cit.*, p. 7-8, 15; Schaefer, *op. cit.*, p. 31 *sq.* On coins struck in *Karkh Maishân* of the Arsakid and Sasanian periods cf. Mordtmann, *Z. D. M. G.*, xxxiii. 126 *sq.* and G. F. Hill, *Catalogue of Greek Coins of Arabia and Persia in the British Museum* (London 1923); cf. also *MUHAMMARA* and also vol. ii. p. 777.

In the middle ages the most southerly town in the 'Irāk was *'Abbādān*, which then lay on the coast—under the later *'Abbāda* it was already some distance from it—and was an important harbour. Cf. above and the article *'AMMĀDĀN*.

At the beginning of the twentieth century it was still an insignificant little village. It is only since the last twenty years that it has undergone an unexpected development because of the Anglo-Persian Oil Company making it the terminus of their pipes from *Shuster* and *Maidān-i Naftān* (cf. ii., p. 779^b). The oil is now pumped into tank-steamers at *'Abbādān*; important factories, warehouses etc. have been built there. *Brēm*, five minutes west of *'Abbādān* proper, has developed into a flourishing town which bears the name *Brēm 'Abbādān* or *'Abbādān al-Hadīqa*—New *'Abbādān*. On the meaning of the word *brēm* (a particular kind of date) cf. *Lughat al-'Arab*, i. 125, i. *sq.*, 443, i. iii. 592, i. from below. In *Brēm* are the ruins of a palace or castle said to date from the time of the Caliph *Harun al-Rashid*; cf. *Lughat al-'Arab*, i. 126, i. *sq.* *'Abbādān* is now next to *Bagra-Aghahār* and *Muhammara* the largest and most important town in the whole of the *Shatt al-'Arab*. On the other places on the island of *'Abbādān* cf. *Lughat al-'Arab*, i. 128, i. *sq.* The island, which before the war belonged to the *Shāikh of Muhammara* who was under Persian suzerainty, was leased about 1911 by England for 99 years. On mediaeval *'Abbādān* cf. *Lughat al-'Arab*, i. 121-129; on modern *'Abbādān* and the works of the Persian Oil Company, *ibid.*, i. 176-184; W. Schweer, *Die türk.-persisch. Erdölverkömmerung*, Hamburg 1919, p. 52, 112-115.

At *'Abbādān* close to the sea-coast there stood in the middle ages the lighthouses known as *al-'Aḫḫābūt* [q. v.].

As has already been pointed out, *'Abbādān* is now over 20 miles from the sea. The most southerly place in the 'Irāk for about a century has been the important lighthouse and telegraph station at *Fāo* [q. v.], built on the shore of the Persian Gulf; on it and the district, cf. *Cuiver, op. cit.*, iii. 268-270; *'Abd al-Razzāk al-Hamānī, op. cit.*, p. 118; *Hāshim al-Sa'dī, op. cit.*, p. 21, 155, i. from below; cf. above and art. *SHATT AL-'ARAB*. This *Tākh* fortified this important strategic point (see *Persian Gulf [Handbook etc.]*, p. 54; *Mes-*

potamitis [*Handbüchlein* etc.], p. 48, 63; al-Nahhānī, *loc. cit.*, li. 142—146).

It may be here mentioned that the Zindj, the African negro-slaves, settled in the southern 'Irāk (cf. 2193 and I, p. 676), during their rebellion in the second half of the ninth century, built several strong places west of the Shatt al-'Arab, which they used as bases during their struggle with the armies of the Caliph. Their main bulwark was the town of al-Mukhtār (Yāqūt, iv. 831, 2) on the Nahr Abi 'l-Khaṣṣ (see above), south of Basra. Other strongholds were called al-Munfa and al-Mangira. When al-Muwaffāq, the brother of the Caliph al-Mu'tamid, undertook command of the military operations against the Zindj, he pitched his camp opposite these places on the east bank of the Shatt al-'Arab; this camp soon grew into a considerable town, called al-Muwaffāqiyā with mosques, bazars and even a mint. But when in 883 the capture of al-Mukhtār broke the power of the rebels and the dangerous servile war was over, this new foundation of al-Muwaffāq seems to have been soon abandoned again. On al-Muwaffāqiyā and the three strongholds of the Zindj above mentioned cf. Weil, *Geschichte der Chalīf*, ii. 456, 462, 464; Lang, *Z. D. M. G.*, xl. 610; A. Müller, *Der Islam im Morgen- und Abendl.*, i. 585 ff.; Noldeke, *Orientalische Skizzen* (1892), p. 174—183; (= *Sketches from Eastern History*, p. 146 ff.); de Goeje, *Mem. sur les Carmathes*, Leyden 1886, p. 103.

The population of Maisân in the early centuries of Islām still had a strong admixture of Persian blood; it was therefore regarded as not quite equal to the pure blooded Arabs who were proud of the purity of their stock. We thus see why the poet al-Akḥḥāl thinks he can most effectively insult Arabs by calling them people from the Maisân district of Asfahān (cf. the verse in Yāqūt, i. 233, 6) i. e., by denying them to be Arabs; cf. Goldziher, *Muhammed. Stud.*, i. (Halle 1889), p. 118 and cf. *idem*, p. 119, note 1, the quotation from the *Kitaḥ al-Aḥḥāl*, (xvii. 65, 23). This naturally produced a reaction among the Maisân Arabs. The celebrated poet and historian Saḥl b. Ḥarūn [q. v.] of Dast-i Maisân, a functional believer in the doctrine of the equality of all Muslims (*Saḥl-nāma*, q. v.) on the other hand, extols the blue blood of the people of Maisân (cf. Goldziher, *op. cit.*, i. 161).

The Muslim inhabitants of Maisân were in the middle ages as at the present day for the most part Shi'as. The number of Jews does not seem to have been considerable before the invasion of the Arabs. At the present day there is only a considerable community of them in Basra. The alleged tomb of Ezer in 'Uzair (cf. above), a much-visited place of pilgrimage also honoured by Christians and Muslims, is in Jewish hands.

Christianity is said, according to legend, to have reached Maisân in the first century A. D. A quite legendary person named Mān, said to be a disciple of Jesus, is regarded as the apostle of the Gospel in Central and Southern 'Irāk; cf. Raabe, *Geschichte des Dominus Mari*, Leipzig 1893 (Dissert.), p. 57—58 and Streck, *Babylonien*, ii. 286 ff. This much is certain that as early as 410 A. D. there was a separate Nestorian ecclesiastical province with 4 dioceses; cf. *Z. D. M. G.*, xliii. 304; Marquart, *op. cit.*, p. 41 and Sachau, *op. cit.*, p. 48—52.

The remarkable sect of the Mandaeans (the Sabi'a of the Kur'an, q. v.), now called Sabi'a, had from their early times their headquarters in southern 'Irāk, in Maisân, especially in the swamp country. On their geographical distribution in the sixth century cf. Chwolson, *Die Sabier und der Sabismus* (St. Petersburg 1850, i. 124—125) and Euting, in *Das Ausland* (1876), p. 224—225. According to enquiries which I made in 1927 of Mandaeans, the number of Mandaeans in the larger towns of the 'Irāk may be approximately estimated as follows: in 'Amīra and Hawra 1,000 each; in Kalāt Sūlī and Muḥammara 500 each, in Basra 300 and in Kurna 100. The language of the Mandaeans, who represent a remnant of the original native Aramaic population of Babylonia, is probably identical in the main with the Aramaic idiom which was once predominant in southern 'Irāk, the dialect of the old kingdom of Mesene-Charakene, the Meshān dialect as it is called in the Targum; cf. Noldeke, *Mandäische Grammatik* (Halle 1875), xxvi and Pognon, *Inschrift mandaïte des coupes de Khunabir* (Paris 1898—1899), p. 13—14, 224.

On the Indian people of the Djaī (Arab Zeit) and the Zindj from East Africa, who were settled on the soil of Maisân at the end of the first (seventh) or in the third (ninth) century, see above i., p. 676 and the articles 2193 and 2177.

As to the industries of the people of Maisân in the middle ages we need only mention the mats made here, which are praised as the best of their kind; cf. S. Frauke, *Die aram. Fremdwörter im Arabisch*, (Leyden 1886), p. 92. The reed-beds of the marishes supplied excellent material for them in enormous quantities. Even at the present day the manufacture of reed-mats continues to give employment to many hands; for the people of the flat lands in southern 'Irāk like to use long tun-shaped hats called *ṣarṣafa*, the walls of which are made of reed-matting.

The history of Maisân since the introduction of Islām practically coincides with that of the 'Irāk, especially that of the northern part (the province of Basra and the Baḥra); the reader may therefore be referred to the articles 'IRĀQ, BASRA and AL-BĀḤRA. Here we will only point out that the administrative district of the Tigris belonging to Maisân was conquered with Dast-i Maisân in the year 14 (635); on this conquest cf. Balādhuri, *op. cit.*, p. 340—346 and Caetani, *Annali dell' Islam*, iii. 252, 301—304 (§ 6 and 81—86); vi. 108 (Index s. v. Maisân).

Al-Maḥḥār, the capital of Maisân, was the scene of important military happenings at the time of the Arab invasion and frequently later also. In the year 12 (635) al-Ḥakīm and al-Muthannā fought a great battle with the Persians at this town, the first in their invasion of the 'Irāk. This battle is sometimes called after an adjacent canal, called al-Jihī (Yāqūt, i. 937, 17). The defeated Persians are said to have lost 30,000 men in this encounter; cf. Balādhuri, *op. cit.*, p. 242, 5; Tabari, *op. cit.*, v. 2026—2029; al-Mas'ūdī, *op. cit.*, iv. 209; Müller, *Der Islam*, i. 228; Caetani, *op. cit.*, ii. 959—962 (§ 195—200). In the fighting with the Khiridjīs for whom the district of Dīkha in Dast-i Maisân frequently served as a hidingplace, there was a desperate battle in 47 (664) in and around the town of al-Maḥḥār. These rebels were forced to retreat by the Kūfāns under the leadership of Ma'kil b. Kais; cf. Wellhausen, *Abh.*

G. W. Gott, N. S., v. N^o 2 (1901), p. 22—23. In the campaigns against the 'Alids, Muṣ'ab b. Zuhair at al-Madhar in 67 (686) inflicted a serious reverse on the army sent by Mukhtar under the command of Ahmad al-Nakhli, which had very grave results for the Shi'a cause championed by Mukhtar; cf. Vākūf, *op. cit.*, iv. 468; Weil, *op. cit.*, p. 83 and above i., p. 676. Several centuries later, there was again fighting at al-Madhar, on this occasion with varying results. This was during the struggle between Abū Kalidjar and Djalāl al-Dawla in 421 (1030) in connection with the disputed succession among the Būyids; see above i., p. 94^b.

(M. STRECK)

MAISARA, a Berber chief of the Maghrib, who rebelled against Arab authority in 122 (739/40). He belonged to the tribe of the Maghira and the historians give him the surname of al-Hakir "the low-born" because he was of humble origin and before his rebellion had been a water-seller in the market of al-Kairuwan.

After the recall of Muṣ'ab b. Nuṣair at the end of the first century A. H., rebellion began to smoulder in North Africa. Umar b. Abd Allah al-Muradi, governor of Tangier, and a grandson of 'Uqba b. Nafi', Habib b. Abi Ubaida, governor of Sūs, were inflicting grievous wrongs on the Berbers by treating them, as regards taxation, as a conquered people not converted to Islam, and by taking the fairest of their women to send as slaves to Damascus. The general Habib having been sent from Sūs with his troops to the conquest of Sicily, his departure was the signal for insurrection. A movement on a large scale broke out: at its head the Berbers put Maisara al-Maghiri. With the related tribes of the Miknasa and Barghawata [q. v.] Maisara advanced on Tangier and seized it. The Arabs tried in vain to withstand him; the governor of Spain, 'Uqba b. al-Harithi, even crossed the Strait to help Tangier but his efforts were in vain. It was not long before Maisara was dismissed and killed by his own followers but his successor Khalid b. Hamid al-Zanati was more fortunate: at the beginning of 125 (740) he inflicted on the Arabs on the banks of the Wadi Shalif (Chelif) the disastrous defeat known as the "battle of the nobles" (*ghazwat al-akhrif*). It required a great expeditionary force to be organised in the east in order to overcome finally this general rebellion, which was not done without considerable losses.

(E. LÉVI-PROVENÇAL)

MAISIR, casting lots by arrows, a method by which a head of cattle was divided. This was the custom of the Arabs before Islam. The word seems almost to mean lucky chance, easy success, from *yasira*, to be easy, *yasara*, to succeed; cf. *maisara*, comfort, riches. A group of ten Arabs used to buy a young camel, which was cut into ten portions and the *yasir* presiding distributed the portions among his companions by means of arrows on which he had written their names and which he drew at random out of a bag. In another system 25 portions were made of the animal: there was one part for the first arrow, 2 for the second and 3 for the third and so on up to 7; the three last got nothing. These arrows were deposited with the guardians of the temple in Mecca.

The game was considered a pagan practice and the Kur'an (ii. 216 and v. 92) forbade it along with wine and idols as a major sin.

The word *maisir* has acquired a wider sense among the commentators and in certain traditions.

Zamakbahrî gives it the same sense as *himâr* [q. v.]. According to a tradition of the Prophet, *maisir* is applied also to dice: "these accursed dice are the *maisir* of Parâia (*maisir al-'ajam*)"; according to a tradition attributed to 'Alî it is also to be extended to backgammon and chess (presumably in so far as dice were used in these games) and according to Ibn Sirîn to every practice in which there is an element of chance.

Cf. the Dictionaries, the *Ġawâz*, *Ġawhar*, *Zamakbahrî*, *Kashshaf*, ed. Nassim Lant, i. 380; *al-Ya'qûbî*, ed. Houtama, i. 300 sq.; Huber, *Über das Maisir gemünzt Spiel*; Freytag, *Einleitung*, p. 170 sq.

MAISUN, daughter of the Kalbi chief Bahdal b. Unâil [q. v.], mother of the Caliph Yazîd I. We do not know if after her marriage with Mu'âwiya she retained the Christian religion which had been that of her family and of her tribe. A few verses are attributed to her in which she sighs for the desert and shows very slight attachment for her husband, but the attribution to Maisûn of this fragment of poetry, which is in any case old, has been rightly disputed. She took a great interest in the education of her son Yazîd and accompanied him to the desert of Kalb where the prince passed a part of his youth; this temporary separation from her husband gave rise to the legend of her repudiation by Mu'âwiya. She must have died before Yazîd became Caliph.

Bibliography: This is given in Lammens, *Études sur le règne du calife omeyyade Mu'âwîya I* (*M. F. O. B.*, III), p. 286-287, 305, 312-314.

(H. LAMMENS)

MAISÜR (MYXOR) (Skt. *mahish-Candûra* "buffalo town"), the premier Hindu State in India, is a principality in Southern India under the British protection, having an area of 29,453 square miles, between 11° 36' and 15° 2' N. and 74° 38' and 78° 36' E. Its Hindu rulers preserved their independence until the middle of the 17th century when Haidar 'Alî [q. v.] took possession of the country. It remained in his and his successor, Tipu Sultan's [q. v.], possession until the capture of Seringapatam by the British in 1814 (1799). Maisûr was then restored by Lord Wellesley to the old Hindu dynasty. The majority of the Mussulmans are Sunnis, very few being Shî'as. Of Muhammadan buildings the most noteworthy are the Gumbaz or Mausoleum of Haidar 'Alî and Tipu at Gandhin, and the Daryâ Dawlat, a summer palace at Seringapatam. The population at the census of 1911 was 5,806,193, of whom 314,494 are Mussulmans, mostly Sunnis. The capital of the principality bears the same name, Maisûr. The languages spoken are Canarese, Hindustani, Tamil and Telugu.

(M. HIDAYET HORAIN)

MAITA (A.), feminine of *maul*, dead (used of senseless things); as a substantive it means an animal that has died in any way other than by slaughter. In later terminology the word means firstly an animal that has not been slain in the ritually prescribed fashion, the flesh of which therefore cannot be eaten, and secondly all parts of animals whose flesh cannot be eaten, whether because not properly slaughtered or as a result of a general prohibition against eating them.

In addition to Sûra XXVI. 33 where *maisir* appears as an adjective, the word occurs in the following passages in the Qur'ân in the first of these meanings: xvi. 116: "He has forbidden you *maisir* blood, pork and that over which another than Allâh has been invoked; if however anyone is forced (to eat these) without wishing to transgress or sin, Allâh is merciful and indulgent" (of the third Meccan period, since vi. 119 may refer to this contest and the appearance of the same exception for cases of coercion in vi. 146 [cf. below] is then only easily explained in view of the whole trend of the passage, if there were an earlier passage, namely xvi. 116, in which it was given full justification; cf. Noldeke-Schwally, *Geschichte des Qur'ân*, i. 146 sq.; Grimme, *Mohammed*, ii. 26 transfers the whole Sûra to the later Meccan period); vi. 140, 146: "They have said: 'What is in the womb of this cattle belongs to the males, and is forbidden to our females'; but if it is *maisir* (still born), all have a share in it... Say: I find in what is revealed to me nothing forbidden, which must not be eaten, except it be *maisir* or congealed blood or pork — for this is filth — or a slaughter at which another than Allâh is invoked, but if anyone is forced (to eat it) without wishing to commit a transgression or sin, thy heart is merciful and indulgent" (of the third Meccan period; cf. Noldeke-Schwally, i. 161; Grimme, ii. 26); ii. 168: "He has forbidden you *maisir*, blood, pork and that at which another than Allâh is invoked but if anyone is forced (to eat it) without wishing to commit a sin or transgression, it is not reckoned as a sin against him; Allâh is merciful and indulgent" (of the year 2 of the Hijra, before the battle of Badr; cf. Noldeke-Schwally, i. 178; Grimme, ii. 27); v. 4, 5: "Forbidden to you is *maisir*, blood, pork, that at which another than Allâh is invoked, and that which has been strangled, killed by a blow or a fall, or by the horns (of another beast), that which has been eaten by wild beasts — with the exception of what is made pure — and that which hath been sacrificed to idols... But if anyone in (his) hunger is forced to eat of them without wishing to commit a sin, Allâh is merciful and indulgent" (in all probability revealed after the valedictory pilgrimage of the year 10; cf. Noldeke-Schwally, i. 227 sq.; Grimme, ii. 28 dates the Sûra to the year 7).

It is quite evident from Sûra, vi. 140 that the *maisir* was of some significance for the Meccans in the many laws about food with which Arab paganism was acquainted (cf. Wellhausen, *Reise arabischen Heidentums*, 2nd ed., p. 168 sq.). Although it is no longer possible to define exactly the part it played (even the statements recorded by Tabari from the earliest interpreters of this passage, which moreover only refers to a detail, reveal the complete disappearance of any reliable tradition), it may be assumed without misgiving that the Qur'anic prohibition contained a corresponding pre-Islamic prohibition, although it perhaps modified it. Both go back to the religious reluctance to consume the blood of animals, and indeed in all the Qur'anic passages quoted, blood is mentioned alongside of *maisir*. It is unnecessary to assume that Muhammad was influenced by Judaism on this point and the suggestion may be rejected especially as the prohibition in its stereotyped form occurs again in Sûra ii. 168 just at the time of vigorous reaction against Judaism and Sûra vi. 147 (Madness, a

late insertion) which contrasts the prohibition of *maita* etc. with the Jewish laws relating to food. What Muhammad understood by *maita*, he tells us himself in the latest passage dealing with it, v. 4: in the second half of the verse the principal kinds of *maita* are given (with the exception of the animal that dies of disease), which had already been mentioned in general terms; the commentators were thus able to interpret the single cases given as examples wrongly as different from the *maita* proper. The purification (in the *Kur'an* only mentioned in this passage) must mean ritual slaughter, by which, even if done at the last moment, the animal does not become *maita* but can be eaten.

These prescriptions of the *Kur'an* are further developed in the Traditions. According to the latter it is forbidden to trade in *maita* or more accurately its edible parts; some traditions (mainly on the authority of Ahmad b. Hanbal) even forbid any use being made of all that comes from *maita*; others again expressly permit the use of hides of *maita*. An exception from the prohibition of *maita* is made in the cases of fish and locusts; these are in general considered as the two kinds of *maita* that are permitted, i.e. no ritual slaughter is demanded in their case (because they have no "blood", cf. above). While some traditions, extending this permission by the earliest *fiqh*, say that all creatures of the sea, not only fishes, can be eaten without ritual slaughter, including even sea-fowl (in this case it is said that "the sea has performed the ritual slaughter"), others limit the permission to those animals and fishes which the sea casts up on the land or the tide leaves behind in contrast to those which swim about on the water. But there is also quoted a saying of Abū Bakr expressly declaring what swims on the surface to be permitted. In this connection we have the story of a monster cast up by the sea (sometimes described as a fish) which fed a Muslim army under the leadership of Abū 'Ubayda when they were in dire straits; but in this tradition and in the interpretation that has been given it (that they only ate of it out of hunger i.e. took advantage of the *Kur'anic* permission for cases of need) is clearly reflected the uncertainty that prevailed about such questions as were on the border line. In the Traditions, we find it first laid down that portions cut out of living animals are also considered *maita*. The way is at least paved for the declaration that all forbidden animal-dishes are *maita*. The regulations found in the *Kur'an* appear again here, e.g. the permission to eat *maita* in case of need and slay properly dying animals at the moment to prevent them becoming *maita*.

Some traditions handed down through Hammād from Ibrahim al-Nakha'i bring us to a somewhat late period (in the *Kitāb al-Athār*): one says that of the creatures of the sea only fishes can be eaten; another, which is found in two versions, limits the permission to what is thrown up by the sea or left behind by the tide; ritual slaughter is not demanded in this case. The question whether the embryo of a slaughtered dam requires a special purification i.e. ritual slaughter, is raised in one tradition and decided in the affirmative.

The most important regulations of Muslim law about *maita*, which express the last stage of development are as follows: It is unanimously

agreed that *maita* in the legal sense is impure and "forbidden" (*ḥarām*) i.e. cannot be eaten and also that fish are exceptions to this; the Mālikis and Hanbalis also except the majority of creatures of the sea, and according to the more correct Shāfi' view, this applies to all marine creatures (the Hanbalis here hold the opinion of Ibrahim al-Nakha'i, except that the two ideas of "thrown up" and "swimming on the surface" are later overlaid and destroyed by the to some extent synonymous "slain by another cause", "died of itself"). The edible parts of *maita* are also *maita*, as are the bones, hair etc. among the Shāfi'is, but not the Hanafis, and among the Mālikis only the bones; the hide when tanned, is considered pure and may be used. Emergency slaughter (*ḍabḥ* or *ṭahḥiyya*; ritual slaughter in general is *ḍabḥ* or *naḥr*) is according to the Hanafis and the better known view of the Shāfi'is (also according to al-Zuhri) permitted, even if the animal will certainly die, provided it still shows signs of life at the moment of slaughter. According to the view predominant among the Mālikis, such slaughter is not valid and the animal becomes *maita* (in contrast to Mālik's own view). The question of the embryo (cf. above) is answered in the affirmative by the Hanafis, following Ibrahim al-Nakha'i and Abū Hanifa (al-Shāhān himself held the Mālikī view, to be mentioned immediately) but in the negative by the Mālikis and Shāfi'is (in this case it is said that "the ritual slaughter of the dam is also the ritual slaughter of the embryo") except that the Mālikis made it a condition that the embryo should be fully developed (Mālik himself also demanded its slaughter "to draw the blood from it" in the case where the embryo had been dropped). That anyone who is forced to eat *maita* may do so, is the unanimous opinion; only on the questions whether one is bound to eat *maita* to save his life, whether he should satisfy his hunger completely, or only eat the minimum to keep life alive etc., there is a difference of opinion. The Shāfi'is and Hanbalis further demand that one should not have been brought to these straits through illegal action (a different interpretation of the *Kur'anic* regulations).

A clear definition of *maita* and its distinction from other kinds of forbidden animal foods was never reached. Sometimes it is separated on the authority of the *Kur'anic* passage itself from its own 4 subdivisions given in Sūra v. Sometimes its validity is extended over extensive allied fields. As is evident from the *Fiqh* books, this terminological uncertainty has not infrequently caused still further confusion in the discussion of differences of opinion.

Bibliography: Lane, *Ar.-Engl. Lexicon*, s.v.; the books of *Ḥadīth* and *Fiqh*; Wensinck, *Handbook of Early Muhammadan Tradition*, s.v.; Juyabali, *Handleiding tot de kennis van de Muhammadanische Wet*, p. 169 sq. (J. Schacht).

MAIYAFARIKIN, a town in the north-east of Diyarbakr [q.v.]. The other Muhammadan forms of the name are Mafarkin, Mafāskīn, Fārkin (whence the name of origin al-Fārīkī) etc. The town is called in Greek Martyropolis, in Syriac Mipherkēš, in Armenian Nphrkert (later Mubarkin, Mphargin). According to Yāqūt, iv. 702, the old name of the town was Madīr-ḡala (read *ḡala* < *mater-*ḡala* in Armenian, "town of the martyrs"). On the identification of Tigranocerta with Maiyafarikin see below.

Geography. The town lies to the south of the little range of the Harō which rises like the first tier of the amphitheatre of the mountains, the higher parts of which consist of the summits (Derkōsh, Antok) rising to the south of Mush and separating the course of the eastern Euphrates (Murād-zai) from those of the Tigris and its left bank tributaries.

Mayyāfārikīn lies 25 miles north of the Tigris and 12 west of the Batmān-yū. It is watered by a little river (now called the Fārkin-yū) which flows into the Batmān-yū 12 miles to the south-east, an important left bank tributary of the Tigris which drains the wild and mountainous country south of Mush (the cantons of Kulp and Sāsūn). The old names of the Batmān-yū are Nicephorius (Roman period), Nymphios (Byzantine period), Syriac Kallath, Arabic Sātidamā (a word of Aramaic origin transcribed Shithithuma in Armenian and explained as "drinker of blood"; Armen. Geogr. of the seventh century, Marquart, *Eränfahrt*, p. 161), Armenian Khalirt and perhaps Mamushet (Faustus of Byzantium). Some of these identifications, as we shall see, are still uncertain.

Mayyāfārikīn is the meeting-place of a number of roads from the north following the different streams which go to form the Batmān-yū: 1. Çabakhdjār (on the Murād-zai)-Dhu l-Karnain-Ladje-Boshāt-Mayyāfārikīn; 2. Mugh-Kulp-Pāst-Mayyāfārikīn; 3. Mugh-Khoit-Tingirt (= Sāsūn)-Mayyāfārikīn. Routes 3 and 4 passing Sāsūn are still little known. The distance between Diyārbakr and Mayyāfārikīn is about 45 miles. The old road Diyārbakr-Bitlis, which used to run through Mayyāfārikīn, now runs farther south and crosses the Batmān-yū south of Almadin (Diyārbakr-Simān-Zok-Weisjāran-Bitlis).

Mayyāfārikīn has thus lost the advantage of being a stage on the road between Armenia and upper Mesopotamia. Since 1260 it has no longer been a political centre around which gravitated the interests of this country around. It retains only its importance as a market for the produce of the mountainous and pastoral country drained by the Batmān-yū.

Ancient History. The mountains to the north of Mayyāfārikīn have long sheltered the remnants of ancient aboriginal peoples. About 600 A.D., Georgios Cyprus (ed. Gelzer, p. 48), mentions the Khothaitai and Sanasounitai there who gave their names to the districts of Khoit and Sāsūn. Marquart (1916) supposes there are elements of the aboriginal language in names like *Māphēr-kēt and *Ma-mush-ēl(i) which are, he says, formed with Caucasian ("ād-kaukasisch") prefixes. According to tradition (Yāqūt, iv. 703), the founder of Martyropolis, Marthā b. Laylā, was the son of a woman of the mountains, and Marquart sees in Laylā a mutilated form of the name of the people Urtā(n) < Urtā (Händes Antiochia, 1915, p. 96; 1916, p. 126). The Marwāld Abū Naṣr was married to the daughter of Sanjharib, lord of the Sanjunn, cf. Amelroos, in *J.E.A.S.*, 1903. Lehmann-Haupt thinks he can recognise at Mayyāfārikīn traces of an ancient Assyrian settlement, "eine von Hans aus assyrische Anlage" (*Armenien*, I, 396, 398).

Tigranocerta = Mayyāfārikīn (?). As early as 1838 von Moltke had suggested that Mayyāfārikīn was the ancient Tigranocerta i.e. the new capital founded by Tigranes II about 80 B.C., which was

taken by Lucullus after the victory won on the banks of the Nicephorius (Oct. 6, 69 B.C.) and again in the reign of Nero by the legate Corbulo (c. 63 A.D.); it is regularly mentioned down to the middle of the fourth century A.D. Other scholars had sought Tigranocerta at Si'rt (d'Anville), Arran (H. Kiepert, 1873), near Keft-Djāz (Kiepert 1875), at Tell-Armen west of Nisibin (E. Sachau; cf. DUNABIA) etc. Late Armenian tradition gives the name Tigranocerta to Diyārbakr. Moltke's idea was taken up vigorously by Lehmann-Haupt and W. Belck, after their expedition to Armenia in 1898-99.

On the north wall of Mayyāfārikīn is a mutilated Greek inscription. It was deciphered and published by Lehmann-Haupt, who attributes it to the Armenian King Pap (369-374), which is quite in keeping with the known facts of the reign of this monarch. In spite of his criticism of the details of Lehmann-Haupt's hypothesis, Marquart (1916) has rather corroborated him by bringing forward new considerations.

In view of the many contradictions found in the classical sources regarding Tigranocerta the question comes to be, if Mayyāfārikīn is not Tigranocerta, what other unknown town existed here in the time of Pap, unless the stones on which the inscription is engraved and which are now hopelessly disarranged ("in heillosen Verwirrung") were brought from another place when Martyropolis was being built?

The main objection to the identification of Tigranocerta with Mayyāfārikīn is that, according to Eutropius, vi. 9, 1 and Faustus, v. 24, Tigranocerta was in Arranene (Atanikh); on the other hand the river Mamushet seems to have formed in the fourth century the western frontier of this latter province. From this fact (Hübischmann, *Die altarmen. Ortsnamen, Indogerm. Forsch.*, 1904, p. 473-475), it seems that Tigranocerta ought to be placed east of the Batmān-yū if this river is identical with the Mamushet. This last name was connected by Marquart with the name al-Musiliyāt, which Muḥaddas, p. 144, gives to one of the tributaries of the Tigris (on the left bank) and apparently corresponding to the Batmān-yū. [A district of Musiliya (?) still exists farther east on the upper course of the Bidlis-zai, in the area of the ancient possessions of the Baṭrīk Mushalik; cf. Kisrawī, in Yāqūt, ii. 551-552].

To reconcile the statements of Faustus, iv. 24 and 27, with the position of Mayyāfārikīn (12 miles W. of the Batmān-yū), Marquart proposes to identify the Mamushet = Nicephorius with the Fārkin-yū while the Musiliyāt would be applied to the whole system of the Batmān-yū (Nymphios, Sātidamā etc.). The insignificance of the Fārkin-yū, which rises in the hills about 3 miles north of Mayyāfārikīn (Ibn al-Aṣṣak calls its source Ra's al-'Ain; the *Ḍihān-namā*, p. 437: 'Ain al-Hawd) and does not suit the description of the hermitage of Mambri, which, according to Faustus, must have been on the right bank, makes Marquart's hypothesis less attractive. If finally we consider the position of Mayyāfārikīn from the point of view of the interests of Tigranes, one is forced to admit that against an enemy coming from the west (Lucullus!) Tigranocerta = Mayyāfārikīn was devoid of natural defences, while in the event of an enemy coming from the east it ran the risk of being easily cut off from Armenia on the main road from Bitlis (the ancient *Κλεινὴ Βαλακίσιον*, cf. Tomaschek,

Sassen, *Sitzungsber. A. W. Wien*, Vienna 1895, p. 8). On the other hand Maiyāfārikīn from its position later played an important part in the defensive system of the Byzantine empire.

In these circumstances and before a more detailed study has been made on the spot, it is a mistake to think that all the difficulties in the identification of Tigranocerta have been cleared up.

Maiyāfārikīn = Martyropolis. The identity of these two towns is quite certain. The Christian sources (Syriac, Armenian and Greek) referring to the foundation of Martyropolis are numerous. A Syriac "history" (*taḥṣīṭhā*) kept in the Jacobite church of Maiyāfārikīn was translated for the historian of the town, Ibn al-Azrak, and is given in a synopsis in Yāqūt, iv. 703—707 and Ḳaswini, ii. 379—380 (transl. with notes in Marquart, *Handes Amorya*, 1916, p. 125—135).

The town is said to have been founded on the site of a "large village" (*ḥarya 'asima*) by the bishop Marūthā (Mār Marūthā) who had obtained the authority of Vezdegird I of Persia to do so. This ecclesiastic flourished between c. 383 and 420 (on the sources for his biography cf. Marquart, *op. cit.*, p. 91—92, 125). The town of Martyropolis to which Marūthā brought the remains of the Christian martyrs of Persia is mentioned for the first time in 410. The etymology of the Syriac name Mipherkē is uncertain (cf. above). In Armenian the town is mentioned for the first time in the Geography of the viiith century as Nphkert (once Nphret).

By the peace of 297 with Diocletian, the province of Sophanene, within which Martyropolis lay, had become part of the Roman empire. Even after the disastrous peace made by Jovian (363) Sophanene remained to the Emperor. Under Theodosius II (401—450), the new town, situated quite near the frontier, acquired considerable importance and became the capital of Sophanene (= Great Tsofkhk). The town was still insufficiently fortified and in 502 the Sāsānian Kawādī b. Pērōz seized it and carried the inhabitants off to Khuzistan where he founded for them the town of Abaz-Ḳobādī (Yāqūt, iv. 707) (Web-Amīdīh-Kawādī = Arrāḍīn; cf. Marquart, *Eränlahr*, p. 41, 307). Anastasius began the fortification of Martyropolis but Justinian, after his accession (527), was the first to reorganize completely the eastern frontier between Dērā and Trebizond. Martyropolis, the headquarters of a commander under the strategos of Theodosiopolis (Erzerüm), became one of the most important military centres. Procopius, *De aedificiis*, iii., gives a complete description of the walls of the town, the height and thickness of which were doubled and a full account of the system of defences (outer walls, advanced forts etc.); cf. Adontz, *op. cit.*, p. 10—12, 140—142. In 589 the town fell into the hands of the Sāsānians but in 591 came back to the Byzantines in return for the support given by the Emperor Maurice to Ḳhusraw II. Heraclius held it till the year 18 = 639 (Yāqūt, *l.c.*). [The date is not given in Muralt, *Chronogr. byz.*, i].

The vicissitudes of Martyropolis probably explain the fact that in the Armenian Geography of the seventh century (ed. Patkanow, transl., p. 45; Marquart, *Eränlahr*, p. 18 and 161) the Persian province of Atšinikh (Arranene) is separated from Tsofkhk (Sophanene) by the line of the Khatir (= Batmān-qu) while in the description of parts

of Armenia Nphret (= Nphkert) figures as one of the 10 cantons of Arranene.

Christian legend as preserved by Ibn Azrak and Yāqūt gives very full details of the building of the town in the time of Mār Marūthā: the arches (*ḡān*) of the walls in which the remains of the martyrs were placed, the eight gates of the town, the names of which are carefully recorded, the convent of SS. Peter and Paul, the buildings erected by the three ministers of the Byzantine emperor, each of whom built a tower and a church. There is still to be seen in Maiyāfārikīn the ruins of a magnificent basilica and of the Church of the Virgin (al-'Adhrā). Miss Gertrude L. Bell, who has studied these monuments, dates the basilica "not much later than the beginning of the fifth century", and suggests that the Church of the Virgin was one of the two built by Ḳhusraw II in recognition of the assistance lent by Maurice; cf. Abu 'l-Faraj, *Muḥṭaṭar*, ed. Pocock, p. 98.

Under Islām. In 19 (640) in the reign of the caliph 'Umar, Maiyāfārikīn was taken by 'Iyād b. Ḡhann without a blow being struck (Balāḡharī, p. 175—6) and henceforth shared the lot of Diyarbakr.

The intermediate character of the position occupied by Maiyāfārikīn puzzled Arab geographers. Ibn Rusta, p. 106, puts the town in Ijastra while the others (Ibn Ḥawḳal, p. 246) regard it as belonging to Armenia. According to these authors, Maiyāfārikīn was a little fortified town having an unhealthy climate on account of the stagnant water but not without its amenities (Iṣḥākhrī, p. 76; Ibn Ḥawḳal, p. 131, 151, 153; Muḡaddasi, p. 54). The region (*ḡiyā' wa-ḥula'*) of Maiyāfārikīn and Arran in the time of Ibn Ḥawḳal was however entirely depopulated.

The Ḥamdānids and the Būyids. Maiyāfārikīn formed part of the territory of the Ḥamdānids [q. v.] (317—394). They built a castle (*ḡasr*) there near the gate Bāb al-Farāḡ wa 'l-Ḡhann (Yāqūt); its ruins are apparently mentioned by Ewliya (1655), iv. 71—4 under the name *Saif al-Dawla Sarāy*. The Bāb al-Maldān gate also dates from Saif al-Dawla (333—356). This prince was buried at Maiyāfārikīn; cf. *Qitāb-namā*, p. 437. In 352, Nadjā, a client of the Ḥamdānids, rebelled in Maiyāfārikīn. In 362 (July 4, 973) Hibat Allāh b. Nāḡir al-Dawla defeated the Byzantines in the vicinity of the town.

In 367 (978) the Būyid 'Aḡud al-Dawla dispossessed the Ḥamdānids who had supported his cousin Bakhtiyār and in 368 Abu 'l-Walī, a general of 'Aḡud al-Dawla, took Maiyāfārikīn (Ibn Miskawayh, ed. Amedroz, ii. 199, 266, 312, 324).

The Marwānid dynasty. After the death of 'Aḡud al-Dawla (374), Maiyāfārikīn and the rest of Diyarbakr fell into the power of the Kurd Bādīh [cf. KURDS and MARWĀNIDS] who had the Dailami garrison of Maiyāfārikīn massacred and was able to defend what he held against the Būyid Šamsām al-Dawla and the sons of Nāḡir al-Dawla, who had meanwhile returned to Mawṣil. After the death of Bādīh, his nephew, Abū 'Alī Ḥasan b. Marwān, established himself in Maiyāfārikīn and for a century this town remained the capital of the Marwānid dynasty (380—479 and again in 486). In 384 the governor Mammā, appointed by Abū 'Alī, succeeded in checking the turbulence of the inhabitants who had been incited by Ḥamdānid intrigues. There is an inscription of Mumahhid

al-Dawla dated 391 (1000) on the wall of the town. In 392 an 'Alid pretender again stirred up trouble in Mayyafarikin. In 401 after the assassination of Muzahhid al-Dawla, his murderer Sharwa, son of Mammū, with the help of his Georgian guards seized Mayyafarikin but Sa'id Abū Naṣr came from Arzan and began his long and brilliant reign (401—453).

A fine castle decorated with gilding was built in 403 on the little hill on which stood the convent and the Church of the Virgin. This Christian sanctuary (the connection of which with the al-'Adhri church is not quite clear, cf. above) was transferred to the Melkite church. Later were built a hospital, a mosque with a clock (*ḥanḥān* < Pers. *ḥinḍā*) and bath. Water was led to all the town from the spring of Ra's al-'Ain. A palace was built on the banks of the Sittidami (Bajman-qa) and this water was raised to it from the river by a noria. A bridge spanned the river Haww (Harrū?). A waqf bequeathed by Shaiḥ Abū Naṣr al-Manāni endowed the mosque(?) of Mayyafarikin with a library. A fort was built to protect the town against the Sāsānī (people of al-Sāsān).

This list from Ibn al-Azraq is supplemented by the statements of Naṣir-i Khusrāw, who visited the town under Abū Naṣr on the 6th Djumādī I 438. The Persian traveller speaks of its walls, built of huge blocks of white stone (Ibn Miskawayh, II, 384: "strong walls of black stone"; Lehmann-Haupt: "gelblichweisser Kalkstein"), the western gate all of iron, the Friday mosque, the water-channels passing before each house (one uncovered with drinking water and the other covered serving as a sewer). Outside the town were the caravanserais, the hot baths, and a second Friday mosque. To the north of the town was the suburb of Muḥadatha, also with a Friday mosque and baths. At a distance of 4 farsakhs from the town (on the bank of the Sittidami?) was a new little town called Naṣriya built by the emir then reigning.

After the death of Abū Naṣr, who was buried in the town, the Saldjūqs began to interfere in the affairs of Mayyafarikin. In 458 Sallās Khorrāsāni sent by Taghribī arrived before the town with 5,000 horsemen. In 463 it was visited by the celebrated Niṣṣan al-Mulk. In 478 by orders of Malik Shāh the former vizier of the Marwānids, Ibn Djaḥir, besieged the capital of his masters, which surrendered in Djumādī I 478. The treasures of the Marwānids valued at 1,000,000 dinārs were carried off by Ibn Djaḥir. In 482, 'Amīd al-Dawla, son of Ibn Djaḥir, was appointed governor of Mayyafarikin. After the death of Malik Shāh (485), the Marwānid Naṣir al-Dawla succeeded in re-entering Mayyafarikin but the Saldjūk Tutuḡ of Syria took the town in Rabi' I 486; cf. Ibn Azraq in Amedroz, *J. E. A. S.*, 1903. In 532 (Ibn al-Aḥbar, XI, 43) the last representatives of the Marwānid family disappeared from the neighbourhood of Mayyafarikin.

The Ortuqid and Aiyūbids. In 575 (1121) the Saldjūk Salṭan Maḥmūd added to the possessions of Il-Ghāzi, founder of the line of Ortuqids of Mardin, the fief of Mayyafarikin, to which Il-Ghāzi appointed his son Saḥmūd (516—518); cf. Abu'l Faraj, ed. Pocock, p. 249 and Kātib Ferdī, *Mardin Maḥabāt-i Ortuqīya (Arḍiyyat) Ta'rikhi* (written in 944=1537), ed. 'Alī Enṣrī Eṣṣadi (Constantinople 1331, p. 20). Six successive Ortuqids ruled Mayyafarikin till 580 (1184). In 587 (1191) the last

Ortuqid Yuluḡ Arḍān again seized the town and held it for a time.

In 581 the Aiyūbids had become masters of Mayyafarikin and held it till 658 (1260). Salāḥ al-Dīn built a mosque there for which the columns of the Byzantine basilica were used (Gertrude L. Bell, *op. cit.*, Pl. xi.). Mayyafarikin had a mint under the Aṭabegs: the coins which they struck (dated 591, 599, 600, 612, 618) bear curious human figures which are portraits or symbolical personages (Ḥalīb Edhem, *Catalogue des monnaies turques* etc., Constantinople 1894, p. 149—67; S. Lane-Poole, *Catalogue of Oriental Coins in the British Museum*, vol. IV, p. 255; see vol. III, p. 24 for a Marwānid coin of this mint). On the walls of the town are inscriptions of the following Aiyūbids: Aḥmad Naḍīm al-Dīn Aiyūb (of 600 A.H.), Malik Ashraf Mūsā (607—617), Malik Muḥaffar Ghāzi (623), Malik Kāmil Maḥmūd (654). A complete list of rulers at Mayyafarikin from 515 to 658 prepared by van Berchem is given in the appendix to Lehmann-Haupt, *Materiales*, p. 134.

The Mongols. In 639 (1241) the Aiyūbid Shihāb al-Dīn Ghāzi had received the summons from the Mongol Khāqān to submit and raze the walls of the town but gave an evasive answer. In 650 (1252) the Mongols pillaged the country round Mayyafarikin. During Hülegü's expedition to Syria in 658 (1260) the army of the prince Yashmut besieged Mayyafarikin which was defended with great bravery by Malik al-Kāmil. The blockade produced a terrible famine in the town which was forced to surrender. Only 70 of the defenders survived. Kāmil was put to death in cruel fashion and his head carried on the point of a lance through the streets of Damascus (Rashid al-Dīn ed. Quatremere, p. 330—331, 350—375; d'Osson, *Histoire des Mongols*, III, 354). Before his death, in 662 (1264), Hülegü gave the district of Diyārbakr to his general Tudān (cf. *supra*). Three years later, Abayza allotted Mayyafarikin to his father's widow, Kutay-Khātun. Mayyafarikin later lost its independence and henceforth shared the lot of Diyārbakr (q. v.).

In 796 during Timūr's stay at Mardin, a number of Maliks including those of Arzin (*ric*) and Batmān came to pay him homage but the *Zafar-nāma* (I, 665) does not mention the lord of Mayyafarikin. After the conquest of Diyārbakr, Timūr on his way to Mīsh took the road via Mayyafarikin (*ibid.*, I, 685) and Sivasur (the name of a summit in al-Sāsān east of al-Antok). This march is the only example of a considerable force following the direct road Mayyafarikin-Mugh.

The Safawids and the Ottomans. Our information about the rule of the Turkoman dynasties (Kara-Koyunlu and Ak-Koyunlu) in the region of Diyārbakr is still very deficient. In pursuit of his campaign against the last Ak-Koyunlu Murād, Shāh Ismā'il I Safawī in 915 occupied all the region of Diyārbakr, the government of which was entrusted to Khān Muḥammad Ustādīn (*Sharaf-nāma*, I, 408; *Adam-ḥus*, p. 23—25). The defeat at Cāldirān produced risings against the Persians throughout Kurdistan. The Kurd chief Sniyid Ahmad Beg Rāzaki seized Mayyafarikin and Atak (Hātākh, cf. the *Ḳārtas* 'Αττάκας of Georgios Cyprus). Mayyafarikin passed definitely under Ottoman rule after the battle (921) of Koç-Hisar (south of Mardin) in which the Persian general Kara-Khān was defeated (von Hammer, *G.O.R.*, I, 731—741).

In 1529 Maiyafarikin was visited by the Portuguese Jesuit Tenreiro, who found there "many monuments with inscriptions and Greek characters. On the walls were images of the apostles and other saints painted in gold and in brilliant colours. . . The town was almost deserted".

The Sulaimāni Kurds. While the events above described affecting a wider area were going on, the power of the local Kurd chiefs was gradually growing. At the end of the xvth century we find the whole valley of the Batman-su reunited under the rule of the Sulaimāni chiefs, one branch of whom was established at Maiyafarikin and the other at Kulp (*Sāraf-nāma*, i. 261—271; cf. above ii. p. 1244 ff.). In 1838 von Moltke found the town full of ruins, evidence of the recent conquest of this part of Kurdistan by the Turks. The Kurds however kept the de facto power down to the beginning of the xth century (cf. Lehmann-Haupt, *Armenien*, i. 394, 419). The name Silwān which in the local administrative language finally eclipsed the old Maiyafarikin, can only be a kind of development of the name Sulaimāni > Silwāni (in Turkish Silwān); cf. Pers. *silwān* (from *māhān*) > Kurd. *māwān*.

In 1891 (Cuihet) there were in the *kaḍā* of Silwān 363 villages with 25,217 inhabitants of whom 18,500 were Muslims and 6,717 Christians (Armenian and Jacobites). The town had 1,450 houses with 7,000 inhabitants (half Muslims and half Christians).

Forsch.*, xvi., 1904, p. 473—475; Lehmann-Haupt, *Armenien einst und jetzt*, i., Berlin 1910, 380—429 (general description and history of Maiyafarikin to 1258), 500—523, 419—420 (Kurd castle of Boshāt with a Sāsānian bas-relief of Artaban II), 500—525 (Tigranocerta), 537—540 (bibliography and complete list of earlier publications by W. Belck and C. F. Lehmann-Haupt); ib., Berlin 1926, p. 396—421, *9—10 (polemic with Marquart); Marquart, *Mithras und Tigranocerta*, *Handes Amtoria* (organ of the Mekhitarists of Vienna), 1916, columns 68—135, cf. also Marquart, *Forsch.*, p. 161, 306 (in *Nachträge* the author was at first inclined to see a local name or an Iranian name *Nevak-fari graecised) and Marquart, *Südasien und die Tigrisquellen*, *Handes Amtoria*, 1915, col. 116 (Sāidamā).

For the Byzantine period the works quoted by Marquart and Lehmann-Haupt; Chapot, *La frontière de l'Euphrate de Pompée à la conquête arabe*, Paris 1907, p. 359—360; Adontz, *Arménie = éparchie d'Asiaticum*, St. Petersburg 1908, index (complete geographical and political study of Armenia in the 16th century); Miss G. L. Bell, *Churches and monasteries of the Tur Abdin and neighbouring districts*, *Zeitschr. f. Gesch. d. Archäol.*, Beiheft 9, Heidelberg 1913, p. 86—92, plates 21 (mosque of Saladin), xlii-xiv. (basilica), xv-xix. and xxviii. 1 (st. Admā).

For the Muslim period: the general sources quoted in the text and L. Strange, *The Lands of the Eastern Caliphate*, p. 111—112. The special history of the town is *Tārīkh Maiyafarikin* written in Arabic in 572 by Ahmad b. Yusuf b. 'Alī Ibn al-Azrak al-Fāriki, unique MS. Brit. Mus., Or. 3805 (fragment of an older version in Or. 6310). The history of Ibn al-Azrak is quoted and completed in vol. II of *al-A'īn al-haḥira fī Dīār Umrā al-Shām wa 'l-Djazīra* (Bodleian Marsh 333, Catalogue I, No. 945) by 'Izz al-Dīn b. Shaddād al-Halabī. The publication of the histories of Ibn al-Azrak and Ibn Shaddād is proposed by the G. M. S. The data in Ibn al-Azrak (and in part of Ibn Shaddād) have been excellently summarised by Amedroz in the articles: *Three Arabic MSS. on the History of the city of Mayyafariqin*, in *J.R.A.S.*, 1902, p. 784—812; *Marwanid dynasty at Mayyafariqin*, *J.R.A.S.*, 1903, p. 123—154; *Notes on two articles on Mayyafariqin* (remarks by Marquart), *J.R.A.S.*, 1909, 170—176. The epigraphical materials of the German expedition of 1898—1899 have been studied by M. van Berchem, *Arabische Inschriften aus Armenien u. Diyarbakr*, in Lehmann-Haupt, *Materialien z. Altarm. Geschichte Armeniens und Mesopotamiens*, Abh. G. W. Gott., N.F., ix., No. 3, p. 125—142; Naḥr-i Khuraw, *Sāraf-nāma*, ed. Schefer, p. 7—8; transl., p. 24—25; Rashid al-Dīn, *Dīwān al-Tawārīkh*, ed. Quatremère, p. 330—331 (Amid) and 360—375 with an excellent study by the editor on Maiyafarikin); Hādījī Khāfī, *Dīwān-nāma*, p. 437; Ewlyā Celebi, *Siyāḥnāme*, iv. 71—74 (interesting details); A. Tenreiro, 1529, *Itinerario . . . da India*, Coimbra 1560 (second edition 1762); Bittl-Haas, "Monfarquim"; Moltke, *Briefe über Zustände . . . in d. Türkei*, ed. Kiepert, Berlin 1841, p. 287: The river ("ein reicher Fluss . . . [der] in schönen Windungen durch die Ebene dem Tigris zusieht") of which Moltke speaks seems to correspond to the Batman-su, as Ritter, *Erdkunde*, x. 79, 87—95 takes it to be; Taylor, *Travels in Kurdistan*, *J.R.G.S.*, 1865, p. 21—58 (this article is still very important); Cuihet, *La Turquie d'Asie*, Paris 1891, ii. 470—472 (*kaḍā* of Silwān); Lehmann-Haupt, *Armenien*, cf. above; Flury, *Islam Schriftbänder*, Paris 1921, p. 44—48 (inscription of Saladin at Maiyafarikin) with two plates. (V. MINORSKY)

MAKALLA. [See **MUKALLA**.]

MAKAM (A.), place, place where *ṣalāt* is performed. As to *Makām Ibrāhīm*, see **KABLA**.

MAKAMA (A.), a variety of Arabic prose of a highly elaborate and artificial nature.

Makama in the old language was the name for the assembly of the tribe, synonymous with *saḍā* (e. g. Lelūd, *Dīwān*, No. 46, 10; Salīm b. Dīnād, *Dīwān*, i. 4 = *Musafḥasīyāt*, ed. Thorbecke, No. 20, 50, ed. Lyall, No. 122, 1; *Hamāra*, p. 95, v. 1 etc.; so also Hamādīn, *Maḥ.* 16, 5 [Stamb. = 44 u. Bār]), hence the word was next applied to gatherings at which the Omayyad and early 'Abbasid caliphs received pious men in order to hear edifying discourses from them, as Hishām for example did with Khālid b. Ṣafwān (*Kitaḥ al-Aḥḥād*, ii. 1 35, 3 35; 19 199); Ibn Kutaiba gives an account of it in the chapter *Makāmāt* (the Sing. appears as *Makām* in the separate headings) *al-Zuhād* 'inda 'l-bāḥiḥ wa 'l-matā' in the *K. al-Zuhād*, 6 of the *K. 'Uyūn al-Aḥḥād* (cod.

Kopr. 1344, fol. 212^v–215^v), upon which Ibn 'Abd Rabbih in *ʿIḥḍ al-Farid* (Cairo 1305), I, 286 *app.* and al-Torṭuṣī, *Siwāf al-Mulūḥ* (Bulāq 1289), p. 32 *app.* have again drawn. The word then came to have the more general meaning of lecture, e.g. in Maṣ'ūdī, *Maṣnūʿ al-Dhahab* (ed. Paris), v. 421, 2 and perhaps also Ḍahbī, *K. al-Bukhārī*, p. 218, 12, where it appears along with poetry, proverbs and tales of battles as an essential element in Arab education. In the third century A.H., however, the word began to sink from this higher sphere; it became the name for a beggar's appeal, which had to be framed in carefully chosen language, the more the literary training of the *adīb*, once a privilege of court circles, became disseminated among the people; an example of these appeals is preserved by Ḍahbī in Baihaqī, *K. al-Maḥasin wa 'l-Maḥsun* (ed. Schwally), p. 623 *app.*. The appeals of beggars seem to have paved the way for the literary genre proper (cf. A. Mez, *Abu 'l-Kāsim*, p. xxiii/xxiv.). This owes its existence to Hamadhāni [q. v.]. He created a typical representative of this literary Bohemianism to which he himself belonged, which entered upon the inheritance of the *siwāf* poets of the early days of Islām, like al-Ḥuṭaī'a. The frequently very witty execution of the constantly changing part of his hero Abu 'l-Faṭḥ al-Iṣkandarī and from the point of view of form the adoption for his tales of rhymed prose, which was already beginning to dominate the finer style of letter-writing, are the two special characteristics of Hamadhāni's work. To the hero himself he gives a *hail* in the person of a narrator, 'Isā b. Hishām, who sometimes appears instead in the role of a trickster, as in maḥma 12. In the 7th also — one of the poorest by the way —, in which a certain 'Isma b. Badr al-Fasrī records a meeting with Farṣadāq not very creditable to 'Isma b. Rūmān, the principal hero takes no part. Six of these stories are only intended to glorify his patron, Khalaf b. Aḥmad ruler of Sijlātān, to whom as Margoliouth supposes (cf. HAMADHĀNI) the whole collection was dedicated. Sometimes he only uses the maḥma form to give expression to his own views on literary questions as, for example, in the first on ancient and modern poets, in the fourteenth on the masters of prose, al-Ḍāḥiq and Ibn al-Muḥallā; in the 25th maḥma, another in which al-Iṣkandarī does not appear, he puts his polemic against the Muṭawillīs in the mouth of a mailman. He does not always make al-Iṣkandarī appear as a rogue but in the 42nd maḥma he displays a knowledge of the world which is quite innocent of guile. No. 26 (Syrian, lacking in the Beirut edition) and 31 (the Russian, incomplete in the Beirut edition) contain specimens of erotic jargon and cant-language; of purely lexicographical interest is maḥma 30, edited and elucidated by Ahlwardt in *Chalif al-Aḥmar*, p. 250 *app.*, which deals with a competition instituted by Saif al-Dawla for the best description of a horse. The last (No. 52 in the Beirut edition) is of quite another character and has only the rhymed prose in common with the maḥma proper: it is on this account classed with nine other anecdotes (as *maḥla*) in the Stambul edition and put in an appendix.

How far al-Hariri's statement quoted above, i.e. HAMADHĀNI, that al-Hamadhāni got the idea from Ibn Damiya's *Arba'īs* is true cannot be ascertained

as this work has not survived. In any case he is entitled to the credit of having created a new literary form, which might have proved very fertile in Arabic literature which is not exactly rich in forms. It is perhaps impossible to appreciate his talent fully if we may believe the tradition that the 52 specimens that have survived to us and which were apparently all that were known to al-Hariri represent only about an eighth of his whole output. His contemporaries and immediate successors were however not able to follow him on the path he had indicated. One only of his contemporaries, the court poet of Saif al-Dawla Abū Naṣr 'Abd al-'Azīz b. 'Omar al-Sa'dī († 405 = 939), has left us a maḥma (Ahlwardt, *Verz. der ar. Handschr. Berlin*, in No. 8536). Not till a century later do Ibn Nāḥiyya and al-Hariri again take up the form created by him. The former (Abu 'l-Kāsim 'Abd Allāh or 'Abd al-Bakī Maḥammad b. Husayn, b. 15th Dhu 'l-Ḥiḍa 410 [March 14, 1020] in Baghdād, d. 4 Muḥarram 485 [Febr. 15, 1092]), of whose other poetical and philological work nothing has come down to us, does not keep strictly to the model created by al-Hamadhāni in the nine maḥmas preserved in a Stambul MS. (Pāsh. 4097; *M.O.*, vii. 112) in as much as he does not have one hero all through and also introduces various persons as narrators, but the main point is the polished form, in which he tells his otherwise not remarkable stories (cf. Cl. Huart, *Les états d'Ibn Nāḥiyya*, *J. A.*, ser. 10, vol. xii., 1908, p. 435–454, and the edition by O. Reuchet, in *Revue sur Maḥmūd-Literatur*, Heft 4, Stambul 1914, S. 123–153). It is not till Hariri [q. v.] that the maḥma receives its classical form, but the latter at the same time considerably limited its subject matter in as much as he makes the anecdotes recorded by al-Hariri b. Hamadhāni centre round a hero, Abū Zaid of Sarūj, and relates the adventures of this Bohemian, whose wit is never at a loss and who is able to meet all difficulties, in a style sparkling with wit and full of all the tricks of language. That he owed the stimulus to his work to an encounter with an actual vagabond may be legend; al-Sabkī, *Tadhkirat al-Shāfi'iya*, iv. 296, and Ibn Taghribirdī, iii. 23, 2 *app.* say he was a Banian al-Muthharī (Ibn Taghribirdī says al-Muḥallā) b. Sallā (cf. C. Dumas, *Les héros des maḥmūd de Hariri, Abū Zaid de Sarūj*, Algiers 1917). The story at least may be quite true that the Maḥma al-Haririyya said to be inspired by this meeting was the first from his pen. In any case Hariri's tricks of rhetoric (cf. the analysis in Crussard, *Études sur les états de H.*, Paris 1923) so overshadowed his subject matter in the eyes of later generations that henceforth the form became the essential characteristic of the literary genre, and it could be used to clothe very varied subject matter. Al-Ghazālī (d. 505 = 1111) and 'Abd al-Karīm al-Sam'ānī (d. 562 = 1167) in their *Maḥmūd al-'Ulamā' bainā yūdai al-Khulafā' wa 'l-'Umarā'* (Ahlwardt, *Verz. der Hss. Berlin*, No. 8537, 1) and *Maḥmūd al-'Ulamā' bainā yūdai al-'Umarā'* (Hādijī Khalifa, No. 12702) attempt to go back to the older form. But the Spaniard Abū 'l-'Aṣḥir Muḥammad b. Yūsuf al-Aṣḥarī (d. 538 = 1143 in Cordova) seems to have come nearer to Hariri in his *al-Maḥmūd al-Sarāfiyya* (in Stambul, Laleli, No. 1928, 1933). He also set himself the classical number of 50. Al-Zamakhsharī (d. 538 = 1143) on the other hand disclaims any

such affinity; his makāmas are simply moral admonitions and like their counterparts, the *Nawābiḡa al-Kalim* and the *Atwāq al-Libāḡa*, are intended to be appreciated mainly as tours-de-force of rhetoric (cf. the editions, printed Cairo 1313, 1325, and the translation by Rescher, in *Beiträge zur Maqām-litteratur*, Heft 6, Greifswald 1913). Whether the *Maqāmāt al-Sāfiya* of Shihāb al-Dīn al-Suhrawardī (d. 587 = 1191), which deal with mystic terminology (s. *Cat. of MSS. Brit. Mus.*, No. 1349, 23), belong to this class at all is doubtful. On the other hand the *Maqāmāt al-Djāwīya* of 'I-Ma'āni al-Ma'āniya (Leyden, No. 426, Cambridge, No. 1098, Escorial, Dénoubourg, No. 542), which the author Ibn al-Djāwī (d. 597 = 1200) himself provided with a lexicographical commentary, are certainly modelled on those of Hariri. The *al-Maḡāmāt al-Maḡābiya* of the Christian physician Abū 'I-Abbās Yahyā b. Sa'īd b. Mārī (d. 589 = 1193; see Ibn al-Kifī, p. 361, 4) definitely profess to be a single imitation of the latter. They have a hero and a narrator but the subject matter is varied, usually of a learned and technical nature (cf. Flügel, *Verz. der Hist. Wien*, No. 384). To the end of the sixth century A. H. seems to belong Abū 'I-Abbās Ahmad b. Abī Bakr b. Ahmad al-Rāzi al-Hanafi who dedicated 30 makāmas to the chief kadi Muḥyī al-Dīn Abū Ḥamid Muḥammad b. Muḥammad b. al-Kasim al-Shahrastūrī (not the same as mentioned in Ibn Khallikān, *Bulak* 1299, i. 597). The only indication of his date is the mention of the Khāḡān of Shirwān (51, 7); this title was first borne by Manučehr II, about 550 A. H. (cf. iv, p. 384). His aim is to imitate Hamadhāni and Hariri but to use simpler language. Like them he introduces his hero and a narrator and is fond of elaborate descriptions, frequently dropping into the obscene; a number of the makāmas go together in pairs, the one being complementary to the other (cf. the edition in O. Rescher, *Beiträge zur Maqām-litteratur*, Heft 4, p. 1-115). Of the fifth century A. H. we only need mention an imitation of Hariri's makāmas, 50 in number, dedicated to the family of Djuwainī (cf. his *Tarīkh al-Dhahāngīyā*, ed. Mirza Muḥammad, G. M. S., xvii, p. iii, note 2) by Shams al-Dīn Ma'add (Muḥammad) b. Naṣr Allāh b. al-Saḡalī in 672 (1273) (Ḥadjdjī Khalīfa, No. 12709) entitled *al-Maḡāmāt al-Zalabīya* (s. *Brit. Mus.*, No. 669, 1403; *Stambul*, Nūr-i-'Oṭmāniya, No. 4273). The Syrian Egyptian poet Muḥammad b. 'Afrī al-Dīn al-Tilmāsī al-Shabb al-Zarī († 688 = 1289) applied the form in the field of love-poetry, sometimes with lascivious subjects (*Maḡāmāt al-'Ushshūb*, Paris, No. 3947; *Faḡḡat al-Maḡāḡāt fī Maḡāḡat al-Ma'āḡāt* and *al-Maḡāmāt al-Hittīya wa 'I-Shāḡīya*, Ahlwardt, *Verz. Hist. Berlin*, No. 8594, 4, 5). These imitations became more numerous in the eighth century. In 730 (1329) Ahmad b. Muḥammad b. al-Mu'ayyad al-Rāzi composed *al-Maḡāmāt al-ḡhāna 'ashara* (pr. Tunis 1303, *Les deux plances du Chikh A. b. M. al-Mohaddhem*, publ. by M. Soliman al-Hariri, Paris 1282 [1855]). The form was occasionally used for religious subjects, e.g. by Abū 'I-Faṭṭī Muḥammad b. Sa'īd al-Nās († 734 = 1334) in praise of the Prophet and his companions in *al-Maḡāmāt al-'aliya fī 'I-Karāmāt al-djāliya* (s. *Rosen, Notices sommaires des ms. ar. du Musée Asiatique*, St. Petersburg 1881, No. 146, 10), for mysticism by Shams al-Dīn Muḥammad b. Ibrahim al-Dimashqī († 727 = 1327) in *al-Maḡāmāt al-falāfiya wa 'I-Tarjūmāt al-*

ḡisfiya, in number 50 (Cambridge 1102), and again for the parnassus in 749 (1349) by Zain al-Dīn 'Omar b. al-Wardī in the makāmas on the plague of which he died in the same year entitled *al-Naba' 'an 'I-Waba'* (Ahlwardt, *Berlin*, No. 8550, 3, probably identical with the makāma which Suyūṭī put in his work on the plague). The makāma was adopted for the panegyric by the Meccan 'Alī b. Naṣir al-Hijāzī in his *al-Maḡāmāt al-ḡhawriya wa 'I-Tuḡfa al-Makkiya* in honour of the Mamlik Sulṭān Kāṣim al-ḡhawwī (606-922 = 1500-1516; s. *Portsch, Verz. der Hist. Gotha*, No. 2773). The great encyclopaedist of the ninth century, al-Suyūṭī, naturally did not omit this form of composition, which he used with complete contempt for its traditional use to treat of subjects from the most varied branches of knowledge, religious as well as profane, e.g. the question of the fate of Muḥammad's parents in the other world, the merits of different perfumes, flowers and fruits; nor did he hesitate to use it for obscene subjects (cf. the article *suṭūṭ* where the printed editions are given). His contemporary, the South Arabian Zaidī Ibrahim b. Muḥammad al-Hidawī b. al-Waṣir (d. 914 = 1508), used the makāma for theological instruction in *al-Maḡāmāt al-maḡābiya wa 'I-Fakīha al-khabariya* (Leyden, No. 438; *Brill-Houtama*, No. 67), as did Suyūṭī's rival Ahmad b. Muḥammad al-Kastallānī (d. 923 = 1517) in the *Maḡāmāt al-'Arīṣṭa* (Stambul, Köprülü, No. 784). Even in the centuries when literature was at a low level, the sixth and seventh, the makāma was still used for the most varied purposes. In 1078 (1667) Djamāl al-Dīn Abū 'I-Faṭṭī b. 'Alawān al-Kabbānī composed a makāma on the war then being waged by the lords of Baḡra Husain Paṣha and 'Alī Paṣha Afrāsiyāb on a Turkish army under Ibrāhīm Paṣha, which he elucidates in the commentary *Zād al-Muṣṭafī* (*Brit. Mus.*, No. 1405-6, *Baghdād* 1924, used by R. Mignon in his *History of modern Bānoraḡ*, p. 269-286; s. *St. H. Longrigg, Four Centuries of modern Iraq*, Oxford 1925, p. 328). His compatriot 'Abd Allāh b. al-Husain b. Mārī al-Baḡdādī al-Suwaidī (d. 1174 = 1760) and his son Abū 'I-ḡhair 'Abd al-Raḡmān (d. 1200 = 1786) used the form to string together a series of old and new proverbs in a witty context (*Maḡāmāt al-Amḡḡāt al-'alīya*, Cairo 1324 and the son's *al-Maḡāmāt al-djāmi'at al-Amḡḡāt 'alīyat al-Amḡḡāt*, Berlin, No. 8582-83). An imitation of Hariri in 50 adventures, the scene of which is laid in India, of an Abū 'I-Zafar al-Hindī al-Sa'iyāh, which al-Nāṣir b. Farḡḡ narrates was finished in 1128 (1715) by Abū Bakr b. Muḥsin Ba'ūd al-'Alawī (ilth. at the Majlis al-'Ulūm Press 1264 entitled *al-Maḡāmāt al-Hindiya*, s. *M. Hidayat Husain, Catalogue raisonné of the Bahār Library*, ii. 459).

Hariri himself had already allowed his art to degenerate to mere juggling with words, when he used in the *Raḡd' al-Siniya wa 'I-Shāḡīya*, not included among the makāmas, in the one only words with *sin* and in the other only those with *shin* (just as a contemporary of Simonides had written a Greek hymn without a *sigma* in it; cf. V. Wilamowitz, *Kultur d. Gegenwart*, i. iii. 49); also al-Hanaff's makāmas contain such jugglings with words; 'Abd Allāh b. 'Abd Allāh al-Idkṣī (d. 1184 = 1770) wrote *al-Maḡāmāt al-Iḡḡandariya wa 'I-Taḡḡifiya* in which the words are arranged in pairs only distinguishable by their disjunctive points

(cf. Ahlwardt, *Vers. Hist. Berlin*, No. 8581, 2). An ostentatious display of learning marks *al-Makāma al-Duḡallīya* wa-*l-Maḡalla al-Umariya* of 'Othmān b. 'Alī al-Umārī al-Mawṣilī (d. 1184=1770), the subject of which is a list and brief characterisation of the Muslim sects (ed. Rescher, in *Beiträge zur Maḡāmalit.*, iv, 191-285, where other later examples of this art are given).

The subject, popular in Arabic literature from early times, of the dispute for precedence, *munāzara* (s. Steinschneider, *Rangstreitliteratur*, S. B. A. H. Wien, clv. 4, 1908; Brockelmann, in *Mitteilungen der Deutschen Orientalischen Gesellschaft*, p. 231; *Asia Major*, i. 32), is clothed in this form in the *Maḡāmat al-Muḡāḡama bain al-Muḡāmat al-Zuhūr* (Ahlwardt, *Vers. Berlin*, No. 8580) of Yūsuf b. Sālim al-Hifsi (d. 1178=1764), who in his *al-Maḡāma al-Hifsiya* (Brit. Mus., No. 1052, 1) also used the *makāma* for the panegyric. A Turk, the Cretan Aḡmad b. Ibrāhīm al-Rumī (d. 1179=1783), also essayed this genre; his *al-Maḡāma al-Rumīya al-Hifsiya* is given by al-Murādī, *Sikā al-Duḡar*, i. 74 sqq.

Finally it may be mentioned that the endeavour to revive this form has been made by writers of the sixteenth century. The Beirut Christian Nāḡī al-Yūsufī (d. 1871) gave a very successful imitation of Hariri in his *Maḡāma al-Badrān* in 60 *makāmas* on which he also wrote a commentary (printed Beirut, 1856, 1872, 1880, 1924). Less successful were the *makāmas* composed in 1237 (1822) and published in 1270 (1853) by Shihāb al-Dīn Maḡmūd al-Aḡlā (d. 1270=1853), iih. Baghdad 1273. In the collected works of the Egyptian 'Abd Allāh Faḡh al-Fihri (d. 1307=1890), *al-Aḡḡar al-Fihriya* (Bulaq 1315), there are several *makāmas*, one of which, *al-Maḡāma al-Fihriya fi l-Muḡāma al-Hifsiya*, has appeared separately (Cairo 1289).

This form of composition so popular in Arabic was also imitated in the literatures of other languages. Among the Persians the *makāmas* of Kāḡī Ḥamīd al-Dīn Abū Bakr b. 'Umar b. Maḡmūd al-Bulḡhī (d. 559=1164), which he wrote in 551 (1156) (*Ḥādīdī Khulfa*, No. 12716), are particularly esteemed; 'Arīdī in the *Caḡar Maḡāla* (ed. Mirz. Muḡammad, p. 13, 11, transl. Browne, p. 25) compares them to those of Ḥamāḡīḡānī and Hariri. They consist of a number of *munāzarat*, e.g. between youth and age, between a Sunni and a Shī'i, between a physician and an astronomer, also descriptions of spring and autumn, love and frenzy, and lastly discussions of legal and mystical problems, but here again the matter is quite secondary to the form. The arrangement and titles of the 23 or 24 *makāmas* in the British Museum MS. (Bleu, *Cent. Pers. MSS.*, No. 747) differ considerably from the Tabriz and Cawnpore lithographed editions (see Browne, *A Lit. Hist. of Persia*, ii. 347). Ḥamīd al-Dīn's example does not seem to have been much followed; but the journalist Adīb al-Mamālīk (d. Feb. 13, 1917), according to a MS. in Browne's possession (see *Lit. Hist.*, iv. 349), composed a collection of *makāmas*.

In Spain the Jew Rahlī Jehūdā ben Shalūm Hariri, who flourished at the beginning of the thirteenth century translated the *Maḡāmat* of Hariri into Hebrew and he composed 50 similar modelled on them which he called *Sefer Zephkūm*; in them he imitated Hariri's style, very skillfully working in quotations from the Bible (s. *Judas Hariri's Maḡāmat*, ed. P. de Lagarde, Göttingen 1834, repr. Hildesheim 1924).

Finally the metropolitan of Nisibi 'Abdīghō' (Ebedyehō) who died in 1318, composed in 1290-91 on Hariri's model 50 Syriac poems, religious and edifying in their subject matter in two parts, called after Enoch and Elias, the artificial language of which he himself elucidated in a commentary in 1316 (the first half: *Paradisa dha Edhān* i.e. *Paradise Eden Carmine auctore Mar Ebedias Sabensi*, ed. Gabriel Cardahi, Beirut 1889).

Bibliography: given in the article.

(C. BROCKELMANN)

MAKĀN u. KĀKĪ, Abū MAḡMŪD, like his father was a captain in the army of the 'Alid rulers of Tabaristān. Saiyid Abū 'I-Kāsim Dī'far b. Saiyid Nāḡīr, son-in-law of Makān, who came to the throne after the flight of Saiyid Abū Muḡammad Ḥasun b. Kāsim, known as the Dī'f ('the summer unto the truth'), appointed Makān to the governorship of Djurdjān. Saiyid Abū 'I-Kāsim died in 312 (924) and was succeeded by Saiyid Abū 'Alī Muḡammad b. Abū 'I-Husain Aḡmad. Makān deposed him, sent him as a prisoner to 'Alī b. Husain b. Kākī, his nephew, for safe custody, and placed his own grandson Saiyid Jamāl b. Abū 'I-Kāsim on the throne. Shortly after this, Saiyid Abū 'Alī Muḡammad effected his escape and was joined by Asfār b. Shīrawāhī (q.v.) who had rebelled against Makān and made himself master of Djurdjān. Makān took the field against them but was beaten and forced to take refuge in the hills in the neighbourhood of Sari.

Saiyid Abū 'Alī Muḡammad died in 315 (927), and was succeeded by his brother, Saiyid Abū Dī'far Ḥasun. Makān now issued from his mountain retreat, overthrew Asfār, who was the commander of the army of Saiyid Abū Dī'far, forced him to fly to Khurāsān, and declared the Dī'f ruler of Tabaristān. In 316 (928) Muḡammad b. Sa'īk, the Samānīd governor of Raiy, invited the Dī'f and Makān to Raiy, delivered the province to them and retired to Khurāsān. During the absence of the Dī'f and Makān, Asfār returned from Khurāsān, conquered Djurdjān, defeated and killed the Dī'f, and became the ruler of Tabaristān. He then marched to Raiy, defeated Makān and put him to flight. But soon after this Asfār came to terms with Makān and delivered Raiy to him. Makān now gradually extended his sway to Djurdjān and even conquered Nishāpūr in 318 (930). About this time Mardāwīḡ revolted against Asfār, and forced him to take refuge in Tabas in Kūhīstān, but Makān fell upon him from Nishāpūr and sent him flying back to Raiy.

In 319 (931) Makān evacuated Khurāsān at the request of Amir Naḡr b. Aḡmad and returned to Tabaristān, but he was soon turned out of it by Mardāwīḡ who had become master of Raiy after the death of Asfār. Makān tried to recapture Tabaristān with the help of Abū 'I-Faḡl of Dīlīn and later of Aḡmad b. Muḡammad b. Muḡtādī, the commander of the army of Khurāsān, but Mardāwīḡ proved too strong for him and he was forced to fly for refuge to Khurāsān. Amir Naḡr b. Aḡmad now bestowed on him the government of the province of Kirmān. He proceeded thither, defeated the former governor and took possession of the province. But when he heard the news of the murder of Mardāwīḡ in 323, he returned from Kirmān, procured the grant of the province of Djurdjān from Amir Naḡr b. Aḡmad,

and asked Washungir, the brother and successor of Mardāwidj, to surrender the province to him which he did. Henceforth very friendly relations were established between them on the strength of which Makān threw off the yoke of Bukhārā. When Amir Nasir b. Ahmad learnt this, he despatched Ahmad, the commander of the army of Khurāsān, against Makān who was defeated after a desperate struggle of 7 months and forced to flee to Washungir at Raiy. Ahmad followed him thither, and defeated the combined forces of Makān and Washungir at Ishākhābād (near Raiy) on 21st Rabi' I, 329 (December 25, 940 A.D.). Makān was shot in the head by an arrow and fell dead. His head was cut off and sent to Bukhārā.

MAKARI. [See MAMARU.]

MAKDISHU, a town in East-Africa on the shore of the Indian Ocean, capital of Italian Somaliland. Population 21,000. Setting aside the question of some ruins perhaps South-Arabic, Makdishu arose in the 5th century A.D. as an Arabian colony. The immigrations of the Arabs reached Makdishu in different times successively, and from different regions of the Arabian peninsula; the most remarkable one came from al-Aḥsā on the Persian Gulf, probably during the struggles of the Caliphate with the Karmitians.

Perhaps at the same time also Persian groups emigrated to Makdishu; and even to-day some inscriptions which have been found in the town demonstrate that Persians from Sindh and Nalāshir were dwelling there during the Middle Ages. These foreign merchants were, however, obliged to unite themselves politically against the nomadic (Sōmālī) tribes that surrounded Makdishu on every side, and eventually against other invaders from the sea. Therefore a federation was concluded in the same 5th century A.D. and composed of thirty-nine clans: 12 from the Makri tribe; 12 from the Qjīd'atī tribe; six from the 'Aḳābī, six from the Imā'īlī and three from the 'Aḳīfī tribe. The trade was even more developed under such conditions of internal peace; then in the town the Makri clans acquired a religious supremacy and, having adopted the *nizāh* "al-Kaḥḥānī", formed a kind of dynasty of "imān" and obtained from the other tribes the privilege that the *ḥāḳī* of the federation should be elected only from among themselves.

But, in the second half of the 13th century, Abū Bakr b. Fakhr al-Dīn established in Makdishu a hereditary Sultanate with the aid of the Makri clans whom the new Sultan recognised again the privilege of giving the *ḥāḳī* to the town. During the reign of Shaikh Abū Bakr b. 'Umar, in the year 1331 A.D., Makdishu was visited by Ibn Battūta, who described very carefully its conditions in his *Rihla*. Shaikh Abū Bakr b. 'Umar was probably a Sultan from the family of Abū Bakr b. Fakhr al-Dīn; and under this dynasty Makdishu reached in the 15th and 16th century A.D. the highest degree of prosperity. Its name is quoted even in the "*Maḥṣaf al-Milād*", a book by the king of Abyssinia Zare'a Yāqob, with reference to the battle fought by the same king against the Mussalmen at Gomat, December 25th, 1445 A.D.

In the 17th century A.D. the dynasty of the Muzaffar succeeded to the dynasty of Fakhr al-Dīn. However, in the region of the Webi Shabellā, viz. the Iran commercial hinterland of Makdishu, the Adjarān (Sōmālī), who had constituted there another Sultanate friendly and allied with Makdishu, were defeated by the nomadic Hawiya (Sōmālī) who conquered that territory. Thus Makdishu was cut away by the Bedouins from the interior of the land and began to decline from its prosperity. The colonial enterprises of the Portuguese and the British in the Indian Ocean hastened even more this decadence. Vasco da Gama, when he was coming back from India in 1499 A.D., assailed unsuccessfully Makdishu with his squadron; and even Da Cunha in 1597 A.D. did not succeed in occupying the town. In 1532 A.D. Makdishu was visited by Dom Estevam da Gama, son of Vasco, who came there to buy a ship. In December 5, 1700 A.D. a British squadron of men-of-war stopped threateningly before Makdishu but they did not land any force and after some days went away probably to India. During the wars between the Portuguese and the *Imām* of 'Omān, Makdishu and other towns on the Sōmālī coast were occupied by the soldiers of *Imām* Sa'īd Sultan (died 1116 = 1704); but after a little while the *Imām* ordered his troops to come back to 'Omān.

In the meantime the Sultanate of Makdishu was practically finished; and the town divided in two quarters (Hamar-Wes and Shanganī) was wasted by civil wars. The Sōmālī had so penetrated, little by little, into the ancient Arabian town that the clans of Makdishu changed their Arabic names with new Sōmālī appellatives: the "Aḳābī" clan became the "rūr Shākh"; the "Qjīd'atī" were called "Shan-shiya"; the 'Aḳīfī took the name of "Gad-ma'at"; and even the Makri (Kaḥḥānī) changed their name for the Sōmālī "rūr Fakhī". But in the 18th century A.D., the Bedouins (Sōmālī) Darandolla, excited by exaggerated traditions of the wealth of Makdishu, assailed and conquered the town. The chief of the Darandolla, who had the title of *imām*, established himself in the Shanganī quarter; and the privilege of the Kaḥḥānī about the election of the *ḥāḳī* was again recognised by the new masters of the town. In the first half of the 19th century A.D., Sultan Barghash b. Sa'īd of Zanzibar occupied Makdishu and ruled the town by means of a *wāḳī*. In 1889 the Sultan of Zanzibar leased the town to Italy, who afterwards in 1906 bought all the settlements of Zanzibar on the Sōmālī coast.

(ENRICO CERULLI)

MAKHĀDUM AL-MULK, whose real name is Mawlānā 'Abd Allāh, was the son of Shāikh Shams al-Dīn of Sulṭānpur. His forefathers immigrated from Multān and settled at Sulṭānpur near Lahore. He was the pupil of Mawlānā 'Abd al-Kādir Saḥrīndī and became one of the most distinguished scholars and saints of India. He was a bigoted Sūfī and looked upon Abū 'l-Faḍl (d. 1011 = 1602) from the beginning as a dangerous man. Contemporary monarchs had a great regard and respect for him. Emperor Humāyūn (937-963 = 1530-1556) conferred on him the title of *Shāikh al-Zilām*. When the empire of India came into the possession of Shāh Shāh (946-952 = 1539-1545) he also honoured him with the title of *Sadr al-Zilām*. He was also a man of great importance during the time of Emperor Akbar (963-1014 = 1556-1605). Bairam Khān Khānān (d. 968 = 1560) exalted his position very much by giving him the sub-division of Thānkawāla which yielded an income of one *luc* of rupees, while Akbar gave him the title of *Makhādūm al-Mulk* by which designation he has become known to posterity. When Akbar introduced his religious innovations and converted people to his "Divine Faith", Makhādūm al-Mulk opposed the Emperor who became very angry with him and ordered him to go on a pilgrimage to Mekka. He therefore started in 987 (1579).

He died or was poisoned in 990 (1582) in Ahmadābād after his return from Mekka.

He is the author of the following books:

1) *Imāt al-Anbiyā*, a work on the chastity of prophets (cf. Badā'ūnī, iii, 70); 2) *Mishkāt al-Dīn*, the life of the prophet (cf. Maḍāhīr al-Umūr, iii, 252); 3) *Ḥikāya Sharh Makhādūm*, a supplementary to Dīnī's commentary on Ibn al-Hādīb's *Kāfiya* (cf. Maḍāhīr al-Umūr, iii, 252); 4) *Sharh Shams al-Tirmidhī*, a commentary on Tirmidhī's *Shams al-Nabī* (cf. Badā'ūnī, iii, 70).

Bibliography: 'Abd al-Kādir Badā'ūnī, *Muntahab al-Tawārikh*, iii, 70; Shāh Nawāz Khān Awrangabādī, *Maḍāhīr al-Umūr*, iii, 252; *Khawāṣṣ al-Aḥyā*, p. 443, 464; *Asnād Akbarī*, transl. by Blochman, p. 172 and 544.

MAKHĀDUM-I DJAHĀNİYĀN. [See DJAHĀN BUKHĀRĪ.]

MAKHLAD (BANT), a family of famous Cordovan jurists who, from father to son, during ten generations, distinguished themselves in the study of Fiqh. The eponymous ancestor of the family was Makhled b. Yazīd, who was ḥāḍī of the province of Reyvāh (the *lāra* in the south-west of Spain, the capital of which was Málaga), in the reign of the Emir 'Abd al-Rahmān II, in the first half of the third century A.H. His son, Abū 'Abd al-Rahmān Bakī b. Makhled, was a great jurist and traditionist. He was born in Ramādān 201 (April 817) and after being in Spain the pupil of Malik b. Anas and of Yahyā b. Yahyā al-Lathī, he made a long journey to the East where he perfected himself in the sciences

of Law and Tradition. On his return to Cordova his indisputable mastery earned him the hatred and envy of the chief Spanish jurists, especially of Abū Muḥammad 'Abd Allāh Ibn Marṣād (cf. Ibn al-Farādī, N° 245; al-Dabbī, N° 572) who tried to get him sentenced to death by accusing him of impiety and heresy. Bakī b. Makhled only owed his safety to the intervention of the secretary to the court of Hāshim b. 'Abd al-'Azīz and was able to end his life under the protection of the Umayyad government, respected by the people of Cordova, where he died in 276 (889). Bakī b. Makhled who, it is believed, was one of the first to introduce the Zāhīrī movement into al-Andalus [see the article *ZITTĀT*], wrote two celebrated books: a *Tafsīr al-Kur'ān* and a *Muḥadḍ* of Muḥammadan traditions, the loss of which is greatly to be regretted if we may believe the laudatory judgment passed on them by Ibn Hārm in his *Kitāb* repeated by al-Makḥḥārī (*Analictes*, ii, 115). On Bakī b. Makhled, cf. Ibn al-Farādī, *Tarīkh 'Ulamā al-Andalus* (B. A. H., vii-viii), N° 283; Ibn Baḥḥawāl, *Sils* (B. A. H., i-ii), N° 277; al-Dabbī, *Bughyat al-mullamān* (B. A. H., iii), N° 584; Ibn 'Abd Rabbīh, *al-Fih*, ii, 366; al-Khūmānī, *Kitāb al-Kuḍāt bi-Kurṭuba*, ed. and transl. J. Ribera, Madrid 1914, index; Ibn 'Idhārī, *al-Bayān al-muḥarrir*, ed. Dozy, ii, 112-113, transl. Fagnan, ii, 179-181; al-Makḥḥārī, *Nafḥ al-Fih*, *Analictes*, i, 312; ii, 115 and 120 and index; Dozy, in *Z. D. M. G.*, xx, 598; Goldziher, *Die Zāhīrīen*, Leipzig 1884, p. 115; Brockelmann, *G. A. L.*, i, 164.

The direct descendants of Bakī b. Makhled devoted their scientific activity mainly to commenting on the masterpieces of their celebrated ancestor. A list of these scholars, with bibliographical references, is supplied in a little monograph devoted to the family of the Baḥḥ Makhled by Rafael de Ureña y Sinenjand, *Familias de juristas consultos: Los Benimājad de Córdoba, Homenaje a D. Francisco Codera*, Zaragoza 1904, p. 251-258.

(E. LÉVI-PROVENÇAL)

MAKHZEN (A.), from *khazama*, "to shut up; to preserve, to board". The word is believed to have been first used in North Africa as an official term in the second century A.H. applied to an iron chest in which Ibrāhīm b. al-Aghlab, emir of Ifrīkiya, kept the sums of money raised by taxation and intended for the 'Abbāsid caliph of Baghdad. At first this term, which in Morocco is now synonymous with the government, was applied more particularly to the financial department, the Treasury.

It may be said that the term *makhzen* meaning the Moroccan government and everything more or less connected with it at first meant simply the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the *ḥiṣ al-māl*. Later, when the sums thus raised were kept for use in the countries in which they were collected and were no longer paid into the treasury of the Muslim community, and they became as it were, the private treasuries of the communities in which they were collected, the word *makhzen* was used to mean the separate local treasuries and a certain amount of confusion arose between the *makhzen* and the *ḥiṣ al-māl*.

We do find in Spain the expression *'abid al-makhzen* but it still means slave, of the treasury.

rather than slave of the government, and it seems that it was only later in Morocco that in proportion as the state became separated from the whole Muslim community after being successively under the Omayyads of Damascus, the 'Abbasids of Baghdad, the Omayyads of Spain and the Fatimids of Egypt that the word *makhzen* came to be used for this government itself.

To sum up, the word *makhzen*, after being used for the place where the sum intended for the *his al-mal* of the Muslim community were kept was used for the local treasury of the Muslim community of Morocco, when it became separate under the great Berber dynasties: later with the Sharifi dynasties the word was applied not only to the treasury but to the whole organisation more or less administrative which lives on the treasury, that it is to say the whole government of Morocco. In tracing through history the changes of meaning of the word *makhzen*, one comes to the conclusion that not only is the institution to which it is applied not religious in character but on the contrary it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which it has grown up through several centuries. The result of these successive usurpations is that the *makhzen* which originally was only a chest in the treasury came to mean first the treasury itself, and the government and to represent to the Moroccan the sole principle of authority.

We know that the fundamental principle of Muslim society is that of the community: the head of this community is simply an administrator who has to exercise his functions, said the caliph 'Umar, like an honest teacher solely concerned with the interests of his pupils. Of this ideal the only part remaining in practice is that the members of the community are effectively in tutelage. In rapidly surveying the history of the *Makhazen*, we can see how this arbitrary government became gradually established while using the prescriptions of Islam, and how it succeeded in forming in face of the native Berber element which surrounded it a kind of Arab façade, behind which the Berbers in spite of the slowness of their gradual Islamisation, have preserved their institutions, superstitions and their independence. In this connection it cannot be too strongly emphasised that, in spite of their perhaps disputable orthodoxy, the Berbers are Muslims and consider that they belong to the Muslim community. No doubt they do not practise it very frequently but they have the pride of Islam and its intolerance; they have taken Muslim ostracism into the service of their native savagery and it would be a dangerous error to think that they could be open to anti-Muslim sentiments and particularly to imagine that their religious lukewarmness ought to make them favourable to us.

No organisation was made at the first conquest by 'Uqba b. Nafi' in 63 (682 A.D.). All the representatives of Arab culture had to do was to levy heavy tributes in money and slaves to satisfy their own greed and to enable them to send valuable gifts to the caliph of Damascus.

It was the same in 90 (708) with Mu'li b. Nu'air but the conquest of Spain brought over to Islam a large number of Berber tribes by promising them a share in plundering the wealth of the Visigoths. On the other hand the exactions of the Arabs and the desire to escape the demands

of the caliphs facilitated the spread of Kharijite doctrines, the many schools of which made any unity of power impossible and on the contrary increased decentralisation.

The Idrisid dynasty, which its Sharifi origin gives a claim to be the first Muslim dynasty of Morocco and which completed the conversion of the country to Islam only exercised its power over a small part of Morocco. Alongside of it the Barghawāta [p. 11.] heretics and numerous Kharijite emirs continued to exist. The Zenāta Miknassa, Maghāwra and Banū Ifren at a later period were no more able to effect a centralisation of power. It was not till the fifth century A.H. (eleventh A.D.) under the Sanhājī dynasty of the Almoravids that in the reign of Ya'qūb b. Tashfin we can see the beginnings of a *makhzen* which only becomes clearly recognisable under the Almohad dynasty.

It was under the latter that religious unity was first attained in Morocco. The heresy of the Barghawāta and all other schisms were destroyed and a single Muslim community, that of the Almohads, replaced the numerous more or less heterodox sects which had been sharing the country and its revenues. It may be said that the organisation of the *makhzen* which we found in Morocco is fundamentally based on this unification and the measures which resulted from it. The Almohads regarded theirs as the only true Muslim community. All who did not belong to it were infidels whom it was lawful to fight, to kill, to reduce their women and children to slavery and to seize their goods and lands for the benefit of the Almohads, the only orthodox community. The Almohads were thus able to apply to all the territory of their empire the ideal Muslim principle for dealing with land, i.e. that all the lands conquered by them from non-Almohads and even from Almohads whose faith was regarded as suspect were classed as lands taken from infidels and became *ḡubūr* of the Muslim i.e. Almohad community. These *ḡubūr* districts are those whose occupants have to pay the tax called *kharaḍj*. In order to levy this the Sultan 'Abd al-Mu'min had all his African empire surveyed from Gabes to the Wādī Nūn.

A few years later Ya'qūb al-Manṣūr brought to Morocco the ḡhughham and Banū Hīlāl Arabs and settled them on lands belonging to the Muslim community, which had been uninhabited since the destruction of the Barghawāta, the wars of the Almohads with the last Almoravids and large despatches of troops to Spain.

These Arab tribes who formed the *ḡhūsh* (pronounced *ghish* in Morocco) of the Almohads did not pay the *kharaḍj* for the lands of the Muslim community which they occupied. They were *Makhazen* tribes who rendered military service in place of *kharaḍj*. We shall find later the remains of this organisation with the *ḡhūsh* tribes and the tribes of *mā'isha*. The efforts of the Marinids to reconstitute a *ḡhūsh* with their own tribes did not succeed and they had to return to the *makhzen* of Arab tribes brought to Morocco by Ya'qūb al-Manṣūr and even added to it contingents of the Ma'kil Arabs of Sūs.

Under the Banū Wajjīn this movement became more marked and Spanish influences became more and more felt in the more complicated organisation of the central *Makhazen* and by the creation of new offices at the court and in the palace.

The conquests by the Christians by causing the development of the *sawiyas* and the fall of the Banū Waṭṭās brought about the rise of the Sa'diāns [q.v.] of Wādī Dar'a. The latter with their primitive manners as Saharan tribes and under the religious influence of the *shaykhs* of the brotherhoods began to try to bring back the exercise of power to the patriarchal simplicity with which it was wielded in the early days of Islām. The necessities of the government, the intrigues of the tribes and the wars of members of the ruling family against one another soon made necessary the constitution of a proper makhzen with its military tribes, ministers, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials which will be mentioned below.

The frequent intercourse between the Sa'diāns and the Turks, who had come to settle in Algeria at the beginning of the xvth century brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the Makhzen.

It is from this time that really dates the existence of this entity, which is really foreign to the country itself, which lived by exploiting rather than governing it and is known as the Makhzen.

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements, the ransoming of Christian slaves, largely contributed to give this Makhzen more and more the appearance of a regular government. The jealousies of the powers, their desire to maintain the *status quo* in Morocco and the need to have a regular government to deal with them further strengthened the Makhzen both at home and abroad and enabled the Sulṭān Mawlay al-Ḥasan to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the Makhzen formed the façade.

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions increased the prestige of the Sulṭān and the Makhzen in the eyes of the tribes. The envoy of the Christian power, surrounded by the presents which he brought, appeared on foot in a court of the palace and seemed to have come to pay tribute to the emir of the Muslims, who was on horseback. All the theatrical side was developed to strike the imagination of the Makhzen with much care and succeeded in creating an illusion of the real efficiency of this organisation in the eyes of both tribes and powers.

Under the Berber dynasties, the Almohads, the Marinids and the Banū Waṭṭās, the military tribes, the *qjaish*, were almost all Arab; under the Sa'diāns they were entirely Arab; to the Djusham and Banū Hilāl Arabs were added the Ma'kil Arabs of Sūs. On the other hand the Sa'diāns had removed from the registers of the *qjaish* a certain number of the Arab tribes who then paid in money the *shharāḍj* for the *ḥabūs* lands of the Muslim community which they occupied. These tribes, in contrast to the *qjaish*, were called tribes of the *nā'iba*, that is to say, according to the etymology proposed for the word, they were

under the tutelage of the makhzen (from *nā'ib* "tutor" or "substitute" for a father) or perhaps that they paid the tribes of the *qjaish* a sum for replacing them (from *nā'ib*, to substitute).

From this time on, Morocco assumed the appearance which it had when France established her protectorate there. The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was, as it still is to-day, divided into two parts: 1. *bilād al-makhzen* or conquered territory; 2. *bilād al-siba'* or land of schism; the latter was almost exclusively occupied by the Berbers.

The *bilād al-makhzen*, which represents official Morocco, was formed of territories belonging to the *ḥabūs* of the Muslim community and liable to the *shharāḍj*.

This land was occupied by Arab tribes, some *qjaish*, others *nā'iba*. Morocco consisted of an Arab government (makhzen) which administered the regions liable to *shharāḍj*, and occupied by Arab tribes, the status of which varied according as they were *qjaish* or *nā'iba*.

The Berber tribes of the *bilād al-siba'* not only refused to allow the authority of the makhzen to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains. One of the main endeavours of the present dynasty, the 'Alawī Shurfa' of Tāfilalt, which succeeded the Sa'diāns in the seventeenth century has been to oppose this movement of expansion of the Berber tribes. This is why Mawlay Ismā'īl, the most illustrious Sulṭān of this dynasty, built 70 *ḥajba's* on the frontier of the *bilād al-makhzen* to keep down the Berbers. Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up till quite recent years was the work of the Makhzen.

As we have already said, it was not a question of organising the country nor even of governing it, but simply of holding their own by keeping rebellion within bounds with the help of the tribes of the *qjaish* by extracting from the ports and from the tribes of the *nā'iba* all that could be extorted by every means. From time to time expeditions led by the Sulṭān himself against the unsubjected tribes asserted his power and increased his prestige.

The Makhzen, gradually formed in course of centuries by the possibilities and exigencies of domestic policy as well as by the demands of foreign policy seems to have attained its most complete development in the reign of Mawlay al-Ḥasan, the last great independent Sulṭān of Morocco (1873-1894). The government of Mawlay al-Ḥasan consisted in the first place of the Sulṭān himself, at once hereditary and also, if not exactly elected, at least nominated by the '*ulamā'*' and notables of each town and tribes from among the sons, brothers, nephews and even the cousins of the late ruler. This proclamation is called *ḥukm*. It is in general he who takes control of the Treasury and of the troops when the moment comes to assume the right of succession. It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it. There is then no rule of succession to the throne.

Formerly there was only one vizier, the grand vizier: the grand vizierate, a kind of Home

Ministry, was divided into three sections, each managed by a secretary (*kātib*):

1. From the Strait of Gibraltar to the Wād Bū Regreg.
2. From Bū Regreg to the Sahara.
3. Tāfūlīt.

In the reign of Sidi Muhammed (1859—1873), the more frequent and intimate relations with Europe and more particularly the working of the protectorate made it necessary to found a special office for foreign relations, and a *waḥī al-baḥr*, literally Minister of the Sea, was appointed. This does not mean minister for the Navy, but for all that came by sea, i.e. Europeans. This minister had a representative in Tangier, the *nāib al-sulṭān*, who was the intermediary between European representatives and the Central Makhzen. His task was to deal with European complaints and claims from perpetual settlements and to play off against one another the protégés of the European powers, who were certainly increasing in numbers and frequently formed an obstacle to the traditional arbitrary rule of the Makhzen. The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the Makhzen from extending its authority over new territory.

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and from the point of view of resistance to European penetration, the Makhzen had everything to gain by keeping in an apparent political independence the greater part of the territory which thus escaped the influence which threatened in time to turn Morocco into a regular international protectorate.

By a conciliatory native policy and cautious dealing with the local chiefs, the *shaykhs* of the *sūways* and the *Sharīfī* families, the Makhzen was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another.

It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels and sought to penetrate by spreading the Arabic language and the teaching of the Qurʾān and gradually substituting the principles of Muhammadan law of the *sharʿ* for Berber customs. In a word, it continued the conquest of the country by trying to complete its Islamisation and making Islām permeate its customs.

In the reign of Mawḥy al-Ḥasan, the Makhzen consisted of the grand vizier, the *waḥī al-baḥr*, minister of foreign affairs, the *ʿaṭāf* — afterwards called minister of war —, the *amīn al-umamāʾ*, — afterwards minister of finance —, the *kātib al-shikāyāt*, secretary for complaints, who became minister of justice by combining his duties with that of the *ḥāqī ʿl-ḥuqūq*, *Ḳāḍī* of *Ḳāḍis*. These high officials had the offices (*ḥanīḥa*, pl. *ḥanāʾiḥ*) in the *maḥḥwar* at the Palace.

The offices were under the galleries which were built round a large courtyard. At the top of the *maḥḥwar* was the office of the grand vizier, beside which was that of the *ḥāqī al-maḥḥwar*, a kind of captain of the guard, who also made presentations to the sulṭān. The *ḥāqī al-maḥḥwar* was in command of the police of the *maḥḥwar* and he had under his command the troops of the *ḡāḍ*, *maḥḥwarīya*, *masakhrīya* (*ḥanāḥī* — sg.: *ḥanḥa*) etc., as well as all

the bodies of servants outside the palace; the *maḥḥwar al-ḥamā*, grand-master of the stables, the *ḥāqī ḡiḡiḡa*, who had charge of the sulṭān's encampments.

In addition to these *ḥanīḥas* of the *maḥḥwar*, mention must be made of an individual, who as was shown in recent times could play a more considerable part in the government than his actual office would lead one to expect. This is the *ḥāqīb* [q. v.], literally the "curtain", i.e. an official placed between the Sulṭān and his subjects like a curtain. His *ḥanīḥa* was situated between the *maḥḥwar* and the palace proper and he had charge of the interior arrangements of the Sulṭān's household. Under his orders were the various groups of domestic servants (*ḥanāḥī al-dūkhḥiyyīn*), *ḥanāḥī al-ḥuḍūḍ*, who looked after the washing arrangements, *ḥanāḥī al-ḥaḥḥ* who attended to the beds, etc., etc.; he also commanded the eunuchs and even was responsible for the discipline of the women of the Sulṭān, through the *ʿarīḥas* or mistresses of the palace. The *ḥāqīb* is often called grand chamberlain, although he does not exactly correspond to this office.

Around these officers gravitated a world of secretaries of different ranks, of officers of the *ḡāḍ*, then the *ḥāqī al-ḥaḥḥ*, who was in theory in command of 500 horsemen, the *ḥāqī al-maḥḥwar*, who commanded 100 down to a simple *ḥanāḥī*. All this horde of officials, badly paid when paid at all, lived on the country as it could, trafficking shamelessly in the influence which it had or was thought to have and in the prestige it gained from belonging to the court, whether closely or remotely. The influence of these court officials spread throughout the regions controlled by the organisation of Makhzen officialdom, which contributed to the centralisation of authority and its profits.

In this organisation it may be noticed that the authority of the Makhzen properly so-called, i.e. of a lay power, continually increased at the expense of the religious power by a series of changes. No doubt the basis continued to be religious, but the application of power became less and less so and the civil jurisdiction of the *ḥāqīs* and of the Makhzen more and more took the place of the administration of the *sharʿ* by the *Ḳāḍis*, which finally became restricted to questions of personal law and landed property.

The authority of the sulṭān was represented in the towns and in the tribes by the *ḥāqīs*, appointed by the grand vizier and by the *muḥḥasibīs*, whose office owed its origin to the religious law of the *sharʿ*. The *muḥḥasib* supervised and controlled the *ḡāḍ*, fixed the price of articles of food and inspected weights and measures and coins.

The tax of the *nāḥiḥa*, which represented the old *ḡharḡiḡ*, was levied on the non-*ḡāḍ* tribes by the *ḥāqīs* of these tribes. It was one of the principal causes of abuses; the amount of this tax was never fixed and the sums which came from it were in reality divided among the *ḥāqīs*, the secretaries of the Makhzen and the vizier without the sulṭān or the public treasury getting any benefit from them.

The grand vizier also appointed the *nāḥī* officers, who from the reign of Mawḥy ʿAbd al-Rahmān had been attached to the local *nāḥīs* of the *ḥabūs* of the mosques and sanctuaries. The *Ḳāḍis* were appointed by the *ḥāqī ʿl-ḥuqūq*; at the present day they are appointed by the minister of justice.

MAKHZUM (BANK) along with the Omayyads, the aristocratic clan of Mecca. This assertion is contrary to the theory popularised by the *Sira* in virtue of which the ancestor of the aristocratic families was Kuraish [q. v.]. About the middle of the 17th century A. D. we find that among the clans of Kuraish [q. v.] that held in most consideration was the Band Makhzum, which traced its descent through Yakaça b. Murra to the legendary Fihir (Kuraish) without going through Kuraish. At this period the Makhzum controlled everything at Mecca except the sanctuary. They alone were able to counterbalance the growing influence of the Omayyads. It is at this time that their name becomes occasionally synonymous with Kuraish (Ibn Duraid, *Kitaḥ al-ʿAshraf*, ed. Wüstenfeld, p. 94, 10).

The Makhzum seem to have owed their primacy to Mughira b. ʿAbd Allāh, a contemporary of ʿAbd al-Muttalib and grandson of the eponymous ancestor of the clan. The adjective Mughiri thus comes to be used for Makhzumi. His son, Hishām b. al-Mughira, is even said to have had the title "lord (rabb) of Mecca" (Ibn Duraid, *ʿAshraf*, p. 93, 10). The Kuraish are said to have dated one of their eras from the death of this individual, if the reference is not to Walid b. al-Mughira. Tradition hesitates between these two Makhzumis. The influence of the Makhzum was preponderant in the *malaʾ*, or council of notables which decided affairs at Mecca. It is frequently a Makhzumi who speaks in name of the *malaʾ*, as for example in the discussion with Muhammad, at the beginning of the preaching of Islam. They are believed to have opened up to Meccan commerce the principal routes to foreign markets. For their intelligence, their activity — they were said to be "ardent as

fire" (*Aghāni*, Būṣī, xv, 8 *infra*) — their patrician pride and particularly their wealth they were envied by the other Meccan clans. In a word they threw into the shade the descendants of Kusayy like the Banū Hāshim, for whose benefit the traditional theory seems to have been put into circulation. They lost a large number of members at the battle of Badr; after this disaster from which they never recovered, they had to yield the first place to the Umayyads.

What injured their reputation in Muslim tradition was their opposition to the rise of Islām. Tradition has chosen from them in the person of Abū Jahl [q. v.] the type of the intractable opponent of Islām. In Mecca the Makhzūmī Walid b. al-Maghira was numbered among the "mockers" of the Prophet. Several verses of the Meccan sūras are said to be directed against him (Ibn Duraid, *Ṭahkīk*, p. 60-61). Before becoming the "sword of Allāh" Khālid b. al-Walid [q. v.] fought with the majority of his people against Muḥammad at Badr, Uhud, Khandaq etc. This persistent opposition explains why they and the Umayyads are called *al-Aḥḍarān min Quraysh*: "the two wicked clans of Quraysh" (Tabari, *Taḥṣīl al-Kurʾān*, xlii, 130).

After the *Fatḥ* (conquest of Mecca) they adopted the new religion without enthusiasm; many went and settled in Madīna, which now became the capital of Islām, so as to get in touch with the governing circles. The Prophet was able to use the military talents of Khālid but had to shut his eyes to his disobedience. Neither he nor the other Makhzūmīs showed themselves more manageable by the Caliphs, as they refused to come to terms with the Umayyads and to respond to the advance of Abū Sufyān (Ibn Hishām, *Sira*, ed. Wüstenfeld, p. 203, 273-5). When the father of Abū Bakr heard that his son had been elected Caliph, the old man's first question is said to have been: "Did the 'Abd Manāf and Makhzūm give their assent?" (Ibn al-Athir, *Uṣul al-Ghāba*, iii, 222). The author of the *Tahf al-Arabi* 'i-Arab (ed. Mann, p. 170, 16) expresses surprise at his discovering in the pre-Hijra genealogies of the Makhzūmīs, names like 'Abd and 'Uḥayr, showing pre-occupation with religion.

Abū Bakr only had peace with Khālid by sending him to wage war in remote lands and giving him *ṭaba* blanche. With the second caliph there was open conflict. 'Umar, although he is said to have been the son of a Makhzūmī mother, had to suppress the turbulent general more used to conquer than to obey. The Makhzūmīs came into conflict with 'Othmān over 'Anmār b. Yazīd [q. v.], a client of their family (Mas'ūdī, *Murūj al-Dhahab*, ed. Paris, iv, 121, 266, 279, 360). They declared against 'Alī in a body 'Abd al-Rahmān b. Khālid b. al-Walid [q. v.] who at first supported Mu'āwīya in the end by his independence aroused the misgivings of the Umayyad caliph. The Makhzūmīs accused Mu'āwīya of having had their relative poisoned and assuming the right to wreak vengeance, they gave a new proof of their independent spirit. From this time they were on bad terms with the Umayyad caliphs, as they had been with earlier caliphs, being naturally inclined to resist authority and to offer a useless opposition. When 'Abd Allāh b. al-Zuhayr [q. v.] rebelled against Yazīd I, they adhered almost without exception to his cause. In return the Meccan anti-caliph appointed one of them his representative in Basra.

The Marwanids after their triumph agreed to

bear no grudge against the Makhzūmīs. They even chose members of the clan for the office of governor of Madīna, hitherto reserved for an Umayyad. After, as before, the Hijra, the Makhzūmīs continued to be reckoned among the richest capitalists in Mecca. They had about 5,000 mithqāl of gold laid out in the caravan which was the cause of the battle of Badr. It was to them that Muḥammad applied on the eve of Hunayn for a loan of 40,000 dirhams. Their systematic opposition to authority put them completely out of the running for any of the great administrative offices in which the members of the Quraysh clans enriched themselves. Their aristocratic pride did not prevent them however from seeking profit in commerce and even in industry. We know this from the story of 'Umar b. 'Alī Rāṣa [q. v.], the most famous of the Quraysh poets. 'Umar kept 70 of his slaves employed in the weaving-mills established in Mecca (*Aghāni*, i, 37, 5). Another Makhzūmī, a contemporary of 'Umar, was known as "the monk (*rāḥib*) of Quraysh" on account of his merit and his assiduity in prayer (Ibn Sa'd, *Ṭabaṭai*, ed. Sachau, v, 153, 20). Much better known than this ascetic and continually quoted on questions of *Fiqh* and *Ḥadīth* is the Makhzūmī Sa'd b. al-Musayyib [q. v.], one of the most famous *ṭabībīs* of the first century A. H.

With the coming of the 'Abbāsids, influence passed over to the Iranians. Gradually the Makhzūm, like other Quraysh clans, fell into obscurity. At the present day there are still families bearing the name Makhzūmī. It remains to be seen to what extent they are justified in claiming descent from the Makhzūmī, if it is not in the female line as in the case of Sirāj al-Dīn al-Makhzūmī al-Himā (cf. Brockelmann, *G. A. L.*, ii, 98). Kalkashandī (*Suḥb al-A'ḥab*, Cairo, i, 213) justly remarks that the tribe of the Banū Khālid which led a nomadic life around Hima has only the name in common with the great Makhzūmī captain. The male line from Khālid b. al-Walid is said to have become extinct very early (cf. Ibn al-Athir, *Uṣul al-Ghāba*, v, 249, *infra*), a statement disputed by the Sirāj al-Dīn mentioned above.

(H. LAMMENS)

AL-MAKIN b. AL-AMID, DIBRUGI ('ABD ALLAH) b. AMR b. YUSUF b. AMR b. AL-MAKIN, the Christian author of a world-chronicle in Arabic. His life has been several times treated by western authors in encyclopaedias and other works of reference; but nothing can be learned of their sources from their articles. Even Brockelmann (i, 348) has to be content with giving the traditional biography and relies upon his European predecessors. To avoid repetition

here, we only give the dates of his birth and death, 602 (1205) and 672 (1273). The latter date is given by Ḥaḍḍī Khaliḥ, ii. 104, No. 2103. His grandfather, according to J. H. Hottinger, *Fruchtbaum*, p. 75 299, died in 606 and his father in 636.

Al-Makin's world-chronicle consists of two parts, the first of which deals with the pre-Islamic world from the Creation onwards and the second with Muslim history down to 658 (1260). The work is so planned that the whole history of the world is given in the form of successively numbered biographies of its most important men. Near the beginning the discussion of several cosmological questions and the several climes is inserted. Down to 586 A.C. it is based on Biblical history; the numeration of the biographies begins with Adam as No. 1. For the period after the destruction of Solomon's temple there come on the usual scheme the dynasties of Eastern Asia, which in turn are succeeded by Alexander, the Romans and the Byzantines. In this and in the second part, as the author himself tells us, he is following the model of al-Ṭabarī's chronicle.

The work which is entitled *al-Maḍīn al-mubārak* exists in numerous manuscripts. The first part is regularly quoted with a Latin translation by Hottinger, *Synopsis Orientale* (1658) in the chapter *De usu linguarum orientalium in theologia historica* on various facts of history. The chapter on Alexander the Great has been edited in Ethiopic and translated into English by E. A. W. Budge, *The Life and Exploits of Alexander the Great* (1896). The second part was edited and translated by Th. Erpenius under the title *Historia Saracenicorum . . . a Georgio Elmachino*, 1625; English and French translations appeared soon after. Many emendations were given by Köhler in Eichhorn's *Repertorium*, vii—ix, xl, xiv, xvii. A critical edition of the whole work is an urgent desideratum. How important it is for Oriental church history has been shown by A. v. Gutschmid, *Verzeichnis der Patriarchen von Alexandria* = *AT. Schr.*, ii., 1890, p. 395—525. This is sufficient to show how necessary would be a comprehensive investigation of al-Makin's place in historical tradition, which could only be undertaken on the basis of a certain text. Besides it is evident that al-Makin used old sources independently which are not known to his immediate predecessors like Eutychius [q. v.] and his contemporary, much quoted by him, Ibn al-Rāḥib (Brockelmann, *G.A.L.*, i. 349 where of course it should be 669 = 1270) with whom he agrees in the numbering of the biographies which are also used by al-Ṭabarī. In the chapter on Alexander the Great, the Ethiopic translation of which edited by Budge agrees very closely with the Arabic original, are found long word for word extracts from the very old Hermetic work in Arabic entitled *al-Ḥisām al-kabīr* (cf. Stein-schneider, *Zur pseudopigraph. Lit.*, 1862, p. 37; *Die arab. Übers. u. d. Griech. Centralbl. f. Bibliothekswesen*, chap. iii., 1893, p. 88), which had been previously copied in the *Ghāyat al-Hakīm* of Pē-Maḍīnī (Brockelmann, *G. A. L.*, i. 243, cf. Ritter, *Placita, sive arab. Handbuch hellenist. Magic, Vorträge d. Biol. Warburg*, i. 94 299; ed. by Ritter and transl. by Ritter and Plessner in preparation for *Studien d. Biol. Warburg*), in Budge's work is also given the Ethiopic translation of Ibn al-Rāḥib's account of Alexander which in contrast to the Arabic text in Cheikh's edition

(*C.S.C.O. Arab.*, mfi., 1903) is here not simply a brief list of events but is a very full account. Only general statements are given from the above mentioned Hermetic work and do not compel the belief that it was used independently so that in spite of all agreements between him and Ibn al-Rāḥib, al-Makin must really have worked independently of him. That the reverse might be the case and Ibn al-Rāḥib be dependent on al-Makin is impossible because al-Makin expressly quotes Ibn al-Rāḥib (cf. Budge, ii. 380, note 7). Since Cheikh only published the Ibn al-Rāḥib text of Abrahamus Ecchellensis, which is perhaps an abbreviation of the basic text while the Ethiopic translation perhaps reproduces the original form, the question of the relations between the two ecclesiastical writers cannot yet be definitely settled; but even the Alexander chapter shows that it is of the utmost importance to settle the problem.

On the continuation of the Chronicle by Maḥmūd b. Abī Ṭ-Ḥaḍḍī, see Brockelmann, *op. cit.*

(M. PLESSNER)

AL-MAKKARĪ, ABU 'L-ARAB AHMAD b. MUHAMMAD b. AHMAD b. YAHYA AL-TILIMSĀNĪ AL-MALIKĪ SHIHĀB AL-DĪN, a Maghribi man of letters and biographer, born at Tilmisān (Tlemcen, q. v.) c. 1000 (1591—92) d. at Cairo in Rjmad II 1041 (Jan. 1632). He belonged to a family of scholars, natives of Makkara (about 12 miles S. E. of Malla, in the present province of Constantine in Algeria). One of his paternal ancestors, Muhammad b. Muhammad al-Makkari, had been chief judge of Fās and one of the teachers of the famous Lisan al-Din Ibn al-Khatib of Granada. He himself received a wide education from his early youth; his principal teacher was his paternal uncle Abū 'Uthmān Sa'īd (d. at Tlemcen in 1030 (1620—21); on him cf. Ben Chenech, *Iḍām*, § 103). He then left his native town and went to Marrākush and Fās where he became *Imām* and *Mafī* of the great mosque of al-Karawīy from 1022 (1613) to 1027 (1617). He then set out for the Holy Places; after doing so he came to Cairo in 1028 (1618) where he stayed for some months and married. In the next year he made a journey to Jerusalem then returned to Cairo. In 1037 (1627) he again made the pilgrimage which he was to repeat several times later. At Mecca as well as at Medina on these occasions

he taught *ḥadīth* in a way that attracted much attention. He again made stays at Jerusalem and Damascus where he was received at the Madrasa Dīnīyya by the learned Ahmad b. Shāhin. In this city also his lectures on Muslim Tradition were largely attended. He then returned to Cairo and while he was preparing to return to Damascus to settle there permanently, he fell ill and died.

In spite of his long stay in the East, it was in Morocco that al-Makkārī collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrākush in the library of the Sa'dian Sultāns (now in part in the Escorial; this is how al-Makkārī consulted among other works the unique copy of the *Muḥammad* of Ibn Marzūq: cf. *Hispania*, v. 8 19). Indeed his masterpiece, written in the East at the suggestion of Ibn Shāhin from materials collected by him in the Maghrib, is a long monograph on Muslim Spain and on the famous encyclopaedist of Granada, Liṣān al-Dīn Ibn al-Khaṭīb, *Nafḥ al-Fīṭḥ min Ghayn al-Andalus al-Raḥīb wa-Dhikr Waṭrinā Liṣān al-Dīn Ibn al-Khaṭīb*, an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the *Nafḥ al-Fīṭḥ* an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the "Reconquista". Even for the later period it is the only Arabic source that we still possess.

The *Nafḥ al-Fīṭḥ* consists of two quite distinct parts, a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-Khaṭīb. The first part is divided as follows: 1. physical geography of al-Andalus. 2. Conquest of al-Andalus by the Arabs, period of the governors. 3. History of the Umayyad Caliphs and of the petty dynasts (*Mulūk al-ḥawāṣif*). 4. Description of Cordova, its history and its monuments. 5. Spanish Arabs who have made the journey to the East. 6. Orientals who have made the journey to Spain. 7. Sketches of literary history, the intellectual and moral qualities of the Spanish Arabs. 8. The "reconquista" of Spain and the expulsion of the Muslims. The second part contains 1. Origin and biography of the ancestors of Ibn al-Khaṭīb. 2. biography of Ibn al-Khaṭīb. 3. biographies of his teachers. 4. letters in rhymed prose of the chancelleries of Granada and of Fās, sent or received by Ibn al-Khaṭīb (*mudhakkāt*). 5. a selection of his works in prose and verse. 6. analytical list of his works.

The *Nafḥ al-Fīṭḥ* was printed in full at Būlāq in 1279 and at Cairo in 1302 and 1304 (4 vols.). The first part was published at Leyden from 1855 to 1861 under the title of *Annales sur l'histoire et la littérature des Arabes d'Espagne*, by R. Dory, G. Dugat, L. Kiehl and W. Wright. In 1840, D. Pascual de Gayangos had published in English, at London, under the title *The History of the Mohammedan Dynasties in Spain*, a version adapted from the part of the first half which deals with the history of Muslim Spain. A critical translation of this monumental work in its entirety remains to be done.

Al-Makkārī also wrote other important works, among which special mention must be made of a lengthy monograph on the famous ʿāshī 'Iyāḥ (q.v.) *Asḥar al-Riyāḥ ft Asḥar al-ḥayāt 'Iyāḥ* publ. at Tunis in 1322 in 2 vols. A list with reference

to known MSS. will be found in Brockelmann and Ben Cheneb.

(E. LÉVI-PROVENÇAL)

AL-MAKKĪ, ABŪ TALĪB MUHAMMAD b. 'ALĪ AL-ḤAKĪMĪ, d. in Baghdād in 386 (996), an Arab muḥaddith and mystic, head of the theological madhhab of the Sālihiyya [q.v.] of Baṣra. His principal work is the *Kut al-Kuṭūb* (Cairo 1310, 2 vols.) whole pages of which have been copied by al-Ghazālī into his *Iḥyā 'Ulūm al-Dīn*.

Bibliography: Brockelmann, *G. A. L.*, I, 200; Sayid Murtadā, *Ḥāf*, ed. Cairo, II, 67, 69 19; Shā'rawī, *Lafḥ*, ed. Cairo, II, 28; Ibn 'Abd al-Rundī, *Rasā'il ḥabṣ*, lith. Fās 1320, p. 149, 200-201. (L. Massignon)

MAKRĀN, the coastal region of Balūchistān, extending from about 39° to 65° 35' E. and inland from the coast to the Siyāhān Range, a little beyond 27° north. This tract was known to the Greeks as Gedrosia, and was inhabited by the Ichthyophagi, or fish-eaters, the Persian translation (*Māk-Kaurān*) of whose name supplies a fanciful derivation for its present name, which is traced, with more probability, to a Dravidian source.

In Persian legend Kaiḫuraw of Irān captured the country from Afrasiyāb of Tūrān, and both Cyrus and Semitamis marched through it. In 325 B.C. it was traversed by Alexander in his retreat from India, and fell, later, under the dominion of the Sasanians, but was occasionally absorbed into the Hindu kingdom of Sind. It was annexed by the Arabs in the course of the rapid expansion of the empire of Islām in the early days of the caliphate, and it was through Makrān that Muhammad b. Qasim invaded Sind in 711 A.D., and established the first Muslim settlement to the east of the Indus. Marco Polo mentions it in 1290 as the most westerly part of India, under an independent chief, probably a Muslim, who found it unnecessary to make any pretence of submission either to Persia or to India. Indigenous tribes ruled the country until they were ousted by the Gīkīs from India, but the Persian monarchs reckoned Makrān as part of Balūchistān, which was included in the great province of Kirmān. In the middle of the eighteenth century the Ahmadi Khāns of Kalāt established their suzerainty over the country, and in 1879 Colonel Goldsmid demarcated the frontier between Persian Makrān and eastern Makrān, which remains subject to

the Khm̄ of Kalat, though British intervention has frequently been necessary to compose the disputes between him and the dominant tribes of the province, Gikr̄, Nūghr̄wān̄, Bimudjān̄ and Shīwār̄. Cultivators of the soil are Bālūm̄, and tribes of inferior social status and the fishermen form a class apart.

The climate of the country varies with the altitude. Near the coast it is uniformly hot, but not unpleasant; in Keč or Kedj, from which eastern Makrân is known as Kedj Makrân, the winter is dry and cool, the summer intensely hot; and higher still Pandigū is bitterly cold in winter and moderately hot in summer.

(T. W. HAIG)

AL-MAKRÎZÎ **ABU 'L-'ABDŪS AHMAD B. 'ALI B. 'ABD AL-KĀDIR 'AL-HUSAYN TAḤŪ AL-DĪN**, Arabic historian, b. 766 (1364) at Cairo, grandson of the Hanafī Ibn al-Sā'igh who educated him according to his school; but on attaining his majority he went over to the Shāfi'is, attacked the Hanafis and even showed Zāhiri tendencies. He began his career as deputy ḥāfi in Cairo and rose to be head of the al-Hakīmīya mosque and teacher of tradition at the al-Mu'ayyadīya madrasa. In 811 (1408) he was transferred as administrator of the waḥf at the Kālīnīsiya and at the Nūrī hospital and also as teacher at the al-Ashrafīya and al-Ikbalīya madrasas to Damascus. About ten years later he returned to Cairo as a private individual to devote himself entirely to literary work. He spent five years in Mecca after his pilgrimage in 854 (1430). He died in Cairo after a long illness on Thursday the 27th Ramaḍān 845 (Feb. 9, 1442).

His literary activity began with his local history of Egypt dealing mainly with topography. He then extended his interest to neighbouring lands as far as Abyssinia and dealt also with questions of social history such as weights and measures and coinage. His principal work, the *Kh̄ṭa*, seems however to be based to a large extent on that of a predecessor, al-Awhādī, which he simply appropriated without acknowledgement according to al-Sakhāwī's well-founded charge. After a very long full historical and geographical introduction he begins his description of the country with Alexandria and goes with particular thoroughness into the topography of Fustāt and Cairo. On the sources of the work see Khayun Gaest, *J. R. A. S.*, 1902, p. 103 sqq. It is entitled *al-Muḥallī wa 'l-'Aḥbār fī Dhikr al-Kh̄ṭa wa 'l-Aḥbār*, Bulāq 1270, 2 vols. fol., Cairo 1308, 1324—1326, 4 vols., ed. G. Wiet (*M. L. F. A. O.*, i—v, 1911—1927) transl.: Makrīzī, *Histoire de l'Égypte*, trad. de l'arabe et accompagnée de notes hist. et géogr. by E. Blochet, Paris 1908; *Description topographique et historique de l'Égypte* by M., transl. by U. Boustani and P. Casanova (*M. L. F. A. O.*, i—vi, 1893—1920); cf. Taḥī al-Dīn Ahmad al-Makrīzī, *Narrative of expeditionibus aeternis Dimgathum*, ed. H. A. Hamaker, Amsterdam 1824; Makrīzī's *Geschichte der Copten* of F. Wüstenfeld, Göttingen 1845; P. Ravanne, *Essai sur l'histoire et la topographie du Caire d'après M.*, Paris 1890; P. Casanova, *Histoire et description de la capitale du Caire d'après M.*, li. 1894—1897. Synopses of the *Kh̄ṭa* were made

by Ahmad al-Hanafī under the title *al-Rawḍa al-hadiya* (s. Petersch, *Kat. Ar. Hist. Gotha*, No. 1685) and Abu 'l-Sūrī Muhammad al-Bakrī al-Siddīqī in the year 1054 (1644) under the title *Kaṣf al-Aḥbār min al-Kh̄ṭa wa 'l-Aḥbār* (Leyden, No. 974; Paris, No. 1765—1766; St. Petersburg, As. Mus., No. 237; Ahmad Taimūr Pāshā in *La revue de l'ar.*, iii. 334; cf. Vollers, *Note sur un ms. ar. abrégé de M. in Bull. de la soc. égypt. géogr.*, 3 series, No. 2, p. 131—139). As a supplement to his main work he then wrote a history of the Pālmīds (*Ittīḥ al-Hunafā' bi-Aḥbār al-A'imma wa 'l-Kh̄ṭa*), first publ. from the unique Gotha autograph by H. Baer, Tübingen 1908) and of the Aiyūbids and Mamlūks 577—840 (1181—1436) (*al-Sulūk li-Muḥarrifāt Duwal al-Mulūk*, MSS. s. G. A. L. ii. 39; *Histoire des sultans Mamlouks*, transl. by Quatremère, 2 vols., Paris 1837—1844), which was continued by al-Sakhāwī (Muhammad b. 'Abd al-Rahmān, 902 = 1497) under the title *al-Tibā al-mustāḥ fī Dhikr al-Sulūk* (*Continuation de l'histoire des Mamlouks de M. par al-Sakhāwī*, texte ar. d'après le ms. unique conservé à la bibl. égypt. rev. and corr. by A. Zeki Bey, Rev. d'Ég., li. iii, Bulāq 1896—1897, ed. E. Gaillardot, Cairo 1897) and by Ibn Taghribirdī (s. E. L. i. 103). As a further supplement to the *Kh̄ṭa*, Makrīzī planned two large biographical works but they remained unfinished on account of the enormous scale on which they were planned. He intended to write the lives of all the rulers and famous men who had lived in Egypt in 80 volumes entitled *al-Muḥallī* but was only able to complete 16 of them of which 3 are preserved in autograph in Leyden (*Cat. codic. ar.*, No. 1032, perhaps also 1103) and one in Paris (No. 2144), see Dozy, *Notice sur quelques mss. arabes*, Leyden 1847, p. 8—16, a portion in van Vloten, *Z. D. M. G.*, li. 224. His collection of biographies of contemporaries entitled *Durar al-'Uḥūd al-farīda fī Tarāḍim al-'A'yān al-muḥallī* intended to be arranged in alphabetical order also remained a torso (a portion of the autograph of vol. i, *Alif* and a part of *'Ain*, Gotha, No. 1771). He also dealt with a number of historical questions in separate essays, some of which are preserved in two collected volumes, Paris, No. 4657 and Leyden, No. 2408 (the latter in part written by the author himself, and in part revised by him, see Dozy, *Notice*, p. 17). The most important of these deal with the history of the Umayyads and 'Abbāsids (*al-Niḥā' wa 'l-Takḥārum fī-mā balma Bani Umayya wa-Bani Hāshim*, ed. G. Voa, Leyden 1888, and *Dhikr mā warada fī Bani Umayya wa-Bani 'l-'Abbās*, Vienna No. 1887; *al-Durar al-muḥallī fī 'l-Tarāḍim al-Dawla al-islāmīya*, Cambridge, Preston, p. 2), the Arab tribes who migrated into Egypt (*al-Bayān wa 'l-'Iṣṣā' 'amma bi-'Arq Mīr min al-'Arab*, ed. Wüstenfeld, Göttingen 1847), the geography of Hadramawt based on enquiries made of pilgrims from there whom he met in Mecca (*al-Turfa al-zharība min Aḥbār Wādī Hadramawt al-muḥallī*, ed. P. Noskowsky, Bonn 1866), the Muslim princes in Abyssinia (*al-Itmām bi-Aḥbār min bi-'Arq al-Habasha min Mulūk al-islām*, Cairo 1895, ed. Fr. Th. Rink, Leyden 1790, cf. J. Guidi, *Sul testo del Itmām d'al-M. in Centenario della nascita di Mich. Amari*, Palermo 1910, li. 387—394), on the Ziyānids in Tiencen (*Tarāḍim Mulūk al-Ghawr*, Leyden, *op. cit.*, according to Dozy's hypothesis, originally a portion of the *Durar al-'Uḥūd*), Islamic coins and

measures (*Nuḥḍat al-'Uḥūd fī Umūr al-Nuḥūd*, Cairo 1298, ed. O. G. Tychsen, Rostock 1797; *Traité des monnaies musulmanes*, transl. by S. de Sacy in *Mag. enl.* by Millin, II/iv., 1797, p. 472; III/L, p. 38 299, revised reprint, Paris 1797, an edition revised by the author *Shuḥūr al-'Uḥūd fī Dhikr al-Nuḥūd*, printed under the title *al-Nuḥūd al-ḥadīma wa 'l-islāmīya*, Stambul 1298 in a collected volume; *Risālat al-Makrūzī wa 'l-Mawāṣin al-ḥarīya*, ed. O. G. Tychsen, Rostock 1800). He also wrote a general geography under the title *Djānī al-Aḥḥār min al-Rawḍ al-miṣṣūr* (Berlin, N^o 6049, Cairo, v. 40) what work he drew upon for this is still uncertain; in Paris, N^o 5919, al-Iḥṣā' *Nuḥāt al-Muḥṭāḥ fī 'l-ḥiṣṣāt al-'Aḥḥār* is said to be the basis; Lévi-Provençal, *Les Historiens des Chorf*, p. 361 identifies it with the *al-Rawḍ al-miṣṣūr fī Khabar al-Aḥḥār* mentioned by Ḥādḥī Khalfā, III., N^o 6598 of Abū 'Abd Allāh Muḥammad b. 'Abd al-Mun'im al-Himyarī, which is said still to exist in the Karawīn mosque of Fez. In some of these shorter essays he touches on theology, a subject he does not elsewhere deal with, dogmatics in the essay composed in 813 (1410) entitled *al-Bayān al-muḥṭāḥ fī 'l-Farḥ bain al-Tawḥīd wa 'l-Talḥīd* the autograph of which is in Leyden, Amin, N^o 188 (cf. also Cairo, vii. 565), *Tadwīn al-Tawḥīd* (in Paris) and tradition in lectures on the family and domestic arrangements of the Prophet, which he delivered in Mecca (*Ḥikā' al-Aḥḥār fī-mā li 'l-Nabī min al-ḥafala wa 'l-Marā'*, in 6 vols., Gotha 1830, Stambul, Köprülü, N^o 1004). To supplement this work, towards the end of his life, he planned a work which beginning with the Creation, was to be also a general geography to give the genealogies of the Arab tribes and the history of the Persians down to the Sāsānians under the title *al-Khabar 'ani 'l-Baḥār*, at which he was still working in 844 (1441) (parts in the autograph Stambul Aya Sophia, N^o 3362 and Fāḥ, N^o 4338—4341, others in the copy Aya Sophia, N^o 3363—3366, Strasbourg, s. Nöldeke, *Z. D. M. G.*, xl. 306, cf. T. Tauer in *Islamica*, I. 357—364). Even later than this work which he quotes in it was the essay *Ḍaw' al-Sarī fī Ma'rifa al-Aḥḥār Taṭaww al-Dārī* (in the Leyden collected volume and also in Leyden, N^o 1080, Brit. Mus., p. 669).

Bibliography: Suyūṭī, *Ḥimā al-Muḥṭāḥ*, I. 321; de Sacy, *Chrest. arab.*, I. 112; Hamaker, *Spec. int.*, p. 207; Wüstenfeld, *Geschichtskreiter*, p. 482; Goldziher, *Zabiratin*, p. 196—202; G. A. L., II. 38. (C. BROCKELMANN)

MAKRÛH. [See SIKRĀ']

MAKS, toll, customs duty, is a loanword in Arabic and goes back to the Aramaic *mākā*, cf. Hebrew *maḥar* and Assy. *makā*; from it is formed a verb *m-k-ḥ* I, II, III and *mukḥār*, the collector of customs. According to the Arabic tradition preserved in Ibn Sida even in the Ḍahīliyya there were market-dues called *maks* so that the word must have entered Arabic very early. It is found in Arabic papyri towards the end of the first century A. H.

Becker has dealt with the history of the *maks*, especially in Egypt, and we follow him here. The old law books use *maks* in the sense of 'utht', the tenth levied by the merchants, more properly the equivalent of an excise duty than of a custom. They still show some opposition to the *maks*, then give it due legal force, but the word con-

tinued to have unpleasant associations, cf. the ḥadīth: *inna ḥāḥā 'l-makrī fī 'l-nār*: 'the tax-collector will go to hell': Goldziher has suggested that the Jewish view of the publican may have had some influence here.

The institution of the customs duty was adopted by Islām about the beginning of the Omayyad period or shortly before it. While theological theory demanded a single customs area in Islām, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas. The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i.e. the religion of the individual paying it; but in practice, attention was paid to the article and there were preferential duties and no attention was paid to the position of the owner in regard to Islām. The laws of taxation were very complicated and graduated; the duties rose in course of time from the tenth (*uḥr*) to the fifth (*ḥāḥā*).

The Egyptian *maks* was levied on the frontier at al-Arīḥ and in the ports (*ṣawāḥil*) 'Aḥḥāb, al-Kuṣair, al-Tūr and al-Suwais but there was also an octroi to be paid in al-Fuṣṭāṭ at a place called Maks. This name is said to have replaced an old Unm Dunain and then became identified with the Maks=custom-house of Cairo. All grain had to pass through here before it could be sold and two dirhams per *arṣab* and a few minor charges had to be paid on it. Further details of the administration of the *maks* in the earliest period are not known but there are references towards the end of the first century A. H. to a *ḥāḥā maks Miḥr* in papyri and in literature also.

The conception of the *maks* was extended in the Fāṭimid period when all kinds of small dues and taxes became known as *mukḥār*, especially — emphasising the already mentioned unpleasant associations of the word — the unpopular ones which the people regarded as unjust. Such occasional taxes had been levied from time to time in the early centuries of Islām. The first to make them systematic was the dreaded financial secretary and noted opponent of Aḥmad b. Ṭāḥīn, Aḥmad b. al-Mudabbir. The latter introduced not only an increase in the ground-tax and the three great monopolies of oilers, fisheries and soda (in connection with which it is interesting to note a reversion was made to old Roman taxes), but also a large number of smaller taxes which were called *maḥṭawīn* and *marāḥīl* and included among the *ḥitālī*, the taxes to be paid according to lunar years. Such artifices (known as *mukḥār* from the Fāṭimid period and later as *marāḥīl*, *ḥimāyāt*, *riwāḥāt* or *mustaḥḥarāt*) were destined to develop in time into the main form of oppressing the people and to become one of the principal causes of the economic decline of Egypt, until under the Mamlūks a limit was reached where hardly anything was left untaxed and *mukḥār* were even granted as fiefs and 'misfortune became general' (*wa-'ammat al-ḥalā'*). These small taxes however (but not the monopolies) were repeatedly abolished by reforming rulers, indeed *ḥitālī al-mukḥār* (other terms are *radd*, *muḥṭawāt*, *isḥār*, *waḥ'*, *raf'*, *al-mukḥār*) even formed part of the style and title of such rulers. Thus it is recorded of Aḥmad b. Ṭāḥīn that he abolished some duties, and later of Salāḍīn, Baibars, Ḳalā'ūn and his sons Ḳhalīl and Nāṣir Muḥammad, of Aḥraf Shāḥān, Barḳūḥ and Djak-

mak. Makrîzi gives a long list of *maks* abolished by Saladin and Kalkashandî gives copies of the texts of *muṣamḥāt*, which are decrees of the Mamlūk Sultāns abolishing taxes or granting exemption from dues which were sent to the governors and read from the minbars and sometimes contain very full details, while shorter decrees were probably carved on stone and are given among the fragments published by van Berchem. It would of course be wrong to deduce from such abolitions of taxes that the government was a particularly good one, while on the other hand the continually recurring extortion of the same taxes shows that the abuses had been restored in the interval. Makrîzi, i. 111 concludes with the well known jibe at the Copts: "even now there are *maks*, which are in the control of the vizier, but bring nothing to the state but only to the Copts, who do exactly as they like with them to their great advantage".

Among the great variety of dues which were of course not all levied at the same place and at the same time were the following: *hīlālī*-taxes on houses, baths, ovens, walls and gardens; harbour-dues in Gizeli, in Cairo at "the corn-quay" (*ṣāḥīl al-ghalla*) and at the arsenal (*ṣināʿa*), also levied separately on each passenger; market-dues for goods and caravans (*baḥāʾi wa-ḥawāʾi*) especially for horses, camels, mules, cattle, sheep, poultry and slaves; meat, fish, salt, sugar, pepper, oil, vinegar, turnips, wool, silk, linen and cotton; wood, earthenware, coal, halfa grass, straw and henna; wine and oil-presses, tanned goods; brokerage (*zamtara*) charges on the sale of sheep, dates and linen. Taxes on markets, drinking-houses and brothels which were euphemistically called *ruṣūm al-wilāya*. Wardens deprive prisoners of everything they have; indeed this right is sold to the highest bidder; officers consume the fiefs of their soldiers; peasants pay their lords forced labour and give them presents (*barāʾī, kalfāyā*) and many officials (*ḥāḍḍ, muḥtāḍ, muḥṣirūn* and *ṣulāt*) also accept them; when a campaign is begun the merchants pay a special war-tax and a third of inheritances falls to the state; when news of victories is received and when the Nile rises, levies are made; the dhimmās, in addition to paying the poll-tax, have to contribute to the maintenance of the army; pilgrims to the Holy Sepulchre pay a tax in Jerusalem; separate special taxes are levied to maintain the embankments, the Nilometer etc.

Outside of Egypt we occasionally hear of the *maks* as toll or market-fee, e.g. in Djidda, in North Africa (cf. Dozy, *Suppl.*, ii. 606). Ibn al-Hādīd, iii. 67 mentions a *muṣamḥat maḥālim*, but does not use the word *maks* in this sense.

MAKSURA. [See **MAṢḤID.**]

MAKTAB (A.), literally a "school in which writing is taught" in practice means a Qur'anic school, the Muslims believing that the first thing that should be taught an infant is the Qur'ān.

The word *maktab*, plur. *makṭib* belongs to the classical language. It is hardly ever found in the spoken dialects in this form. These prefer the word *kuttāb*, especially in Cairo and Tunis. *Kuttāb* is found in the middle ages used by Ibn al-Hādīd al-'Abdārī, a Moroccan author (see *Bibliography*), but it is not now used any longer in Algeria or Morocco.

The Qur'anic school has also other names: *mad* in Algiers, Tlemcen, and in certain districts of the Algerian Tell, at Fer, Rabat and Salé; *ḡāma* at Tangier, Larache, Constantine, in Orania and some districts of Morocco and the Algerian Tell; *ḡarfa* among the nomads of Algeria; *m'imra* among the Moroccans of the Djabala; *thima'urt* among the Kabyls of the Djurdjura; *maḥḍar* at Safi; Spain had *maḥḍra*, now found in Senegal.

The position of the Qur'anic school varies in different countries. Among the African nomads it is a tent placed in the centre of the douar which is also used as a mosque. In most towns it is a room on the ground floor, very often dark, damp and badly ventilated. In Cairo, the Qur'anic school is placed on the first story of some public building, usually a fountain. In Fer, a number of *mad* are also on a higher level than the street. The schools of Fer and those of Cairo show architectural features which deserve special study. The façades, doors, windows, usually large, are adorned with carved woodwork.

Inside, the Qur'anic school is as a rule bare of all ornament, mats of *alfa* grass or of rushes are stretched on the floor; the walls are also hung with mats of the same kind from the ground up to a height of 4 to 6 feet. A wooden or stone bench serves as a chair for the teacher. In one corner is a vessel of water (*nāḥī*) in which the slates of the pupils are washed.

The Qur'anic schools are distributed through the different quarters of the town. There are none in the immediate vicinity of the mosques, the Prophet having recommended that children and lunatics should be kept away from mosques (cf. *Madḥḥal*). On the other hand, it is not unusual to find Qur'anic schools in sanctuaries built to the memory of some saint or in the *sāwiyas*, the places of assembly of the religious brotherhoods. According to the *Madḥḥal*, it is recommended to place schools in the most frequented streets and not to place them in isolated places or by-streets. Although the author of this book gives pedagogic reasons for this recommendation, it is quite clear at the present day that it is due to the desire to let as many passers-by as possible hear the divine word. In the village, the Qur'anic school is held in one of the rooms of the building which is used as a mosque. The sites of Qur'anic schools are *ḡāmas* or *wakf* properties. Rich individuals sometimes install Qur'anic schools at the entrance to their houses fronting the street for the use of their children and of those of their servants and neighbours and friends.

The head of the Qur'anic school is called *ḡāḥ* or *ḡā* (classical *ḡāḥ*) in the towns of Morocco, *ḡāḥ* in the country districts of North Africa, sometimes *ḡāḥ*, *ḡāḥ* at Tunis and in the Tunisian

Sahel; at Tlemcen, we find the the word *derâr* which again crops up in the Algerian towns.

The master in the Qur'anic school has as his only intellectual equipment as a rule a perfect knowledge of the text of the Qur'an. He cannot understand or expound it; he hardly knows any grammar or any of the branches of religious knowledge. The most learned masters are those who have devoted themselves to learning a certain number of the seven ways of reciting the Qur'anic text according to the principles laid down by the seven *shaikh al-rinâya*.

In some towns there are Qur'anic schools for girls but this is exceptional. The mistress is known as *fakîha* or *shîra* (Morocco).

The pupils are called *tlamîdh* in the towns, *genâlis* in the country districts and *maâfiri* in the towns of Morocco. Their ages run from six to eighteen. Where there are schools for girls, little boys are sent there also up to the age of six.

In Qur'anic schools nothing is studied but the Qur'an and without any explanation. The task of the pupils is to learn the sacred text by heart. Ibn Khaldûn in his *Mufaḥḥisa* says that in his time the schools of Spain and Tunisia taught children reading and writing and the Arabic language before putting them to study the Qur'an, which they then learned without much difficulty while in the rest of the Maghrib they were only taught to recite the Qur'an and from the beginning of their studies. It is this latter that is still the usual fashion in North Africa of our day.

The Qur'an is not studied to know and understand it. It is learned by heart for the reward promised in the next world to those who know it and to benefit by the virtues or *baraka* of the divine word. This latter point of view is very much in keeping with the mentality of Muhammadan peoples with a strong belief in magic.

When the boy begins his studies he is taught to smear a wooden slate with a fine white clay called *ganjal* steeped in water. When the slate is made dry, either by being exposed to the sun or held to a fire, the master traces on it the letters of the alphabet with the point of a *ḥalam* (or reed sharpened for writing) without any ink. He cuts into the clay by forming the letters on the slate and the pupil is then asked to go over them with the *ḥalam* dipped in ink (which is made from burned wool). At the same time the child learns by heart the names of the letters and their descriptions without the master however thinking it worth while to point out to him on the slate that a certain character corresponds to a certain name of a letter. It is therefore not surprising that with such a method a pupil has to devote two or three years to learning to read and to write.

When the child can write to dictation, the master dictates verses from the Qur'an. The child writes them one by one. As soon as he has finished writing one he says *na'am yâ zîdi* on reaching the last word he has to write. The master then dictates the next verse and so on till the slate is completely covered with writing. Then the pupil goes to the bottom of the class and begins to learn by heart what has been dictated to him aloud. When he knows the text by heart, he recites it to the master. If the latter is satisfied he orders the child to clean his slate. For this purpose the boy washes it in the *maî*, the vessel of water in the corner of the school; then he

covers his slate with clay again and begins all over again.

If we reflect that the master has 30 or 40 pupils in front of him each of whom is at a different place in the Qur'an and that his method of instruction is individual, we can see that to learn the whole of the Qur'an, even the most intelligent pupil requires several years if he is not discouraged before reaching the last sûra.

The study of the Qur'an begins with the first chapter, the *fatiha*. After this sûra the last and then the second last, then the ante-penultimate is learned and so on back to the second sûra, that of the Cow. The Qur'an is thus learned in reversed order. This method is explained by the fact that the sûras have been classed, except for the *fatiha*, in order of length, the shortest being at the end. Since at the time of prayer, the believer repeats a sûra, usually one of the last, there is some point in the study of the Qur'an beginning with the sûras at the end of the book. When the pupil has learned the sacred text in the reverse order, he repeats it in the proper order.

For study and recitation the Qur'an is divided into sixty parts called *ḥizb*; each *ḥizb* is divided in its turn into four *rûd* or quarters, each quarter into two *ḥumam* or eighths, and each eighth into two *ḥarrûḥa* or sixteenths.

The time-table of the Qur'anic school is as follows: the master and pupils arrive at dawn, at least in theory. They study without a stop till lunch-time. Some go home to eat and return as soon as possible; others are given their lunch in school and eat either in the class, which is not encouraged, or outside near at hand. If the master goes out, his place is taken by an older pupil. They continue reciting the Qur'an till sunset when everyone goes home to dinner; they frequently return to the school till the hour of the *ḥalât al-ḥiḥâ*. No recreation is provided for. The only relaxation is the recitation by the pupils in a body of panegyrics of the Prophet. In the Maghrib there is no school from Wednesday at midday till Friday after the noon *ḥalât*. Tradition has it that the Caliph 'Umar (who founded the first Qur'anic schools) prescribed the Thursday rest. It is said in explanation that the triumphal return of the Muslim troops after the conquest of Palestine took place on a Thursday; the pupils having had a holiday to take part in the festivities, the Caliph Umar decided that henceforth Thursday should be a holiday in the schools. In the Hijâz the holiday is Tuesday (cf. W. Marçais, *Textes Arabes de Tanger*, p. 184, note 2).

The schools are also closed on the occasion of the religious feasts and the fast of Ramadan for one week or two, each country having its own special habit in this respect (cf. especially Michaux-Bellaire in *Archives Marocaines*, xvii. 77 sqq.).

When a child knows by heart a fixed portion of the Qur'an, the first sûra, the first quarter of the book, the half, the whole, his parents give a feast in which all the pupils share, the master and frequently all the other masters of the quarter, needy men who take advantage of every occasion when good cheer is going. These feasts are called *ḥadîma* or *ḥalâ* or *ṭakrîḥa*, sometimes *ḥadîsa*, according to the country; some of these titles are used on the occasion of its partial recitation of the Qur'an and others of a complete recitation. For the feast the master decorates the boy's slate

with different colours. It is to be noted that the mixture used for this purpose always includes eggs. Some verses are written on the slate. A procession is formed to go to the house of the child, who is the hero of the occasion; a part of the *Kur'ān* is recited and a copious repast eaten. A collection made after the feast and also at the houses of the relatives and friends of the family procures the teacher a supplement to his salary which he much appreciates.

Discipline is maintained in the *Kur'ān* school by corporal punishment. The master keeps in his hand a long stick with which he strikes more or less cruelly inattentive children on the head. To punish serious faults he inflicts a certain number of blows on the soles of the delinquent's feet. The boy is laid on his back, with his legs in the air and laid together; one of the older pupils holds his feet up to the master who beats them rhythmically with a rod of the wild quince tree. If the pupil is too strong for his comrades to be easily able to keep him in the desired position, his feet are fastened to a wooden bench (*falaḥ*) which two of his comrades hold up. These corporal punishments have been frequently condemned (cf. especially *Maḥḥal*) but they continue to be applied with the unanimous consent of the parents. Indeed the parents very often commission the master to punish children for faults committed out of school.

The master's duty is to give the children a good education; that is to say an education that is entirely religious. He generally does his duty very badly, at least from the European point of view.

The results obtained in the traditional *Kur'ān* teaching are generally bad. After long and monotonous years spent in school, the child only knows a few sections of the *Kur'ān* and like his master is unable to write a letter correctly or read a book. Wherever general education has made some progress we find the *Kur'ān* schools losing their importance in spite of the piety of the people. The child is often taken there to learn a few *sūras* after which he is taken away and put at the primary school. Very often the child goes to the *Kur'ān* school outside of the hours of the primary school and only for a year or two. On the other hand in cases where the people are at all backward but ardent in their faith, the *Kur'ān* schools are numerous and largely attended.

The children at the *Kur'ān* schools play a certain part in social ceremonies on account of the doubly magic character which their youth and knowledge of the divine word gives them. On Thursdays they go in a body under the conduct of the master to recite the *Kur'ān* over the graves of persons recently buried; when a woman's accouchement is difficult and threatens to be dangerous, the children from the neighbouring school go round the town chanting litanies behind a piece of cloth held by four of them; in the centre of the cloth is an egg; the passers-by throw coppers into the cloth and utter good wishes for the sick woman. The school-children, slate in hand are also sent to seek mercy from a conqueror for a conquered town or tribe; to appeal for rain in time of drought, the *Kur'ān* schools are also called upon to take part in processions.

The organisation of *Kur'ān* teaching is rudimentary. In the towns, it is the *kādi* who in theory supervises the schools; in reality he only

interferes in cases where complaints are made against the teacher. In the tribes it is the *ḥāid* who takes the place of the *kādi* in this connection.

The teacher is very often a stranger to the country, more often from the country than the town, which is to some extent explained by the magic character common to the state of being a foreigner and to *Kur'ān* study.

In the towns he receives a very small sum monthly from the parents of his pupils; on the Wednesday, the children pay him a few coins on leaving school; on the occasion of school-feasts and holidays he receives a few more gifts. He also makes amulets which he sells. In the country the *fālāh* is paid in kind. The relatives of his pupils feed him in turn, giving him, eggs, butter, cereals and lambs; sometimes the village or donor shares the labour of working a plot of ground and gathering its yield for him. Payment in kind of the services of the teacher is the subject of a regular contract between the representative of the village or of the donor and the *fālāh*. The latter is then called *fālāh muḥarrif*. The teacher is also the imām of the village; he washes the dead and prepares them for burial; he is also occasionally tailor and public letterwriter. In brief although he enjoys the respect of those around him he lives very poorly.

The choice of a teacher is often decided by the reputation which he enjoys. The consent of the parents in the towns, of the *ḥāid* in the country gives him the right to exercise his functions. Tunisia however has endeavoured since the French occupation to regulate more carefully *Kur'ān* instruction and to demand a certain standard of knowledge and morality in the teacher. *Kur'ān* instruction by its very nature seems to have remained unchanged from the early days of Islām.

MAKŪ, a khānate in the Persian province of Ādharbāidjān.

Makū occupies the N. W. extremity of Persia and forms an enclave between Turkey (the old sandjak of Bāyazīd) and Transcaucasia. In the west the frontier with Turkey follows the heights which continue the line of Zagros in the direction of Ararat. The frontier then crosses a plain stretching to the south of this mountain (valley of the Şarî-şu) and runs over the saddle between Great and Little Ararat. Down to 1920 Great Ararat formed the frontier between Russia and Turkey while Little Ararat was divided between Russia and Persia. Since 1920 Great Ararat has been completely surrounded by Turkish territory, while Little Ararat is divided between Turkey and Persia. The Turco-Persian frontier at the present day comes down to the Araxes. The Lower Kāra-şu and the Araxes (to its confluence with its right bank tributary Kōtur-çai) form the frontier between Makū and the autonomous territory of Nakhčevān which forms part of the Armenian Soviet republic. The third side of the triangle i.e. the inner boundary between the khānate and the Persian province of Khoi is somewhat vague. When the prestige of its khāns was at its greatest, their lands stretched to the districts of Çai-pāra, Çaldīrān (Kāra-Ain) and Ālānd. The little khānate of Awadīk (30 villages belonging to the Aīrūnli Khāns) on the Bāyazīd-Çaldīrān-Khoi road forms a little enclave close to the Turco-Persian frontier.

The khānate consists of a series of heights and fertile valleys. In the centre between the valley of the Zāngimār and that of the Akh-çai rises the isolated mass of Soğkar. At the foot of the Little Ararat along the frontier chain and on the slopes of Soğkar there are excellent pastures.

The lands of Makū are very well watered. The streams that flow into the Araxes on the right bank are as follows: 1. in the northwest the lower Kāra-şu which runs almost parallel to the Araxes and receives on the right bank the waters from Dambāt (a high plateau to the S. E. of Little Ararat where in 1905 Minorsky discovered the ruins of the ancient town which local Armenian tradition identifies with Arshakawan, cf. Moses of Chorene, III. 27 and *ibid.*, I. 30); 2. the mountain-torrents Ylāndīrāl and Şarî-çai; 3. the river Zāngimār (Zāngibār, Mākū-çai) which consists of three main branches, one coming from the khānate of Awadīk; the other, the Tighnīt, from the S. E. corner of the plain of Çaldīrān from the vicinity of the village of Tighnīt (Armenian: *Amut* = muddy); the third from the central canton of Bābādīk. The combined waters run through the defile in which lies the town of Makū and water the rich district of Zāngimār ("watered by the Zāngimār"). Here the Zāngimār receives on its right bank the waters from the central massif of Soğkar (this tributary seems to have been once known as the Şahan), and on the left bank the Şarî-şu (different from the above mentioned Şarî-şu) which rises on Turkish territory in the north of Bāyazīd and flows a considerable distance parallel to the central course of the Zāngimār. 4. The Akh-çai, the sources of which are on the eastern face of the chain which separates Turkey from Persia and on the southern

face of the transverse chain (Ālāgān) which separates Akh-çai from Tighnīt. The waters of the Akh-çai and its tributary irrigate the canton of Sōgmān-āwā, flow into the fertile plain of Çaipāra and flow into the Kōtur-çai which waters the plain of Khoi. Below this confluence the Akh-çai receives on its right bank the waters of the district of Ālānd which rise near the Turco-Persian frontier to the south of the sources of the Akh-çai and the north of those of the Kōtur-çai.

The town. The site of the town of Makū is very striking. It lies in the short gorge through which the Zāngimār here runs. The cliffs rise perpendicularly on the right bank. The cliffs on the left bank rise to a height of 600 feet above the river. The little town lies in an amphitheatre on the slope. Above the town at the foot of the rocks, are the ruins of ancient fortifications and a spring. Then the mountain wall rises almost perpendicularly and at a height of 180 to 200 feet leans forward. There is therefore an incredible mass of rock suspended over the town. (According to Monteith's estimate the dimensions of the cavern thus formed are: height 600 feet, depth of the cavern 800 feet(?), breadth 1200, thickness at the top of the arch 200 feet). It is only for a brief period daily that the sun penetrates into this gigantic cave. Just above is a cave which used to be entered by a perilous scaffolding. At a later date when the cave was used as a prison, the prisoners were hoisted up by a rope. (The only European who has been inside it is A. Iwanowski).

The population. The population of Makū consists of Turks and Kurds. The former, who are in the majority, occupy villages along the rivers of the khānate. They are the remains of the Turkoman tribes of Bayat, Pōrnāk etc. The canton at the foot of the Soğkar is called Kāraşoyunlu. The people (about 900 houses grouped into 26 villages) belong to the Ahl-i Haqq faith (*R. M. M.*, XI, p. 66) which is indirect but interesting evidence of the character of the heresy of which the Turkoman dynasty of the Kāraşoyunlu was accused (*Müneddjim-bağhi*, III, p. 153). The old enmity between the Turkoman tribes survives in the general name applied by the Kāraşoyunlu to their Shi'a "Twelve" neighbours: they call them Akşoyunlu (*Gordlevsky*, p. 9).

The Kurds of the khānate are semi-nomads. The Djalālī (cf. on their supposed ancestors, *Ālam-ārā*, p. 339 under the years 1017—1018) occupy the slopes of Ararat and in summer betake themselves to the pastures along the Turco-Persian frontier. Many sections of them lead a troglodyte life in the caves of the Dambāt region.

The Miān live between the Araxes and the massif of Soğkar where they pass the summer. At Kāra-ain (in Kurdish Kāleu) there are Haidarānlu.

Before the war there were only 1,200 Armenians left in Makū. It is remarkable that the confidential servants in the houses of the khāns are of this nationality. The celebrated and imposing monastery of St. Thaddeus (Thadēvos-Arakel = Kāra-Kilsa among the Muslims) rebuilt in 1247 (St. Martin, *Mémoires sur l'Arménie*, II. 463) is in the central canton of Bābādīk. It is regarded with a certain respect even by Muslims who kiss the Gospels on entering it. A long inscription recording the *firman* of protection given it by Shāh 'Abbās adorns the doorway. At one time the villages at Makū and

at Khoi belonged to the monastery and paid their rents to it. Another Armenian monastery (Sarp-Stephanos; Dāniyāl-Peighambar among the Muslims) lies below the mouth of the Kōtur-čai on the borders of Mākū. The little village of Džabbārlu is inhabited by Yazidis.

Ancient history. The oldest monuments of Mākū go back to the period of the Khald (Yannic) kingdom. The chamber carved in the rock near Sangar (on the Mākū-Bāzīgān-Bāyazid road) is one of a number of similar constructions in Bāyazid and in the country west of Urmia (Minorsky, *Kela-ihin, Zap.*, xxiv., p. 171). A Khaldic inscription known as that of "Mākū" seems to come from Bastām on the Akh-čai (district of Cai-pāra). It is of king Rusa II, son of Argishti (c. 680—645 B.C.; cf. Sayce, *A new Vannic Inscription, J. R. A. S.*, 1912, p. 107—113; N. V. Marr, *Nadpis Rusl II iz Maku, Zap.*, xxv., 1921, p. 1—54). The inscription is important as showing that the power of the kings of Wān extended to the region of Khoi.

Mākū later formed part of Armenia. It corresponds to the canton of Artas of the province of Vaspurakan (Armenian seventh century *Geography*). According to Moses of Chorene, the district was at first known as Shavarshān but was given the name of Artas in memory of the old home of the Alān whom Artashēs transplanted thither (cf. Ardoz in Ossetia). The name Shavarshān may be explained from the rule of the Artiruni kings among whom the name Shavarsh (Xšayārīan = *Šāpūr* = Mod. Pers. Siyāwush) was frequent (cf. Marquart, *Erānshahr*, p. 4, 177). The suggestion of this scholar that Artas is connected with the older "Ažaga etc.", Strabo, xi. 14, 3, is untenable because Azara is above Artaxata which again is above the land of Artas = Mākū. The Amatuni kings who later established themselves north of the Araxes must also have ruled in Artas for the diocese of Mākū is called Amatunec'tan (Adontz).

The names Mākū and Hac'tun (= Hasun) north of Mākū are mentioned in the *History* of Thomas Artiruni written in the tenth century, in the passage (ii. § 3) describing the frontier of the lands ceded by the Sāsānian Khusrav to the emperor Maurice in 591 (Brosset, *Coll. d'Hist. Arm.*, St. Petersburg 1874, i., p. 78). On the many Armenian monuments in the land of Mākū cf. the work of Minorsky on the antiquities of the khānate; cf. also Hübschmann, *Die altarm. Ortsnamen*, 1904, p. 344 and Adontz, *Armenia v. epokhu Justiniana*, St. Petersburg 1908, index.

According to a legend recorded by Moses of Chorene (i. 30; ii. 49), Tigranes, having defeated the Mede (in Arm. *Mur*) Abdahak settled his descendants all around Masis (Ararat). Neither the Arab historians (Tabari, Ibn al-Athīr) nor geographers know this corner of Armenia although the name looks very old. It would be tempting to explain Mākū as Māh + Kūh = Mountains of the Medes (Pers. *māh* and Arm. *mār* go back to the old Iranian *Māda*). The form Mākūya (*Mākōya) which is found in Hamdullāh Muṣṭawfi however presupposes a different final element.

History under Islām. Hamdullāh Muṣṭawfi (*Nuṣṣat al-Kutub*, ed. Le Strange, p. 89) is the first writer (740 = 1340) to mention Mākū among the cantons of the *rumān* of Nakhčuwān: It is a castle in the cleft of a rock and at the foot lies a village which stands in the shade till midday. In this place lives the Christian chief priest (*ḥakīm*) whom

they call Mar-Hāsiyā (this reading is preferable to *Mardjanthā* of Le Strange; cf. Aram. *Mar-Khānā* "the Lord Bishop").

The Spanish Ambassador Clavijo who visited Mākū on June 1, 1404 still found it inhabited by Armenian Catholics ruled by their prince Noradin, who enjoyed practical independence. Timūr did not succeed in taking Mākū but by a treaty Noradin agreed to supply him with 20 horsemen when required. The eldest son of Noradin was taken to the court of 'Umar Mirā and converted to Islām when he was given the name of Sorgutmix (Suyurghatmish); as to another son, Noradin intended to send him to Europe to be consecrated a bishop. Clavijo mentions a monastery of Dominicans at Mākū, "en el dicho lugar" (Frayles de Sancto Domingo, *Vida y hazañas*, ed. Srenzewski, St. Petersburg 1881, p. 158—162 and 376; transl. Le Strange, London 1928, p. 144—145). Clavijo gives an accurate description of the town (a castle in the valley; on the slope, the town surrounded by walls; higher, a second wall, which was reached by steps cut in the rock).

On the death of Timūr, Kara-Yūsuf the Kara-Koyunlu reappeared on the scene and Mākū was one of the first places he conquered in Soq (1406) (*Sharaf-nāma*, i. 376). Henceforth the country must have become rapidly Turkicised. According to the *Sharaf-nāma* (i. 295, 308), in 982 (1574) the Ottoman government ordered the Kurd 'Iwād Beg of the Mahmūdī tribe (cf. above ii., p. 1145^b) to take Mākū (one of the cantons of Nakhčuwān) from the Persians and to restore the fortress. 'Iwād was given Mākū as *niḡāḡlīq*. After his death in 1002, Sulṭān Muḥammad II gave the fortress to Muṣṭafā Beg, son of 'Iwād.

When in the summer of 1014 (1605) Shāh 'Abbās was in the vicinity of Khoi the Mahmūdī Kurds of the district of Mākū and Pasak (a village on the Alind-čai to the west of Khoi) did not come to pay homage to the Shāh. 'Abbās I transferred the clan of Manṣūr-beg to the Irāq (Persian) and took the field in person against Muṣṭafā, beg of Mākū. The historian Iskandar-munghl mentions two forts at Mākū, one at the foot of the mountain (*pā-yi kūh*) and the other on its side (*miyān-kūh*). The former was soon taken by the Shāh's troops but the capture of the other was "not so easy". Orders were given to plunder the Mahmūdī tribe which was done. The women and children were carried off and the Mahmūdī men executed. The booty was so great that cows were sold at 2 dirhams = 200 (Persian) dinārs a head. The royal camp remained for 10 days at Mākū but the upper fortress "in spite of the constrictedness of the place and the lack of water" held out and the Shāh left for Nakhčuwān without having obtained its surrender (*Ālām-ārā*, p. 479).

The Turks and Persians attached great importance to the position of Mākū. Murād IV in the campaign of 1045 himself realised the importance of Kōtur and Mākū and in the instructions given in 1048 to Kara Muṣṭafā Paṣha ordered him to demand that the Persians should destroy the two fortresses. Indeed by the treaty of 1049 (1639) the Persians decided to raze Kōtur Mākū, (read Mākū) and Maghazberd (*Tārīkh-i Nā'imā*, i. 686). However Murād IV died and in the reign of Sulṭān Ibrahim the Persians reoccupied Kōtur and Mākū (Ewliyā Çelebi, iv., p. 279).

The next stage is recorded in the Persian inscription engraved on the rock above the fortress (Minorsky, *Drumstti*, p. 23). It tells us that Shāh 'Abbās II ordered the destruction of the fortress because it sheltered the unsubmitted (*muftidān*). The fortress is compared to a Ka'fa-yi Kābūn; the executor of the Shāh's order was a certain Akbar and the date is 1052 = 1641—1642 (Chronogram *gh-n-f*). The history of 'Abbās II (*Kiṭāz al-Khāṣṣi*, Bibl. Nat. Paris, Suppl. Pers., No. 227) throws no light on the incident but as (fol. 74^b) an Ottoman embassy to the court of the young Shāh in 1052 is mentioned, it is probable that it was not without influence on the destruction of the fortress, on the preservation of which Persia had formerly laid stress.

Contrary to the tenor of the inscription, Ewliyā Çelebi II, 337—339 claims that it was the Ottomans who, after the peace of 1049, destroyed Mākū and at the same time recalled the Maḥmūdī Beg who was their representative there. In 1057 (1647) the Kurd Beg of Shūshik (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protesting against his raids, seized the occasion to introduce to Mākū 2,000 riflemen from Mārandārūn. The Ottomans sent an army of 72,000 men against Shūshik. Mustafa Beg of Shūshik was defeated and sought refuge in Mākū. Ewliyā accompanied the Pasha and the detachment that went to Mākū to demand the extradition of the rebel. Satisfaction was given them and the wali of Erzerum Mehmed Pasha treated the Persian envoys in a very friendly fashion. He told them however that if the Persians did not withdraw their troops from Mākū and destroy the fortress, he would attack Eriwān and Nakhčevān. The result is not known but Persia's possession of Mākū recognised in 1639 does not seem to have again been seriously disputed by Turkey.

The family which ruled Mākū from 1747 to 1923 belonged to the Bayat tribe, the clan settled around the Sokhar (on the Bayat cf. Köprülü-sāde Mehmed Fā'id, *Öğretmekle İhtilâsine Dâir Târîḥî Notalar*, *Türkîyat Medfû'esi*, Istanbul 1925, p. 16—23). According to oral tradition Abund Sultan Bayat was in Khōrāsān in the service of Nādir Shāh. After the latter's assassination, he seized one of his wives and a part of his treasure and returned to Mākū. Very little is known about him or his son Husain Khān (Monteith's host) who died in 1835. It is possible that under the Zand dynasty and at the beginning of the Kājārs the real authority in the region N. W. of Aḥar-bāidjān belonged to the family of Dumbull Khāns (cf. KURDS), whose headquarters was at Khōl (cf. TAKAR, the special history of the Dumbull is not accessible in Europe). The disappearance of the Dumbull must have opened the way to the Bayat. 'Alī Khān (1775—1865), son of Husain Khān, is often mentioned by travellers (Fraser, Abich, Flandin, Čirlikow, Likhutin) as an influential chief jealous of his prerogatives. We know that the Bāb was entrusted to the guardianship of 'Alī Khān from June to December 1847 and that the latter treated him very kindly. The Bāb in his esoteric language calls Mākū *ghabak-i ālī* in contrast to *ghabak-i ābādī* (= Čahrik, cf. SALMES) where his imprisonment was more rigorous (cf. Browne, *A Traveller's Narrative*, 1891, II, p. 16, 271—277; Jānī-Kāghānī, *Nuṣṣat al-ghaf*, G. M. S., xv., 1910, p. 131—132). During the war of 1853—1856 'Alī Khān derived

great material advantage from the neutrality of his territory which lay between Russia and Turkey. His son Timūr Pasha Khān (1820—1895?) profited by a similar situation during the Russo-Turkish war of 1877—1878. In 1881, his appearance at the head of the Mākū horsemen in the district of Salmās accelerated the collapse of the invasion of Kurds under Shāikh 'Ubaidallāh [q.v.]. Timūr Pasha Khān was hailed as the saviour of Aḥar-bāidjān and the people even called him *Mākū Pahlavān*.

His son and successor Murtadā Qulī Khān Iḡbal al-Salḥāna (1863—1923) at first continued the policy of isolation and aggrandisement of the khānate but his activity aroused suspicion on all sides. At the beginning of the war of 1914 Russian distrust earned him a forced stay in Tiflis. In time Mākū became part of the theatre of war. The Russian troops built a light railway from Shāh-takhd (on the Araxes) to Bilyazid and the station of Mākū became a busy centre. In 1917 the Sardār returned home and held his position till the coming of Rījā Shāh Pahlavī, when, accused of intrigues, he was arrested on 25th Mihr 1302 (Oct. 17, 1923) and transported to the prison of Tabriz where he died suddenly. A Persian officer was appointed governor of Mākū (Nawbakht, *Sākhinijāh-i Pahlavī*, Tihān 1342, p. 112).

MÄL (A.), means in the old language possession, property, referring among the Beduins particularly to camels, but also to estates and money, in any case to concrete things. The word is formed from *māl* and *l* and means properly anything that belongs to any one. As a noun it is of course treated as a med. = stem from which a

verb is then formed. In the meaning "money" the word is used in the expression *māl jāmit* "dumb property" in contrast to *māl wāqif* "speaking property", applied to slaves and cattle. There is a full definition of the conception in the introduction to the *Isḥār ilā Maḥāsin al-Taḥfā* of Abū 'l-Faḍl Dja'far b. 'Alī al-Dīmashqī (Cairo 1318, p. 2 sq.) studied and for the most part translated by H. Ritter, *Isl.*, vii. (1916), 1—91. There and in the *Mafātīḥ al-'Ulūm* (see *Bibl.*), p. 59, the different classes of property are enumerated. As *māl* includes property in its different aspects the word can also mean "taxes".

The attitude of the Muslim religion to money and property and its acquisition was of course a subject of discussion from the beginning of the literature. The authoritative religious and ethical point of view is that of al-Ḡhazālī (so to be written, cf. Moh. ben Chenob, *R.A.A.*, vii., 1927, p. 224 sqq.) in the second decade of the 10th, especially book 13 (Ritter, *op. cit.*, gives an analysis) and 14 (transl. by H. Bauer, *Erläutertes und verbottenes Gut = Islamische Ethik*, iii., 1922; cf. R. Hartmann in *Isl.*, xiv.).

The acquisition, guarding and disposal of property is one of the four main sections of economics (*Tadwīr al-Mamāl*), the second part of practical philosophy, which is divided into ethics, economics and politics, just as it entered Islām with the rest of Hellenistic sciences. As the *Politics* of Aristotle, the first book of which deals with economics was not translated into Arabic, the Muslims had to be content with the only translated work on economics, composed by the Neo-Pythagorean Ps.-Bryson which has had a deciding influence on the whole economic literature of Islām. The text, the Greek original of which is lost, was first edited by L. Cheikh in *Machriq*, xix. (1921) and has been recently published with the Hebrew and Latin versions and a German translation by M. Plessner (cf. *Bibl.*). The interesting chapter on *māl* in it was further expanded by Muslim authors of the school of Ps.-Bryson, particularly from religious literature. A standard work is the *Akhḡḡḡ-i Nāṣiri* of al-Ṭūsī [q. v.] of which the economic section has been analysed and translated by Plessner. The view of the origin of money which Aristotle holds in the *Nic. Ethics* reached Islām direct, besides coming through Ps.-Bryson; it is first found in the *Tahḡḡḡ al-Akhḡḡḡ* of Miskawīh (this is his correct name and not Ibn Miskawīh [q. v.]) e.g. Cairo 1322, p. 38 (cf. also *NAMU* and *DIHANAB*).

The word *māl* very early became a technical term in arithmetic. It is first found in exercises in dividing inheritances applied to the property of the testator which is to be divided. We later find the word used regularly for the unknown quantity in an equation; in this meaning it was afterwards replaced by *ḡhar* [q. v.]. Used for the unknown in quadratic equations it became the word for the square of a number. The fourth power is called *māl al-māl*, the fifth *māl al-ḡḡḡ*, the square of the cube. The history of this change of meaning has been elucidated by J. Ruska, *Zur ältesten arabischen Algebra und Rechenkunst* (S.B. Ak. Heid., Phil.-hist. Kl., 1917, N^o 2; esp. chap. vi., cf. also index, s. v. *MĀL*).

Bibliography: Brockelmann, *Grundriss*, I; H. Ritter, *Ein arabisches Handbuch der Handelswissenschaft*, *Isl.*, vii. 1—91 (cf. esp. the passages quoted on p. 45 note 3 from the

Arab *Lexicographers*, the *Liṣān al-'Arab* and Douy, s. v.); M. Plessner, *Der alsoquand der Neupythagoreer 'Bryson' und sein Einfluss auf die islamische Wissenschaft*, 1928; Mers, *Die Einführung der aristotelischen Ethik in die arabische Philosophie (Verhandlungen der XIII. Intern. Orientalistenkongresses, p. 290 sqq.)*; on the meaning in algebra cf. the references given in Ruska, *op. cit.*; al-Khwarizmi, *Mafātīḥ al-'Ulūm*, ed. van Vloten, 1895, p. 59, 198 sq. (the latter passage transl. by Wiedemann, *Beiträge zur Geschichte der Naturwissenschaften*, xiv. = S. B. F. M. S. Erlg., xl., 1908).

(M. PLESSNER)

MĀL AMĪR, more accurately MĀL-i Amīr, a ruined site in Lūrīstān. It lies in the centre of a flat plain about 3,100 feet above sea-level, in 49° 45' East Long. and 31° 50' N. Lat., 3—4 days' journey east of Shūstār [q. v.] and marks the site of a mediaeval town for which during the caliphate the name Idḡadī (sometimes vocalised Aīdḡadī) was exclusively used. The modern name Māl-i Amīr seems to be first used in the Mongol period; at least the first known occurrence is in the first half of the 15th century in Ibn Baṭṭūṭa (ii. 29) in the Arabic form MĀL al-Amīr = "estate of the prince". Idḡadī under the 'Abbāsids was the capital of a district of the province, and was also described more precisely as Idḡadī al-Aḡwā i. e. "Idḡadī of al-Aḡwā" (Khūzistān), sometimes called after Rām(a)hurmuz to distinguish it from a place of the same or similar name in the region of Samarkand (cf. Yāqūt, i. 416, 417; Idḡadī; ii. 496).

Even under the Sāsānians the somewhat inaccessible district of Idḡadī seems to have enjoyed a certain independence. When the Arabs for the first time invaded Khūzistān in 17 (638) they came to a friendly arrangement with the lord of Idḡadī by which the latter was guaranteed the possession of his power (Tabarī, i. 2553). Eleven years later (29 = 649) however, the governor of Basra, 'Abd Allāh b. 'Amīr [q. v.], was forced by a rising in the newly won province to undertake a military expedition which took him incidentally to Idḡadī; see Balāḡdhuri (ed. de Goeje), p. 382 and above, ii. p.

Under the caliphate Idḡadī played no prominent part. During the troubles in the last decade of Omayyad rule Abū Dja'far al-Manḡūr afterwards Caliph (cf. v. Vloten, in *Z. D. M. G.*, iii. 314) administered the district of Idḡadī for the 'Alid pretender 'Abd Allāh b. Mu'āwiya [q. v.]. A son, afterwards the caliph al-Mahdī, was born to him here, apparently by a woman of Idḡadī (see Tabarī, iii. 527). The family of the latter apparently kept up its connection with Idḡadī for Yāqūt (i. 416) speaks of descendants of al-Mahdī who bore the family name of Idḡadī. The name Māl al-Amīr, "prince's estate", might date from the time of al-Mahdī when the 'Abbāsids seem to have had lands in Idḡadī. But this name of Idḡadī, as already mentioned, does not occur in an Arabic source till 500 years later, so it may be assumed with greater probability that it arose in the time of the Atābega of Lūr-i Buzurg [q. v. = Great Lūr] under whom Idḡadī attained its greatest prosperity. This ruling family, which traced its origin to a Kuri chieftain of Syria, is also called the Faḡlawī dynasty after an ancestor or the Ḥazāraspid after the proper founder of their power, Malik Ḥazārasp. Their rule over East and South Lūr-

ristin dated from about 550 (1155). The capital was Idhadj. At times the power of these princes stretched eastwards as far as the vicinity of Isfahan and southwards to Basra and to the Persian Gulf. They owned the suzerainty of the caliphs or of the Mongol Khāns who replaced the 'Abīdīs; in practice they were fairly independent. Among the Atābegs of this dynasty mention may be made of Almad Nuzrat al-Dīn (696—730 or 733—1226—1329 or 1332). According to Ibn Baṭṭiṭa, he built 160 madrasas in his kingdom, of which 44 were in Idhadj. He also improved caravan traffic by hewing roads through the rocks. Under his successor Afrāsiyāb II, Ibn Baṭṭiṭa spent some time in Idhadj and gives an interesting description of life at the court in this town. The Tīmūrids in 827 (1424) put an end to the rule of the Faḡlāwī dynasty. On this dynasty cf. above ii., p. 48 *sup.*, and the genealogical tables in Justi, *Iranisches Namenbuch*, Marburg 1895, p. 460 and E. von Zambaur, *Manuel de Géral, et de Chronol. pour l'Histoire de l'Islam*, Hanoover 1927, p. 234.

On the later history of Idhadj nothing is known. The town probably became gradually deserted after the fall of the Faḡlāwīs. Its ruins are now represented by a large mound of earth, about 35 feet high, of irregular shape with smaller mounds of rubble around it. Cf. Layard in *J. G. R. S.*, xvi., 1846, p. 74 and Layard, *Early Adventures in Persia, Susiana and Babylonia*, London 1887, i. 403, and Jéquier, *op. cit.* (s. Bibl.), p. 134.

It may be mentioned that the Būyid Sultāns struck coins in Idhadj; cf. Lindberg, *Les Monnaies Couffiques des Buyides = Mém. de la Société des Antiquaires du Nord*, Paris 1840—1844, ii. 269 and see above iii., p. 44^b. On coins of the Atābegs minted in Idhadj cf. above iii., p. 48^a.

The perfectly flat plain of Māl-Amīr out of which rises the mound of ruins of the Sāsānian and Muslim town of Idhadj is about 4 miles broad and about 7 long according to Jéquier (see Bibl.) who has given a plan of it (*op. cit.*, p. 133). It runs from N. W. to S. E. c. 3100 feet above sea-level and is surrounded on all sides by steep, barren but not high hills. The most important of these border ranges is in the S. E. and is linked up to the Mungasht hills farther south (cf. Rawlinson in *J. R. G. S.*, ix. 80—81; de Bode, *op. cit.*, xiii. 100; Layard, *op. cit.*, xvi. 74 and de Bode, *Travels*, ii. 30) within which stood the fortress of the same name, which played an important part in the middle ages (Mungasht, Man-shigh, Māndjagh; cf. also above iii., p. 46^b, 47^a). The ridge which shuts in the plain of Māl-Amīr in the east or N. E. is called Kūh Gashmet. According to Jéquier, there is a large artificial lake in the north (northeastern) part of the plain, which finally disappears in the swamp. According to de Bode (*J. R. G. S.*, xiii. 104), there were in his time two small lakes there, the so-called Shatt-bend's, which dried up in summer like the marshes and the small streams which run through the plain. The water of the latter came in the main from the lake of Deriādj-ei Bandān, south of the plain of Māl-Amīr, behind which Houtum-Schindler (see Bibl.) ascended the steep wall of the Tanawah range. The lake called Fām al-Bawwāb described by Yāqūt may be identical with this stretch of water; cf. Le Strange, *op. cit.*, p. 245; Schwarz, *op. cit.*, p. 337.

Among the numerous ravines which are to be

found among the hills that border the Māl-Amīr plain on the N. E. the most interesting from the archaeological point of view is that of Kul-i Fārā (see the plan in Jéquier, *op. cit.*, p. 135). *Kul*, according to O. Mann means in Lāri "little ravine"; cf. above iii., p. 41^b. Dieulafoy and Schindler have erroneously reproduced this to them unintelligible word by Kal'a or Kūt = fortress; see Weissbach, *op. cit.*, p. 743, note, whose suggestion about the meaning of Kul is now ruled out. For Fārā, H. Schindler gives the form Ferā and Ferendj (Franks, Europeans), the latter apparently based on a Lāri interpretation of the male costume in the reliefs there. Earlier travellers (Layard, de Bode) write Kul-i Fir'awn, apparently because their Lāri authorities identified the name Fārā with Fir'awn (Pharaoh) whom they knew from the Kur'an.

The majority of the sculptures of pre-Īrānian (Elamite) origin in the region of Māl-Amīr are to be found in Kul-i Fārā. Quite close to the entrance to the ravine is a large stele with a large human figure in high relief, a row of smaller figures with a well preserved 24 line cuneiform inscription and 10 smaller inscriptions (the latter giving the names of the individuals represented). According to the large inscription it is a monument erected by a certain Hanni, son of Tahhīhi. Opposite, on the other side of the ravine at intervals on blocks of stone and on the wall are five tablets with other reliefs of rude execution. Special mention must be made of a great procession with 67 figures. The total number of figures in Kul-i Fārā is according to Layard 341.

Opposite the ravine of Kul-i Fārā, in the hills which bound the S. W. side of the plain of Māl-Amīr is the cave with many corridors of Shikefte-i Salmān, "the cave of Salmān". According to the Bakhtiyāris who hold this place in great honour, the name is derived from that of Salmān al-Fārist (q. v.), the first Persian to adopt Islām, who is buried there, contrary to the modern Samt and Shi'ī tradition which locates the tomb of this companion of the Prophet in al-Mada'in (Salmān Pāk; cf. iii., p. 79). In Shikefte-i Salmān have survived four primitive bas-reliefs of the Elamite period of which two are outside and two inside the cave. Among them is a figure, over life size with a 36 line cuneiform inscription which also dates from the Hanni above mentioned. On a little explanade to the south of the cave are the ruins of a little Muslim sanctuary, probably erected on the site of an older sanctuary. In the corner of the cave is a spring in which rises one of the little streams that water Māl-Amīr.

Apart from the monuments of Kul-i Fārā and Shikefte-i Salmān there are a series of other monuments and remains of the ancient and mediaeval periods in the plains of Shikefte-i Salmān. For example, in the southwest part of the plain near a ruined *imāmshāh* (saint's tomb) which the Lāris call Shāh-Suwār (the king on horseback) on a slope of the hill is a small stele, obviously also of the Elamite period, with 6 figures and an inscription which has been destroyed. According to Layard, there are many popular traditions about this place. A little north of Shāh-Suwār at a place called Kūh Wā are the ruins of a palace. In the opposite direction in the N. E. section of the plain rises a round palace on the summit of a rock, called Kal'a Gashdum (= Scorpion Hill) by the natives. A ravine near by is called Hong; in it

may be seen a much weathered Sāsānian rock-sculpture of great dimensions, probably of the earlier period (c. Shāpūr I).

That the plain of Māl-Amīr enjoyed comparative prosperity in the Sāsānian period is evident from the remains of canals of this date.

In the S.W. of the plain a narrow road runs to the village of Hallādjan (de Bode: Halegun). Near it are old ruins of the period of the Atābeg dynasty. There is an Atābeg citadel, an Atābeg bridge and well. The numerous traces of buildings probably date from a mediaeval town. Of recent date is the ruin (mentioned by de Bode) of a palace of Hasan Khān, a chief of the Bakhtiyārī tribe of Chahr Lāng who lived here about 1821. Here is another little river called Hallādjan or Shāh Rūben which is probably connected with the lake at Deriādj-e Bandān already mentioned (cf. Layard, *J.R.G.S.*, xvi. 74 and *Early Adventures*, I. 403; de Bode, *J.R.G.S.*, xiii. 100 and *Travels* etc., I. 404).

In the N.E. of Māl-Amīr runs an old road paved with huge blocks of stone, which is now called Rūh-i Sultān (the Sultān's path) or Qāddet-i Atābeg (= Atābeg road) to the Sar-i Rāk (Rādj) some 3,500 feet high, the highest point, and thence to Isfahān after several days' journey. It has already been mentioned above that the Atābegs did a great deal for road-making in their lands. But the original planning of the road probably goes back to a great antiquity; cf. thereon de Bode, *J.R.G.S.*, xiii. 102—104, and *Travels* etc., II. 6—8, 35—46. Perhaps, he suggests, the "ladder-road" (καλμαρὸς κελύς) over which Eumenes passed, as mentioned by Diodoros xix. 21, may be identical with the Atābeg road. Remains of old roads paved or hewn out of the rock are also found in other places in the neighbourhood of Māl-Amīr; cf. iii. 51^b. The natives ascribe them at once to the Atābegs, as they do the ruined caravanserais found everywhere. Near the Sar-i Rāk pass about 12 miles east of Māl-Amīr is a place called Kal'a-i Medrese, where chiefs of the Bakhtiyārīs meet every year. There are the ruins of two Sāsānian buildings; cf. Unvala, in *Revue d'Assyriologie*, xxv. 1928, p. 86—88, who gives a detailed description of them. Schwarz, *op. cit.*, p. 340 thinks that this Kal'a-i Medrese—in spite of the discrepancy in the distances given—corresponds with the place Halāfthān mentioned by Ibn Baṭṭūṭa (ii. 41). A ruined site of the same name, also with two Sāsānian buildings is according to Unvala 24 miles S.E. of Masjd-i Sulaimān (cf. *SUSAN*); 4—5 hours N.E. of Māl-Amīr are the ruins of Sūsan (q.v.).

The Arab geographers of the middle ages reckoned the celebrated stone bridge (*qanāra*) of Idhādī crossing the Dūdjalī (Kārūn) among the wonders of the world. It was also called Qanāra Khurāsād from the alleged (otherwise unknown) name of the mother of Ardashīr I, who is said to have built this bridge and another in the town of Ahwāz (see Schwarz, *op. cit.*, p. 321). Otherwise we only know the masculine form of the Iranian name Khurāsād (cf. Schwarz, *op. cit.*, p. 338 note 4 and Justi, *Iranisches Namenbuch*, Marburg 1895, p. 180^b). In the 10th (xth) century this bridge of Idhādī was restored by the vizier of the Būyid Rukn al-Dawla after two years of work. De Bode identifies it with the "Atābeg" bridge at Hallādjan; probably however we should, with Rawlinson, *op. cit.*, p. 83 and Schwarz, *op. cit.*, p. 339, identify it with the

"Old Bridge" crossing a small tributary of the Kārūn N.E. of Kal'a-i Medrese. For further information on the Bridge of Idhādī cf. Yāqūt, I. 416, iv. 189 and Schwarz, *op. cit.*, p. 338—339.

The rulers who had the sculptures and rock inscriptions of Kul-i Fārā and Shikefte-i Salmān made, belong to the period of the later Elamite kingdom, to the period between Nebuchadnezzar I (1146—1123) and the rise of Assyria in the first half of the 12th century i.e. about 1000 B.C. It cannot be decided whether king Hānni, son of Tāhbiht, from whom the monuments and inscriptions date, and the Shūtur Nakhkhunte, son of Indada mentioned by him, ruled the whole of Elam or whether they are to be regarded as members of a local dynasty ruling perhaps the district of Māl-Amīr. The inscriptions are in the Elamite language but contracts written in the Babylonian language have also been found in Māl-Amīr; cf. the *Bibliography*.

Here it may be mentioned that following de Bode the town of the Uxiāns which Alexander the Great passed on his way from Susa to Persopolis after passing the "Susan Gates" has often been sought in the region of Māl-Amīr; cf. de Bode, *Travels* etc., II. 47 sq.; Spiegel, *Iranische Altertumskunde*, I., Leipzig 1870, p. 409 and Kaerst in Pauly-Wissowa, *Realencykl. d. klass. Altertumswiss.*, I. 1424.

Since the late middle ages (beginning of the vii/xiii century) the Bakhtiyārī Lārs have settled in the district of Māl-Amīr (cf. above iii., p. 42^a, 45^b). They spend the winter there on account of the fine green pastures. On the Bakhtiyārīs see BAKHTIYARIS and iii., p. 42^b, 45^b, 46^a, 50^a.

Bibliography: B.G.A., *passim* (a. Indices); Yāqūt, *Mu'jam*, ed. Wüstenfeld, I. 416 sq.; Ḥamd Allāh Mustawfī, *Nuḥat al-Kuṭūb* (= G.M.S., xxi.), p. 70; Ibn Baṭṭūṭa, ed. Paris, II. 29—42; G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 245; P. Schwarz, *Iran im Mittelalter nach den arab. Geographien*, iv., Leipzig 1921, p. 293, 335—340; 441, note 3; 421, note 6; 439—440; Ritter, *Erdkunde*, ix. 152—157, 218. — It is only since the 19th century that we have more exact accounts of the plain of Māl-Amīr and its monuments from European travellers. On those for the period 1841—1889, see Weissbach, *op. cit.* (see below), p. 743. Rawlinson was not himself in Māl-Amīr but heard of the ruins there when in the neighbourhood in 1836; cf. his article in *J.R.G.S.*, ix. 82—84. — For the archaeological monuments of Māl-Amīr the most valuable records are those of Layard and C. A. de Bode who both visited it in 1841 and that of Jéquier at the beginning of the 20th century. Cf. A. H. Layard in *J.R.G.S.*, xvi., 1846, p. 74—81, 94—95 and in *Early Adventures in Persia, Susiana and Babylonia*, London 1887, I. 401—411; II. 4, 7, 11—14; C. A. de Bode in *J.R.G.S.*, xiii., 1843, p. 100—104 and in *Travels in Luristan and Arabistan*, London 1845, I. 400—404; II. 1, 6—8, 25—60, 102—106; Jéquier, *Description du site de Māl-Amīr*, in *Diligation en Perse, Mémoires*, vol. III., Paris 1901, p. 133—143 (with 2 plates). Cf. also the description by A. Houtum Schindler (*Reise 1877*), in *Zeitschr. d. Gesellsch. f. Erdkunde zu Berlin*, xiv., 1879, p. 45 sq. Cf. also the descriptions of the monuments of Māl-Amīr in Weissbach,

Neue Beiträge zur Kunde der indischen Inschriften = *Abh. d. ind. Ges. d. Wissensch.*, xxxiv, 1894, p. 743—747 (based mainly on Layard) and G. Hüsing, *Der Zagros und seine Völker* (A. O., ix, 3—4), Leipzig 1908, p. 47—57 (based on Jéquier); s. also J. de Morgan, *Mission scient. en Perse*, vol. iv., *Recherch. Archéol.*, Paris 1896—1897, p. 176 sq.

For the Elamite bas-reliefs in Māl-Amīr and the cuneiform inscriptions with them the reader is referred to Weissbach, *op. cit.*, p. 745, 747—748 for illustrations, aquettes, editions, decipherment and commentaries as regards the *Bibliography* down to 1893. The inscriptions were first edited by Layard in his *Inscriptions in the Cuneiform Character*, London 1851, Pl. 31—32, 36—37. Mention should also be made of: A. H. Sayce, *The Inscriptions of Mal Amīr*, in *Actes du 1^{er} Congrès Internat. des Orientalistes*, à Leyde, vol. II, Leyden 1885. Weissbach gave a new edition in the publication above mentioned, a new transcription and translation of the Māl-Amīr texts with commentary; cf. *op. cit.*, p. 748—752, 759—777 (and plates i—iv). A transcription, differing in many points from Weissbach, of the two great inscriptions of Kū-i-Fāst and Shikēstē-i-Salmān (with notes) was given by G. Hüsing in *Elamische Studien* (= *M. V. G.*, iii, Heft 7), Berlin 1898, p. 21—34; cf. also Hüsing's short articles in *O. L. Z.*, ix, 1906, col. 605—606; xi, 1908, col. 337 sq. The latest edition of all the Māl-Amīr inscriptions — including the fragmentary one of Shikēstē-i-Salmān omitted by Weissbach — is that of Scheil; s. *Délégation en Perse, Mémoires*, vol. iii, Paris 1901, pl. 23—26; transcription and translation under No. lxiii and lxiv, p. 102—112. Scheil (*ibid.*) also published autotype facsimiles of the bas-reliefs and a picture of the cave of Shikēstē-i-Salmān; cf. pl. 27—33. In his travels in Kurdistan O. Mann also visited Māl-Amīr and took aquettes of the inscriptions there (cf. *O. L. Z.*, xi, 605); but so far as I am aware he has published no more about them. — On the particular form of cuneiform used in the Māl-Amīr inscriptions see Weissbach, *op. cit.*, p. 752—759 (syllabary) and the epigraphic tables on pl. iv—v; cf. on the question of transliteration Hüsing, *Elamische Studien*, p. 15—21 with table of characters and do., in *O. L. Z.*, vii, 1904, col. 437—440.

In Māl-Amīr have also been found cuneiform tablets of a legal nature (contracts) written in the Babylonian language; 16 of these contracts have been edited, transliterated and translated by V. Scheil in *Délégation en Perse, Mémoires*, vol. iv., Paris 1902, pl. 19—20 and p. 169—194.

(M. STRACK)

MALABAR, a district of the Madras Presidency in British India, situated on the west coast of the peninsula, between 10° 15' and 12° 18' N. latitude and 75° 14' and 76° 15' E. longitude, and extending for 450 miles along the shores of the Arabian Sea; on the E. the district is bounded by the Western Ghats, the hills of which attain an average elevation of 5,000 feet, but occasionally rise to 8,000 feet. Out of a total population of 2,039,333 (according to the Census of 1921) there are 2,004,327 Muslims, of whom 93.60 per cent are Sunnis; the greater part of them are Mappillas [q. v.];

the Labbais [q. v.] form the next largest group, and there are a few Pathans, and in the larger coast towns a few Arabs.

Trade with Arabia appears to have led to the introduction of Islam into the Malabar coast at an early period, the exact date of which is uncertain. Hindu rājās encouraged the Arab traders and the commerce of the western coast had passed almost entirely into their hands by the end of the xvth century when the Portuguese arrived to dispute it with them. The Arabs did not give way without a struggle, but by the middle of the xvth century only the petty coasting trade was left in Arab hands, and when the power of the Portuguese declined in the xvith century their place was taken by English and Dutch traders. In 1766 Haider 'Alī [q. v.] added Malabar to his dominions, but found it a turbulent possession, and his son Tipu Sultan [q. v.] in 1792 had to abandon this territory to the British.

Bibliography: W. Logan, *Malabar*, Madras 1887; C. A. Innes, *Malabar (Madras District Gazetteer)*, Madras 1908.

MALACCA (from the Sanskrit *mālaka* through the Malay *mēlaka*, *Phyllanthus pectinatus* Hook. fil., Euphorbiaceae) is the name of a town situated on the west coast of the Malay Peninsula in 2° 17' 30" N., 102° 15' E. (Gr.), of a river which enters the sea at that spot, and of a territory of about 720 English square miles adjacent to and administered from the town. Formerly the name was often extended to the Malay Peninsula as a whole, but this usage is obsolete in English though still sometimes found in Continental works.

The earliest date in the history of Malacca occurs in Book 325 of the History of the Ming dynasty of China (1368—1643), which relates the sending of a Chinese mission to it in the year 1403, in consequence of which the local chief was shortly afterwards recognized as king by the Chinese Emperor. Previous to this time Siam had apparently claimed some kind of suzerainty over the country. Two alleged earlier references are very doubtful, one in chapter ix. of the Javanese history *Pararaton*, and the other in the Siamese *Kor Mongkhitrakhan* (*Majapahit*). The latter work certainly mentions Malacca as a vassal of Siam, but in its introduction it speaks of a Siamese king (Paramatralakanātha) whose reign began about 1435. The oldest strictly contemporary notice of the place occurs in the *Ying-yai Sheng-lan* of Ma Huan, which records a Chinese mission to it in 1409 and states that at that time the king and people of Malacca carefully observed the tenets of Islam. As Malay traditional history connects the rise of Malacca with the fall of Singapore (probably circa 1327), it seems likely that the establishment of Islam as the official religion in Malacca may have occurred between these dates.

Owing to its position on the trade route from India and Western Asia to the Malay Archipelago, China, and Japan, Malacca became in the xvth century the most important of the Malay states; it was visited by traders from various countries, many of them being Muslims from Northern and Southern India, the Persian Gulf and the Red Sea, and it became the centre of a Muslim propaganda of which the earliest successes in this part of the world had already been registered by Marco Polo in North-Eastern Sumatra before the close of the

xiiith century. After the middle of the xvth century Malacca territory was increased by the conquest of Pahang (on the East coast of the Peninsula); and for a time the kingdom included all the coasts of the centre and South of the Peninsula to about 4° N. together with a suzerainty over the parts of Sumatra lying opposite to it. Siam made several unsuccessful attacks on Malacca during this period.

The growth of this incipient empire, which however already showed signs of decay in the form of internal divisions and bad administration, was cut short by the Portuguese conquest in 1511, whereby the town and its immediately adjoining territory, together with the command of the sea, fell into European hands. Though often challenged by the attacks of their Muslim neighbours (especially the new state of Aceh [Achin] in Northern Sumatra), the Portuguese maintained their hold on Malacca till 1641, when after a prolonged siege it was taken by the Dutch. In 1795 it was occupied by the British, in the name of the Prince of Orange, and held until 1818, when it was returned to the Netherlands under the provisions of the treaty of Vienna. In 1824 it finally became British and in 1826 it was incorporated in one government with Penang and Singapore and made subject to the East India Company.

During the Dutch period the importance of Malacca as a trading centre declined: it was never allowed to compete seriously with Batavia, and in the end it was quite overshadowed by Penang (founded in 1786) and Singapore (founded in 1819). In recent times it has shared in the general economic development of the Peninsula; but it only ranks as the fifth town in British Malaya, with a population (in 1931) of 30,671 (of whom about one-fifth were Muslims) in an area of 3.5 English square miles. In the whole settlement or territory of Malacca, including the town itself, the population was 153,522; of whom 83,635 were Malays proper (including a considerable number of Minangkabau descent), 2,777 other Muslims (such as Javanese, Banjarese, etc.) of similar Indonesian stock, 1,146 Muslim Indians, 257 Muslim Chinese, and 56 Arabs, making an approximate total Muslim population of 87,871, almost all of whom were Sunnis of the school of Shafi'i. Of the rest of the Asiatic population about four-fifths were Chinese and one-fifth Hindus.

(C. O. BLADEN)

MALAGA, Arabic *Mālaqa* (ethnic: *Mālaqa*), a large town in Spain on the Mediterranean and capital of the same name, has at the present day 133,000 inhabitants. It is built at the centre of a bay commanded by the hill of Gibralfaro (the *Ujhal Fārsh* of Idrisi). The town is traversed from north to south by the "rambla" (i.e. the bed, usually dry [Arabic *ramla*]) of the Guadalemeña

(*wadī 'l-mudlana*) which, while very often dried up, sometimes overflows in the rainy season. To the west of the town lies the Vega or Hoya of Malaga where the vegetation is exotic and extremely luxurious.

Malaga, the ancient *Mālaqa*, was founded by the Phoenicians and remained for long under Roman rule traces of a deep Punic influence; its port under the Empire was one of the most important in the Iberian peninsula. At a later date it was the see of a bishop. It was taken from the Byzantines in 571 by the Visigothic king Leovigild. In 711 it was taken by a Muslim force sent from Ecija by Tariq. It soon became an important Muslim town and in time supplanted Archidona (Archidona, q.v.) as capital of the province of *Reiyo* (Latin: *regio*) where in the time of the governor Abu 'l-Khattar al-Husam b. Dā'ir al-Kalbi the Arab *ghazw* of Jordan (al-Urdunn) was settled in 125 (742). Malaga welcomed the founder of the Umayyad dynasty of Spain, 'Abd al-Rahmān I al-Dāghil, after his landing at Almorovar and his triumphal progress through the district of Elvira. But, in the second half of the third (ninth) century, the province of *Reiyo* including Malaga became closely involved in the troubles stirred up by the nationalist 'Umar b. Hafsun. In the reign of the Emir Muhammad b. 'Abd al-Rahmān b. Hakam, according to the historian Ibn Haiyān, the province supplied for a summer expedition (*ḡiḡa*) against Galicia an imposing number of horsemen: 2,600. Later, when the rebel was causing anxiety to the Emir 'Abd Allāh an expedition on a large scale had to be undertaken against the province of *Reiyo*. An army under the command of prince Abūn son of 'Abd Allāh took the field in 291 (904) and inflicted a severe defeat on the troops of Ibn Hafsun. Three years later, the same general had to besiege Malaga which was held by the rebel Musawwir b. 'Abd al-Rahmān. Another expedition was again led against Malaga in the reign of 'Abd Allāh in 297 (909).

The great caliph 'Abd al-Rahmān III, on ascending the throne, had no peace until he succeeded in putting down the rebellion of Ibn Hafsun. In the early years of his reign several expeditions were again sent against the rebels in the province of *Reiyo* of which Malaga was the port but not yet the capital. Once order was completely restored by the sovereign, Malaga entered on a long period of prosperity which continued till the end of the Umayyad caliphate.

From being capital of a province, Malaga became the capital of an independent kingdom in the period of the *waṭiḥ al-jamāl*. The Hammūdid after having had to renounce their claims to the caliphate of all Muslim Spain were able to hold out in a little principality in the S.E. of Spain with Malaga as capital. At the same time another branch of the same family founded a little kingdom around the town of Algeiras. The Hammūdid dynasty of Malaga survived till 449 (1057) [on it cf. the article *ḡamāṭiṭ*]. The king of Granada, the Zīrid Bādīs b. Ḥabbūs, had hitherto been nominally their vassal. He decided to cast off their suzerainty and seize their principality. He did this with ease and called the last Hammūdids to Africa: his son al-Mu'izz was appointed ruler of Malaga. On the death of Bādīs in 466 (1073) his kingdom was divided between his two grandsons 'Abd Allāh and Tamīm and Malaga

fell to the latter. The town very soon passed to the Almoravids and then to the Almohads. When in 629 (1232) Muḥammad I Ibn al-Aḥmar founded the Nasrid kingdom of Granada, Malaga and its province formed part of his lands and remained in the power of the dynasty till the period of the Catholic Kings. Ferdinand and Isabella took Malaga from the Muslims on Aug. 18, 1487 after a close blockade.

The Arab geographers of Muslim Spain almost all give enthusiastic descriptions of Malaga. Idrisi (xith century) mentions two of its suburbs, praises the sweetness of its waters and the flavour of its fruits. Ibn Baṭṭūṭa in the second half of the xivth century says much the same and adds that a fine gilt porcelain was made at Malaga which was exported to the whole Muslim world. Finally Ibn al-Khaṭīb frequently speaks of Malaga in his description of the kingdom of Granada; one of his minor works is devoted to a comparison of Malaga with Salé, the *Mufakkarat Malaga wa-Salé* (the Arabic text has been published from two MSS. of the Escorial by M. J. Müller, *Wettstreit zwischen Malaga und Salé*, in *Beiträge zur Geschichte der weltlichen Araber*, p. 1—13).

Very few monuments of the Muslim period survive in Malaga, which have not been very much altered. The old chief mosque has become the cathedral. According to the author of *al-Rawḍ al-miṣṣar*, this *ḡriba* had five naves and five doors, two on the side facing the sea, one on the east front (*Bāb al-Wādī*) and one on the north side (*Bāb al-Baḥr*). Another mosque at Malaga built in the *ḡriba* is said to have been founded by the traditionist Mu'awiya b. Sāliḥ of Emma (d. 158 = 775). The old Muslim citadel is still called *Alcazaba*. There are very few relics of Islam in it, a vaulted gateway (Arco de Christo) and a tower (Torre de la Vela). This citadel was joined to another fortress by a double rampart built on the hill of Gibralfaro; it was restored at the end of the xiiith century by the Nasrid rulers of Granada.

Malaga in the Muslim period remained an important sea-port and an active centre of shipbuilding, less important however than its neighbour Almeria. This *Dār al-Sinā'a*, the name of which has survived in the form *Atarazana*, occupied the actual site of a market and one of the gates with the motto of the Nasrids (*fā ḡalibū illa'llāh*, "There is no victor but Allāh") is still standing.

(E. LÉVI-PROVENÇAL)

MALĀḤIM (A., sing. *malḥama*) came, after a long and obscure development, to mean "destinies", either simply *al-malāḥim*, or *kutub al-malāḥim* or in the singular. The word was already quite adequately explained by De Sacy in his *Choix de mathie arabe*, II, 298—302, on the basis of several passages in Ibn Khaldūn's *Muḥaddira*. There Ibn Khaldūn defines *al-malāḥim* as "numerous books on dynastic changes and events (*hidṭhān al-dawā*)", written in verse and prose and *radjaz*, many of which are spread abroad amongst the people, some dealing with the changes in the Muslim people (*al-milla*) as a whole, and others with particular dynasties, but all ascribed to well known individuals", although, in Ibn Khaldūn's opinion, it would be difficult to prove the correctness of any of these ascriptions (Quatremère's text, II, 192 foot; De Slane's transl., II, 226). The most famous case of these is the book called *al-Djāfī* (q. v. and the references there). Such predictions as to public affairs have close connection with, and were probably developed from the Jewish and Christian apocalypses. As there are many stories, both in sober historians and in popular tales, describing these books as secretly preserved and consulted by dynastic leaders for their own guidance, they have also contacts with the Roman Sibylline books. The popular doctrine of the Mahdi [q. v.] and of the Last Day (*al-Kiyāma* [q. v.]) became inextricably confused with this branch of Muslim literature.

The derivation of *malḥama* and the development of its meanings are very obscure. The word does not occur in the Qur'an which has the root only in *laḥm* and *luḥm* with the concrete meaning, "flesh". Yet the root *l-ḥ-m*, like the cognate Hebrew root, had apparently two very separate but old meanings, "food" and "fighting". Further, the fact that the Hebrew food-word, *leḥem*, means "bread", while its exact equivalent in Arabic means "flesh" would suggest a separation very far back rather than a borrowing (cf. the comparative treatment and references in Browne-Driver-Briggs, *Hebrew Lexicon*, p. 535 109). In old Arabic the meaning of decisive fighting, leading to defeat, pursuit and slaughter, seems to be certain (cf. the treatment in the *Lisān*, xxii, 9—12, and add to the quotations there *Hamān*, ed. Freytag, p. 124, 728; *Dawān* of Tufail b. 'Awf, ed. Krenkow, p. 171, l. 29, with translation and note on p. 15).

The *Lisān* endeavours to connect the meanings (flesh; warp and woof in weaving; close, entangled fighting) under the general idea "being intricate, mixed" (*ḡṭṭān*, *ḡṭṭilān*) or with the picture of the flesh of the slain on the battle-field. But, in view of the Hebrew usage, it is better to be satisfied with the meaning of *malḥama* as "a stricken field"; the *Lisān* (p. 10) reiterates the idea of war and fighting with much slaughter and especially "in the Fitna" (*ḡṭṭān*), its only allusion to the prophetic and eschatological usage. An epithet of Muḥammad is "the prophet of the *malḥama*" and of that the *Lisān* gives two explanations: (i) "the prophet who was sent with the sword" (as in another tradition, *ḡṭṭān ḡṭṭān*); (ii) "the prophet of union and good order" (*ḡṭṭān*).

There is very little general prophecy in the Qur'an as to future historical events in this world; but in Tradition there is a great deal. Even the two *Ṣaḥīḥ's* have sections on such future *ḡṭṭān* —

apparently the oldest word for them and frequent in the *Kur'ān* — especially those leading up to the Last Day. In Bukhārī (*Bulāḡ* 1315, ix. 46-61; Book 92 in Wensinck, *Handbook*) the Prophet is quite explicit in foretelling such woes and trials to come and in warning how they must be met. In Muslim (Constantinople 1329-1333: viii. 165-210; Book 52 in Wensinck, *Handbook*) there is a similar series of hortatory predictions, but, also, an explicit statement (p. 172 sq.) that the Prophet foretold everything which would happen to his People until the Last Day. By Ibn Khaldūn (*Maḡaddima*, ed. Quatremère, ii. 182 sqq.; transl. De Slane, ii. 212 sqq.) this tradition is cited and others, by later and less weighty authorities, which make the Prophet give a dynastic history for future Islām, with the names, fathers' names and tribes of all leaders of revolts until the end.

The use of the term *malāḥim* in connection with those prophecies appears first among the 'Alids in their doctrine of the *Djafr*. The *Fihrist* gives two occurrences: 'Alī b. Yaḡmīn (d. A. H. 182; p. 224, l. 22) had a *Kitāb min umūr al-Malāḥim* and Ismā'īl b. Mīhrān (p. 223, l. 20) had a *Kitāb al-Malāḥim*. But the use must have spread very rapidly. In the *Maḡārib* of al-Baghawī (Cairo 1318, ii. 128 sqq.) those traditions are classified and one section is *Ḥab al-Malāḥim* (p. 130-33). All the traditions bear on the wars of the Last Days but the word *malḥama* itself occurs only in the early part of the *ḥisān* section (p. 132 middle) in such phrases as "the *Malḥama*", "the great *Malḥama*", connected with the capture of Constantinople and the appearance of al-Dajjāl. In the *Mishkāt al-Maḡārib* (Dihlī 1327, p. 396 sqq.) the text is practically the same, only adding the names of the collections from which the traditions are taken, Abū Dāwūd and al-Tirmidhī. Abū Dāwūd has a separate section on *malāḥim* (N^o. 36 in Wensinck). In such a book of edification as the *Tadhkirat* of al-Kurtubī (d. 671 = 1272), in the *Muḥḥataṭ* of al-Shā'irānī (Cairo 1324) the sections on the *Malāḥim* have swallowed up the whole doctrine and history of the Mahdī (p. 113-21), to the aid of whom there is sent an angel called *Qamāra* (i), *qāḥib al-malāḥim*.

Ibn Khaldūn has recorded the final form which these prophecies took. Traditions put in the mouth of the Prophet were supplemented and largely displaced by calculations of astrologers and by the speculations of pantheistic Sufis using the science of *Simiyā* [q. v.] in the interests of the 'Alids. We have thus to distinguish sharply between (i) the *malāḥim*-predictions registered in the canonical books of traditions and in the literature of edification based upon these and (ii) the *malāḥim*-books based upon secret tradition and on astrology which went back to the 'Alids and are represented best by the *Djafr*. For, besides the *Djafr* ascribed to Dīfār al-Sāḍik, there was also an astrological *Djafr*, ascribed to Ibn Ishāḡ al-Kindī, dealing with the dynastic destinies of the 'Abbāsids. An asserted fragment of this, called the Little *Djafr*, was in circulation in the Maghrib in Ibn Khaldūn's time, but had apparently been composed in the interests of the Muwāḥhid. Further Ibn Khaldūn had known as in circulation in the Maghrib several poems of this class in the interests of different western dynasties. In the Orient he had heard of several such *malāḥim* ascribed to Ibn Sīnā and he had actually had

knowledge of one such ascribed to Ibn al-'Arabī. In Cairo he had found another, also ascribed to Ibn al-'Arabī, giving a horoscope for that town. In the Orient, too, he had seen a *malḥama*-poem by a certain Sifī, Muḥammad al-Bājirīkī, of the Karandall Fraternity of darwishes, who left behind him a heretical sect, al-Bājirīkīya, and who died 724 (1324). Ibn Khaldūn gives a mass of details on this *malḥama* and on its author, who called it a *Djafr*. It dealt with the dynasties of the Mamlūks and Ibn Khaldūn knew it in two recensions from which he quotes. For still more details on this genre of literature, based on Ibn Khaldūn's personal knowledge, see Quatremère, text, ii. 193-201 (the *Bulāḡ* texts are not complete) and De Slane's translation, ii. 226-237. In stories, there are frequent references to the science of *malāḥim* as one of the esoteric sciences along with astrology and *qarāb al-ramal*. Thus, in Habicht's text of *The 1001 Nights* (ed. Breslau, iii. 218) in the Story of Kamar al-Zamān and Budūr, a form closely akin to the version of Galland and different from that in the second Calcutta and the *Bulāḡ* editions, Marzawān, the foster-brother of Budūr, is described as learned in the sciences of astronomy and the sphere and reckoning and algebra and *ramal* and *malāḥim*.

Bibliography: is given in the course of the article.

MAL'AK. [See MALĀ'IKĀ.]

MALĀ'IKĀ, angels, is the Arabic broken plural of an early Semitic (Canaanite?) word *mal'ak*, meaning "messenger". The evidence would suggest that it is a loan-word, coming into Arabic from Hebrew: there is no trace of a verb in Hebrew (nor in Phoenician, where the noun occurs in later inscriptions), and in Arabic the root, even, is in the greatest uncertainty, being referred to a dubious *mal'ak* (Lane, p. 81, b, c; *Lisān*, xii. 272 sqq.; Tabari, *Tafsīr*, i. 150) and to a still more dubious *mal'ak* (*Lisān*, xii. 370). The singular in Arabic is normally *malak* without *hamsa*, and so always in the *Kur'ān*; although the *Lisān* in two places (xii. 274, 2; 371, 2) quotes the same verse as a proof that *mal'ak* does occur, but as an exceptional form (*shūdhūh*). Both singular and plural in Arabic are used only in the sense "angel". In the *Kur'ān* it occurs twice in the dual (*malakain*, ii. 96; vii. 19); of the two angels Hārūt and Mārūt (q. v. and under *mar*), and of Adam and Eve being tempted in the Garden to believe that they may become angels. The plural occurs very often in the *Kur'ān* (in Flügel's *Concordance* under *mal'ak*, p. 171) but the singular only 12 times (Flügel under *mal'ak*, p. 183). These are of the people demanding revelation by an angel rather than a human being (*ḥaḡḡar*, vi. 8, 9, 50; xi. 15, 33; xvii. 97; xxv. 8); women think Joseph an angel for his beauty rather than a human being (*ḥaḡḡar*, xii. 31); an angel's intercession (*shaf'a*, liii. 26) does not avail; twice as collective for angels, beside the *'arsh* (lxix. 17), and in rows and rows (lxxxix. 23).

In xxxii. 11 "the angel of death" (*malak al-mawt*) occurs but not by name; see article *mal'ak*, and references in tradition in Wensinck, *Handbook*, p. 226. *Djibril*, the angel of revelation, is named three times (ii. 91, 92; lxvi. 4); cf. traditions on him in Muslim, i. 109-111 of ed. Constantinople 1333, and other references in Wensinck, p. 59. In *Kur'ān* xxvi. 193-195, *Djibril*, unnamed, is called

"the Faithful Spirit" (*al-rūḥ al-aqīm*); he brings down the revelation to the *ḥab* of Muhammad in a clear Arabic tongue. There are other descriptions of him, still unnamed, in *Qur'ān* iii. 5-18 and lxxii. 19-25, as appearing plainly to Muhammad in revelation. He, as "our Spirit" (*rūḥanā*), was sent to Maryam (xix. 17). He is called "the Holy Spirit" (*rūḥ al-quds*) in xvi. 104 and Allāh's aided *Isā* with the same (ii. 84, 254; v. 109). Mikā'il (variant Mikāl) is named (ii. 92) as an angel of the same rank as Djibril; see a long and apparently true story of how his naming came about in Baiḍawī (Fleischer's ed., l. 74, 18 199.); in traditions he, with Djibril, appears to Muhammad and instructs him; he does not laugh (Weissbach, p. 152^b); Muhammad called the two his wazir's of the angels. To Isā'il (q. v.), the angel with the trumpet of resurrection, there is no reference either in the *Qur'ān* or in canonical traditions but very much in eschatological legend. In *Qur'ān* xliii. 47, the tortured in hell call to the keeper of hell, "O Malik!" and in xcv. 18, the guards of hell are called *al-Zabāniya*, an otherwise unused word, meaning apparently, "violent thrusters" (*Liṣān*, xvii. 55); the number of these, *Qur'ān* lxxiv. 30, is sixteen and they are asserted specifically to be angels; apparently to guard against the idea that they are devils; they are called "rough, violent" (*ghillāṣ, ḥidād*). Another class of angels are those "Brought Near" (to Allāh), *al-muqarrabūn* (iv. 170); these praise Allāh day and night without ceasing (xxi. 20); Baiḍawī calls them also *al-ḥawṣiyūn* (on *Qur'ān* ii. 28; Fleischer's ed., l. 47, 22); and *al-ḥawṣiyūn* (حَوَصِيّوْنَ) on *Qur'ān* iv. 170 (Fleischer's ed., l. 243, 24) as those that are around the *ḥab*. The same term, *muqarrab*, is used of Isā' (*Qur'ān*, iii. 40) as he is in the company of the angels nearest Allāh; cf. article 183, above, for his semi-angelic character. At the beginning of the *Sūra* of the Angels (*Qur'ān* xxxv.) there is a significant description: "making the angels messengers (*rasūlūn*), with wings two and three and four; He increases in the creation what He wills"; this has had much effect on later descriptions and pictures. They are guardians (*ḥafẓa*) over mankind, cognizant of what man does and writing it down (*kitāb*); *Qur'ān* lxxvii. 10-12). In xxi. 94 the writing down is ascribed to Allāh himself. In lxx. 4; lxxvii. 38; xcvii. 4, there occurs the very puzzling phrase "the angels and *al-rūḥ*". Baiḍawī on the first two passages shows how perplexing the distinction was found (Fleischer's ed., ii. 356, 1; p. 383, 4): "the *rūḥ* is an angel set over the spirits (*al-arwāḥ*); or he is the whole genus of spirits; or Djibril; or a creation (*ḥalq*) mightier than the angels"; cf., too, Kaẓim's *Al-faḥḥ*, ed. Wasmuth, p. 36. For spirits and the conception "spirit" in Islām see article 181c. In the *Qur'ān* there is no reference to the two angels, Munkar and Nakir, who visit the dead man in his grave, on the night after his burial, and catechize him as to his Faith. Thereafter, if he is an unbeliever, his grave becomes a preliminary hell, and if he is a believer, it becomes a preliminary purgatory from which he may pass at the Last Day into paradise; it may even, if he is a saint, be a preliminary paradise. This is called technically the Questioning (*ḥawṣ*) of Munkar and Nakir and, also, the Punishment of the grave (*ʿadāb al-qabr*). This doctrine, similar to the Lesser Judgment of Christian theology, is

one of the *ṣam'iyyāt* (to be believed on oral testimony) and is based on the implicit meaning of *Qur'ānic* passages (xiv. 32; xl. 11, 49; lxxi. 25) and upon explicit traditions (Taftāzūl's commentary on Nasāfi's *ʿAḥḥād*, ed. Cairo 1321, p. 109; *Mawāḥiḥ* of al-Jāḥiz with commentary of al-Djardjān, ed. Brill 1266, p. 590 199.). There is a still fuller account and discussion by the Hanbalite theologian Ibn Kaṣīr al-Djāwī (Brockelmann, *G. A. L.*, ii. 106, N^o. 23) in his *Kitaḥ al-Kaṣḥ*, ed. Haidarabad 1324, p. 62-144, §§ vi-siv.

The angels are, also, called the heavenly host, or multitude (*al-mala' al-a'la*, xxxvii. 8; xxxviii. 69) and guard the walls of heaven against the "listening" of the *ḡinn* and *ḥaṣīf*'s. See further on this under *ḡinn*, iii. p. 410^a.

The *Qur'ān* lays stress on the absolute submission and obedience of the angels to Allāh, "To Him belong those who are in the heavens and in the earth and those who are with Him" (*ʿindahu*) are not too proud for His service (*ʿibāda*) and they do not become tired. They praise, night and day, without intermission" (xxi. 19, 20). "They do not anticipate Him in speech and they labour in His command" (xxi. 27). At the creation of Adam they are distinguished in this respect from him and his future race: "while we praise Thee and sanctify Thee" (ii. 28). Over the Fire there are set certain terrible and powerful angels; "they do not rebel against Allāh as to what He commands them and they do what they are commanded" (lvi. 6). But does this absolute obedience extend to impeccability (*ʿiṣma*; q. v.)? The *Qur'ān* is emphatic as to their obedience, but is in contradiction as to their created nature and as to their relationship in that respect to the *ḡinn* and to the *ḥaṣīf*'s. Thus, in several passages in the *Qur'ān*, the story is told of the creation of man out of clay and that the angels were hidden by Allāh to prostrate themselves to him. This they all did "except Iblīs" (*iblis*; *Qur'ān* ii. 32; vii. 10; xv. 31; xviii. 48; xxxviii. 74). Iblīs, therefore, must have been an angel; as Baiḍawī says, "If not, the command to them did not apply to him and his being excepted from them was illegitimate" (Fleischer's ed., l. 51, 21). This would mean that the angels were not impeccable. But, again, in *Qur'ān* xviii. 48 the statement is expanded, "except Iblīs; he was of the *ḡinn*"; so he departed from the command of his Lord" (*ṣaḥaḥ 'an amr al-ḥab*). Further, in *Qur'ān* vii. 11; xxxvii. 77, Iblīs pleads in justification that man was created of clay (*ṣaḥ*) but he of fire (*nār*); and the *ḡinn* are acceptedly created of fire; "fire of the *ḥawṣ*" in *Qur'ān* xv. 27, "of a *mawḥ* of fire" in *Qur'ān* iv. 14. The meaning of *mawḥ* is unknown; the *Liṣān* (ii. 189, 13-14) gives a number of contradictory explanations, but it is probably an unidentified loan-word. Iblīs and the *ḡinn*, then, were created of fire; but there is no statement in the *Qur'ān* as to the material out of which the angels were formed. A tradition traced back to A'ishā is the foundation of the accepted position that the angels were formed of light: "The Prophet said, 'The angels were formed of light (*ḥalq min nūr*) and the *ḡinn* were formed of a *mawḥ* of fire and Adam of that which was described to you'" (Muslim, vii. 226 of ed. Constantinople 1333; Radlwi, i. 52, 1). Another difficulty in the doctrine of the impeccability of the angels is the *Qur'ānic* statement as to Hārūt and Mārūt referred

to above. These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Bābil and there to teach magic to men. But, it is answered, the Qur'ān says nothing of their fall; (ii.) teaching magic is not practising magic; (iii.) they always first warn those who come to them, "We are only a temptation (*fitna*); so do not disbelieve" (Qur'ān ii. 96); cf., further, Tafsīrīn on the *ʿAḥzād* of Nassāfi, ed. Cairo 1321, p. 133.

In Baiḍawī on Qur'ān ii. 32, there is a long discussion of the angelic nature (ed. Fleischer, i. 51, so to p. 52, 2) which, however, runs out in the despairing statement that knowledge on the point is with Allāh alone (*al-ʿIlm biḥdāllāh*). Perhaps Iblīs was of the *ḡinn* as to his actions (*ʿasā*) but of the angels as to species (*naṣb*). Also, Ibn ʿAlbās has a tradition that there was a variety (*ḡarḡ*) of the angels who propagated their kind (this has always been regarded as an essential characteristic of the *ḡinn* and of the *ḡalḡ* as opposed to the angels) and who were called *al-ḡinn*; and Iblīs was of these. Or, that he was a *ḡinn* brought up among the angels and identified with them. Or, that the *ḡinn* were among those commanded to prostrate themselves to Adam. Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e.g. the prophets, are guarded against sin but most are not. Further, perhaps a variety of the angels are not essentially different from the *ḡalḡ* but differ only in accidents and qualities as men are virtuous or evil, while the *ḡinn* unite both, and Iblīs was of this variety. The tradition from ʿAḡḡa is no answer to this explanation, for light and fire in it are not to be taken too precisely; they are used as in a proverb, and light is of the nature of fire and fire of light, they pass into another; fire can be purified into light and light obscured to fire. So al-Baiḡawī.

With this should be compared the scholastic discussion in the *Mawāḡif* of al-ʿIḡḡī, with the commentary of al-ʿIḡḡḡī (ed. Bonn 1266, p. 576). In it the objector to the *ḡinn* of the angels has two grounds: (i.) their urging upon Allāh that he should not create Adam showed defects (slander, pride, malice, finding fault with Allāh) in their moral character; (ii.) that Iblīs was rebellious, as above. These grounds are then answered scholastically. Then various Qur'ānic texts, as above, on the submission and obedience of the angels are quoted. But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins. The point, therefore, cannot be absolutely decided. Individual exceptions under varying circumstances may have occurred, just as, while the *ḡalḡ* as a class were created for evil (*al-ḡalḡ al-ḡalḡ*), there is a definite tradition (*ḡarḡ* by al-Māḡḡḡī on *al-ḡalḡ* ascribed to Abū Hanīfa, ed. Hahārāḡḡ 1321, p. 25) of one Muslim *ḡalḡ*, a great-grandson of Iblīs, who appeared to Muḡammad and was taught by him certain sūras of the Qur'ān.

The story of Hārūn and Mārīḡ suggests that the angels possess sex, although they may not propagate their kind. But "they are not to be described with either masculinity or femininity" (*ʿAḡḡīd* of Nassāfi, ed. Cairo 1321, p. 133). Tafsīrīn and the other commentators in this edition explain that there is no authority (*naḡḡ*) on this

point and no proof by reason (*ʿaḡḡ*); it should, therefore, be left unconsidered and that, apparently, was the course followed by al-ʿIḡḡī and al-ʿIḡḡḡī. They may have sex and not use it. In that respect man who has in him the possibility of sin and must himself rule his appetites of lust (*ḡalḡ*) and of anger (*ḡalḡ*) has a higher potentiality of excellency than the angels (Baiḡawī on Qur'ān ii. 28, ed. Fleischer, i. 48, 2 227).

This leads to the second question as to the angels which scholastic theology has considered, the relative excellency of angels and men, and, especially, of angels and prophets. This is stated shortly by Nassāfi (p. 147 of ed. cited above): (i.) "The Messengers (*rasūḡ*) of mankind (*al-baḡḡar*) are more excellent than the Messengers of the angels and (ii.) the Messengers of the angels are more excellent than the generality of mankind and (iii.) the generality of mankind are more excellent than the generality of the angels". Tafsīrīn develops that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, but that the other two statements (i. and iii.) will bear argument. He urges (i.) the prostrating of the angels to Adam; (ii.) that Adam was taught all the names of things (Qur'ān ii. 29); (iii.) that Allāh "chose" (*ḡḡḡḡ*) Adam and Nūḡ and the family of Ibrāḡīm and the family of ʿIsrāḡ over all created things (*ʿaḡḡ al-ḡalḡ*; Qur'ān iii. 30); (iv.) that mankind achieves excellencies and perfections of knowledge and action in spite of the hindrances of lust and anger. But the Mu'taḡilites and the "philosophers" (*al-falḡḡḡ*) and some Ash'arites held the superior excellency of the angels. They urged (i.) that they were spirits, stripped of materiality (*arwāḡ muḡḡarrada*), complete actually, free of even the beginnings of evils and defects, like lust and anger, and from the obscurities of form and matter (*ḡubūḡ al-ḡḡḡḡ wa ḡḡḡ*), capable of doing wonderful things, knowing events (*ʿaḡḡ*), past and to come, without error. The answer is that this description is based on philosophical and not Muslim principles. (ii.) That the prophets learn from the angels, as in Qur'ān xvi. 193; iii. 5. The answer is that the prophets learn from Allāh and that the angels are only intermediaries. (iii.) That there are multiplied cases both in Qur'ān and in tradition where mention of the angels precedes that of the prophets. The answer is that precedence is because of their precedence in existence or because their existence is more concealed (*al-ḡḡḡ*) and, therefore, faith in them must be emphasized. (iv.) In Qur'ān iv. 170, "al-ḡalḡ does not disdain to be an *ʿaḡḡ* to Allāh nor do the angels" must mean, because of linguistic usage, that the angels are more excellent than ʿIsā. The answer is that the point is not simple excellency but to combat the Christian position that ʿIsā is not an *ʿaḡḡ* but a son to Allāh. In the *Mawāḡif* (p. 572-578) there is a similar but much fuller discussion which involves a philosophical consideration of the endowment—mental, physical, spiritual—of all living creatures from immaterial spirits to the lower animals (*al-baḡḡa*).

In the *ʿAḡḡīd al-Maḡḡḡīn* of al-Karḡīnī (ed. Wustenfeld, p. 55-63) there is an objective description of the angels in all their claims, in which the statements of Qur'ān and Sunna are adjusted to the Aristotelian-Neoplatonic universe

with its spheres (*al-afāq*), in accordance with al-Karwini's general aim to give a picture of the created universe in its details and wonders. Yet, apparently, while the angels possess the quality "life" (*ḥayā*) and are the inhabitants of the heavens and of the heavenly spheres (*jahān al-samawāt*) they are not to be reckoned among the animals (*al-ḥayawān*). Al-Damiri includes mankind and the *qinn*, even the diabolic (*mutashakkaf*) *qinn*, such as the *ghāl*, in his *Hayāt al-Hayawān* but not the angels. Equally acute and scholastic with the discussion in the *Mawāḥiṣ*, and more spiritual than that by Karwini, is al-Ghazālī's treatment of the mystery of the angelic nature in some of his specialistic smaller treatises. For him it is part of the general question of the nature of spirit to which his smaller *Maqāṣid* is devoted. See, too, the larger *Maqāṣid* (ed. Cairo 1303) in *Rubn*, II, p. 23 sqq., and the translation by W. H. T. Gairdner of his *Mithqāl al-Anwār* (London, Royal Asiatic Society, 1924), *passim*.

The above is a statement of Muslim ideas as to the angels. But Muslim literature also takes account of non-Muslim ideas on them, as those of "philosophers", Christians, dualists, idolaters. These will be found given shortly by Baiḍawī on *Kurʾān* II, 28 (ed. Floischoi, I, 47, 10 sqq.) and in more detail in *Dict. of techn. terms*, p. 1337 sqq.

MALATYA, an old city, not far from the upper Euphrates. It lies at the junction of important roads (in antiquity: the Persian royal road and the Euphrates route; in modern times Samarra-Sivas-Malatya-Diyarbakir and Karsartaya-Albistan-Malatya-Kharput) in a plain, the fertility and richness of which in all kinds of vegetables and fruits was celebrated by the Arab geographers, as in modern times by von Möltke and others, at the northern foot of the Taurus not very far south of Tokkima-ḡā (Arab. Naḥr al-Kubākib) which is there crossed by the old bridge of Kırğöç. The town was supplied with drinking-water by the springs of Üçün Dāwūdīya and by the Euphrates. Weaving used to be a flourishing industry there; according to Ibn al-Shihna there were once 12,000 looms for spinning wool in Malatya but they no longer existed in his time.

The town appears as Melitida in Assyrian cuneiform inscriptions and two "Hittite" steles have been found there (to be more accurate: at Arslan Tepe, a little south of Malatya; Messerschmidt, *Corpus Inscr. Hittite*, in *M. V. A. G.*, 1900, part IV, p. 13; 1906, part V, p. 7). It is probably also to be identified with the district called *M-l-e* (last letter uncertain) in the inscription of king Zabar of Hamat, (c. 800 B.C.) which Pognon found in 'Aṣṣ near Aleppo. Pliny (*Nat. Hist.*, VI, 8) calls the town *Melita* a *Somiranide condita*; the name of the legendary foundress has perhaps survived in that of the fortress of Shamra which Michael Syrus (*Chronicle*, transl., Chabot III, 272) mentions in the sixth century in the land of Sawād

in the region of Malatya. To its position on the Oriental *limit* Malatya owed its great prosperity in the Roman period. From the time of Titus it was the headquarters of the *Legio XII Fulminata*; it was much extended by Trajan and under Justinian raised to be the capital of the province of Armenia III. Anastasian and Justinian refortified and beautified it. After his severe defeat at Malatya in the autumn of 375 Khosrow I burned the town (John of Ephesus, VI, 9; E. Stein, *Studien zur Gesch. d. Byzant. Reiches*, Stuttgart 1919, p. 66-8; 83 note 9; 200 Habib b. Maslama al-Fihri was sent by Iyad b. Ghāsim from Armenia VI (Shimshār) against Malatya and took the town; but it was later retaken from the Muslims. When Mu'āwiya became *wālī* of Syria and al-Djazīra, he again sent Habib b. Maslama against the town. He stormed it in 36, left a troop of cavalry in it to guard the frontier and placed a governor in it. Mu'āwiya himself visited Malatya on his campaign against Asia Minor and left a large garrison in the town which henceforth became one of the headquarters for the summer campaigns into Bilād al-Rūm. When the people abandoned the town in the time of the caliph 'Abd al-Malik and 'Abd Allāh b. al-Zubair, it was taken and sacked by the Byzantines; on their withdrawal, it and the whole of Armenia IV was settled by the Armenians and and Nabataeans, that is Aramaic speaking peasants, driven out of their kingdom by the emperor Philippos (Noldeke, *Z. D. M. G.*, xxv, 125; al-Balādhuri, ed. de Goeje, p. 185; Michael Syrus, transl. Chabot II, 482; according to Theophanes the Armenians were settled in Malatya by Philippos in 712 A. D. They increased very much and were valuable allies of the Arabs in the wars against the Byzantines (Michael Syrus, *loc. cit.*). The caliph Omar settled the fugitive inhabitants of Turanda (now Derenda) in Malatya and made al-Djāwana b. al-Harith of the tribe of the Banī 'Anīr b. Sa'ya's governor. In 123 (740-741) a Greek army of 20,000 men under Ashkivash, the general of the Thema Armeniakon, advanced against Malatya and plundered the country round it. The inhabitants closed the gates and sent a messenger to Hishām in al-Raqāfa; but the latter soon heard that the Greeks had withdrawn and sent the messenger back with a body of cavalry. Later, when he himself took the field against the Byzantines, he camped before Malatya until the rebuilding of the town which the enemy had destroyed was completed (Balādhuri, *loc. cit.*; Michael Syrus, II, 306; Theophanes, ed. de Boor, year 743; Ps. Dionys, ed. Chabot, year 1051). The Emperor Constantine VI Copronymos in 135 (750) advanced on Kamakh and Malatya, whose inhabitants looked in vain for help to Mesopotamia, as a civil war was raging there. As the emperor knew this he demanded that the inhabitants should abandon the town. After at first refusing they finally agreed, being exhausted by the siege, left the town with all their goods and chattels and went to al-Djazīra whereupon Constantine levelled Malatya to the ground; nothing but a half ruined granary remained standing. Hishām Kalawdhīya was also destroyed and its inhabitants, like those of the other villages in Armenia IV, carried off into captivity (Balādhuri, *loc. cit.*; Michael Syrus, II, 518; Baethgen, *Abh. f. d. K. d. Morgenl.*, VIII, 3, p. 34, 127; Weil, *Gesch. d. Chalifen*, II, 15). Six years afterwards (139 A. D.) al-Manṣūr wrote to Ṣāliḥ b. 'Alī b. 'Abd Allāh who had in the

previous year defeated an army of 100,000 men under Constantine and retaken Malatya (G. W. Freytag, *Selecta ex histor. Halebi*, Paris 1819, p. 62, note 58) ordering him to rebuild and fortify the town. He then appointed his nephew, the Imam 'Abd al-Wahhāb b. Ibrāhīm, governor of al-Djazīra and its marches (*al-Djāzira*). He arrived there in 140 with al-Hasan b. Kāshān and Khurāsān troops, who were reinforced by Syrian and Mesopotamian troops to the number of 70,000. They camped at the ruined city and collected builders and workmen of all kinds from everywhere and rebuilt Malatya with its mosque and large barracks for the frontier troops; the work was finished in six months. Hish Kālawdhīyā was also rebuilt (Baladhuri, *loc. cit.*; Michael Syrus, ii. 522; Ps. Dionys., ed. Chabot, p. 67; Vāhūtī, *Mu'jam*, iv. 633; Weil, *Gesch. d. Chalifen*, ii. 35); a frontier fort was built 30 *mil* from the town and another on the Nahr Kubākīlī (Tōkhma-sū). Al-Manṣūr settled 4,000 Mesopotamian soldiers in Malatya to whom he gave increased pay and allotted lands as fiefs.

In the next year (141) Muḥammad b. Ibrāhīm was sent to Malatya with a Khurāsān army to protect the town from the enemy. The former inhabitants, at least those who were still alive, thereupon returned to Malatya. An expedition sent by the Byzantines against Malatya was defeated by Hārūn al-Rashīd (Baladhuri, *loc. cit.*). In the reign of al-Ma'mūn, his son, al-'Abbās, who was governor of al-Djazīra conducted a campaign against the Byzantines (Weil, *op. cit.*, ii. 239) from Malatya. In the summer of 222 (837) the emperor Theophilus went into Armenia via Zibāra, which he sacked and burned, and on his way back passed through the country of Malatya which was also laid waste and its inhabitants carried off prisoners into Byzantium (Michael Syrus, iii. 89; Mas'ūdi, *Murūj*, viii. 133 *sq.*; Tuhātī, Ya'qūtī and other Arabs wrongly date this campaign in 223 [838]; cf. for the contrary view Weil, *op. cit.*, ii. 310, note 1 and Bury, *Hist. of the East Roman Empire*, 1912, p. 260, 1; Markwart, *Hamlet Amirya*, xxviii. 1914, p. 44, 1). The town itself, which was handed over to him by the Roman prisoners there, he spared out of fear of an approaching army of the enemy. Towards the end of the following year al-Mu'tasim sent the Syrian amir Abū Sa'īd Muḥammad b. Yūsuf against the Byzantines but he only met with moderate success; the people of Malatya under Afshin and the amir 'Omar b. 'Abd Allāh b. Marwān al-Aḥṭā' of Malatya in alliance with the Armenians and 10,000 Turks then defeated the emperor Theophilus near the fortress of Duṣīmān (al-Mas'ūdī, *B.G.A.*, viii. 169; Mas'ūdi, *Chronogr. Byz.*, p. 418, 729; Weil, *op. cit.*, ii. 312). In 841, however, the Byzantines conquered al-Hadāth, Mar'ash and the land of Malatya. When in the middle of the 12th century the Paulicians (Arab. al-Ballīkātī, al-Baylīkī) some of whom lived in the country west and north of Malatya (Kaspet Ter Mardēan, *Die Paulicianer*, Leipzig 1893, p. 116 *sq.*) rebelled against Byzantium, the amir of Malatya, 'Omar b. 'Abd Allāh al-Aḥṭā' (*Ḥamṣ*, *Ḥamṣ*), protected them from their persecutors; their leader Karbeas built in this region the fortresses of 'Ayyawān (Ayyawān), Tephrikē (Diyarbakir) and Amara (Emirli, near Vanuz). Fighting went on for some years with varying results (Weil, *op. cit.*, ii. 363—365); finally 'Omar al-Aḥṭā' was completely defeated on a

campaign in Asia Minor in Rajab 249 (863) by the valiant Petronas (al-Bayrūtī), Michael III's general, with his whole army on the Mardī al-Uḥāl (Weil, *op. cit.*, ii. 380; Tomaschek, *Savun u. d. Quellengabel des Tigris*, S. B. Ak. Wien, cxxxiii, vol. iv., 1895, p. 23; on the site of the "Bishop's Meadow": Le Strange, *Eastern Caliph*, p. 138). The Emperor Basil I in 871 went against Tephrikē and Taranton (Dereunde); he plundered Zibāra and Samaisā and then encamped *ṣūḥ ṣū Zayduy weraṣū* (Nahr al-Zarūk, now: Cirmiklī-Sū), *ḥḍa ṣū Kapaṣṣṣu ierī* (Theophan. continuat., ed. Bonn, p. 268; Kastrā Karāmīs in Barhebraeus, *Chron. eccl.*, ed. Abbeloos-Lamy, i. 460; now: Cirmiklī, cf. Tomaschek, *Brit. z. alten Gesch. u. Geogr. Festsch. f. H. A. Lepel*, Berlin 1898, p. 141). But he was not able to take Malatya which was fortified (Hergenröther, *Phoenice*, ii. 242; Weil, *op. cit.*, ii. 471). His army suffered heavy losses during the siege and the emperor himself was nearly captured. Whether he undertook a second campaign against Malatya is doubtful (Weil, *op. cit.*, ii. 475).

The Arab general Mūsā in 304 (916—917) devastated Cappadocia from Malatya (Weil, *op. cit.*, ii. 635); similar invasions took place in 310 and the following years. It was not till 314 (926—927) that the Byzantines were able to exact their revenge. Under the brave Domestikos Joannes Kurkuas (Ibn al-Athīr, ed. Tornberg, viii. 221; *al-Dumistīk Kurkūsh*; Michael Syrus, iii. 122 *sq.*; 158; Kyriakos), they entered the district and advanced up to the suburbs of Malatya, laying waste the country and going as far as Shimshāt (Arsamusa) (in 315 according to Hamza al-Isfahānī, *Tārīkh*, ed. Gottwaldt, p. 205; transl. p. 158, wrongly "*in fines Samosatensis invadere*"). Kurkuas forced the amir of the town to send his son, Abū Ḥafṣ ('*Arḥḥal*'), and the general Abū 'Alī 'Ash' ('*Arḥḥal*') to him and to acknowledge the suzerainty of the emperor (Synecion Magister, Bonn, p. 741 *sq.*; Georg. Monach., ed. Murali, p. 834, while the Bonn edition p. 908 and Theophanes contin., ed. Bonn, p. 416 and Georg. Kedren., ii. 310 *sq.* wrongly write '*Arḥḥal*'). Kurkuas, himself an Armenian by birth, seems to have granted the lands of Malatya and Samaisā to the Armenian prince Mīch (Arab. Malīḥ, Greek *Maliaz*) who was however again driven out of Malatya and Samaisā in 320 by Sa'īd al-Dawla, uncle of the Hamdanid Nāṣir al-Dawla of Mawṣil (Weil, *op. cit.*, ii. 639; *Zapiski Imp. Akad. Nauk*, xiv. 162 *sq.* following Djamāl al-Dīn b. Zāfir). But in 934, after the death of the two friends of the Byzantines, Abū Ḥafṣ and Abū 'Alī 'Ash', Kurkuas and Mīch again appeared before the town, which at that time was protected by a double wall and a ditch full of water. The inhabitants found themselves forced by starvation to negotiate about the surrender of the town. During the negotiations the Greeks succeeded by a stratagem in forcing an entrance through the north gate of the town and taking it on May 19, 934. The inhabitants, in keeping with the promise that had been given them, were allowed to leave the town. The walls were razed so that the town was henceforth open to all attacks (Michael Syrus, iii. 122 *sq.*; Ibn al-Athīr, viii. 221; Ramlah, *L'Empire Grec au XI^e siècle*, Paris 1870, p. 423, 1; Rosen, *op. cit.*, p. 89 *sq.*, 106, 108). In the next decade Sa'īd al-Dawla repeatedly raided the territory of Malatya.

His *mamlūk* Najjā² in his campaign to Hanzī in 350 (961—962) encountered 'Abd Allāh of Malatya and put him and his friends to flight (Freytag, *2. D. M. G.*, xi. 197; Rosen, *op. cit.*, p. 88). Two years later he again ravaged the land of Malatya for 18 days with fire and sword (Freytag, p. 204, 206).

When the emperor Nicephorus conquered Syria, he wished to repopulate Malatya, which was defenceless and deserted. But the Greeks refused to live there for fear of Arab *razzias*. His advisers therefore recommended him to invite Syrian Jacobites to the country. He did this and promised the Patriarch Mās Yohannan Sarigā, that if he repopulated Malatya, Hanzī and the passes (*κλειρώματα*), he would no longer persecute the Jacobites (Michael Syrus, iii. 130 *sq.*; Barhebraeus, *Chron. eccl.*, ed. Abbeloos-Lamy, i. 411 *sqq.*; Markwart, *Handb. Arabiya*, xxx., 1916, p. 121 note). People now flocked to Malatya from all parts (c. 969 A.D.). Monasteries were built. About 1100 there were said to be in Malatya and district 53 churches and 60,000 Christians capable of bearing arms, including many Melkites (Michael of Tinnis in Renaudot, *Hist. Patr. Alexandr.*, Paris 1743, p. 403; Barhebraeus, *op. cit.*, i. 424, note 1). The emperor did not, however, keep his promise; persecutions again became of everyday occurrence and drove the Jacobites more and more into the arms of the Arabs (Michael Syrus, iii. 131, 136, 147).

According to Ibn al-Athīr (*al-Kāmil*, iii. 65), Malatya at this time was placed in the *département* (*Armiya*) which he says stretched to the Bosphorus (*Khalīf al-Kutūb*).

The Emperor John Trimisces (Shihabīk) in Dhu l-Hijja 361 (972) on his campaign to Nijīn crossed the Euphrates at Malatya (Yahyā al-Anṣārī in Rosen, *op. cit.*, p. 183 note; Schlumberger, *L'Épique byzantine*, i. Paris 1896, p. 255). The rebel Bardas Scleros in 366 (976—977) seized the town of Malatya, imprisoned the strategos who was governing it for the Emperor and had himself proclaimed *basileus*. When Scleros was fighting against the imperial general Michael Burtzes (al-Burdj) there was with him a Shaikh who had been converted to Christianity, the patrician 'Ubaid Allāh al-Maṣnagīr of Malatya, who is perhaps identical with the 'Abd Allāh mentioned in 350. Scleros made him *magister* and sent him with one of his slaves, the eunuch Kantatish (l'Anatol 'Alaudet') whom he raised to the rank of *basileus* ("Count"), to Antakya against the patrician Kulaib, the imperial governor of this town. Kulaib surrendered to them Antakya, the Taurus and the whole of the "Orient"; he and the most prominent citizens of Antioch were then sent as prisoners to al-Kalādhuk (Cappadocia) (Rosen, *op. cit.*, p. 2 *sq.*, and note, p. 81—90 *sq.*; Schlumberger, *L'Épique byzantine*, i. 359, 362, 376 *sq.*). Scleros however at once sent the Antioch notables back to their homes and made Kulaib *basileus* of Malatya (Rosen, *op. cit.*; Schlumberger, i. 386) while on the other hand 'Ubaid Allāh soon went over to the emperor Basil (977—978). When after a seven years' internecine on the Tigris island of Madida near Baghdad, Bardas Scleros succeeded in gaining his freedom, he escaped to Malatya with the help of Beduins, where he at once (in Shawwāl 376 = March 987) seized the *basileus* Kulaib who had gone over to the emperor, and himself again proclaimed

basileus (Yahyā, transl. Rosen, p. 22; Schlumberger, i. 678). Bardas Phocas, who took Bardas Scleros prisoner by treachery and then claimed the imperial title for himself, passed through Malatya on Sept. 14, 987 on his way westwards straight through Asia Minor (Schlumberger, i. 695). In 399 (1008) the Hamdanid Abn 'I-Hakīm fled to Malatya before the Mirdasid Maṣṣūr b. Lu'lu', where the emperor appointed him *magister* (Rosen, *op. cit.*, p. 51; Schlumberger, ii. 442).

The most important event during the Byzantine occupation of Malatya was the invasion of the Turks. Their first incursion into the area of the town was in 1058; the inhabitants fled before them mainly into the adjoining mountains where they perished of hunger and cold. The Turkish force 3,000 strong under the amir Abū Dīnār remained 10 days pillaging Malatya and laid the country waste for a day's journey round. On their retreat the Turks were surprised by the people of the Armenian district of Samsun (Arab. al-Samsana; now, Şamsūn) and all slain, with the assistance of the prisoners and fugitives from Malatya (Michael Syrus, iii. 158 *sq.*, according to whose erroneous chronology these incidents took place in the 9th or in the last year of Constantine IX [i.e. 1050—1051 or 1054—1055]; Matthias of Edessa, transl. Dulamier, p. 107—109; Aristakēs Lastivenci, in Tomaszek, *Sassan u. das Quellengebiet des Tigris*, S.B. Ab. Wien, cxxxi., vol. iv., 1895, p. 29 *sq.*). One of the prisoners who survived, the Syrian monk Joseph, wrote three *shams* on these events; the patriarch Yohannan X bar Shāhān also composed 4 *shams* on the devastation of Malatya (Rammstark, *Gesch. d. syr. Lit.*, p. 291 *sq.*). By the time of the Emperor Isaac I. (1057—1059) we again find the Turks raiding the country of Malatya and carrying off prisoners from it. His successor Constantine X Doucas (1059—1067) restored the two walls and the ditch at Malatya (probably in 1060—1061). When the imperial decree regarding this was published, a number of citizens of Malatya, who were in Constantinople returned home and arranged for a large number of workmen and builders to be brought from Asia Minor and Antakya; in a very short time owing to the continual threat to the town, the fortifications were rebuilt on the old foundations (Michael Syrus, iii. 165 *sq.*). The Byzantine *καρναγος* Krinotes was afterwards killed with his wife and children and the town "henceforth knew no peace" (Michael Syrus, *loc. cit.*).

These constant invasions of the Turks, which specially affected the region of Malatya (Skylitzes in the ed. of Kedrenos, Bonn, ii. 660 *sq.*) met with very little opposition. Then the legions quartered around Malatya, whose pay and provisions had been withheld, refused to cross the Euphrates to meet the enemy along with the local volunteers. The Turks did not besiege the town but went on to attack Karkara, which they stormed (Skylitzes, *loc. cit.*). When Romanus IV Diogenes attacked the Turks in 1068 he sent a general from Gökün, perhaps, as Gfrörer suggests (*Byz. Gesch.*, iii. 720), the Bulgar Alutianos, to Malatya to guard the frontier against the raids of the Turk Afshin (Αψίνος). The general however did not leave Malatya so that Afshin was able to advance against the emperor undisturbed (Skylitzes in Kedrenos, ed. Bonn, ii. 671; Weil, *op. cit.*, iii. 112, note 2).

In the same year the emperor appointed the

κατοικησάντες Φιλάρητος Βραχάριος (Sklitzes, *op. cit.*, p. 681; Anna Komn., ed. Reifferscheid, I. 205 sq.; Zonaras, ed. Dindorf, IV. 209; Arab. Filardūs al-Rūmī) to be μάγος ἀμύραντος (Tomaschek, *Sasan*, p. 36). He won for himself with his Armenian hordes an ephemeral kingdom on the Syrian frontier and installed the Armenian Thoros (Theodoros) son of Hétom as governor in Malatya. Thoros was succeeded as *éyepátēs* of the town by the Armenian Hareb, then by Balatianos (Valentinus?) and finally by the defeated Greek Gabriel (Michael Syrus, III. 173 sqq.; in Matthias of Edessa, ed. Dulaurier, p. 222 sqq. with mod. Greek pronunciation *Káwtirī*). When the latter recognised that the Byzantines could not permanently hold out against the Turks he got the Caliph to confirm him in his rule over Malatya. He was at first able to keep the Turkish hordes from Malatya by various devices. But when they besieged Malatya, Gümüştagin b. Dānīshmand of Siwās made peace between them and Gabriel (Michael Syrus, III. 179). Kılıdī Arslān I besieged Malatya for the first time in 1100 A. D., but retired when Gabriel, whose daughter Morfā had been given in marriage to Baldwin of Edessa, summoned the Franks to his assistance (Michael Syrus, III. 187, 192; Will. of Tyre, XII. 4). When Gümüştagin besieged the town and laid waste the country around, Boemund came from Antakya with his relative Riccardo del Principato and a troop of cavalry, but he was ambushed at Mar'ash and sent a prisoner to Niksār (or Siwās) in June 1100. From there he appealed for help to Baldwin of Edessa who relieved Malatya and pursued Gümüştagin for 3 days without overtaking him. He then returned to Edessa via Malatya which Gabriel surrendered to him and left 50 horsemen for its protection. Gümüştagin appeared before Malatya again in 1100, where Gabriel had in the meanwhile made himself so detested by the inhabitants that they handed him over to Gümüştagin, who thereupon entered Malatya on Sept. 18, 1101 (Michael Syrus, III. 188; *Reinild. Hist. Or. Cris.*, I. 5, 203; III. 522, 526; Matthias of Edessa, transl. Dulaurier, p. 230). The dynasty of the Dānīshmands (q. v.) thus came to rule there (on them cf. also van Berchem-Kh. Edhem, *C. I. A.*, III. p. 2, note 3; p. 3, note 1; Zambaur, *Mannell d. Genital. et de Chronol.*, Hanover 1927, p. 146 sq.). At the suggestion of the Emperor Alexios, Gümüştagin in the summer of 1103 released Boemund, who had been brought to Malatya, on payment of 100,000 dinars (Michael Syrus, III. 189; Röhrich, *Gesch. d. Kaiser. Jerusalem*, p. 45). According to Michael Syrus (III. 192), Taushtinan i. e. Gümüştagin b. Dānīshmand died within two years of the taking of Malatya (i. e. 1103—1104); he was succeeded by his son Aghuian (Yāghūtassan?). Kılıdī Arslān again began the siege of Malatya on June 28 and directed siege-artillery against the round N. E. tower of the town, which had to surrender after several onslaughts had been made on it. Kılıdī Arslān I began his rule there on Sept. 2, 1106; when he fell the very next year in the battle on the Khābūr, he was succeeded in Malatya by his youngest son Tughril Arslān, in whose reign much evil fell upon the town as a result of the murder of the governor Fīzīhī (Michael Syrus, III. 194). During the fighting among the other sons of Kılıdī Arslān, of whom Mas'ūd sought refuge in Malatya about 1107 (*Reinild. Hist. Or. Cris.*, III. 534) Boemund

succeeded in conquering Abulastān, the district on the Djāhān and the whole country round Malatya (Michael Syrus, III. 195). The Atabeg of the Sulhān of Malatya (probably Balāq), in 1111 again deprived him of his lands on the Djāhān. Kılıdī Arslān's widow left Malatya to marry the doughty amir Balāq (Michael Syrus, III. 200). A Turkish cavalry leader offered to sell Tughril Arslān the fortress of Ziyād; when the young sulhān of Malatya wanted to take possession of it, however, it was taken from him by the son of the sulhān of Khurāsān without a blow being struck. On the 11th March 1118 the amir Mangadag of Kamakh pillaged the country round Malatya; the Khātūn of Malatya thereupon turned to Joscelin of Edessa for help (Michael Syrus, III. 204). In the following year the Sulhān of Malatya conquered Abulastān and the lands on the Djāhān; the region of Kafā passed as a gift to Malatya (Michael Syrus, III. 205). Tughril Arslān owed his success to the governor Balāq, who advanced as far as Kamakh, defeated the Greeks with the help of al-Ghāzī b. Dānīshmand; again took Hīsn Ziyād and defeated the Armenians of Gargar on the Euphrates (Michael Syrus, *loc. cit.*). When, after further considerable successes, Balāq fell fighting the Franks before Manbidj his kingdom was divided; the Sulhān of Malatya received Masārā and Gargar with the result that there was soon fighting with Salāmīn of Hīsn Ziyād. On this occasion al-Ghāzī of Siwās and his son-in-law Mas'ūd attacked Malatya and besieged it from June 13 to Dec. 10, 1124. The town suffered exceedingly from famine and the Khātūn's reign of terror and the inhabitants breathed more freely when the ruler left the town with her son and all her followers and al-Ghāzī entered it (Michael Syrus, III. 219 sq.; Matthias of Edessa, p. 315). Under him Malatya enjoyed continued peace. His son Malik Muhammad who succeeded him in 1135 left Malatya soon afterwards when the news of the approach of the Byzantine Emperor reached him (Michael Syrus, III. 237). When John II Komnenos invaded Syria, Mas'ūd invaded Cilicia from Kōniya and carried the inhabitants of Adhāna prisoners to Malatya (Michael Syrus, III. 245). Malik Muhammad in 1139 also invaded Cilicia and took from the Greeks the fortresses of Bahgāy and Galmūpert (Rāzī, *Karshirpagan*, Armen. Vaghe, Gaban; Michael Syrus, III. 248; Röhrich, *Gesch. d. Agr. Jerusalem*, p. 211, note 2). Two years later he was fighting with the Franks who had advanced as far as Zibajra, Arka and Abulastān and encamped at Niksār opposite the emperor John, who had again taken the field against the Turks, for six months without fighting (Michael Syrus, III. 249). After his death (Dec. 6, 1143) Dhu l-Nūn succeeded him in Malatya (Syr. Dānūn in Michael Syrus, III. 253 and Suppl., p. lvii.; Byz. *Δαδούως*). When however his brother 'Ain al-Dawla (Michael Syrus only 'Dawla') advanced against him, the Turkish garrison of Malatya broke through the Burāldiya gate and surrendered the town to him (Michael Syrus, III. 253). Sulhān Mas'ūd of Kōniya besieged Malatya, when 'Ain al-Dawla would not submit to him of his own accord, first from June 17 to Sept. 14, 1143 and again in 1144 without success (Michael Syrus, III. 254, 258 sq.; Röhrich, *op. cit.*, p. 226, note 3). After 'Ain al-Dawla's death (June 12, 1152) his minor son Dhu l-Karizān succeeded him, for whom his mother first acted as regent but she was soon banished as she

plotted against his life (Michael Syrus, iii. 305 sq.). Mas'ud again (July 24, 1152) tried without success to take the town. Dhu 'l-Karnain was succeeded in October 1162 by his minor son Nasir al-Din Muhammad (Muhammad) who made himself so detested by his excesses that he had to leave Malatya (1170). His place was taken by his brother Abu 'l-Kasim (Fakhr al-Din Kasim; Michael Syrus, iii. 336 sq.). In May 1172 when 15, he married the daughter of the lord of Hsin Ziyad. During the wedding festivities he fell from his horse while jousting and died of his injuries (Michael Syrus, iii. 343). He was succeeded by his younger brother Feridun (Afirdin) who had to marry the princess intended for the brother. On the news of these happenings, Kilidj Arslan II attacked Malatya, where however preparations were rapidly made for the defence under the direction of the eunuch Sa'd al-Din. Kilidj Arslan had to withdraw but carried off with him 30,000 prisoners from the country round (Michael Syrus, iii. 346). On Feb. 15, 1175, Feridun was murdered by his brother Muhammad, who after many adventures had returned in disguise to Malatya by a secret agreement with the princess of Ziyad who had left her husband (Michael Syrus, iii. 362—364). When Kilidj Arslan II thereupon again besieged Malatya, the discontent with Muhammad was so great that he no longer felt safe in the town but withdrew to Hsin Ziyad. Kilidj Arslan after a four months' siege entered Malatya on Oct. 25, 1178 (Michael Syrus, iii. 373). He repaired the two walls of the town (Michael Syrus, iii. 388). The Turkomans, who since 1185 had been ravaging wide tracts of Asia Minor also invaded and plundered the district of Malatya (Michael Syrus, iii. 402). In 1189 (Michael Syrus, 1191 according to Arabic sources) Kilidj Arslan gave the town of Malatya to his son Ma'izz al-Din Kaiqar Shih (Michael Syrus, iii. 407; *Rec. Hist. Or. Cris.*, ii. 56; iii. 269). Kilidj Arslan later found himself forced to hand Malatya over to his other son Kotb al-Din Malik Shih; but Ma'izz al-Din went to Salih al-Din (580 = 1191—1192) and regained his position with his help (*Rec. Hist. Or. Cris.*, i. 57, 68 sq.; iii. 269; v. 44).

To strengthen the alliance he married the daughter of Malik al-Adil and accompanied Salih al-Din's army to Tihata (*Rec. Hist. Or. Cris.*, v. 117). In June 1200 Rukn al-Din Sulaiman of Diyar (Toghat) deprived his brother Ma'izz al-Din of Malatya; the latter fled to his father-in-law Malik al-Adil (Barhebraeus, *Chron. Syriac.*, ed. Bedjan, p. 406; *Rec. Hist. Or. Cris.*, ii. 71). Saladin's son, al-Malik al-Zahir, who had only Sumaiyah left of his inheritance, submitted in 1207 to Rukn al-Din of Malatya and Koniya (Barhebraeus, *Chron. Syr.*, p. 408). In the next year Rukn al-Din took Angora; a few days later he died (Barhebraeus, p. 418 sq.). He was succeeded by his young son Kilidj Arslan III, who was however soon thrown into prison by Ghiyath al-Din Kai-Khusraw I (Barhebraeus, p. 419). After the latter (d. 1205) came his son 'Izz al-Din Kai-Khusraw, who while on a campaign against Malik al-Ashraf in Malatya developed consumption from which he died on his return (Barhebraeus, p. 437; *Rec. Hist. Or. Cris.*, ii. 150 sq.). In the reign of his successor 'Ala' al-Din Kai-Kubad, the Tatars in 1231 penetrated to Hsin Ziyad and to the Euphrates near Malatya (Barhebraeus, p. 463). 'Ala' al-Din took Khilaf from Malik al-Ashraf in 1232. When in the next year

the latter along with his brother Malik al-Kamil of Egypt occupied Hsin Mansur, 'Ala' al-Din collected an army of over 100,000 men, took Hsin Ziyad (Barhebraeus, p. 467) and besieged al-Ruha in the following year; the inhabitants of Hsin Ziyad fearing an attack on Malatya sent him the keys of their town (Barhebraeus, p. 468; Kamal al-Din, transl. Blochet, *R. O. L.*, v. 58). His successor Kai-Khusraw II (1237—1245) at the beginning of his reign drove the Khwarizmians out of his kingdom; on their retreat they defeated the commander (Sibghat) of Malatya Saif al-Dawla and crossed the Euphrates at Masur (var. Muṣra) (Barhebraeus, p. 471). In 1241, the Amir of Malatya again suffered an annihilating defeat from fanatical Turkoman hordes under the prophet Papi (Baba) (Barhebraeus, p. 474). When the news of the victory of the Tatars at Koz-Dagh (1243; Barhebraeus, p. 475) reached Malatya, the Sibghat Rashid al-Din and the other court officials broke into the royal treasury, shared the treasure among themselves, and fled to Halab. Many prominent citizens followed them; but they were surprised by the Tatars on the hill of Bih Göz, a day's journey from Malatya and some slain, some taken prisoners. The inhabitants of the town, Muslims and Christians, asked the Metropolitan Mār Dionysios 'Angur to direct the defence of the town. After two months during which Malatya was watchfully defended, the Tatars withdrew. In 1244 the Tatar chief Isawür (var. Nasawür) Nuyin besieged Malatya and ravaged the country round until Rashid al-Din caused him to retreat by rich presents (Barhebraeus, p. 477—479). After the division of the Saljuq empire by Hülakü, there ruled at first 'Izz al-Din at Malatya, then, after his dethronement, his brother Rukn al-Din (Barhebraeus, p. 482). At the end of 649 (1251—1252) and in July 650 (1252—1253), the Tatars again besieged the town under Isawür and wasted its surroundings (Barhebraeus, p. 491). When in 1257 'Izz al-Din sent al-Fughr Ifafa into the district of Malatya to seek recruits and the latter allotted the towns to the Kurd chief Sharaf al-Din Ahmad b. Bilal, the inhabitants would not have him as they had sworn fealty to Rukn al-Din and feared his Tatar patron Baldu. It was not till 'Izz al-Din had sent a second envoy, Bihadur, that they admitted him into the town; but the latter soon fled again before Baldu and only returned when he had gone, but again found the gates closed against him and was only admitted after famine had broken out in Malatya as a result of his siege (Barhebraeus, p. 498—500). In 1260 Hülakü built bridges over the Euphrates for his west host at Malatya, Kai' al-Rum al-Bira and Karakisiya (Barhebraeus, p. 509). The Egyptian governor of al-Bira Hidar (Khidr) in 1282 laid waste the country round Malatya (Barhebraeus, p. 546).

The Mongol Khan Abaka (1265—1282) again divided the kingdom of Rum between two Saljuq cousins of whom Mas'ud received Arrindjan, Siwa and Malatya.

In the ninth and tenth century lived the two great Syrian historians, both born in Malatya, to whose chronicles we mainly owe our knowledge of the history of the town: the patriarch Michael I (1126—99), son of the priest Eliya, who belonged to the family of Kindasi in Malatya and the Mafr'yan Gregor Abu 'l-Faradj called Barhebraeus (1226—86; q. v.), whose father, the baptised

Jewish physician Ahron had restrained his fellow citizens in Malatya from stupidly flying before the Tatars (Baumstark, *Gesch. d. iyr. Lit.*, p. 298—300, 312—20). Michael's principal authority, Ignatius (d. 1104), was also metropolitan of Malatya (Baumstark, *op. cit.*, p. 291).

The increasing weakness of the Seljuks about 1300 favoured the formation of local Turkoman and Armenian petty states, especially in the east of Asia Minor. According to Abu 'l-Fida', Christians and Muslims in Malatya in those days lived on the best of terms with one another; the town took the side of the Tatars and informed them of everything that went on in the country. During his war against the Tatars, Sultan al-Malik al-Nasir in 715 (1325) decided to send a large army under the aid of Hammam, Saif al-Din Tugus who was joined by his vassal Abu 'l-Fida' of Hamah, against Malatya. The army went by Halab, Ainab, Hama Mangur and Zibatu to Malatya and encamped before the town on April 28. The inhabitants sent their hakim Dhamal al-Din al-Khafi, whose father and grandfather had filled the same office in their time, through the south gate, Bab al-Kadi, to Tugus, who was willing to afford them protection and security, if they surrendered the town. But he was unable to fulfil his pledge for the soldiers could not be restrained from plundering and ravaging in the town. Among the prisoners was the Tatar Ibn Kerbogha and the sibil of Hama Arkanus, Shaiikh Mindu. The greater part of the town was finally burned down (Abu 'l-Fida', *Annales Muslim.*, ed. Reiske, v. 286—92; ed. Stambul 1286, iv. 77 sq.; transl. also in *Rec. hist. ar. orient.*, i. 180; Weil, *Geogr. d. Chalf.*, iv. 310 sq.). The Sultan made the territory of Malatya a separate frontier province, which included seven districts (Khalil al-Zahiri, *Zubda*, ed. Ravaisse, p. 52). There were seven citadels around the town: Mushar or Minshar, Kumi, Karahisar, Kaderbirt, Kafat Akdis, Kafat Nawhamam (?) and Kafat al-Ahrad (Khalil, *op. cit.*; Gaudelroy-Demumhynes, *La Syrie à l'époque des Mamelouks*, p. 97, 105).

Malatya for the next few decades belonged to the Mamluk Sultans. As their remotest province, it was with Halab in 791 (1389) the scene of a great rebellion led by the governors Minshar and Yelboghla against Barsuk [q.v.]. About this time the Turkish family of the Dhu 'l-Kadroggha [q.v.] began to rise to power in the region of Malatya and Albistan where they ruled till 1515 under Egyptian suzerainty. About 794 (1391/2) Bayazid I conquered the town and in 1400/1 Thumr. By the battle of Kös Hissr (1516) it fell into the hands of Selim I [q.v.] who destroyed the Dhu 'l-Kadroggha. This was the cause of his war against Egypt, which was rapidly decided on the field of Marj Dabik. At a later date the eyalet to which the Sanjak of Malatya belonged was still called Dhu 'l-Kadriya; Malatya now forms a sanjak of the wilayat of Ma'muret al-Aziz (Kharjir).

The town in 1838 was the headquarters of the Serasker Hafiz Pasha, with whom Moltke was attached. It is said to have suffered much at the hands of the troops quartered there for months before the battle of Nizib. After the earthquake of 1893 Malatya was rebuilt on the site of the suburb of Asma S.W. of the older site now called Eski-Shehr, but the old town continued to be inhabited. It has now about 30,000 inhabitants, including many Armenians, Kurds and Ghilbash.

MALAY PENINSULA is a name sometimes rather loosely applied to the whole tract of land South of the Isthmus of Kra (Lat. 10° N.); but so far as the Northern part of this tract is concerned the name is a misnomer, the bulk of the population there being Siamese and Chinese, not Malay. Excluding from the total Malay population of Siam [q.v.] as a whole some 50,000 Malays scattered in Ayuthia, Bangkok, Chantabon and the rest of the Eastern shore of the Gulf of Siam, the remaining 350,000 are in Southern Siam and mainly in the parts South of Kra. But it is not till about Lat. 7° N. that one meets with districts where the majority of the inhabitants is Malay, viz. on the West coast Palen and Sital and on the East coast the province of Patani (formerly an important Malay state, finally conquered by Siam in 1832). Of the approximate total population of 370,000 in these three districts the greater part consists of Malays. The Southern boundary of Siam, running irregularly between 6° 45' and 5° 45' N., separates them from the rest of the Peninsula, which is attached to the British Empire and with which we are here concerned. The area of this latter portion is about 52,500 English square miles.

The geological structure of the Peninsula includes calcareous rocks and limestone, cherts, shales, quartzite, volcanic rocks, granite, alluvial deposits, and the ferruginous substance known as laterite. The most important minerals are tin and tungsten. The former has been exported for more

than a thousand years and is still a very important product.

Until about fifty years ago the rivers, though mostly small and only navigable for small craft, were the chief and almost the sole means of access to the interior, which was then an almost trackless forest of luxuriant vegetation, traversed by a number of mountain ranges, some running roughly north and south, others transversely or irregularly. A few of the highest points exceed 7,000 feet (roughly 2,100 metres). At sea-level the average temperature is about 82 F. (about 27 C.) with a daily and annual variation of not more than about 10 F. (about 4.5 C.) in each direction; the annual rainfall varies locally from about 60 inches (about 150 cm.) to four times that amount. The N.E. and S.W. monsoons prevail, but are subject to periods of slight or variable wind. The climatic conditions are therefore very favourable to the main staples of native agriculture, viz.: rice, coconuts and miscellaneous local fruits; to these, foreigners have added the cultivation of other products, such as tapioca and coffee (now almost abandoned) and especially Para rubber, in the cultivation of which the Peninsula has led the way. The economic development of the Peninsula may be said to date from the institution of the Residential system in three of the Western states in 1874, which led progressively to the making of a network of excellent roads and a State railway system now comprising a trunk line from Singapore to the western part of the boundary with Siam, where it links with the Siamese system, and a number of branches, one of which turning northward through the centre of the Peninsula is destined to join the Siamese railway at a point near the eastern end of the frontier.

From the administrative point of view, the British portion of the Peninsula falls into: 1. the British colony styled the Straits Settlements (which is an abbreviation of "British Settlements in the Straits of Malacca"), comprising the three "settlements" or divisions of Singapore, Penang and Malacca; 2. the Federated Malay States, viz. Perak, Selangor, Negeri Sembilan, on the West coast and Pahang on the East coast, which are united in an administrative union under a Chief Secretary to Government at Kuala Lumpur (in Selangor) and 3. the Unfederated Malay States, viz. in the extreme North and on the West coast, Perlis and Kedah, and on the East coast, Kelantan and Trengganu, and in the extreme South, Johor. Administratively the Island of Labuan off the coast of North Borneo, and the Cocos-Keeling Islands and Christmas Island to the South-West of Java form part of the "settlement" of Singapore; and the State of Brunei (Bérunai) in Borneo is an unfederated Malay State ranking with those of the Peninsula.

The Colony has the usual administrative machinery, consisting of a Governor (who is also the High Commissioner for the Malay States), together with executive and legislative councils, and a Supreme Court. Each of the Malay States has a Malay ruler, who usually bears the title of Sultan, and also a British official, styled in the Federated Malay States the British Resident and in the unfederated ones British Advisor or General Advisor, and a State Council. For the Federated States there is in addition a Federal Council and a Judicial Commission. In these States the chief

administrative departments are federalized under federal heads, and in one or two cases (such as Education) are linked up with the corresponding department in the Colony. Both the Colony and the States are divided into administrative districts, and the officials in charge of such districts in the Colony and Federated States are mainly Europeans. The same applies to the heads of the principal departments of Government. Many of their assistants are also European. In the unfederated States the administrative machinery is not so elaborately organized and the proportion of Europeans is smaller. Government schools have been established in the principal villages and give elementary instruction exclusively through the medium of Malay. In towns there are also higher schools, supported but not founded or managed, by Government, which give instruction through the medium of English. The college at Kuala Kangsar, which is bilingual, is mainly for the sons of Malay rajahs and chiefs though others are admitted. Female education has developed more slowly but is gaining ground.

The ancient history of the Peninsula is obscure. Palaeolithic and neolithic implements have been found in various places. The so-called aborigines, amounting in 1921 to about one per cent. of the total population, comprise in the extreme North a few thousand woolly-haired Negritos, generally termed Sémang, in the centre a much larger number of wavy-haired light brown people known as Sakai, and in the South mostly straight-haired people of the Indonesian type, often referred to as Jakun. The first two groups and a portion of the third speak languages containing a strong Mon-Khmer element, the remaining Jakun speak Malay dialects with some alien admixture. From about the 7th century A. D. Sanskrit inscriptions on stone found in Kedah and Province Wellesley (opposite Penang) attest the presence of Buddhists using a South Indian script. An inscription of 775 originally set up at Ligor (Nakhon Sri Dhammaraj) about Lat. 8° N. indicates that before that date certain points on the isthmus were held by the Śaileन्द्रa kings of Sri Vijaya (Palembang in Southern Sumatra), who controlled the trade route through the Straits and across the isthmus probably till near the end of the 13th century. It would appear from a notice in the History of the Liang dynasty of China (502-556 A. D.), Book 54, that this isthmus had formerly been controlled by the state of Funan, which centred round the mouth and lower course of the Mekong river. An inscription found at Chaiya (Jaiya, near Lat. 16° N.) and probably dated 1183 gives the king who presumably set it up a princely title which points to the Malaya region of Southern Sumatra, adjoining Sri Vijaya to the North-West. Another inscription of Chaiya dated 1230 was set up by the local king Candrabhānu who according to the Mahāvamsa and other sources raided Ceylon on two occasions (probably about 1236 and 1256) with his "javaka" (i.e. Malay) forces.

It is plain, therefore, that between the 7th and the 13th centuries the settlement of the Peninsula by Malays from Sumatra had been going on. A few years later, but before 1280, the Siamese from Sukhothai (Sukhodhaya) put an end to Malay rule in Ligor, thus beginning the extension of Siamese influence to the southward. In the Javanese poem Nāgarakṛtāgama (1365) a

number of places on both coasts, from Kédah and Sai (in the old Patani state) in the North to Singapore [q.v.] in the South are claimed as vassals of the Javanese empire of Majapahit. In the same century, but at a date which cannot be precisely fixed owing to the fragmentary condition of the record, the earliest Malay inscription in the Arabic character as yet discovered makes it plain that Islam had recently become the state religion of Tréngganu. In the xvth century Islam was being spread in the Peninsula under the influence of the then most important state, Malacca [q.v.]; and after its fall in 1511 at the hands of the Portuguese its dynasty continued to rule in the extreme South (Johor) and neighbouring islands, while another branch held Pahang, and Perak eventually came into the hands of a family claiming to descend from the senior line of the same stock. In or before the xvth century an immigration of Minangkabau settlers from Sumatra founded a number of small states inland of Malacca, which all eventually admitted the suzerainty of Johor, save the southernmost, Naning, which was in theory at any rate a subordinate ally of the Portuguese. In the early part of the xvth century the Achinese raided Kédah, Perak, Johor, etc., and for a number of years exercised some sort of suzerainty over Perak. Meanwhile the Northern states came intermittently under Siamese influence, which varied with the strength of that power but retained the character of an external suzerainty till Kédah in 1821 and Patani in 1832 (this last finally) were conquered by Siam.

The Dutch tenure of Malacca (1641—1795), while it controlled to some extent the external trade of the Malay states, did not interfere with their internal affairs. In the eighteenth century Bugis adventurers settled in the Riau-Lingga Archipelago and made their influence felt on the mainland, ultimately establishing the new state of Sélangor under a still ruling Bugis dynasty. British influence dates from the founding of Penang (1786), which was followed by a temporary occupation of Malacca (1795—1818), its final cession in 1824, the founding of Singapore (1819), and the incorporation of all three settlements in one government (1826), which in 1867 was transferred from the control of India to that of the Colonial Office. The policy of non-interference with the Malay states was maintained until long continued disturbances in Perak, Sélangor, and Sungai Ujong (part of Nègèri Sembilan), due to Malay dynastic quarrels and civil war between unruly gangs of Chinese tin-miners, coupled with an increase of piracy in the Straits, led in 1874 to the inauguration of the Residential system. This ultimately developed into the present system whereby since 1895 Perak, Sélangor, Nègèri Sembilan and Pahang form a federation administered under the direction of British officials. Pèrlis, Kédah, Kèlantan and Tréngganu were ceded by Siam in 1909 in return for certain concessions, one of which was the abolition of the extra-territorial privileges of British subjects.

The population in 1921 of the part of the Peninsula and adjacent islands under British administration or protection was about 3,325,000, nearly half being immigrants, mainly Chinese, and to a less extent Indians, among whom males predominated very considerably. The great bulk of the native-born population consisted of Malays, and the total number of Malays, properly so-called

(including, however, something like 100,000 persons of Minangkabau descent in Nègèri Sembilan and Malacca) numbered 1,418,198. The other Muslim Indonesians amounted to 171,315 (including 112,775 Javanese, 37,848 Banjarese, 9,772 Bogyane, 8,388 Bugis, 727 Achinese, 859 Korinchi, and 946 Mendeling). The 47,465 non-Indonesian Muslims comprised 41,337 Indians, 4,315 Arabs, 1,800 Chinese, and a few Persians and Turks; the total Muslim population was 1,636,978, the great majority being Sunnis of the school of Shāfi'i. Of the non-Muslim population roughly three-quarters were Chinese and about one-quarter Indians but there were also 32,448 so-called aborigines of the Peninsula (a few of whom may, however, have been converts to Islam), 18,178 Siamese, 14,833 Europeans (mostly British, but including Continental Europeans and Americans of European descent), 12,629 Eurasians, 6,989 Japanese, and 2,215 Sinhalese, besides several smaller communities.

MALAYS. People. In this article only the Islamic features of the Malay nation will be dealt with, so neither ethnographical nor anthropological questions will be discussed. It may be sufficient to say that the Malays originally—we do not venture to say: as autochthons—were established in the middle part of Sumatra, especially in Palembang, and spread over the eastern and northern parts of that huge island, and settled in the Straits, mainly in Malacca (see MALAY PENINSULA), and founded colonies in Borneo, along the great rivers, and elsewhere eastward. They belong to the widely dispersed Polynesian (or Indonesian) race, whose languages extend from Madagascar to the Philippines and from the peninsula of the utmost S.E. point of Asia to the remoter islands of Micronesia and Melanesia in the Pacific. The Malay chronicles, for the greater part mythical, and a few epigraphical data, make it clear that there was a highly cultivated Hinduised Malay kingdom in Palembang, the seafaring people of which went over to several adjacent and more distant countries; it was along the ways of commerce that they carried the Malay language to sundry ports and lands. It is not exactly known in what century Islam swept away Hinduism, but it is a fact that the new religion on its arrival in the Straits found Malay people settled in the Peninsula and the Malay language introduced there as the generally adopted speech of commerce and political intercourse.

Language. It is due to Islam that Malay, being already a language enriched with many Sanskrit words, became an idiom of very mixed lexicographical character. The Islamic current brought words of Tamil origin, innumerable Arabic words, some of them in Dekhanised or Persian-like garb, many Persian words, some of them with Indian characteristics, and a small quantity of Hindustani vocables. In that heterogeneous form Malay became the vehicular language of the new religion. Undoubtedly it had found its way already to the most visited ports in the Archipelago in a simplified form fit for intercourse with all kinds of natives and foreign merchants, later also with European, namely Portuguese and Dutch captains and ambassadors. It was Islam that gave Malay a literary character, and when it had established itself as a medium into which innumerable Arabic books were translated, its form became crystallised and its orthography was fixed systematically. That uniformity made it the appropriate language for literary and liturgical purposes and also a *seré* for dogmatics and mysticism, as well as romantic and historical literature. It has to be borne in mind that there is a great difference between the patois or *linguacée* heard in most of the sea-ports, and the cultivated literary language, which became highly developed in Malacca, once the seat of a Muhammadan court and a royal library. When Arabic and Indian learned men came to Aceh, they discussed theological questions in Malay and even wrote books in that language. The literary form is sustained uniformly to the present day, literary products being written in archaistic formulae, and the colloquial style being used in different parts of the Archipelago, the purest in Johore and Malaya in general and the East-coast-districts of Sumatra; the least pure in Java and more eastern islands. In the Moluccas, especially in Ambon (Amboyna), the preaching of Christianity availed itself of Malay; in those islands this language has therefore assumed an individual character. As to its linguistic character, it may suffice to notice that Malay, like all Polynesian languages, belongs to the agglutinative type, declension not existing, conjugation being limited within narrow bounds, and amplification of the mainly dissyllabic stems with a quantity of prefixes, infixes and suffixes giving opportunity of forming words for almost all grammatical and logical relations. There are some traces of the influence of Arabic grammar on Malay syntax, but on the whole the Muhammadan current has not essentially altered the character of the language; it has only enriched it with an enormous number of words, and given to its written literature an individual Islamic character.

Literature. Of pre-Islamic literature nothing is known. As far as may be concluded from a few old inscriptions in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, is written in Arabic letters only. The oldest manuscripts are preserved in the Cambridge and Oxford libraries; they date from the last years of the xvth and the first decade of the xvith century. The only literary-historical evidence of the existence of written literature in the xvth century is the mention, in a xvith century chronicle, of the use made of a royal library at Malacca at the time when the Portuguese endeavoured to capture that town (1512).

Malay literature, as it presents itself now, is only for a very small part original. Hardly any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances having been translated from Persian, but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases, and laden with Islamic theory. There are, it is true, some indigenous farcical tales, and some fables, especially the sometime highly appreciated mouse-deer-tales, moreover some original romances with Hinduistic influences, and several adapted old Javanese tales, that do not betray real Islamic influence, but the very fact that all these books are written in Arabic characters makes them overflow with Arabic words, and in that way shows that they belong to Islamic mentality. In this short account there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence; only in so far as Malay literature has Islamic features, will it be treated here. The originally genuine Indonesian deer-fable has undergone an Islamic correction. The historical writings, more or less mythical and semi-romantic, are almost absolutely Islamicised. To that class of works the chronicle *Sjarah Melayu*, and other ones, as the chronicles of Kutawaringin, Kutai, Aceh and Pasai are to be reckoned. A partly historical, but for the greater part fictitious, romance is the *Hikayat Hang Tuah*. A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay-reading East-Indian World; the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leyden, Batavia and London. Some books of fiction have been translated from Persian, Arabic or Hindustani. A group of them is to be traced to the *Hispadesa*-collection, another one to the *Tuti-nama*-series, a third one to the Bakhtiyar-cycle. By way of exception foreign authors have written in Malay; e.g. the Radjput Nûr al-Dîn al-Ranî (q.v.), who wrote a great encyclopaedic chronicle at the instigation of an Acehnese queen. A very great number of texts deals with the old prophets, the Prophet Muhammad, his family and friends. These works, like e.g. the romances of Amir Hamza and Muhammad b. al-Hanafiya, have Persian originals. The purely religious books cannot be regarded as Malay literature.

Poetical literature has a different character. The real Malay kind of poetry, though not devoid of Persian influences, is the *pentun*, i.e. popular quatrains, whose first two lines deal with a natural fact, or a well known event, and are intended to prelude, phonetically, the 3rd and 4th lines, that contain the real meaning of the usually erotic poem. The other "genre" is the *gâ'ir*. Its form is the stanza of four rhyming lines. Some of these very extensive overloaded poems are from the Javanese, some others are versified versions of prose romances; moreover historical events, love-scenes, religious matters, mystical speculations etc. are dealt with in innumerable *gâ'irs*, the titles of which may be seen in the following catalogues: Leyden Univ. Library, by H. H. Juynboll; Supplement thereto by Ph. S. van Ronkel; Batavia, the Hague and Brussels by the same; London (R. A. S.) and ibidem E. I. H. (India Office Library) by H. N. van der Tuuk.

Special literary questions have been dealt with by Ph. S. van Ronkel. The papers on Malay Subjects and some numbers of the Malay Literature Series contain some valuable contributions. A fuller account is given in the Dutch *Encycl. van Nederlandsch-Indië*, s. v. Literatuur (Maleische).

(PH. S. VAN RONKEL)

MALÄZGERD, district (*Kaḡā*) and town in Armenia, to the North of the lake of Wan. Of the name, there occur, in old-Armenian, the forms Manavazkert, Manavaskert and Manazkert. The middle-Armenian and Byzantine forms, Mandagerd and *Manvazkert* resp. as well as the Arabian form *Manūdzjird*, point to old-Armenian Manazkert being the original form, Manavaz(a)kert representing a popular etymological formation, from the name of the noble family of the Manavazenn's, which, in older times, resided in the district. For it is phonetically impossible, that an old-Armenian form Manavaz(a)kert should regularly become Manazkert. This is the theory of Hübschmann, who admits however the possibility, that an earlier Manavaz(a)kert may have been arbitrarily shortened in pronunciation, so as to become Manazkert, the word being otherwise too long. W. Belck has conjectured, that in the first part of the word, there may be hidden the name of the Urartæic (pre-Armenian) king Mennas of Wan. This conjecture is based on the fact, that from an inscription of Mennas it appears, that this king founded a city, which was called Mennahim (= Mennas-town); thus it would, according to Belck, be very probable, that Maläzgerd, in whose environs there have been found many inscriptions of Mennas, was this very town, named after him. If such be the case, then the old-Armenian form *Manvazkert* must have originated from a later, popular etymology. From the fact, that names of towns formed with *-kert* (= *-karta*) seem to have originated not before the Parthian epoch, as Hübschmann observes, it would follow, that the memory of the old king Mennas was still alive in the relatively late Parthian time. This difficulty, however, is not insoluble, for it seems, that the name of another Urartæic king of Wan also may survive in classical Armenian quasi-historical tradition as Aram.

The oldest and best Arabic spelling of the name of the town is *Manūdzjird*, with *n*; the forms with *l* are later, and on them is based the modern name (*Maläzgerd*). The spelling with *n* we find e.g. in al-Iṣṭakhrī; Yāqūt; the author edited by Houtsma in *Rec. des textes rel. à l'hist. des Seljoukides*, ii.; al-Nasawī (ed. Houdas); in a varia lectio of the text of the *Rūḡat al-Sūdūr* (G. M. S., New Series, ii. 119); and in the text quoted *J. R. A. S.*, 1902, p. 797. The spelling with *l*, common in later texts, occurs, among older authors, in al-Mukaddasī; Ibn al-Aṭṭār; the *Rūḡat al-Sūdūr* (the reading adopted by the editor); Djuwainī, and the *Nuḡat al-Kuṭub*. The terminations *-dzjird* and *-kird* also alternate in the spelling: this variation is already noted by Yāqūt (*Muḡjam*, iv. 648). As regards the form Manazav, cited by Marquardt (*Evangelik*, p. 162) from Thomas Arizuni, cf. Hübschmann, *Die alt-armenischen Ortsnamen* (in *Idg. Forschungen*, xvi.), p. 450.

For the year 1898 the number of inhabitants of the district Maläzgerd is given as 21,000, viz. 12,000 Kurds, and the rest Armenians. The district belonged to the *vilāyat* Bitlis, *sandjaḡ* Muḡh. In this hilly country, the highest elevation is the

Sipān-Dagh (3,000 m.); perhaps the same mount as the *Sang-i Safid*, which is, according to Yāqūt (*Muḡjam*, iii. 168), a mountain in these regions. The soil of the district is fertile; its main products are wheat, barley, millet, lentils and peas, which are also exported, as are also sheep and horses, e.g. to Diyarbekr. The region of Maläzgerd produces also salt and mineral stone, which becomes hard when brought to the day light. Its wild animals are the wolf, the fox and the stone-marten, which is hunted for its fur. Textiles are manufactured in and exported from the district.

The town of Maläzgerd is situated on a tributary of the Murād Şu, called the Tuzla Şu; Hājjdī Khālifa (*Djihad-nūmā*, p. 426) reckons 2 *marḡala* between Maläzgerd and Erzerum. The town lies, moreover, on the way from Şivās to Ardīsh, and also at the crossing of the two different ways, which connect Muḡh and Bāyasīd. The city is surrounded by a high wall and towers; at the East of the town there is the citadel, built from black volcanic stone. In the 11th (12th) century, Maläzgerd had a triple wall, and it was well furnished with drinking water from within (Cedrenus, ed. Bonn, ii. 590). More than one fruitless siege of this place is recorded in its history.

Belck supposes, that the well-known battle between the Assyrian king Tiglathpileser I against the allied Natri-kings took place in the plain of Maläzgerd (*Z.D.M.G.*, li. 560). If, at that remote time, the town of Maläzgerd existed already, is not certain. That it existed in the time of the Urartæic king Mennas, who, as Belck thinks, gave his name to the town, is made probable by an inscription of that prince, from which it would appear, that he rebuilt an older citadel and an older palace on that place. The environs of the modern city of Maläzgerd are remarkably rich in cuneiform inscriptions, which were discovered by Lehmann and Belck during their stay there. They found an Assyrian inscription of Tiglathpileser I and several Urartæic inscriptions, among others, of Mennas (± 800 B.C.) and Argistis II (714—ca. 690 B.C.). It appears from these documents, that Mennas devoted great attention to the irrigation of the land, by constructing several canals.

In the early Middle-ages, the town of Maläzgerd (Manazkert), lying on the confines of the cantons Harkh and Apahunikh, was sometimes assigned to the former, sometimes to the latter. That in old-Armenian times here resided the family of the Manavazenn's, has already been remarked. For these matters, and also for the quotations from Byzantine and Armenian authorities regarding them, cf. Hübschmann, *Die altarmenischen Ortsnamen*, p. 328, 330, 449 sq.

Maläzgerd belonged, since the beginning of their dynasty, to the realm of the Bagratides of Armenia, who allowed it to be ruled, as well as Ahlat, Ardīsh and "Perkri" (= Bergir?), by a family of their vassals. This family, whose members bear Arabic names, became in course of time independent of the Armenian kings, but, on the other hand, was obliged to pay tribute to the emperor of Byzantium (Constantinus Porphyrogenetus, *De admin. imp.*, ed. Bonn, p. 192 sq.).

Yāqūt says, that the inhabitants of Maläzgerd are Armenians and Byzantines (*Rūmī*); a native of this town was Abū Naḡr al-Manāzī (this, therefore, is the *nirba* of the name), who was wazir to one of the Marwānid princes of Diyarbekr. This Abū

Nasr died 437 (1045—1046) and, according to our authority, was a good poet. Yāqūt cites two fragments from his poems (*Muʿjam*, iv. 648 sq.). Regarding another al-Manāṣir, cf. *J. A. S.*, 1902, p. 788, note 1.

Among political events connected with the town of Malāzgerd, it may be noted that, on the occasion of the campaign, which the great Ḥamānīd Saif al-Dawla undertook into Armenia (328 = 940), there is mentioned one 'Alid al-Ḥamīd, prince (*shih*) of Malāzgerd and Sibelwark (Sewerek) (*J. A. S.*, 1902, p. 797): the name 'Abd al-Ḥamīd occurs among the names of the dynasty of Malāzgerd, recorded by Constantinus Porphyrogenetus, and this contemporary of Saif al-Dawla doubtless belonged to that family. But he cannot be the 'Abd al-Ḥamīd of the Greek text, who, from a chronological point of view, must have lived two generations earlier (cf. the genealogical table of these dynasts of Malāzgerd in Bandurius *Animadversiones in Const. Porph. Lib. de Administr. Imp.*, in the Bonn edition of Constantinus, iii. 372). In 353 (964) a certain Naḍjā, a *ghulam* of Saif al-Dawla, revolted against his master, after taking possession of that part of Armenia, which was ruled by one Abu T-Ward. The latter was slain, and, among the places conquered by Naḍjā, Malāzgerd also is cited (Ibn al-Athir, ed. Tornberg, viii. 408); in the year 359 (969—970) Malāzgerd was taken by the Byzantines (*ibid.*, viii. 445); they must have lost it again before 382 (992—993), for in that year they besieged not only Akhlāt and Ardjāh, but also Malāzgerd, but this time they could not take it, but returned home after concluding a treaty for ten years with Abū 'Alī al-Ḥasan b. Marwān (*ibid.*, ix. 67). In 440 (1048—1049) it must have belonged to the Byzantines, for the *gherna*, which Ibrāhīm Toghril Beg's brother, undertook into the Byzantine empire, affected also the territory of Malāzgerd (*ibid.*, ix. 372). And it is explicitly stated by Ibn al-Athir (ix. 411), under the year 446 (1054—1055), that Malāzgerd was in possession of the Byzantines, for there he relates, that this strong city resisted a siege by Toghril Beg himself (cf. also Cedrenus, ed. Bonn, ii. 590 etc.). The most important historical event, with which the name of the town is connected, is the battle of Malāzgerd (463 = 1071) between Alp Arslān and the Byzantine emperor Romanus Diogenes, in consequence of which the eastern part of Asia Minor, viz. Armenia and Cappadocia, was lost for ever to the Greek empire (Ibn al-Athir, x. 44; *Rec. des textes rel. à l'hist. des Seldjoukides*, ed. Houtama, ii. 38 etc.; *Riḥat al-Safar* (G. M. S., New Series, II), p. 119; Zouhar, ed. Dindorf, iv. 213 etc.; cf. also H. Geller in E. Krumpholtz's *Geschichte der byzantinischen Literatur* 2, p. 1010). After this event, therefore, Malāzgerd passed into the possession of the Seldjūqs. In 531 (1137) it was given by king Malikshāh, along with Erzerum and part of the territory of Akhlāt, to his brother Seldjūq, as a *kif* (*Rec. des textes* ..., ed. Houtama, ii. 185).

In course of time, the city was besieged in vain (587 = 1191) by Taki al-Din 'Umar b. Ayyūb. In 601 (1204—1205) its environs suffered from the incursions of nomads from the direction of Adharbāydjan (Ibn al-Athir, xii. 41, 134). During the disturbances, of which Armenia was the scene in the beginning of the sixteenth century, mention is several times made of Malāzgerd. In 603

(1206—1207), a former *mamlūk* of the Shāh Arman took possession of Malāzgerd, and, after that, also of Akhlāt. He had, in addition, control of Ardjāh and other places. This man, whose name was Ballās (the vocalisation of the first syllable is uncertain), was assisted by the prince of Erzerum, Muḥṣin al-Din Toghril Shāh b. Kiliḍj Anāim, against al-Malik al-Awhad, son of al-Malik al-'Adil of Egypt. Later on, Ballās was murdered by his ally of Erzerum, who tried to enter Akhlāt and Malāzgerd, but in vain, so that he was obliged to return to his own states (Ibn al-Athir, xii. 168 sq., 180 sq.). In 623 (1226), Djalāl al-Din b. Khwārizmshāh 'Alā al-Din Muḥammad occupied Malāzgerd, as he intended to attack Ḥusām al-Din 'Alī, the *newwāl* of al-Malik al-Ashraf, in Akhlāt. But, since his attempt on this town did not succeed, and as the winter also set in (he had entered Malāzgerd on Dhu T-Ka'd 13, November 5, 623), and the Turkomans invaded his own realm, he was obliged to retire (Ibn al-Athir, xii. 301). In 626 (1229) however he succeeded in taking Akhlāt, after which he besieged Malāzgerd, first in person, afterwards leaving one of his generals in charge of the siege, but on this occasion without success (al-Nawawī, ed. O. Houdas, text, p. 205, 208; translation, p. 342, 344, 347).

MĀLDA (properly, Māldah or Māldaha), a district in Eastern Bengal and in the Rājshahi Division of the Presidency of Bengal. Area 1,899 sq. m. Pop. in 1911, 1,004,159, of whom 465,521 were Hindus, and 505,396 Muslims. In old times it was famous for its two capitals of Gam [q. v.] or Lakhnawti, and Pandua, where there are many ruins of the mosques and other buildings of the Muhammadan kings of Bengal.

(H. BEVERIDGE)

MALDIVE ISLANDS, a group of coral islets in the Indian Ocean, lying between 7° 6' N. and 0° 42' S. lat. and 72° and 74° E. long., and consisting of seventeen atolls with a great number of islands, of which about 300 are inhabited, the population being estimated at 70,000. The Moorish traveller, Ibn Battūta, lived for more

than a year (1343—1344) in the islands, but the first Europeans to visit them were the Portuguese, who established a factory in them in 1518. The Maldives were much harassed by Mappilla (Moplah) pirates from the Malabar Coast and in 1645 the king, who is entitled 'Sulṭān of the Twelve Thousand Isles', placed himself under the protection of the Dutch in Ceylon, with which island the Maldives have, since that time, been politically connected. The natives are Muslims and fall into three ethnographical divisions, (1) the northern, with a strong admixture of Dravidian blood from India, (2) the central, under the immediate rule of the Sulṭān, who resides in Male, which has acquired from Arab traders and settlers a strain of Semitic blood, and (3) the natives of the southern clusters, who have had little communication with the central group, and preserve more of the primitive type, resembling the Sinhalese villagers of Ceylon. All are peaceful, intelligent and industrious, growing their own crops and weaving their own cloth and mats. The chief exports are copra, oil, and dried fish products. The language is a dialect of the Sinhalese, somewhat Muhammadanized, but many read Arabic more or less fluently.

MALHAMA. [See MALAUM.]

MALI, a town, which no longer exists, the old capital of the Mandingo empire, in the western Sūdān, also called Mali, Māli, Melli, Melle, Mani or Mané. All these names are dialectic or local variants of the same word which is the name of the country of origin of a people whom the French call Malinké, following the Pul and Tukulor, and the English 'Mandingo', following the form used by one section of this people on the Lower Gambia.

The name found in the Arab authors for this town was not the one used by the inhabitants themselves and the latter is not given us by the geographer Idrisi, nor the historian Ibn Khaldūn, nor the traveller Ibn Battūta, nor Leo Africanus. It was only in 1913 that the translation of an Arabic manuscript not long before discovered in the Sūdān, the *Ta'rikh al-Futūkh*, enabled us to learn that in reality there were two successive capitals of the Mandingo empire or of Mali: the older was called Djirila or Djériba and there was later another called Niani.

Recent researches in the valley of the Niger have enabled the sites of these two towns to be discovered. The first was situated at the junction of the Niger and the Sankarani, and at the place called Mani or Mali Tombo, i.e. ruins of Mali. There are still traces of a very ancient and important town, which the natives regard, according to their traditions, as the ancient residence of their former sovereigns and the place where the latter are buried.

As to the second town, a copyist's error in the text of Ibn Khaldūn concealed the true name till

the publication of the *Ta'rikh al-Futūkh* in 1913. It was recently recognised that the capital in question should be located on the left bank of the Sankarani, and at the level of Siguiri, not far from the place where there is still a town of the same name, Niani.

Djériba was no doubt the cradle of the Mandingo dynasty of the Keita of the xiith—xiiith century. We have no information about it. We are more accurately informed about Niani. It is supposed to have been founded in 1238 after Sundjata Keita, ruler of the Mandingo, had defeated in 1235 at Kirina the emperor of Sōn, Sumanguru Kante, his rival and enemy. Gongo Mūsā, often wrongly called Kanku Mūsā, was ruling there a century later, when on his return from a pilgrimage to Mecca, he attracted to his court an Arab poet named al-Sāhilī who belonged to a Granada family. By orders of Gongo Mūsā, this foreigner built in Gao a mosque with battlemented terrace and pyramidal minaret. According to tradition, this was the first building of the type, now so widely spread in the western Sūdān, the origin of which is North Africa.

In 1352—53, in the reign of Sulaimān Keita, brother of Gongo Mūsā, the Arab traveller Ibn Battūta visited the town. It was then a completely Muslim metropolis, in which lived Egyptian and Moroccan legal authorities, students of Islam, readers of the *Qur'ān* in the mosques, and merchants. No description of the different quarters of the town has come down to us but we have a fairly detailed account of the sovereign's palace. The ruler gave his audiences in a room looking out on a courtyard, with six windows of wood, three of which were covered with plates of silver and above these three covered with plates of gold. These windows were hidden by curtains, which were lifted to show that the hour of audience had come.

The empire of Mali retained its power down to the beginning of the xvth century when its decline began. According to Leo Africanus who visited the Sūdān in the first half of the xvth century, the capital Mali or better Niani was inhabited by about 6,000 families who included many artisans and traders. Islam was flourishing, the town had still a number of mosques and prosperous schools but it had lost its former glory.

In 1545, Dā'ūd, brother of the *askiya* of Gao, marched to Niani; the ruler of the Mandingo having succeeded in escaping, Dā'ūd occupied the town which he plundered for a week before withdrawing, ordering his soldiers to denude the palace of the king with ordure.

In the xvth century the growth of the Bambara kingdoms of Segou and Kaarta contributed to overthrow what was left of the old Mandingo power, the last chiefs of which, leaving Niani, took refuge in Kangaba.

There is no doubt that Niani was visited on several occasions by the Portuguese. We know nothing of the expeditions which set out from their factories in Lower Gambia to the interior; on the other hand, we have notes about the Mandingo capital on the journey made in 1483 of an embassy from Elmina (now the Gold Coast Colony). João de Barros describes it in his Book III of his *Asia*: 'By the route of the fortress of Minas (Elmina) he (John II) also sent an embassy to Mahmūd b. Mansur, grandson of Mūsā, king of Songo. This city is one of the most populous of this great country which we usually call the

land of the Mandingoes". Another author, Barth, claims to identify the *Songo* of the Portuguese historian with the land of the Songhay on the Niger. This is clearly wrong. But is *Songo* a name applicable to the Mandingo capital? M. Delafosse does not think so; he calls attention to the fact that the country of the Mandingoes is still known among the coast peoples of the Gulf of Guinea and in all the Fanti and Ashanti country under the name of *Songo*, so that among those with whom the Portuguese of Elmina mixed, the word was simply a synonym of Mandingo or Mali.

MALIK (A.), King. In the Qur'an the word, in addition to being used of the kings of this world, is also applied to Allāh, e.g. xx. 113: "So is Allāh exalted, the King, the Truth". In iii. 25, Allāh is the *malik al-mulk*, the possessor of royal power, which he gives to and takes from whom He will; in the *Fatḥ* many Qur'an readers read *malik* (for *mālik*) *ṣaym al-dīn*: God's kingdom is also described as *mulk* and *malūkāt* [cf. ALLĀH].

Muslim rulers do not generally call themselves kings; as in the Qur'an, the use of the word was confined to the rulers of foreign peoples in so far as it had an earthly significance. The application of the word to Muslim potentates was regarded not so much as blasphemy but rather as implying a form of rule which was contradictory to Muslim political theory. It was considered very much to Mu'awiya's discredit that he described himself as the first king in Islām; and as a kingdom, which is contrasted with the imāmate, the dignity alone worthy of the Muslim rulers, the rule of the Omayyads was attacked and despised by the pious old-fashioned party.

While religious constitutional literature does not recognise the word *malik* as a term for Muslim conditions, it plays a very much greater part in the literature of mirrors for princes which is indifferent to religion, but, only when it is a question of a ruler in general and not of specifically Muslim rulers. Al-Dīnawarī gives his *K. al-Ta'rikh* the subtitle *Fī Akhbār al-Mulūk* and al-Fārābī deals very fully with the duties of a king. In the ethical encyclopaedias which deal with all three moral sciences, ethics, economics and politics [cf. MĀL], like the *Sūfīk al-Mulūk* *fī Tadhīr al-Mamūlīk* of Ibn Abī 'l-Rabi', the king appears as the subject of special chapters in the scheme of division of this kind of literature.

With the spread of Islām and the Arabic language into Asia, *malik* became used as the equivalent of the Persian *šāh* and as a royal title was particularly favoured by mediaeval dynasties of Turkish origin. We find the title *malik* as early as the Sāmānids and in the next century the Buyid Bahā' al-Dawla calls himself *Malik al-Mulūk*,

a title modelled on the ancient Iranian title of "King of Kings". Among the Seldjūqs, Atābegs and Urtukids, it is the regular title of sovereignty, usually combined with an honorific epithet. It is not so generally used by the Aiyūbids and Mamlūks. In the feminine it is the royal title of the Mamlūk queen Shajar al-Durr, who calls herself "queen of the Muslims" (*Malika al-Muslimin*). One of the rare occurrences in India of the title is also in the feminine *Malika*, which queen Ragya of Delhi uses in place of the *Sultān* of the other members of the dynasty. After being practically extinct for several centuries in the Muslim world *malik* has quite recently been adopted as the royal title in the new kingdoms of Egypt, Iraq, the Hijāz and Afghanistan so that it has suddenly, if somewhat artificially under the influence of the western conception of king, come to be the royal title *par excellence* in the Muslim world.

MALIK 'AMBAR ḤABASHI, an Abyssinian slave, who rose to great power and influence in the Deccan. When Ahmadnagar was conquered by prince Dāniyāl in 1609 (1600), Malik 'Ambar and Rājā Minnān, a Deccan chief, divided the remaining territories between them. About this period owing to the rebellion of Sulṭān Salīm, the death of Akbar, and the revolt of Sulṭān Khurāsān, 'Ambar found time to regulate his country and raised large armies, and even dared to seize several of the imperial districts. He introduced a new revenue system into the Deccan, perhaps in imitation of Tōdār Mall. When the authority of the emperor Dīnshah was established, he sent several expeditions to the Deccan, but 'Ambar could not be subdued. At last he restored the places taken from the Mughals to Shāh Dīshah, to whom he became attached and remained loyal to him until his death, which occurred in 1635 (1626), in the 80th year of his age. He was buried in Dawlatābād [q.v.].

AL-MALIK AL-KĀMIL I, NĀṢIR AL-DIN ABU 'L-MĀ'LI MUHAMMAD R. AL-MALIK AL-'ĀDIL, an Aiyūbid, was born in Rabi' I 576 (Aug. 1180) and knighted with full ceremony on Palm Sunday (May 29) 1192 in Akkā by Richard Cœur-de-Lion who was on friendly terms with his father. A few years later his name begins to appear in the history of the Aiyūbid wars. When his father, who was besieging Māridin [q.v.] with his army, left it after the death of al-'Asir, Saladin's brother, on 27th Muḥarram 595 (Nov. 29, 1198) to seize the capital, Damascus, for himself, he entrusted the conduct of the siege of Māridin to his son Kāmil. The governor of the town had begun to negotiate with him for surrender, when reinforcements arrived and after a fight which went badly for al-Kāmil, the latter was forced to withdraw and join his father in Damascus. Al-'Ādil's death (7th Djumādā II, 615—Aug. 31, 1218) left him the difficult task of clearing Egypt of the Crusaders, who had landed near Damietta in the beginning of summer and had begun to besiege the town.

On the news of their landing, al-ʿAdī [q.v.], who was then in Syria, sent troops to Egypt and al-Kāmil endeavoured to defend the land as best he could. The Christians gained the upper hand at first and by the end of Shaʿbān 616 (beg. Nov. 1219), Damietta had fallen into their hands. It took nearly two years for al-Kāmil, who had had homage paid to himself as sultan of Egypt and Syria after the death of his father, to retake the town with the help of the other Ayyūbids, particularly his brother al-Malik al-Muʿazzam; the Christians by this time were tired of fighting and in Raddab 618 (the end of August 1221) they offered to abandon the town if given a free passage. Al-Kāmil, who feared not without reason that they would soon receive reinforcements from Europe, gladly accepted their terms whereupon the Franks left Egypt. But then troubles broke out within the Ayyūbid ranks. When al-Muʿazzam died (end of Dhu l-Kaʿda 624 = Nov. 1227) al-Kāmil and his brother al-Malik al-Ashraf attacked his son and successor al-Malik al-Nāṣir Dawūd and finally took Damascus from him (Shaʿbān 626 = June/July 1229); al-Kāmil next occupied southern Syria and Palestine and al-Ashraf was recognised as ruler of Damascus under the suzerainty of al-Kāmil, while their nephew Dawūd received al-Karak, al-Shawbak and some other remote fortresses as compensation. Al-Kāmil had previously entered into negotiations with the Emperor Frederick II and concluded a treaty with him by which he ceded Jerusalem to him with a corridor to Jaffa and the Emperor in return promised to help him against all his enemies. After some time the Ayyūbids came into conflict with the Saljuqs. Kai-Kāṣ I [q.v.] had previously quarrelled with al-Ashraf and sought to bring against him a confederacy of petty Mesopotamian dynasties and under his brother and successor Kai-Kobād I [q.v.] it came to open fighting. The successes won by al-Kāmil in this war, however, aroused the jealousy of his relatives and they formed a coalition against him [cf. ARYUNDS]. Al-Kāmil then set out for Egypt and advanced victoriously as far as Damascus. He succeeded in taking this city also but died very soon afterwards (in Raddab 635 = March 1238). As a ruler he was undoubtedly one of the most distinguished of the Ayyūbids. He was a brave soldier and a skilful diplomat and rendered lasting services to the development of his country. He devoted special attention to irrigation and in his reign the defences of the citadel of Cairo were completed. He also took a lively interest in the cause of learning.

AL-MALIK AL-KĀMIL II. [See SHAʿBĀN.]

MALIK SARWAR, KHAWAJA-I DJAHĀN was a eunuch given by Salar Raddab to his grandson Muhammad, son of Firuz Shah Tughlak, in whose service he rose to be chief eunuch and controller of the elephant stables. He

was faithful to his master in all his troubles, and in 1389 received the title of Khawaja-i Djahān and was made *warir*. Muhammad's son, Mahmūd Shah, sent him in March, 1394, to govern the eastern provinces, with his headquarters at Džawnpūr, and conferred on him the title of Malik al-Sharḥ, or lord of the east. He took thither with him Karanful, a slave and water-bearer of Firuz Tughlak, whom he had adopted, and his brothers. His administration was most successful and his adopted son Karanful served him loyally. On the disruption of the kingdom of the Tughlak dynasty after Timur's invasion, Malik Sarwar assumed the title of Sultan al-Sharḥ and established his independence in Džawnpūr. Karanful received the title of Malik al-Sharḥ, and his brother Ibrahim was made commander of the fort and city.

Malik Sarwar died in 1400 and was succeeded by Karanful, who ascended the throne of Džawnpūr under the title of Mubarak Shah.

W. P. and Oudh (*Sharqi Architecture of Jaunpūr*, by A. Führer), 1889. (T. W. HAIG)

MALIK b. ANAS, a Muslim jurist, the imām of the *madhhab* of the Mālikis, which is named after him, and frequently called briefly the Imām of Medina.

1. The sources for Malik's biography

The oldest authority of any length for Malik, Ibn Saʿd's account (d. 230) based on al-Wāqidi (d. 207) in the sixth class of the Medina "successors", is lost as there is a hiatus in the manuscript of the work, but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in Tabari (iii, 2519 sq.), in the *Kitaḥ al-Uyūn* (*Fragm. hist. arab.*, i, 297 sq.), in Ibn Khallikān and al-Suyūṭi (p. 7, 6 sq., 12 sq., 41, 46). From this it is evident that the brief biographical notes in Ibn Kutaiba (d. 276) and the somewhat more full ones in the *Fihrist* (compiled in 377) are based on Ibn Saʿd. The article on Malik in Tabari's (d. 310) *Dhail al-Mudharriyāt* is essentially dependent on the same source, while a few other short references there and in his history are based on other authorities. Al-Samʿāni (c. 550) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Khallikān (d. 672) and particularly in al-Nawawī (d. 676) the legendary features are more pronounced although isolated facts of importance are also preserved by them. Al-Suyūṭi (d. 911) gives a detailed compilation from Ibn Saʿd and other works, most of which are now no longer accessible but are for the most part of later date and unreliable, like the *Muṣnad Hadīth al-Muwaffiq* of al-Fāḥikī, the *Ḥilya* of Abū Naʿīm, the *Kitaḥ al-Musṭafas* wa l-Muṭṭalaf of al-Khatīb al-Baghādī, the *Kitaḥ Tarīkh al-Madīnah* of al-Kāḍi ʿIyāḍ, the *Faṣṣal* of Abū l-Ḥasan Fihri. The bulk of the later *Manāẓih*, for example that of al-Zawāwī, is of no independent value.

II. Malik's Life

Malik's full name was Abū ʿAbd Allāh Malik b. Anas b. Malik b. Abū ʿĀmir b. ʿAmr b. al-

Harith b. Ghaimān b. Khurrah b. 'Amr b. al-Harith al-Asbahī; he belonged to the Humair, who are included in the Banū Taim b. Murra (Taim Kuraish).

The date of his birth is not known; the dates given, varying between 90 and 97 are hypotheses, which are presumably approximately correct. As early as Ibn Sa'd we find the statement that he spent three years in his mother's womb (over two according to Ibn Katalba, p. 290), a legend, the origin of which in a wrong interpretation of an alleged statement by Malik on the possible duration of pregnancy is still evident in the text of Ibn Sa'd. According to a tradition preserved by al-Firmidhi, Muhammad himself is said to have foretold his coming as well as that of Abū Hanifa and al-Shāfi'. His grandfather and his uncle on the father's side are mentioned by al-Sam'āni as traditionists, so that there is nothing remarkable in his also being a student. According to the *Kitaḥ al-Aghani*, he is said to have first wanted to become a singer, and only exchanged his career for the study of Fiqh on his mother's advice on account of his ugliness (cf. Goldziher, *Mus. Studien*, II, 79, note 2); but such anecdotes are little more than evidence that some one did not particularly admire him. Very little reliable is known about his studies, but the story that he studied Fiqh with the celebrated Rabi'a b. Farrūkh (d. 132 or 133 or 143) who cultivated *ra'y* in Medina, whence he is called Rabi'at al-Ra'y can hardly be an invention, although it is only found in somewhat late sources (cf. Goldziher, *op. cit.*, p. 80). Later legends increase the number of his teachers to incredible figures: 900, including 300 tālīmūn are mentioned. He is said to have learned *ḥir'a* from Naḥ' b. Abi Nu'aim. He transmitted traditions from al-Zuhri, Naḥ', the Mawla of Ibn 'Umar, Abu 'Zinād, Ḥāshim b. 'Urwa, Yahyā b. Sa'id, 'Abd Allāh b. Dīnār, Muhammad b. al-Munkadir, Abu 'Zulair and others, but the isnaḍs of course are not sufficient evidence that he studied with the authorities in question; a list of 95 shuyūkh is given by al-Suyūṭī, p. 48 *sup.*

A fixed chronological point in his life, most of which he spent in Medina, is his being involved in the rising of the 'Alid pretender Muhammad b. 'Abd Allāh in 145 (on the other hand the story of Malik's alleged dealings with Ibn Hurmuz in the same year gives the impression of being quite apocryphal). As early as 144 the caliph al-Manṣūr sent to the Ḥasanids of Mecca through him a demand that the two brothers Muhammad and Ibrahim b. 'Abd Allāh suspected of being pretenders should be handed over to him; this shows that he must have already attained a position of general esteem and one at least not openly hostile to the government; he was even rewarded out of the proceeds of the confiscated property of the captured 'Abd Allāh, father of the two brothers above named. This mission met with no success. When Muhammad in 145 by a coup made himself master of Medina, Malik declared in a *fatwā* that the homage paid to al-Manṣūr was not binding, because it was given under compulsion, whereupon many who would otherwise have held back joined Muhammad. Malik took no active part in the rising but stayed at home. On the failure of the rebellion (147) he was punished by flogging by Dja'far b. Sulaimān, the governor of Medina, when he suffered a

dislocation of the shoulder, but this is said to have still further increased his prestige and there is no reason to doubt that the stories of Abū Hanifa's ill-treatment in prison are based on this episode in the life of Malik. He must have later made his peace with the government: in 160 the caliph al-Mahdi consulted him on structural alterations in the Meccan sanctuary, and in the year of his death 179 the caliph al-Raḡid visited him on the occasion of his pilgrimage. While this fact may be considered certain, the details in the *Kitāb al-Uyūn* are already somewhat legendary and in Suyūṭī, following Abū Nu'aim, quite fantastic. The story of al-Manṣūr found as early as Ibn Sa'd, in a parallel *riwāya* in al-Tabari of al-Mahdi, is quite fictitious and is given again with fantastic detail in al-Suyūṭī (from Abū Nu'aim) of al-Raḡid, that the caliph wanted to make the *Muwatta'* canonical and only abandoned his intention on the representations of Malik.

Malik died, at the age of about 85 after a short illness, in the year 179 in Medina and was buried in al-Baqī'. 'Abd Allāh b. Zainab, the governor there, conducted his funeral service. An elegy on him by Dja'far b. Ahmad al-Sarrāḡī is given in Ibn Khallikān. Pictures of the *ḡubba* over his grave are given in al-Hatamī, *al-Riḥla al-Hijāziya* 2, opposite p. 256 and in Ibrahim Rif'at Pasha, *Mir'at al-Haramain*, vol. I, opposite p. 426.

As early as Ibn Sa'd (certainly going back to al-Wāḡidī) we have a fairly full description of Malik's personal appearance, his habits and manner of life, which however cannot claim to be authentic, nor can the sayings attributed to him which became more and more numerous as time went on. The few certain facts about him have been buried under a mass of legends: the most important facts have already been noted and the others will be found in al-Suyūṭī and al-Zawāwī.

On the transmitters of his *Muwatta'* and the earliest members of his madhhab see Sect. III, and v.; here we will only mention the most important scholars who handed on traditions from him. These were 'Abd Allāh b. al-Mubārak, al-Awāḡī, Ibn Djarāḡī, Ḥammād b. Zaid, al-Laith b. Sa'd, Ibn Salama, al-Shāfi', Shu'ba, al-Thawri, Ibn 'Ulayya, Ibn 'Uyaina, Yazid b. 'Abd Allāh and his shaikhs al-Zuhri and Yahyā b. Sa'id; al-Suyūṭī, p. 18 *sup.* gives a long list of transmitters but most of them are not corroborated. We may just mention the apocryphal story of Malik's meeting with the young al-Shāfi' (*Fragm. hist. ar.*, I, 359; Wustenfeld, *Gott. Abh.*, 1890, p. 34 and 1891, p. 1 *sup.*), which is simply an expression of the view that was held of the relation between the two Imāms.

III. Malik's Writings

Further sources for his teachings

1. Malik's great work is the *Kitaḥ al-Muwatta'*, which, if we except the *Corpus Juris* of Zaid b. 'Ali, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice, ritual and practice of religion according to the *ijmā'* of Islām in Medina, according to the *sunna* usual in Medina and to create a theoretical standard for matters which were not settled from the point of view of *ijmā'* and *sunna*. In a period of recognition and appreciation of the canon law under the early 'Abbāsids, there was a practical interest in pointing out a "smoothed path" (this

is practically what *al-muwaffa'* means) through the far-reaching differences of opinion even on the most elementary questions. Mālik wished to help this interest on the basis of the practice in the Hijāz and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a means; the older jurists are therefore hardly ever quoted except as authorities for Mālik himself. As he was only concerned with the documentation of the *sunna* and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The *Muwaffa'* thus represents the transition from the simple Fikḥ of the earliest period to the pure science of Ḥadīth of the later period.

Mālik was not alone among his contemporaries in the composition of the *Muwaffa'*; al-Mājjahūn (d. 164) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the *Muwaffa'* are recorded by several Medina scholars of the same time (cf. Goldziher, *op. cit.*, p. 219 *sq.*) but nothing of them has survived to us. The success of the *Muwaffa'* is due to the fact that it always takes an average view on disputed points.

In transmitting the *Muwaffa'*, Mālik did not make a definitive text, either oral or by *munāwala*, to be disseminated; on the contrary, the different *riwāya's* (recensions) of his work in places differ very much (cf. Goldziher, *op. cit.*, p. 222). The reason for this, besides the fact that in those days very little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (cf. Goldziher, *op. cit.*, p. 221), lies probably in the fact that Mālik did not always give exactly the same form to the same lectures in different "classes". But the name *Muwaffa'*, which certainly goes back to Mālik himself, and is found in all recensions is a guarantee that Mālik wanted to create a "work" in the later sense of the term, although of course the stories which make Mālik talk of his writings reflect the conditions of a later period. In later times the *Muwaffa'* was regarded by many as canonical (cf. Goldziher, *op. cit.*, p. 213, 265 *sq.*; al-Suyūṭī, p. 47) and numerous legends deal with its origin (al-Suyūṭī, p. 42 *sq.*).

Fifteen recensions in all of the *Muwaffa'* are known, only two of which still survive in their entirety, while some five were studied in the 11th/12th centuries A. H. in Spain (Goldziher, *op. cit.*, p. 222, note 2 and 4) and twelve were still available to al-Rudānī (d. 1094) (Heffening, *Fremdenrecht*, p. 144, note 1):

a. the vulgate of the work transmitted by Yahyā b. Yahyā al-Maḡmūlī (d. 234), often printed, e.g. Delhi 1216, 1296 (without isāda, with Hindustani translation and commentary), 1307, 1308, Cairo 1279—1280 (with the commentary of Muḥammad b. 'Abd al-Bāqī al-Zurqānī, d. 1122), Lahore 1889, Tunis 1280; numerous commentaries, editions and synopses; cf. Brockelmann, *G.A.L.*, I, 176; Ahlwardt, *Katalog Berlin*, 1145; Muḥammad 'Abd al-Ḥayy al-Lakhnawī (Introduction to the edition of the recension *h*), Lucknow 1297, p. 21 *sq.*; al-Suyūṭī, p. 3 and *passim* (work of al-Faḡḡī), p. 57 (on Ibn 'Abd al-Barr) and p. 58 (chief passage); Goldziher, *op. cit.*, p. 230, note 2; Schacht, *Abb. Preuss. Ak.*, 1928, N. 2; and al-Suyūṭī, *1'af al-Muḡaffa' li-Riḡāl al-Muḡaffa'*, Delhi 1320 and

Muḥammad b. 'Aḥīr al-Fatmī, *Madjma' Biḡār al-Muḡaffa'*, Lucknow 1283;

β. the recension of Muḥammad b. al-Ḥasan al-Shaibānī (d. 189) which is also an edition and critical development of Mālik's work, as al-Shaibānī at the end of most chapters gives his own views and that of Abū Ḥanīfa on the questions discussed, sometimes with very full reasonings; often printed e.g. Lahore 1211—1213 (with Hindustani translation and notes), Ludhiana 1291, 1292, 1293, Lucknow 1297 (with introduction and commentary by Muḥammad 'Abd al-Ḥayy al-Lakhnawī), Kazan 1910 (*do.*); several commentaries; cf. Brockelmann, *op. cit.*; Schacht, *op. cit.*, N. 2, 2a, 2b; and the works quoted under a.

On the relation of these *riwāya's* to one another cf. Goldziher, *op. cit.*, p. 223 *sq.*

γ. The quotations from the recension of 'Abd Allāh b. Wahb (d. 197) which are preserved in the two fragments of al-Ṭabānī's *Kitaḡ al-Ḥatā'if al-Fuḡḡā'* (ed. Kern, Cairo 1902, and Schacht, *op. cit.*, N. 22) are fairly comprehensive; this *riwāya* follows that of Yahyā b. Yahyā quite closely.

The other recensions of the *Muwaffa'* are given by al-Lakhnawī, *op. cit.*, p. 18 *sq.*; further lists of transmitters of the *Muwaffa'* are given in al-Suyūṭī, p. 48, 51 and in al-Nawawī.

z. Whether Mālik composed other works besides the *Muwaffa'* is doubtful (the statements in the *Fihrist*, p. 199, *sq.*, which speak of a number of writings by Mālik are quite vague and uncertain). The books ascribed to him fall into two groups: legal and otherwise. Among the legal we read of a *Kitaḡ al-Sunan* or *al-Sunna* (*Fihrist*, p. 199, *sq.*), transmitted by Ibn Wahb or by 'Abd Allāh b. 'Abd al-Ḥakam al-Miṣrī, a *Kitaḡ al-Manārik* (al-Suyūṭī, p. 40), a *Kitaḡ al-Muḡḡā'āt*, transmitted by Ibn Wahb (*ibid.*), a *Riḡāla fī 'l-Adḡiya*, transmitted by 'Abd Allāh b. 'Abd al-Ḥallī (*ibid.*, p. 41) and a *Riḡāla fī 'l-Fatāwā*, transmitted by Khaliḡ b. Naṣṣār and Muḥammad b. Maṭarrif (*ibid.*). The genuineness of all these is, however, uncertain and even if they go back to Mālik's immediate pupils (sometimes they are actually attributed to the latter; cf. al-Lakhnawī, *op. cit.*, p. 19) Mālik's own share in them would be still uncertain. A book (Gotha 1143) said to have been transmitted by 'Abd Allāh b. 'Abd al-Ḥakam al-Miṣrī and heard by him along with Ibn Wahb and Ibn al-Kāsim is certainly apocryphal and besides does not pretend to give any utterances of Mālik himself.

Of other titles are mentioned a *Taḡrīf*, a *Riḡāla fī 'l-Kadār wa 'l-Radd 'ala 'l-Kadāriya*, a *Kitaḡ al-Nuḡūm* and a *Kitaḡ al-Sirr* (al-Suyūṭī, p. 40 *sq.*) which are in the usual style of the apocryphal literature. The suspicion of falsity is also strong in the case of the *Riḡāla* containing advice to the caliph al-Raḡḡid, mentioned as early as the *Fihrist* alongside of the *Muwaffa'* (printed Bulāḡ 1311; cf. Brockelmann, *op. cit.*) which look like a Mālikī counterpart of the *Kitaḡ al-Kānūḡī* of Abū Yūsuf: even al-Suyūṭī doubted its genuineness, although for reasons which are not convincing to us.

3. There are two other main sources for Mālik's teaching (setting aside the later accounts of the doctrine of the Mālikī madḡhab):

The more important is the *al-Mudawwana al-Kubra* of Saḡnūn (d. 240) which contains replies by Ibn Kāsim (d. 191) according to the school of Mālik or according to his own *ra'y* to questions of Saḡnūn as well as traditions and opinions of

Ibn Wahb (d. 197) (cf. Brockelmann, *op. cit.*, p. 177; Hefening, *op. cit.*, p. 144; Krenkow, in the article *SAHNUN*).

Al-Tabari who in his *Kitaḥ al-Iḥtiṣāṭ al-Fuḥḥāṣ* has preserved fragments of the *Muwattaʿ*-recension of Ibn Wahb (cf. above), also quotes frequently traditions and opinions of Mālik in his commentary on the Qurʾān on the "legal" verses.

IV. Mālik's position in the history of Fiqh

Mālik represents, in time, a stage in the development of Fiqh in which the reasoning is not yet thorough and fundamental but only occasional and for a special purpose, in which the legal thought of Islām has not yet become jurisprudence and, in place, Medina where the decisive foundations of Muslim law were laid down. One of the main objects in the juristic thought that appears in the *Muwattaʿ* is the permeation of the whole legal life by religious and moral ideas. This characteristic of the formation of legal ideas in early Islām is very clear, not only in the method of putting questions but in the structure of the legal material itself. The legal material, having in itself no connection with religion, that has to be permeated by religious and moral points of view, is the customary law of Medina, by no means primitive but adapted to the demands of a highly developed trading community, which for us is the principal representative of old Arabian customary law: it appears in Mālik sometimes as *sunna* "use and wont", sometimes it is concealed under the Medina *ijmāʿ* which he ascertains with great care; broadly speaking this only means that objections on religious grounds have not been raised by anyone against a principle etc. of customary law. The older jurisprudence had another main object: the formation of a system which sets out from principles of a more general character, which aim at the formation of legal conceptions in contrast to the prevailing casuistry and is to some extent rounded off in a codification, if still a loose one, of the whole legal material.

While the islamisation of the law had been already concluded in its essential principles before Mālik, many generations had still to work at its systematisation; therefore Mālik's own legal achievement can only have consisted in the development of the formation of a system. How great his share in it was cannot be ascertained with certainty from the lack of material for comparison. The surprising success achieved by the *Muwattaʿ* of Mālik out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medina without any considerable work of the author's own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical). The *Muwattaʿ* would in this case have to be regarded less as evidence of Mālik's individual activity than as evidence of the stage reached in the general development of law in his time. It may be said that this average character was just what Mālik aimed at (cf. Sect. iii. 1).

The high estimation in which Mālik is held in the older sources is justified by his strict criticism of Hadith and not by his activity in the interest of Fiqh (al-Tabari, iii. 2484, 2492; al-Samʿānī; al-Nawawī; Goldziher, *op. cit.*, p. 147, 168; do., *Zāhirīyya*, p. 230); even this only means that

with his hadiths he kept within the later consensus. That al-Shāfiʿi devoted special attention to him out of all the Medina scholars (cf. his *Kitaḥ al-Iḥtiṣāṭ* Mālik waʾl-Shāfiʿi) is explained by the fact that he was a disciple of his.

As to the style of legal reasoning found in the *Muwattaʿ*, Hadith is not by any means the highest or only court of appeal for Mālik; on the one hand he gives the *amāl*, the actual undoubted practice in Medina, the preference over traditions, when these differ (cf. al-Tabari, iii. 2505 *sq.*) and on the other hand in cases where neither Medina tradition nor Medina *ijmāʿ* existed, he laid down the law independently; in other words he exercises *raʾy*, and to such an extent that he is occasionally reproached with *idʿarrah*, agreement with the Iraqis (cf. Goldziher, *Muh. Studien*, ii. 217; do., *Zāhirīyya*, p. 4 *sq.*, 20, note 1). According to a later anti-*raʾy* legend, he is said to have repented of it on his deathbed (Ibn Khallikān). It is scarcely to be supposed that he had diverged seriously from his Medina contemporaries in the results of his *raʾy*.

V. Mālik's Pupils

The Mālikī Madhhab

In the strict sense Mālik no more formed a school than did Abū Ḥanīfa; evidence of this is found in the oldest names *Ahl al-Hijāz* and *Ahl al-ʿIrāq* resp., compared for example with *Aḥḥāb al-Shāfiʿi*. These names at once indicate the probable origin of the Mālikī madhhab; after a regular Shāfiʿi school had been formed, which in view of al-Shāfiʿi's personal achievement, is quite intelligible in the development of Fiqh (cf. Bergsträsser, *op. cit.*, p. 76, 80 *sq.*), it became necessary for the two older great schools of Fiqh, whose difference was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Mālik or Abū Ḥanīfa was regarded as head. In the case of Mālik the high personal esteem, which he must have enjoyed even in his life-time (cf. Sect. II) no doubt contributed to this also. But it is to his pupils that his elevation to the head of a school is mainly due. Traces of this process are still to be found in the varying classification of old jurists as of the Hijāz school or as independent madhabs (cf. also *Fihrist*, p. 199, *sq.*).

Among Mālik's pupils and companions who soon became known as Mālikīs may be mentioned: al-Laiṭi b. Saʿd (d. 161 or 165 or 175), ʿAbd al-Raḥmān b. al-Kāsim (d. 191), ʿAbd Allāh b. Wahb (d. 197), Maʿn b. ʿInā (d. 198), Aḥḥāb b. ʿAbd al-ʿAzīz (d. 204), ʿAbd al-Malik b. ʿAbd al-ʿAzīz (d. 212), ʿAbd Allāh b. ʿAbd al-Ḥakam (d. 214), ʿAbd Allāh al-Kaʿnabi (d. 221), ʿImāʾil b. Uways (d. 226) and his brother Abū Bakr, Sahnūn (d. 240). Sahnūn was too late to hear Mālik himself; with him the formation of the Mālikī madhhab is already concluded.

Of the later Mālikī Fiqh literature two short compendia attained special fame as text-books: the *Riṭāla* of ʿAbd Allāh b. Abī Zaid al-Kairawānī (d. 386) whom the author of the *Fihrist* mentions as an important contemporary (p. 201, 12) and the *Mukhtaṣar* of Khalfi b. Ishāq (d. 767); numerous commentaries on and editions of both exist and they have also been discussed in Karo-

pean languages (cf. *Bibl.*). Their importance has sometimes been exaggerated in Europe; development did not stop with them (cf. *Pröbster, Zeitschr. f. vergl. Rechtswiss.*, xlii. 422 sqq.; *Pröbster* deals with an important later jurist in *Islamic*, ii. 430 sqq.). His immediate pupils are not to be regarded as opponents of *ra'y* any more than Mālik, and the Mālikī madhhab is not at all more conservative or traditionalist than the Ḥanafī for example (B. Ducati in *Islamic*, iii. 214 sqq., even endeavours to show that it is the most juridical of the Muslim schools of law).

The Mālikī madhhab spread mainly in the west of the Muslim world; after it had succeeded in driving out the madhhab of al-Awā'ī and the Zāhir school, it prevailed not only in the Maghrib (Tunis, Algeria, Morocco, including Muslim Spain) but in all the rest of Africa, so far as it has adopted Islam. The Mālikī school has many followers in Egypt: in Upper Egypt it occupies about the same position as the Shāfi'ī in Lower Egypt. This geographical distribution seems to go back to corresponding conditions existing before the formation of the madhhabs. Particularly ardent or successful disseminators of Mālik's teaching were 'Abd al-Malik b. Ḥabīb al-Sulamī (d. 238 or 239) and Ism'īl b. Ishāq (d. 282; *Fihrist*, p. 200, 2) but there must also have been earlier scholars for whose time the existence of a regular school is doubtful.

Bibliography: On Mālik's life: Ibn Kuthayba, *Kitāb al-Ma'arīf*, ed. Wüstenfeld, p. 250, 290; al-Tabarī, *Annales*, ed. de Goeje, Index, s. v.; *Kitāb al-Fihrist*, ed. Flügel, p. 198; al-Sam'ānī, *Kitāb al-Ani'ah*, G. M. S., xx. 412; Ibn Khallikān, ed. Wüstenfeld, No. 560; al-Nawawī, ed. Wüstenfeld, p. 530; de Goeje, *Fragmenta historiarum arabicarum*, Index, s. v.; al-Suyūṭī, *Taswīf al-Manāzil*, in: Ibn al-Kāsim, *al-Madawwana*, vol. I, Cairo 1324; 'Isā b. Ma'ād al-Zawāwī, *Manāẓih Sayyid al-Imām Mālik*, ibid.; the further *Manāẓih* and Mālikī *Ṭabaḥāt*-literature; a modern list by Muhammad 'Abd al-Hayy al-Lakhnawī in the introduction to his edition of the *Muwatta'* of al-Shāhānī (cf. above iii. 16).

On Mālik's writings: Brockelmann, *G. A. L.*, i. 175; Goldziher, *Muhammedanische Studien*, ii. 213 sqq.; al-Lakhnawī, *op. cit.*

On Mālik's position in the history of Fikh: Bergsträsser, *Isl.*, xiv. 76 sqq.; Goldziher, *op. cit.*

The older Mālikīs are given in *Fihrist*, p. 199 sqq. Of the Mālikī *Ṭabaḥāt*-works there have been printed e.g. *al-Dibāj* of Ibn Farḥūn (d. 799) along with the *Takmil al-Dibāj* of Ahmad Baba (d. 1032), Fez 1898 and *Nail al-Dibāj* of al-Ṭaḥṣīn al-Dibāj of the same Ahmad Baba, Fez 1317 (cf. Fagnan, in *Festschrift f. Codera*, p. 105). On individual Mālikī jurists cf. the articles on them. On the spread of the Mālikīs: Ahmad Pasha Taimūr, *Nagara ṭarīkhīya fī Hudūd al-Maghrib al-arabīya*, Cairo 1344; Juybolli, *Handbuch der islamischen Geistesg.*, p. 28; do., *Handbuch*, p. 21; Ibn Farḥūn, *op. cit.*, p. 17; Bergsträsser, *Z. D. M. G.*, 1914, p. 410 sq.

Discussion of the Mālikī teaching in European languages (some further references): Petron, *Précis de Jurisprudence Musulmane* (transl. of the *Mukhtasar* with extracts from the commentaries), 1848; Sautyria-Cherbon-

bonnean, *Du Statut personnel et des Successions* (based on the *Mukhtasar*; the commentary takes note of modern decisions), 1873; 'Abd al-Rahīm, *The Principles of Muhammadan Jurisprudence*, 1911 (Italian by Cimino, 1922); al-Kairawānī, *Risāla*, transl. by E. Santillana, *Istituzioni di diritto musulmano malichita*, 1926; Russell-Suhrawardy, *A Manual of the Law of Marriage, from the Mukhtasar*.

(J. SCHACHT)

MĀLIK b. 'AWF, a contemporary of Muḥammad, called al-Naṣrī, to distinguish him from several men of the same circle in his time, and also because he traced his descent through Naṣr b. Mu'āwiya to the eponymous ancestor of the powerful Kaṣī tribe of the Banū Hawāzin. We know very little about his history previous to the day of Hunayn [q. v.] to which he owes his dubious fame. We may assume that he early found opportunities to display his personal bravery. He was still *amrad*, "beardless" (*Aghānī*, xix. 81) — that is, barely out of his first years of adolescence — when he commanded a detachment of the Hawāzin in the Fijār [q. v.] war.

This distinction he perhaps also owed to the consideration which his clan, the Banū Naṣr b. Mu'āwiya, enjoyed among the Banū Hawāzin. Allies of the tribe of Thaqaf (*Aghānī*, xii. 46), the Banū Naṣr found themselves in the same position with regard to the latter and the town of Tā'if as the *Aghānī* with respect to the Quraysh and Mecca. They supplied mercenaries to Tā'if and were given the task of defending the town and protecting against the depredations of marauders the fine gardens that covered the Thaqaf territory. Their relations were, as a rule, peaceful and friendly, but occasionally it happened that the anarchical instincts of the Beduins gaining the upper hand drove them to encroach on the domain of their allies, the citizens of Tā'if. This situation enables us to understand how in the struggle that was about to develop against Islam, the Thaqafis were ready to march under the banner of a Beduin generalissimo.

In the year 8, Muḥammad at the head of a strong force was preparing to attack Mecca. This news disturbed the people who lived on the hills of the Sarāt. They asked themselves, if, once master of Mecca, the Prophet would not be tempted to invade their country. It was then that Mālik b. 'Awf succeeded in combining for their joint defence the majority of the Kaṣī tribes, settled in the frontiers of Najd and of the Hūdūd. The Thaqafis joined their forces to those of their Hawāzin allies. The only result was the defeat at Hunayn. The commander-in-chief Mālik had had the unfortunate idea of bringing the women, children and flocks along with the actual combatants. The whole of this enormous booty fell into the hands of the Muslims.

The defeated side did not distinguish themselves by bravery on the battlefield; the tradition of the Banū Hawāzin attempts the impossible when it endeavours to hide this failure and save Mālik's reputation. After the debacle, he is said to have bravely sacrificed himself to cover the retreat of his comrades-in-arms. This same tradition attributes

to him a series of poetical improvisations on this occasion, in which, after the fashion of the old Beduin paladins he explains and excuses his flight.

The defeated leader tried to make a stand at Liya, a few hours south of Tā'if where he had a *ḥuṣn*. What was a *ḥuṣn*? In Medina at the time of the Hijra the name was given to an enclosure commanded by an *uṣṭun* or tower. Mālik's had probably only brick walls like the little strongholds in Yemen described by the geographer Maḳḍī (Aḥsan al-Takwīm, ed. de Goeje, p. 84). A century ago, the traveller Maurice Tamisier (Voyage en Arabie, Paris 1840, ii. 5) passing through Liya saw there "une forteresse flanquée de tours" intended, as in the days of Mālik, to guard the road. In any case, whatever the strength of the little building, Muhammad easily destroyed it. When Mālik learned of the approach of the Muslims, he thought it prudent to seek refuge behind the ramparts of Tā'if.

In the interval all the booty taken by the Muslims at Hunain had been collected in the camp at Djifra including Mālik's family and flocks. To the Hawāzin deputies sent to negotiate the ransom of the prisoners, Muhammad said: "If Mālik comes to embrace Islam, I shall return him his family and property with the addition of a gift of a hundred camels". Whatever the decision adopted by Mālik, this declaration could not fail to compromise him with the Thakafis. He rightly recognised that his position in Tā'if had become untenable. He succeeded in escaping from the town and presented his submission to Muhammad who fulfilled his promise to the letter. Mālik then pronounced the Muhammadan confession of faith and, to use the traditional formula, "his Islam was of good quality".

The new proselyte had extensive connections and was remarkably well acquainted with the Thakafi region. The Prophet was glad to use him against Tā'if which he had been unable to take by force. He put Mālik at the head of the Ka'bi tribes who had adopted Islam. Mālik therefore organised a guerrilla war against his old allies in Thakaf. No caravan could leave Tā'if without being intercepted by Mālik's men. Exhausted by this unceasing struggle, the Thakafis decided to sue for terms. Mālik then became the representative of the Prophet among the Banū Hawāzin, and the caliph, Abū Bakr, later confirmed him in the office. He took part in the wars of conquest, and was at the taking of Damascus and the victory of Kādisiya in the 'Irāq.

(H. LAMMENS)

MĀLIK b. NUWĀIRA, chief of the Banū Yarbūʿ, a considerable clan of the Banū Ḥaṣala, who were in turn a branch of the confederation of the Banū Tamīm [q. v.]. His liberality, magnanimity and especially his courage had earned him a great reputation before the Hijra. His contem-

poraries said that in the last respect he was without a peer. There was a proverbial saying: *fatā wa-lā ka-mālik*, "a hero no doubt, but not comparable to Mālik". His fame, however, came principally from the impression made by his tragic death and from the collection of elegies, which his brother Mutammim [q. v.] devoted to him.

Along with several other Tamīmī notables he embraced Islam in the lifetime of Muhammad. In return the latter appointed him to collect the canonical taxes, *jizāʾāt*, from among of his fellow-tribesmen. By giving him an appointment like this the Prophet hoped to bring him definitely to his side. The death of the Prophet and the incident of the *riḍā* [q. v.] served to show the foolishness of this hope. Like most of the nomads, Mālik had joined Islam as a political organisation, having clearly made up his mind that he would not be absorbed by it to the extent of sacrificing the independence of his tribe and his own prerogatives.

When the Muslims, or more accurately the Quraysh, of Medina gave their votes for Abū Bakr, Mālik refused to recognize the validity of this election which had been carried through without his participation in it. He argued for the strictly personal character of the *baʿa*, as the Beduins interpreted it. He explained himself in verse, for he was also a poet: — "If the thing turns out badly, we shall bring a remedy, crying: — long live the faith of Muhammad!". He did not stop at this but passing from words to deeds, he divided among the Tamīm the taxes which had been collected. An even graver step, he next plundered a caravan which was taking to Medina the contributions of those nomads who had remained loyal. Then — an eminently Beduin trait — he celebrated in verse this strange exploit, which was equivalent to a declaration of war. He finally compromised himself completely by joining his cause with that of the prophetess Sadiyya [q. v.].

In Medina, Abū Bakr had at first to shut his eyes to these things. But as soon as he felt himself master of the situation, he decided to act vigorously. Khalid b. al-Walid was sent against the secessionists. His orders were to spare only those who declared themselves Muslims. The individualism of the Beduins singularly facilitated the task. He attacked separately the tribes, who were divided or hesitating, and succeeded without difficulty in defeating the rebels in small sections. Thus he came to the Banū Tamīm. The chiefs were suspicious of one another and declined to combine for joint action. Surprised by Khalid and finding himself almost alone, Mālik had to refrain from fighting forces so markedly superior to his. He surrendered on an assurance that his life would be spared and finally declared himself a Muslim.

The prisoners including Mālik were, nevertheless, executed with refinements of cruelty. It was said there had been some misunderstanding of Khalid's orders for which dialectic differences were to blame; so say those authors who feel the need of exculpating Khalid. It was by no means the first action of the kind of the impetuous Makhlams. Did he want to get rid of a rival or deal the last blow to a rebellion by sacrificing, even against the laws of nations and his own orders, a person so highly esteemed as the chief of the Yarbūʿ? As he had been anxious to marry Laila, the vivacious wife of Mālik, he was credited with the first aim. 'Omar demanded that the

faithless leader should be dismissed and brought to judgment, but Abū Bakr refused. "Never", he replied, "shall I put back in the scabbard a sword which Allāh has brought out of it". The elegies on Malik by Mutammim remained celebrated in literary tradition. "No dead man", said the Arabs, "was ever lamented as Malik was by Mutammim".

MALIK AL-ṬAI, Abū Walid Malik b. Abī Ṭamh, was one of the great singers and composers of the Umayyad and early 'Abbāsid period. He was born during the reign of Mu'āwiyā I (40—60 = 660—680) in the land of the Ṭai', his father belonging to the Banū Ṭhāl, a branch of the Ṭai', whilst his mother came from the Banū Makhrūm. In this way Malik could claim to be one of the aristocracy of Islām, and as a child he was adopted by 'Abdallāh b. Dja'far, the famous art patron of Madīna, and was given a good education. In the year 64 (684), he became enamoured with the singing of the celebrated Ma'bad [q.v.] whom he heard at the house of Hamza b. 'Abdallāh al-Zubair, and the event changed his whole career. Taking lessons from Ma'bad and Djamila [q.v.] in singing, he soon astonished everyone by his abilities, and he became very popular with the aristocracy. He thus came to be recognised as a professional musician, for indeed his protector, 'Abdallāh b. Dja'far, had made his house a veritable conservatory of music (al-Mas'ūdi, *Murūj*, v. 385, text). On the death of 'Abdallāh b. Dja'far, Malik attached himself to Sulaimān b. 'Alī the Hashimite. In spite of this however (cf. *J. A.*, Nov.—Dec., 1873, p. 499), Malik was favoured by the Umayyads Yazīd b. 'Abd al-Malik and al-Walid b. Yazīd. On the accession of the 'Abbāsids (132 = 750) Sulaimān was appointed governor of the Lower Tigris, and Malik accompanied him to his seat at Bagra. After a short stay in this city, Malik returned to Madīna, where he died over eighty years of age about the year 137 (754).

Malik was certainly a fine singer. In one place in the *Aghāni* at least (i. 98; cf. ii. 327), he is mentioned as one of the "four great singers", by no less an authority than Ishāk al-Mawṣilī, although the latter in another place ranks him after Ibn Surīdī, Ibn Muhriz, Ma'bad, and al-Gharrī (cf. *Aghāni*, ii. 131). He was apparently not an original composer but a good adapter it would seem (*Aghāni*, i. 173; xiii. 64). Certainly, he was at a disadvantage in not being a performer on the lute (*ūd*), and Ma'bad had to correct his compositions for him.

(H. G. FARMER)

MALIKSHAH AL-ARSLAN ABU 'L-FATH, Saldjūk Sulṭān (465—485 = 1072—92), born on the 9th or 19th Djumādī I, 447 (Rāwandī and *Zub al-Tawārīkh* wrongly 445) = Aug 6th or 16th, 1035. He accompanied his father on his last campaign into Transoxania and homage was at once paid to him as Sulṭān by the vizier Niḡm al-Mulk and the Turkish amirs on Alp Arslān's death. His uncle Kāwurd [q.v.], the ruler of Kirmān, was not satisfied with this, however, because he thought that, as the oldest member of the family, he had the best claim to the throne and set out with his troops for Hamadīn. When attacked by Malikshāh they made but feeble resistance, Kāwurd himself was captured and later strangled (April 1078). Malikshāh then returned to Transoxania by forced marches for the Khakān of Samarḡand, Shams al-Mulk, on hearing of the death of Alp Arslān, had seized the opportunity to occupy Tirmidh and even Balkh had opened its gates to him. The Saldjūk governor Aynā, a brother of Alp Arslān, happened to be away at the time and when he hurried back, he suffered a terrible defeat and died soon afterwards. Shams al-Mulk, however, did not dare to risk another breach with Malikshāh, so the latter re-occupied Tirmidh and proceeded to Samarḡand. The Khakān thereupon submitted; Balkh and Tokharistān were granted to Malikshāh's brother Takash. These campaigns prevented the Sulṭān from going at once to Baghdad to receive the homage of the Caliph in person, and an ambassador was sent to carry through the ceremony. The Caliph was quite ready to do so, and gave the Sulṭān the honorific titles of Djalāl al-Dawla, Mu'izz al-Dīn, Kāsim Amir al-Mu'minin. Our sources are silent about the happenings of the next few years; it is not till 472 that we hear of a campaign against Kirmān, which, however, came to a peaceful termination for Saldjūkshāh, Kāwurd's son, submitted to the Sulṭān and was confirmed by him in the hereditary possession of this province. In Ibn al-Kalānisi (ed. Amedroz, p. 115), we are told that in 475 Malikshāh came to Halab, but Ibn al-Athir and the other sources accessible to me make no reference to this. At this time the Sulṭān made the mistake of discharging 7,000 of his soldiers, although the vizier advised him against it, pointing out that if these men were deprived of their livelihood, they would in desperation become robbers or rebels and a public danger. This is what actually happened. The men went to Takash and he thought that with their help he was strong enough to rebel against his brother. He took several towns and was preparing to occupy all Khorān so that Malikshāh was forced to take the field against him. Takash then retired to Tirmidh, and submitted when besieged there; on this occasion he was pardoned, but when he again rebelled without success a few years later (477 = 1084), he was blinded and thrown into prison in Takrit. In 479 (1086) Malikshāh left Isfahan which he had made his capital and went via al-Mawṣil, Harrān, al-Ruhā and Kalāt Dja'bar to Halab. His object was to establish and re-organise Saldjūk rule securely in these places, but one great inducement for this campaign was that the commander of Halab had appealed to Malikshāh because he was threatened by the latter's brother Tutush [q.v.]. The latter had conquered the Saldjūk ruler of Asia Minor, Sulaimān b. Kutalmish [q.v.], and was trying to

bring Halab under his rule also, but retired when he heard of the approach of Malikshah. The town was granted to Aksonkor, father of Zangi, another general. Buran received al-Ruhil and Vaghisiyan, Antakiya which had just been retaken from Sulaiman while Sulaiman's son Kildj Arslan (q.v.) who was still a youth was taken back by the Sultan to the Irak. There was no further campaign in Asia Minor, Malikshah left the war against the Byzantines to be conducted by the above mentioned amirs, to whom should be added Burjuk, although the author of the *Zubdat al-Tawarikh* makes him besiege Constantinople in person. The fiction narrated in the *Ta'rikh-i Guzida* and in Mirghasod is well known, according to which Malikshah was taken prisoner by the Byzantines without their recognizing him, and only regained his liberty by the stratagem of the vizier, Nizam al-Mulk. The story in al-Bondart is more credible that the Byzantines had to pay the Sultan an annual tribute of 300,000 dinars plus a lump sum of 30,000 dinars. On his return from Halab, Malikshah visited Baghdad for the first time and he was received in ceremonial audience by the Caliph al-Muqtadi bi-Amr Allah. The latter had previously in 474 sought a daughter of the Sultan in marriage but as she had been then still a child, the opportunity was now taken to conclude the matrimonial alliance. The wedding took place next year with great splendour and amid the jubilation of the people of Baghdad. The chroniclers give a full account of it and give no hint that this marriage was soon to be a source of trouble to the Caliph as well as to the Sultan. Before we deal with that, it must be mentioned that in 482 (1089) Malikshah undertook a second campaign against Baghdad, Samarqand and Kashghar as a result of the tyrannical conduct of the young prince Ahmad, a nephew of Shams al-Mulk who was now dead. He gained great successes, took Ahmad back a prisoner to the Irak and then forced the ruler of Kashghar to recognize Saljuq suzerainty. Later however, he allowed Ahmad to return to his kingdom and resume his rule, probably at the intercession of his wife Tarkan Khatun (so to be read, not Turkan Khatun) who was Ahmad's aunt. On these incidents, cf. Barthold *Turkistan down to the Mongol Invasion*, p. 316 sq. Towards the end of the reign of Malikshah the Saljuq empire thus reached its greatest extent, especially when in 485 some Turkish amirs were sent even so far as Yaman, who subdued the land for the Sultan, temporarily only, it is true.

As regards the internal administration of the country, the Sultan left this in the hands of his vizier, Nizam al-Mulk, who was given unlimited power by him at the very beginning of his reign, which he wielded till his death, although as a result of his great age his prestige began to decline towards the end of the reign of Malikshah and to be threatened by intrigues in the palace. His services will be appreciated in the article *NIZAM AL-MULK*; here it is sufficient to characterize his policy briefly, which was to restore the dominion of orthodox Islam under its supreme head, the Caliph, with the help of the sword of the Saljuqs. He had, therefore, to do all he could to maintain harmony between the Sultan and the Caliph, but the course of events led to a breach between the two. Malikshah had several sons by his wife Zubaida Khatun, and the eldest, Ahmad, had been design-

nated successor to the throne but died in 481 (1088). The obvious thing was for Prince Barkiyaruk to take his place as was desired by Nizam al-Mulk and the Turkish amirs but Malikshah had in the meanwhile married another wife, the Princess Tarkan Khatun, who made every effort to secure the throne for her son Mahmud born in 480. Malikshah, however, was more anxious about his daughter who had married the Caliph, for she was unhappy in Baghdad and complained of being neglected by her husband, so that finally the Sultan demanded that she should be sent home with the little son whom she had borne to the Caliph. She, therefore, returned to her father but died soon afterwards in 482; her son Djafar however, became his grandfather's pet and he gave him the name of "Little Commander of the Faithful" in the hope that he would one day bear this title in reality. At the same time he decided to make Baghdad his winter capital and had extensive building operations carried out in the N.E. of the town when he was there in the winter of 1091/92, including a great mosque, the *Djami' al-Sultani*; he also ordered Nizam al-Mulk and his amirs to build residences for themselves there. During this period the great amirs from the west, Aksonkor, Tutush etc., had come to Baghdad, great hunts and other pleasure parties were held, but the Caliph was completely ignored. When in the autumn of 1092 he was on his way from Isfahan to Baghdad for the third time, the aged vizier Nizam al-Mulk was stabbed by a *shahin* at Sahna. It was now for the first time apparent how much the existence of the Saljuq empire depended on this one man, for when the Sultan and his wife were no longer guided by his advice, they committed the gravest errors, which were very soon to plunge themselves and their empire into destruction. Scarcely had the Sultan arrived in Baghdad than, with the intention of making his grandson Caliph, — which was contrary to Muhammadan law as he was a minor — he announced to Muqtadi that he must at once abdicate and leave the town. With difficulty the Caliph obtained a few days respite which he was spending in prayer and fasting, when suddenly the news came that the Sultan was dead. The exact date is not certain but it was about the middle of Shawwal 485 (middle of November 1092). He was said to have caught a severe fever while out hunting, which they attempted to cure without success by bleeding, and he died soon afterwards. But it can hardly be doubted that he was poisoned, as some writers expressly state (cf. Houtema, in *Journal of Indian History*, Sept. 1924, p. 147 sq.). The usual funeral ceremonies were not held; the body was sent to Isfahan and buried there. The Caliph had no difficulty in coming to terms with Tarkan Khatun; he offered to recognize her young son Mahmud as Sultan, if she would hand over to him his own son, the Sultan's grandson. This was done. The title "Commander of the Faithful" died the very next year, when the course of events took a disastrous turn for the Caliph and Tarkan Khatun with the rise of Barkiyaruk. The tragic deaths of the Sultan and his vizier were celebrated in verse by Mu'izzi; cf. Schefer, *Sassanid*, suppl., p. 62 sq.

Malikshah's was a highly honourable character, he was loyal to his relatives and to his servants, brave, just and gentle. His rule is, therefore, much praised by Christian as well as Muslim

authors, but he was uncultured and owed to his vizier the reputation of a patron of learning, whose name is associated with a reform of the calendar (cf. the article *ḤALĪF*), and with certain new legislation; cf. *al-Maṣṣal al-Malikshāhiya*, in *Urda fī Ḥikāyat al-Salḡūkiya*, ed. Süsseheim, p. 69 sq. His connection with the *Risāla-i Malikshāhiya*, a geographical work used by Hamd Allāh Mustawfī, is unknown but it was certainly not written by the Sultān himself, as Ḥādijī Khalifa says (s. v.).

The name Malikshāh was first borne by: 1. Malikshāh, the infant son of Barkiyārūk, who after the death of his father in 1104 held the title of Sultān for a short time, but had soon to give way to his uncle Muḥammad. 2. Malikshāh b. Maḥmūd who, after the death of his uncle Maḥmūd in 1152 became Sultān, but after a few months was thrown into prison as he was quite an incapable ruler, escaped from confinement, spent some time in Khorāsān and died in 1160. We also find individuals of this name among the Salḡūks of Rūm and Syria and among the Khwārizmshāhs.

Bibliography: cf. the article *SALḤŪKA*. The best sketch of the character and reign of Malikshāh is in the article on him by Ibn Khallikān, who had taken many of his facts from a history by al-Ḥamdānī (MS. of vol. i. till the year 367 in Paris, *Bibl. Nat.*, No. 1469). (M. TH. HOOTMA)

MALTA, the chief island of the Maltese archipelago (Malta, Gozo, Comino, Cominotto, Filfoia and minor rocks), inhabited in ancient times by a Mediterranean race, whose megalithic monuments are preserved at Hagiar Kim ('standing stones'), Hal Tarxien and Hal Saġieni. It was colonized very early, certainly before the 2nd century B.C., by the Phoenicians, and formed a base for their trading ships.

It is not certain that the name of Malta is derived from the Phoenician, while the Phoenician origin of Gauslo (Gozo), meaning 'a merchant boat of round shape', seems certain.

The Carthaginians became masters of the island in the 5th–4th century B.C., and kept it four or five centuries. The Romans conquered it in 218 B.C., and for the next ten centuries Malta remained under Roman and Greek influence, being situated near Eastern Sicily. Gozo had only Greek coins, and Greek and Roman coins in great number were minted in Malta. Very early, with St. Paul in the first century, the island was converted to Christianity; during the Western Empire's decay the Byzantines established themselves in it; after their conquest of Northern Africa the possession of Malta became indispensable to them.

The Muslim conquest of Malta is usually ascribed to the year 256 (869–870); in reality it was occupied long before. Ibn al-Athīr informs us that in 221 (835–836), the Aghlabid Ibrāhīm 'despatched a fleet against the islands'; we have every reason for believing that he refers to the islands between Africa and Sicily, comprising the Maltese islands. Further when Ibn al-Athīr speaks of an army sent to Malta from Sicily in 256, he adds that at that moment 'the Christians raised the siege'. If Malta was besieged, undoubtedly by the Greeks of Byzantium, it may be concluded that it had already been occupied by the Muslims, who probably, having landed in 824 at Marara, in Sicily, had occupied the Maltese islands beforehand.

The raids against Sicily and Malta began in the 8th century A.D., and it is not rash to believe that Malta fell before 800 A.D. under Muslim influence. This is also de Goeje's opinion (*Z. D. M. G.*, lviii, 905, note 2).

In Malta the Muslim occupation was certainly more permanent and strongly established than in Sicily; the narrow island was completely subjugated by the conquerors; and this helps us to understand how the Arab-Berber Muslims of Africa succeeded in forcing upon Malta the Arabic language, from which the modern Maltese dialect is derived.

The question of the origin of the Maltese dialect has occasioned many discussions between those who sustained its Phoenician origin (Vassalli, Bres, Bellermann, Cumbo, E. Carnana, Preca) and those who derived it from Arabic (Gesenius, de Sacy, L. Bonelli, Stumme, Noldeke). The conclusion must be accepted that Maltese is an Arabic dialect, which in some ways shows resemblances to the Eastern Arabic dialects, in many others recalls the Arabic dialects of the Maghrib. Peculiarities of Maltese phonetics are the *imāla* of *ā*, which tends to become *ē* and *ē* (*ye* at the beginning of words, as *yēnā* for *ānā*), the pronunciation of *ḥ* as *hamas*, the existence of *ḡ* and *ḥ* sounds in neo-latin and arabic words; in morphology the use of *ni* as prefix of the 1st person singular forms the main affinity with the Maghrib dialects. The accent tends to fall towards the beginning of words. In Malta itself are to be found dialectal varieties between town and country; in the country and in Gozo the dialect is nearer the original Arabic, sounds like *ḥ* and *ḡ* not heard in Valletta, are noticeable in the Gozo vernacular.

A study of the Maltese lexicon, to show how affinities with Arabic dialects, Eastern and Western, may be explained, and how word-fossils have been preserved in Maltese, is still to be undertaken. The prevalence of the Latin-Italian race and the flourishing of Italian civilization and culture in the island have influenced its dialect, both as to syntax and as to phonetics. The percentage of Latin, or rather Italian, words in spoken Maltese varies according to the degree of individual culture.

The Maltese, up to a few centuries ago, had not chosen any particular alphabet for their dialect, as they did not use it as a written language. In the 17th century Agius de Soldanis, a Maltese, turned his attention to the dialect and began to study it; since his time several attempts have been made to systematize the writing of Maltese; it was also proposed to use the Arabic alphabet, and a diacritical transliteration, precise and scientific, was tried. In practice the use of the common Latin alphabet, with the modification of some few letters, was continued. The last attempt of this kind, which has not met with public favour nor with the approval of the vernacular press, was that of the *Għajda tal-kittiba tal-walid* 'Association of the writers of Maltese', which has published a small grammar, particularly concerned with the spelling, called *Taġrif fuq il-kita maltija*, Malta 1924; the preface mentions the precedent systems of writing Maltese. The same *Għajda*, in 1925, began to publish a quarterly review called *Il-Malti*; it is mostly concerned with grammatical questions, and has promoted a movement in favour of pure Maltese (*malti safi*).

Since about 1850 the question of the Maltese dialect has also acquired a political character: the English rulers favoured the development of the dialect at the expense of the Italian language (which remains the language of culture, of the Church and of the Bar). Bibliographical information on Maltese literature to about 1900 is to be found in the works of L. Bonelli and H. Stumme.

Besides the Arabic dialect and place-names, the Muslims have left in Malta a few coins and a considerable number of inscriptions on tombstones: one of them, the celebrated inscription called of Maimūna, dated 1173 A.D., was published more than a century ago, and repeatedly studied by orientalist (Italmaki, Lanci, Amari, Nallino etc.); another one, found in Gozo, is to be seen in the Malta Museum; about twenty more have been found in the excavations made in 1922—1925 at Rābato (near the city Notabile); they are preserved in the Museum of the Villa Romana, near the place of excavation.

The Muslims lost Malta in 1090, when the Normans conquered it; they were however allowed to live on the island under the Norman government until 1249. From 1530 to 1798 Malta was the seat of the Order of St. John of Jerusalem, which the Turks had expelled from Rhodes in 1522. The Order organized there an important war navy. The island was in constant relations with the East and with Barbary; thousands of Muslim slaves were taken to Malta; the Maltese ships had repeated encounters with those of the Porte and of the Levantine and Barbary pirates. The Turks attempted to occupy Malta in 1565, with their well-known expedition which ended in disaster, and again in 1614; more than once they threatened to invade it under Sultan Muhammad IV.

Considering the Order's relations with the Muslim East and the fact that an important portion of the registers of Rhodes was saved, the importance of the Order's archives for the history of the Mediterranean Levant and of North Africa in the sixteenth and seventeenth centuries is easily understood.

A few Arabic MSS. and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum.

MALTHAI, or properly MA'AL-THAYYA, the Arabic name of two villages in the *ḥaḍra* of Duhūk in the old wilāyat of Mawṣil. They are about 40 miles N. N. W. of Mawṣil at the point where the river of Duhūk (left bank tributary of the Tigris) enters the plain, whence the Aramaic name Ma'al-thā > Malthai, "entrance".

The pass of Ma'al-thā giving access to the country to the south of Lake Van must have played an important part in ancient times. Its importance is indicated by the famous bas-reliefs carved on the rock half an hour's walk to the south of Ma'al-thāyā. They reproduce the same scene four times: a king standing in an attitude of adoration before a procession of seven gods, six of whom are standing, each on a mythological animal, and the seventh is seated on a throne placed on the back of a lion. There are no inscriptions accompanying them. Since, however, they are evidently connected with the similar bas-reliefs at Bāwīyān (30 miles N. E. of Mawṣil on the Khazir, a right bank tributary of the great Zab) and these belong to the kings Salmanassar II (860—825 B.C.) and Sennacherib (689—681), it is supposed that the bas-reliefs of Ma'al-thāyā were also executed in the time of Salmanassar II. The figures of the gods are especially interesting as forming a link between Assyrian and Hittite art.

Among the Nestorian Christians Ma'al-thā gave its name to a diocese (also called Bēth-Nuhāḏrē). A Nestorian bishop of Ma'al-thā is mentioned as early as the fourth century. (Hoffmann, *op. cit.*, p. 52, 210); there are other references to the years 497, 544, 554, 576, 585, 605, 962, 1063, 1074, 1092, 1265 (Chabot, *Synedicon Orientale*, Paris 1902, Index, and Hoffmann, *op. cit.*). In the seventh century the Metropolitan of the Jacobites, Mārūṭha, still numbered among his subordinates a bishop of Ma'al-thā (Labourt, *Le Christianisme dans l'empire grec*, 1904, p. 240). At the present day Ma'al-thāyā is still inhabited by Nestorians (in part in union with the Catholic Church).

Balādhūri, p. 331, mentions al-Ma'alā (sic) among the places in Mawṣil conquered by 'Uṭba b. Farḡad in 20 (641). Ma'addasi, p. 139, 145—146, talks highly of the wealth of the vicinity of Ma'al-thāyā in coal, fruits, salt, meat and camphor. He locates the little town on the road from Mawṣil to al-Ḥasaniya (= Zakhū on the little Khābur; cf. M. Hartmann and G. Bell). The importance of this route for communication with the lands of the Kurds is evident from Ibn al-Athīr (viii, 521). Yāqūt, iv, 578, knows Ma'al-thāyā as a little town (*balad*) the name of which is occasionally mentioned in the history of the later period.

Place, *Ninive et l'Assyrie*, 1867, pl. 45; Hoffmann, *Auszüge aus syrischen Akten pers. Märtyrer*, 1880, p. 208 and Index; Perrot and Chipiez, *Histoire de l'art dans l'antiquité*, 1884—1890, II, 642; Luscha, *Ausgrabungen von Sendsjirli*, I, (1893), p. 23; G. L. Bell, *Amurath*, London 1911, p. 284; Lehmann-Haupt, *Armenien*, *ibid.*, 1926, p. 369—375; Thureau-Dangin, *Les sculptures rupestres de Malatya*, *Revue d'Assyriologie*, xxi, 1924, p. 185—197; new photographs taken at Malatya have led the author to identify the gods and the beasts which carry them in the following order: Assur (a dragon and a horned lion),

Ninlil, wife of Assur (a lion), Enlil (a horned lion), Sin (a dragon), Shamash (a harnessed horse), Adad (a horned lion and a bull), Ishtar (a lion). According to Thureau-Dangin the bas-reliefs should be attributed to Sennacherib; as to the motif of the mounted gods, usually explained as showing Hittite influence, examples are found in Sumerio-Accadian art. Cf. also Bachmann, *Federleiste in Assyrien* (Bavarian, Malthai und Gamluk), publ. by the Deutsche Orient. Gesell., Berlin 1927. (V. MINORSKY)

MĀ'LULĀ, a town in Central Syria north-east of Damascus. It is mentioned as early as Georgios Kyrios (ed. Gelzer, p. 188, N^o 993) as *Μαλούλαι* (MSS. *μαλούλαι*, *μαλουργούλαι*) in Phoinike Libanensis. Yāqūt also calls Mā'lulā an *iftīm* (*κλίμα*) near Dimashk with many villages. The modern Mā'lulā, a village of Christians, is picturesquely situated at the west end of a deep ravine of the Antilibanon, which splits into a western and southern arm. "At the entrance to the northern lies the monastery of Mār Taklā built half into the rocks. The two ravines form the way to the other monastery of Mār Serkis, which stands on a rocky plateau above the village". Numerous caves, mostly ancient dwelling-places, have been found on the west and southern corner of the rock on the eastern slopes of which the modern village is built in the form of an amphitheatre. Some Greek inscriptions have been found in the caves (Waddington, *Inscriptions*, N^o 2563—2565; Moritz, p. 145—147, N^o 3—8, including one dated 107 and 167 A.D.). Mā'lulā and the adjoining villages of Bakh'a and Djabb 'Adin are noted for the fact that the Western Aramaic dialect still spoken there represents the last remnants on Syrian soil of the Syriac spoken throughout Palestine and Syria in the time of Christ.

(E. HONIGMANN)

MĀLWĀ proper is an inland district of India bordered on the south by the Vindhya, and lying between 23° 30' and 24° 30' N. and 74° 30'. To this tract, known in the age of the *Mahābhārata* as Nishadha, and later as Avantī, from the name of its capital, now Ujjain, was afterwards added Akara, or Eastern Mālwa, with

its capital, Bhilsā, and the country lying between the Vindhya and the Sātpūrā. The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the White Huns, and the Kingdom of Kanawdj, and then passed to the Mālawa, from whom it has its name. These, when Hinduized formed the Paramāra (Pawar) tribe of Rājputa, which bore sway in Mālwa from 800 to 1200, and was overpowered in 1053 by a confederacy of the Čalukyas of Anhilvāda and the Kalachuris of Tripuri. In 1235 Shams al-Din Iltutmish of Dihli captured Ujjain, demolished the temple of Mahakāl, and sacked Bhilsā. Mālwa became a province of Dihli, and, with interludes of Hindū revolt, remained so until, in 1392, on the dissolution of the kingdom of Dihli after Timūr's invasion, the Afghan governor, Dilawar Khān Ghūrī, made it an independent kingdom. He was murdered in 1405 by his son Alp Khān, who ascended the throne under the title of Hūshang Shāh. He transferred the capital from Dhār to Māndū [q. v.] and founded Hūshangabad. On his death in 1435 he was succeeded by his son Gharni Khān, who, after a reign of a few months, was succeeded by his infant son Mas'ūd Khān. The child was removed by his cousin and guardian, Mahmūd Khaldīr, who in 1436 ascended the throne as Mahmūd I, and whose reign of thirty-three years was the most glorious in the annals of Mālwa. He waged war successfully against the kings of Gujjarāt, the Dakhān, and Džawnpūr, the small state of Kālpi, and Rāna Kumbha of Čitor; he retired, but without disgrace, before the superior power of Dihli; and he extended the frontiers of his kingdom on the north, the east, and the south. On his death in 1469 his third son, 'Abd al-Kādir Ghilyāh al-Din, who succeeded him, surfeited with public business during his father's strenuous reign, retired into his harem and left the administration of the kingdom to his son, Nāsr al-Din, who in 1500 poisoned his father and ascended the throne. Nāsr al-Din met his death in 1510 by falling in a fit of drunkenness, into a tank or cistern, where his attendants, thankful to be rid of the monster, let him lie. He was succeeded by his son Mahmūd II, who was as unfortunate in war as the first of that name had been fortunate. With the help of Mupassar II of Gujjarāt he rid himself of his powerful Rājput minister, Medni Rāi, but in doing so embroiled himself with Sangrama Rānā of Čitor, who defeated him in the field and took him prisoner, but generously released him. He then, with inconceivable folly and ingratitude, bitterly offended Bahādur Shāh of Gujjarāt, who invaded Mālwa and, after giving Mahmūd every opportunity of atoning for his error, carried Māndū by assault on March 27, 1551. Mahmūd and his sons were sent in custody towards Čāmpān, but the officer in charge of them, apprehending a rescue, put them to death.

Mālwa now became a province of Gujjarāt, and in 1555 the emperor Humāyūn, invading that kingdom, defeated Bahādur Shāh at Mandasor and captured Māndū, but was recalled to Hindūstan in the following year by the menacing attitude of Shēr Khān in Bengal, and Mallū Khān, an officer of Mahmūd II, established himself in Mālwa and assumed the title of Kādir Shāh. Shudjāt Khān and Hūjdīr Khān, two officers of Shēr Shāh, drove him from Mālwa and assumed the government of the province. Shudjāt Khān died

in 1554, and was succeeded by his son Malik Bayazid, known as Bāz Bahādur, who, during the decline of the power of the Śūr emperors, became independent. A severe defeat at the hands of the queen of the Gond kingdom of Garha Mandla engendered in him a distaste for warlike enterprise and he devoted himself to music and to the embraces of the beautiful Rūpmati. In 1561 Akbar's army under Adham Khān surprised the voluptuary at Sirangpur, defeated his troops, put him to flight, and captured his mistress, who took poison rather than become the conqueror's paramour. Bāz Bahādur fled into Khāndesh and Pīr Muḥammad Khān, second-in-command of Akbar's army, who followed him thither, was defeated by Mubārak Khān of Khāndesh and drowned in the Narbadā. Bāz Bahādur returned and again reigned in Māndū, but in 1562 another army under 'Abd Allāh Khān the Uzbak invaded Mālwa and compelled him to flee to Citor. He remained a fugitive until 1570, when he submitted to Akbar and entered his service.

Mālwa was now a province of the empire, and remained so until, in 1743, the Marāṭhas extended their rule over it, and the Peshwā was made deputy-governor.

It was afterwards divided between the great Marāṭhā generals whose descendants, Sindhya of Gwalior, Holkar of Indor, and the Ponwars of Dhār and Dewas still hold most of it.

From 1780 until 1818, when British supremacy was firmly established, the province was one of the principal arenas in which Muslim, Marāṭhā, and European contended for empire. Since then its history has been uneventful, but sporadic risings took place at six military stations during the mutiny of 1857.

(T. W. HAIG)

MA'MAR n. al-MUTHANNA. [See **AMM**

MA'AL.]

MAMLÜK (A., plural *mamlūkūn* and *mamlūk*), participle passive I of *malaka* "to possess", denotes the slave as his master's possession. The term owes its origin probably to the current phrase of the Qur'an *mā malakat aimānukum* "what your right hands possess", a general designation of slaves without specialisation of gender. Mamlük occurs once only in the Qur'an (sūra xvi. 77), in the expression *'abd mamlūk* "a slave in the possession of his master", mamlük alone not yet being a technical term for slave, to all appearance. In *ḥadīth*, *'abd mamlūk* occurs likewise (Darimī, *Siyar*, h. 34), but throughout the literature of *ḥadīth* mamlük alone is already a technical term synonymous with *'abd*. — The distinction between a slave born and a slave born from free parents, must be made by the addition of a genitive to *'abd*, in the former case *ḥinn* (*'abd ḥinn*), in the latter *mamlaka* (*'abd mamlaka*).

It may be remarked that neither in *ḥadīth*, nor, to all probability, in Arabic literature, has the term mamlük ever received the religious meaning of devotee, as is the case with *'abd*.

The Qur'an enjoins the master to be humane

towards "what his right hands possess" (sūra iv. 40). *Ḥadīth* is copious on this point. It assures us that Muḥammad on his death-bed did not cease repeating "(I recommend to you) *'abd* and what your hands possess" (Ahmad b. Hanbal, *Musnad*, iii. 117; cf. i. 78). "Whoever does not treat his mamlük as he ought to do, shall not enter Paradise" (Ahmad b. Hanbal, i. 12). "When the mamlük performs *ṣalāt*, he is thy brother" (Ibn Māja, *Adab*, b. 10). "The mamlük may claim his food and raiment" (Muslim, *Aimān*, trad. 41). "The Apostle of Allāh used . . . and to protect the mamlük who appealed to his help" (Ibn Māja, *Zuhd*, b. 16). "The mamlük who acquits himself of his obligations towards Allāh and towards his master, will receive double wages" (Bukhārī, *Ḍu*, h. 31) and "one is bound to pardon his mamlük even unto seventy times a day" (Ahmad b. Hanbal, ii. 111).

For the legal position of slaves see **AND**.

For the Egyptian dynasties called the Mamlūks, see the following article. — It may be finally remarked that in certain circles mamlük had the special meaning of white slave. See Fagnan, *Addition aux lexiques arabes*, s. v.

(A. J. WENSINCK)

MAMLÜKS, a dynasty of rulers of Egypt and Syria.

A. Period from 1250 to 1517. The history of this dynasty is dealt with under the separate rulers; the general questions of art, religion and economics of their time are also dealt with in these articles and notably in Becker's article **EGYPT** [q. v.] and Hartmann's article **DAMASCUS** [q. v.]. Only a brief survey of the whole period is given here.

They were, as their name shows [cf. **MAMLUK**], former slaves from the bodyguards of the sultāns and amirs who had distinguished themselves by ability and been given their freedom by their masters. A somewhat arbitrary distinction is made between two dynasties, the Bahrī [q. v.] from 648–792 = 1250–1390 and the Burdjī from 784–922 = 1382–1517. The name Bahrī Mamlūks was given to the guards of Sulṭān Naḍīm al-Dīn Aiyūb (637–47 = 1340–49), whose barracks were upon the island of Rōḍa [q. v.] in the Nile (Bahr). Except for the first three the Bahrī Sulṭāns were chosen by the Mamlūks from among the descendants of the Sulṭān. Thus after Balbars [q. v.] there ruled two of his sons, after Kālī'ūn [q. v.] two sons, a series of grandsons and a great grandson. It was different with the Burdjī Mamlūks, a bodyguard founded by Kālī'ūn, who were quartered in the towers of the citadel of Cairo. The first Burdjī, Barkūl, [q. v.], was able to secure the succession of his son and even a second son succeeded for a brief period to the throne, but after this the Mamlük guards never tolerated hereditary succession again; no Sulṭān's son, who was proclaimed heir-apparent, ever succeeded in keeping the throne (the only exception is al-Nāṣir Muḥammad II who occupied the throne for nearly three years.) The Mamlūks did not always choose the ablest, but more often the oldest; a kind of system of seniority developed. The first Mamlük on the throne was 'Izz al-Dīn Albak (648–55 = 1250–57), the husband of Shāḍir al-Durr [q. v.] a slave whom Aiyūb had married.

In the period of its greatest extension under the Mamlūks, the frontiers of Egypt were in the west the Lybian desert as far as Barka, in the

south Nubia as far as Massaw'a, in the north the Mediterranean Sea. The frontiers of Syria in the east stretched to the Euphrates to Dēr al-Zōr through Raḳka, in the south to the Arabian deserts and in the north to the Taurus. The two countries met in Sinai and were separated by the Red Sea. The sultāns usually exercised suzerainty over the holy places in Mecca and Medina; Sultān Kānshū Ghūrī [q.v.] even maintained garrisons in South Arabia for a time.

The first task of the Mamlūk sultāns was to consolidate the kingdom. Their most dangerous enemy, the Tatars under Hülegü, was defeated in Syria in 658 (1260) at 'Ain Djilāt [q.v.]; the Crusaders were destroyed by Sultāns Balbars, Kālān and Khallī, the remnants of the 'Alids and Assassins [q.v.] rendered harmless by Balbars. Their power was finally consolidated and justified to the Aiyūbids by the petty kingdoms left to them, by Balbars welcoming in Cairo the Caliph who had been driven from Baghdad by the Mongols, restoring the caliphate here in 659 (1261) and then having himself appointed by the Caliph participator in power (*Ḳāsim al-Dawla*) and having the power ceremoniously transferred to him. This remained the position till the end of Mamlūk rule. The Caliph paid homage to the Sultān on his accession and ceded all his rights to him. He thus lost all authority and became the shadow of a ruler without power, without money and without influence; only now and then an Indian Sultān sought a diploma of investiture from the Caliph.

The rule of the Sultān was absolute. He was assisted by a council in which the chief commanders of the Mamlūks sat to the left and right of the ruler according to their rank (this sitting in order of rank dated from the early Mamlūk period): the representative of the Sultān (*na'ib ḳāfi*, later only appointed in case of absence of the ruler), the commander-in-chief (*amir ḳabir*), later combined with the office of Atābeg, the commander of the guards (*ra'is nawab al-anawād*, see AL-AMIR AL-KAḲIR), the War Minister (*amir-jilāḳ*, ibid.), the president of the council who was the chief civil official (*amir maḳḳis*); later the minister of the Interior (*dawūdār ḳabir* [q.v.]) and the ministers of the palace and domains (*ustādār*) gained more influence and became numbered among the highest officials, as did the chief military judge (*ḳāḍī al-ḳudḍiḳā* [q.v.], properly high chamberlain) and at times the chief marshal (*amir ḳhāḳir* q.v.). The officers and their relative rank (cf. e.g. under AMIR AL-KAḲIR for the composition and order of precedence in later times) changed. These members of the council were military officers, the so called lords of the sword (*aḳḳāb al-sayf*), they belonged to the class of amirs of 1,000 (*mukaddim al-ulūf*). From this class were chosen the governors of the Syrian provinces (Damascus, Aleppo, Tripolis, Hamā, Safad) and frequently also the governors of the citadels of Damascus and Aleppo who were appointed by the Sultān himself. The next class was formed by the *Tashakkānā*, amirs of 40 Mamlūks, who had the right to be accompanied by a band. They were followed by the amirs of 10 and those of 5 Mamlūks. All the amirs of 1,000 were appointed by the Sultān himself; the other amirs in the provinces sometimes by the sultān and sometimes by the governor. The administrative system at the Sultān's court was reproduced on a small scale in

the provinces. Every governor was a little Sultān who had to some extent the same retinue as the Sultān in Cairo. The Syrian governors were in general independent of one another (very few like the Amir Tengiz [see DAMASCUS, I., p. 908] had other governors subordinated to them). In the beginning the Mamlūks, perhaps influenced by the Mongols, had the tendency to make all offices secular and fill them with Mamlūks who, as lords of the sword (*aḳḳāb al-sayf*), belonged to the military caste. They kept this up in the highest offices throughout the dynasty, but they had to create the important offices of private secretary (*ḳatib al-sirr*) and head of the chancery (*ḳāḍī Dīwān al-inḡāḳ*) and fill them with civilians and even admit Christians, Jews, and especially converts to Islām to them, because the Turkish ruling caste was not fitted for them. The above mentioned chief offices on the military and administrative side remained however reserved for the constantly increasing oligarchy, into which neither Arabs, nor the sons of Mamlūks were admitted. It hardly ever happened (I only know of 3 cases of Arabs) that Arabs or sons of Mamlūks became amirs of 1,000, or rose to the highest posts in the legal and scholastic world and in the other branches of the civil service.

The Mamlūks were purchased on behalf of the government by a high officer, the purchaser of Mamlūks (*ḳāḍir al-mamlūk*), educated in the first place in the Mamlūk School in Cairo, then distributed in the different branches of the corps of pages to act as armour-bearers, cup-bearers, carvers, polo-grooms, club-bearers etc., for further training and then placed in the service of the amirs or of the Sultān as vacancies occurred. The Sultān's lifeguards were called *ḳhāḳḳ* and the amirs had also similar bodyguards. The army consisted of a) the bodyguard of the Sultān, b) the *dīwān al-ḳhāḳḳ*, enlisted troops, who were paid in money and with the yield of the crown estates, c) the guards of the great amirs and former Sultāns. In later times there was a body of reserves, *amlūk al-nās*, who were only called up for service in times of war but also received pay in times of peace. Military expeditions were usually decided upon by the council of state; the amirs were given money to equip and maintain their troops, to be able to lead them into the enemy's country.

In addition to the military officers there were civil officials, *aḳḳāb al-ḳalam* (lords of the pen): a) the religious officials (*al-ʿulmā*), who filled posts in the legal and scholastic worlds and a series of other offices; b) the regular administrative officials (*al-dīwāniyya*) for the rest of the civil service.

The Sultān's revenue was made up of the ground-, poll- and poor-tax, from the yield of the fiefs (on the Egyptian system of appanages cf. II., p. 92) out of which he gave the necessary funds for the army and officials, the customs, the state factories and extraordinary taxes on goods and markets, which, not being laid down in the *Qurʾān*, were considered illegal and resisted. He also sometimes made money by forced purchases and sales. The government bought up goods at a fixed price and forced purchasers to take them at a definite price. Finally there were monopolies out of which the Sultān made profits. Another favourite means of raising money was for the Sultān to visit some great man from whom he extorted large sums while a guest (especially *Ḳāḳḳā* [q.v.]). Things

seem to have been similar in Syria but we know very little about the division of the fiefs there.

The importance of the Mamlüks in history lay in the fact that, protected by the deserts and their armies they stemmed the flood of Asiatic conquerors; they conquered Čingiz Khān's Mongols and later the hords of Timūr Lenk, who had conquered Syria for a short time, and other conquerors. After the defeat of the Tatars and the retreat of Timūr, the Sulṭāns were forced to concentrate on the struggle with the gradually increasing power of the Ottomans. The struggle was long avoided by the formation of buffer states on both sides; among these the most notable were the dynasties of Dhū l-Qaḍir and of the White and Black Sheep (so-called from their standards). The success of Kā'ithā's policy postponed the end but the rulers who followed him were weak. The rule of the Mamlüks lost its vigour. They were weakened in long wars; their finances became quite hopeless as a result of their immoderate expenditure, not commensurate with their means and a defective system of taxation, which in the later period enabled the owners of large estates to escape the taxes. They therefore could not permanently resist the Ottomans, especially as the lack of discipline among the Mamlūk leaders and the weakness of their field artillery made the army useless. The well equipped fortresses were not defended against the Ottomans; they fell through treachery. The himself able Sulṭān Kānṣūh Ghūrī was defeated and slain in 922 (1516) at Manjī Dābiḳ (in the province of Aleppo). The way to Egypt was thus opened to Sulṭān Selīm; after six months' resistance the last Sulṭān Tūmṭūḳī had to surrender. He was hanged from the Rib Zuwallā in Cairo. A number of the great amirs and the Caliph were taken to Constantinople. The caliphate ceased as no new Caliph was appointed; the Sulṭān of Constantinople became the first ruler in Islām. The protection of the holy places also passed automatically to him.

The period of the Mamlüks was marked by great activity in building (ii. 23^a). Of secular buildings, few palaces have survived; on the other hand fortresses (Cairo, Aleppo, Damascus and Biredjik) which were entirely rebuilt in the Mamlūk period, as well as a large number of fine tombs, hospitals, baths, fountains and aqueducts still exist. Of religious buildings splendid mosques with schools attached to them were built. While even under the Aiyūbids there had been only one "great mosque" in each town or independent suburb, where the Friday service was held, it became the custom under the Mamlüks that many Sulṭāns and governors and occasionally even one of the guilds built "great mosques" for the Friday service in the large towns. Mention may be made of the mosques of Balbars, Kālā'ūn, Muḥammad al-Nāṣir, Sulṭān Ḥasan, Baḳḳū, Mu'ayyad, Kā'ithā' in Cairo, as well as the mosques in the provincial capitals Aleppo, Damascus and Tripoli. While agriculture, industry and art showed great prosperity, trade suffered very much under the later Mamlūk Sulṭāns through the extortionate taxes of the government. The trade through Egypt, based on treaties with Frankish and Oriental rulers, yielded huge sums. The customs and the treatment of merchants by the Sulṭāns finally became so intolerable that the European powers did everything possible to secure the sea-route to India in order to avoid the transit

through Egypt with its enormous expense and the rogery to which it was exposed.

The object of the last wars of Sulṭān Kānṣūh Ghūrī was to gain a footing in South Arabia and nearer India to secure the Egyptian share in Indian trade.

Bibliography: Only the most important of the rich literature on the Mamlüks is cited below (s. especially in van Berchem's index to *Matériaux pour un Corpus Inscriptionum Arabicarum*, i., *Égypte*, Paris 1903, the full list):

7. Medina: Samhūdī, *Wafāʾ al-Wafāʾ*, Cairo 1285 (1869); *Geschichte der Stadt Medina*, transl. Wüstenfeld, Göttingen 1861.

(M. SOBERNHEIM)

B. Period from 1517 to 1798. It is a significant fact, that even this period of nearly three centuries, during which Egypt belonged to the Ottoman Empire, may still be designated as a third Mamlūk period. The change brought about by the conquest of Sultan Selīm in 1517 was, after all, not a radical one, from the point of view of government. Egypt and its inhabitants remained under the rule of a powerful minority of foreign race. The antagonism that existed in the beginning between Ottoman Turks and Mamlūks and which had led at first to much bloodshed (execution of 800 mamlūks by Selīm I in Cairo) did not last very long after the troubles of the occupation were over. The Turkish soldiers and officials who entered Egypt during Ottoman rule soon became mixed up to a large extent with the numerically more powerful class of the Mamlūks, whose aid was, moreover, indispensable, for the government of the country. Besides, the number of Mamlūks (*al-Sharāḥiṣa*) continued to receive additions by purchase of slaves from the Caucasus. An author of the xviiith century (Vansleb, p. 13) says that Egypt, in his day, was inhabited by Copts, Moors (by whom he means the islamised population), Arabs, Turks, Greeks, Jews and Franks. The "Turks" were the governing class and composed of Mamlūks and Ottomans, between whom no distinction is made. We may even speak of a mamlūkisation of the Ottoman element; the real ottomanisation of the country belongs to the xixth century. In accordance with what is said, the history of those centuries never shows, among the parties and factions into which the Mamlūks were divided, a pro- or anti-Ottoman party; those quarrels were only of local and personal character. Even the first governor of Egypt, Khāṭir-bek, was a Mamlūk, although, after him, the Pashas were sent, without exception, from Constantinople.

During the first 100 years, it is true, the authority of the Pashas sent from Constantinople to govern the country was undisputed. The Pasha could rely on seven contingents of troops (*ṣafās*) six of which were instituted by Selīm I, while a seventh contingent was added under Sulaimān I, composed of Mamlūks. Their nominal strength was 20,000 men in all. They were not commanded by the Pasha, but by their own commander, who belonged to the *ṣafā* of the Janissaries and resided in the citadel of Cairo. Afterwards these troops behaved more and more independently and were even able to depose Pashas whom they did not like, until, in the xviiith century, this military force became the instrument of some all-influential Mamlūk beys. Important matters of administration were treated by a great *Dawān* or State Council, which only met in extraordinary cases and in which the high functionaries were represented, as well as the military chiefs and the high religious dignitaries. Local and special government functions were exercised by twelve Sandjak Beys; these represented at the same time the feudal aristocracy; from the beginning however, the ties that linked them to particular provinces seem to have been rather loose, for among them are mentioned the *Kāḍys* of the

Paḡha, the *Daftardār*, the *Amir al-Haḡḡī* and the *Amir al-Kāḡḡa*, the three first of whom were also members of the great *Diwān*. The other *Beys* were commanders at Suez, Damietta and Alexandria, and governors of the five big provinces in the Nile delta. Besides these twelve *Beys* there were twelve other *Beys* with similar functions. The real provincial administration was exercised by a class of functionaries called *Kāḡḡī*. Their chief task was the collection of the revenues. They may be considered as a kind of governor; some of the great *Beys* themselves were also *Kāḡḡī* in their districts or had different *Kāḡḡī*s under them. Vansleb mentions 36 *Kāḡḡī*s. As to the revenues, they were collected in various ways, the local customs in different parts of Lower Egypt and Upper Egypt varying considerably. The most common form was the farming out of revenues (*iltizām*); the *mullasims* had different kinds of right of possession on the lands, which were hereditary. They collected the revenue, in taxes or in kind, from the *fellāḡa*, generally through the village notables called *Ṣaḡḡā al-Balad*. In the tax-collecting there were further employed, a host of subordinate technical and financial functionaries, many of whom were Copts. Some *Kāḡḡī*s were at the same time *mullasims*. This system of administration showed the close relation between administration and land-owning, which has always been characteristic of Egyptian conditions (cf. ZAYY). It was the continuation of the system which had prevailed under the Mamlūk Sultāns (regulation by Kāḡḡī Bay) and was regulated again in the *Kāḡḡī-nāme-i Mīr* of Sulaimān I (cf. J. von Hammer, *Des osmanischen Reiches Staatsverfassung und Staatsverwaltung*, Vienna 1815, i. 101—142); here a special stress is laid on the rights and obligations of the *Kāḡḡī*s.

In Cairo a large chancery, the chief of which was the *Nāḡḡī*, had to collect these taxes and to keep the registers; the revenues collected were reserved partly for the pay of the troops and works of public utility such as irrigation, building of bridges and dikes, etc. and partly for the yearly tribute to the Sultan, which was in the beginning 800,000 ducats and afterwards lowered to 600,000 and later to 400,000 ducats. In the xviiith century the paying of tribute practically fell into disuse.

Besides the land-tax, there existed a great number of other taxes, under different denominations; they were collected more or less arbitrarily, and, as in course of time, the anarchy in the government assumed greater proportions, they pressed ever heavier on the population. The rural population had as much to suffer from the exactions of their Mamlūk administrators and proprietors as from the raids of Arab tribes, which the government was unable to control.

The history of Egypt during this period is a not very interesting succession of domestic intrigues, struggles and revolts. Until the beginning of the xviiith century the *Paḡhas* could more or less maintain their authority, but they were replaced too often to have a lasting influence. No less than 117 *Paḡhas* governed Egypt until the arrival of the French (a complete list of them is given in Thurely, *Souvenir d'Orient*, iv. 835 seq.). Many of them tried to make their short stay as profitable for themselves as possible, and several of them had to pay their cupidity with their lives after their return to Constantinople. In the xviiith

century the real power in the country was exercised by the great *Beys* in Cairo, who had the troops in their hand and tolerated only those *Paḡhas* who did not interfere with their affairs. By this time the two most powerful positions in the country were those of the commander of Cairo, called the *Ṣaḡḡā al-Balad* and of the *Amir al-Haḡḡī*. Some of the *Ṣaḡḡā al-Balads* are reputed as good rulers, especially Isma'il Bey, who held that office from 1707 to 1724. But the changes of power were always of a violent kind and prevented the forming of a dynasty; Isma'il's *Ṣaḡḡā al-Balad*ship itself had been preceded by a curious struggle between the two rival parties of the *ḡhu* *ḡḡāriya* and the *Kāḡḡiyya*, which had lasted for three months outside Cairo. In 1747 the Porte tried for the first time to reestablish its authority by ordering the governor Rāḡḡīb *Paḡha* to exterminate the Mamlūk *Beys*; this attempt failed, however, completely and the disorders continued until the appearance of the young Mamlūk 'Alī Bey [q. v.] who made himself for a short time independent *Ṣaḡḡā al-Balad* and ruler of Egypt, for the years 1770—1771. By this time the Porte began to take more serious measures to retain its hold on Egypt, but the regime of the Mamlūk *Beys* did not end until a foreign power, France, temporarily occupied Egypt (cf. KHEDIVE).

Under such a regime the conditions of living of the population could not be flourishing. It was not so much the position of Egypt as an Ottoman province that caused the suffering of the population, as the lack of a strong central power. European travellers like Vansleb and Lucas point to the fact that Egypt was, in the xviiith century a rich country and that by the practical stopping of the payment of tribute, all the money remained in the country itself. But the riches remained only in the possession of the ruling minority, while the rural population was oppressed very hardly. The bad organisation caused, moreover, from time to time terrible famines, while, about the middle of the xviiith century, began a series of ravaging epidemics of plague. Since the last period of the Mamlūk Sultāns the country had lost, moreover, a rich source of revenue by the change of the trade-route to India. The transit trade was now restricted to inner African products and coffee and aromatics from Arabia, while the exportation of Egyptian products such as corn, cotton and sugar was limited. The timber that the country needed had to be imported from Turkey. Moreover, the trade with Christian countries often experienced serious hindrances from the arbitrary measures of the local authorities. At the same time the local industries declined rapidly; one of the causes may have been the transportation of a large number of skilled craftsmen to Constantinople by Salīm I; the once flourishing guild organisation was paralysed by this measure (cf. Thörning, *Beiträge zur Kenntnis der islamischen Verfassung*, Berlin 1913, p. 81 and al-Uḡbartī, i. 20).

The decline of Egypt's economic strength, on the other hand, made Egypt a relatively quiet possession for the Porte. Only in the very beginning of Ottoman rule, in 1524, a Turkish governor, Ahmad *Paḡha*, tried to take the title of sultan of Egypt, but afterwards no attempts to recover independence were made until the time of 'Alī Bey. Then, however, the political needs of the European colonial powers

made Egypt appear again as an important stage on the way to India and opened new possibilities of a more independent development, which were to be realised in the sixteenth century. In the meantime the possession of Egypt had been useful to Turkey in many respects; the Porte could always count on an Egyptian contingent of troops in its wars and the country itself was a base of action for the military operations in Syria, the Hijaz and Yaman. The reconquest of Yaman under Selim II was carefully prepared in Cairo. As soon as the tendency to independence appeared, however, as under 'Alī Bey, the Turkish hold on Syria and Arabia was immediately endangered seriously.

The predominant position of Egypt in Islam was not seriously affected by the Ottoman occupation. Al-Azhar [q.v.] remained one of the most important centres of Islamic learning; the Turkish Pashas and other dignitaries showed their acknowledgement of this fact by gifts and by the execution of restorations to the building, as they did occasionally for other religious institutions in the country. Though Islamic science continued to flourish, Egypt did not produce many prominent figures in this period. In the domain of *fiqh* the most important figure was al-Ramlī (q.v.; d. 1596), the commentator of al-Nawawī, further the mystic al-Sharānī (q.v.; d. 1565), and, as representative of Arabic philology, 'Abd al-Kādir al-Baghdādī (q.v.; d. 1682). In popular mysticism the veneration of Ahmad al-Badawī [q.v.] by the Ahmadiya held a large place.

The period of Ottoman domination in Egypt is not wholly without interest from the point of view of architecture and art. Several governors, beginning with Khā'irbek have constructed mosques; these mosques show a kind of transition from the Mamlūk to the Ottoman architectural style. There are also in Cairo several mosques founded by the Mamlūk Beys, like the mosque of Abū Dhahab, the traitor of 'Alī Bey, constructed in 1773. Some beautiful palaces have likewise been built by the Mamlūks, but only few of them are still extant (cf. on this subject: Mme R. L. Devonshire, *L'Égypte musulmane et les fondateurs de ses monuments*, Paris 1926, p. 115 sqq.).

Bibliography: The sources for the history of Egypt under Ottoman rule have not been much studied. Of the many Arabic works have to be mentioned (cf. Brockelmann, *G. A. L.*, ii. 289 sqq.): Ibn Iyās, *Badrī' al-Zuhūr fī Wafā' al-Dukhūr*, iii., Būlak 1312, p. 101 sqq. (until 1522); al-Minhājī, *al-Budūr al-izāra fī man waliya 'l-Kāhira*, MS. Vienna, No. 9152 (until 1549); al-Burhān, *al-Riyāṣ al-zahira fī Akhbar Miṣr wa 'l-Kāhira*, MS. Algiers, No. 1605; Ibn Zūnbul, *Paṭṭa Miṣr*, many MSS. (1517—1519); al-Iḥākī (cf. Babinger, *G. O. W.*, p. 160 sqq.), *Dumḥat al-Akhbar fī man waliya 'l-Diyār al-Miṣriya* also called *Laṭā'if Akhbar al-Uwal fī man taqarrufa bi-Miṣr min Arṭūḥ al-Dumal*, several times printed in Cairo 1276, 1296, 1300, 1304 (until 1623); do., *al-Rawḍ al-burīq fī Akhbar man waḍa min al-Awālim*, MSS. Paris, No. 1562 and Brit. Mus., No. 1251 (until 1623); al-Ghumrī, *Dhahā'ir al-ʿilām bi-Tārīkh Umayyā 'l-Miṣr fī 'l-ʿilām*, only in MSS. (poem, until 1630); Muḥammad b. Muḥammad b. Abī 'l-Sūrūr, *al-Tuḥfa al-Baḥiya fī Tamalluk 'l-Uḥmān al-Diyār al-Miṣriya*, several MSS. (until 1634); do., *al-Rawḍ al-Zahira fī Wafā' Miṣr al-*

Kāhira al-Muṭṭaiya, several MSS. (until 1651); do., *al-Kawākib al-Sā'ira fī Akhbar Miṣr wa 'l-Kāhira*, several MSS. (until 1645); al-Awfi, *Tarāḍim al-Sawā'ih fī Wafā' al-Sandūfīh*, several MSS. (treats of some events in the years 1658 and 1661); 'Abd al-Kādir, *Tārīkh*, MS. Berlin (*G. A. L.*, ii. 299; the years 1603—1643); Ibrāhīm al-Khaṭīb, *Mabḍa' al-Adīb bi-mā dū'a fī Miṣr min al-Majā'ih*, MS. at Cairo (*G. A. L.*, ii. 299; written about 1721); al-Damir-dāshī, *al-Durra al-Mārjāna fī Wafā' al-Kināna*, several MSS. (*G. A. L.*, ii. 300; the years 1688—1755); Muṣṭafā b. Ibrāhīm, *Tārīkh Miṣr*, MS. Copenhagen, No. 159 (the years 1686—1739); al-Djabbārī, *Adīb al-Akhbar fī 'l-Tarāḍim wa 'l-Akhbar*, Cairo 1236, vol. i. and ii. (from 1694 up to the French occupation).

Among the Turkish sources all the great historical works of the Ottoman Empire since the time of Selim I should be mentioned, to begin with the different *Salim-nāmes*; on the conquest of Egypt: Haidar Çelebi, *Tagebuch des ägyptischen Feldzuges Sultan Selims*, transl. by Khalil Edhem, Weimar 1916 (*Deutsche Orient-bücher*, vol. xx.). The following deal specially with Egypt: 'Abd al-Samad, *Nawādir al-Akhbar*, several MSS. (*G. O. W.*, p. 58 sqq.; Turkish translation and continuation of an older Arabic work, up till 1540); Ṣāliḥ b. Djalāl, *Tārīkh-i Miṣr-i Qudsiya*, several MSS. (*G. O. W.*, p. 100 sqq.; written in 1546); Yūsuf b. Ni'met-Allah, *Tārīkh-i Miṣr*, MS. Turin (*G. O. W.*, p. 121; Turkish translation of an older Arabic work and continuation up till 1592); 'Alī, *Hāṭat al-Kāhira min al-Adāt al-Zahira*, several MSS. (*G. O. W.*, p. 133; written in 1599); Mahmūd b. 'Abd Allāh, *Tārīkh-i Miṣr*, several MSS. (*G. O. W.*, p. 243 sqq.; up till 1679).

J. J. Marcel, *Histoire de l'Égypte depuis la conquête arabe jusqu'à celle des Français*, Paris 1834, p. 416 sqq. (this author uses the more important Arabic sources); M. (J. H. KRAMERS)

AL-MA'MUN, 'ABU 'L-AHMAD 'ABD ALLAH [a. HAKUN], 'Abbāsīd caliph, born in Rābī I 170 (Sept. 786), son of Hārūn al-Rashīd and a Persian slave named Marāḍīl. After a desperate struggle, which ended in the assassination of the Caliph al-Amin [q.v.] in Maḥarram 198 (Sept. 813), the latter's brother al-Ma'mun ascended the throne; it was six years, however, before he could make his entry into Bagdad. On account of his sympathy for things Persian, which was stimulated by the vizier al-Faḍl b. Sahl [q.v.] the Caliph was not

at all popular with the Arabs. An 'Alid Muhammad b. Ibrahim, usually called Ibn Tabataba, therefore set up as a pretender to the throne in Kufa in Jumādā II 199 (Jan.-Feb. 815) and was supported by a former adherent of al-Ma'mün, Abu 'l-Sariya. The rebels had some success at first but Ibn Tabataba died suddenly and when the general Harthama b. A'yan [q. v.] advanced against him, Abu 'l-Sariya had to take to flight. Soon afterwards he was taken prisoner and put to death (Rabi' 200 = Oct. 815). In the meanwhile the movement had spread, but the 'Alids made themselves so hated that Harthama's troops were able to restore order everywhere without difficulty. The victorious Harthama, however, was shamefully rewarded for his services. After he had occupied Merw, the suspicious Caliph had him thrown into prison where he soon died (Dhu 'l-Ka'da 200 = June 816). This increased the general discontent. While al-Ma'mün remained for the time in Merw, the people of Baghdad rebelled and placed al-Manṣūr, a son of the Caliph al-Mahdi, at the head of the movement. When in Ramaḍān 201 (March 817) al-Ma'mün designated an 'Alid, 'Ali al-Riḍā [q. v.], as his apparent and assumed the green of the 'Alids instead of the black of the 'Abbasids, the people of the capital elected Ibrahim, another son of al-Mahdi, Caliph (Dhu 'l-Hijja 201 = July 817). Then there were troubles in Egypt and in Ḍḥarbidjan, the people were stirred up by the Khurrami Bābak [q. v.] who terrorised the northern provinces for nearly 20 years. In these circumstances al-Ma'mün had finally to leave Merw and go to the 'Irāk (202 = 817). But when the Arabs murdered the vizier al-Faql who was particularly hostile to them, and 'Ali al-Riḍā died suddenly, and in addition, the governor of Wāsiṭ, al-Ḥasan b. Sahl, the vizier's brother went mad, or at least was treated as such, the people of Baghdad had really no longer reason to support Ibrahim and in Ṣafar 204 (Aug. 819) al-Ma'mün entered the capital and the 'Alid colours were exchanged for the 'Abbasid. Al-Ḥasan b. Sahl was then restored to his governorship, and a few years later the Caliph married his daughter Bāran [q. v.]. As soon as the Caliph had left Khurāsān a rebellion broke out there among the Ḥarūris. At the end of 205 (June of 820) or beginning of 206, Ṭāhir b. al-Ḥunain [q. v.] was appointed governor of Khurāsān. He proved in every way fitted for his difficult post but carried his independence so far that in 207 (822) he renounced his fealty to the Caliph. Although he died the following day, the Caliph did not dare to deprive his sons of Ṭāhir's governorship, and in this way the dynasty of the Ṭāhirids was founded in Khurāsān. In 210 (825-826) 'Abd Allāh b. Ṭāhir [q. v.] after defeating Naṣr b. Shabath went by the Caliph's orders to Egypt. Here the Yamanis, who were loyal to al-Ma'mün, had begun to fight with the Kaṣis who sided with al-Amin, and the struggle lasted till the latter's death. A more peaceful period ensued, but soon new troubles broke out, and with the arrival of the Spanish Muslims banished by the Caliph al-Ḥakam I [q. v.] the situation became still more complicated. The latter seized the town of al-Iṣkandariya, but when 'Abd Allāh b. Ṭāhir arrived in Egypt the native rebels had to submit, and the Spanish intruders retired to Crete. When 'Abd Allāh was appointed governor of Khurāsān,

the Caliph made his brother, afterwards the Caliph al-Mu'tasim, governor of Egypt. But in 214 (829) the Egyptians rose again against his deputy so that al-Mu'tasim had to go himself to Egypt to bring the rebels to terms. Two years afterwards the people of Lower Egypt again rebelled against al-Mu'tasim's officers. The Copts defended themselves with desperate vigour until the Caliph himself arrived with fresh troops and ruthlessly put down all resistance. Towards the end of the reign of al-Ma'mün, the old struggle with the Byzantines broke out again. The cause is unknown but probably Bābak was being supported by the Emperor Theophilus. In any case the Caliph in Muharram 215 (March 830) took the field against the Byzantines accompanied by his son al-'Abdā [q. v.]. In the next two years campaigns were conducted by al-Ma'mün in person; as usual the fortune of war varied, but the Muslims succeeded in taking the fortress of La'lu'a after a long siege, whereupon Theophilus wanted to make peace. But his offer was refused by al-Ma'mün and in 218 (833) he again invaded Byzantine territory but died in Radjab (August) of the same year in Badendūn not far from Tarsus, after having had al-Mu'tasim proclaimed as his successor.

In spite of all political troubles al-Ma'mün found time to devote his attention to religious problems and to the cause of learning. His rationalistic tendencies made him join the Mu'tazilis, whose most prominent representative then was the Kaḍi Ahmad b. Abu Du'ād [q. v.]. Urged on by him, the Caliph went so far as in Rabi' I 212 (June 827) to publicly proclaim the dogma of the creation of the Qur'ān and therefore to raise the Mu'tazila to be the State religion. While he persecuted the orthodox and catechised them severely about the soundness of their belief in the Mu'tazila, he treated the 'Alids with the greatest consideration. In his reign poetry and learning reached their golden age. It was then that lived men like Abū Tammām and al-Buḥārī, each of whom collected a *Ḥamāsa*, the historian al-Wāḳidi, the traditionist al-Buḥārī and the jurist Ahmad b. Hanbal. The Caliph also took a special interest in philosophy and the exact sciences. In Baghdad he built an astronomical observatory with a fine library, and the medical school in Dīmdal Sābūr [q. v.] was an object of his special care. Scientific works by Greek physicians and natural philosophers had previously been translated into Arabic through the Syriac, but under al-Ma'mün there was a great revival of activity in this branch of learning.

AL-MA'MUN, honorific *ṭāgh* of the principal sovereign of the dynasty of Berber origin of the Banū Dhī l-Nūn, who founded a kingdom with Toledo as its capital on the fall of the Umayyad caliphate of Cordova in the first quarter of the eleventh century [cf. the article *DHU L-NUN*].

Al-Ma'mun, whose full name was Yahyā b. Ismā'il b. 'Abd al-Rahmān b. 'Amir b. Muḥarrir b. Dhī l-Nūn, succeeded his father, Ismā'il al-Zāfir, on the latter's death in 429 (1037) and spent his long reign in incessant warfare with all his Muslim neighbours, the dynasties of Saragossa, Valencia, Badajoz, Seville and Cordova.

The beginning of his reign was mainly occupied by a struggle with the powerful king of Saragossa, Sulaimān b. Hūd al-Musta'in, who disputed the possession of Guadalajara (Wādī l-Hijāra) with him and took this town. Al-Ma'mun set out against him but was defeated and had to retire to Talavera in which he was besieged. He was then reduced to seek an alliance with and to own the suzerainty of the king of Leon and Castile, Ferdinand I. In spite of the help of the Christian king he could not bring his enemy Ibn Hūd to terms. Al-Ma'mun then turned for help to the king of Seville al-Mu'tadid b. 'Abbād and to obtain it had to declare himself the vassal of the pseudo-caliph Hishām II. Ibn 'Abbād then fighting the Aftasids of Badajoz [q. v.] did not give al-Ma'mun the help for which he hoped and Ibn Hūd becoming bolder, laid waste the country of Toledo and forced its inhabitants to submit to him. He would undoubtedly have deprived al-Ma'mun of his kingdom if he had not died in 438 (1046).

The rest of al-Ma'mun's reign was spent in a struggle with the Aftasid prince of Badajoz, Muḥammad b. 'Abd Allāh al-Muḥaffar, and hostilities between the two dynasties continued for several years with varying success. In 457 (1065) al-Ma'mun seized Valencia. The king of Valencia, al-Manṣūr 'Abd al-'Azīz b. Abī 'Amir, had died at the end of 452 (1060—1061) and his young son 'Abd al-Malik al-Muḥaffar had succeeded him but his lands aroused the cupidity of Ferdinand I who besieged him. Under the pretext of assisting him, al-Ma'mun came to 'Abd al-Malik in Valencia and soon deprived him of his throne.

A few years before his death, al-Ma'mun was asked by the Berber lord of Carmona, al-'Izz b. Iḥṣān al-Burālī, to come to his assistance against the attacks of the 'Abbāsid king of Seville al-Mu'tadid on his little kingdom. Al-Ma'mun occupied Carmona and as a result of negotiations with al-Mu'tadid, he abandoned this town to him in return for a promise of his assistance in taking Cordova, then ruled by a prince of the family of the Dihawarids. Once more the 'Abbāsid failed him at the last moment. On his death his son and successor al-Mu'tamid [q. v.] took up al-Ma'mun's plan on his own account, seized Cordova in 461 (1068) and left his son 'Abbād there as governor. But a few years later in 467 (1075), al-Ma'mun with the help of a Cordovan of low birth, Ibn 'Ukāsha, was able to hatch a plot

which made him master of Cordova. Six months later, al-Ma'mun was poisoned on the 11th Dhu l-Ka'da 467 (June 28, 1075) either at the instigation of al-Mu'tamid, king of Seville, or of Ibn 'Ukāsha. His son Yahyā al-Kādir succeeded him. A few years later, Alfonso VI took Toledo.

The long reign of al-Ma'mun is quite characteristic of the period of the *mūlūk al-tawā'if* of the Iberian Peninsula. He certainly increased his dominions but his conquests were ephemeral and he was one of the first to have no scruples about an alliance with the Christian princes of Castile and Leon in order to fight other Muslim rulers of al-Andalus. He even afforded hospitality at his court for nine months to Alfonso VI when the latter was deposed by his brother Sancho of Castile.

AL-MA'MUN, ABU 'L-'ALĀ' IDRIS b. YA'KUB AL-MANṢŪR b. YUSUF b. 'ABD AL-MU'MIN b. 'ALĪ, ninth sovereign of the Almohad dynasty, born in 581 (1185—1186) in Malaga, of the marriage of his father with the Spanish princess Ṣāfiya, daughter of the amir Abū 'Abd Allāh b. Mardanish (Martinez). The Arab historians pay high tributes to the good qualities of this prince who was very well read, equally well versed in profane and religious learning. At a time when the Almohad dynasty was much troubled by the strife stirred up by pretenders, he was able by his energy to postpone for several years its final collapse.

At first al-Ma'mun served in Spain as the lieutenant of his brother Abū Muḥammad 'Abd Allāh al-'Adil then on the throne. The latter had soon to leave the Peninsula and return to Morocco without having been able to subdue the rebel leader Abū Muḥammad al-Baiyāṣi supported by Ferdinand III of Castile, but he was soon betrayed by his own men in his own land and assassinated in 624 (1227). This murder was followed by the almost simultaneous proclamations of al-Ma'mun and another Almohad pretender, nephew of the preceding, Yahyā b. al-Nāṣir b. al-Manṣūr, who took the honorific *ṭāgh* of al-Mu'taṣim bi'llāh. On his accession and without leaving Spain, al-Ma'mun was soon able to make himself recognised in the greater part of his empire and to get rid of the rebel al-Baiyāṣi. But almost immediately a rebellion broke out in the east of al-Andalus, in which Muḥammad b. Yūsuf of the powerful family of the Banū Hūd was proclaimed caliph in the town of Murcia. At the same time the prestige of Yahyā al-Mu'taṣim increased in Morocco and his partisans became more and more numerous. Feeling himself powerless in Spain and forced to turn his eyes towards Africa al-Ma'mun was forced to seek an alliance with the king of Castile. The latter agreed to support al-Ma'mun under very harsh terms, including the surrender of ten Muslim strongholds of the *frontera* and the building of a church and the granting of freedom of worship in Marrākuṣh. In return, al-Ma'mun received a body of 12,000 Christian mercenaries with whom he at once went to the Maghrib. He was soon able to enter Marrākuṣh in triumph, after having

defeated the army of al-Ma'tāsim in 627 (1230).

Enraged at the defection of the Almohad Makhzen so devoted to his predecessors, al-Ma'mūn took a decision at Marrākush, that was quite unprecedented in the annals of the dynasty. He stigmatised the memory of the Mahdi Ibn Tūmart, denied him 'impeccability' (*ʿiṣma*) and had a large number of Almohad *shaykhs* executed whom he suspected of having betrayed him. The rest of the reign of al-Ma'mūn was spent in trying to put down several rebellions in the Maghrib; but he did not succeed in bringing his rival to terms for the latter was able to take and plunder Marrākush. On hearing this, al-Ma'mūn, then busy with the siege of Ceuta, hurried off to the capital at once but fell ill and died on the way in the valley of the Wādī 'l-'Abd at the end of Dhū l-Hijja 629 (Oct. 1232).

(E. LEVI-PROVENÇAL)

MA'MUNIS, name of a dynasty.

In the 19th (11th) century Džurdjāniya, to the north of modern Khiva, was a dependency of Bukhārā and was ruled by a line of princes called the Ma'mūnis. Nothing is mentioned about them by the Oriental historians till 382 (992) when Ma'mūn b. Muḥammad b. 'Alī, ruler of Džurdjāniya, is said to have assisted Amir Nūḥ b. Maṣṣūr the Sāmānid in his exile during the temporary occupation of Bukhārā by Bughārā Khān, ruler of Kāshghar. In 385 (995) Ma'mūn attacked Abu 'Abd Allāh, ruler of Khwārizm, in order to punish him for his treachery to Abū 'Alī Simjūnī, took him prisoner and annexed Khwārizm. Ma'mūn was assassinated in 387 (997). His son Abū 'l-Ḥasan 'Alī succeeded to the throne, and married a sister of Sulṭān Maḥmūd of Ghazna. Abū 'l-Ḥasan died about 399 (1008—1009) and was succeeded by his brother Abū 'l-Abbās Ma'mūn. Abū 'l-Abbās married his brother's widow, the sister of Sulṭān Maḥmūd. Shortly after this he gave offence to his army by doing homage to Sulṭān Maḥmūd. The commanders of the army organised a rebellion against him, put him to death on Shawwāl 15, 407 (March 16, 1017) and raised one of his sons to the throne. On hearing this, Sulṭān Maḥmūd marched to Khwārizm to avenge the death of his brother-in-law, defeated the rebels at Hazrasp on Ṣafar 5, 408 (July 3, 1017), and executed the leaders of the insurrection. All the scions of the royal house were taken prisoners and sent to Khurāsān. The kingdom of Khwārizm was annexed and placed under the command of Altūntāsh with the title of Khwārizmshāh. But after the return of Sulṭān Maḥmūd to Ghazna, Abū Ishāq, father-in-law of Abū 'l-Abbās Ma'mūn, tried to establish himself in Khwārizm but he was defeated by Altūntāsh.

The rulers of this dynasty were famous patrons of learning, and it was at the court of Abū 'l-Abbās Ma'mūn that Abū Raiḥān al-Bīrūnī, the astronomer, Abū 'Alī b. Sīnā and Abū 'l-Khayr b. Khammās, the physicians, and Abū Naṣr b. 'Arrāḥ, the mathematician, flourished.

This dynasty has been confused by the *Ta'rikh-i Ghalib* and *Ta'rikh-i Džahān Arā* of Kāḍī Aḥmad Ghaffārī, with the Farḡhānīs who were the rulers of Džūdžānān.

Bibliography: al-'Uṭbī, *Kitāb al-Yamīnī*, ed. Lahore, p. 77 sq., 94—96, 106, 300—303; Abū 'l-Faḍl Baiḥaqī, *Ta'rikh-i Maḥmūdī*, ed. Morley, p. 834—853; Niṣānī Samarḳandi, *Čakār Maḥāla*, G. M. S., p. 76—80, 241—244; Ibn al-Aṭṭar, *Kāmilī*, ed. Tornberg, ix. 93 sq., 184 sq.; E. de Zambaur, *Manuel de géologie et de chronologie*, p. 205. (MUHAMMAD NAZIM)

MA'MURET AL-'AZIZ, the name given to the new town of Meṣre, built beside Kharpūt [q.v.] in honour of Sulṭān 'Abd al-'Azīz. In time the name became applied to the new wilāyet formed in 1879 around Kharpūt-Meṣre; this consisted of three sanjaks: al-'Azīz, Khōzāt and Malāṭiya. As a result of the administrative reforms of 1340 (1921) each of these sanjaks became an independent wilāyet but later modifications were made.

According to the official annual of 1925—1926, the wilāyet of Ma'mūret al-'Azīz has an area of 11,299 sq. km. or 12,428,900 *dōnūms*, of which 3,124,596 are arable. It contains 6 *kāḍās*: the central *kāḍā*, Pāla, Kharpūt, Kebān, 'Arabkir, Kemāliye (this new name replaces the historical one of Egin).

The annual of 1926—1927 records an even more radical reorganisation. The area of the wilāyet of al-'Azīz is given as 17,268 sq. km. with 1,562,296 *dōnūms* of arable land. The wilāyet which lost the western *kāḍās* ('Arabkir and Egin) has been extended on N. and E. It has 11 *kāḍās* subdivided into 32 *nāḥīyas* with names little known and difficult to transliterate:

1. the *kāḍā* al-'Azīz, with the *nāḥīye*: Khānkendi, Mullā-kendi, Īme, Khūḥāḥiyya (?), Erenler (Aynuw), Bāl-Bey, Kharpūt, Čongush, Sarnī (Daghidi).

2. Kebān, with only one *nāḥīye*: Tahir.

3. Bāskil: Muḥār-Huyuk, Leoli (Komūr-khān), Karabekān (Meriwan), Seywan.

4. Pāla: Gök-dere (and Balanlık) Okht (and Lower Balanlık), Kara-Gor.

5. Khōzāt (Dersim): Ballkan (Elghāzi), Kermilī, Anantka, Stn. Dere-Aghannik.

6. Cemish-gerek: Waskowān, Bash-Wartenik, Kermilī, Waakerū (Pāshaweng), Čarsandjak, Shawak (Albighker = Awi-sheker?).

7. Māzgerd: Pakh, Tereshmek, Mukhandī (Muḥundī).

8. Čabakčur: Perkhenguk (Kamran).

The *kāḍās* without *nāḥīye* are:

9. Owadlık.

10. Gen dī-marker (Dārlin).

11. Ma'den.

Number of the <i>kāḍā</i> .	Number of villages.	Number of inhabitants.
1	241	52,700
2	78	22,494
3	?	16,117
4	333	17,496
5	127	12,000
6	?	?
7	180	13,000
8	104	12,000
9	87	6,180
10	?	5,649
11	?	11,476

The wilāyet (without Cemish-gerek) has therefore 171,631 inhabitants. The events of the war and the suppression of the Kurd rising in 1925 must have had far-reaching effects on the ethnical aspect of this territory. Before the war the population was mixed: Kurd, Armenian and "Zaza" (a people speaking an Iranian dialect, q. v.).

Bibliography: cf. the fundamental article KHARPUT, *Türkiye Dişinüriyü Devlet Sânu-meri*, 1925—1926, p. 836—841; do., 1926—1927, p. 694. (V. MINORSKY)

MA'N b. AWS, an early Muhammadan poet of the tribe of the Banū Muzaina. His period can be established with some accuracy. From the *Kitāb al-Aghāni* we know that he composed a panegyric on 'Omar I and a lampoon on 'Abd Allāh b. al-Zubair for his lack of hospitality; the latter is preserved in the *Aghāni* as is the beginning of the former. The panegyric survives also in the *Divān*, where it is dedicated to 'Omar's son 'Āṣim. The *Aghāni* further records that Ma'n lived to the beginning of the *fitna* between 'Abd Allāh and Marwān b. al-Hakam, i. e. to 64 (684). The poet must therefore have been born about the beginning of the Muslim era. The *Aghāni* further gives details of his private life and the *Divān* also gives similar information. He had an estate in Arabia and made journeys to Syria and the 'Irāk. One of his wives came from Syria. He also took part in the wars of his tribes. In his old age he became blind.

Up till recently all that we knew of Ma'n's poems were the fragments preserved in the *Aghāni* and elsewhere. P. Schwarz however discovered in the Escorial an incomplete manuscript of the *Divān* with a commentary, the work of al-Kāfi [q. v.] which he published in 1903 with a short introduction and translation of the notices in the *Aghāni*. H. Reckendorf supplemented this. In 1927 Kamāl Muṣṭafā published an edition in Cairo. It lacks some poems given by Schwarz; on the other hand it has two fragments not given by him. The introduction is in part a literal translation of Schwarz, who is mentioned by name. It is not clear from it on what the edition is based. It seems however to be based simply on Schwarz's edition without new manuscripts and, compared with it, only shows corruptions of the text, omissions and additions from other sources.

Bibliography: *Kitāb al-Aghāni*, x. 164—168; P. Schwarz, *Gedichte des Ma'n Ibn Aws*, Leipzig 1903 (cf. Nöldeke, in *Z. A.*, 1903, p. 274 sq. and Reckendorf, *O. L. Z.*, 1904, p. 138—140), where further sources are given; *Ma'n Ibn Aws, Hayātuhū, Shī'rūhū, Akhḥārūhū, Ḍamā'ihū* Kamāl Muṣṭafā, Cairo 1927.

(M. PLESSNER)

MA'N b. MUHAMMAD b. AHMAD b. ŞUMĀDH AL-TURĪBĪ ABU 'L-AHWAS or ABU YAHYĀ, founder of a dynasty in the little principality of Almería, in Eastern Spain in the middle of the 11th century A. D. The principality had been founded in 1025 by the two 'Amirid "Slavs" Khairūn and Zuhair. On the latter's death in 1037, their overlord 'Abd al-'Azīz b. Abi 'Āmir, king of Valencia, declared it his property and in 1041 placed his brother-in-law Ma'n b. Şumādh as governor there. The latter belonged to a noble family of Arab origin; his father had been one of the generals of the celebrated Hādijb al-Manṣūr [q. v.] and was governor of the town of Huesca. Ma'n remained

loyal to the king of Valencia for nearly four years, then cast off his allegiance and declared himself independent. He reigned at Almería for a few years longer and died in Ramaḍān 443 (Jan. 1052).

MA'N b. ZĀ'IDA, ABU 'L-WALĪD AL-ḤAJJĀBĪ, a Muslim general and governor. In the Omayyad period Ma'n was in the service of the governor of the 'Irāk, Yazīd b. 'Omar b. Habbāra, and took part in the fighting against the 'Alid rebel 'Abd Allāh b. Mu'āwiya and the general of the 'Abbasids Kaḥṭaba b. Shabīb as well as against his son al-Ḥasan. He thus gained the enmity of al-Manṣūr and after the murder of Ibn Habbāra had to go into hiding to escape the vengeance of the 'Abbasids. But when the Rawandis [q. v.] went to al-Ḥashimīya (probably in 141 = 758—759) and tried to storm the palace of the caliph, because he had had their ringleaders arrested, Ma'n came out of his retirement, drove back the rebels with his men and rescued al-Manṣūr, who at once pardoned him and gave him the governorship of the Yaman. Here he favoured his fellow tribesmen, the Banū Rabi'a, while the Yamanis were treated with the greatest severity. He was transferred to Sijjīstān, according to the usual date, in 151 (768—769) and his son Zā'ida followed him as governor of the Yaman. Soon afterwards, probably the next year, Ma'n was murdered in Bust by some Khurridjīs, who had gained an entrance to his house by pretending they were workmen doing repairs. 151 and 158 are given for the year of his death, in addition to 152.

(K. V. ZETTERSTEN)

MA'N (BANU), Emirs of the Lebanon. Their political history begins with the Turkish conquest of Syria. We do not know if they were of Arab origin like the Banū Bohtor, or Kurds like the Djuḥlāt, or Maghribi like the 'Abd al-Samad, the Talhāk etc., who came to the Lebanon in the retinue of the Fātimids. When, in the 11th century, the biographer Maḥibbī (*Khuṣṣat al-Aḥwāl fi Aḥwāl al-Karn al-ḥādī 'ashar*, iii. 266) was collecting the records of the family of the Banū Ma'n, he found they were not agreed about the genealogy of their ancestors. But he is certain that they had long been in possession of the emirate of Shuf (Southern Lebanon). He is certain that they did not belong to the princely family of the Lebanon Tanākh. It is none the less surprising that in the monograph, which he devotes to the latter family (*Tarīkh Batriūt*, ed. Cheikho) Sāliḥ b. Yahyā deliberately passes over the Banū Ma'n.

The Ma'n seem to have early adopted the teaching of the Druses. This step secured them the sympathies of the Druses of the Lebanon and

of the Wādī 'l-Taim at the foot of Hermon. In the latter district they were allied with the Shihāb emirs. Enfeebled by the struggles with the 'Alam al-Dīn — their relations and also their secular rivals — the Banū Tanūkh, themselves divided into Kaists and Vamanis, underwent the fate of such exhausted organisms and ended by breaking up. The Ma'nids were only waiting the opportunity to seize their political heritage. This was given by the Ottoman conquest of Syria.

On the eve of the battle of Dabik (1516) between the Turks and the Mamlūks of Egypt they divided in time to which side victory would incline and wiser than the Tanūkh declared for the Turks. Their chief at that time was the emir Fakhr al-Dīn I. He was one of the first of the Syrian chiefs to hasten to Damascus to congratulate Selim I on his victory. Favourably impressed by his protestations of devotion, the Sultān sent him back to the Lebanon with enhanced prestige and authority at the expense of the Tanūkh. In this accession of power, the Ma'nid emir was much assisted by Ghazālī, a traitor to the Mamlūk cause, to whose fortunes he had decided to link that of his family. We do not know how he escaped the catastrophe that overwhelmed (Jan. 1521) his protector Ghazālī, who in the end played traitor to the Turks also.

In 1544 the emir Kurkmas succeeded his father Fakhr al-Dīn and in 1585 there took place at Dīn 'Akkār the plundering of the caravan which was taking to Constantinople the taxes collected in Egypt and Syria. The Ottomans accused the Ma'n of complicity and of having sheltered the criminals. Their troops invaded the Lebanon. The emir Kurkmas shut himself up in the inaccessible rock of Shaḡīf Tūfān near Dījazin (Southern Lebanon) and died there of chagrin or poison (1585).

The most remarkable of the Ma'nids was undoubtedly the son and successor of Kurkmas, called Fakhr al-Dīn (1585—1635), like his grandfather. The partisans of the cause of independence in the Lebanon regarded him as a precursor and have never ceased to invoke the example of his efforts for his country. For an account of his career see the article on him (II, p. 45). The conquests beyond the Lebanon and his relations with European powers brought down upon him the vengeance of the Porte. He had to go into exile in Italy and leave to 'Alī, the eldest and most gifted of his sons along with his own brother Yūnus, the administration of the Lebanon (1613). On a promise to dismantle the chief fortresses of the Lebanon the Porte recognised 'Alī and even, after five years of exile, allowed his father Fakhr al-Dīn to return to the Lebanon. His son 'Alī displayed no enthusiasm at his return (1618). The new conquests of his father soon began to disturb the Porte, who resolved to make an end of the troublesome Ma'nid vassal. Surprised by superior forces in the Wādī 'l-Taim his son 'Alī fell fighting bravely and Fakhr al-Dīn was taken to Constantinople and put to death (1635).

The Central and Southern Lebanon, "the Mountain of the Druses" as it was officially called, was then handed to the family of the 'Alam al-Dīn, whose ambitions had never ceased from the beginning of the rise of the Banū Tanūkh, to thwart the efforts of all the rulers of the Lebanon. One of their first acts was to exterminate the last actions of the Tanūkh. This crime facilitated the rise to

power of the Shihāb. Their excesses and the regret for the Ma'nids soon made the 'Alam al-Dīn unpopular. After their expulsion from the Lebanon the Ma'nid emir Muḥim followed; his son Aḥmad succeeded in regaining a precarious authority under the jealous supervision of the Turkish Pashas. The more distinguished of the two emirs was Muḥim, son of the emir Yūnus and nephew of the great Fakhr al-Dīn. He ruled for about 20 years. Both continued the liberal traditions of their illustrious ancestor. Like him they protected the colonies of Christian agriculturists whom he had invited from northern Lebanon and for whom he had built churches and monasteries.

Aḥmad, grand-nephew of Fakhr al-Dīn II, died in 1697 without leaving male heirs and the family of the Ma'nids thus became extinct. Turkey could no longer have any illusions about the rebellious nature of the Lebanese and their impatience under a foreign yoke. To assume the direct government of the Lebanon was not attractive to the Porte and would have forced it to undertake its conquest. The grave political crisis through which Turkey was then passing prevented a new expedition being undertaken, the risks of which were very well known. On the other hand the rule of the 'Alam al-Dīn with official support had not given satisfactory results. On promise of the payment of an annual tribute, the notables of the Lebanon were authorised to form a general assembly at Sumḡāniya (province of Shūf) to elect a governor to inherit the legacy of the Banū Ma'n. Their choice fell upon the Shihāb emirs, allies and relatives of the old emirs.

MA'NĀ (A.) means in the old language sense, significance and is so used as a grammatical term. In philosophical language the use of the word varies from the most general to the most particular so that it is impossible to give a general translation for it. It occurs in quite untechnical connections as "thought", "what is meant" or simply "thing" etc. but also has the special meaning of "conception" or as the *Dictionary of Technical Terms*, ed. by Sprenger, has it "an image of the intelligence (*ṣūra dhikniya*) in so far as a word corresponds to it, i.e. in so far as

it is meant by a word". Horten has investigated the special meaning of the word in metaphysics (*Was bedeutet معنى als philosophischer Terminus?*, in *Z.D.M.G.*, lxi, 391 sqq.). According to him, *ma'nā* is an "incorporeal reality" not merely a subjective conception. In this use it is regularly contrasted to *ḥiṣā*.

The plural *ma'ānī* is the name of a branch of study, namely, rhetorical style.

Bibliography: in the article; cf. also the dictionaries and *Tashkīr al-Miftāḥ al-Sa'ade* s. v. *Ḥim al-Ma'ānī*. (M. PLESSNER)

MANĀF is the name of an early-Arabian idol which was venerated by Kuraish and Hudhail, as may be concluded from the fact that among these clans the name 'Abd Manāf "servant of Manāf" occurred. It is said that one of Muḥammad's ancestors — the pedigree being Muḥammad b. 'Abd Allāh b. 'Abd al-Muttalib b. Hāshim b. 'Abd Manāf — received this name, because his mother consecrated him to Manāf, who was then the chief deity of Makkah.

Whether this last statement be true or not, it does not restore to life a deity whose individuality remains to us as dim as that of all its companions. Ḥim al-Kalbi knows nothing of its whereabouts, except that menstruating women were bound to keep themselves at a distance from it.

The name does not occur either in the *Qur'ān* or in classical *ḥadīth*. It derives from a root *n-a-f*, which in several Semitic languages conveys the meaning of "being elevated".

MANĀḤIB (أ.), plural of *manāḥib*, means the merits and doings of a miraculous nature of celebrated holy persons of Islām, heads of schools, saints and founders of *ṭarīqas*. Other terms like *ḥawāṣit*, *ṣaḥāb* are used with the same meaning but less frequently. We have the titles or manuscripts of several works on eastern *manāḥib*. Ḥajjī Khalifa gives a long list of them. Among the most notable may be mentioned the *manāḥib* of 'Umar b. al-Khaṭṭāb, of Aḥmad b. Ḥanbal, of al-Shāfi'i and of Abū Ḥanīfa.

The literature of the *manāḥib* assumed a special development in Morocco from the end of the middle ages. The majority of the *ghaibis* who played a part in the great renaissance of Islām in this country at that time had one or more monographs devoted to their *manāḥib* after their deaths.

For a more detailed study of the place occupied by the genre of *manāḥib* in the Arabic literature of Morocco cf. my *Historiens de Cherfa, Essai sur la littérature historique et biographique au Maroc du XVI^e au XX^e siècle*, Paris 1922, p. 44—54 and 220 sqq. (E. LEVI-PROVENÇAL)

MANĀRA, tower, minaret.

Material, structure and adornment. The use of brick or stone for *manāras* depended on the material generally used for building in the country in question. The *manāras* in Spain were therefore of stone so far as one can judge from those still extant, in the African Maghrib mainly of brick, in Cairo of stone, in Arabia, Syria, Anatolia, Armenia and Mesopotamia of both, in the Irāk, Persia and Afghanistan of brick and in India of both. In Persia there are isolated exceptions, like the *manāra* in Kerāt, a structure of

stone and lime with an outer covering of tiles; indeed stone and lime were very often used for the foundations and bases without affecting the character of the edifices themselves in brick. Of considerable importance from the artistic point of view is the outer covering of a layer of tiles in Persia and the Irāk, from the variations and patterns of which the *manāras* receive their decorative exterior; by alternating horizontal and vertical layers (*ḥāṣirāf*, banding), by alternating reliefs and depressions, ornamental areas are formed from which strips of ornament or script arise formed of tiles specially prepared for the purpose. The Tarkestān and Timīrid *manāras* are decorated with coloured glaze. In the post-Timīrid period also the glaze continually appears, especially in the pair of minarets which now commonly flank the entrance to a mosque (Tabriz, Mashhad, etc.). It is in the Guldasta, the balconies round the top, that the art of working decoratively in brick reaches its height. Here the necessary basis for the balcony was formed by brackets arranged in layers or rows of cells (stalactite-like cornices, *muḥarnas*).

Object and Significance. The term *manāra* or *minār* is applied to all Muslim towers. They were used not only for religious purposes as places from which to call to prayer and to mark mosques but also, as before the Muslim conquest, for profane purposes as watch- and signal-towers. The tower on the top of a hill at Kerāt in Khorezm (cf. below) is from its isolated commanding position intended as a signal-tower or column of victory and it shows that these towers were built in the Muslim period exactly like the *manāras* of mosques. In form and style these erections, serving different purposes, form one category, into which they also fall objectively from having the same name. There are a number of early references to such *manāras*, which were intended to be indicators for caravans and watch-towers (cf. Dier, *Persien, Islam. Bk. in A'harān*, p. 59). Such towers were however found all over the Asiatic plains and through China to the Pacific Ocean. Of course very few of them were works of art. There are a number of exceptions in the contemporary names for such towers, like that of Mahmūd of Ghazna which is called an *imār* in an inscription (see below). One of the minarets of the *mosalla* in Herāt is called simply *imarat* in the inscription (cf. Niedermayer-Lies, *Afghanistan*, p. 59). The *stambhas* or *ṭūtas* erected by King Aśoka in India between 250—232 B.C. may be claimed as precursors of the minarets of eastern Islām; although actually pillars of much smaller size than a *mināra*, many of them already show the same division into a polygonal and a cylindrical section. Their object was also half religious and half monumental in character. They in turn came from the Indo-Aryan columns of wood which were put up from the earliest times as symbols of the deity. The Indo-Buddhist *stambhas* of brick in Kabul of uncertain date is a connecting link between these and the earliest Muslim memorial towers in Ghazna (see below).

Shape. From this similarity just mentioned, it is evident that the *manāras* follow the traditional shape of the towers of the country in question. In the Mediterranean lands, as H. Thiersch has shown, it was the lighthouses and in Syria the watch-towers, dwelling- and church-towers that

were the predecessors in form of the manāras. The *malwiya's* of Samarra and the manāra of Ibn Tulūn in Cairo again go back to old Oriental models. In Persia and Sijidistan also, Nestorian church towers may have given the early manāras their square and polygonal shape (cf. Dietz, *Persien, Isl. Bk. in Khuridān*, p. 75); but in the rivalry of shapes in the eastern empire the slender cylindrical manāra, which is often also called *mil*, won. It was the victory of the monumental building without windows over the western dwelling-tower with windows. Their earliest precursors were, as already mentioned, the Indian *lita*. The observatory towers built by Salṭāna Mahmūd and Mas'ūd III. in Ghazna were built as memorials of victories like the Indian *Djagatamāhas*. Their shape was suggested by India but remodelled by the spirit of Muslim Persia and given a character of their own (cf. Dietz, *op. cit.*, p. 76 and 151 *seq.*). The best monumental evidence of Indian inspiration is the Kūth Minār [q.v.] in Delhi (beg. of viith—xiiith century; cf. M. v. Berchem, in Dietz, *Churatanische Bauten*, p. 109 *seq.*). The fact that the Persians called them *mil* points to their ancestry, the primitive poles and pillars used as indicators. To such poles, which can still be found at the present day at saints' tombs, revered by the common people in the country districts of Persia, may perhaps be traced the square and octagonal decorative shafts of the city and mosque *twihs*, found in pairs in Persian towns with Turkish inhabitants and in Asia Minor. Although they are frequently in the shape of minarets and have a gallery, their object is as a rule merely decorative. Both groups of manāras, the square and the round, are hollow towers with a staircase winding up inside opening out on the gallery. In the old Persian minarets of brick, these galleries or *guldests* have been completely destroyed as they were made of wood. We must imagine them to have stood on cornices of cells with carved wooden railings, rafters and roofs such as may be seen everywhere in the surviving mināras at popular places of pilgrimage like Karbalā, Kum and Maghad. A comparison with the galleries in the towers of the wooden churches of Eastern Europe (e.g. in Transylvania) points to the descent of the minaret galleries from wooden buildings of an everyday character.

Form and Significance of the manāras. In spite of the similarity of purpose there is a marked difference, indeed contrast, between the minarets of eastern and western Islām. The square and polygonal minarets of the Maghrib, Egypt and Syria are still essentially buildings for habitation; the cylindrical manāras of the eastern lands are on the other hand distinctly monumental buildings, pillars symbolic of the deity. The angular minarets of the west are divided into stories by mouldings and have windows for communication with the outer world; they are usually heavy on a broad base, while in contrast the cylindrical minarets of the east incorporate the symbol of the absolute which has this form, the unique, the abstract, the irresistible ascension to the deity without transitions or stopping places. The minarets of the west remain individual towers, of which hardly two are alike; in the east of the viith (xiiith) century the cylindrical form was already established as the absolute and only one, never to be altered nor made capable of ascension, as the only possible

form of manāra. The minarets of the west thus remain ex-watch-, church- or lighthouse-towers without bells or lights, decorative survivals of a culture foreign to their nature; those of the east on the other hand were etherealised and became spiritual manāras. The Cairo minarets were an interesting sport in their shape; the Persian and Turkish on the other hand a confession of faith in monumental form. They soar up to the heavens with unimpeded vigour. The silhouette of their tiled decoration rises upwards on close inspection till finally the eye of the beholder is held by the marked effects of light and shade on the guldest. The form of the guldest however is chosen with an idea of magical effect. The spire rests on a gallery of cells, the secret of the construction of which the spectator cannot easily grasp and the decorative gallery of wooden rafters and railings glitters with bright colours above it. A coat of glaze and the gilt top reflect far and wide a magic reflection like the glazed dimes.

Shape and development of the manāra in different countries.—Syria is the original home of the square manāra, which there took over the old native form for watch-towers, dwelling-towers or grave-towers and the church-tower which succeeded them. Islām at first used the existing pre-Islamic towers as minarets, on to which mosques were frequently built, when old churches which already had towers were not taken over and adapted (cf. Brünnow in Thiersch, *Pharos*, p. 101). The oldest minarets of this kind are in Hawrān, the land of stone building *xar ḥayr*, which contained many old undecaying stone-towers (Bosra, manāra of the mosque of 'Umar b. al-Khattāb, inscription of the time of the Caliph 'Umar, *Dār al-Muslim* etc.). In Damascus the two southern minarets of the Omayyad mosque begun by Walid in 86 (705 [?]) belonged to the old church of St. John, while the northern minaret was a completely new building of Walid's. This is therefore the oldest independent Muslim manāra. The manāras of the Omayyad mosque became models not only for Syria but through the Omayyad migration to Spain (Cordova) for the Maghrib also. Wherever we later find in Syria the Egyptian tower-form, there is always definite Egyptian influence present and as a rule they are Mamlik foundations. It is still hardly possible to compile a chronological list of Syrian manāras (cf. Thiersch, *op. cit.*, p. 99—110 and the illustrations).

Palestine. In this country on the borders of Egypt, the influence of the latter country made itself felt. The octagonal manāra on a square base predominates. The manāra of the chief mosque in Ghazna shows an octagon diminishing in width by successive stages; while the minaret of the mosque of al-Hāshim there has the same diameter throughout and is only divided into four stories with windows by large mouldings. The smaller mosques have short squat octagonal towers. The manāra of 'Alī Bakka in Hebron is half rectangular and half octagonal with a high miḥrāb-like niche in the lower story. The octagonal tower is found as far as Jerusalem, where it meets with the northern Syrian square towers. The latter is again found at Harām al-Sharif and in the mosque of Sūda 'Umar beside the Church of the Holy Sepulchre and along the coast in Jaffa, Haifa, Sidon, Tyre and Haifa, and in the interior in Tiberias, Safed, Nāblus, etc. On the other hand

the manāra in Ramla of the viiith (xiith) century is unique with its buttresses and pointed arched niches and dwarf pillars and columns. Thiersch takes it to be a copy of the most celebrated Christian tower of the country, the bell-tower of the Holy Sepulchre built in 1160—1180 in Jerusalem, of which only the base is still standing; (cf. Thiersch, *op. cit.*, p. 119 *seq.* and the pictures there).

Egypt. The oldest manāra in Egypt is the tower of the Dīmi' b. Tūlūn. Like the Malwiya of Sāmarrā, this minaret stands outside the mosque and resembles them in form also, although it differs in its material which is limestone. The first storey is a square tower with a window with horseshoe arches, the second is cylindrical and an outer staircase leads up around them. The two upper octagonal stories are later in date, having been erected by the Mamlūk Sultan Lādīm. Nothing final can be said about this manāra, apparently erected by a foreign architect and combining a number of foreign influences. The manāras next to it in time are the five towers of hewn stone of the mosque of Ḥakīm with their covering of tiles of a later date; they must be contemporary with the mosque, which was built in 393—404 (1002—1013), and were covered by Baibars II and given new spires (703 = 1303—1304). They are of different shapes. The northern tower is cylindrical on a square base, the southern has a square lower half and four octagonal upper stories, each narrower than the one below it, the first of which has four semi-cylindrical cornices in the corners. The decoration in relief on the stone has analogies in the gateway of the same date (pictures in Diez, *A. d. Isl. Volk*, I, p. 58; *, p. 54). Of these two towers the southern one may be considered the ancestor of the minarets of Cairo. Its square-octagonal form, usually crowned by a cylindrical storey, survives. The further development is limited to the proportions, which aim at greater elegance and slenderness, and the breaking up of the surface with niches and muqarnas cornices. Towards the end of the second Mamlūk period, say under Ka'it Bey, it reached its culmination. The minaret of the mosque at his tomb was never to be surpassed in grace and wealth of ornament. A list of the most important minarets of Cairo between 1000—1356 A. D. is given by Thiersch with many illustrations.

Arabia. As in Palestine, in Arabia there was no native type of manāra and indeed Arabia never developed any sacral architecture with a character of its own. The minaret of the mosque of Walid in Medina may have been Syrian in form. The manāras at present standing in Medina belong to the sixth restoration of the mosque by Ka'it Bey in 888 (1483). They are slender minarets of the Mamlūk type with octagonal and cylindrical stories. The seven manāras in Mecca, the sanctuary of which was ten times restored, only show modern forms of tower, frequently influenced by the slender Turkish form (cf. Thiersch, *op. cit.*, p. 123). Two slender round minarets of the ixth (xvth) century still flank the ruined mosque on the island of Bahrain (cf. Diez, *Jahrb. d. dt. Kunst*, 1925, ii. 2).

Maghrib. The oldest *zawmā'a*, as the manāras of the Maghrib are called, in Africa is in Kairuān, the massive three storied tower of the mosque of Sidi 'Oktā of 105 (724). The two upper receding stories with blind niches are probably of later

date than the unadorned upper storey with loopholes on three sides and three windows only on the side that looks on the court. The cistern in the basement and the measurements of this tower which are exactly half those of the Pharos, suggested to Thiersch that it was an imitation of the Pharos. Another *zawmā'a*, also of the ixth (viiith) century was the minaret of the Dīmi' al-Zūna in Tunis before its restoration in the sixteenth century. Old pictures of it show a plain square lower storey with a narrower octagonal upper storey and the platform on top enclosed by a breast-high parapet with a pillared gallery. Of this probably only the lower part is old, while the second storey and the parapet date from the restoration of 1653 (pictures in *A. d. O.*, ix.; Kühnel, *Maurische Kunst*, vi.). Egyptian influence, in so far as such existed, extended to Tunis. West of Tunis begins the Spanish sphere of influence, the model for which was the *zawmā'a* in Cordova built by 'Abd al-Rahmān III in 339—340 (951) and destroyed in 1593. A description of it is given by Idrisi (c. 548 = 1154). According to him, the minaret of Cordova was a high quadrangular tower, square in plan, the sides of which were richly adorned with inscriptions in relief. The upper section terminated in two rows of blind arcades probably like those still to be seen in the mosque of Cordova and on other minarets of the Maghrib. On the platform was a second, probably also square, storey with four doors and upon the dome which crowned it shone three halls of gold and two of silver and lily leaves (cf. Thiersch, *op. cit.*, p. 127). This minaret however had a predecessor in a more modest tower built by 'Abd al-Rahmān I, the model of which according to Marçais (*Rev. Afr.*, 1906) was Walid's minarets in Damascus. The second, imposing and splendid, minaret at Cordova seems to have served as a model for the *zawmā'as* of Seville and Morocco. At the same time we must consider the claims of the minaret of the Ka'la Bani Hammād built in 393 (1001), the only tower that survives of the Fatimid period, which was half destroyed by the Almohads in 1152 (cf. Saladin, *Bull. arch.*, 1904, p. 243 *seq.*). It is a high square tower of hewn stone, smooth on three sides and embellished on the courtyard side only with shallow blind niches and balcony doors in three layers above one another (pictures in Thiersch, *op. cit.*, p. 130; Kühnel, *op. cit.*, xviii.; Saladin, *Mannet*, p. 217; Marçais, *Mannet* and *op. cit.*). This tower already shows the scheme of decoration of the Giralda and allied towers, namely the vertical combination of two windows or doors of the middle axis above one another by flanking double high shallow niches. The almost contemporary Giralda in Seville of about 1190 A. D., the so-called Tower of Hasan in Rabat and the Kutubiya in Marrākuṣh are allied to it, the two latter of the end of the viiith (xiith) century (pictures in Thiersch, Kühnel, Marçais), all square with narrower square top stories, of which only that of the Kutubiya still survives. These towers already show the system of decorating the surface now becoming typical in the later Maghribi manāras, the network of geometrical patterns in high relief and the beautiful windows with horseshoe and toothed arches and muqarnas niches. In the other towers of Morocco, in Fez, Tetuān, Tangier, etc., are more modern minarets. The characteristic type of Algeria is best seen in the numerous minarets in Tlemcen, mainly of the xiiith—xivth

century. They continue the form, characterized above, only the geometrical decoration in relief gains the upper hand and the windows disappear; their appearance is not quite so solid. On the other hand, the huge minaret of the great mosque of Manṣūra is highly thought of in Morocco for its size as well as its decoration, because it was built by a Moroccan Marinid (701-702 = 1302). The square tower therefore dominates the whole of the west. It is only later in the xvth century that we find the octagonal tower appearing in Tunis, which Saladin attributes to Hanafi influence.

The 'Irāk and Džazīra give a picture of development similar to that of Persia and the lands east of Persia. The oldest manāras still standing, the two malwiyas in Samarra of the iijth (ixth) century, have remained the only examples of spiral towers but they are significant monuments of the early Muslim Arab variation of Babylonian architecture (the spiral as motif). These genuinely Arab buildings were followed by a reaction towards the Mediterranean style with square and octagonal towers and with the coming of the Turkish peoples and Seldjūk rule the cylindrical minaret, usually on a polygonal base. The following list is given by Herzfeld (*Arch. Reist.* ii. 229): Raḡḡa, mosque extra muros, rectangular tower of the ivth (xth) or vth (xith) century; Raḡḡa, intra muros, a round tower, Nūr al-Dīn 561 (1166); Abū Huraira, round; Bāli, octagonal, 589 (1193) to 615 (1218); Irbil, round on octagonal base 586-630 (1190-1232); Sindhār, round on polygonal base 598 (1201); Bagdad, Saḡ al-Ghazī, round on a base (?) (630 = 1232); Mōsul, minaret of the great mosque, round on a cubical base; Mōsul, minaret of the Ka'fa, round on a cubical base; Mōsul, Manāra al-Mak-sūra; Ta'ik, round shaft on a polygonal base. In addition there is the unique octagonal minaret built of small broken stones with a covering of plaster, on the island of 'Ana in the Euphrates of the vth (xth) century (Herzfeld, *op. cit.*, ii. 319, and Pl. 137) and the bulk of the later minarets from the viith (xivth) century onwards, which repeat this type.

Persia. The oldest manāras of Irān and the countries adjoining on east and north, Afghanistan, Sijidjīstān and Turkeṣtān seem to have been usually octagonal, as the ruin of the manāra, possibly of the liith (ixth) century in Zaranj. Nūr 'Alī, Sijidjīstān (now 25-30 feet, originally twice as high; cf. G. P. Tate, *Sistan*, Calcutta 1910, p. 202 and Plate) shows. The models for these earliest manāras may have been the watch-towers found all over the Asiatic steppes, hence the blind window and the great diameter. Octagonal manāras still exist in Amrān, Sijidjīstān (vth-viith century?); octagonal with cylindrical upper storey are the two observatory towers of Ghazna of about 410 (1019-1020) and 495 (1101-1102) (the original height was estimated at about 140 feet; the inscriptions on the two towers only say that their erection was ordered by Maḥmūd and Ma'ūd respectively, both with full titles; cf. Diez, *Chur. Bālm.*, p. 162 197). Counterparts to these towers in two parts are the manāras in Sirwān, east of Herāt (c. 100 feet high) and Kerāt in eastern Khurāsān (c. 80 feet high), with octagonal bases and cylindrical shaft, both of the vth (xith)-viith (xith) centuries. Cylindrical manāras of the vth-viith (xth-xiith) centuries still survive in Persia and the lands east of it in Sangbāt, Fīrūzshād, Kāsim-

Shād (Sijidjīstān), Khoarūgird (Sabzawar) of the year 505 (1111), Damghān, (2) Bastām, Sawa, Semnān, Tabas, Kunya Urgendj (old Khtwa), Termez on the Amū Daryā, Būkhārā, Manār-i Kalyān 542 (1147-1148), Kāshān, Mestoryān (Turkoman steppes north of the Atrek, 2 towers) and Isfahān (4) (cf. the list in Diez, *Persien, Lit. Bk. in Churāsān*, b. 168-169). In the Timūrid period with the general flourishing of architecture the manāras are given a further last increase in their embellishment, a few examples of which are still to be seen in the Timūrid ruins in Herāt. Here we still have the ruins of nine polygonal-cylindrical manāras the soles of which are usually of slabs of white marble with inscriptions in relief, the shafts to the top covered with glazed mosaics of fabulous beauty which in their delicacy recall the work of the carver in ivory (cf. Niedermayer-Diez, *Afghanistan*, p. 58 199, and illustrations, p. 157 199). To this Timūrid group also belong the manāras in Samarkand mostly in ruins and the minarets of the Masjid-i Shāh in Mashhad built by the amir Malik Shāh and the two minarets now destroyed of the Blue Mosque in Tabriz, built in the time of Džahān Shāh (841-872 = 1437-1467). The last mentioned minarets belong to the group of double towers found all over Persia and Turkeṣtān which either flank the doors or stand at the corners of the wall of a mosque or are built on the top of the doors. These double towers which become more and more common after the Seldjūk and Mongol invasions never of course attained the height of the single manāras just described and their importance lies mainly in their decoration.

Asia Minor and Turkey. Among the Seldjūks and Ottomans the manāra lost the character and individuality which it revealed among most other peoples, at least in the early period. Apart from isolated exceptions like the very interesting fluted minaret at Adalia (pictures in Lanckoroński, and Thiersch, *op. cit.*, p. 149), the minarets are henceforth subordinated in the general architectonic scheme to the main building, either placed as a pair at the gate or as a single tower built into the wall of the mosque. It is true that these arrangements are found also in Persia, which was filled with Turkish tribes, but there was constant change there, while in Asia Minor a certain style soon became predominant which culminated in the absolute uniformity of the Ottoman minarets. The early minarets of Asia Minor of the xiiith century usually have their surfaces broken up into round and smooth areas which give them a certain charm, especially when this plastic ornamentation is combined with the painting of frescoes and with relief (Laranda Masjid and Indje Minareli, Konis, Gök Medrese, Sirwān, etc.). The Ottomans heightened the minaret which they had taken over from the Seldjūks, made it still more slender and gave it a long conical spire which has become typical. According to the importance of the mosque, it was given one tower on the front or flanked with two or even 4 or six minarets (the Mosque of Sulṭān Ahmad, Constantinople) and these were given one, two or three galleries.

India. In India there is only a single old manāra of importance: the Kutb Minār (q. v. and the illustrations) in Old Delhi built by order of Aibek Kutb al-Dīn and completed by Iltutmish (diameter 45 feet and height 240 feet). The three lower stories of this, the highest and finest ma-

nāra in the Muslim world, are built of red sandstone, the two upper, which have been restored, of white marble with layers of sandstone. The pavilion which once crowned the top fell down in 1803 during an earthquake and was put up again on the ground. The exterior is of angular and round flutings and ornamented with inscriptions from the Qur'ān. There is no reason to doubt that the numerous mosques of the Pathan dynasties also had minarets but most of them seem to be destroyed and so far as I am aware no one has yet studied the subject. Isolated surviving minarets like the detached slender round minaret of the Lat-ki-Masjid in Hissar show however that they were usual (cf. *Arch. Surv. India, Annual Report*, Pt. 1, 1913—1914, Pl. I). But their occurrence in India was confined to particular areas. The mosques of Dhanpur, Sirke, Mandi, Kulbargah and other places usually of the xvth—xvth century have no minarets. On the other hand they are characteristic of the xvth—xvth century mosques in Ahmadābād, built in pairs flanking the doors or at the corners of the surrounding wall, as in the Mongol mosques of Persia. In shape, the towers of Ahmadābād are quite Indian with well marked outlines, many mouldings outside and three to six galleries. In the Moghul empire again the smooth round or faceted minaret of Persian origin again became predominant but was Hinduised by the pavilion placed on the top and by other alterations.

MANAT, an old Arabian goddess. Her character can only be deduced from her name, which may safely be connected as a plural (for *manawāt*) with the Aramaic *manā*, plur. *manāwāt*, portion, lot, Hebrew *mānā*, plur. *manān* and also with the god of fate *manī*, Is. lxx. 11 (cf. lxx.). In Arabic we have corresponding to it, *maniya*, plur. *manāya*, "the allotted, fate, especially of death". She was therefore a goddess of fate, especially of death. Her main sanctuary was a black stone among the Haghailis in Qadai, not far from Mecca on the road to Medina near a hill called Mughallai. She was however worshipped by many Arab tribes, primarily by the Aws and Khazraj in Yathrib. In Mecca she was very popular along with the goddess al-Lāt and al-'Uzzā [q. v.]; the three (according to the Qur'ān) were regarded as Allāh's daughters, and in a weak moment Muhammad declared their worship permitted (cf. Sūra liii, 19 sq.). The obscure expression "Manat, the third, the other" is probably due simply to the rhyme. According to Ibn al-Kalbī, she was the oldest deity, whose worship gave rise to that of the others, because names compounded with Manat occur earlier than other theophoric names. Another view is found in the poem of Ibn Hishām, p. 145, where "the two daughters of 'Uzzā" are Manat and al-Lāt. As an independent deity we find her in the Nabataean inscriptions of al-Hidjr, where מנא (the Aramaic plural form; cf. above) is often found along with Dughāra and others. Manat is connected in a peculiar way by some writers with the great *ḥadīṣ* [q. v.], for we are told that several tribes including the Aws and Khazraj assumed the *ḥadīṣ* at the sanctuary of Manat and on the conclusion of the rites cut their hair there and dropped the *ḥadīṣ* [q. v.]. Wellhausen sees in this an erroneous confusion of an independent pilgrimage to Manat with the great *ḥadīṣ*, as later writers acknowledge none but the latter; it is however possible that some such confusion may really have taken place in pagan times.

That Manat was also a domestic deity is evident from the story in Ibn Hishām, p. 350 (cf. Wākidī, ed. Wellhausen, p. 350). The destruction of the

great sanctuary in Khudaïd after the capture of Mecca is attributed by some to Abū Sufyān, by others to 'Alī, according to Wāḳidī, *op. cit.*, Ibn Sa'd, *lil.* 15, 25, to the Awsī Sa'd b. Zaid.

MANĀZGERD. [See MĀLĀZGERD.]

AL-MANĀZIL (A.), pl. of *al-manzil*, more fully *manzil al-ḥamār*, the stations of the moon. Just as for the sun the zodiacal circle is divided into 12 stations each of 30°, which it traverses in the course of a year, so the course of the moon is connected with 28 groups of stars, each of which corresponds to one day of its course, so that on an average each is an arc of 13° apart. The settings of the sun at these stations, Arabic *manāz*, pl. *manāzil*, are of decisive importance for the beginning and forecasting of the phenomena of the weather and the fertility or otherwise of a year which depends on them, i.e. for the peasant's calendar. As regards the testimony of the Arab poets, the reader may be referred to the verses given by al-Kāzimi. M. Steinschneider in particular has published very thorough investigations of the importance of the stations of the moon among the Hindus and Arabs from Arabic, Hebrew and late Latin sources. The Arabic names of the stations and the constellations belonging to them are as follows:

1. *al-Sharāṭīn*, "the two signs", also *al-Aḥrāṭī*; the Horns of the Ram (β γ Arietis).
2. *al-Buṭāin*, "the little paunch"; the paunch of the Ram (α δ ε Arietis).
3. *al-Zūraiṣā*, "the Pleiades" (q. v.).
4. *al-Dalārān*, "the Aldebaran" (α Tauri) with the Hyades.
5. *al-Ḥaṣ'a*, three small stars on the head of Orion.
6. *al-Ḥan'a*, the stars *al-Zirr* and *al-Mairān* (γ ξ Geminorum).
7. *al-Dhira'*, "the Lion's Paw"; Castor and Pollux (α β Geminorum).
8. *al-Naṣṣra*, "the nostril" of the Lion or fence with asses (in Cancer).
9. *al-Tarf*, i.e. *Tarf al-Asad*, "the eye" of the Lion (ξ Cancri & Leonis).
10. *al-Djabbā*, i.e. *Djabhat al-Asad*, "the forehead" of the Lion (ζ γ α Leonis).
11. *al-Zubra*, i.e. *Zubrat al-Asad*, "the mane" of the Lion (δ ε Leonis).
12. *al-Sarfa*, "the weathercock" (β Leonis).
13. *al-Samra'*, "the barkers" or Dogs (β γ δ Virg.).
14. *al-Simāl*, "the prominent", more accurately *al-Simāl al-aṣat*, the unarmed S. (α Virg. = Spica; cf. *E. l.* iii. 456).
15. *al-Ḥaṣra*, "the cover" (φ α Virginis).
16. *al-Zubāna*, i.e. *Zubānat al-Aḥra*, "the pincers" of the Scorpion (α β Librae).
17. *al-Ḥalī*, "the crown", i.e. the head of the Scorpion, the three stars (β δ ε Librae).
18. *al-Qalb*, "the heart" of the Scorpion, the Antares (α Scorpi.).

19. *al-Shawla*, "the tail" or sting of the Scorpion (λ υ Scorpi.).

20. *al-Naṣīm*, "the ostriches", 8 stars in Sagittarius (γ δ ε ζ η θ ι κ Sagitt.).

21. *al-Balda*, "the town", an area in Sag. without stars.

22. *Sa'd al-Dhābiḥ*, "the luck of the slayer" or sacrifices (α β Capric.).

23. *Sa'd Bala'*, "the luck of the devourer" (μ ν Aquar.).

24. *Sa'd al-Sa'ūd*, "the greatest luck" (β γ Aquar.).

25. *Sa'd al-Aḥbiya*, "the luck of the tents" (γ ζ η Aquar.).

26. *al-Fargh al-awwal*, "the fore socket" on the pail (α β Pegasi).

27. *al-Fargh al-ḥamī*, "the hinder socket" on the pail (γ Peg. & Androm.).

28. *Baṭn al-Ḥūt*, "the fish-belly", a number of stars in the form of a fish (β Androm. the brightest).

MANBIDJ (Bambyke, Hierapolis), an ancient city in northern Syria, two days' journey or 10 farsakh N.E. of Halab, about 3 farsakhs from the Euphrates. It lay in a fertile plain, and had a double wall built by the Greeks. According to Ibn Khurdādhbih, there was a very fine church there, built of wood (*B.G.A.*, vi. 161 sq.). Ps. Dionysius (ed. Chabot, p. 47, 68) mentions a church of the Virgin and another of St. Thomas in Manbidj. There were no buildings in the neighbourhood of the town (Nāṣir-i Khusrāw, ed. Schefer, p. 31); Abu 'l-Fida' mentions the many canals, fruit- and particularly mulberry-trees there, the latter for the silkworm culture. As K. Ritter (*Erdkunde*, x. 1057 sq.) has shown, the name *Βάμβυξ* for the silkworm can hardly be connected with "Bambyke", the old name of Manbidj; on the other hand, the Levantine trade-name *bombazina*, *bombagio*, common in the middle ages for raw cotton, seems to be derived from Manbidj; it is perhaps also concealed in the name of the ancient Phrygian Hierapolis, Pambuk-Kal'esi (as early as Michael Syrus, ed. Chabot, i. 148; Mabbug in Phrygia). The Arabs called the robes made in Manbidj, *manbidjāniya* (Lammens, *Fāfima*, Rome 1912, p. 71).

Kamāl al-Dīn b. al-'Adīm gives the following account of its origin: Khusrāw [I] built it, when he conquered Syria (in reality the town in 540 A.D. ransomed itself from a threatened siege by paying tribute), built a fire-temple there and made a certain Yazdānyār of the family of Ardashir b. Bābak its governor. According to other authorities, Manbidj was the name of the fire-temple, from which the town took its name (Ibn al-Shihna, *al-Durr al-muntakhab fī Tārīkh Halab*, ed. Sarkis, Bairūt 1909, p. 227). Mabbug (Agapioz) b. Kustantīn of Manbidj says in his history of the world written

in the tenth century, at the end of the history of the patriarchs (ed. Vasiliev, *Patrol. Orient.*, v. [1910], p. 664): "In the year 31 after the birth of Levi, the son of Jacob, queen Samrin built a great sanctuary for the worship of the idol *Kay-nas* in a town on the banks of the Euphrates (F), installed 70 priests and called the town Hieropolis (Mahbub: *أبروليس*; Ibn al-Shihna, p. 227: *أبروليس*, var.

أبروليس), i.e. the City of the Priests; this was the town *Manbidj al-Atika*". For *Kay-nas* *Kaywān* should be read; on the coins of Hieropolis this deity seems also to be depicted (Wroth, *Catalogue of the Greek coins of Galatia, Cappadocia, and Syria* [Brit. Mus.], 1899, p. liii.), and the Armenian Epiphanius (ed. Finck, p. 12) says: "Erapolis consists of 3 towns: it is called Mapēn; in it is the idol *Kaynana*"; with Preuschen (*Götting. Gel. Anz.*, clxvii. [1905], li. p. 837, note 3) we should here also read *Kaywan*.

In reality Manbidj seems to have already been known to the Assyrians (as Nappigi or Nampigi in Salmanassar, *Karêh-Memolith*, rev. 35; Johns, *Assyr. Bibl.*, xvii. 11, 82; cf. also Bambuki on the cuneiform tablet *Brit. Mus. K 180*, in Johns, *Assyr. Deeds and Documents*, No. 773; Cheyne's *Encycl. Bibl.*, s.v. *Carchemish*). If the name is of Semitic origin, it perhaps goes back to a Syriac word *mambog*, "spring" (Nöldeke, *Nachr. G.G.W.*, 1876, p. 5-8). The Greeks knew as the name of the town besides Hierapolis (on coins always Hieropolis) also the native form of *Βαμβούκ* (rarely *Βαμβούκ*; *Papyr. Oxyrh.*, xi. [1915], p. 197, col. v., l. 100); in the common proper name *Μαμβουγαίς* etc., Nabataean *Mamboghā*, the name of the town is concealed (for references see Pauly-Wissowa, *Realenz.*, suppl. vol., iv., p. 733). The town which at first was included in Kyrhestikē and afterwards was made, probably by Constantine, the capital of the Syrian Euphratesia, played an important part in ancient times as the centre of the worship of Atargatis. Bardaisan was brought up here by a heathen priest Anūthbar and his son Kuduz. After the triumph of Christianity, the pagan cult was supplanted by the worship of holy relics, which also brought numbers of the faithful to Bambyke (Procopius of Gaza, *Puntyr.*, ch. 18, in Migne, *Patr. Græc.*, lxxxvii., iii., col. 2817). From the third century onwards the town is frequently mentioned as a place for the concentration of troops for campaigns against the east or for the defence of Syria. In the Byzantine period it was a great centre of the Monophysites, according to whose tradition Justinian married Theodora in Hierapolis; she is said to have belonged to the neighbourhood of the town (Michael Syrus, ii. 189). After the end of the Byzantine period, it was for a considerable period a stronghold of the Maronites (Michael Syrus, ii. 412, 511).

In the year 16 Abū Ubaida went to Halab al-Sādjiir and sent 'Isā b. Ghānim on to Manbidj. The inhabitants capitulated under the same conditions as the people of Antioch; when Abū Ubaida reached the town, the agreement was ratified (al-Balādhuri, ed. de Goeje, p. 150; al-Ya'qūbi, ed. Houtsma, ii. 161; Ibn al-Shihna, ed. Baifut, p. 228; Caetani, *Annali dell' Islam*, iii., p. 792, § 281, p. 794, § 284, p. 797, § 290, p. 816, § 325). Manbidj seems to have enjoyed a certain degree of independence down to the time of Yazid I; the inhabitants of the town, for example, asked

'Umar for permission to trade within the caliphate (Lammens, *M. F. O. B.*, vi. 437, note 1). The vicinity of the town was settled by Yamani tribes (Michael Syrus, iii. 47), notably the Banī Taghlīb (Lammens, *op. cit.*, p. 445, note 1). Yazid, when he created the *djund* of Kinnasra threw Manbidj into this military province (al-Balādhuri, p. 132; Lammens, p. 437 *seq.*). Hārūn al-Rashid separated it again, made it the capital of the frontier district of the 'Awasim [q.v.] in 786 and appointed 'Abd al-Malik b. Šalīb b. All as wali there in 173, to whom the town owed many buildings (al-Balādhuri, *loc. cit.*). In 131 (748) it was severely damaged by an earthquake, in which the church of the Jacobites collapsed during mass and buried many of the worshippers in its ruins (Pseudo-Dionysios, transl. Chabot, p. 42; Michael Syrus, ii. 510; Beathgen, *Abh. f. d. Kunde d. Morgenl.*, viii/iii., 1884, p. 126). The brother of the caliph al-Mu'tasim, al-'Abbās, who had taken part in the mutiny led by the general 'Udjaif b. 'Anbasa, was tortured to death by Haidar b. Kāwus, the Afshin of Urdshana, at Manbidj in 223 (838) (Tabari, iii. 1265; Ibn al-Athir, ed. Tornberg, vi. 349; Michael Syrus, iii. 101; Weil, *Gesch. d. Chalif.*, ii. 320). The conquest of Syria by Ahmad b. Tulūn in 264 (877-878) brought Manbidj also under Egyptian suzerainty (Ibn al-Shihna, p. 228). In the account of the *akaw āghyōnawōs* of Edessa, said to have been compiled by the Emperor Constantine Porphyrogenitos, a miracle is mentioned that took place in the time of Christ at the *κέντρον ἱερουπόλεως*, ἢ τῇ μὲν Σαρακενῶν φωνῇ *Μαμβίχ λέγεται*, τῇ δὲ τῶν Σύρων *Μαμβούκα* (*De imag. Edess.*, in Migne, *Patr. Gr.*, cxliii., col. 432; better in von Dobschütz, *Christusbilder*, in *Texte u. Unters. z. altchristl. Lit.*, xviii., 51⁸²). Abgar's envoy, who was spending the night in a brickworks near Manbidj on his way back from Jerusalem hid there among the bricks the sacred handkerchief with the portrait of Christ. Terrified by the bright light like that at fire, the heathen inhabitants of the neighbourhood hurried next morning to the brickworks and found there a brick with a miraculous copy of the portrait, which they carefully preserved in their city.

The Hamdanid Saif al-Dawla, soon after the capture of Manbidj in 947, made his cousin, the poet Abū Firas, governor of Manbidj (Dvořák, *Abū Firas*, p. 75). When the Domestikos Nicephoros Phocas invaded Syria in 962, Abū Firas, who happened to be hunting outside the town, was taken prisoner by the strategos Bēdrus (Theodoros?, Petros?), a nephew of the emperor, and taken first to Kharghana and then to Constantinople (Dvořák, 98 *seq.*; Weil, iii. 17) where he wrote poems full of longing for Manbidj and his mother there (Dvořák, p. 300, 302, 323 *seq.*). In 966 when emperor, Nicephoros encamped before Manbidj and made the people of the town produce the sacred brick (*al-Kirmīda*, i.e. *argamāna*) but did them no other injury (Yāhyā al-Anṣārī, *Cod. Parisin. Bibl. Nat.*, anc. foud. ar. No. 131 A, fol. 96^a; the translation by Freytag, *Z. D. M. G.*, xi. 212, has been corrected by Rosen, *Zapiski Imp. Akad. Nauk*, aliv., 1883, p. 07-08, note d). The Byzantine writers who apparently did not know that *Mamburka* was the Arabic name of Hierapolis and sought to locate it in Palestine or near Hims, wrongly make Nicephoros take Manbidj in 968 and carry off the brick and some hairs from the head of John the Baptist (which was only done

by his successor) (Leo Diaconos, Bonn, iv. 10, p. 71; John Skylitzes, ii. 364; Zonaras, xvi. 25, p. 503; Glykas, Bonn, p. 569 etc.) but this statement cannot be reconciled either with the route given for his campaign of 968 (cf. v. Dobschütz, *op. cit.*, p. 172, note 1; Schlumberger, *Nicéph. Phocas*, p. 704—706, note 5), nor with the bounds of his conquests given by Kamāl al-Dīn (in Freytag, *Z. D. M. G.*, xl. 232). It was his successor John Tzimiskes, who first took the fortress (ἑρμύριον) of Manbij in 974, and found there Christ's sandals and some still bloody hairs of John the Baptist, which he brought as relics to Byzantium (Leo Diaconos, x. 4, p. 165).

In the year 1025 the Mirdāsīd Šālih took the town (J. J. Müller, *Historia Merdasidarum ex Halebnibus Cernaleddini annalibus excerpta*, Bonn 1819; Rosen, *op. cit.*, p. 68). By the treaties between Mahmūd and 'Alīya [cf. HALAB, ii. p. 345*] Manbij passed in 456—457 to 'Ayya (Müller, *op. cit.*, p. 56 sq.). In 472 (1079—1080) Tādī al-Dawla Tutuṣh occupied the town (Müller, p. 88). The emperor Romanus IV Diogenes took it on his Syrian campaign in 1068 and strengthened the defences of the citadel (John Skylitzes, Bonn, ii. 673, 675, 685; Michael Attaliates, Bonn, p. 108 sq., 111, 116; Zonaras, xviii. 11, 26, Bonn, iii. 691; Michael Syrus, iii. 168; Matthēos of Uḫay, transl. Dulaurier, p. 162; Weil, iii. 112; Kamāl al-Dīn, transl. Müller, *op. cit.*, p. 63 sq., where it is wrongly stated that Manbij remained Greek for 70 years). It was not till 479 (1086) that Malik-ghāh deprived the Greeks of Manbij and al-Ruha, and gave the rule over Halab, Hamā, Manbij and al-Lādhiḳya to Aḫ-Sonḳor (Ibn al-Aṭīr, x. 98; Weil, iii. 131).

In 504 (1110—1111) the Franks conquered Manbij, occupied and plundered the town and advanced as far as Bālis which they burned (Röhrich, *Geich. d. Kgr. Jerusalem*, p. 88; Weil, iii. 193; according to Michael Syrus, iii. 215, probably wrongly, in the year 502). But they lost Manbij again in the same year (504) (Abu 'l-Fidā', *Annal. Musulm.*, ed. Reiske, iii. 370). Baldwin II in 513 (1119) invaded the lands east of Halab as far as Manbij and al-Nukra, and Joscelin, in the following year, on the pretext that one of his followers had been imprisoned in Manbij and that no compensation had been given to him for it, plundered the lands of al-Nukra and al-Aḥas (Recueil hist. or. crois., iii. 623, 625). When Nūr al-Dawla Balag enticed the amir of Manbij, Ḥassān al-Ba'labakki, within his power and then imprisoned him in Palā, Ḥassān's brother 'Isā seized the citadel of Manbij, which Balag then attacked with siege artillery (1124). 'Isā then appealed for help to Joscelin and had him proclaimed lord of Manbij, but Joscelin suffered a severe defeat before the walls of the town. On the next day, however, Balag was mortally wounded by an arrow shot by an unknown hand (according to Kamāl al-Dīn, by 'Isā himself; according to Matthēos of Edessa, by a sun-worshipper). In 518 (1124) Ḥassān was liberated and returned to Manbij (Ibn al-Aṭīr, x. 436; Michael Syrus, iii. 211; Matthēos of Edessa, transl. Dulaurier, p. 311 sq.; Röhrich, *op. cit.*, p. 161 sq.). The Crusaders never again took the town after the brief occupation in 504. Although we know of Frankish archbishops of the town (cf. William of Tyre, xiii. 11; xv. 14; xvii. 17) one of whom, Franco, took part in the Council of An-

tioch of Nov. 30, 1139 (Röhrich, *op. cit.*, p. 223), we also know that they did not reside in Manbij itself but in Duḫk (Doliche) (Michael Syrus, iii. 191). In the old French text of William of Tyre, the archbishopric is called *Geraple* (ed. Paris, I. 489; ii. 68, 167), a name which has often been identified with the modern *Qerābulus* (*Qerābuli*) (Ray, *Les colonies françaises de Syrie*, Paris 1883, p. 315; cf. also Bischof, in *Ansland*, 1873, p. 136). This equation must however be rejected on phonetic grounds (Hogarth, *Annals of Archaeol. and Anthropol.*, Liverpool, ii. [1909], p. 166, note) as well as historical (*Qerābulus* = Syr. *Agropos*, *Ἐβρωτες*).

The Atābeg 'Imād al-Dīn Zangī in 521 (1127—1128) seized the towns of Manbij and Ḥiṣn Biṣā'a and entered Halab on the 17th Djumādā II, 522 (*Recueil hist. or. crois.*, I. 17, 380; ii. 69). The emperor John II Comnenos on his campaign against Zangī (1142) only captured Biṣā'a (Ḥiṣā), while he passed by Manbij (ṭā Bāḥar) because, as Niketas (Bonn, p. 37) disparagingly remarks, it was considered easy to take and lay in the hollow of a valley (ὡς ἐν καταρτήσιν καὶ ἀπὸ τοῦ οὐρανοῦ ὁρατὰς), a statement, which in view of the lack of success at the sieges of Halab and Shaizar hardly seems credible. Anna Comnena mentions (Bonn, I. 331) a certain *Ἡεμπερζήτης* (i. e. al-Manbijī), *τὸν ἐπικουρῶντα αὐτὴν ἐν ἐνεγκαμένης λαχόν*, as in the Byzantine service; but the Byzantines never occupied the town itself after the eleventh century.

An amir Ḥassān of Manbij, probably a descendant of the same name of the Ḥassān already mentioned, distinguished himself frequently in the fighting against the Crusaders, especially by the capture of Tell Bāḥit on July 8, 1151 (Kamāl al-Dīn, transl. Blochet, *R. O. L.*, iii. 526 sq.; Röhrich, *Geich. d. Kgr. Jerusalem*, p. 197, 268, note 3, 281). He was succeeded by his son Ghāzi (Kamāl al-Dīn, *op. cit.*, p. 543). He rebelled against Nūr al-Dīn from whom he had received Manbij as a fief. Nūr al-Dīn sent troops to Manbij, deposed Ghāzi and made his brother Kuṭb al-Dīn Ināl (in Kamāl al-Dīn: Niyāl) his successor (*R. O. L.*, iii. 543; *Recueil hist. or. crois.*, ii. 241). After ruling for eleven years, this well beloved amir, who had built a Hanafī school in Manbij (*R. O. L.*, iii. 544), was deposed in 572 (1176—1177) by Saladin (*Recueil*, i. 46 sq.; ii. 241; iv. 132; Michael Syrus, iii. 366). According to a note in Kamāl al-Dīn (*R. O. L.*, iv. 147), in the same year (572) Ghāzi al-Dīn Khidīr set out with his followers to Manbij against al-Duwalk to whom Malik al-Nāṣir had granted the town as a fief; but this al-Duwalk is otherwise quite unknown. Taḳī al-Dīn 'Umar of Hamā, a nephew of Malik al-Nāṣir who was in Manbij in 577, wished to bar 'Isā al-Dīn's way to Halab; when he failed in this, he retired to Hamā, but was not allowed to enter it by the inhabitants (*R. O. L.*, iv. 156). 'Imād al-Dīn attacked Manbij in 578 (1182—1183) and laid waste the country round it (*R. O. L.*, iv. 162). Saladin made his brother Malik al-'Adīl governor of Manbij and he went there in Ramaḍān 579 (1183—1184) (*Ric. or. hist. crois.*, iv. 249). He seems to have spent most of his time in camp, for in 582 (1186—1187) the sultan gave Manbij to Taḳī al-Dīn along with other towns (Abu 'l-Fidā', *Annal. Musulm.*, iv. 72). Among the leaders, whom Saladin sent in 1190 against the Germans who after Frederick's death were trying to reach 'Akkā, was Nāṣir al-Dīn b. Taḳī al-Dīn of Manbij (*Recueil*

hist. or. crois., iii. 165). Saladin's third son Malik al-Zahir Ghāsi in 589 (1193) was allotted Hārim, Tell Hāshir, Manbij, A'zās and other fortresses (*Recueil*, i/l. 76; Röhricht, *Gesch. d. Kgr. Jerus.*, p. 658). In 591 (1195) the latter set out from Kindasim to Karā Hīsar in order to besiege Manbij which then belonged to al-Malik al-Manṣūr of Hama but on receiving disquieting news hastened to Damascus (*R. O. L.*, iv. 209). Saif al-Dīn Tughril al-Zāhiri defeated a division of the army from Hama, which attacked Manbij in 595 (1199), took many prisoners and brought them to Malik al-Zāhir, who however released them again (*R. O. L.*, iv. 218). The lord of Hama in 596 (1200), at the request of al-Malik al-ʿAdil, gave ʿIzz al-Dīn Ibrāhīm al-Muḥaddam the towns of Manbij, Famiya and Kafarab in compensation for Bārs (Weil, iii. 434, note 4). When the latter died in Famiya, Manbij was to go to his brother Shams al-Dīn ʿAbd al-Malik whom however Malik al-Zāhir in 597 deprived of his rule over Manbij and Kalʿat Nadjm and carried off a prisoner with him; he offered the two towns to al-Malik al-Manṣūr of Hama, who once previously in 588 (1192—1193) had refused Manbij (*Rec. hist. or. crois.*, iii. 298), if he would assist him against Malik al-ʿAdil, which however he declined to do (Röhricht, *op. cit.*, p. 685). Al-Zāhir thereupon destroyed the citadel of Manbij lest it should fall into an enemy's hands and gave the town, now deprived of its defences, in 597 (1201) to al-Ḥadīdjāf as a fief (*R. O. L.*, iv. 222) and in the following year to ʿImād al-Dīn b. Saif al-Dīn ʿAlī b. Ahmad al-Mashūb (Abu ʿI-Fidaʿ, *op. cit.*, iv. 195). But very soon afterwards, al-Zāhir had again to send the amir of Halab, Mubārīz al-Dīn Akdja, to the siege of Manbij: the latter however withdrew on the approach of Malik al-Faʿiz, son of Malik al-ʿAdil. Malik al-Faʿiz entered Manbij, rebuilt the citadel and fortified it. He then returned to his father al-ʿAdil in Nābulus, while the Halab troops avoided an encounter (*R. O. L.*, iv. 223). Soon afterwards the Halab army again marched on Manbij but was recalled by Malik al-Zāhir, who was besieging Damascus. A little later, al-Zāhir himself set out against Manbij to avenge himself on the inhabitants who had taken the side of al-Faʿiz; but he was appeased by his amirs, pardoned the town which submitted to him and gave it as a fief in 598 (1202) to Ibn al-Mashūb (*R. O. L.*, iv. 224). The Saljuq Kai-kāʾus in 615 (1218—1219) went to Manbij, which opened its gates to him, placed one of his officers, Sārim al-Dīn al-Manbijī, as governor there and repaired the walls of the town; but when al-Malik al-Ashraf approached, he left the town again and suffered heavy losses in his retreat (*Recueil hist. or. crois.*, i/l. 146; Kāmil al-Dīn, in *R. O. L.*, vi. 57; Abu ʿI-Fidaʿ, *Ann. Mus.*, iv. 266). When the Sulṭān of Halab, al-Malik al-Nāṣir, concluded an alliance with the Sulṭān of Rūm for their mutual defence against the raids of the Turkomans, he sent the kādī of Manbij, Awhad al-Dīn, as a confidential envoy to him (*R. O. L.*, v. 94). Al-Malik al-Maghūth of Harrān fled in 635 (1237—1238) before the Khwārizmians to Manbij to seek protection with his aunt (*R. O. L.*, v. 103). When the Khwārizmians three years later invaded Syria, a Halab army met them but suffered an annihilating defeat on the Nahr al-Dhabab (*R. O. L.*, vi. 3). Thereupon the Khwārizmians advanced

on Manbij, the inhabitants of which retired behind its walls and barricaded the place where the walls were no longer standing. The town was stormed on the 21st Rabiʿ II 638, numerous inhabitants put to death, the houses destroyed and rich booty taken; the enemy even entered the mosque where many women had taken refuge and violated them (*R. O. L.*, vi. 6). After the Khwārizmians had been driven back, al-Malik al-Manṣūr re-entered Manbij (*R. O. L.*, vi. 17). In the treaty between Sulṭān Kalāʾūn and Leo of Armenia of the 1st Rabiʿ II 684 (June 6, 1285), Manbij is mentioned among the Egyptian towns (Makrizi, ed. Quatremere, *Hist. des Sulṭans Mameluks*, i/l. 168; transl., p. 205).

According to Ibn al-Shihna (Bairut 1909, p. 228), Manbij which previously, excluding its 8 suburbs, had paid annually 510,000 dirhams to the Sulṭān's Dīwān, was destroyed by the Tatars (who invaded Syria several times between the end of 699 [1299] and 702 [1302]); perhaps there is here a confusion with the Khwārizmians. According to Abu ʿI-Fidaʿ, the fortifications and the town were for the most part in ruins in his time; Khallī al-Zāhiri does not mention it at all.

After the Russo-Turkish War (1879) Circassians were settled in Manbij: since that date the few remains of antiquity noticed by earlier travellers have almost completely disappeared.

The ruins of *Bambyk*, as the name of the place is now pronounced by the natives with a marked echo of the ancient Bambyke (Eating in M. Hartmann, *Zeitschr. d. Gesellsch. f. Erdk.*, Berlin, xxix. 525; Littmann, *Amer. Archæol. Exped. to Syria*, iii. 171, note 3), have been visited by Maundrell (1699), Pococke (1737), Drummond (1747), Sachau (1879), Cumont (1907) and Hogarth (1908). The old town walls, surrounded by a broad ditch which were several times restored in the middle ages, still survive almost in their entirety (Ainsworth, *A personal narrative of the Euphrates Expedition*, i. 1888, p. 238).

(E. HONIGMANN)

MAND (I), a people whom the Arabs found in Sind. Only the outline of the name is certain *ماند* = *mnd (Mid, Maid), *mnd (Mand, Mund). In the reign of Mu'awīya (41—60), Rasht b. 'Amr lost his life on an expedition against the Mand (Balādhuri, p. 433). During the governorship of al-Hadijādī, some Mand from Daibul [q.v.] sailed on the high seas the Muslim women who were being repatriated by the king of the Rubis islands (Dharrat al-Yaḥyū); this act of piracy served the Arabs as a pretext to send an expedition against Daibul (*ibid.*, p. 435). After 95 (714) Muḥammad b. Kaṣim concluded a treaty of peace with the people of Suwat(?) who were "Mand, pirates of the sea" (*yafṣūna fī l-baḥr*), *ibid.*, p. 440; the name of this place recalls Surāṣṭra = Kāthiawār. In the reign of al-Ma'mūn (218—227), 'Amrūn b. Mūsā attacked the Mand, of whom he slew 3,000 and built a dyke (canal?) of the Mand (*ṣāḥ al-Mand*) probably to disturb their irrigation. Then with the Zutt whom he had conquered 'Amrūn resumed the campaign against the Mand; a canal (*nahr*) was dug from the sea and the lagoon (*ḥafṣa*) of the Mand inundated with salt-water (*ibid.*, p. 445). In the same period Muḥammad b. Faḍl, commander of the fort of Sandān (Dāmān to the south of Sūrat?; cf. Elliot, i. 402), undertook a naval expedition against the Mand with a fleet of 70 ships (*ibid.*, p. 446).

Of the geographers, Ibn Khurdādhbih (p. 56, 62) is the first to mention the Maid(?) who were four days' journey from the Indus (to the east) and who were robbers. Mas'ūdi (*Musūdī*, i. 378), who visited India after the year 300 says that the country of Maṣūra is continually at war with the Mand of Sind and other peoples; cf. also Mas'ūdi, *Tawḥīd*, p. 55; Istakhrī, p. 176 (= Ibn Hawkal, p. 231) mentions the Budha and the Mand among the infidel peoples of Sind. The latter lived on the banks of the Indus (*ḥanfū al-Māḥrūn*) from Multān to the sea, and occupied

pasturages in the desert which stretched between the Indus and Kāmūhal. According to Idriṣī (548 = 1154), transl. Jaubert, i. 163, the Mand dwelt on the borders of the desert of Sind. They pastured their flocks up to the borders of Māmāhal (Kāmūhal?). They were numerous and owned many horses and camels; their raids extended as far as Dūr (read Rūr; cf. IULI) and sometimes even to Makrān. This last detail is curious for it indicates an extension of the Mand towards Persia, but the text is not certain: perhaps we should read Multān. After this the name Mand disappears from Muslim literature.

The town of "Kāmūhal", the site of which is important to fix the limit of the habitations of the Mand, is sometimes located in Hind (Istakhrī, p. 176), sometimes between Sind and Hind (Idriṣī). The form of the name is uncertain (Fāmāhal, Māmāhal, Amāhal). Elliot, i. 363, identified it with Anahwāra; cf. al-Bīrūnī, p. 100. This last town (Anahwāra, Nahrwāra, founded in 746 A.D.) is identical with the modern Pātan (on the Saraswati in northern Baroda; cf. *Imp. Gazette of India*, 1908, vol. xx; Cunningham, *op. cit.*, p. 290, places "Māmāhal" at Umārkot). In any case Kāmūhal must mark the limit of the pasturages of the Mand to the S.E. of al-Manṣūra (= Haidarābād, on the Indus; cf. Elliot, i. 370).

Among the Muslim sources a special place is occupied by the *Muḥṣil al-Tawārīkh*, written in Persian in 520 (1126). This work gives extracts from a book which was composed first in an Indian language, then translated into Arabic by Abū Ṣāliḥ b. Shu'ayb b. Djamī (in 417 = 1028) and finally translated from Arabic into Persian by Abū 'l-Ḥasan 'Alī b. Muḥammad al-Halabī, librarian in Durgājan. This source which is a very inaccurate résumé of the *Mahabharata*, begins with a chapter on the "Maid and the Zutt, two peoples in the land of Sind, descendants of Cham (Hām), son of Noah. The Maid had conquered the Zutt, who withdrew to the banks of the river Pān (or Bahr?) and from there attacked the Maid by water. Finally tired of fighting, the two peoples agreed to approach king Dabūṣṣān b. Dahrān (Duryodhana, son of Dhrtaraṣṭra) to ask him to appoint a king over them. Dabūṣṣān sent them his sister Dūsal (Droṣālā), married to Bājdrī (Jayadratha) who became a powerful king. At the request of Dūsal, Dabūṣṣān sent 30,000 Brahmins to people Sind. One part of the country was given to the Zutt, who were given as a ruler Bājdrī (Vudhishthira, eldest son of Dhrtaraṣṭra). The Maid (Maidiyan) also were given a special area; cf. Reinaud, *Fragmente arabis et persanis relatifs à l'Inde*, 1845, p. 2—3, 25—27.

Here we have an attempt to connect the history of the Maid and Zutt with Indian tradition by quoting a passage in the *Mahabharata* which says that Droṣālā was given in marriage to Jayadratha, "king of the lands watered by the Indus" (transl. Fauche, Paris 1863, i. 299, *śloka* 2742). Indian tradition however contains nothing definite of value about the Mand. In the *Śikṣa-Samhitā*, transl. Kern, *J.R.A.S.*, 1871, p. 81—86 which is one of the sources for the enumeration of the peoples of India in al-Bīrūnī (ed. Sachau, p. 150—157, transl. i. 299—303), we find a Māṣṣarya people (located in the centre, north or northwest of India). The derivation of the Arabic Mand from some such name may be suspected (cf. the name of the

modern town on the coast of Kāthiāwar; Māndvi). On the other hand in Central India alongside of the Mapāṣya the Medha are mentioned (al-Bīrūnī: *Maitha*, the final a being only indicated by means of a *fatḥa*).

The question of the Maid/Mand has been discussed by Elliot and A. Cunningham; the former (*Hist. of India* [1867], i. 319—331) says that the Meda still exist on the borders of Sind and Jūdhpūr, as well as to the west in the little harbours of Makrān (the clans of Garbur, Hormāit, Ḥallār-zā', Celmar-zā'). The name *Med has even undergone a phonetic change to Mer (which we find in the mountains of Arāwālī and in Kāthiāwar). Elliot also thinks it possible that the Meda or one of their branches bore the name Mand of which traces can be found in place-names (Mand-ar, Mand-hro, etc.). Cunningham in his *Report 1863—1864* connected the Zup and the *Mayd or Mand" with the Iatli and Masdrueni whom Pliny (*Nat. Hist.*, vi. ch. xviii.) mentions near the Oxus and calls the "Med or Mer" the first Indo-Scythic invaders of the Panjāb. In *The Ancient Geography of India*, 1871, p. 290—294, Cunningham finds a variant of the name Mand in the name of the town *Mavayāpa* of the *Periplus mar. Erythr.* (cf. Ptolemy, viii. § 63: *Mavayāpa* to the east of Indo-Scythia), which would be "the town of the Scythians, Mān" = Mānḥābari (Mandjābari) of the Arabs = Thatha, etc.

The question of the Mand evidently deserves a new special study. Was there only one, or two peoples *Maid and *Mand? The statements of the Muslim authors seem to refer to a single people. The toponymy of the land south of the Indus reveals the presence of an old element *Mand*; cf. Ptolemy, vii. § 7: Mandagana. When its origins have been studied, it will be interesting to compare its possible connection with the oldest name of the Aryans, *Manda*, found in the cuneiform inscriptions of the third millennium B.C. according to E. Forrer, *Die Inschriften und Sprachen des Hatti-Reiches*, Z.D.M.G., lxxvii, 1922, p. 247. According to E. Meyer, *Die Völkertämme Kleinasiens*, *Sind. A. W. Berlin*, 1925, p. 244—261 (cf. do., *Gesch. d. Altertums*, vol. ii, sect. i., p. 35, note 3), the name *Manda" meant the Scythians who in the seventh century B.C. had invaded nearer Asia and was sometimes transferred to the Medes alongside of whom the Scythians were settled. A diametrically opposite process would be to compare *Mand with the name of the Muṇḍa language (of the Mon-Khmer family; cf. in this connection: Przyluski, *Un ancien peuple du Punjab, Les Udumbara*, J.A., 1920, No. 1, p. 53, where a theory is advanced according to which, before the arrival of the Indo-Aryans the valley of the Indus was peopled by "Austro-Asiatics" from the Himalayan zone to the sea. The influence of the Austro-Asiatic substratum, i.e. languages of the Muṇḍa type, would also explain the preservation in Sanskrit of the aspirated sonants.

(V. MINORSKY)

MĀND (Münd, Mund), the longest river in Fārs (*Nuzhat al-Kulūb*: 50 farsakhs; E. C. Ross: over 300 miles in length).

The name. As a rule in Persia, sections of a river are called after the districts through which they flow. Mānd is the name of the last stretch near its mouth. The name seems to appear for the first time in the *Fārs-nāma* (before 310 = 1116) but only in the composite Māndištān (cf. below).

The old name of the river is usually transcribed in Arabic characters Sakkān (Iṣṭakhrī, p. 120; Ibn Hawkal, p. 191; Idriṣi, tr. Janbert, i. 401) but the orthography varies: *Thakān*, *Fārs-nāma*, G.M.S., p. 152; *Nuzhat al-Kulūb*, p. 134; *Zakān* or *Zakkān*, *Nuzhat al-Kulūb*, p. 217; Sittāgan, *Ḍiḥān-namā*, p. 247; cf. also *Ṣaḥkān* in Ḥasan Fāsā'i.

The identification of the Sakkān with the *Yaraxēs* mentioned in the *Periplus* of Nearchus (Arrian, *Indica*, xxxviii. 8) is generally recognised. The identity of Sitakos with the Sittogannus (Sittogannos) mentioned by Pliny, *Nat. Hist.*, vi. 26 is also usually admitted (Weinbach 1927), but Herzfeld (1907) relying on the existence of another river, the *Shādkhān* (= Sittogannus?), has suggested doubts about the identification of the Sitakos with the Sittogannus. Now, according to Iṣṭakhrī, p. 119, the *Shādkhān* flows into the Persian Gulf at *Duḥl al-Dastakān* (north of Bāshir). This *Shādkhān* must be identified with the river *Shāpūr*. The *Fārs-nāma*, ed. Le Strange, p. 163, mentions *Rūdāl-i Sittādjin* ("the banks of the S.") as a station on the road from *Shīrāz* to *Tawwāḍj*. From this fact and especially from the name, Sittādjin seems to be applied to the left bank tributary of the *Shāpūr*. Pliny, who follows Onesicritus, adds that by the Sittogannus one reaches Pasargades in 7 days (*quo Pasargades septime die navigatur*). Whatever be the identity of the Sittogannus, the exaggeration in this statement is evident (especially in the direction of the sea to Pasargades) and the waters of Pasargades (Mushad-i Murghāb) do not flow into the Persian Gulf. But there is nothing to prove the absolute impossibility of using the Sakkān as a subsidiary means of transport in the season of floods (the winter). According to Arrian, Nearchus found at the mouth of the Sitakos large quantities of corn which Alexander had brought there for the army. Iṣṭakhrī, p. 99 places the Sakkān among the rivers of Fārs which are navigable at need (*al-anḥār al-kibār allatī taḥmilū al-sufūna idhā uffriyat fī-ḥā*).

Another question is the phonetical identity of the names Sitakos (Sittogannus?) and Sakkān. According to C. F. Andrus, *Yaraxēs* is a nominative restored from a supposed genitive **Yaraxēs* (Sittakān); Sittogannus is a mistake for Sittogannus; lastly the peculiarity of the Arabic script could explain the change of Sittakān to Sakkān. Here we may add that Ḥasan Fāsā'i gives one of the stretches of the river the strangely written form *Ṣaḥkān* (< **Stkān*?). Iṣṭakhrī however derives the name of the river from that of the village of *Sakk* (*Nuzhat al-Kulūb*: *Zakān*) in the district of *Kazm* considerably below the *Ṣaḥkān* stretch of the river.

To sum up the identification of the Sitakos with the Sittogannus does not seem sufficiently established.

The course of the river. The Sakkān (Münd) describes a great curve. At first it runs in the direction N.W.-S.E., to the northern base of the *Kuh-i Marra-yi Shikāst*, which separates it from the valley of the river *Shāpūr*. It follows this direction (c. 100 miles) to the end of *Āmān-gird* mountains around which it makes a bend and turns south (70 miles). It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (140 miles).

The Sakkān (Münd) and its tributaries drain and irrigate a considerable area. Iṣṭakhrī says that

its waters contribute the largest share to the fertility of Fārs (*akḥarā 'imrātin*).

The sources of the river (Kān-i Zard, Chihil-šāhna and Surkh-rag) rise in the mountains of Kūh-i Nār and Kūh-i Marra-yi Shikāft in the N.W. and W. of Shirāz. These streams unite before Khān-i Zinyān in the district of Mājarm on the great Shirāz-Kāzrūn-Būshir road. Iṣṭakhrī, p. 120, places the sources of the Sakkān near the village of Shāhidfāt (?) in the district of Ruwāidjān (?). In the same author, p. 130, Khān al-Asad on the Sakkān corresponds to the modern Khān-i Zinyān. The *Fārs-nāma* (and the *Nushat al-Kulūb*) places the sources of the Sakkān near the village of Cātrūya (?). Under the Turkish name of Karaghāc, i.e. "(the river of) the elm", the combined streams flow through the districts of Mājarm (= Kūh-i Marra-yi Shikāft), Siyākh (Iṣṭakhrī, p. 120: Siyāh) and Kawār. In this last district, Rivadaneyra, iii. 81, going from Shirāz to Firūzābād crossed the river by a "substantial bridge". It is in the district of Kawār that Ḥasan Fāsā'ī gives the river the name of Šāh-kān. In Kawār (Ḥasan Fāsā'ī) there used to be the barrage of Band-i Bahman, where by a subterranean channel (*ḥanā*) part of the water was led into reservoirs (*ḥāḥ*) and then to the fields. In the bulūk of Khāfr (Iṣṭakhrī, p. 105: Khāfr), which must be distinguished from the district of the same name in the kūra of Iṣṭakhrī, the river turns south. Aucher-Eloy, who crossed the river on the road from Firūzābād to Džarrūn (Džahrūm) calls it "Tengui Tachka" (= Tang-i Kashkai?) and speaks of its "beautiful valley". Rivadaneyra continuing his journey from Firūzābād to Dārāb crossed the river by a ford between the villages of Tadvān and "Asmān-luchend" (Asmāngūd?). He also admires the pleasant and flourishing aspect of Khāfr. Below the latter, the river enters the bulūk of Šimkān where, near the village of Surkāl, it receives on its left bank, the brackish (*šūr*) river of Džahrūm, and then flows through the ravine of Kāzrūn, and waters the bulūk of Kīr-we-Kāzrūn. Abbott coming from Fāsā' crossed the river by a ford between 'Alī-ābād and Līfandjān (cf. the name of the ramm of Kurds in Fārs al-Līwāldjān, Iṣṭakhrī, p. 113), where it was 100 yards wide and the water rose up to the horse's belly. Farther down below the ford, Stack, going from Kīr to Kāriyān crossed the river, here 60 yards broad, by the bridge of 'Arūs, built in a zig-zag and in two stories ("the queerest structure in the way of a bridge"). Near the village of Nīm-dih, the river enters the bulūk of Afrar. After having wound round the foot of Kāl's-yi Shahrīyār the river receives (near the place called Čam-i Kabkāb) the name of Bān and then irrigates the bulūk of Khundj (cf. Ibn Battūta, ii. 241: Khundj-bāl = Khundj + Bāl). In the district of Dīz-gūh of the bulūk of Galla-dār the river has two tributaries: near the village of Gabrī, the Dār al-Mīzān, and two farakhs lower, that of Dīhrām. The Dār al-Mīzān comes from the left (east) side of the bulūk of Asr. The Dīhrām much more important comes from the right side after watering the historic district of Firūzābād (the ancient Gūr, capital of Anāshīr-Khurrā; cf. the details in Le Strange, p. 256). Iṣṭakhrī, p. 121 makes this tributary come from Līkūjān (of Siyāh) and water first Khūmīghān and then Gūr (in place of the name of the river Tirza, Iṣṭakhrī, p. 99, 121, one should probably read Barzā; cf. the *Fārs-nāma*, p. 151,

Nushat al-Kulūb, p. 117—118: Ḥakīm Burtāz was the sage who dried up the Lake of Gūr).

After Dīz-gūh, the river enters the district of Sanā-wa-Shumba of the bulūk of Daštī, and near the village of Bāghān receives on the right bank the river Čānt which comes from the district of Tasūdji-Daštī. Finally near the village of Dāmānū the river enters the coast district of Māndistān and receives the name of Mānd. It flows into the sea near the village of Ziyārat, halfway between the old harbours of Nadjram (to the north) and Sirāf (to the south).

Māndistān. The district forms part of the bulūk of Daštī (which is to be distinguished from Daštistān to the north of Daštī up to Būshir). Daštī (36 × 18 farakhs) is composed of 4 districts: 1. Bardistān, the part of the coast in which is the port of Daiyir. 2. Māndistān on the coast to the north of Bardistān and the two banks of the river Mānd. 3. Sanā and Shumba on the river above Māndistān. 4. Tasūdji-Daštī, a very narrow valley (11 × 1/2 farakhs), watered by the Čāntir and separating Sanā and Shumba from the bulūk Arba'a (on the lower course of the river of Firūzābād).

The whole of the bulūk belongs to the torrid zone (*garmāyir*) of Fārs. Māndistān (12 × 5 farakhs) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation. Agriculture (wheat, barley, palm-trees) is dependent on the winter floods. The district has 40 villages. The capital of the district and of the bulūk is Kākī. There used to be two rival families in Māndistān: the Šāhkh-i-yān and the Ḥādījī-yān. During the disturbances under Afghān rule (1722—1729) the Ḥādījī Kākī Djamāl exterminated the Šāhkhīyān and founded a little dynasty of hereditary governors who were able to annex the district of Bardistān through matrimonial alliances. One of his descendants, Muḥammad Khān (d. at Būshir in 1299 = 1881), was noted as a poet under the pen-name of Daštī.

Ḥasan Fāsā'ī explains the name Māndistān by a popular etymology: "the place where the water flows slowly (*mā-mūda*)". Names in -istān are common in Fārs (Lāristān, Bardistān) but even if such a formation was possible in a river-name, the element Mānd would still be a puzzle. It is curious that Ḥasan Fāsā'ī sometimes writes it Mānd (read *Mānd*) and sometimes Mund (read: *Mūnd*). It might be suggested as a pure hypothesis that there is a connection with the people MND (cf. MAND), of which there might have been a colony in Māndistān.

(V. MINORSKY)

MANDINGO, a people of the Western Sudan whose country of origin was on the Upper Niger stretching from Bamako to Siguiri inclusive. This region includes the gold-bearing district of Bouré, Bute, or Bito as well as the provinces of Lower Faleme and of Bambuk which also produce gold. At the present time the Mandingoes have spread into the mountainous country in which the two branches of the Senegal arise; they occupy Sangaran, Gangaran, Bambuk, and the valley of the Gambia to the South while to the North they extend as far as the Western Sahara. In the 13th century, they colonised a part of the modern Mauretania and, according to the Arab authors of this period, who mention them under the name of *Gangara* (sing. *Gangari*) or *Wangara* — a word which seems to be a corruption of the name of their country of origin: Gangaran, Gwangan or Gbangan — they were to be met with in Hadda. In our time the first of these names has been kept by the Moors and the Sarakole, the second by the Songhay, the Pul of Massina and the Hausa.

The country of these natives is called according to the different dialects: Manding, Mandi, Mami, Mandeng, Maneng, Mandé, Mane. The inhabitants are called by the names of Mandinka, Maninka, Maninga, Mandenka, Manenka or Manenga in the dialects of the Centre and of the East and Mandinko or Mandingo, in those of the North, South and West. This last form in use in the British possessions of Gambia and Sierra Leone has been adopted by the English while the French keep the form Manding or Mandingue.

The name of the country corrupted by the Pul has become in the language of these natives Mali, Malli, Malli, Meli, and that of the inhabitants has become Mallinke or Malinke. This last word has now come to stand for the South-Western portion of this people or for their dialect.

Ethnography. The Mandingo group constitutes a well marked ethnological group, but it does not form an organised people under one rule. Three chief divisions can be distinguished, and these can again be subdivided into many sections. They are the Malinke, the Bambara, or BaMama, and the Diula or Giula.

A Sudanese historian of the xvth century, Mahmūd Kōti, who wrote the *Tārīkh al-Fatāwā* in Arabic, distinguished in his time between the Malinke and the Wangara, regarding the former as warriors and the latter as merchants and traders. The Malinke are the least advanced of the Mandingoes from the social point of view, many of them remaining faithful to the matriarchal system and are still cultivators of the soil, hunters and gold-diggers.

An attempt has been made to derive their name

from that of the hippopotamus: *mali* or *muri*, and thus "malinka" would signify the "people of the hippopotamus!" This explanation is erroneous, the suffix "ka", signifying the nationality, can only be joined to the name of a country or of a tribe and never to that of an animal. It is possible however, that the name of the country which was the cradle of their race, could come from *ma*, mother, and *deng* or *ding*, child; this word then would signify "child of the mother", in allusion to the descent by the female line which is customary amongst them.

The Bambara inhabit the valleys of the Niger and of the Bani as far as Lake Diebo, they are numerous in the Sahel. They are more advanced agriculturists than the Malinke and they recognise descent by the male line. An attempt has been wrongly made to derive their name from that of the crocodile: *bamā* or *bama*. Some authors, on the other hand, have held that their name signifies "refusal to obey a master" (*lan*: refusal, *ma*: master, *na*: towards). This explanation, although it could be accepted linguistically, must, according to M. Delafosse, be rejected. He prefers that of "renunciation of the mother" (*lan*: refusal or renunciation; *ka* or *ma*: mother; *na* or *ra*: to).

The Diula or Giula inhabiting some fairly important centres are chiefly merchants and traders. They are met with in small colonies, settled amongst the indigenous peoples to the East of Bani as far as the Upper Volta and the Gold Coast. Having been converted at an early date to Muhammadanism, they have remained fervent Muslims and there are amongst them quite a large number of learned men.

Their name is said to signify "from the foundation, from the stock" (*diu*). According to their own account, it was given to them because their ancestors belonged to families of noble birth.

At the basis of Mandingo society is an extended family (*gba* or *gwa*) comprising all the living descendants of an ancestor, sufficiently near in place and in time for all the ties of relationship not to have been forgotten. In general this extended family covers four generations: the patriarch, his brothers and cousins, their children, the children and grand-children of the latter, and an equal number of generations of slaves. Persons of the same generation placed on the same level are called by the same name: father, brother, son, without distinguishing the fathers from the uncles, the brothers from the cousins, the sons from the nephews, all are collectively sharers in the family property, which they have helped to acquire and to augment by their labours. This family property consists of crops, of animals, arms, surplus utensils and clothing, as well as treasure in gold, silver or cowries gathered together by the founder of the family. It is administered by the patriarch who cannot dispose of it without the consent of the majority of the other members. Each of those, man or woman, possesses in addition a private store of which he has the free use.

The chief exercises a political, domestic and religious authority. In this capacity he is charged with making sacrifices and offerings to their ancestors and to the patron deities of the family. A number of families observing the same religious prohibitions and bearing the same name (*diama*) form a clan; the members, who form a clan are of the same origin, but so far removed by birth

that it is impossible to trace their descent back to a common origin.

The chief Mandingo clans are those of Keyta, Kante, Tarnore, the Dembele, the Konate, the Kulniali, the Kuruma, the Diara, the Samake, the Mareko, the Kamara, the Bakayoko etc. None of them is either organised or under a single ruler.

There exists between persons of different clans a particular tie called *enyakuya*; without doubt the remains of an ancient phratry which obliges them to assist one another and to exchange presents on certain occasions; the same persons can also quarrel among themselves or fight with one another without involving any serious consequences.

The organisation which is lacking in the clan and in the tribe shows itself on the contrary in each inhabited centre in the form of the hierarchical brotherhoods, which combine all the young people and the men of the same age who have together submitted to circumcision and to the tests of successive initiation. The first is that of *ntoma*, grouping together the boys from the ages of 7 to 14 years, then there come the so-called secret societies, such as those of the *komu* or of the *nama* which consist of politico-religious groups within the village.

The village or *dugu* is the administrative unit, the union of a number of villages and the lands which surround it forming a district or *kafo*; a number of districts constitute a province or a kingdom, *diamana*, at the head of which there was in former times the *Manu* or *Mansa*. The latter was surrounded by different ministers and assisted by a treasurer.

Although Muhammadanism has long penetrated amongst the noble families of the Mandingo, the greater portion of the population has remained faithful to the worship of natural forces and of protecting deities, *dugu la siri*, *guena* and *belli*. The great religious festivals are the agrarian feasts and the most important correspond to the periods of seed-time and harvest.

The Language. The Mandingoes properly speaking are in number about 2,800,000 of whom 77,000 are in Senegal; 1,000,000 in French Soudan; 200,000 in the Upper Volta; 2,500 in Nigeria; 290,000 on the Ivory Coast; 550,000 in French Guinea; more than 680,000 live in Gambia, Sierra Leone, Portuguese Guinea and the Republic of Liberia. In addition to these natives, whose mother tongue is Mandingo, more than 2,000,000 other people speak this idiom; for this reason it is often spoken of as a language that is still spreading.

The Mandingo belongs to the African Negro language and more especially to the group which M. Delafosse calls Nigero-Sennegalese; D. Westermann: Mandingo, and A. Drexel: Nko-Nke; it is closely allied to Senu. Foreign idioms seem to have had little influence, although it has borrowed certain abstract and religious terms from the Arabic; from Phoenician or Punic it has borrowed expressions relative to horsemanship and cotton; from Berber about a dozen words, and finally during the space of the last fifty years it has further borrowed from several European languages.

The roots are monosyllabic or dissyllabic and many of them can be traced to an ancient African Negro origin. For example: *faŋa*, the action of killing or being dead, seems to come from a root *faŋ* or *faŋ*; cf. in Senu *faŋa*; Hausa: *faŋa*; Mosai: *faŋ*; Fang: *war*; Pul: *war* (*de*); Mungu: *faŋa*;

Congo: *fuwa*; Swahili: *fa* and *wa*; Ancient Egyptian: *faŋ*. The nominal class does not exist in this language.

Mandingo uses derivative suffixes which are used to form distinct substantives used as substantives only; for example: *ka*, *nka*, or *nga*, the suffix for nationality: *Mandinka*; *la* or *ra*, the instrumental suffix: *tege*, to cut; *tege-la*, the instrument for cutting, axe. It employs also adjective suffixes; for example: *ma* or *mā* indicating the possession of the thing mentioned: *gyi*, water; *gyi-ma*, "full of water"; *ŋā* indicating on the contrary the lack of the thing expressed: *gyi n-ŋā*, "without water". Certain suffixes, joined to a simple or derived root, indicate the possession of a quality or of a state; for example: *yo-turu*, "short, little"; *turu-ya*, "shortness" and also "to shorten or to approach". Suffixes also exist, indicating determination or relationship.

The Mandingo conjugation employs prefixes denoting the perfect, the aorist, the injunctive. Certain auxiliary prefixes serve to indicate time. It has a considerable number of verbal forms, affirmative as well as negative.

This language does not possess any trace of a system of syntax of agreement; the relations between one element of a sentence and another are entirely determined by the respective position of the two elements and their grammatical function is often determined only by the place which they occupy in the sentence.

In the syntax of this language, the complement of a noun, pronoun or verb always precedes the noun, pronoun or verb in question; the adjective qualifying or determining a noun always follows this noun; the noun of number always the noun of the thing numbered; an adverb modifying a word follows it. The order of the words in the sentence is subject, prefix or auxiliary of conjugation, direct complement of the verb, verb root or derivative, indirect complement of the verb, adverb modifying the statement.

Mandingo is divided into a fairly large number of dialects revealing differences more or less marked. We distinguish the Bambara or Bamana dialects, the Diula dialects and lastly the Malinke dialects, which are themselves divided into the Malinke of the East, of the North (sometimes Khassonke), of the West and of the South.

History. The wide diffusion of this language is due to certain historical circumstances, and to the rise of the Mandingo hegemony which extended over almost all the Western Soudan from the year 1250 to 1500.

According to local tradition, the Mandingo sovereigns bore the title of *Mansa* or *Mama*; they belonged to the Keyta and married into that of the Konde or Kone. In the beginning, they owed their influence to their knowledge of sorcery and magical practices and little by little they emerged from obscurity. Ibn Khaldūn has transmitted to us the name of the first of them, Baramendana, who about the year 1050, was converted to Islam, in order to obtain, according to al-Bakri, the end of a drought, which was cruelly trying the country of Mande; thereafter he made the pilgrimage to Mecca. Native tradition has kept the name of two of the descendants of this prince, Hamana and Dyigui-Bilali. The son of the latter, Mūsā, called Allakoy, reigned from the year 1200 to 1218. Four times he made a pilgrimage to Mecca,

and he extended the power of his dynasty. On the other hand, his son Nare Fama (1218-1230) suffered a great reverse and was defeated by his neighbour, the king of Sôô, Sumanguru Kante, who annexed Mandingo in 1224 and put to death eleven out of the twelve sons of the conquered monarch. The last son, San Diata or Mari Diata (1230-1255), who was weak and delicate suddenly recovered his health and strength after touching his father's sceptre. Little by little he got together a powerful army, with the help of which he conquered a part of Futa Djalon, the country situated between the Niger and Bani, in the region of Kita and that of Beledugu. In 1235 he attacked his enemy Sumanguru Kante and defeated him at Krima, not far from the Niger. After having subdued shortly afterwards the whole of the Sôô, he advanced in 1240 as far as the celebrated city of Ghâna which he plundered. During the following years, San Diata took possession of Gangaran and of the gold-bearing district of Bambuk, without neglecting the good administration of his lands in which he encouraged agriculture and extended the cultivation of the cotton plant. Towards the year 1240 he abandoned the ancient capital of the Mandingoes, Djeriba, and transferred it to Niani, wrongly called Mali or Meili by the Arab historians. He died in 1255 in the vicinity of this town. One of his sons succeeded San Diata, whose name only is handed down to us, namely Mansa Ule or the Red King (1255-1270). After him reigned the princes Wali, Khalifa and Abu Bakari between the years 1270 and 1285 about whom we possess no information. After the death of the latter, the power passed into the hands of a slave of the Keyta called Sakura or Sabakura, who kept it from the year 1285 to 1300. Then the Keyta regained the throne and under Gan, Mamadu, and Abu Bakari they held it from 1300 to 1307. At the end of this undistinguished period, Kankan Mussa, also called Gongo Mûsa (1307-1332), the son of the last of these sovereigns, seems to have raised to its zenith the power of his dynasty. We owe to Ibn Khaldûn some details about his person and the events of his reign. He was an ascetic prince and full of piety, and he made a pilgrimage to Mecca in 1325 and on his return he brought back with him to the Sûdân, al-Mamer, a descendant of the founder of the dynasty of the Almohads, as well as the Arab poet al-Sâhili. When he was still in the Sahara, Kankan Mussa learnt that his troops had seized Gao, Tumbuktu, Walata and the kingdom of Songhoy. He decided to visit the first two of these towns, and on the advice of the strangers who accompanied him, he built in each of them a mosque and a palace, thus introducing Arab architecture into the country. When he died in 1332, his authority extended from the valley of the Bani to that of the Faleme, and from the Sahara as far as the thick forest, and he had entered into relations with the Sultân of Fes.

His son and successor Maghan (1332-1336) was not able to keep intact the kingdom bequeathed to him by his father. During the reign of this prince the Mossi pillaged Tumbuktu, and Songhoy cast off the Mandingo yoke.

On his death, Salaimân (1336-1359), the brother of Kankan Mussa, ascended the throne. According to Ibn Khaldûn, the first care of the new sovereign was to assert his authority in his possessions in

the North. He was not successful in regaining Songhoy, but he established peace and security in his kingdom, which he reorganised. The traveller Ibn Battûta, who passed through Mandingo in the year 1351-1352 furnishes us with valuable information on the country, the administration, justice and the court.

Kamba, the son of Salaimân, succeeded his father but was deposed at the end of a few months by Mari-Diata, the son of Maghan who kept his power until 1374. He died of sleeping sickness and is remembered as a cruel, debauched and extravagant prince.

His successors Mûsa II (1374-1387), Maghan II, Sandigui Maghan III, Mûsa III and Mûsa Ule II reigned until the beginning of the xvth century. From this time onwards exact information ceases, as our authority, the historian Ibn Khaldûn, died in the year 1406.

The decline of the Mandingo empire was hastened during the xvth century by the attacks of the Tuareg, the Songhoy, the Mossi and the king of Tekrur. In the year 1481 Mansa Mamadu feeling himself to be in danger, approached the Turks who were established on the coast of Africa and sought their protection. This move and others similar which followed it influenced the kings John II and John III in sending to the court of the king of the Mandingoes two ambassadors, the one in 1483, the other in 1534, but without lending any military aid.

In the year 1545 the Askia Dâ'ûd of Gao came and plundered the Mandingo capital. The Moroccans who had come from Tumbuktu some months before, joined in the year 1591 the enemies who surrounded the kingdom. The period from 1600-1670 marks the last stage of Mandingo power. But two new principalities were formed on its ruins at Segu and in Kaarta.

According to the legend, the Bambara under the guidance of two brothers, Baramangolo and Niangolo, were flying before their enemies. They were on the point of perishing under the blows of their enemies, since a river barred their route when they were saved by a miraculous fish which carried them to the opposite bank. After this miracle they took the name of "Kulu bali", that is to say the men "without boats".

In the middle of the xvth century the descendants of Baramangolo had spread into the valley of the Niger and of the Bani but they paid tribute to the inhabitants of Djenne and to the Moroccans of Tumbuktu; their capital was Segu. Biton Kulubali (1660-1710) liberated them from this tutelage. Having collected a powerful army and fortified Segu, he made war first against the sovereign of the Mandingoes, then seized the right bank of the Niger and finally Massina and even Tumbuktu. He died of tetanus after organising his kingdom and dividing it into sixty districts.

His son Denkoro (1711-1736), a cruel and debauched prince, was assassinated; 'Ali, the brother of Denkoro, only reigned a few days and was deposed by the army of the Tondion or government troops. The period 1736-1750 was troubled by internal disorders, and in the year 1750 the power passed to the family of the Diara, who kept it until 1861. At this time the conquering al-Jadili 'Omar seized Segu and put 'Ali, the last king of the dynasty, to death.

The descendants of Niangolo Kulubali are cal-

led "Massai", that is to say "royal race". At the end of the xviiith century they occupied all the province of Kaarta itself and they were the rivals of the Bambara of Segu. In the middle of the xviiith century, Massa Bakari succeeded in bringing under his authority Kaarta, Kingui, Bakuna, Gnidumo and Diapuna. One of his successors, Bessikoro, received the explorer Mungo Park at Guem in the year 1796. In the year 1854 the last sovereign of the line of the Massai, called Kandian, was reigning at Niore when al-Hajj 'Omar seized the village and executed all members of the royal family.

After these events the Mandingoes remained divided and until the year 1860 only played a modest part in history. In this year, there arose in the vicinity of Kankan, in the district of Wassulu, Samori Ture, at first the leader of a band and then the sovereign of the province of Bissandugu. This new conqueror, although he was quite illiterate, seized in a short time the whole of Wassulu and took the title of "Almami". Crossing the Niger he extended his warlike expeditions into Sankaran and advanced within 80 miles of Kita, a post recently founded by the French. The latter fought against Samori first from the years 1881 to 1886 and in the next year imposed upon him the treaty of Bissandugu, which he respected for only a few months. From 1888 to 1891 Almami attacked Tieba, the king of Sikasso, without any success; thereafter he resumed hostilities against the French, who at the end of the year 1893 occupied Wassulu. Samori then fled into the Upper Ivory Coast, which he ravaged from the year 1894 to 1897, and he destroyed Kong, Bondoukou and Buna. In front of this town, a detachment commanded by Captain Braulot was exterminated in the year 1897 by the warriors of Sarantie Mori, his son and his lieutenant. France thereupon determined to settle with Almami against whom a combined force was sent. It resulted in the capture of Samori and of his army on 29th Sept. 1898 at Guelennu on the Upper Ivory Coast. Samori was deported with his family to Gabon where he died in 1900; he was about 65 years old. Since the disarmament of his warriors, no event of importance has disturbed the peace of Mandingo.

(H. LABOURET)

MANDŪ, a fortress now in ruins, was formerly the capital of Mālwa [q.v.], and stands in 22° 21' N. and 75° 26' E. It has probably been a stronghold from time immemorial, but little is known of its history until the fortifications were erected in their present form by Dilāvar Khān Ghūrī (1392-1405), the first independent Muslim king of Mālwa, and his successors. His son, Hūshang Shāh, made it his capital, and it remained the capital of the kingdom and province of Mālwa throughout the period of Muslim rule, and has stood many sieges. Its streets ran with the blood of 19,000 Rājapūts, slain by Mahmūd II of Mālwa when he recovered his capital from his rebellious troops.

Of the ten gates of the fortress (two on the south, two on the west, one on the east, and five on the north), the Tūrūp Gate was built by Dilāvar Khān, the Djāhāngīr Gate by the emperor Djāhāngīr, and the 'Alamgīr Gate by an officer of the emperor Aurangzib in A. D. 1668. The Bhagwān Gate was built in 1517 in the reign of Mahmūd Khaldjī II, and the Songarh Gate is an old gate rebuilt early in the nineteenth century by Maina Bai, the great Rājā of Dhār. The Lawant, Rāmpol, Dīhlī, and Bhāngī Gates are old, but bear no inscriptions. The last has

its name from the legend that a sweeper was buried alive on the completion of the gateway. The Gāpt or Carriage Gate bears no inscription and its age is unknown.

The principal buildings in the fortress are the mosques of Dilāvar Khān (1405), Malik Muḥṣib (1432), and Hūshang (1454), the last being one of the finest specimens of Pathān architecture in India; the Hindola Mahall with the Nahār Dīharokha, the Tawell and Dīhāz Mahalls, the palaces of Nāṣir al-Dīn (1509) and Cīshī Khān, the Campa Bāḥ or Well, Rūpmatī's pavilion, the tombs of Hūshang Shāh and Daryā Khān, the Hāthī-khāna (actually a tomb), and the Tower of Victory of Maḥmūd Khāldī. These buildings are now carefully conserved by the Archaeological Department of the Government of India.

MANDŪ. [See SHARF A.]

MANF, or, according to Abu 'l-Fida' (p. 116), Minf, the ancient Egyptian capital Memphis, on the left bank of the Nile, not far from Cairo, is well known in Arabic literature as a very old town. The geographers cite, among the *āḥir*'s of Egypt, that of Manf and Wasim (cf. e.g. Ibn Khordādhbih, p. 81), but the town was already ruined in Muḥammadan times (al-Ya'qūbī, *Kit. al-Buldān*, p. 331) — by 'Amr b. al-'As, according to Abu 'l-Fida' (*loc. cit.*) — and was no more than a village in the time of Ibn Hawkal (p. 106).

Most Arab writers speak of the ancient traditions connected with Manf, often together with 'Ain Shams [q.v.]. It is said to have been the first town inhabited in Egypt after the Flood, founded by Bāṣar b. Hām b. Nūh (Ibn 'Abd al-Hakam, *Futūḥ Miṣr*, ed. Torrey, p. 9) or Miṣrayim b. Bāṣar (al-Maḥrizī, ed. Wiet, i. 73); the name is said to mean thirty (*maṣā*, *sc.* the Coptic *mas*), because the first inhabitants were thirty in number. Further it is said to have been the town, where the Qur'anic stories of Mūsā and Yūsuf took place (Yāqūt, iv. 667), namely the Madinat Firawn, which possessed 70 gates and from which flowed the four great rivers of the earth (Ibn Khordādhbih, p. 81). The temple (*barhi*) of Manf was built under the queen Dālūka by herself or by the sorceress called *al-afūka*, and had magical properties. Manf had also a tradition as a Christian town; the ruins of the monastery Dair Hirmā are still to be seen, and the Arab authors know of some churches in the place (e.g. Kantat al-Uṣṣaf; cf. Yāqūt, *loc. cit.*), which reminded them of the ancient enormous prosperity of the town.

(J. H. KRAMERS)

MANGIR, the general name for copper coin under the early Ottomans, corresponding to *altun* (gold) and *akçe* (silver). As a particular denomination it was a copper coin struck in the reign of Sulaimān II during a period of financial stress. In 1099 (1687) it was resolved to issue

temporarily a token coinage in copper to be withdrawn from currency when the finances of the state improved. 800 mīngirs were struck to the oke of copper and put into currency as half aspers. When the situation did not improve, the value was raised to one asper; the remedy proved worse than the disease for very soon the country was flooded with copper coins and gold and silver driven out of circulation.

Mangir is also the name given to imitations of sequins in brass or other cheap metal worn as ornaments.

Bibliography: M. Belin, *Essai sur l'Histoire économique de la Turquie*, in *J. A.*, ser. vi., vols. 3—5 (1864—1865); A. Djewad Bey, *État Militaire Ottoman*, transl. by Georges Macrides, Constantinople—Paris 1882, p. 106 *seq.* (J. ALLAN)

MANGISHLAK, a mountainous peninsula on the eastern shores of the Caspian Sea, first mentioned under the Persian name Siyāh-Kōh ('Black Mountain'; cf. *B. G. A.*, i. 218); the same name was given to the hills west of the Sea of Aral (*op. cit.*, vii. 92; see *XMD-DARYA*). According to Iṣṭakhri (*op. cit.*, i. 219), the peninsula used to be uninhabited; it was only shortly before his time (or that of his predecessor al-Balkhī) that Turks, who had quarrelled with the Ghuzz [q.v.], i.e. with their own kin, had come there and found springs and pastures for their flocks. Ships which were wrecked on the cliffs of the peninsula used to be plundered by these Turks. Muḥaddasī (or Maḥalī) mentions the mountain of Bīnqishlah as marking the frontier between the land of the Khazars and Djurdjān [q.v.] (cf. *B. G. A.*, iii. 355).

In the form Mankishlah (vocalised Mankashlah by Yāqūt) the name first appears in documents of the viii (xiith) century (W. Barthold, *Turkistan*, i. 34, 44 and 79) and in Yāqūt (iv. 670). According to Yāqūt, this name was borne by a strong fortress near the sea between Khwārizm [q.v.], Saksin [q.v.] and the land of the Rūa. The peninsula was evidently no longer, as it had once been, a place held in terror not only for its natural conditions but also for its inhabitants; via Mangishlak there ran, as later almost into modern times, an important trade route from the Volga territory to Khwārizm; goods were unloaded in the bay near Cape Tūb-Karagun and taken to Khwārizm by caravans. Before its conquest between 1127—1128 and 1138 by the Khwārizmshah Atsız [q.v.], Mangishlak was a separate and practically independent principality on the frontier of the Muslim world (it was of course regarded as within the empire of the Saljuqs; q.v.). As the verse quoted shows, the conquest resulted in the destruction of the town. No permanent settlement is again mentioned on the peninsula until its occupation by the Russians, in spite of its importance for commerce.

For the last few centuries (perhaps even earlier) the peninsula has been inhabited by Turkomans. Towards the beginning of the xth (xvith) century these were the Salur [q.v.]; on the coast lived the 'inner Salur' (*ijā Salur*), on the road from the 'inner Salur' to the coast (about 500 miles; it took 20 days to traverse) lived the outer (*ṭāḥir*) Salur (Zap., xv. 208). Also 'l-Ghazī (ed. Desmoulin, p. 267) gives the Ersari for the Salur; towards the end of this century, this tribe was almost completely driven out by the Mangi [q.v.] i.e. by the Nogai; later we find the Kalmucks [q.v.]

conquering here. On their rule in Mangishlak, cf. Abu'l-Ghāṣī, p. 316; the name of the peninsula is written by Abu'l-Ghāṣī (see Index), Mānīshlak, Mangishlak and Mangishlak. In addition to the regular traffic by sea with Astrakhan [q. v.], frequently mentioned in Russian sources, there was also a connection with Shirvan mentioned by Abu'l-Ghāṣī (p. 257 and 273) and other sources. Three Turkoman tribes, the Čawdur, the Igdir and the Somađji, were deported by the Kalmucks under Ayska (1670—1724), according to others as early as the reign of Pansuk-Mončak (1667—70) from Mangishlak to the northern part of the Caucasus, but a section of the Čawdur continued to dwell in Mangishlak. When, under Russian rule, the land of the Turkomans was organised as the "Trans-Caspian territory" (*Zakavkazskaya oblast'*), the "district of Mangishlak" was included in it; the capital was the little settlement founded in 1839 as "Novo-Petrovskoye-ukrepleniye" and known from 1859 as "Fort Aleksandrovsk" (now: Fort Urickogo). In the 19th century the Turkomans were gradually driven out of Mangishlak by the Karak [cf. KIKRIZ]; therefore after the Revolution the district of Mangishlak was separated from the land of the Turkomans and now belongs to the republic of Karakistān.

After the western shore of the Caspian Sea had passed under Russian rule, it was recognised that the Gulf of Balkhān [q. v.] formed a better gateway to Central Asia than Mangishlak. In 1819 the ambassador Murawiew proposed to the Khān of Khiva, Muḥammad Rāḥim, that the caravan route from the Caspian Sea to Khiva should no longer start from Mangishlak but from the port of Krasnowodsk on the Gulf of Balkhān. The Khān replied: "It is true, the road via Mangishlak is much longer than the road via Krasnowodsk but the people in Mangishlak are my subjects, whereas the Yomut as far as Astrakhan belong for the most part to the Kādjar" [q. v.] (N. Murawiew, *Puteshestviye v Turkmenskiy i Khivan, Moscow 1822*, p. 134). It was only after Russian rule was firmly established in Central Asia that this question could be settled in favour of the Gulf of Balkhān. Since Krasnowodsk became the starting point for the Central Asiatic railway, Mangishlak has lost any importance it had in favour of the Gulf of Balkhān. According to the census of 1897, the population of Krasnowodsk was 6,322 and of Fort Aleksandrovsk only 895.

Bibliography: given in the article.

Descriptions of the district of Mangishlak will be found in all works on Turkestan, e.g. V. Masal'skiy, *Turkestanskii Krai*, St. Petersburg 1913, p. 621 sq. (W. BARTHOLO)

MANGIT, the name of a tribe and a people. In the time of Čingiz-Khān [q. v.] the word Mangit appears as the name of a Mongol people in Rashid al-Din (*Trudi Vost. Otd. Arkh. Otd.*, vii. 205 sq.: Mangit). From the Mongol period onwards the name Mangit (written Mangkit, Maughit, Mānghit, Manhit, Maughit and Maughit) like many other Mongol names (Naiman, Kungrat etc.) appears as the tribal name of Turkish or Turkicised peoples. According to the *Zafar-nāma* (Ind. ed., i. 277) the Mangit were a tribe (*timār*) of the Golden Horde, which produced the celebrated Emir İdegu (in Russian sources Vedigei), the contemporary and opponent of Timur and Tokhtamish. The people called Nogai in Rus-

sian sources is always called Mangit by Abu'l-Ghāṣī (see Index) and other Oriental sources of the same period. Now Nogai alone is used as the name of the people. The statement that the Mangit tribe makes up about 90% of them wants more careful investigation (M. Tinfahpaev, *Materiali k istorii Kirgiz-Kasakskogo naroda*, Tashkent 1925, p. 28); the name Mangit is said to be also found as the name of a family among the Yakuts. In the *Baḡr al-Asrār* of Maḥmūd b. Walī (MS. Ind. Off., No. 575, f. 35^a) the tribe (*atār*) of the Mangit and the tribe (*it'*) of the Kungrat are mentioned as the two most important branches of the Özbeks. The Mangit tribe was of some political importance for the political life of Bukhārā and Khwārezm. In the fighting with other tribes the Mangits of Bukhārā were supported by their brethren in Khiva and vice versa but it was only in Bukhārā that they became supreme. On the dynasty of the Mangit see the article BUKHĀRĀ (there written Manhit); the dynasty was overthrown in the revolution of 1920. In Khiva the Mangits combined with the Nukis to form a double tribe (the other double tribes were the Uigur-Naiman, Kitai-Kipčak and Kiyat-Kungrat).

The place called Mangit on modern maps was only founded in Radjab 1215 (Nov.-Dec. 1800) by members of the tribe who had been driven by the Turkoman Yomut to the east (History of Khiva, MS. of the Asiatic Museum, p. 590 supra, f. 75^b).

At the present day the Mangits number 99,200 in Bukhārā (of whom 44,000 are in Bukhārā itself and 31,000 in Karak; q. v.) and only 10,300 in Khiva.

MANGU. [see MÖNGKE.]

MANGU-TIMUR, so on his coins, Mongol Möngke-Timur, as in the article NERKE, [q. v.], written Māngka (e.g. Rashid al-Din, ed. Blochet, p. 109), in the Russian annals Mengutemer, Khān of the Golden Horde (1266—1280), grandson of the Khān Bātū [q. v.], son of Tūgūlān. According to Egyptian sources, the death of his predecessor Berke took place in 665 (Oct. 1266—Sept. 1267); in Šafar 666 (Oct.-Nov. 1267) an embassy left Cairo which was to bring the new Khān an expression of sympathy and congratulations from Salḡin Baidars I [q. v.]. In 667 (Sept. 1268—Aug. 1269) an embassy from the Khān arrived in Egypt. The exchange of embassies was maintained throughout the whole of the Khān's reign. When in 670 (1271—1272) an embassy on the way to Egypt was captured by a Frankish ship from Marseilles, the ambassadors and all their goods had to be released on the Salḡin's demand. When in 680 (April 1281—1282) an Egyptian embassy left for the Golden Horde nothing was yet known of the death of the Khān. Only later did they learn that he was no more, having died in Rabi' I 679 in the district of Aḡlukīya (apparently nowhere else mentioned);

his death is said to have been caused by the unskillful removal of a boil on the neck. In Rashid al-Din (ed. Blochet, p. 142) the date of Mangū-Timur's death is given as 681 (Apr. 1282–March 1285); there are coins of his brother and successor Tughlugh-Mangū struck in this year.

The Egyptian government tried to induce the Khān to resume the war on the Persian Mongols begun by his predecessor Berke; but soon after his accession Mangū-Timur concluded peace with Abāka and never again attacked Persia. Rashid al-Din by an oversight attributes to Mangū-Timur the campaign against Arghūn of the year 689 = 1290 (in Blochet's edition in p. 140, we have not for this); d'Osson (*Hist. des Mongols*, iv. 42) and Barthold (article ARGHUN) have been misled by this.

On Mangū-Timur's participation in events in Central Asia down to the Kurultai of 667 (1269) (sending an army of 30,000 men under Berkedjār, a brother of Batu and Berke) see the article BUKAR-KHĀN. Accounts of this are found in the still unprinted parts of the *Djūmī' al-Tawārīkh* of Rashid al-Din (reign of Abāka, cf. d'Osson, *op. cit.*, iii. 428). The alliance between Mangū-Timur and Kaidū, whom he was then supporting, is also mentioned later; when in 1277 two sons of the emperor Kubilai Khān were taken prisoners in the war with Kaidū, the latter had the princes sent to the court of Mangū-Timur, from which they were later sent back to their father (Rashid al-Din, ed. Blochet, p. 8; d'Osson, *op. cit.*, ii. 452 *sq.*).

Russian rulers appealed to Mangū-Timur for support as they had done to his predecessors and successors. Lev of Galicia received assistance from him against the Lithuanians but the Tatar auxiliaries proved a great burden not only to his enemies but also to their protégés. In 1277, a Russian army was fighting in the Caucasus against the Alans under the Khān's orders. From Mangū-Timur dates the earliest extant edict of a Khān of the Golden Horde on the privileges of the Greek orthodox clergy; it is dated in the year of the Hare (probably 1267). The bishop of Sarai, Theognostos, was sent by Mangū-Timur as an ambassador to Constantinople.

In contrast to the last two decades of the thirteenth century the Golden Horde under Mangū-Timur was a great power, free from internal troubles. Coins were still struck only in the old commercial city of Bulghār (q.v.) but, unlike those of his predecessors, in his own name not in that of the Great Khān. On his coins, the seal of the Golden Horde appears for the first time.

MĀNĪ. [See ZINDUK.]

MANI is the name given in Ottoman Turkish to popular songs in quatrains. The name is a corruption of the Arabic word *ma'nā*, meaning "thought, idea", and is by no means found throughout the whole area where Ottoman Turkish is spoken. In many districts isolated quatrains, like songs of several verses, are simply called *türkü*. Songs in quatrains are known among almost all Turkish peoples; they must therefore be considered

to have been known to the original Turkish stock.

The rhythm of the mani is, as in Turkish popular poetry generally, sometimes purely syllabic (a definite number of syllables without a fixed caesura), and sometimes depends on the accented syllables (with a fixed caesura and therefore with the order of weak and strong syllables to some degree fixed). The lines show as a rule 7 syllables (4-3, 3-4, rarely 2-3-2). Quatrains with all four lines alike are rare, the third line usually differs from the others (3-4, 3-4, 4-3, 3-4, or 4-3, 4-3, 3-4, 4-3 and so on). The original arrangement of the rhyme in Turkish quatrains is *abab* (two lines rhyming) which clearly shows the quatrain was originally a distich. In the Ottoman mani we have a development of this form also, with three rhyming lines (*aaa*). The rhyme however which connects the second and fourth lines is often fatter and more distinct than that which connects the first and second lines. Alliteration, which is highly developed among many Turks, especially in the north, is only found sporadically in the mani; it is found both as line alliteration (similarity in the initial letters of the words of a line, e.g. *kara koyun karmarmak, ötmele benime hal, etc.*) and as verse alliteration (similarity of the initial letters of the lines in a verse, e.g. *varı gülüm yecinde, senin insaf nerinde, sul binde yok acı diyim, sana gönül verende*).

As regards matter, the majority of the mani fall into two distinct parts, an introduction dealing with nature, and a concluding part of a personal character. Originally the two parts must have been very closely connected. It would however be a mistake to find such a connection in all the manis, because the singers very often only improvise new conclusions to ready made introductions taken from older poems, without troubling in the least about the train of thought. The great majority of mani are tinged with eroticism, but we also find satirical ones, also soldiers' and robbers' songs in the form of quatrains. The quatrains composed on the Anatolian brigand Çakırdı have been much admired by European scholars. Isolated, originally independent mani are now often strung together to form ballads of some length. It would therefore be wrong to regard mani and *türkü* as two fundamentally different classes of songs.

The number of mani current among the people is enormous. They are sung at all kinds of festivals and ceremonies, and by people over their work in the house in the long winter nights. On *Hidrellez*, St. George's Day (April 23), they are used as oracles by young girls.

Very popular also among the Ottoman Turks are the so-called *şinasi mani*: punning mani. These are quatrains, the rhymes of which are identical syllables but have each a different meaning.

AL-MĀNĪ, one of Allāh's names. [See ALLĀH.]

MANISA, MAGNĒSIA (> MĀ'nisa), in Arabic Magnisiya, capital of the district of Şārīkhān in western Anatolia.

Magnisia is two hours' journey distant on the south from the river Gediz or Gedüs (the ancient Hermos; on its course, cf. Tchihatchef, *Asie Mineure*, II. [1866], p. 232) on the northern slope of Mount Magnisia-daghl or Yamanlar (the ancient Sipylon) which separates it from Smyrna (the distance between the two towns by the Sabuncı-beli pass is only 20 miles; by railway 40 miles).

In ancient times the town ("Magnesia ad Sipylum") was mainly noted for the victory won in its vicinity by the two Scipios over Antiochus the Great of Syria (190 B.C.). The town was then incorporated in the Roman empire. It flourished until the fifth century as its coins show. Magnesia is also often mentioned in Byzantine history: after the taking of Constantinople by the Crusaders in 1204 John Ducas retired to Magnesia where he held out till 1255.

The Turkoman chief Şārī-Khān [q. v.] who had formed a principality for himself on the ruins of the Seldjūk kingdom of Konya, took Magnesia in 1313 and the town was the capital of his dynasty for 78 years. It was in the reign of Şārī-Khān that Ibn Baṭṭūṭa (II. 312) visited the town where he stayed in a *sawwa* of the brotherhood of the *ṣūfīyān*. The town was large and beautiful, rich in gardens and with a plentiful supply of water. On the buildings erected by the Şārī-Khān dynasty see the article on them.

After the battle of Angora (805 A.H.) Timūr ordered his grandson Sulṭān Muḥammad to lay waste (*ishkhan*) the district between Brussa and Magnesia and to take up his winter quarters in the latter town. The author of the *Zafar-nāma*, II. 466—467, 480, calls it "Maghul-siyāh in the Şārīh-eli" [cf. Urudj-beg, p. 32: Şārī-khān] and comments on the excellence and abundance of its water-supply and the pleasantness of its climate. According to Turkish sources (cf. Urudj, *Tamr-i-ḥāṭi Ati 'Othmān*, ed. Bahinger, p. 34—35; *Ashiy-pāshā*, p. 70; Münedjīm-baḥrī, III. 33), Timūr restored the fiefs of Anatolia to their old holders (*beyli-beyine*) but by 813 (1410) Sulṭān Muḥammad I had retaken the region of Şārī-khān [q. v.].

Magnisia became the residence (*Djikhān-nūmā*, p. 635: *dār al-amān*) of the Ottoman princes but

for a time (1405—1425) its district was within the sphere of influence of the rebel Dīnāid (son of the Ottoman governor of al-Aydīn; von Hammer, *op. cit.*, p. 271—327). Murād II having abdicated the throne in 1444 chose Magnisia as his place of retirement. The Hungarian offensive drew him out of it but after the victory of Warna (Nov. 10, 1444) he returned to Magnesia (v. Hammer, *G.O.R.*, I. 351, 357) where the remains of his palace and gardens can still be seen. Murād III (1574—1595) and his wife also contributed to beautifying the town; cf. *Djikhān-nūmā*, p. 635. Chandler, *Travels in Asia Minor*, Oxford 1775, p. 207—209 and 266—268 speaks of the palace and pretty mausoleum of Murād (III?) and of his foundations (*tekke* = college of arishies, lunatic asylums etc.).

In 1633 in the reign of Murād IV, the governor of Kārasi [q. v.] İlyās Pāshā rebelled and laid siege to Magnesia which was taken and plundered for three days. İlyās was taken prisoner and the Sulṭān in ordering him to be beheaded reproached him with having devastated "the residence of his ancestors" (*l.c.*, III. 113—114).

In the xviiith century Magnesia became the capital of the powerful family of the Kārā 'Othmān-Oghlu whose authority extended from the Maeander to the Propontid. It was not till 1814 that these hereditary chiefs, whose administration is praised by Keppel, *Narrative of a Journey across the Balkans*, London 1831, II. 294—301, were replaced by a regular Turkish governor.

With the introduction of the system of wilāyets, Magnisia became the capital of the sandjak of Şārīkhān in the wilāyet of Aydin (Smyrna). Sāim-bey, *Kāwūs al-'Alām*, Constantinople 1898, VI. 4348 estimated the population of the town at 36,252 of whom 21,000 were Muslims, 10,400 Greeks, 2000 Armenians etc. Magnisia which is divided up by streams into 3 quarters had 25 *ḥamā*, 38 mosques, 25 *midrāṭa*, 18 *tekke* etc. The *kaḍā* of Magnisia had 4 *nāhiye*: Amīāk, Yont-daghl Palamut and Belek. Cuiet, *La Turquie d'Asie*, III. 1894, p. 523—534 gives the following as the *nāhiye* of the sandjak: Magnisia, Soma, Kır-Aghac, Ak-Hisar, Kasaba, Girdia, Demirdji, Şālibl, Kule, Ala-shehir, Eshme. After the reform of 1921 Şārī-khān became a wilāyet with 11 *kaḍās* (the old *nāhiyes*). The population of the new wilāyet is 302,752 souls and of the *kaḍā* Magnisia, 75,021 souls; cf. the *Turkiya Djumhuriyetinin Sāl-nāmeti*, 1926—1927, p. 926—933. In view of the movements of the population the ethnical composition of the sandjak must have undergone profound modifications.

(V. MINORSKY)

MANSHÜR (A.) means literally "spread out" (as in the Kūrān xvii. 14 and III. 3; opposite *maḥṣūl* "folded"), or not sealed (opposite *maḥṣūl*) hence means a certificate, an edict, a diploma of appointment, and particularly a patent granting an appanage.

In Egypt in the early Arab period *manshūr* seems to be a name for the passes which the government compelled the *fallāḥīn* to have in order to check the flight of colonists from the land, which threatened to become overwhelming (*Djāliya*, cf. above, II. p. 14¹ and 994²). In any case in the *Führer durch die Ausstellung (Papyrus Erbsenrog Rainer)*, N^o. 631 (cf. also N^o. 601—602) such a certificate of the year 180 (796) is called a *manshūr* and in Makrizi, *Khitaṭ*, II. 493, we are told

than 26 texts, beginning with one drawn up by Muḥyī l-Dīn b. 'Abd al-Zāhir in the reign of Kālān for the latter's son Nāṣir Muḥammad, which for its remarkable beauty he calls a regular *ṣaḥīḥ al-manāḥīr*. The other texts are for the above mentioned military ranks, as well as for sons of emirs (*awlad al-amūr*) and for emirs of the Arabs, Turks and Kurds.

The term *manṣūr* was also used for potentia of appointment in the Ottoman empire, but it does not seem to have been used so definitely or exclusively in this sense; there are however *manāḥīr* for viziers, generals, and governors (*recueil manṣūr*, *manṣūriyat manṣūr*, *evāliṣ manṣūr*), and in the treaties of peace made after the Balkan War in 1913, it is still provided that the chief motifs to be appointed in Bulgaria and Greece are to receive their *manṣūr* from the *Shaykh al-Islām* in Istanbul and they have also to put forward for approval the *manṣūr* of the ordinary muftis subordinate to them (cf. e.g. Karl Strupp, *Angewählte diplomatische Abenteuere zur orientalischen Frage*, Göttingen 1916, p. 295, 308).

The name *manṣūr* was also applied to the pastoral letters and epistles of the Christian patriarchs and bishops. In conclusion it may be mentioned that *manṣūr* in mathematical language means "prism" (varieties e.g. *M. mū'īl* oblique prism, *M. ṣā'im* straight prism, *M. musawwīl* 'isof' parallel prism, *M. musawwīl* regular prism, *M. musawwīl* triangular prism, *M. nāḥiṣ* truncated prism), and that in the language of the Persian poets the nightingales are called "the *manṣūr*-writers of the garden" (*manṣūr-nawīstān-i bāgh*).

MANŠUKH. [See NAKH.]

AL-MANŠÜR, ABU DĪYĀR 'ABD ALLĀH B. MUHAMMAD, the second 'Abbāsid caliph. His mother was a Berber slave girl called Sallāma, his brother the caliph Abū 'l-'Abbās al-Saffār [q. v.]. In the fighting against the Omayyads he distinguished himself and took part in the siege of Wāsiṭ, which had been fortified by Ibn Hubāla [q. v.], the last important supporter of Marwān. The treacherous murder of Ibn Hubāla, to whom the two 'Abbāsids had expressly promised a pardon, is however not out of keeping with Abū Dīyār's character. His brother gave him the governorship of Armenia, Adhurbāidjān and Mesopotamia, which he administered till his accession. On the way back from the pilgrimage, he learned that Abū 'l-'Abbās had died in Dhū l-Hijja 136 (June 754) and that he himself had been proclaimed caliph. His uncle 'Abd Allāh b. 'Alī [q. v.] wished to dispute the succession but was defeated by Abū Muslim [q. v.]. Soon afterwards the Caliph had the latter put out of the way, which led to a rising in Khorāṣān. The leader of this was a Persian named Sunbāgh; he advanced far into Media but was defeated between Hamadhān and al-Rāy by the caliph's troops led by Dīyār b. Marwān and soon afterwards slain. When Dīyār also cast off his allegiance to the caliph, the latter sent an army under Muḥammad b. al-Ash'ath against him (138 =

755—756). Dīyār was defeated and fled to Adhurbāidjān, where he was put to death. About the same time the Khāridjīs rebelled in Mesopotamia under Muṭabbad b. Harnala al-Shāhānī who inflicted severe reverses on al-Manṣūr's armies, until the rebellion was finally suppressed by Khāsim b. Khazima in 138 and Muṭabbad slain; in al-Haḥimīya also there was a rising (probably in 141 = 758—759). A body of the so-called Bāwānī [q. v.] who identified the caliph with God himself, went to the capital and when al-Manṣūr had some of them arrested, they were forcibly rescued by their friends. But for the valiant Ma'n b. Zā'ida [q. v.] it would hardly have been possible for the caliph to dispose of these mad fanatics. A few years later, the 'Alids also rebelled under their leader 'Abd Allāh b. al-Ḥasan [q. v.]. In the autumn of 145 (762), a rebellion broke out in al-Medīna, and Muḥammad son of 'Abd Allāh was proclaimed caliph there, but in Ramaḍān of the same year (Dec. 762) defeated by the Caliph's nephew 'Isā b. Mūsā. 'Isā then attacked Muḥammad's brother Ibrāhīm, who had risen in Baṣra and severely defeated him at Bāghamrā [q. v.] where the latter was slain (Dhū l-Ka'da 145 = Febr. 763). In Spain the Omayyad 'Abd al-Raḥmān b. Mu'āwīya had founded an independent kingdom in 138 (756) and in Africa there was fighting for several years with the Berbers and Khāridjīs. It was only after the Abūj Abū Ḥatīm [q. v.] had been defeated by the Caliph's troops under Yazīd b. Ḥatīm in Raḥat I, 135 (March 772) and killed that order was restored there. Yazīd remained in Kalawān as governor till his death in 170 (786—787). In Khorāṣān a new rebellion broke out in 149 (766—767) or 150. The leader Ustāḥḥas declared himself a prophet and gathered numerous followers around him but was defeated by Khāsim b. Khazima, who wrought a fearful massacre among the rebels.

The frontiers also resounded with the noise of battle. The war against the Byzantines was continued under al-Manṣūr, but was confined mainly to raids or the destruction of individual strongholds. Al-Manṣūr devoted special attention to protecting the frontier by building fortresses, and the two towns of Maṣāṣya (Meliteno) and al-Maṣāṣya (Mopsuestia) were rebuilt in his reign. Several expeditions were sent against Dailām and Tabaristān in the early years of al-Manṣūr's reign and after the extinction of the old line of Ispahbads of the Banū Dābūya [q. v.] in Tabaristān, this province too received Arab governors. In 147 (764—765) the Khazars invaded Armenia, seized the town of Tiflis and defeated the caliph's troops but retired again. There were also encounters with the people beyond the Oxus and in India; but these were of minor importance. At first al-Manṣūr lived at al-Haḥimīya near Kūfa, as did his predecessor; he later decided to build a new capital and in 145 (762) the foundation stone of Baghdād [q. v.] was laid. Khallī b. Barnak is said to have been his adviser in this matter; he played an important part in other respects in al-Manṣūr's reign (cf. NAKHARINS). Al-Manṣūr devoted himself with the greatest energy to his duties as a ruler but troubled little about the means he used and never hesitated to act in the most faithless manner if he could only attain his aim. He was always kept very well informed of everything that went on in the different parts of his wide empire, and devoted special attention to the improvement of the finances of the State in

order to leave his successor a full treasury. He took an active interest in literature and was a brilliant speaker; on the other hand he did not tolerate music and song at his court and in general led a very simple life. His nephew 'Isā b. Mūsā (q.v.) had been destined by al-Saffār to succeed al-Manšūr but was induced by the latter to withdraw his claims on condition that he should succeed after al-Mahdī (q.v.). Al-Manšūr died in Dhū l-Hijja 158 (Oct. 775) in Bīr Ma'inūn, when on the pilgrimage to Mecca and was buried near the holy city [cf. the article AL-MURVĀN].

AL-MANŠŪR b. 'ILĀH AL-KĀSIM, the name of two Zaidī imāms of the Yemen.

I. **AL-KĀSIM b. 'ALĪ AL-AYYAN** (?) according to others al-Ilyāsī). His genealogy goes back through a certain 'Abd Allāh and a Muḥammad to al-Kāsim b. 'Ibrāhīm Ṭabāṭabā (d. 246 = 860), the spiritual founder of Zaidism in the Yemen; he is however not a descendant of the latter's grandson, al-Hādī Yahyā b. al-Ḥusayn, the creator of the secular power of the Zaidis in the Yemen. The latter was succeeded in the imāmate by his two sons: the weak Muḥammad al-Murādī and the more capable Ahmad al-Nāṣir. With his death in the year 322 (934) the imāmate came to an end for a time. Although in 345 (956) al-Kāsim al-Mukhtār, a son of al-Nāṣir, seized the capital Sa'da, he was soon defeated by al-Daḥḥāk, the chief of the tribe of Hamḍān, who put Sa'da under the suzerainty of the Ziyādids of Zabīd; the hostile tribe of Khawlan however played it (352 = 963) into the hands of the Ya'furid 'Abd Allāh b. Kaṭṭān. In the midst of this civil strife, a nephew of the defeated Mukhtār, Yūsuf b. Yahyā b. al-Nāṣir succeeded for a short time in gaining power and being recognised by the Zaidis at least as a *ḥafī*. Driven out by the Ya'furids, his power became limited to the old Zaidi stronghold of Sa'da in the north. Al-Kāsim b. 'Alī, with the support of the Banū Hamḍān, rose against him, claiming the imāmate with the title al-Kāsim b. Manšūr b. 'Ilāh in 389 (999); he occupied Sa'da, forced his way through the Waḥī Shuwaḥ and al-Bawn southwards to the highlands in the N.W. of Sa'da and from there forced the capital to

recognise him. His career however was brief and his power unenduring: for when in 393 (1003) he died, his governor in Sa'da had already gone over to Yūsuf al-Da'i. He was however the first since al-Nāṣir Ahmad, and the fourth in all to be entered — although not by everyone — in the lists as Imām of Yemen (but cf. on the above claimants: Munadjjidmāghī, in *Sachau, Ein Verzeichnis saudi-arabischer Dynastien*, in *Abh. Pre. Ak. W., Phil.-hist. Kl.*, 1923, i. 22).

Only for an equally short time from 401-404 (1010-1013) his son al-Ḥusayn al-Mahdī was able to regain his father's office. His early death in battle is noteworthy because it produced a quite un-Zaidi belief in his return and for a period founded a special sect, the 'Husayniya' in the name of this concealed imām. Some years later another son of al-Kāsim, 'Ilā'far, began a struggle full of vicissitudes with the other 'Alid claimants to the imāmate, which was complicated by a party grouping of the tribes of the country: about 453 (1061) Sa'da fell to the Imām al-Sulayhī and then to Hamḍān chiefs. Only in 545 (1150) Ahmad b. Sulaymān al-Mutawakkil, whose genealogy also goes back to al-Nāṣir Ahmad b. al-Hādī but neither through al-Kāsim al-Mukhtār nor Yūsuf al-Da'i, succeeded in restoring the imāmate for a long and brilliant period. For the history of the following centuries, which were full of incidents and individual imāms of importance cf. the article AL-MAHDI LI-DIN ALLAH and 2. The family of Yūsuf al-Da'i remained victorious in the end. His descendant in the twelfth (14th) generation:

II. **AL-MANŠŪR AL-KĀSIM b. MUḤAMMAD** (cf. *supra*, p. 119), was the founder of the modern Yemen dynasty. At the end of 1005 (1597) he appeared in the field and held his own against five Turkish governors. Not only did he find opponents and people he could not trust among his own Zaidis, who went over to the Turks but among the latter the change of governor frequently led to trouble and even to mutiny: the tribes were an incalculable element; the Turks were often able to call to their help the Isma'īlīs (Karāmīyās), always hostile to the Zaidis. The lack of equipment was a great hardship to the Imām; for example in one battle he is said to have mustered only 20 rifles against the Turks' 2,400. It is very difficult to get a clear idea of this minor war but the following are the main facts that emerge. After the proclamation of the holy war at Djidda al-Kāra in the northern district of Ṣaḥm al-Sharī at the end of Maharrat 1006 (Sept. 1597), al-Kāsim conquered the highlands of Ahūm and Shahrā, the latter with the fortress of the same name, which had been a bulwark of the Zaidis for 300 years with occasional interruptions; turning to the southeast he established himself in the mountains of Haḍḍr al-Shakh (also called Haḍḍr Banī Aḍ; cf. the article ḠAḌḌ) in the important Thula (see THULA) in the N.W. of Sa'da; his followers rose throughout the land and for a time even cut off the Turkish communications with the sea. But after two years, the collapse began before General Sīnā: by the end of 1010 or beginning of 1011 (1602) he had to flee from Shahrā. But in 1014 (1605) again he rebelled against Sīnā in the district of Shahrā who had been appointed governor this time from Wādī; he also took Sa'da. After Sīnā Paḡa was recalled, al-Kāsim was able to induce his successor 'Ilā'far Paḡa to make a truce, which

was observed for about ten years with a few interruptions especially on the arrival of new governors in 1022 and 1025. After renewed fighting a formal peace in 1028 left the imām in possession of the four separate areas: around Shāhāra, around Khāshab in the east, around Sa'da in the north, and lastly in the S.W. of Šan'a around Haima [q. v.], the inhabitants were, however for the most part not Zaidis but Shāfi'is. Al-Kāsim died in Rabi' I 1029 (Feb. 1620). In the middle of 1038 (beg. of 1629) Haidar Pasha had to evacuate Šan'a before his son and successor al-Mu'ayyad Muḥammad.

Al-Kāsim b. Muḥammad was a conscientious Zaidi; as a youth when a fugitive before the Turks he had studied with many spiritual authorities; he composed numerous appeals for the rebellions; works of a legal and dogmatic nature by him still exist.

(R. STROTHMANN)

AL-MANŠŪR, the sixth ruler of the Ḥammādid dynasty, succeeded his father al-Nāṣir in the year 481 (1088). The latter had witnessed the rise to the height of its power of the dynasty of somewhat artificial development of Kal'a Bani Ḥammād [q. v.], a result of the destruction of Ḥairawān by the Arabs. Two years after the accession of al-Manšūr, the Arabs, who had advanced towards the west and who had spread over all the region adjoining the Kal'a, began to make existence there difficult. The prince moved his capital from Kal'a to Bougie which he considered less accessible to the nomads; it should be mentioned that his father al-Nāṣir had already made preparations for the exodus by transforming a little fishing port into a regular town, which he called al-Nāṣiriya and which was to become Bougie, while on the other hand, the Kal'a was not completely abandoned by al-Manšūr and he even embellished it with a number of palaces. The Ḥammādid kingdom had therefore at this time two capitals joined by a royal road.

After taking up his quarters at Bougie, al-Manšūr had in the first place to quell the revolt of one of his uncles, Belhar, the governor of Constantine. He sent against the rebel another Ḥammādid Emir, Abū Yakni. The latter after his victory was given the governorship of Constantine but shortly after he in his turn as well as his brother, who had been given the governorship of Bone, rebelled. These risings over which al-Manšūr, thanks to his energy,

was triumphant, brought to the side of the rebels of the Ḥammādid family the Zirids of al-Mahdiyya, who wished to get back some power in Barbary, the Almoravids of the Maghrib, who wished to extend towards the East and the Arabs who were always ready to join in the feuds of their powerful neighbours.

Al-Manšūr was, on the other hand, led to oppose the advance of the Almoravids who were curiously allied with the traditional opposition of the Zenāta [q. v.]. With the probable object of disarming the opposition al-Nāṣir and al-Manšūr had married two sisters of Mākhūkh, the chief of the Banu Wamānūl, at that time the most powerful of the Zenāta group. This alliance did not hinder the time-honoured feud from breaking out again. It became more acute when al-Manšūr murdered his wife, the sister of his enemy. The latter then asked for support from the Almoravids.

From Tlemcen, where they had been installed for more than twenty years, the Almoravids had after many attempts, endeavoured to expand towards the East at the expense of their brethren of the same race, the Sanhādja b. Ḥammād. Al-Manšūr had twice reduced them to impotence. It was at this time that the murder of the sister of Mākhūkh by al-Manšūr drove the Wamānūl chief into an alliance with the Almoravids of Tlemcen. The alliance formed in this way was a great blow to the Ḥammādid kingdom. Algiers was besieged for two days; Ashir was taken.

The fall of the latter fortress, the oldest stronghold of the family, was bitterly resented by al-Manšūr. He got together an army of 20,000 men, composed of the Sanhādja, the Arabs and even the Zenāta; he marched against Tlemcen, met the governor Tāḥfin b. Tin'amir to the North-East of the town and put him to flight. Tlemcen was not spared even at the supplication of Tāḥfin's wife, who invoked the ties of relationship uniting them with the Sanhādja (496 = 1102).

After the defeat of the Almoravids, al-Manšūr severely punished the Zenāta and the rebel tribes of the Bougie district, whom he forced to flee into the mountains of Kabylia.

Thus al-Manšūr seems on the eve of his death (498 = 1104) to have thoroughly re-established the power of the Ḥammādid. According to a tradition, which is not above suspicion, recorded by Ibn Khaldūn, the two capitals owed very important buildings to him: Bougie, the Palace of the Star and the Palace of Salvation; the Kal'a, the government palace and the Kaṣr al-Manā, the beautiful donjon of which is still in part extant.

(GEORGES MARCAIS)

AL-MANŠŪR, AḤMAD b. MUḤAMMAD, born in 1549, seventh ruler of the Sa'dian dynasty of Morocco, son of Sulṭān Muḥammad al-Mahdi and Saḥāba al-Rahmāniya. His victories and his wealth earned him the epithets al-Manšūr and al-Dhākabi.

He was still a child when on the accession of his eldest brother 'Abd Allāh (1557) he accompanied into exile his other brothers 'Abd al-Malik and 'Abd al-Mu'min, who went for safety from Sijilmassa to Tlemcen. The fugitives were potential claimants to the throne of the Sharifians, by virtue of an agreement concluded in the life-time of their father by which the one to inherit the power was not the Sultān's heir but the eldest of the family. 'Abd al-Mu'min was assassinated at the instigation of his nephew Muḥammad b. 'Abd Allāh called al-Mutawakkil and Aḥmad retired to Algiers to join 'Abd al-Malik who was already there. He was henceforth always a loyal lieutenant of his brother whose ability he fully realised. The death of 'Abd Allāh in 1574 gave the exiles the opportunity to assert their rights. Pretenders and rebels could always rely on the support of the natural enemies of every reigning sharif: Spain and Turkey. Philip II had remained deaf to the repeated appeals of 'Abd al-Malik, who appealed to the Grand Turk and in 1574 went to Constantinople where his marriage with the daughter of the renegade al-Hādīdj Morato assured him of patrons. In Algiers Aḥmad conducted successful negotiations with certain Moroccan notables, mainly in Fās. It was perhaps he who gave the signal when an expedition appeared to have some chances of success. He was at his brother's side when the latter entered Morocco in 1576 with a Turkish army led by Ramaḍān Pasha and helped him to raise troops in the region of Tlemcen. We do not know exactly what part he played in the battles of al-Rukn and al-Sharrāḥ which gave Morocco to 'Abd al-Malik but we know that he was given the task of pursuing the deposed sultān on his flight to Marrākush.

One of 'Abd al-Malik's first acts was to recognise his brother as his heir. It seems, however, that he did not show the latter as much esteem as affection and he had left in Constantinople, with his wife, his son Ismā'īl. But he was bound by his policy. In these circumstances Aḥmad naturally had the vice-royalty of Fās.

He did not stay there long, for he was recalled to save Marrākush from a return of al-Mutawakkil. Taking command of one of the three armies charged with pursuing the vanquished sultān in al-Sūs and the Atlas, he does not seem to have found an opportunity for a decisive military success; he returned to his governorship while Muḥammad was driven to seek refuge behind the walls of Ceuta.

In June 1578, 'Abd al-Malik summoned him with all his forces to Kaṣr al-Kabīr (Alcazarquivir, q.v.) to stop the advance of the King of Portugal's army. The latter had foolishly sought to realise the dream of conquering Morocco cherished by John III. When Muḥammad b. 'Abd Allāh after vainly appealing for help to Philip II, turned to Sebastian, he at once received a favourable reply. A large army with about 20,000 effective fighters left Portugal in June, landed at Tangier, then went to Arzila, which 'Abd al-Karīm b. Tuda had just relieved, and proceeded by land towards Larache. The Moroccan forces coming from Marrākush and Fās met them at al-Kaṣr. Aḥmad found his brother seriously ill, poisoned by the ka'ids of his staff, it is said. The battle was fought a few miles from al-Kaṣr on Aug. 4. Sebastian's men, abnormally led, having exhausted all their provisions, fought with their backs to the river of the Wādi 'l-Makhāzin. The sharif arranged

his army in a crescent. In about 5 hours the Christians were annihilated by the Moorish cavalry. 'Abd al-Malik died in his litter during the battle, Sebastian was killed or committed suicide and al-Mutawakkil was drowned. That evening, Aḥmad henceforth known as Aḥmad al-Manšūr was proclaimed emperor.

Elegant, cultivated, very learned in religious matters, more a man of the council-chamber than of the camp, he was succeeding a popular and fearless ruler, of exceptional energy, who having acquired a taste for innovations in Turkey had begun to introduce them, perhaps too eagerly, into Morocco. Designated as his successor by 'Abd al-Malik, and benefitting by the great reputation left by his father, Aḥmad al-Manšūr was rapidly able to overcome the difficulties which awaited him, as they did every sovereign of Morocco on his accession: mutinies of the troops, demands from allied tribes and the Zāwiyas, and agitations among the Berbers. While in Spain it was feared that the Christian garrison would be attacked and swept away, al-Manšūr had to hurry to Fās to put make himself recognised as ruler there, to put down unrest and behead a few notables. He edified the people by displaying the skin of Muḥammad al-Maṣlūkh stuffed with straw in the regions of al-Sūs and the Atlas, where the influence of the former sultān had survived for a brief space his tenure of the throne.

Aḥmad al-Manšūr very soon sought means of enriching himself. The booty taken in the field of al-Kaṣr, the work done by the prisoners reduced to slavery, the ransoms extorted from the gentlemen gave the sharif and his people enormous sums. The Sultān kept the nobles for himself. So were soon brought to him and he set about bargaining about them. In a little time, less than a year, the ransoms had been arranged.

The haste displayed by foreign courts to congratulate the Moor on his triumph was remarkable. Ambassadors thronged to Marrākush, those of Spain and Portugal bringing magnificent gifts. Aḥmad al-Manšūr had the sense to understand that these presents were the most he was likely to get from European action. For its neighbours, Morocco was a weak and troublesome state. The cupidity of its neighbours was its best protection. Many reasons urged the Turks to obtain a footing there: the cupidity of the beglerbegs of Algiers; ambitious of extending their powers to the west; the naval basis of Mazagan of al-Ma'mūn and of Larache; the formal promises that had been given by 'Abd al-Malik, when he was begging assistance, and there was always the troublesome question of spiritual supremacy, as the Turkish Sultān did not admit that the Moroccan sharif had an authority in religious matters as great as his. To extricate himself, al-Manšūr played the usual game, following the example of his brother, who had made advances to the kings of Spain, Portugal and France, to the Queen of England and to the Grand Duke of Tuscany; he turned without ceremony from the Grand Turk and threw himself into the arms of Philip II, overwhelming the Catholic King with demonstrations of friendship, of which the most significant was the return without ransom of the body of Sebastian; he was even promised Larache. The quarrel with Turkey was soon to come to a head. 'Alī, Beglerbeg of Algiers, exerted all his influence to get war declared. Aḥmad al-Manšūr

as a last resort had to send in 1581 an embassy laden with presents to Constantinople where the enemies of 'Euldj 'Alī were conducting an effective campaign against the Beglerbeg. The relations between the two Muslims resumed the appearance of cordiality which they usually had. In 1587, the death of 'Euldj 'Alī, the end of the régime of the Beglerbegs and the weakening of Turkish power in Algiers freed Morocco from a threat, which had long weighed heavy upon it. There were still periods of tension: when al-Manšūr ceased to send what he considered gracious gifts and what the Grand Turk received as tribute; when the conquest of the Sūdān seemed to be about to threaten Ottoman interests, spiritual and material; and lastly in the periods of friendship with Spain. But there was never again a real crisis; even in spite of the efforts of Ḥasān who had married 'Abd al-Malik's widow, the Turk did nothing really serious to sustain the claim of Ismā'il.

When al-Manšūr had peace on the Turkish side he showed Philip what negotiation meant: yielding nothing, breaking off nothing, playing enemies off one against the other. It was no longer a question of handing over Larache but of an exchange and the pourparlers dragged along for four years with a decreasing seriousness of purpose. The Duke of Medina-Sidonia, supported by Philip II, to deal with Moroccan affairs was played with by the Moor who was able to reap considerable advantage from his hesitation on several occasions. The Sharif seems to have summed up very skilfully the character of the Catholic king and the needs of his policy. Spain, faced with a crisis at home and abroad, could not think of risking anything important in Africa. It was her interest that Morocco should remain weak, that is to say Moroccan, and especially that it should not fall under the influence of the Turks or of the English. Corsairs sheltered in the Atlantic ports, on the route to India. The garrisons, weak and badly provisioned, were periodically blockaded sometimes threatened, by the natural movements of tribes around them rather than by deliberate hostilities on the part of the Sharif. The policy of the two Philips, one of distrust and fear, tried to limit the evil and to obtain by subtle means a neutrality as little malevolent as possible, by awaiting the favourable moment of the anarchy, which history showed to recur in Morocco with an inexorable regularity. The Spanish court did not attempt to make capital out of the presence in Spain of two pretenders, al-Nāṣir and al-Shaikh, the brother and the son of al-Matawakkil which disturbed al-Manšūr; in 1589, Arzila was evacuated without a quid pro quo. The fear of seeing Moors and Moroccans draw closer to one another kept Spain from unfolding a liberal economic policy, the only one capable of affecting the Sharif in a sensitive part.

The latter by nature very cautious and far-seeing was not inclined to take risks. He had also to reckon with a public opinion, already irritated by the influence wielded by Jews and renegades; anti-foreign feeling definitely increased in the course of the reign; the fact that he had compromised himself with the Christians weakened the prestige of the Sultān, while the wealth and power of the Marabouts and brotherhoods increased to a dangerous degree. The splendour-loving ruler of a covetous people, al-Manšūr did not think of concealing the sympathy he had for traders. With the Grand

Duke, who freely received Moors in Tuscany and did all he could to develop commerce between the two countries, with Elizabeth, with the English, French and Dutch traders, relations were close. Sugar was exported from the South and Morocco also supplied corn in good years, gold from the Sūdān, saltpetre, copper and hides. It imported principally cloth and for al-Manšūr himself, the materials for his buildings. From the Sharifian court there went undefinable envoys, at once ambassadors, spies, procurers of jewels and of women. But contraband especially interested the Sharif, contraband of war and the sale, advantageous for every one, of the cargoes and slaves brought in by the corsairs. The English were the most punctilious contrabandists and the trade with Morocco developed so well that in 1585 the Barbary Company was founded with a monopoly and a regular constitution. But Ahmad al-Manšūr was not too fond of regular traders. The many Christians settled in Morocco must be considered to have been adventurers. Quasi-prisoners of the Sharif and his people, they were able to realise precarious fortunes, always liable to extortion. In 1585 bankruptcies were numerous in Morocco and the loyal company could not survive. The caprices of the sovereign drove off many other foreign traders.

These economic relations gradually developed into political ones. It was to exercise pressure on Spain that Ahmad al-Manšūr pretended to submit to the wishes of a combination of Dutch and English. After the destruction of the Armada in 1588, he entered without hesitation into the English camp; he received at his court Don Christoph, son of the Portuguese pretender Don Antonio, and agreed to a loan to Elizabeth. Then he drew back again. The taking of Cadix in 1596 again influenced his feelings; he spoke of an alliance and made definite offers. Nothing resulted from these demonstrations, except a painful impression left after deception. So long as Elizabeth was alive, relations were friendly, for the two rulers had kindly feelings for one another, but James I, on his accession, at once showed a much less benevolent attitude towards the Sharifian court.

It was in the direction of the Sūdān that Ahmad al-Manšūr gave reign to his desire for glory and conquest. His troops had had some experience in the Sahara. In 1581, the oases of Tuat and Tigherrit, which had long been free from the Sharifian yoke had been conquered brilliantly. In 1584 an unsuccessful expedition had ended in the disappearance in the desert of a large army which had not even reached Tigherrit. In 1590, having sought a quarrel with the *azāla* Ishāk over the ownership of the salt mines of Tigherrit, al-Manšūr persuaded his Council to go to war; a little army under the Pasha Ḥawdhār crossed the desert and destroyed the Sūdānese empire. The occupation of the conquered country was nothing but systematic plunder and massacre. The Sharif collected great wealth there; he received the congratulations of the Powers and gained a prestige which still survives; his lieutenants also enriched themselves. With remarkable regularity, almost every year, reinforcements set out for Gago and very often reached it; caravans brought gold, wealth and slaves back to Marrākush. The most famous of the prisoners was the logist Ahmad Babā [q.v.] for whom Marrākush was a gilded prison where he taught quite freely. The

Sūdān was drained dry. In 1600 al-Manšūr saw the necessity of reorganising trade there but does not seem to have succeeded.

Morocco was, on the whole, prosperous during his reign. The first Sa'dians had done much for the development of commerce and agriculture. Sugar factories were built up and down the country which were the Sultān's private property but were farmed out by him to Jews and Christians. Trade was active at the ports. The profits from the sale of captives or their labour contributed to make the notables wealthy and through this to the peace of the country. Besides the industrial monopolies, the normal revenue came from the customs dues and the taxes established by Muḥammad al-Mahdī, which al-Manšūr heavily increased. The collection of these taxes provoked murmurs of discontent and served as an excuse for military demonstrations which maintained good order in the country. Al-Manšūr had also a considerable army (he never formed a fleet) composed of excellent troops, Moors from Spain and particularly renegades, a nursery for *ḥāshīs* and officers of ability and energy. He was rich enough to pay them well. All this contributed to make rebellions few and they were always quickly and harshly suppressed by the Sharif's lieutenants: the rising of the people of Saksāwa, stirred up by Mawliḍ Dāwūd, son of 'Abd al-Mu'min in 1581 and the rebellion of the Berbers of Amizut in 1597. The throne itself was never seriously threatened except in 1595—1596 when al-Nāṣir came from Spain and landed at Melilla. Starting without resources, for Philip II would do nothing for him, al-Nāṣir nevertheless proved a redoubtable enemy for he gathered round him all those who were dissatisfied with the rule of al-Manšūr and raised troops from the Barānis (Branes), always ready to rebel and who had until lately been vassals of the Turks. He took Tānz and tried to raise the Rif and the country around Fās. Defeated at al-Rukn on Aug. 3, 1595, he held out till May 1596. Decisively defeated at Taghāt, he was put to death.

Al-Manšūr had rarely need to leave Marrākush and he did not like to do so. His mother had acquired a great reputation for her pious foundations. He himself, six months after his accession, began the building of the palace of al-Badī' which was finished in 1602. Marble for it came from Italy and artists from Spain, and Marrākush became one great workshop. A splendid palace arose, sumptuous pavilions surrounded by beautiful gardens in which stood numerous fountains. Foreigners were fêted there and the Sharif displayed his generosity. Especially on the occasion of religious festivals he displayed great pomp and ceremony. His wealth earned him great fame abroad and it was no doubt to it that he owed most of his glory. At his court the principal posts were held by renegades: Jews who had charge of his finances, Christians who conducted his private trading for him, and the agents of foreign courts. Al-Manšūr was one of the richest and most courted rulers of his time. Spain kept a regular ambassador or a representative permanently at Marrākush; France had a consul there; there was a constant passage of embassies between the Sharif and the Sublime Porte.

The palace of al-Badī' was destroyed by Mawliḍ Ismā'īl. The mausoleum in it still remains, a very fine specimen of the art of a decadent period.

Towards the end of his life al-Manšūr was thinking of creating a new Marrākush on the model of Fās.

Aḥmad al-Manšūr at first ruled as an autocrat. His orders were clear, his decisions rapid and sometimes, as might be expected, drastic to cruelty. His intimates, the *ḥāshīs* Ruihe, a Jew, whom we only know from European sources and 'Azna, seem to have been his secretaries, like al-Fishālī, his biographer and poet-laureate whose works have not survived. The Pasha Riqwān, very powerful at the beginning of the reign, acquired such influence that the Sharif had him beheaded in 1581. In time the notables acquired a great deal of independence and the Sultān hardly dared check their abuse of their power; two factors caused him much anxiety, the anti-foreign and audacious 'Abd al-Karīm b. Tula and his own son Abū Farīs.

By a concubine, al-Khairmān, al-Manšūr had two sons, al-Shaikh and Abū Farīs, and by his wife Lalla 'Aṣṣha al-Shabbāniya, Zaidān. His favourite son Abū 'I-Ḥasan was killed in 1594. In 1579 he had designated as his heir al-Shaikh, called al-Ma'mūn who held the vice-royalty of Fās. The remainder of Morocco was divided into governorships under other princes. These were several times rearranged; Abū Farīs, having considered everything, remained at Marrākush near his father to be ready in case of his death. In Fās, al-Ma'mūn, supported by his favourite Muḥṣafa, conducted himself like an independent ruler. He had displayed his gifts of energy, leadership and bravery on the occasion of al-Nāṣir's escapade in 1595; living in great pomp, beloved by his troops, he was undoubtedly a cause of anxiety. His father allowed himself to be led by Abū Farīs. The conflict broke out in 1598. Forced to sacrifice his favourite, thrown into prison and then half pardoned, al-Ma'mūn had to renounce all hope of winning in the struggle against Zaidān who was supported by Abū Farīs. After 1600 he sought support from Spain and Algiers.

Under Aḥmad al-Manšūr, the dynasty attained its zenith. But it is hardly correct to say that the decline of the Sa'dians only dates from the death of the great Sultān. After the conquest of the Sūdān, the anarchy reigning in Algiers, the weakness of Spain in Europe, the death of al-Nāṣir, the conversion to Christianity of another pretender, al-Shaikh, Morocco was rich, seemed powerful and the Sharifian throne stable. Aḥmad al-Manšūr, by not being able to arrange for his own successor, nor even to keep his son in obedience, gave his country the chance to destroy itself. This process began under his own eyes. He had gone to Fās to try to reconcile his children and put through the appointment of Abū Farīs as heir apparent when the plague carried him off in 1603. Civil war broke out over his dead body. He had passed the last few years of his life wandering about living in a tent, shifting his camp every ten days, driven from Marrākush by the plague, which had begun to rage in Morocco in 1598.

(C. FUNCK-BRENTANO)

AL-MANŠÜR IBN ABĪ 'AMIR, a famous ḥadīth of al-Andalus in the tenth century A.H., the Al-mansur of the Christian chroniclers of mediaeval Spain; his full name was Abū 'Amir Muḥammad b. 'Abd Allāh b. Muḥammad Ibn Abī Amir. He belonged to an Arab family which had settled in the Iberian peninsula at an early date: one of his ancestors, 'Abd al-Malik al-Ma'sūri, had landed there with Ṭārik [q.v.] and settled at Torrox in the province of Algeciras where he had founded a family. Al-Manšūr's father, Abū Ḥafṣ 'Abd Allāh, was a jurist noted for his knowledge and piety who died on his way back from the pilgrimage at Tripoli in Barbary at the end of the reign of the Caliph 'Abd al-Rahmān III al-Nāṣir (cf. Ibn al-'Abbās, *Tahmilat al-Šila*, B.A.H., v—vi, N° 1251, p. 437-438; al-Maḥḥārī, *Analectes*, i. 904).

While still quite a young man, Muḥammad Ibn Abī 'Amir conceived great political ambitions; they were to dominate his whole career. After studying in Cordova and holding a minor office with the ḥāḍi of the capital, Muḥammad b. al-Salim, he entered the service of the Omayyad court in 356 (967) as superintendent of the estates of a princess of Basque origin, Šubh, the wife of the Caliph al-Ḥakam II and her son 'Abd al-Rahmān, who had just been born. Ibn Abī 'Amir was not long, thanks to his tact and courtesy and ability, in making himself persona grata with this princess and it was without doubt on the intervention of the latter that the young superintendent found himself within two years the holder of the new offices of superintendent of the mint, treasurer and administrator of intestate estates. A few years later in 358 (969), he was appointed ḥāḍi of the district of Seville and Niebla. In 361 (972) the Caliph al-Ḥakam II gave him command of a section of his police corps (*shurfa*).

All these offices, combined in the person of Ibn Abī 'Amir assured him a considerable income and soon enabled him to lead a very luxurious life in Cordova. He built himself a palace in the aristocratic quarter of Ruṣṣafa and his generosity, courtly disposition and his splendour soon placed him in the forefront of the dignitaries of the Omayyad court. In a few years he had filled the

first part of his programme: to become popular and indispensable, to make numerous friends, ready to support him on the day on which he would begin his attempt on the throne of the caliph.

Ibn Abī 'Amir very soon realised that it was not sufficient to be popular in Cordova but that he had also to create reliable friends among the generals of the Caliph's armies. The circumstances of the time were peculiarly in his favour. Al-Ḥakam II, following the example of his predecessor 'Abd al-Rahmān III, had his North African policy and his armies were busy suppressing a Maghribi revolt which had broken out as a result of an expedition of reprisal sent against the petty Idrisid dynasty of Tangier, Ḥasan b. Gannūn. The Omayyad troops, under the orders of the general Ghālib, were sent to dethrone all the petty Idrisid rulers of Morocco who were more or less vassals of the Fīṭimids. This expedition was crowned with success and Ḥasan b. Gannūn was obliged to take refuge in a fortress of the Rif, Ḥadīrat al-Naṣr, in which Ghālib besieged him. But the Spanish army in Africa was a heavy burden on the treasury of the Caliph. Ghālib had distributed money recklessly among the chiefs of the Berber tribes of the North of Morocco in order to buy them over. Al-Ḥakam II decided to send over a controller-general of finance and he chose Ibn Abī 'Amir who set off with the title of chief ḥāḍi (*ḥāḍi 'l-ḥudūd*) and exact instructions. He carried out his very delicate task with unusual tact. He returned to Cordova at the same time as the army. When al-Ḥakam II died, leaving the throne to his young son Ḥishām in 366 (976), the new Caliph at the same time as he appointed ḥāḍi the favourite vizier of his father, Abū 'l-Ḥasan Dja'far b. 'Othmān al-Muḥṣafi, appointed Ibn Abī 'Amir as the latter's vizier. The ambitious minister now worked unceasingly to get rid of his chief, al-Muḥṣafi. In the first place he was able to reduce to nothing the considerable power which the Slavs (*Ṣaḥāliba*, q.v.) had in the Caliph's entourage. In Cordova they formed a body of mercenaries who guarded the royal palace, and at this time their leaders were two of their number, Fa'ik al-Nigāmi, grand master of the wardrobe, and Djawḥar, grand goldsmith and chief falconer. On the death of al-Ḥakam they had attempted to oppose the proclamation of Ḥishām who was still a child and to put on the throne of Cordova his uncle al-Muḥṣafi. The latter was slain at the instigation of al-Muḥṣafi and it seems likely that Ibn Abī 'Amir played an active part in the plot which ended in this murder. In any case very soon after the accession of Ḥishām II as a result of the rigorous measures taken against them, the Slavs lost all influence at the Omayyad court to the great satisfaction of the people of Cordova who had long suffered from their abuses. Ibn Abī 'Amir also gained in popularity, still further increased when he displayed for the first time the possession of military talents which had not been suspected.

A little later he succeeded in getting the command of an expedition against the Christians of the North who had taken up arms against Islām as soon as al-Ḥakam II had fallen ill. Setting out from Cordova in Rajab 366 (Feb. 977) he laid siege to the fortress of los Baños in Galicia and returned to the capital with considerable spoil. He then cultivated the friendship of the aged and

distinguished general Ghālib, governor of Madinat Salim (Medinaceli, q.v.), and obtained his help to bring about the fall of the ḥāḍijī al-Muḥaḥḥī. Ghālib on the intervention of Ibn 'Amir received the much coveted title of *ḥāḍijī al-wisāṭīn* and the command of the forces on the frontier in the expeditions against the Christians. This friendship was strengthened in a new campaign in which Ibn Abī 'Amir commanded the troops from the capital alongside of Ghālib. This expedition was again crowned with success and earned Ibn Abī 'Amir a new and honourable office, that of commandant of Cordova in place of the son of al-Muḥaḥḥī who was dismissed. Al-Muḥaḥḥī, conscious of the danger which threatened him, then tried to play off Ghālib against Ibn Abī 'Amir but this was labour lost. The young minister even became son-in-law of Ghālib who gave him the hand of his daughter Asmā'. A few months later, al-Muḥaḥḥī and the members of his family, who still held offices at the court, were dismissed and their property confiscated. On the same day Ibn Abī 'Amir was appointed ḥāḍijī. With his father-in-law, Ghālib, he was at the head of the administration of the empire.

It was not only the plots he had woven with success nor his personal ability that had enabled Ibn Abī 'Amir to advance so rapidly in his career. It seems very probable that the princess Ṣubḥ, widow of al-Ḥakam II and mother of the reigning Caliph, was the mistress of the former superintendent of her son's estates. This liaison was not unknown to the Cordovans and produced bitter criticisms of the princess and her lover. Public opinion, which had at first been so favourable to the ḥāḍijī, began to be hostile to him. A plot to overthrow Ḥishām II and put in his place another grandson of 'Abd al-Rahmān III was prepared but nipped in the bud. The Cordovan jurists then spread the rumour that Ibn Abī 'Amir was devoted to philosophy and that his orthodoxy therefore was quite nominal. He proved them wrong. Ibn Abī 'Amir did not hesitate to burn from the splendid library formed by the cultured al-Ḥakam II all the books dealing with branches of knowledge prohibited by the *Ulamā'*. He conciliated them by this act of vandalism the gravity of which can hardly have escaped him. But with his unparalleled ambition nothing which might prevent him attaining his object was allowed to deter him.

But the young Caliph Ḥishām II was now growing up. He had to be prevented from taking an active part in the conduct of affairs. Business was then conducted in the Caliph's palace in Cordova. In order to set aside the ruler finally, Ibn Abī 'Amir in 368 (978) decided to build near the capital a regular town for administrative purposes. This was al-Madīnat al-Zāhira (q.v.) which in a few years became an important city at the very gates of Cordova. As to Ḥishām, he then began the life of a recluse, either at Cordova or at Madīnat al-Zāhira, which was to last throughout his reign. At the same time as he settled the problem of the possible intervention of the ruling prince in the affairs of state in a manner as energetic as it was unscrupulous, Ibn Abī 'Amir was reorganising the army and inaugurating a new policy in the country. The Omayyad army, in the form in which it was then constituted, was recruited in the country itself and the permanent bodies of mercenaries were not large. Ibn Abī 'Amir required new ones; this is why from now

on till the end of his life, he appealed for Berber volunteers from the north of Morocco and Ifrīqiya. At the same time he realised that the occupation of certain parts of the Maghrib by the Omayyads was only a source of expense to the Caliph's treasury and that any plan of territorial expansion in that direction would be disastrous to the ruler of Cordova. He therefore abandoned all these possessions, retaining in Africa only one of the keys of the Strait of Gibraltar, the citadel of Ceuta. The administration of the rest of the country he handed over to petty local dynasties under the nominal suzerainty of Cordova. Along with the Berber troops in his pay, Ibn Abī 'Amir formed other corps by recruiting Christian mercenaries from the north of Spain, from Leon, Castille and Navarre. He was able by his generosity and attentions to secure the complete devotion of his new soldiers.

Having thus a strong and veteran army at his disposal, Ibn Abī 'Amir renewed with ardour the old feud against the Christians on the frontiers of the empire. He first of all got rid of his father-in-law Ghālib, whom he had displeased by the manner in which he had upset the old military organisation of the country; then he undertook in 371 (981) an expedition on a grand scale against the kingdom of Leon. He took and plundered Zamora, where he took 4,000 prisoners. The King of Leon, Ramiro III, then made an alliance with García Fernandez, Count of Castile, and the King of Navarre. But all three were defeated by the Muslim general at Rueda to the south-west of Simancas and this town itself was taken by him. Ibn Abī 'Amir continued his advance on the town of Leon and inflicted another defeat on Ramiro III. The return of the ḥāḍijī to Cordova was a regular triumph and it was on this occasion that he took the honourific *laqab* of al-Manšūr bi'llāh, 'the victorious in God'.

All powerful at Cordova and a successful general, al-Manšūr Ibn Abī 'Amir was to devote the rest of his life to an unceasing war on the Christian frontiers and to increasing considerably the territory ruled by the Muslims in the Peninsula. After his defeat, the nobles of Leon had deposed Ramiro III and proclaimed in his place Bermudo II. The latter finally found himself forced to seek al-Manšūr's help and to recognise him as suzerain. Al-Manšūr then decided to make an expedition into Catalonia in 374 (985): he defeated Count Borrel and stormed Barcelona, which he sacked. According to Ibn al-'Abbār, it was the 'Amirid's twenty-third campaign.

Ibn Gannūn, the petty Idrisid dynast in the north of Morocco having again rebelled against Cordova, al-Manšūr sent his cousin Ibn 'Askalādja to subdue him. Ibn Gannūn surrendered on being promised his life. But al-Manšūr had him executed along with Ibn 'Askalādja whom he accused of having plotted against him. This breach of faith and brutal execution having produced a reaction of feeling in the capital, al-Manšūr to rehabilitate himself undertook a pious work: in 377 (987) he extended the cathedral mosque of Cordova which had become too small. Eight new naves were built on the east and the western wall of the hall of prayer and of the *qibla* was moved out 150 feet. The Arab historians say that al-Manšūr made gangs of Christian prisoners do this work, for the greater glory of Islām.

In the same year the war against the kingdom of León had resumed. The Muslim troops, that al-Manšūr had sent there, had oppressed the country and Beraunda II had finally driven them out. Al-Manšūr punished his boldness with the greatest rigour. In two campaigns several months apart, he took Coimbra, which he laid waste, León which he left completely in ruins, and Zamora. The Counts of León had then to lay down their arms and submit to al-Manšūr and Beraunda II was only left possessions very much reduced in extent.

The campaigns that followed were again directed against the N.-W. of the Peninsula. The best known is that of St. Jago de Compostella in 387 (997). This famous sanctuary of western Christianity [cf. the article *MIANT YAGU*], was taken by the Muslim troops on the 2nd Ša'ban (10th August) and only the tomb of the apostle was spared, by orders of al-Manšūr.

The last expedition against the Christians dates from the year 1002. Its objective was Castilla. Al-Manšūr took Canales and destroyed the convent of San Millán de la Cogolla. But on his return from the expedition, he fell ill and died at Medinaceli on the 27th Ramaḍān 392 (Aug. 10, 1002). He was buried in this town.

The last years of the life of al-Manšūr in spite of his successful career and victorious expeditions had been marked by events which might have been fatal to him if he had not once again displayed an iron will and extreme violence in the suppression of plots hatched against him. The few attempts made on behalf of Hishām II to regain for him the power, which had been seized by his first minister were in vain. In 381 (991) al-Manšūr gave up his title of *Ḥaḍḍ* in favour of his son 'Abd al-Malik. Five years later he assumed with an audacity worthy of him the princely title of *malik ḥarīm* "noble king" and reserved for himself the title *ṣayyid* "lord". The only thing that he did not dare to do or could not do was to announce the overthrow of the Umayyad caliphate and the constitution of an 'Amirid caliphate in its stead. He arranged however for the power to pass to his heir after him, and it was his son 'Abd al-Malik al-Manšūr, who succeeded him on his death to control for a few more years the destinies of the Muslim empire in Spain.

Various judgments have been passed on al-Manšūr. His lack of scruples has been emphasised and the often criminal means which he used to attain his ends. His career is nevertheless an extraordinary one. This dictator was undoubtedly one of the greatest men of affairs that Islam has ever produced and under his "reign" Muslim Spain remained the great nation, which in the caliphate of 'Abd al-Rahmān III had shown itself one of the most remarkable centres of culture and civilisation in the medieval west.

MANŠŪR b. NUḤ, the name of two Sāmānid rulers:

1. **MANŠŪR b. NUḤ I** (Abū Saḥib), ruler of Khorāsān and Transoxania (350—363 = 961—976), succeeded his brother 'Abd al-Malik b. Nuḥ I (q.v.). Ibn Hawḥal is able to describe the internal conditions of the Sāmānid kingdom under Manšūr as an eye-witness; cf. especially *B. G. A.*, II, 341: *fi maṣṣana ḥaḍḍ*; p. 344 ff. on the character of Manšūr "the justest king among our contemporaries, in spite of his physical weakness and the slowness of his frame". On the vizier Baḥāmī, see *Kalām* where also information is given about the Persian version of Tabarī's history composed in 352 (963) by or by orders of this vizier. On the rebellion of the commander of the Sāmānid bodyguard, Alp-Tegin, and the independent kingdom founded by him in Ghazna and on the establishment of Sāmānid rule there in the reign of Manšūr and the son and successor of Alp-Tegin, Ishāk (or Abū Ishāk Ibrāhīm) see *ALP-TEGIN* and *GHAZNA*; in Barthold, *Turkestan*, *G. M. S.*, New Series, I, p. 251, note 4. Abū Ishāk Ibrāhīm should be read for Ishāk b. Ibrāhīm (this passage is misunderstood in the Russian original). In other directions also in this reign the Sāmānid kingdom prospered in its foreign affairs, the fighting with the Buyids (q.v.) and Ziyarids was a rare victorious.

2. **MANŠŪR b. NUḤ II** (Abū I-Ḥarith), ruler of Transoxania (387—389 = 997—999). His father Nuḥ b. Manšūr, to whom out of all the Sāmānid empire only a portion of Transoxania was left, died on Friday 14th Rabi'ab 387 (July 23, 997) but it was not till 14th Rabi'ab (November) that homage was paid to Manšūr as his successor. Baḥāmī (ed. Morley, p. 503) talks highly of his courage and eloquence; on the other hand he is said to have been feared by every one for his extraordinary severity. During his brief and impotent reign he was hardly able to install terror into any one. The last Sāmānids were quite helpless against the kings and generals who were quarrelling over the inheritance of the dying dynasty. One of these generals, Fā'ik, succeeded even in taking Baḥāmī at the head of only 3,000 horsemen. Manšūr had to fly to Amul (q.v.) but was called back by Fā'ik. The last months of his reign were devoted to fruitless efforts to settle peacefully the question of the governorship of Khorāsān, which

(244) End

was claimed by various parties; but before the problem had been settled by force of arms, Manšūr was dethroned on Wednesday, 12th Šafar 389 (Feb. 1, 999) by his generals Fā'iq and Begtūsh, blinded a week later and sent to Bulhāra.

(W. BARTHOLD)

AL-MANŠŪR ISMĀ'IL, ABŪ TĀHĪR or ABŪ 'ĪSMĀ'IL, third Fā'imīd caliph, was 32 when he succeeded his father Abū 'Ī-Kā'im al-Kā'im in Shawwāl 334 (May 946) under particularly difficult conditions: Abū Yazīd, the Khāridjī agitator supported by many Berber tribes and by the people of Kairawān had failed before al-Mahdiya but was still besieging Sūs. Al-Manšūr concealed his father's death and did not alter the formulae of the *shamsa*, of the coin-legends or of the standards lest Abū Yazīd should profit by the weakening of authority which was a regular feature of change of ruler. Sūs was relieved by the efforts of the reinforcements sent by al-Manšūr by sea. Abū Yazīd had to beat a hurried retreat. Al-Manšūr, however, having returned to Kairawān and pardoned the inhabitants who had supported the agitator, had to prepare to meet a new attack. Abū Yazīd was not long in reappearing; repulsed he came again to the attack. Al-Manšūr tried to make terms with him and gave him back his women captured in Kairawān but Abū Yazīd, in spite of his promise, attacked him again and was completely defeated in a pitched battle (Aug. 946). He was then pursued to the west. After a delay caused by the illness of al-Manšūr, Abū Yazīd mortally wounded was taken prisoner at Djebel Kiyāna, north of Meila, in Muharram 336 (Aug. 947).

This success established al-Manšūr securely. A section of the tribes of the Central Maghrib who had embraced the cause of Abū Yazīd made their submission, like the Maghrawa under Muhammad b. al-Khair. Taking advantage of the difficulties of the Fā'imids, the Omayyads of Spain had entrenched themselves more securely in western Barbary. A former Fā'imīd officer, Hāmid b. Yawd, was ruling the Maghrib in the name of the caliph of Cordova and laid siege to Tāhert. Al-Manšūr relieved the town and appointed the Ifranid Yā'la b. Muḥammad to rule it. He invested with considerable authority the chief of the Sanhādja Ziri b. Manād, who had proved a loyal auxiliary during his days of trial.

Returning to Kairawān, al-Manšūr had again to take the field against the son of Abū Yazīd who was trying to stir up a rebellion again. Besides taking these vigorous steps in Barbary to put an end to the Khāridjī movement, al-Manšūr developed the naval power of Ifrīqiya. His freedman Farāq, supported by the governor of Sicily, won a striking victory over the Greeks in the south of Italy and came home laden with booty (340 = 951).

Lastly al-Manšūr holds a high place among the Fā'imids of Ifrīqiya for his buildings. The capital was no longer al-Mahdiya nor was it Kairawān whose recent treachery made it suspect. From 947 Sōdra, also called al-Manšūriya from its founder, was the capital. The town built at the gates of Kairawān was beautified by the palaces which he built and grew rich on the bazars which he removed from the old city.

Al-Manšūr was 39 and had reigned 7 years, when he died suddenly on a journey from a chill caught by taking a bath in cold weather (Shawwāl 39, 341 = March 953).

(GEORGES MARÇAIS)

MANŠŪRA, founded by Manšūr b. Djamshūr al-Kalabi, was from 258 (871) the capital of Sind under the Arabs. Istakhri described it as more fertile and populous than Multān. Before the arrival of the Arabs, Brahmanābād (probably identical with the modern Haidarabad) was the capital of Sind, and its name was changed to Manšūra after the Arab conquest. For notices of Manšūra by early travellers to India, see *Gazetteer of the Bombay Presidency*, I, Part 1, p. 506, 507, 511, 525.

(M. HIRAYET HOSAIN)

AL-MANŠŪRA, large town in Lower Egypt, on the right bank of the Damietta branch of the Nile, capital of the province al-Dakahlīya. Another canal or branch of the Nile went from here to Ashmūn in a north-eastern direction. It was originally a camping place for the army, founded in 616 (1219) by al-Malik al-Kāmil, when he tried to recapture Dimyāt, then occupied by the Crusaders. In 1249 the Crusaders were defeated in the neighbourhood of al-Manšūra by al-Sulṭān al-Mu'izzam Tūḡlākh, on which occasion Lewis IX of France was taken prisoner. The town is now an important emporium for the cotton trade; in 1917 there were 49,238 inhabitants (Baudker). It possesses no remarkable buildings; a railway bridge crosses the Nile at this place.

There are still various other places in Egypt, called al-Manšūra.

(J. H. KRAMERS)

AL-MANŠŪRA, the name of a town now in ruins built by the Sulṭān of Fās about 5 miles to the west of Tlemcen. The very precise account given by Ibn Khaldūn enables us to reconstruct with exactitude the history of this typical town-camp. In the year 698 (1299) the Marjanid Abū Ya'qūb Yūsuf, who had come to lay siege to the capital of the Banū 'Abd al-Wād,

which he had closely surrounded with entrenchments, set up his camp on the plain which stretches to the west. As it was a long drawn out blockade he built a few dwellings for himself and the leaders of his army and laid the foundation of a mosque. In the year 702 (1302) the "Victorious Camp", *al-Maḥalla al-Manṣūra*, was given the form of a regular town by the construction of a rampart. Besides the mosque, the dwellings of the chiefs, the store-houses for munitions and the shelters for the army, there were baths and caravanserais. As Tlemcen was inaccessible to caravans, *al-Manṣūra* or New Tlemcen, as it was called, naturally attracted to itself the business of the invested town. After a siege of eight years and three months the Marinids withdrew from Tlemcen, and *al-Manṣūra* was methodically evacuated under the direction of Ibrāhīm b. 'Abd al-Jalīl, the viceroy of the Sultān Abū Thābit. The people of Tlemcen were compelled, by the terms of the treaty made with the Marinids to respect the rival town for some time. Some time after, when the entente between the two empires had been broken, they demolished its buildings and rendered uninhabitable the entrenchments left at their gate by their hereditary enemy.

Thirty years later, in the year 735 (1335), the Moroccan army under Sultān Abū 'l-Ḥasan was once more at the gates of Tlemcen. On this occasion the 'Abd al-Wādī capital was forced to surrender (27th Ramaḍān 737 = 1st May 1337). *Al-Manṣūra* was rebuilt. It became the official capital of the Marinids during their occupation of the central Maghrib. It was in fact, during this time that the great mosque was built and that the "Palace of Victory" was erected (745).

After the retreat of the Marinids, *al-Manṣūra*, once more abandoned, fell little by little into ruins. At the present day the rampart of terre piécée flanked by square towers is still comparatively intact, but the interior is land under cultivation and contains a French village. There still exists there, however, the ruins of a palace no longer distinct, a section of a paved street, and probably the surrounding wall in terre piécée of the Mosque with half of the great minaret in stone, which arose above the principal entrance. Although the inlaid ceramic work has almost entirely disappeared, the facade of the square tower, which is 120 feet high, is one of the most perfect pieces of the Maghribi art of the 14th century that survives. The columns and the capitals in marble of the mosque are preserved in the Museums of Tlemcen and Algiers.

(GEORGES MARÇAIS)

MANTIK (A.), Logic. The logic of the Arab philosophers is that of Aristotle, here and there modified by the Stoic and Neo-Platonist tendencies

of the Greek commentators. The Arab philosophers did not develop this logic but they gave *résumés* of it, reproduced it and wrote commentaries on it, often with success; they understood it very well and it is in logic that they came nearest to the authentic Aristotelianism. As to the matter, it was easier for them to grasp the exact sense of the logical writings of Aristotle than of his other works since the translation of the *Logic* had been made and remade with great care (cf. e.g. the two versions of the beginning of the *Interpretation* in J. Pollak, *Die Hermeneutik des Aristoteles in d. arab. Übers. d. 1033-6. Huncin*, Leipzig 1913) while the translation of the *Metaphysics* for example was very defective and incomplete. The remark of the *Iḥwān al-Sa'ī* — who evidently did not care much for the subject of logic — at the beginning of their little treatise on logic "the ancient ages have dealt with these subjects and their work are in the hands of the reader, but they are very diffuse, for the translators did not understand the exact meaning" is then not justified.

To the six works of Aristotle, the *Categories*, *Hermeneutics*, the *Prior Analytics* and *Posterior Analytics*, the *Topics*, and the *Sophist*, the Arabs — like the latest Greek commentators — added the *Rhetoric* and the *Poetics* (as to the *Rhetoric*, Aristotle himself had regarded it [*Rhet.*, I. 2, 1356 a 23] as a lateral branch of the *Dialectic* and *Poetics*). They explained the order of these works in the manner of the later Greek commentators (cf. Elias in *Aristotelis Categor. Comment.*, ed. Burnet, p. 116-117, etc.). The most important of these treatises was the fourth, the *Posterior Analytics*, to which the three preceding are only the preparation and introduction; in the *Posterior Analytics* Aristotle was thought to have treated of the absolutely True, in the *Poetics* of the absolutely False and in the intermediate treatises, according as they approach the *Poetics*, the element of improbability begins to preponderate. Then, still in the manner of the Greeks, they placed in front of these works the *logos* of Porphyry which as its name, *Ἐκλογὴ εἰς τὰς Ἀριστοτελεῖς κατηγορίας*, *Killaḥ Furṣūḥ al-Ma'rif li 'l-Muḥallil*, shows, is an introduction to the logic of Aristotle.

Among the Greeks there were two further kinds of introduction to philosophy or — since the study of philosophy began with logic — to the logic of Aristotle. In the one which preceded the *categories*, *Προλεγόμενα τὰς κατηγοριῶν*, ten questions were put (among them: Whence came the names of the different "philosophical schools"? What is the division of the works of Aristotle?) to which a brief reply was given. Among the Arabs, we still find an introduction of this kind in a little work by al-Fārābī, *Risāla fī ma' yunbaḥḥ al-yunbaḥḥ al-ḥikmī fī 'l-ḥikm al-Falāfi* (ed. Schmoeckers in his *Decem phil. arab.*). The other kind of introduction, the prototype *Προλεγόμενα τὰς ἐπιστημῶν* of which is given by the pupil of Proclus, Ammonius Hermiae, was introductory to the *logos*. In the first part definitions were dealt with, in the second divisions of philosophy. The Arabic treatises on the division of the sciences go back to this kind of introduction which they further developed. We still possess from the pen of the two of the greatest Arab philosophers, al-Fārābī and Avicenna, such treatises on the divisions of the sciences. Avicenna's entitled *Maḥallat fī Taḥḥīṣ al-ḥikm wa 'l-'Ulūm* was printed at Constantinople

among the *Tis' Rasid* *fi'l-'Ilm* wa *'l-Tashfi*. For the manuscripts, the publication — in a little review, *al-'Irfan*, in 1921 at Saida (Syria) — and the emendation of the text of al-Fārābī, *Kitāb Iqāṣ' al-'Ulūm*, cf. the excellent study by M. Bouyges S. J. in the *Mélanges de l'Université St. Joseph*, vol. ix, fasc. 2, Beirut 1922. These two treatises were translated into Latin and that of al-Fārābī in particular, with the Latin title of *De Scientiis* since it was incorporated almost completely into the *De divisione philosophiae* of Gundessalimus, had a great influence on the European scholars of the middle ages.

There were three opinions among the Greek logicians as to the relationship of logic to the system of philosophy: 1. To the Peripatetics, logic was simply a methodology, an introduction to philosophy; 2. except for its integral realism the structure of reality is in conformity with the structure of the mind; the rules of logic therefore deal with realities themselves and logic would then be a true part of philosophy; this was the opinion of the Stoics and especially of Plotinus, *Enn.*, I, 5, 3; 3. the combination of these two views in several Neo-Platonists; logic was at the same time an introduction to and a part of philosophy. Among the Arabs these three points of view were also represented (cf. Kharrāzī, *Kitāb Mafāṭih al-'Ulūm*, ed. van Vloten, p. 132) but the Peripatetic view was in the majority. The third view is found, for example, in Avicenna (cf. *Logica*, f. 2a, Venice 1508).

Logic, according to the Arab logicians, leads to a knowledge of the unknown from the known (cf. Aristotle, *Post. Anal.*, at the beginning) but its supreme object, according to them and the later Greek commentators, is that, by making us distinguish good from evil, it can guide us to the greatest perfection of soul and the greatest happiness.

Although, on certain points in logic, there were differences among the Arab Aristotelians, they agreed on the main lines and even Averroes, who frequently attacks his predecessors with vigour, in other passages of his works often expresses his support of their views that have been disputed; further, the solutions of problems in the Aristotelians and perhaps in other philosophers also sometimes consist of formulae, the meaning of which on examination is not always quite clear. I may here note some general points which are connected with the great problems of Metaphysics.

As for Aristotle, knowledge for the Arab logicians is a representation, an image of reality; there are in the soul resemblances of things (*quadrata, angula*), concepts, which in judgment are put together. According to this conception — a contradictory conception since it at the same time affirms and denies the knowledge of reality — thought would never be in contact with reality. Naturally implicit or explicit, this contact is often affirmed by Aristotle. A curious example of the conception of knowledge as an image, but in which at the same time the contact with reality is openly affirmed, is found in the theory of the duality of existence, a theory which the Arabs took over from the Greek commentators. The ten categories have a double existence, according as they are found in the outer world or as images in the soul and the word existence has therefore two meanings: 1. reality or objective existence

and 2. subjective existence of the soul. The intelligence may direct itself in an *intentio prima* (*qawm sirq*) towards the exterior world of which the highest kinds are the ten categories, but it can turn inwards upon itself in an *intentio secunda* (*qawm idr*), upon its concepts, of which the highest kinds are the five "voices" of Porphyry. Everything has an existence, if not in the exterior world, at least in the soul. This theory gives rise to difficulties: in the first place the term "existence" becomes ambiguous; secondly, since the negation of each thing exists in the soul, "what is not in the soul" must exist in the soul. It is particularly in the *Kalām* [q. v.] notably among the Ash'aris and probably under the influence of Stoic discussions on the existence or non-existence of the "not things" (*corra*) that the existence of concepts like the impossible and the negative has been discussed. The Arab Aristotelians were very often content to admit a concept "thing" (*shay*), the *ei* of the Stoics) more general than being, without paying too much attention to the fact that by this they were contradicting the thesis that everything is. For the rest, in the Aristotelian philosophy the concept of existence or of being gives rise to grave difficulties; it was much discussed in Islām, not only among the philosophers but also for the metaphysical questions connected with it among the theologians and the mystics. Aristotle had already affirmed (e.g. 1040, b 18) that existence or being is neither kind nor substance and the Arab philosophers al-Fārābī, Avicenna, Ghazālī and Averroes supported this view with the stereotyped reasoning that existence cannot express the essence of things, since being man implies being animal, being a living body, being a body etc., but it does not at all imply that man is being. On the other hand being (*wāw*) and substance (*shay*) are synonyms in Aristotelian philosophy. How are these two views to be reconciled? Avicenna says, as the theologians had already done before him, that only in God substance (being) and existence coincide; for the other substances, existence must be added to them as an accident. For Averroes on the other hand, as before him for the Ash'aris, being is always substance and never accident and he says that in judgments, in which being is predicated and thus apparently an accident, as when one says "substance is", "is" is an *intentio secunda*.

As to the theory of ideas, the Arab logicians deny, with Aristotle and using his own arguments, the separate existence of the universals, but admit with Plato their *supra-sensible* existence. This is the theory very prevalent in the last period of philosophy (in the Middle-Platonism, Neo-Pythagoreanism and Neo-Platonism) according to which ideas or universal forms exist from eternity in God. The intelligibility of things comes from this, that their cause is an intelligence; as the idea of the statue in the soul of the sculptor is the cause of the existence and intelligibility of the statue, so the intelligence of the creator of the world is the cause of the intelligibility of natural things. Avicenna expressed this theory by the formula that the Universe is *ante multitudinem* (in multiplicitate) in things and *post multitudinem* (in our soul). It is the second element in this formula "in multiplicitate" that offers a difficulty (a difficulty already found in Aristotle): how to conceive of the existence of universals in things which are themselves individuals? Often a conceptualist or nomi-

malist tendency is seen in the Arab Aristotelians; it is explicitly stated that the universal is only found in the mind and following Aphrodisias the forms in matter, the *forma in materia*, are regarded as individuals. But since in the system of Aristotle, forms are universals by definition, contradiction cannot be avoided, and the theories of the universals among the Arab philosophers are often very complicated and very obscure. Another nominalist or subjectivist tendency is found in their conception of the relation, which they call — with the Stoics — "what the mind puts into things". But it is the theologians who under the influence of materialist, nominalist and sensualist Stoicism have developed a nominalist system which only admits atomic and individual facts without a connection, in which all relation is regarded as subjective or even non-existent.

The ambiguous manner in which he deals with the concepts "possible", "impossible" and "necessary" gives rise in Aristotle as well as in the Arab logicians, who follow their master faithfully, to grave difficulties. Aristotle (*Prior Analyt.*, 32a, 23–25) — like the Arab logicians (cf. Avicenna, *Ishārāt*, ed. Forget, p. 34) — distinguishes two aspects of the concept of the possible; the possible is the negation at once of the impossible and of the necessary, but he does not always observe these two aspects and thus the necessary and the actual are considered as possible since what happens is not impossible. On the other hand, the actual is considered as the necessary, since what happens, happens necessarily; and although the definition of the possible is "what may or may not happen", for Aristotle "possible" is also "what will happen" since what never happens is not possible. These contradictions are occasioned by the fact that the problem which is at the basis of all this, that is to say, the objectivity or subjectivity of the possible and of the necessary, is differently treated by Aristotle. Aristotle hesitates between determinism and indeterminism. Of two future events, he says in the *Hermetica* that one of two will be true, but which is not determined in advance. He says that necessity does not govern the celestial world and that the sublunar world is the reign of contingency; he also says that God alone is absolutely necessary, that all the rest is hypothetically necessary, that is to say, contains an element of contingency. On the other hand, everything is caused, and goes back necessarily to a first cause. All these contradictions are found among the Arab Aristotelians. The Mutakallimūn, who, like the Stoics, wish to exclude the possible from reality (but they sometimes regard, like certain Stoics, the "possible" and "necessary" as both subjective, thus affirming that everything is possible) have with justice declared that if there is a necessary cause, the effect of it must also be necessary and that there is therefore no contingency in the world. Averroes in his polemic against Ghazālī seems to admit the justice of this argument but elsewhere he repeats all the theories of his master.

Although Ghazālī confesses that theology, while opposed to the metaphysics of the philosophers cannot however deny the evidence of their logical technique, certain arguments of Greek scepticism against logic are sometimes repeated by the Mutakallimūn. Definition is, they say, not possible, because by the particular one cannot reach the

universal, and the syllogism is a *petitio principii* since the conclusion is already contained in the major premiss. These arguments are justified against Aristotelianism, regarded as an empirical theory which sets out from the particular fact. There is however a rationalist tendency in Aristotle and the Arab logicians; they admit that the intelligence can at once know first principles and that without induction from particular facts it can grasp relations between universals. But when the Mutakallimūn say that knowledge and the Universal cannot give the truth, since according to the definition of truth, agreement must exist between true knowledge and reality, and knowledge is universal and reality individual, they reveal by this argument one of the greatest contradictions in Aristotelianism. Averroes tried in vain to refute it.

MANUF, name of two towns, in the region between the two main Nile arms called al-Djizra, generally distinguished as Manūf al-'Ulyā and Manūf al-Sufīa. The latter was situated on the right bank of the western Nile arm, while the former lay more to the east on a smaller canal. Both are described by the geographers as large towns, surrounded by fertile districts and inhabited by wealthy people, especially Manūf al-'Ulyā, where, according to Ibn Hawkal (p. 92), there resided a governor. The *ḥara* of Manūf al-'Ulyā is often called the *ḥara* of Damsis and Manūf, while the *ḥara* of Manūf al-Sufīa is designated as Tawwa and Manūf (cf. e.g. al-Maqrī, ed. Wiet, I, 307). Both the ancient towns have decayed since the tenth century; Yāqūt only knows a village of that name. The name has survived, however, until our day, in the name of the province al-Manūfiya; the capital of the *mudiriya* of his name is now Shibū al-Kawm, and the modern Manūf is a provincial town, situated to its south-west.

Manūf al-'Ulyā is known in Greek sources as *Μανύφ* & *αἰμα*, the Coptic name being Panouf Rū; the other Manūf is not mentioned in Greek documents and is called in Coptic Panouf Dīst.

(J. H. KRAMERS)

MÄPILLAS (Moplahs), a group of Muham-madans, of mixed Arab and Hindu descent, on the west coast of Southern India, numbering 4,099,453 according to the Census of 1921. Their name is said to be derived from the Malayalam *mā* ("great") and *pilla* ("child"), an honorary title originally bestowed upon all foreigners and

first applied to Christians, Jews and Muslims, but now confined to the last; this derivation, however, is disputed (Thornton, p. 460-461). They owe their origin to Arab merchants, who were attracted to this coast by the trade in spices, ivory, etc.; settling in various commercial centres, they intermarried with the natives of the country and added to their numbers by proselytising; but fresh accessions of the Arab element having ceased long ago, the Mappillas now approximate to the aboriginal type and exhibit no signs of any admixture of foreign blood. The earliest date of their settlements is uncertain, and the legendary accounts given by the Mappillas themselves are of no historic value (Zain al-Din, p. 21-25). The foreign traders appear to have been encouraged by the Hindu rājās, who made use of them to man their fleets, and by the beginning of the xvth century the Mappillas were estimated to have formed one-fifth of the population of Malabar (Barbosa, p. 310), but the arrival of the Portuguese in this part of India checked the growth of Muslim power and ruined the Arab trade. The Mappillas are still successful traders, especially on the coast; inland, many of them are agriculturists. There are both Sunnis and Shī'is among them; the former belong to the Shāfi'ī school. Their religious leaders are called Tangal (an honorific plural of the personal pronoun, commonly used in addressing superiors) and are treated with profound respect; many of them receive their training in a college attached to the Dhamā'at mosque in Ponnāni, the chief centre of their religious organisation; the Tangal of Ponnāni is an Arab who claims descent from the Prophet; in accordance with local custom he inherits his sacred office in the female line, i.e. his nephew and not his son succeeds him.

The history of the Mappillas is full of incidents of fanaticism and turbulence. In 1524 they attacked the Jews in Cranganor and massacred them without mercy, so that in 1565 the remnant of them fled into Cochin, where they founded the Jewish settlement that survives to the present day (Zain al-Din, p. 50-51; Francis Day, p. 351-352). The Mappillas also persuaded the Zamorin of Calicut to expel the Syrian Christians from his dominions (Francis Day, p. 367). Even their co-religionists found them to be turbulent subjects; they joined the Hindus in fighting Haidar 'Alī (q. v.) after he had extended his power over the Malabar coast, and they rose in rebellion against Tipū Sultan (q. v.) in 1785, and frequently plundered his territories (Francis Day, p. 368). During the last hundred years as many as 51 fanatical outbreaks have taken place among them, especially in the Ernad sub-division of the district of Malabar. Some Mappillas generally begin by murdering a Hindu landlord and then seek martyrdom by slaying kinsmen; others join them, after divorcing their wives, and clad in the white robes of the martyr (*shahīd*, q. v.) go out to die fighting against the infidel, with a complete contempt for death. They desecrate and burn Hindu temples, and forcibly circumcise such Hindus as they do not murder. Some of these outbreaks appear to have been stimulated by agrarian discontent at the oppressive action of Hindu landlords, but the last (in 1921) was entirely political in character and was excited by the Khilāfat movement; it differed from all preceding ones in its wide ex-

tent and clear evidence of systematic preparation and organisation; the outrages committed upon Hindus were of a specially revolting character.

The Mappillas of South Malabar generally observe Muhammadan law; those of North Malabar follow the local Marumakkattayam system of inheritance, according to which the sons of a man's sister inherit his property, and his wife is not regarded as a member of the husband's family but resides in her mother's home, and only receives periodical visits from her husband. On the other hand, a man's self-acquisitions usually descend to his wife and family in accordance with Muhammadan law.

The Mappillas speak the Malayalam language, but use a modified form of the Arabian script in writing it. The majority of them are illiterate, and few only can read and write. Their literature is mainly composed of songs descriptive of religious war, and they are fond of singing them in order to stir up fanatical zeal. Their mosques are quite unlike those of other Muhammadans, having no minarets and often consisting of several stories, with two or more roofs; they often resemble Hindu temples in style, and in fact many Mappilla mosques were once Hindu temples.

Mappillas are also found in the Laccadive Islands, Ceylon, the Straits Settlements and Burma.

MARABUT. [See MURABUT.]

MARĀGHA, the old capital of Ādham-bā (q. v.).

Position. The town lies at a height of 5,500 feet above sea-level on the southern slope of Mount Sahand (11,800 feet high) which separates it from Tabriz (q. v.). This explains the very considerable difference in climate between the two towns which are only 50 miles apart as the crow flies (by the high road 80 miles). The climate of Marāgha is mild and rather moist (Hamed Allāh and Mocquenet, 1904). The plentiful water supply makes the vegetation rich. The fruit of Marāgha is celebrated in Persia and a good deal of it is exported to Russia via Astrakhan. The district is watered by the stream which comes down from the Sahand and then

turns west to Lake Urmiya which is 20 miles from Marāgha. The town is built on the left bank of the river Sāfi (Sof)-dai which then waters Bināb. A little distance to the east runs the parallel river Mardī-dai which waters the district to which Meequenem gives the name Pahindur (Bayandur?); on the left bank rise the heights of Mandilur (= with head bound). The next stream is the Lellān which flows into the Dīghān (cf. SAWD-J-BULK). The rivers farther east (Kasānghū and its sources which water the Haghtarūd district) belong to the system of the Safid-rūd [q. v.], i. e. the basin of the Caspian Sea.

From the geographical point of view, Marāgha is quite independent of Tabriz. It lies a little off the great road from Tabriz to Kirmānshūh which runs nearer Lake Urmiya (via Bināb). The direct bridle-path Tabriz—Marāgha by the passes of the Sahand is only practicable in summer. There is also a direct route along the Sahand on the south and southeast side, joining Marāgha to Ardabil and Zandjān. This road has always been of importance whenever Marāgha was the capital of Ādharbāidjān. The important place on the route was Kālarā (cf. below).

At the beginning of the 19th century, Marāgha had 6,000 families (*Bastin al-Siyūhāt*). In 1298 (1880) it had 13,259 inhabitants of whom 6,365 were men and 6,394 women (H. Schindler). Meequenem (1904) gives Marāgha 15—20,000 inhabitants.

At the present day the inhabitants speak Adharb. Turkish but in the 19th century they still spoke "arabised Pahlavi" (*Nawāst al-Fānuš*; *pahlavi-yi mū'arrāf*) which means an Iranian dialect of the northwestern group.

The walls of the town are in ruins. Its gates have the following names: Ahmadi, Kān-Khāna, Akdāsh, Pul-i Bināb (or Gilāshik) and Hādīsh-nīzā. The quarters are: Agha-beg, Meldān, Darwāza, Sālār-Khāna.

Prehistory. The valley of the Mardī-dai is famous for its deposits of fossil vertebrates discovered by Khanykov in 1852. Excavations have been conducted by Goebel (Russia), Straus, Rodler, Pohlig (Austria), Günther (England) and Meequenem (France). On the Mardī-dai have been found remains of the hippopotamus, of the rhinoceros etc. dating from the period before the eruption of the volcano of Sahand. Cf. J. F. Brandt, *Über die von A. Goebel . . . bei der Stadt Maragha gefundenen Säugethierreste, Denkschr. d. Naturforschender Vereins in Riga*, 1870, and the bibliography in Meequenem, *Contribution à l'étude du géomorphisme des vertébrés de Maragha*, Paris 1908; cf. another article of the same author and title in *Annales de paléontologie*, 1924, p. 133—160.

The name. According to Balādhuri, the town was at first called Akāf-rūd (Ibn al-Fakih, p. 234—Akāf-rūd; Yāqūt, iv. 476; Afrāsh-rūd). This name which means in Persian the "river of 'Abdūh" recalls very much the name of the town *ṛz* *ḥāḥāra* which Mark Antony besieged in this region on his campaign against the Parthians in 36 B.C. (Plutarch, *Vita Antonii*, ch. xxviii, Paris 1864, p. 1113 and Pseudo-Appian, *Parthica*, ed. Sweighamer, Leipzig 1785, iii. 77, 99). It has long been supposed that the names *ḥāḥāra* in Strabo xi, ch. xiii and Index, p. 935; *ḥāḥāra*, Ptolemy, vi, ch. ii, 105; *ḥāḥāra*, Dio Cass., xlix. 25 are variants of the same name which was probably

that of the ancient capital of Atropatene; cf. Ritter, *Erdkunde*, ix, p. 770. If the identification of *ḥāḥāra* (summer capital, Strabo) with Takht-i Sulaimān suggested by Rawlinson has been accepted (cf. Hoffmann, *Auszüge aus syrischen Akten*, p. 252; Marquart, *Iranische*, p. 108; William Jackson, *Perse, Past and Present*, p. 136), the identification of *ḥāḥāra* is still uncertain. On general principles it is improbable that a town like Marāgha so advantageously situated by nature was not in existence in Roman times as the ancient name of Marāgha increases the probability of the identification *ḥāḥāra* = Marāgha (of course with a reservation as to the exact site of the ancient town).

A place-name Marāgha is mentioned in Arabia (Yāqūt) and a little town of the same name is in Egypt near Tanja. The etymology "place where an animal yells" (from *m-r-gh*) proposed itself to the Arabs here, but in Ādharbāidjān (cf. also the village of Marāgha near Abarkuh, *Nushat al-Kulūb*, p. 122) the name is rather a popular Arab etymology of some local name. It is to be observed that Ptolemy, vi, ch. 2, calls Lake Urmiya Margiane (*μαργα ῥε; Μαργαῖος; Μαρῆς*) and gives the same name to the country along the coast of Assyria. Lastly Marquart in *Iranische*, p. 143, 221, 313 retains the variant *Maprag* but *Maprag* seems also to be based on a good tradition (cf. Ptolemy, ed. Wilberg, 1838, p. 391).

The Arabs, Marāgha must have been among the towns of Ādharbāidjān conquered by Muḥammad b. Shu'ba al-Thakafi in the year 22 (Balādhuri, p. 325; Yāqūt, *Kilāb al-Bulāḥ*, p. 271). Muḥammad b. Muḥammad returning from his expedition to Māhān and Gilān in 123 (740) (cf. Yāqūt, *Historia*, ii. 365) stopped here. As the place was full of dung (*shirgin* < Pers. *shirgin*) the old village (*harya*) was given the name of Marāgha (cf. above). Marwān did some building there. The town later passed to the daughters of Harun al-Rashid. On the rebellion of Waḥid b. Rawwād, lord of Tabriz [q. v.], Khuzaima b. Khāzim who was appointed governor of Ādharbāidjān and Armenia (probably in 187; cf. Vassmer, *Chronologie armenischer Armenien*, *Zap. Kolleg. vostokovedov*, 1925, I. 397), built walls round Marāgha and put a garrison in it. When Bābak rebelled in 201 the people sought refuge in Marāgha. Ma'mūn sent men to restore the walls and the suburb (*rubad*) became inhabited again (Balādhuri, l. c.). In 221 Marāgha is mentioned as the winter-quarters of Aḥmad in his campaign against Bābak (Tabari, iii. 1186).

In 280 (893) the Saffid Muḥammad Aḥmad b. Diwād seized Marāgha from a certain 'Abd Allāh b. Ḥusain, who was killed (Tabari, iii. 2137; Mas'ūdi, *Murūj*, viii. 145). In 296 (908) the caliph confirmed Yūsuf b. Diwād in possession of Marāgha and the whole of Ādharbāidjān. A dithem is known of this year struck by Yūsuf at Marāgha (Vassmer, *O monastikh Saffidov*, Baku 1927, p. 14). According to Ibn Hawqal, p. 338, there was at Marāgha a military camp (*ḥawāṣir*), a governor's palace (*dār al-imārā*), a treasury (*khazāna*) and government offices (*damman al-nahiya*) but Yūsuf razed the walls of Marāgha and transferred the capital to Ardabil (cf. Ḥakīmī, p. 181). Marāgha is only mentioned as the place where the last Saffid Abu Ḥ-Mas'ūd al-Fath was killed in 347 (929) (Arth, *Tabari continuatus*, ed. de Goeje, p. 145).

The Dailamīs. In 332 (943) (during the rule

of the Dailami Mustafarids) the Russians (*Kur*) had taken Bardha's [q. v.]. Ibn Miskawayh (*G.* *M.S.*, vi, 100) speaks of the diseases which decimated them because they ate too much fruit in Marāgha. This reference to Marāgha is quite unexpected in the text and Margolouth has rightly proposed to read *مراك* in place of *مراك*. A coin struck at Marāgha in 337 by Muhammad b. 'Abd al-Razzāk is a record of the brief conquest of Adharbāijān by the general of the Būyid Rukn al-Dawla (Vasmer, *Zur Chronologie d. Gestaften*, *Islamica*, iii/2, 1927, p. 170). Of 347 we also have dirhams of Marāgha in the names of the two sons of the Dailami Marzubān, Ibrahim and Iḥsān (*ibid.*, p. 172).

The Rawwādi and the Saldjūks. After the disappearance of the Dailamis we find in Tabriz the family of Rawwādi Kurds who seem to have been related with the Mustafarids by marriage only. On the other hand, it is very likely that the Rawwādi are the descendants of the Arab Rawwād al-Azdi, lord of Adharbāijān (Balādhuri, p. 331) who became assimilated by their neighbours in Adharbāijān. The best known of these Rawwādi is Wahsūdān b. Mamlān (= Muhammad; the change of *d* to *l* in Kurdish is common) who is mentioned between 420 and 446 (Ibn al-Athir, ix, 279, 351, 410) and who in addition to Tabriz possessed other strongholds in the mountains (Sahūd). When in 420 the Ghuzs reached Marāgha and executed there a great number of Hahhādī Kurds, the latter united under Wahsūdān and drove out the Ghuzs (Ibn al-Athir, ix, 270-272). This incident shows that the district of Marāgha was within the sphere of influence of Wahsūdān. In 446 Wahsūdān became a vassal of the Saldjūks, but Ibn al-Athir, *ibid.*, p. 410 says nothing about the extent of his possessions around Sahūd.

In 497 the peace between the sons of Malīk Shāh, Barkiyaruk and Muhammad was signed near Marāgha and in 498, Muhammad visited Marāgha.

The Ahmādī. In 505 we have for the first time mention of the Amir Ahmādī b. Ibrahim b. Wahsūdān al-Rawwādi al-Kurdī, lord of Marāgha and Kūral (Kūlāzar) (Ibn al-Athir, x, 361). He was the founder of a little local dynasty, which lasted till about 624. We know very little of the history of the Ahmādī which has never been closely studied.

Ahmādī was certainly the grandson of Wahsūdān b. Mamlān of Tabriz (cf. above) and this explains the insistence with which the atābegs of Marāgha tried to retake Tabriz. Only intransmissible hereditary rights can explain the strange fact of the presence of a Kurd among the amirs of the Saldjūks. The name Ahmādī is a peculiar formation; the name of Mahmādī, a village to the south of Marāgha, belongs to the same category of diminutives. The Ahmādī however very soon adopted Turkish names.

Ahmādī with a large army took part in the Anti-Crusade of 505. During the siege of Tell Hāshir, Joscelin came to terms with him (*infirmitas*) and he withdrew from the town (Kamāl al-Dīn, *Tārīkh Ḥalab*, *Rec. des hist. des croisades*, iii, 599). Ahmādī soon abandoned Syria entirely, for he coveted the lands of Sukmān Shāh: Arman who had just died. We know that Sukmān had extended his sway over Tabriz [q. v.] and the

reference is probably to this town. According to Sibṭ al-Jawzi, *ibid.*, p. 356, Ahmādī had 5,000 horsemen and the revenues from his fiefs amounted to 400,000 dinars a year. In 510 (or 508) Ahmādī was stabbed in Baghdad by the Isma'īlīs to whom he had done much injury (*ibid.*, p. 356; Ibn al-Athir, x, 361).

Aḳ-Sunḳur I. In 514 Malik Ma'sūd, governor of Mawālī and Adharbāijān, rebelled against his brother Mahmūd and gave Marāgha to his atābeg Kasīm al-Dawla al-Buzurjī but the rebellion collapsed and in 516 Aḳ-Sunḳur al-Ahmādī (client of Ahmādī?), lord of Marāgha, who was in Baghdad, was authorised by Sulṭān Mahmūd to return to his fief. As the amir Kun-toḡdī, atābeg of Malik Tughril (lord of Artān; Ibn al-Athir, x, 399), had died in 515, Aḳ-Sunḳur expected to get his place with Tughril. The latter ordered Aḳ-Sunḳur to raise 10,000 men in Marāgha and set out with him to conquer Ardabil in which they failed. In the meanwhile Marāgha was occupied by Dīyāsh Beg, sent by Sulṭān Mahmūd. The Georgian Chronicle (Brosset, i, 368) mentions under 516 (1123) the defeat of Aḳ-Sunḳur (whom he calls 'Aghsunthul, Atābeg of Ran' = Artān) during a demonstration against the Georgians carried out by Tughril from Shirwān. In 523 Aḳ-Sunḳur took a part but not a very active one in the suppression of the intrigues of the Mas'yūdī Dubais. In 524 he was one of the promoters of the election of Sulṭān Dāwūd, whose atābeg he was. In 526 Tughril, uncle of Dāwūd, defeated the latter and occupied Marāgha and Tabriz (al-Bundārī, cf. Houtma, p. 161). Dāwūd along with his uncle Ma'sūd and Aḳ-Sunḳur sought refuge in Baghdad. With the support of the Caliph and the assistance of Aḳ-Sunḳur, Ma'sūd reoccupied Adharbāijān. After the capture of Hamadān, Aḳ-Sunḳur was killed there by the Isma'īlīs (527) instigated by Tughril's vizier (al-Bundārī, p. 169).

Aḳ-Sunḳur II. The name of Aḳ-Sunḳur's son is transmitted in different forms. Ibn al-Athir, xi, 166 and 177, calls him Aḳ-Sunḳur (II); cf. also *Tārīkh Ḥalab*, p. 472. Al-Bundārī, p. 231, calls him al-Amīr al-Kābir Nuḡrat al-Dīn Khāshbek and, p. 243, Nuḡrat al-Dīn Arslān Aḥa (cf. al-Kāshghari, *Divān Luḡat al-Turk*, i, 80). The *Kūsh al-Sulṭān*, p. 241, 244, 262 gives him the name of Atābeg Arslān Aḥa. Al-Bundārī treats him as an equal of the great amir Ḥdīq [q. v.] whose family finally triumphed over the lords of Marāgha. Aḳ-Sunḳur II's adversary was the amir Khāshbek b. Būlūḡ-eri(?) who was the favourite of Sulṭān Ma'sūd and sought to establish himself in Artān and Adharbāijān. This Khāshbek had besieged Marāgha in 541 (al-Bundārī, p. 217). In 545 Sulṭān Ma'sūd took Marāgha and destroyed its walls (*ibid.*) but a reconciliation later took place between Khāshbek and Aḳ-Sunḳur II under the walls of Rūyto-dū (cf. below). The execution of Khāshbek in 547 (1153) by Sulṭān Muhammad alienated Ḥdīq and Aḳ-Sunḳur II and they installed Sulaimān on the throne of Hamadān. Muhammad on his return to power sent an embassy to restore good relations with the two lords of Adharbāijān (*ibid.*). Peace was concluded in 549 and the two great amirs shared Adharbāijān between them (al-Bundārī, p. 243). On his deathbed (554) Muhammad entrusted his young son (Malik Dāwūd, cf. the genealogical tree in the *Kūsh al-Sulṭān*) to Aḳ-Sunḳur. As Ḥdīq was furthering the interests

of his wurd Sultān Arslān, Pahlawān b. Ildiguz advanced against Ak-Sunqur II but the latter with the help of Sūb-i Arman defeated him on the Safid-rūd. In 556 Ak-Sunqur sent 5,000 men to the help of the governor of Ray, Inandj, who was fighting Ildiguz. The latter gained the upper hand and in 557 Ak-Sunqur II took part in the expedition of Ildiguz against the Georgians (Ibn al-Athīr, xi, 189). In 563 however, Ak-Sunqur II obtained recognition for his ward from Baghdad. Pahlawān b. Ildiguz at once besieged Ak-Sunqur in Marāgha (*ibid.*, p. 218) but a peace put an end to hostilities.

In 564 the amir of Ray, Inandj, was killed (Ibn al-Athīr, xi, 230). The *Ta'rikh-i Gūda*, p. 72, seems to suggest that the rebellion in Marāgha of Kutlagh (?), brother of Ak-Sunqur (II?), was due to Inandj's influence. He was punished by the Atābeg Pahlawān b. Ildiguz and Marāgha was given to his brothers 'Alā' al-Dīn and Rukn al-Dīn.

Under 570 Ibn al-Athīr (xi, 280) mentions at Marāgha Fakr al-Dīn, son of Ibn Ak-Sunqur (i.e. son of Ak-Sunqur II), to whom his father had bequeathed his estates. Pahlawān besieged the fortress of Rūym-diz and Marāgha. On this occasion peace was concluded on the cession of Tabriz to the family of Ildiguz. This important detail shows that down to 570 the hel of the Ahmadii comprised all the country round mount Sahand including Tabriz (q.v.).

In 602 the lord of Marāgha 'Alā' al-Dīn came to an agreement with the Atābeg of Arbil Muḥaffar al-Dīn Gök-būri to deprive the Ildiguzid Alā' Bākr of Āgharibūdjan on the pretext that he was incapable of ruling. From Marāgha they marched on Tabriz but Alā' Bākr called to his aid the former slave of his family Ay-doghūsh (cf. Delicoury, *Recherches sur 4 princes d'Hamaouan*, 7-8, 1847, i, 160). Gök-būri returned to his own lands and Alā' Bākr with Ay-doghūsh came to Marāgha. 'Alā' al-Dīn had to surrender the fortress which was the bone of contention but was given in compensation of the towns of Urmīya and Ushūl. In 604, 'Alā' al-Dīn whom Ibn al-Athīr, xii, 337, 382, here calls Kāza-Sunqur died and left one son, a minor. A brave servant of 'Alā' al-Dīn assumed the guardianship of the child but the latter died in 605. Alā' Bākr then took possession of all the lands of the Ahmadii except Rūym-diz where the servant already mentioned had entrenched himself with his late master's treasures.

It is not clear if 'Alā' al-Dīn Kāza-Sunqur is identical with the brother of Ak-Sunqur II mentioned in 564. For the date of his accession and his importance we have a hint. According to the preface of the *Haft-pānāh* of Nīshāpūr (q.v.), this poem (finished in 593) was composed at the request of 'Alā' al-Dīn Krb(?) Arslān (the Rūm and the Rūm paid him tribute [gharāḡ]); (the Georgians suffered reverses at his hands). This *minshūh* was definitely identified by Rieu, *Catalogue*, ii, 567 and Supplement, 1895, p. 154 with 'Alā' al-Dīn of Marāgha. Nīshāpūr mentions two sons of 'Alā' al-Dīn, Nūrat al-Dīn Maḥammad and Ahmad, but to reconcile this with Ibn al-Athīr we should have to suppose that both died before their father.

The family of the Ahmadii was continued for some time in the female line. In 618 the Mongols arrived before Marāgha and the town was stormed

on the 4th Šafar. The Mongols sacked and burned the town and massacred the inhabitants (*ibid.*, xii, 246, 263) but the lady of Marāgha (daughter of 'Alā' al-Dīn?), who lived in Rūym-diz escaped the catastrophe.

Djalāl al-Dīn. In 622, the Khwārizmshāh Djalāl al-Dīn came to Marāgha via Daḡaḡa. He entered it without difficulty for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawi, *Sirat Djalāl al-Dīn*, ed. Houdas, p. 110). Djalāl al-Dīn tried to restore the prosperity of Marāgha; cf. Ibn al-Athīr, xii, 280, 282.

In 624 (1227) while Djalāl al-Dīn was in the Persian 'Irāk, his vizier Sharaf al-Mulk was forced to reconquer Āgharibūdjan. In the course of his campaign he besieged Rūym-diz, the lady of which was a grand-daughter (*min kafaḡat*) of the Atābeg 'Alā' al-Dīn Karāba (?) (Nasawi, p. 129). This princess was married to the deaf-mute Khamūsh, only son of the Eldiguzid Özbek. The Atābeg Nūrat al-Dīn, son of Khamūsh, mentioned incidentally by Ġuwāint, *G.M.S.*, ii, 242, must have been his son. As a way out, she offered her hand to Sharaf al-Mulk. Djalāl al-Dīn suddenly arrived from the 'Irāk and married the princess himself. Rūym-diz was given to a certain Sa'd al-Dīn. The citadel contained some thousands of houses (*athn min dīn*) occupied by the former inhabitants of the town (*judanā*). Sa'd al-Dīn decided to evacuate them but as a result of his tactlessness the fortress closed its gates again (to Sa'd?) (Nasawi, p. 129, 157). Ibn al-Athīr, xii, 322 seems to deal with the course of these events. Under 627 he says that the troops of Djalāl al-Dīn besieged Rūym-diz for some time. The fortress was about to capitulate when some malcontents summoned the assistance of a Turkoman amir Sewindj (Sewij) of the tribe of Kaḡ-yawa. The domination of this chief and his relatives who succeeded him only lasted two years.

Rūym-diz. This fortress lay "near Marāgha" (Ibn al-Athīr, xii, 322). According to Zakariya Kawālī who gives a very accurate description of Rūym-diz, it was 3 farsakhs from Marāgha. Its proverbially impregnable position (*dariba ḡ-ḡisnāṭiḡha al-muḡḡa*) suggests that it was built on the side of Sahand. The Russian map marks on the Sofi-dai 10 miles (c. 3 farsakhs) above Marāgha a place called Vay-shāhār (in Turkish = "summer-town") besides which two streams flow into the Sofi-dai (on the left bank) and between them is written the corrupted name "Res or Erlā". It is very probable that this is the site of the famous fortress on either side of which there was a stream (*nahr*); for Res one should read Diz i.e. Rūym-diz. The date of the final destruction of Rūym-diz is unknown. As late as 751 the Čobanid Aḡraf imprisoned his vizier there (v. Hammer, *Gesch. d. Islam*, ii, 337) but the *Nuḡat al-Kuḡūb*, in 740 (1340) only knows the other Rūym-diz, that of Sawālīn (there is still a Rūym-dizak 4 farsakhs N.E. of Ardabil).

Kāḡsara. Ibn al-Athīr, v, 340, calls Ahmadīl "lord of Marāgha and of Kūḡḡ". This last name (كوتب) seems to be a corruption of Kāḡsara (كولسرد) or Kūḡsara, a little town well known to the Arab geographers on the Marāgha-Ardabil road (10-12 farsakhs from Marāgha and 20-27 from Ardabil); cf. Ibn Khurdaḡbih, p. 120; Ku-

Annales, p. 213; *Iqbal*, p. 194; Ibn Hawqal, p. 252, in particular from his own experience talks of the importance of Kūlaara and its flourishing commerce. This place may correspond to the village of Kūlaṣpā "hill of cinders" (popular Turkish etymology) which lies on the Karanglu about 35 miles (c. 10 *farasakhs*) east of Marāgha. The fort of Kāf'a-yi-Zohāk notable ruins of which were discovered by Monteilh c. 15 miles below Kūlaṣpā (cf. Morier, *op. cit.*, p. 296), must have been a bulwark for Kūlaara and Marāgha against invasion from the northeast. Rawlinson, *J.R.G.S.*, 1841, p. 120 sees a Sassanian fortress in Kāf'a-yi-Zohāk.

The Mongols. Marāgha was definitely taken by the Mongols in 628 (Ibn al-Athir, xii. 324). After the taking of Baghdad in 656 (1258) Hūllāghū took up his quarters in Marāgha and ordered an observatory to be built there from the plans of Nāṣir al-Dīn Tūsī (who had as advisers four astronomers one of whom, Fakhr al-Dīn, was a native of Marāgha) (Rashid al-Dīn, ed. Quatremère, p. 324). The observatory was built on a fortified hill to the west of the town where only traces of foundations of the walls are still to be seen. According to Schindler's plan (1883), the levelled area on the hill measures 137 × 347 metres. On the observatory cf. Jourdain, *Mémoires sur les instruments employés à l'observatoire de Maragah*, in the *Magasin encyclop. bibliog. par A. L. Millin*, Paris 1809, vol. vi, p. 43-101 (transl. of an Arabic *risāla* belonging to the *Bibl. Nationale* and attributed to Nāṣir al-Dīn's colleague Mu'ayyid al-Dīn al-Ardi) and Ritter, *Reichkunde*, ix., p. 839-843. To contain his treasures Hūllāghū built a castle on the island of Shāhī 1-2 days distant from the capital. Here he was buried. On the fortifications of Shāhī cf. Tabari, iii. 1171. The handsome sepulchral towers of which there are four at Marāgha (Mequmem 1908) date from Hūllāghū or his immediate successors: 1. the one at the entrance to the bridge of Sālī-dāi is built of red brick on a square foundation and has a vaulted cellar (*Gunbad-i Kirmis?*); 2. similar, situated in the gardens to the south of the town on the road from Khānāgā; 3 and 4 near the old cemetery in the interior of the town; the octagonal tower No. 3 is of red brick overlaid with blue enameled faience (*Gunbad-i Kāhūd*) and No. 4 is round, covered with plaster which is decorated with arabesques (*Kūl-burdī* "Tower of the Ram"). There is a photograph of No. 1 in de Morgan (1894), p. 337 and Sarre, *op. cit.*, text, p. 15-16; of No. 3 in Sarre, *ibid.* and of 4 in de Morgan, *ibid.*, p. 340. H. Schindler claimed to have read on the *Gunbad-i Chāfī* (No. 2?) the name of Abū Bakr-i Sa'd-i Zangī (atabeg of Fārs, 623-658?). According to Sarre, No. 4 is later than 1550. The monuments require to be again studied on the spot. Lehmann-Haupt says that inscriptions can still be seen in their interiors.

The early Mongol Ilkhāns led a semi-nomadic life which explains the absence from Marāgha of any other kind of memorial. It was only with Ghāzān that a regular capital was built at Tabriz [q.v.]. Marāgha continued to be of some importance on account of its pastures and was a station on the road between Adharbāidjān and Mesopotamia. Its name continually appears in the history of the Ilkhāns. In 703 (1304) Uldjaitū received at Marāgha the ambassadors from the

Kā'an of China and installed at the observatory the son of Nāṣir al-Dīn Tūsī.

In 712 (1312) Kars-Sunkur, *amir al-umara'* of Aleppo, fearing the wrath of the Sultan of Egypt, Nāṣir, sought an asylum in Persia with Uldjaitū who gave him Marāgha. Ibn Baṭṭūṭa who tells this (l. 179) adds that this town was known as "Little Damascus" (*Dimichk al-saghira*). Kars-Sunkur died in 728 (1328) (d'Ohaon, *Hist. des Mongols*, iv. 699).

The Geographers of the Mongol period. Zakariyā Kāzwīnī (1275) seems to be personally acquainted with the town. According to him there were in the town memorials of the pre-Islamic period. He describes the mineral springs (near the village of Kiyāmat-ahūd) and a cave which must correspond to the *Chai-bāgh* visited by Morier, Lehmann-Haupt, Minorsky etc. Kāzwīnī also mentions the mountain of Zandjāhūn with a calcareous spring, the village of Dīnshāk (*Gundashak*) with a bottomless well (p. 350) and gives a description of Kūyān-dīr (p. 358).

The *Nashat al-Kullū* (written in 1340), G.M.S., p. 27 estimates the revenues of Marāgha paid to the treasury at 70,000 dinārs (Ardabil paid 85,000) and those of its wilāyat at 185,000 dinārs. The *tanah* of Marāgha comprised all the southern part of Adharbāidjān, in the north it was bounded by the *suman* of Tabriz, in the west by that of Khūi (Urmīya), in the south by the lands of Kurdistān (Urmīya) and in the east by 'Isk-i 'Adjam (Zandjān, Sadjān). All the lands now under the modern Sa'wī-būkhā [q.v.] were then ruled from Marāgha. As dependencies of Marāgha, Hamd Allāh gives the towns of Dih-i Khūshān (in popular Turkish Tashborghān) to the south of Tabriz, Lailān on the right bank tributary of the Dīghātū (cf. Rawlinson, 1841, p. 39; the ruins of Kāf'a-yi Bakhta) and Pasaw in Lāshidjān, in the valley of the Tigris (cf. SAWYR-DOUGLAS). The *suman* comprised six cantons (the names are much mutilated): Sarādjān (?), Niyādjān (?), Duzakhrūd (? of the mountain Duzakhrūd on the middle course of the Dīghātū), Gāwduḳ (at the confluence of the river of Lailān with the Dīghātū (the name is also read Gāwduḳ, Gāwduḳān. It is remarkable that Firdawsi (ed. Mohl, vii. 141, 151) mentions in these regions a Dagh-i Dūk and Kūba Dūk where Bahram Chāhin was defeated by Khurrawī), Bihistān (probably the district of Bāht on the Tawwā), Hasharūd (to the east of Sahand on the Karanglu). The district of Angurān on the Kizil-dān was also a dependency of Marāgha.

Christianity at Marāgha. In the Mongol period, Marāgha had become an important centre of Christianity. The celebrated Mār Bar Hebraeus (Jacobite *Maraphian*) lectured in 1268 on Euclid and in 1272 on Ptolemy in the "new monastery" of Marāgha; there he wrote the *Alfah al-Duwal*. When he died on July 30, 1286, 22 a sign of mourning the Greeks, Armenians and Nestorians closed their shops in the market-places (Assemani, *Bibl. Orientale*, ii. 266; Wright, *A Short History of Syrian Literature*, 1894, p. 267, 271, 276, 279). The history of Mār Yabballāh III (patriarch of the Nestorians [1281-1317], transl. Chabot, Paris 1895) contains valuable notes on Marāgha. Yabballāh rebuilds the already existing church of Mār Shalūt and built a house beside it. In 1289 Argūto had his son baptised in Marāgha. In 1294 the patriarch laid the foundations of the monastery

of John the Baptist $\frac{1}{2}$ of a farsakh north of Marāgha. After the accession of Ghāzān (1295) the persecution of the Christians began, instigated by the amir Nawrūz. The mob plundered the residence of the patriarch and the church of St. George built by the monk Rabban Šawmā (it had been furnished with articles from the portable church of Arghūn's camp). The patriarch sought refuge in the suite of the Armenian king Hātton. On his return to Marāgha, Ghāzān punished the fomenters of the troubles. In 1298 Yahbalāshā was confined in his rights. In Sept. 1301 he finished the monastery of St. John. His biographer and contemporary gives an account of the beautiful buildings, the numerous relics and riches of the monastery (Chabot, *op. cit.*, p. 133). The village of Dahli (?) to the east of Marāgha was purchased to serve as a *wāḡf* of the monastery (to the N.E. of the town there is still a village of Killa-kandi "village of the church"). Ghāzān and his successor Uldjaitū visited the monastery. Yahbalāshā died and was buried there in 1317.

On the south side of the hill of the observatory there are chambers carved out of the rock (3 rooms 12 feet high communicating with one another, and a corridor). Inside there are niches in the shape of altars. Local tradition sees a church in these (perhaps of the Sāsānian period); cf. Macdonald, Kinneir, H. Schindler, Lehmann-Haupt and Minsky, *Zap.*, xiv, 1947, p. 167.

After the Mongols. In 737 (1337) the Ilkhāyirid Šaiḡh Ḥasan inflicted a defeat on Tughl-Timūr [q.v.] near Marāgha (or at Hashtarūd). The pretender Muḥammad was buried at Marāgha in 738 (*Šarāf-nāma*, p. 315). Later the political struggles of the Turkmāns had their principal arena in the northern part of Ādharbāiḡān. In the same period the Kārdish elements of the districts south of Lake Urmia became consolidated and received reinforcements from the districts of Mawṣil (*Šarāf-nāma*, I, 288). The Mukri Kurd amirs extended their influence over Marāgha and even as far as Dih-Khwarāḡān. The Turks during their rule over Ādharbāiḡān included Marāgha with Talat and levied 15 *khawān* of gold per annum on it which caused its inhabitants to go away (*ibid.*, p. 294). In 1002 (1593) the name of the fortress of Saru-karḡān (demolished in 795 by Timūr; cf. *Zafar-nāma*, I, 628 and rebuilt by the Mukri) in the region of Marāgha often occurs in the *Šarāf-nāma*, p. 294—296; this name recalls that of the Sarū, the right bank tributary of the Diḡhātū.

During the second Ottoman occupation (1725) Marāgha was governed by 'Abd al-'Azīz Paṣhā; this administrative unit consisted of 5 *sandjaks*, of which 2 were hereditary and 3 granted by the government (v. Hammer, IV, 228; according to Celebi-zāde). In 1142 (1729) Nādir defeated the Ottomans at Miyanābād on the Diḡhātū and occupied Dimdū, Sawdī-būlāq, Marāgha and Dih-Khwarāḡān (Mandī-khān, *Ta'riḡ-i Nādir*, Tahriz 1284, p. 66; transl. Jones, I, 104). According to the recently discovered history of Nādir, the monarch transplanted 3,000 inhabitants from Marāgha to Kalāt (Berthold, in *Zap.*, xxv, p. 88).

The Mukaddam. As early as the time of Nādir the Turkish tribe of Mukaddam is mentioned as settled in the region of Marāgha (Macdonald, Kinneir: 15,000 men). Ahmad Khān Mukaddam played a considerable part in the affairs of Ādhar-

bāiḡān. Jaubert, *Voyage*, p. 160 knew him in 1805 as *beglarbegi* of Ādharbāiḡān under prince 'Abbās Mirza. In 1810 he exterminated the Bilbas chiefs whom he had invited to Marāgha [cf. Sawrū-muṣṣā]. According to Morier, *Second Journey*, p. 293, this patriarch was aged 90 in 1815 (cf. Brydges, *Dynasty of the Kajars*, p. 60). The governor of Marāgha Šamad-Khān, a partisan of Muḥammad 'Alī Shāh who besieged Tabriz in 1809, was of the family of Ahmad-Khān. At the present day the Mukaddam are concentrated round Miyanābād.

In 1828 Marāgha was occupied by Russian troops. In 1881, the Kurd invasion by Šaiḡh 'Ubadallāh reached the gates of Marāgha. The town was not taken but the whole country round was in ruins when H. Schindler visited it in 1882. During the war of 1914—1918, Marāgha was within the zone of the Russo-Turkish operations [cf. Tansiz].

Bibliography. In addition to the native sources quoted in the text: Sam'ānī, *Kifāy al-Aṣṣḡ*, G.M.S., xv, fol. 519r (he also derives the *niska* Marāgh from the clan al-Marāgh of the tribe of al-Ard); Ḥājjī Khalfā, *Djāhān-nūma*, p. 389; Ewliyā-Celebi, *Siyāhat-nāma*, IV, 333 (confused and of doubtful value); Zaim al-'Abidin, *Rustūn al-Siyāḡa*, p. 355.

The European descriptions of Marāgha (only since the sixth century) are not very numerous and do not exhaust the subject: Macdonald, Kinneir, *Geogr. Memoir*, London 1813, p. 155—156; Morier, *A Second Journey*, London 1818, p. 281—297 (Tabriz—Marāgha—Gultape [Kul-tape?]—Sarakand); Ker Porter, *Travels*, 1822, II, 493; Monteith, *Journal of a Tour*, J.R.G.S., 1833, p. 4 (Saland—Sarakand—Kul-ai Zohāk); Rawlinson, *A march from Tabriz*, J.R.G.S., 1841, p. 39 (Miyan-da-ah); Ritter, *Erdkunde*, IX, p. 828—852; Hoffmann, *Aussage aus syrischen Akten*, Leipzig 1880, p. 248 etc. (important historical and geographical notes); Houtum-Schladler, *Reisen im n.-w. Persien*, *Zeitschr. d. Geogr. u. Erdkunde*, Berlin 1883, p. 334 (cf. the article Marāgha in the *Encycl. Britannica*, 11th ed., 1911); De Morgan, *Mission scientifique*, *Études géographiques*, I, Paris 1894, p. 337—340 (several views); Zagnayer, *Une Révis d'Yazdwan*, Berlin 1905, p. 123—128; S. G. Wilson, *Persian Life*, London 1890, p. 71—80; Le Strange, *The Lands of the East*, Caliphate, p. 164—165; de Moccquennet, *Le lac d'Ourmiah*, *Annales de Géogr.*, 1908, p. 128—129; Lehmann-Haupt, *Armenien*, I, 1910, p. 208—216; de Moccquennet, *Contribution à l'étude du gisement des vertébrés de Marāgha*, in *Ministère Instr. Publique, Délégation en Perse, Annales d'Histoire naturelle*, 1/2, 1908, p. 1—79 (with a geographical introduction).

Cartography. Khanykov, *A map of Azerbaijan*, *Zeitschr. f. Allg. Erdk.*, Berlin 1862, map N° xiv; de Morgan, *Carte de la partie centrale du Kurdistan*, *Mém. scient. en Perse*, Atlas, Paris 1895; de Moccquennet, *Vernum occidental du Sahel, Esquisse de la Délég. Franç. en Perse*, Paris 1904, 1:400,000 (published separately; Russian maps 5 versta to pouce).

(V. MIKOLSKY)

MARAND (r.), a town in the Persian province of Ādharbāiḡān.

Position. The town lies about 40 miles N. of Tabriz, halfway between it and the Araxes (it is 42 miles from Marand to Ujūf). The road

from Tabriz to Khoi also branches off at Marand. A shorter road from Tabriz to Khoi follows the north bank of Lake Urmia and crosses the Mishowdagh range by the pass between Tasandj (q.v.) and Diyā al-Dīn. Marand, which is surrounded by many gardens, occupies the eastern corner of a rather beautiful plain, about ten miles broad and sloping slightly to the west. To the south the Mishow range (western continuation of the Sawālū) separates it from the plain of Tabriz and from Lake Urmia. The pass to the south of Marand often mentioned by historians is called Yam (Mongol = post-station). The pass between the plain of Marand and Tasandj (q.v.) takes its name from the village of Wāldiyān. To the east of Marand lies the wild and mountainous region of Karadja-dagh (capital: Ahur). To the north, the plain of Marand is separated from the Araxes by a range, a continuation of the central heights of the Karadja-dagh which is crossed by the defile of the Dūrādīs. The plain of Marand is watered by the river of Zūnūr, the southern arm of which called Zilhar runs quite near Marand. The combined waters of Zūnūr and Zilhar flow into the Kotar-dā (an important right bank tributary of the Araxes) about 20 miles N.E. of Khoi. The length of the Zūnūr is about 40 miles (Hamd Allāh Muttawfī: 8 farsakhs).

History. A lofty tell which rises beside the town is evidence of the great antiquity of this as an inhabited site; it must have existed in the time of the Vennic (Khald) and Assyrian kings. Its Greek name *Μαρενδία* is perhaps connected with the people *Μαρενδαι* who, according to Ptolemy VI, 2, occupied the lands as far as Lake Urmia. A legend of Armenian origin based on the popular etymology *mar* and *mater* *rai* locates in Marand the tomb of Noah's wife (Hülshmann, *Die altarmenischen Ortsnamen*, 1904, p. 346 and 451; Ker Porter, *Travels*, I, 217). Moses of Choren places Marand in the district of Bakurakert. There was another Marand mentioned by the Armenian historian Orbelian (c. 1300) in the province of Simnīch (north of the Araxes) and a village of Marand still exists east of Tighnūt in the khānate of Māhū (q.v.).

Ibn Ba'th. After the Arab conquest a certain Halbas of the tribe of Rabi'a took Marand. His son Ba'th, a soldier of fortune (*ṣā'ib*) in the service of Ibn al-Rawwād, fortified Marand. Muhammad b. Ba'th erected castles there (*ḥuṣūr*) (Balādihur, p. 330). This chief had acquired considerable notoriety. In 300 (815) he had taken from the family of Rawwād, the strongholds of Shāhī and Tabriz (Tabriz, iii, 1171). (In another passage, Tabriz, iii, 1379, mentions Yakdar [?] in place of Tabriz). Ibn Ba'th lived at Shāhī which stood in the centre of Lake Urmia (the peninsula of Shāhī, where at a later date Hülāgū Khān kept his treasure and where he was buried). Ibn Ba'th was at first on good terms with the Khurramī Bābak, whose authority must have prevailed in the Karadja-dagh in particular, in the north-eastern corner of which was his residence al-Buḥūdī. Ibn Ba'th suddenly changed his tactics and seized by a ruse 'Igna, one of Bābak's generals whom he sent to the caliph al-Mu'tasim. In 221 Ibn Ba'th accompanied Bughā on his expedition against al-Buḥūdī (Tabriz, iii, 1190, 1193). Under the caliphate of Mutawakkil, Ibn Ba'th committed some crime (*dhulafa*) and was imprisoned in Sarraman-mā. On the intercession of Bughā al-Sha'fī,

30 people of repute became guarantors of Ibn al-Ba'th's good behaviour and he must have been allowed considerable liberty, for in 234 (848) he escaped to Marand. Ibn Khurdādhbih, who wrote in 234, mentions Marand as being Ibn Ba'th's fief. Tabriz, iii, 1379—1389, gives a very graphic account of the expedition sent against this town. The wall which enclosed Marand and its gardens was a *farsakha* in circumference. There were springs within it. The dense forest outside was a further protection to the town. Ibn Ba'th collected 2,200 adventurers who were reinforced by a number of non-Arabs (*ʿaḍāḍ*) armed with slings. He had ballistas constructed to repel the assailants. During the 8 months that the siege lasted, 100 individuals of note (*awḥyā al-ʿaṭfūn*) were killed and 400 wounded. When Bughā al-Sha'fī (Balādihur, p. 330; Bughā al-Saghir) arrived he succeeded in detaching the men of the Rabi'a tribe from Ibn Ba'th. Ibn Ba'th and his relatives were seized and his house and those of his partisans plundered. In Shawwāl of 235 Bughā arrived with 180 prisoners at the caliph's court. Mutawakkil ordered Ibn Ba'th to be beheaded but the latter recited verses in Arabic and the caliph was astonished by his poetic gifts (*inna waḥda la-ʿadab*) and gave him his life. Ibn Ba'th died in prison and his sons entered the corps of mercenaries (*al-ḥāḥiriya*). According to one of Tabriz's authorities (iii, 1388), the *ghalkha* of Marāgha who praised the bravery and literary ability (*adab*) of Ibn Ba'th also quoted his Persian verses (*bi 'l-fārisiya*). This important passage already quoted by Barthold, *Bull. School of Oriental Studies*, vol. II, Pt. IV, 1923, p. 836—838, is evidence of the existence of the cultivation of poetry in Persian in the N.W. of Iran at the beginning of the ninth century. Ibn Ba'th must have been uneducated to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his *rustāks* (*rustāks vaṣṭāḥīk*).

Later History. The Arab geographers of the tenth century (Iḥṣāḥ, p. 182; Ibn Hawqal, p. 239) mention Marand among the little towns of Adharbāydjān where the material called *ḥak* was manufactured. Muḥaddas, p. 51, 374, 377, puts Marand under Tabriz and notes its gardens, its flourishing suburb and a cathedral-mosque in the centre of the market. The same author, p. 382, mentions a direct road from Marand to Marāgha (via Nūm [?], somewhere west of Tabriz). Later, Marand must have shared the fate of Tabriz (q.v.). According to Yāqūt, iv, 503, the town had begun to decline after it was plundered by the Georgians (Kurdj) who carried off its inhabitants. This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgian Chronicle for 1208—1210 (605—607) [cf. TAVATZ and TITZEL].

Among the theologians, born in Marand, Yāqūt mentions one who died in 216 and another who had studied in Damascus in 433. In 624 (1226) Marand which had not sufficient defences, was occupied by the ḥāḥī *ʿAlī al-Aḥrafi* of Ahlūt. Sharaf al-Mulk, governor for the Khwārmashāh, retook the town and wrought great slaughter in it (Nawwī, ed. Houdon, p. 166).

The only historical monument in Marand is the old mosque now in ruins with a *mihrāb* in stucco bearing the date of rebuilding 731 (1331) (reign of the Ilkhān Abū Sa'īd). Cf. Sarra, *Denkmäler pers. Baukunst*, Berlin 1910, p. 24—25 and pl. xvii.

and the observations by Herfeld, *Die Gumbadzi-Alawiyen*, in the Volume... presented to E. G. Brown, 1922, p. 194—195. In the same period (1340) Hamd Allāh Mustawfī, *Nushat al-Kutub*, G. M. S., xlii, p. 88, counted 60 villages in the district of Marand. The walls (*hārā*) of the town were 8,000 paces (*ḡam*) around but the town only occupied half the area.

Marand is several times mentioned in connection with the Turco-Persian wars. According to Ewliyā Celēbi (in 1647), *Seyḥat-nāma*, ii, 242, Marand was a hunting-resort of the Turanid Shāhrukh. In spite of the damage done by the invasion of Sulṭān Murād, the town looked prosperous and had 3,000 houses. Ewliyā enumerates a number of celebrated theologians buried north of Marand.

In the autumn of 1724 'Abd Allāh Pasha Koprūla sent the Kurd Khān of Bitlis Muḥammad 'Abid to occupy Marand the inhabitants of which had fled. Resistance centred round the town of Zūnūs (10 miles N. of Marand) which had 7,000 (?) houses and a castle called Dīza by the Persians. To dispose of the threat to their flank, the Janissaries before advancing on Tabriz, fought a battle here in May 1725 with the Persians of whom a large number were slain. Dīza was taken and dismantled (cf. von Hammer, *G. O. R.*, iv, p. 226, following Celēbi-sūde).

Marand has often been mentioned by European travellers since Chardin (1811 edition, i, p. 318); cf. the notices by Ker Porter, Jaubert, Morier, Ouseley and Monteith of which a résumé is given in Ritter, *Erdbkunde*, ix, p. 907. Marand has recently gained in importance since it lies on the modern high road from Tabriz to Qulfa built by the Russians in 1906 and replaced by a railway in 1915.

(2.) A town in the district of Khutāil, to the north of the Oxus; cf. Muḥaddasī, p. 49, 290—291.

(V. MINORSKY)

MAR'ASH, a town in Syria near the Asia Minor frontier (*al-Thiḡār al-Shāmīya*). It lies about 2,000 feet above sea-level on the northern edge of the hollow ('Amk of Mar'ash; now Çakal Owa and south of it Şeker Owa or Mar'ash Owa) which lies east of the Dīhān and is watered by its tributary, the Nahr Hūrūth (Ak-Sū). As a result of its situation at the intersection of the roads which run to Antakya, to 'Ain Zarba and al-Maḡḡira, to Albiḥān (Abulustān) and Yarpūz, via Gökün (Kokussos) to Kinnasīya, via Behranī (Bahasnī) to Sumnāsī and via al-Hadith and Zihāra to Malatya, Mar'ash was from the earliest times one of the most important centres of traffic in the Syrian frontier region. It is repeatedly mentioned as early as Assyrian texts as Mar'asī, capital of the kingdom of Gurgum (cf. the article *IMAR'ASHMA*), and several Hittite monuments have been found there (cf. Unger, *Margalit*, in Ebert's *Kollektik. d. Vorderas.*, viii, 1927, p. 48).

In the Roman imperial period it was called Germanikeia in honour of Caligula (on the coins *Caesarea Germanike*; cf. Grégoire, *Rev. de l'inst. publ. en Belg.*, ii, 1908, p. 217 sq.). The identity of Germanikeia and Mar'ash is certain from numerous literary, especially Syriac, references. The Armenians probably knew, but probably from learned tradition only, the name *Germanik* (Germanig in Vahram; cf. Matha, of Edessa, ed. Dulaurier, p. 487 infra; St. Martin, *Mém. sur l'Arm.*, i, 200). The statement is a description of the district of Halah (Paris

MS. Arab., N^o. 4683, fol. 72a) that the Armenian name of the town was *Nahinik* (Blochet, *R.O.I.*, iii, p. 325 sq., note 6) is wrong; this is a mistake for *Gēlānik*, a name later given to the neighbouring al-Hadith (q.v.). The Emperor Heraclius passed the town in 626 (Theoph., *Chron.*, ed. de Boor, p. 313; Rammey, *Class. Review*, x, 140; Gerland, *Byz. Zeitchrift.*, iii, 1894, p. 362). The Emperor Leo III came from Mar'ash (Germanikeia); later authors (like Theoph., *op. cit.*, p. 391) wrongly called him the 'Isaurian' (a confusion with Germanikopolis; cf. K. Schenk, *Byz. Zeitschr.*, i, 1896, p. 296—298).

In the year 16 Abū 'Ubayda sent Khālīd b. al-Walīd from Mabbidj against Mar'ash and the Greek garrison surrendered the fortress on being granted permission to withdraw unmolested; Khālīd then destroyed it (Caetan, *Annali dell' Islam*, iii, 1910, p. 794, 806). Sufyān b. 'Awf al-Ghāmīdī in 30 (650—651) set out from Mar'ash against the Byzantines. Mu'āwiya rebuilt Mar'ash and settled soldiers in this 'Arah Cayenne' (as Lammens, *M. F. O. B.*, vi, 1913, p. 437 calls it). After Yazīd I's death the attacks of the Greeks on the town became so severe that the inhabitants abandoned it.

After Muḥammad b. Marwān in 74 (693—694) had broken the truce concluded by 'Abd al-Malik with the Greeks, in Djamāda I of the following year the Greeks set out from Mar'ash against al-'Amk (= 'Amk of Antakya; cf. Le Strange, *Palestine* etc., p. 391) but were again driven back in the 'Amk of Mar'ash. Mar'ash was restored by al-'Abbās, son of al-Walīd I, and fortified and repopulated; a large mosque was also built there. The people of Kinnasīn (i.e. probably of the *Djund* of Kinnasīn) had to send troops every year to Mar'ash. During Marwān II's fighting against Hims, the Emperor Constantine again besieged Mar'ash, which had finally capitulated (746) and was destroyed (al-Baladhuri, ed. de Goeje, p. 189; Theophanes, *Chron.*, ed. de Boor, p. 422; Georg. Kedrenos, ed. Bonn, ii, 7). The inhabitants emigrated to Mesopotamia and the *Djund* of Kinnasīn. After the capture of Hims, Marwān sent troops to Mar'ash, who rebuilt the town in 130 (747); the castle in the centre of the town was henceforth called al-Marwānī after him (Yāqūt, ed. Wüstenfeld, iv, 498 sq.). But by 137 (754) the Greeks again sacked the town. Al-Manṣūr then had it rebuilt by Salīm b. 'Alī (d. 130 = 767) and gave it a garrison which al-Mahdī strengthened and supplied with ample munitions (al-Baladhuri, *op. cit.*, p. 189; Theoph., *op. cit.*, p. 445; *é. d'Alex.*... *nécessaire* l'apparition de; *Palaeographie*). The Arabs in 769 (1080 Sel.) entered the 'Amk of Mar'ash and deported the inhabitants of the region who were accused of espionage on behalf of the Byzantines, to al-Ramla (Michael Syrus, *Chron.*, ed. Chabot, ii, 526). According to the Syriac inscription of 'Enash on the Euphrates, in 776—777 A.D. (1088 Sel.) the people of the hollow ('*amk*) of Mar'ash invaded Asia Minor (Beth Rhōmāya) to plunder (Chabot, *J. A.*, ser. ix, xvi, 1900, p. 286 sq.; Pognon, *Inschr. simil. de la Syrie et de la Mésop.*, p. 148—150, N^o. 84). A Greek army of 100,000 men in 161—162 (778—779) under Michael Lachanodrakon besieged Mar'ash which was defended by Is b. 'Alī (Ispahān) in Theoph., *op. cit.*, p. 451), grand-uncle of the Caliph al-Mahdī, destroyed al-Hadith and laid waste the Syrian frontier (Weil, *Geogr. d.*

Chalif., ii. 98). In 183 (799) Hārūn al-Rashīd built the town of al-Hārūniya near Mar'ash (al-Baladhuri, *op. cit.*, p. 171; Yāqūt, iv. 498, wrongly calls it a suburb of Mar'ash); he also raised the prosperity of Mar'ash and al-Maṣṣiḥ (al-Mas'ūdī, *Murūj al-Dhahab*, ed. Barbier de Meynard, viii. 295). The amir Abū Saīd Muḥammad b. Yūsuf in 841 invaded Asia Minor; the Greeks drove him back however and took al-Hadath, Mar'ash and the district of Malatya (Michael Syrus, iii. 102; Weil, *Gesch. d. Chalif.*, ii. p. 315 *sq.*, note 4, considers this story unhistorical). The emperor Basil I in 877 passed via *Ramouds* (Gökün) and the Taurus passes (*ερεκνὰ καὶ Ταύρου*) against Mar'ash (*Ραμωδισσας*) but could not take it and had to be content with burning and plundering the suburbs; the same thing happened at al-Hadath ("Aḥara; Georg. Kedrenos [Bonn], ii. 214; Theophan. continuat., ed. Bonn, p. 280). According to the *ἱστορικὴ περιήγησις τοῦ ἑλληνισμοῦ* (ed. *collocationes bellica*, Migne, *Patrol. Graec.*, cxvii. 1000) shortly before the attack on Germanikeia he crossed the *ἡρακλῆους περάσεις* (cf. Pliny, *Nat. Hist.*, v. 93: one of the *intus flumina* of Cilicia, probably the Ak-Sū, Arabic: Nahr Džurth or Harth; the location by Tomaschek, *S. H. Ak. Wien*, cxiv. 1897, Abb. viii. 66, is therefore presumably wrong). The Byzantine Andronikos in 992 (904—905) invaded the region of Mar'ash, defeated the garrisons of Tarsus and Maṣṣiḥ and destroyed Kūrus (Ibn al-Athir, ed. Tornberg, vii. 378; al-Jahiz, iii. 2298; Weil, *op. cit.*, ii. 533; Vasilev, *Visantiya i Arabi*, i. 1902, p. 154). The Armenian Mleh (Arab. Malih) plundered Mar'ash in 916; 50,000 prisoners were carried off from it and Tarsus (Weil, *op. cit.*, ii. 634; Vasilev, *op. cit.*, p. 203 *sq.*). In the fighting against Saif al-Dawla the Greeks under John Kurkuas took Mar'ash in the spring of 337 (949) (Kamal al-Din in Freytag, *Z. D. M. G.*, xi. 187; Weil, *op. cit.*, iii. 14, note 1; Vasilev, *op. cit.*, p. 268). In 341 (952) the Hamdanid defeated the Domestikos at Mar'ash and in June rebuilt the defences of the town (Freytag, *op. cit.*, p. 191; Vasilev, *op. cit.*, p. 291). When the Hamdanid Abu l-'Aḥḥār in 956 was taken a prisoner by the Byzantines, his father-in-law Abū Firas followed as far as Mar'ash in the attempt to rescue him but could not overtake his captors (Dvořák, *Abū Firas*, Leyden 1895, p. 31; Vasilev, *op. cit.*, p. 297). Nicephoros Phocas in Rabl I 351 (Aug. 962) occupied Mar'ash, Dulk and Raḥān (Freytag, *op. cit.*, p. 199; Rosen, *Zapiski Imp. Akad. Nauk*, xlv. 152, note 100). Bandjūtakin in 382 (992) carried out a raid on Mar'ash and came back with prisoners and great booty (Freytag, p. 248; Rosen, p. 250, 263). The Armenian Philaretos Brachamios (Filardos al-Rum) who in the second half of the 11th century, as leader of a robber band and ally of the Byzantine emperor, conquered a little kingdom for himself on the Syrian frontier, belonged to the village of Shihān in the district of Mar'ash (Michael Syrus, iii. 173, 174 note 9).

After the Franks under Godfrey de Bouillon had taken Mar'ash in 490 (1097), they installed a bishop there (Michael Syrus, iii. 191). Bohemund of Antioch was taken prisoner in June 1100 in the *ῥαγὼς* of Mar'ash in the village of Gafinā (Michael Syrus, iii. 188) on his campaign against Malatya by Ghūshūstegīn b. Daūshband (*Recueil des hist. or. des crois.*, iii. 589; Röhrich, *Gesch. des Königs Jerusalem*, p. 9; Weil, *op. cit.*, iii. 179). The emperor

Alexius later sent the general Butumites against Mar'ash (*τὸ Μάρζαν*) who took the town, fortified the surrounding small towns and villages and gave them garrisons and left Monastria there as *ἐγγυράσιον* (Anna Comnena, *Ἀναστροφὴ*, ed. Reifferscheid, ii. 132, 133 *sq.*; F. Chalandon, *Les Comnènes*, i. Paris 1900, p. 234). The town of Mar'ash was placed under the Armenian prince Thathul, who had distinguished himself in its defence against Bohemund (Matthæus Uthayec'i, ed. Dulantier, ch. cixxi. p. 239 *sq.*; Chalandon, *Les Comnènes*, i. 102 *sq.*). But by 1104 he had to abandon it and surrender it to Joscelin de Courtenay, lord of Tell Bashir (Matthæus, *op. cit.*, p. 257, ch. cxxxi; Raoul of Caen, ch. 148; Röhrich, *op. cit.*, p. 49, note 8; p. 52, note 4). This Thathul is perhaps the same Armenian as had given his daughter in marriage to Godfrey's brother Baldwin (in William of Tyre, x. 1, he is called *Tafenc*; in Albert of Ais, iii. 31; v. 18: *Taphnus*; cf. Chalandon, *op. cit.*, p. 103). By 1105 Tancred of Antioch seems to have been in possession of Mar'ash (Röhrich, p. 56) to whom it was allotted in the treaty of Sept. 1108 (*ἡ Τερραμασια καὶ τὰ ἐν αὐτῇ πόλεις*; Anna Comnena, ed. Reifferscheid, ii. 217; Röhrich, p. 66). In 1114 the widow of the recently deceased Armenian prince Kogh Vasil (= "Basil the thief") of Mar'ash submitted to Ak Sonker of Mawṣil (Weil, *op. cit.*, iii. 199); on the 28th Džumādā (Nov. 27) of the same year, Mar'ash was devastated by a disastrous earthquake in which 40,000 lost their lives (Michael Syrus, transl. Chabot, iii. 200; *Recueil hist. or. arab.*, iii. 607; Matthæus Uthayec'i, p. 289, ch. ccxvii.). King Baldwin granted a monk named Godfrey (*Gulfridus Monachus*) a fief consisting of Mar'ash, Kaism and Raḥān (Michael Syrus, iii. 211; Röhrich, *op. cit.*, p. 161); in 1124 Godfrey was at the siege of Manbij in the train of Joscelin of Edessa. The Danishmandid Muḥammad b. Amīr Ghāsi in 1136—1137 laid waste the villages and monasteries near Mar'ash and Kaism (Matthæus, p. 320, ch. ccliii.). The Saljuq sultan Maṣ'ūd in 1138 advanced as far as Mar'ash, plundering the country as he went (Michael Syrus, iii. 246) as did Malik Muḥammad of Malatya in 1141 (Michael Syrus, iii. 249) and Kildj Arslān II in 1147 (Michael Syrus, iii. 275). The town then belonged to Raynald, son-in-law of Joscelin II of Edessa, who fell in 1149 at Innib (Röhrich, *op. cit.*, p. 260). On Sept. 11, 1149, Kildj Arslān and his father Maṣ'ūd set out from Albistān against Mar'ash, plundered the country around and besieged the town. The Frankish garrison capitulated on being promised a safe retreat to Antakya; but the sultan sent a body of Turks after them, who fell upon them on the road and slew them. On this occasion all the treasure of the churches of Mar'ash was lost, which the priests who had rebelled against the bishop had appropriated (Michael Syrus, iii. 290; Matthæus Uthayec'i, p. 330, ch. cclix.; Chalandon, *op. cit.*, p. 421; Röhrich, *op. cit.*, p. 263). After the capture of Joscelin, Nūr al-Dīn of Haleb in 546 (1151—1152) took a large part of the country of Edessa including the town of Mar'ash, Tell Bāḥir, 'Aināb, Dulk, Kārm etc. (*Recueil hist. or. arab.*, i. 29, 281; ii. 54; Weil, *op. cit.*, iii. 296; Röhrich, *op. cit.*, p. 265, note 5). The district was then divided: the Sultan received Mar'ash, Barrāmān, Raḥān, Kaism and Bahasā; the Urjuqid Kara Aslān of Hija Ziyād got Bābūla, Gargar, Kākhā

and Hün Manşur; Nūr al-Dīn kept the rest (Michael Syrus, iii, 297; Will. of Tyre, xvii, 16). When Maṣūd's son Kildj Arslān, lord of Mar'ash (Michael Syrus, iii, 318), attacked an Armenian village, the Armenians under Stephan, brother of the prince Thoros, in 1156 revenge themselves by setting Mar'ash on fire and carried off the whole population into captivity, during the absence of the Sultān and his Turks (Michael Syrus, iii, 314 [expanded from Barhebraeus, *Chron. syr.*]; differently in Abū Shāma, *Ris. hist. or. croit.*, iv, 92; F. Chalandon, *Les Communes*, ii, [1912], p. 434). Among those carried off was the bishop Dionysios bar Salibi, who escaped to the monastery of Kālīsūr (according to Chabot, *loc. cit.*, the *κλίσυρ* Καλίσυρος of Anna Comnena, ed. Reifferscheid, ii, 219) and wrote three *aiṁnē*s about the devastation of his former diocese of Mar'ash (Michael Syrus, *loc. cit.*; Baumstark, *Geich. d. syr. Litt.*, p. 298). Thoros of Little Armenia in 1165 plundered Mar'ash (Barhebraeus, *Chron. syr.*, ed. Bedjan, p. 331; Röhrich, *op. cit.*, p. 319, note 8; Chalandon, *op. cit.*, ii, 531, note 1). Nūr al-Dīn again took Mar'ash from Kildj Arslān II when he was on a campaign against the Dānišmandid Dhu l-Nūn (Michael Syrus, iii, 350) in the beginning of Dhu l-Ka'da 568 (June 14, 1173) and Bahasā in Dhu l-Hijjā (R. hist. or. croit., i, 43, 592; iv, 158; Matthēos Iſthayec'i, ed. Dulaurier, p. 360; Abū l-Fidā', *Annal. Musl.*, ed. Reiske, iv, 4; Röhrich, *op. cit.*, p. 303, who is followed by Chalandon, *Les Communes*, ii, 463, wrongly puts these events as early as 1159).

Nūr al-Dīn perhaps handed Mar'ash over to his ally Mīch of Little Armenia. When the dynasty of Mar'ash raided the district of Raḥnā, al-Malik al-Zahir in 592 (1195-1196) took the field against him, whereupon the lord of Mar'ash sought forgiveness and recognised his suzerainty (Kumāl al-Dīn, transl. Blochet, *R. O. L.*, iv, 212). The Armenian ruler Rupen III took Bohemund III of Antakya prisoner in 1185 and forced him to cede the territory from the Dhiḥna up to Kaṣtūn (Michael Syrus, iii, 396 *sq.*; Röhrich, *op. cit.*, p. 403, note 7, 661). Ghāthi al-Dīn Kaikhosraw, son of Kildj Arslān II, in 605 (1208), when on a campaign against Little Armenia took Mar'ash (Abū l-Fidā', *Annal. Musl.*, ed. Reiske, iv, 232) and made Ḥasām al-Dīn Ḥusām governor of the town. He was succeeded in this office by his son Ibrahim, who in turn was succeeded by his son Najrat al-Dīn, who ruled Mar'ash for 50 years. The long reign of his son Muṣaffar al-Dīn was followed by that of his brother Imād al-Dīn who however in 656 (1258) abandoned the town which was much harassed by the Armenians and Georgians, after failing to find support either from 'Izz al-Dīn Kai-Kā'as of Rūm or al-Malik al-Salīh of Egypt. The town then surrendered to the Armenians (Hün al-Shayna, Boirūt 1909, p. 192).

Mar'ash did not escape during the great Mongol invasion of Asia Minor. Baibars I of Egypt in his campaign against them in 670 (1271) sent from Halab a division under Taibars al-Wazir and 'Isā b. Muḥin to Mar'ash, who drove all the Tatars from there and slew them (R. hist. or. croit., ii, 246; Makris, ed. Quatremère, *Hist. de Sult. Musl.*, i/ii, 101). In the wars with the rulers of Little Armenia troops from Halab went as far as Mar'ash in 673 and destroyed the gates of the outer town (Weil, *Geich. d. Chal.*, iv, 77). In the next few years Baibars negotiated with envoys

from Su, from whom he demanded the surrender of Mar'ash and Bahasā; but he was satisfied instead with a considerable sum of money (Makris, ed. Quatremère, *op. cit.*, i/ii, 125 [year 673 = 1274]; i/ii, 104 [688 = 1289]). It was not till 692 (1292) that Imād Khalīl by a treaty received Bahasā, Mar'ash and Tell Hamdān (Mufaddal b. Abi l-Fadā'il, *Hist. des Sultans Mamlouks*, ed. Blochet, in *Patrol. Orient.*, xiv, 557; Weil, *op. cit.*, iv, 186; S. Lane-Poole, *Hist. of Egypt in the Middle Ages*, London 1901, p. 287). But the Armenians must have retaken the two last named towns not long afterwards (Weil, iv, 213, note 1), for in 697 (1297) Mar'ash was again taken by the emir Bilban Tabakht, Na'ib of Halab, for Lūlū. A treaty was then concluded with the ruler of Little Armenia by which the Dhiḥna was to be the frontier between the two countries; Hamā, Tell Hamdān, Kūharā, al-Nukair (on its position cf. L. Allahan, *Sinwan*, p. 493-496), Hadjar Shaghlan, Sirfandakār and Mar'ash thus passed to Egypt (Makris, *op. cit.*, i/ii, 63; Abū l-Fidā', *Ann. Musl.*, v, 140).

In the second half of the viijth (sixth) century Zain al-Dīn Karadja and his son Khalīl, the founders of the house of the Dhu l-Kadr-oghlu, conquered the lands along the Egyptian Asi Minor frontier with Malatya, Albistān, Mar'ash, Bahasā and Kharḥit (cf. Dhu l-Kadr-oghlu). In the mosque of Mar'ash one of his successors, Malik Arslān, was murdered in 870 (1465-1466); his portrait with the inscription "Sultān Arslān" and that of his sister Sitti Khātūn with the legend *ḥayyān Kāra* are painted in the Codex Venetus 516 of the *Geography* of Ptolemy, which he apparently intended to dedicate to his father-in-law Mehmed II (Olshausen, in *Hermes*, xv, 1880, p. 417-424).

Conquered by Selīm I, Mar'ash became Ottoman; on his campaign against the Dhu l-Kadrīya in 1515 he encamped on his way back before Mar'ash and then returned via Kars Mar'ash (now Kars Bazar or Kars Dhu l-Kadrīya) and Göksun to Kaniş (cf. Taeschner, *Türk. Bibl.*, xxiii, p. 36, note 4).

From 1832 belonging to Egypt, Mar'ash passed finally in 1840 back to the Turks. The town was occupied by the French from 1918-1920; after its evacuation it was the scene of massacres of Armenians (F. Tournebise, in *Dict. d'Hist. et de géogr. eccl.*, iv, Paris 1925, col. 360-362).

Mar'ash is now the capital of a wilāyet which in 1928 had about 185,000 inhabitants; the town itself has about 50,000 inhabitants.

The extent of the territory belonging to Mar'ash was liable to vary considerably with the vicissitudes of the town in the middle ages. The following places are mentioned as belonging to the territory of the town.

Garbadisā (= *Gerbadāse*, *Itin. Anton.*, ed. Parthey, p. 85; Kieyn, *Tavbat. Garbadāse*, p. 191; corrupted in Michael Syrus, ii, 256 to 'Arbadis, in Barhebraeus, *Chron. Syr.*, p. 370 to Gerbid), 28 Roman miles from Nicopolis (Halabīya) and 15 from Doliche (Tell Dūlak near 'Aintib).

'Uṣay (Michael Syrus, ii, 447); cf. Ouph, Uplie near Allahan, *Sinwan*, p. 238? This place perhaps lay on the Nahr 'Aṣṣay (Assy. Aprē) which Barhebraeus (*Chron. Eccl.*, ed. Abbeloos-Lamy, i, 399 *sq.*) calls Nahr 'Uṣay.

Rebelin "which is now destroyed" was the

birthplace of Nestorius near Mar'ash (*Patrol. Orient.*, vii. 162 sq.).

Shūbar, the birthplace of Philaretos (see above).
The monastery of Mār Shōnā (Michael Syrus, iii. 148).

Kharāna, probably the Kharshema of the Syriac writers, is described by Matthaios Uthayecī (transl. Dulaurier, p. 259) as adjoining the territory of Mar'ash. Dulaurier (*op. cit.*, p. 445) locates it not far from the Euphrates; but in the *Marāzid al-Iḥḥid*, ed. Juyneholl, iii. 347, the reference is rather to Xapandō and in Babelmeuss (*Chron. Syr.*, ed. Bedjan, p. 319; cf. Michael Syrus, iii. 307), the correct reading is "Torghunt". We should rather identify it with Chabot (Michael Syrus, *index*, p. 43⁷) with Kamen on the Nahr 'Afrin (cf. M. Hartmann, *Zeitschr. Geschl. f. Erbd. Berlin*, xix. 1894, p. 522, No. 47; Lammons, *M. F. O. Beyruth*, ii., p. 383, note 2; in the *Saltānna* of Hulab of 1286 [1869—1870]: Karsen[ish]).

The modern wilāyat (formerly sandjak) of Mar'ash consists of four kaza:

Zaitūn, north of Mar'ash, scene of the Armenian rising against Turkey in 1894—1895, noted for its rich iron-mines (Aghassi, *Zaitoun*, Paris 1897; Anatolio Laitou, *Gli Armeni e Zaitun*, Florence 1897).

Albistān [q. v.], also north of Mar'ash;
Andarin, west of the town and the Djaḥān (not to be confused with Andarin in the Syrian steppes); the capital of the kaza is Koban (Arm. *Uhalan*), the capital of Leo of Little Armenia.

Pāzandjī, between Mar'ash and Alutāh; the capital is Baghdin.

AL-MAR'ASHI. [See SHUSHYART].
MARĀTHĀ, commonly misspelt in Hindi and in Indian Persian Marhatta, is the name of a people of Western India inhabiting Mahābhāra, the country lying to the east of the Western Ghāts between the seventeenth and the

twenty-first parallels of north latitude and extending at one point as far east as the seventy-ninth degree of east longitude. The Marāthā caste is an agricultural caste, of common origin and nearly identical with the great Kuntī caste, but sometimes claiming a Kshatriya descent. The Marāthās served in the armies of the Muslim Kingdoms of Southern India, and there gained military experience, but their opportunity came with the decline of the power of the Mughal Empire in the seventeenth century, when their national hero, Shiwājī Bhonsla, converted the peasant population of Mahābhāra into a military nation. Shiwājī was born at Shiwner, near Džunnār, in 1627 and while his father was conquering a great part of the Carnatic for Bidjāpur obtained possession of many hill forts in the Western Ghāts. The Sahib of Bidjāpur was unable to subdue him, and in 1659 he slew Afzal Khan, commander of the army of Bidjāpur, at a friendly conference. In 1664 he sacked the city of Surat, and was obliged to contend with an imperial army sent by Aurangzeb to punish him. In 1666 he was induced to pay homage to the emperor at Dillī, but was so disgusted by his reception that he escaped, and, returning to the Deccan, extended his authority there until, in 1674, he assumed the title of Rājā, and was enthroned at Raygarh. He gained possession of the grants of lands in the Carnatic which his father had received from Bidjāpur, and died in 1680. His eldest son and successor, Sambhadr, fell into the hands of Aurangzeb, who put him to death, but preserved his infant son Shāhū, whom he retained at his court, and Rājā Rām, Shiwājī's younger son, became the ruler of the Marāthās, now a nation. On the death of Aurangzeb in 1707 Shāhū was liberated, and mounted the throne of his grandfather, but was never more than a puppet-king, and left all business of state to his Brahman minister, or Pishwa, Bāladji Wiswamāth, who reduced his sovereignty to the condition of a state prisoner and founded the dynasty of the Pishwas. He led an army to Dillī and extorted from an effusive government recognition of the Marāthā state and the right to levy *sauti*, or one quarter of the revenue, throughout the Deccan. In the time of his two successors, Bādjī Rāo I (1720—1740), and Bāladji Rāo (1740—1761), the Marāthās conquered Gujārat, Mālwa, Berār, Gondwāna, and Uṭṭar, and raided the Carnatic, Bengal, and the Panjāb. They seemed to be on the point of superseding the Mughal power in India when Ahmad Shāh Abdālī or Durrānī [q. v.] crushed them at the battle of Panipat in 1761. The Marāthā power survived, however, in the hands of the Pishwa's generals, Sindhya in Gwālīyar, Bhonsla in Nagpur, Holkar in Indūr, and Gāekwā in Gujārat. The dynasty of the Pishwas survived at Pūna, and a disputed succession in 1775 tempted the Bombay Government to intervene. In 1778 the Marāthās surrounded the Bombay army near Pūna and compelled its leader to sign a humiliating convention, but an army sent from Bengal by Warren Hastings humbled Gāekwā and the Pishwa, and another force defeated Sindhya and captured Gwālīyar. Peace was restored on terms favourable to the Marāthās, but their confederacy was much weakened. In 1802 Bādjī Rāo II, who had fled from Pūna, took refuge with the Government of Bombay and entered into a subsidiary alliance with the Government of India. He was reinstated in Pūna by

Major General Arthur Wellesley, but Sindhya, Bhosla and Holkar, resenting the Pishwā's subservience to the British, took up arms, and the third Marāṭhā War began. In the Deccan Arthur Wellesley captured Ahmadnagar, won the decisive victories of Assaye and Arghūn, and stormed the strong fortress of Gāwli. In Hindustān General Lake defeated Sindhya's army at Laswār, and occupied Dillī. Bhosla lost Urisa and Berār, Sindhya his possessions in the Deccan and his guardianship of the emperor, and Holkar was humbled, but after the peace the freebooters known as the Pindārīs, whom the Marāṭhās had employed, continued to ravage states under British protection, and even British territory, and when in 1817, the Marquess of Hastings concentrated troops to deal with these marauders, the Pishwā, Bhosla, and Holkar rose against the British Residents at their courts. The first was defeated at Khirki, and the second at Sitabaldī, and the army of the third was destroyed at Mahūdpur. The dominions of the Pishwā were forfeited and annexed to the Bombay Presidency, and Holkar and Bhosla lost much territory. Bhosla died in 1853, and his dominions lapsed, in default of male issue, to the British Government. The deposed Pishwā also lived until 1853, and his adopted son, Dhondī Pant, was the Nāṭh Śāhib of the Indian Mutiny. Three great Marāṭhā states remain to this day: those of Sindhya in Gwāliyar, Holkar in Indūr, and Gāekwār in Gujjarāt, but not one of them is in Mahārāṣṭra.

MARDAITES. These are the Djarādīms [q.v.] singular Djarādīmī, of the Arabs: they are sometimes confused with the *Djarāmīḡa*, singular Djar-makānī, so called from the name of their town Djarādīm. They occupied the rugged regions of the Amanus and of the Taurus, separating Syria from Cilicia, as well as the marshy districts of Antiochene [see *ARḤA*]. They enjoyed a semi-independence nominally under the Byzantines to whom they furnished recruits and irregular troops. When the Arabs seized Antioch the Mardaites agreed to serve them as auxiliaries and scouts and in this capacity to watch the passes, the "Pulāi" of the Amanus. In the small forts built on the heights beside the defiles, commanding the entrance to or the exit from Syria, they, in conjunction with the Arabs, supplied the garrisons. Exempt from the poll-tax, they obtained the right to spoil on the field of battle. They were in every sense of the word irregulars, living by war and by raids and asking only to fight for whoever paid for their services; half-nomads, they came and went again like a dash. Very lukewarm Christian Monothelites or Monophysites—we do not know exactly—their loyalty either to the Byzantines or to the Muslims was quite intermittent. "Sometimes", says Baladhuri, "they obeyed our officials; at other times they betrayed us for the benefit of the

Greeks". The precarious nature of the Arab conquest in the North of Syria—a varying frontier region continually devastated by the Muslims and by the Byzantines—and the difficulty of gaining access to the land of the Mardaites, made it impossible to chastise such fickle allies.

Towards the year 46 (666) the Greek Emperor succeeded in sending them against Syria. This was not a raid of the type usual to the mountaineers of the Amanus, but a regular invasion supported by a few squadrons of cavalry and led by officers of the Imperial army; their bands penetrated into the heart of the Lebanon and occupied its chief strategical points as far as Palestine. The natives, discontented with Arab rule and also the thousands of slaves whom the Muslim conquerors on land and on sea had collected in Syria, hastened in a body to take refuge with the invaders. The highlanders of this country, who had kept their independence, also threw in their lot with the Mardaites. At all costs the Omayyad government had to put an end to this dangerous movement, limit the extent of the invasion and to make sure at once of the neutrality of Byzantium who had let loose this hurricane. Not for a moment did Mu'awiya hesitate to subscribe to the onerous terms of the Emperor—an annual tribute of 3,000 pieces of gold, the liberation of 8,000 prisoners, the delivery of 50 thorough-bred horses. In return the Emperor agreed to withdraw from the Mardaites his support in men, arms and money. There is, however, no evidence that these adventurers definitely evacuated from that time their strong positions in the heart of the Syrian mountains. The neutrality of the Empire, the partial checks sustained by them and finally the establishment on the border of the Mardaites territory of a strong colony of Zūṭi [q.v.] reduced for the moment to inaction the Djarādīms, abandoned by the Byzantines.

A quarter of a century later, they once more attracted attention. This was under 'Abd al-Malik, who was engaged in an interminable war with the anti-Caliph Ibn al-Zuhair and was taken by surprise by the sudden rising of the Omayyad Amr al-Ashdaq [q.v.] In the year 69—70 A.H. (688—689) the Emperor Justinian II took advantage of these difficulties to let the Mardaites once more loose against Syria. The result was a repetition of the movement in the reign of Mu'awiya I. Byzantium furnished them with subsidies and with arms. At the same time he sent the army of Anatolia to advance and support the irregulars. In the same manner as in the first invasion their ranks were swollen by the accession of thousands of slaves, fugitives and malcontents, amongst whom one could probably reckon the Maronites (cf. *LIBAN*). Taken unawares, 'Abd al-Malik at once followed the policy of Mu'awiya. The Emperor increased his demands. In addition to the conditions previously agreed to by the Sufyānid Caliph, the Arabs were forced to abandon to the Byzantines half the tribute of Cyprus, of Armenia and of Iberia. In return for this, Justinian agreed to withdraw the Mardaites. The majority of the invaders agreed to evacuate Syria. One of their chiefs, who persisted in continuing the war on his own account in the mountainous massif in the districts of Homs and of Damascus, perished, treacherously assassinated by a partisan of the Caliph. A few Mardaites bands remained in the country, where we find them again still feared

and handled carefully in the caliphate of Walid I.

Entrenched in the Amanus, protected by the great marshes and the lake region of 'Umk in Antiochene, the *Djurdjuma* lived in practical independence of the Empire and of the Caliphate. They chose their masters and their rulers at their own convenience. At the same time some of them were quite ready to put their swords at the service of the Arabs. Amongst these must be named a leader of a band called *Ma'isma* or *Maimin*. He with his contingent (about a thousand men, probably all Mardaites like himself) perished at the siege of Tyane. His compatriots in the Amanus seem to have wished to profit by the death of 'Abd al-Malik to renew their raids upon the Syrian provinces. Maslama, the son of the Caliph, resolved to put an end to these rebels. He penetrated into their country, laid siege to their capital *Djurdjuma*, and forced it to capitulate. Thousands of Mardaites perished in this campaign. To the remainder he granted the right to retain their Christian faith, to serve in the Muslim armies, in fact he gave them the same terms as were obtained by their ancestors at the beginning of the Arab conquest. After this severe lesson the Mardaites perished, which had been the cause of incessant trouble during the reign of the preceding caliphs, was practically at an end. The people of Antiochene saw emigration begin to thin their ranks, many of them having decided to emigrate to Anatolia or to enter the service of the Emperor. This resolution, however, did not prevent the Mardaites, who remained in Syria, from fighting under the flag of the Caliph. We still find them in the reign of Yazid II when they co-operated with the Syrian army in the suppression of the troubles in the Irak.

(H. LAMMENS.)

MARDĀWIDJ b. ZIYĀR, ABU 'A-HAYDĀDĪJ, the founder of the Ziyārid dynasty, was descended on his father's side from the rulers of Gīlān and on his mother's side from the Isyakhids of Rūyān. He had taken service under the 'Alid rulers of Tabaristān and was a captain in the army under Asfār b. Shrawāhī in 316 (928). Mardāwīdj slew Saiyid Abū Muhammad Ḥasan al-Dā'i, and shortly after that rebelled against Asfār, made himself independent at Zandjān which he held in *ghāzī* and captured Kāzwin. He then defeated Asfār, forced him to fly to Tabas in Kūhistān and put him to death in 319 when he was attempting to reach the castle of Alamūt [q.v.].

Mardāwīdj thus became master of Ray and Tabaristān. He then defeated Mākan [q.v.] and annexed Tabaristān. Mākan attempted twice to capture Tabaristān, with the help of powerful

allies, but Mardāwīdj defeated him on each occasion and forced him to take refuge in Khurāsān. At this time (319-93) 'Alī, Ḥasan and Ahmad, the three sons of Buwāhī, who were commanders of the army of Mākan, deserted to Mardāwīdj who conferred on 'Alī the eldest the governorship of the province of Karādj.

Having consolidated his power over Tabaristān and Gurgān, Mardāwīdj next turned his attention to Djibāl, defeated Ḥārūn b. Ghārīb the governor, in the neighbourhood of Hamadān in 319 (931) and conquered the whole of Djibāl up to the confines of Hulwān. In the following year Maktadir, the Caliph, formally recognised him as ruler of the provinces which he had conquered on condition that he evacuated Isfahān, but as Maktadir was assassinated shortly after this Mardāwīdj evaded compliance. About this time 'Alī b. Buwāhī, the governor of Karādj, rebelled and took possession of Isfahān. Mardāwīdj sent his brother Washmīr against 'Alī who abandoned Isfahān and retired to Arrādjān. To deal more efficiently with 'Alī, Mardāwīdj made an alliance of friendship with Yāqūt, governor of Shīrāz, marched to Isfahān and threatened to take the field against 'Alī. 'Alī now offered submission and, as a guarantee of good faith, sent his brother Ḥasan as a hostage to Mardāwīdj.

In 322 (934) the Caliph Kābir confirmed Mardāwīdj in his government on the condition of his evacuating Isfahān. Mardāwīdj obeyed and sent instructions to his brother Washmīr, the governor of Isfahān, to deliver the province to the Caliph's agent, Muṣaffar b. Yāqūt, but as Kābir was deposed shortly after this in Djumādī I of the same year (April-May 934 A.D.) Mardāwīdj again evaded compliance.

In Safar 323 (Jan. 935) Mardāwīdj was assassinated by his Turkish slaves at Isfahān. He was loved by his soldiers, who, it is stated, carried his coffin on their shoulders all the way to Ray for burial. Mardāwīdj was a man of high ambition and had drawn up a plan for the conquest of Baghdad and the restoration of the Persian Empire in his own person, but he was murdered before he could carry out this scheme.

(M. NAEIM.)

MARDIN (written Mardīn in Arabic, in Syriac Mardē), a town in upper Mesopotamia (Diyār Rāḥ'a).

Position. In Upper Mesopotamia, the watershed between the Tigris and Euphrates is formed by the heights which culminate in Karādj-dagh (5,000 feet) S.W. of Diyār-bakr. This basaltic mass is continued eastwards in the direction of Djesirat Ibn 'Omar by the limestone chain known in ancient times as Masius and later as Iula (Ḥalāḥ). The eastern part of this ridge forms the district of Djahāl-Tūr or Tūr 'Abdīn [q.v.] the capital of which is Miṣyā. From the southern slopes of the Masius descend numerous watercourses, the majority of which join one another before flowing between the mountains of 'Abd al-'Azīz (in the west) and Tell-Kawkab and Sindjā (in the east); their combined waters form the river Khābūr [q.v.].

Märdin lies near the point where there is an easy pass through the Masius from the lands south of the Tigris [the rivers Gök-su and Şaikhān] to the lands round the sources of the Khābūr [the stream called Zawīrak which rises north of Märdin], in other words Märdin commands the Diyār-bakr-Niṣbīn road (which then turns towards Hājira b. 'Omar and Mawṣil). On the other side towards the west several (Ritter, xi. 356, gives three) direct roads connect Märdin via Urfa with Biredjik (on the Euphrates); to the S.W. a road runs from Märdin to Ra's al-'Ain (there is now a railway) and to Harrān. The direct distances are as follows: Märdin-Diyār-bakr 55 miles; Märdin-Niṣbīn 30 miles; Märdin-Sawur-Midyāt 75 miles; Märdin-Biredjik 160 miles; Märdin-Adana (by rail) 450 miles.

The advantages of this position at the intersection of important roads are enhanced by the very strong natural situation of the town, built at a height of 4,000 feet on an isolated eminence on the top of which is a fort 300 feet above the town (cf. the sketch in Černik, pl. II, No. 17). Buckingham compares its position with that of Quito in South America. All travellers (cf. Ibn Hawqāl, p. 132) have been struck by the unique spectacle of the vast Mesopotamian plain which from the height of the town is seen to stretch southwards as far as the eye can see. Only a hundred years ago Märdin was still considered impregnable, but the difficulty of access sensibly affected its commerce. According to Černik loaded camels could not ascend right up to the town. A branch line 15 miles in length now connects Märdin with the station of Darbaziya on the "Baghdād" railway, but the station for Märdin is five miles from the town.

Ancient History. It is noteworthy that in spite of its remarkable situation Märdin does not seem to be mentioned in the cuneiform sources. Ammianus Marcellinus (xix. 9, 4) is the first to mention two fortresses, "Maride and Lorne" between which the road passed from Amīd (Diyār-bakr) to Niṣbīn. Theophanes Simokatta (ii. 2, 19) mentions τὸ Μάρδιον φρούριον and (v. 3, 17) τὸ Μάρδιον 3 passages from Dārā. Procopius, *De Aedificiis*, (ii. 4) mentions Σαρδηνίον (or Σαρδηνίον) and Αἰσώριον and Georgias Cyprina, ed. Gelzer, 1820, p. 46: Μάρδιον Αἰσώριον.

The name Μάρδιον in Ptolemy, vi. 2, however refers to another place in Assyria to the east of the Tigris.

Muslim Conquest. The Muslims under 'Iyād b. Ghānim occupied the fortress of Märdin along with Tūr 'Abdīn and Dārā in 19 (640) (Balādhuri, p. 176). In 133 Märdin is mentioned in connection with a rebellion in Upper Mesopotamia. The town formed part of the possessions of Buraika chief of the Rāhī'a who was defeated by the 'Abbāsid Abū Dja'far (Taḥarī, iii. 53). In 279, Aḥmad b. 'Isā took Märdin from Muḥammad b. Ishāq b. Kandīdī (*ibid.*, iii. 2134). Ḥamdān b. Ḥamdān after his accession in 260 (873) seized Märdin. In 281 the caliph Mu'taṣid marched on the town. Ḥamdān fled and left Märdin to his son. The latter surrendered the fortress which was dismantled (*ibid.*, iii. 2142). The "grey fortress" (*al-dār al-ahmad*) was later restored, for Ibn Hawqāl (in 306) attributes its erection to the Ḥamdān b. al-Ḥasan Nāṣir al-Dawla b. 'Abd Allāh b. Ḥamdān. On the death of his father in 358, Ḥamdān was

dispossessed by his brother Faḍl Allāh Abū Taghlīb. By the peace of 363, concluded between the Bayd Bakhtiyār and Abū Taghlīb, Ḥamdān recovered his possessions with the exception of Märdin (Ibn Miškawih, ed. Amedroz, ii. 254 and 319).

The Arab geographers give few details about Märdin but they emphasise its importance. According to Ibn al-Faḥih, p. 132, 136, the *ḥikmah* of Märdin was equal to that of Maiyāfāriḳin (865,000 dirhams). Iṣṭakhri, p. 76k, says that it is a large town on the summit of a peak the ascent of which is a farsakh in length; Dunaisar [q. v.] was one of its dependencies. Ibn Hawqāl, p. 143, gives the ascent at two farsakhs. The quarter of Märdin itself was flourishing, thickly populated with large markets. The water supply was brought by subterranean canals from the springs to the town. The rain-water was also collected in cisterns (*al-ḥirāḍi wa-shirak*). Yāqūt, iv. 390 (cf. al-Kazwini, p. 172), speaks of the splendour of the quarters outside Märdin (i. e. below the town itself) and its many *madrasas*, *ḥusnā'āt* etc.: as to the *ḥuṭa* there was nowhere in the world so strong a defence; its dwelling-houses rose in terraces one above the other.

The Marwānids and the Saldjuks. It is probable that Märdin was within the sphere of influence of the Marwānids, for according to their historian (cf. Amedroz, *J. R. A. S.*, 1904), their ancestor Bāgh (d. 380—990) had extended his power over Diyār-Rab'a (Niṣbīn, Tūr 'Abdīn). The Saldjuks ruled there next. After the death of Malikshāh, Tutuḡ b. Alp Arslān seized for a time all the lands as far as Niṣbīn. Under Barkiyarūḡ Märdin was given to his old bard (*mughannī*).

The Ortoḡids. At this time arose the dynasty whose fortunes are especially associated with Märdin. The son (or grandson?) of Ortoḡ called Yāqūt took by stratagem the fortress in which he had been imprisoned but it was taken from him by his brother Sakmān b. Ortoḡ who died in 498. In 502 we find at Märdin II-ghāzi b. Ortoḡ (Ibn al-Athir, x. 269, 321) whose line ruled there till 811 (1408) [cf. the art. *ortoḡids*]. On their coins struck at Märdin in 599, 600, 634, 637, 648, 655, 656 etc., cf. Ghālīb Edhem, *Catalogue des monnaies turcomanes*, Constantinople 1894 and S. Lane Poole, *Catalogue of Oriental Coins in the British Museum*, vol. III. and x. [Index, s. v. Märdin].

In 579 (1183) Saladin came to Ḥarrazm (6 miles S.W. of Märdin) but was unable to take the town. In 594 Malik 'Adil b. Aiyūb seized the outer suburb which was pillaged but the siege of the town itself was abandoned in the following year. In 599, 'Adil sent against Märdin his son al-Ashraf who appointed governors (*ḥāḡnas*) in its dependencies. The Aiyūbid of Aleppo al-Zāhir b. Ṣalāḡ al-Dīn offered his good offices and 'Adil was content with an indemnity of 150,000 dinars and the acknowledgment of his suzerainty by the Ortoḡid of Märdin (cf. Abū 'I-Faraj, ed. Pococke, p. 412, 425, 427).

The Mongols. In 657 the Mongol Hülāgū Khān demanded the homage of the prince of Märdin, Naḡm al-Dīn Ghāzi Sa'īd, who sent his son Muṣaffar to him but maintained a neutral attitude. In 658 the town was besieged for 8 months by the troops of Yashmut, son of Hülāgū. Famine and an epidemic raged in the town. Ac-

cording to Rashid al-Din (ed. Quatremère, p. 375), Muṣaffar killed his father in order to put an end to the sufferings of the inhabitants (Abu'l-Faraj and Waṣṣaf give different versions, cf. d'Ohason, iii. 308, 358). Muṣaffar was confirmed as lord of Mardin; his descendants also received from the Mongols the insignia of royalty (crown and parasol). In the reign of Salih b. Manṣur (769 = 1367) whose sister Dunya Khātūn was the wife of the Ilkhan Khudabanda, Ibn Battuta (ii. 142-145) visited Mardin.

Timūr. The Ortoḡid Sulṭān 'Isā (778-809) was king of Mardin at the invasion of Timūr in 796. Sulṭān 'Isā came to pay his homage to the conqueror but the citizens attacked those of Timūr's men who ventured into the town. Malik 'Isā was put in chains and taken to Sulṭāniya (Zafar-nāma, i. 663, 671-672). In April 1404, Timūr returned to the attack and the town was taken by storm. Then the siege of the upper fortress (*al-kal'at al-shahīd*) was begun but it was never taken. Timūr was content with presents and promises of *shirāzī* and returned to the plain (*ibid.*, i. 676-679). The people of Mardin obtained an amnesty on the birth of Ulugh-beg. Sulṭān Salih was appointed at Mardin in place of his brother, Sulṭān 'Isā (*ibid.*, i. 676-681), but three years afterwards the latter was pardoned and restored to his fief (*ibid.*, i. 787). When in 803 Timūr reappeared in Mesopotamia, Sulṭān 'Isā shut himself up in Mardin. As the siege would have taken some time and supplies were short, Timūr did not stop before the town but ordered Kara 'Othmān Aḡ-Ḳoyunlu to besiege Mardin (*ibid.*, ii. 354).

The Aḡ-Ḳoyunlu. This was the beginning of Aḡ-Ḳoyunlu interference in Mardin but Kara 'Othmān's forces were not yet equal to this task. In 805, Sulṭān 'Isā came of his own accord to Timūr and was pardoned (*ibid.*, ii. 312).

For a brief period the Kara-Ḳoyunlu tried to resist the extension of the power of the Aḡ-Ḳoyunlu to Mardin. When, after the death of Timūr, Kara Yūsuf left Egypt to re-enter into possession of his territory he joined Sulṭān 'Isā and advanced against Kara 'Othmān. The battle lasted 20 days and was settled by agreement. As soon as Kara Yūsuf had left for Adharbāydjān, Kara 'Othmān returned to the attack, defeated Sulṭān 'Isā near Djawak (there is a Djawak 10 miles W. of Mardin on the road from Derek) and besieged Mardin, but once more without success (Münedjilim-baḡī, ii. 685). It is not clear what connection these hostilities have with an expedition against Diyarbakir conducted by Djakim or Djakim (governor of Aleppo, a former Mamlūk of Barḳuk's) in which Malik 'Isā took part. In the battle which Muḥammad (?) son of Kara-İlik [= Kara 'Othmān] fought against the allies on the 15th Dhu'l-Ḳa'da 809, Sulṭān 'Isā was slain (cf. the Egyptian sources consulted by Rien for Howorth, iii. 685). Sulṭān Salih succeeded a second time to Sulṭān 'Isā, but the Aḡ-Ḳoyunlu continued to harass him and finally in 811 he ceded Mardin to the Kara-Ḳoyunlu who gave him Mawṣil in exchange.

We do not know the exact course of subsequent events but according to Münedjilim-baḡī, Kara 'Othmān's successor 'Alī Beg (832-842, cf. Ahmed Tewhid, *Musit Imp. Ottoman, Mon. musulm.*, part iv., Constantinople 1903) gave his brother Ḥanna the task of establishing the Turkomans

in the vicinity of Mardin. Djihāngir (848-857), son of 'Alī, was already master of the town. In the reign of Uzun Ḥasan, Josephat Barbaro visited Mardin and was lodged in the hostel (*ospedale*) built by Djihāngir Beg (Zhangir). We have coins struck at Mardin by Uzun Ḥasan (875) and by his son Ya'qūb. After the death of Ya'qūb 'Alī al-Dawla, prince of the Dhu'l-Ḳadar Turkomans, seized the land of Diyarbakir but, as the anonymous Venetian merchant shows, the Aḡ-Ḳoyunlu retained Mardin. In 903 (1498) Abu'l-Muṣaffar Ḳāsim b. Djihāngir dated his firman in the name of the prince of Eğil from his capital (*dār al-salṭana*) Mardin; cf. Balagī, *Der älteste Firman der Çengiz-begs*, *Wissenich. Mitt. aus Bosnien*, vi., Vienna 1899, p. 497. The coins of Ḳāsim come down to 908. The *takīya* of Ḳāsim-pādshāh which Niebuhr mentions must date from the same ruler.

Persian Conquest. In 913 (1507) all the lands as far as Malatya were conquered by Shāh Ismā'īl who appointed his general Ustādīlu Muḥammad to it. According to the Venetian merchant who travelled there in 1507 (*op. cit.*, p. 149), Mardin was occupied without bloodshed. The same traveller mentions the fine palaces and mosques of the town; there were more Armenians and Jews in Mardin than Muslims. The battle of Çaldiran (914) shook the power of the Persians. In place of Ustādīlu Muḥammad killed at Çaldiran, his brother Kara-Ḳhān was appointed and established his headquarters at Mardin. Soon the Ottomans occupied Diyarbakir and then the town of Mardin, but the Persians who never lost the fortress restored the status quo.

Ottoman conquest. Finally in 922 (1516) Kara-Ḳhān was defeated and slain in battle at Karghan-dede near the old town of Ḳoc-bisār, 10 miles S.W. of Mardin. Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mardin still remained in the hands of Salaimān Khān, brother of Kara-Ḳhān. The siege lasted a year and not till Bīyāzī Muḥammad Pīshā arrived from Syria with reinforcements was it stormed and its vallant defenders put to the sword (*Alam-arāḡ*, p. 24, 32; this Persian source mentions Olāng-i Fūrāk (?) in place of Ḳoc-bisār) (v. Hammer, *G. O. R. A.*, i. 7367-40, quoting Abu'l-Faḡl, son of Ḥakīm İdrīs and continuer of his *Ḥaḡḡ-Ḥaḡḡ*).

In the Baghdadī campaign of 941, Mardin was created a *sandjak* and included in the *eyālet* of Diyarbakir. Ewliyā Çelebi, iv. 59 gives Mardin 36 *ḡāmet* and 465 *timār*lotes; Mardin could put in the field 1,060 armed men (*ḡeḡet*). In the xviiith century Mardin became a dependency of the Pīshās of Baghdad; Otter (1737) found at Mardin a *reis* appointed by Ahmad Pīshā. As late as the time of Kinneir (1810), Mardin was the frontier town of the pīshāhlik of Baghdad and was governed by a *mütaḡallīm* sent from Baghdad.

The reforms of Mahmūd were badly received in Upper Mesopotamia. In 1832 (Ainaworth) Mardin rebelled. Power in Mardin had passed to the Kurd beys. Southgate (1836) speaks of a hereditary (?) family who ruled in Mardin. The two brothers of the "ruling bey" seized the power and refused to recognise the authority of the Porte. (It may be asked if these beys were not of the Milli tribe; on their chiefs cf. Buckingham, *op. cit.*, p. 156). Rashid Pīshā, the pacifier of Kurdistan, besieged the town and blew up the great mosque

(Ainsworth). Order was temporarily restored. Considerable works were undertaken to improve the road giving access to the town. Rashid Pasha died in January 1837 (Foujoulat). When the Egyptians invaded Syria, their partisan Timurti b. Ayyub of the Milli tribe seized Mardin (Sir Mark Sykes, *The Caliph's Last Heritage*, London 1915, p. 320) but was killed. The defeat of the Ottomans at Nizbi (June 1839) brought matters to a head. The Porte entrusted Mardin to Sa'ad Allah Pasha of Diyarbakir but the inhabitants preferred to submit to Ibrahim Pasha of Mawasil who was opposed to the *taninmül*. This Pasha appointed a governor to Mardin but the rebels still held the citadel (Ainsworth 1840) and the governor soon perished in a *riasing*.

By the "wilayet law" of 1287 (1870) Mardin became a sandjak of the wilayet of Diyarbakir. It had 5 *kadās*: Mardin, Nishin, Djastra, Midiyat and Arine. The area of the sandjak was 7,750 square miles and the number of towns and villages 1,063. The sandjak was mainly agricultural. The town of Mardin produced a small quantity of silk, wool and cotton, leather, shawls etc., but in spite of the excellence of the work these articles were mainly used for local consumption (Cuiet). By the reforms of 1921 Mardin formed a wilayet with 6 *kadās*, 1,018 towns and villages, and 125,809 inhabitants (*Türkiye İstatistikleri 1925-1926 Sânu'meni*). The *Sânu'meni* of 1926-1927 made a number of changes. There are now 8 *kadās*. The area is 6,000 square miles with 6½ million *dinm* of arable land.

Kadā	Number of towns and villages	Corresponding Nāhiyyas
Central	147	Koç-hisar
Sawur ('Awniya)	113	'Omerekān
Nishin	114	Hubāh
		Āliyan (Dīrān)
Midiyat	134	Kerbūran
		Ujeshmī
		Ba-ğjārīn
		Humān-keif
Ba's al-'Ala	9	
Dīrak	138	Mahall-i Matnān (Shamrakh)
Ujesh	211	Sūtu
Ker-djās	98	
	922	

The wilayet now marches with the zone of the French mandate.

Population. Niebuhr (1766) counted 3,000 houses in Mardin (of which 1,000 were Christian) with 60,000 inhabitants. Dupré (1808) estimated the population at 27,000 of whom 20,000 were Turks (i.e. Muslims), 3,200 Jacobites, 2,000 Armenians and 800 Shamsiya. The statements of other travellers are as follows: Kinneir (1814): 21,000 of whom 1,500 were Armenians; Southgate (1837): 3,000 of whom 1,700 were Muslims, 500 Armenians, 400 Catholics, 250 Syrian Catholics, 100 Chaldeans; Midlbach (1838): 12-15,000 inhabitants; Sachau (1879): 20,000; Cuiet (1891): 25,000 of whom 15,700 are Muslims.

According to Southgate, Arabic and Kurdish are the predominating languages in the town. The rural population of the Mardin speaks the "Torchin" dialect of Aramaic; cf. Frym and Socin, *Die neuaramäische Dialect des Tur Abdin*, Göttingen 1881;

on the Kurd dialect cf. Makas, *Kurdische Texte aus der Gegend Mardin*, Leningrad 1924.

Among the religion sects of Mardin the Shamsiya would merit a special study. In the time of Niebuhr (1766) there were about a hundred families in the town, and Buckingham (op. cit., p. 192) and Southgate (1837) also mention them. The Shamsiya probably represent the last survivors of a local pagan cult. Towards the middle of the xviiith century they were led to declare themselves Jacobite Christians but only formally (cf. Ritter, *al.*, p. 303-305).

Christianity at Mardin. The district of Mardin has played an exceptionally important part in the development of Eastern Christianity. A brilliant period of the Nestorian church which begins in 755 is closely associated with Mardin. Towards the end of the eighth century numerous monasteries were established round the town by the bishop John of Mardin. In 1171 the Jacobite patriarchate was transferred from Diyarbakir (Amid) to Mardin. In 1207 it was moved to Deir-Zafaran, an hour's journey from Mardin, to return to Mardin in 1555 (Assmann, *Bibl. Orient.*, ii. 110, 221, 470; Wright, *A Short Hist. of Syrian Literature*, 1891 [Index] On the position of the Christians before 1914 cf. the works of Southgate, Parry, Cuiet etc.).

Antiquities. According to Niebuhr, there are many Arabic inscriptions at Mardin. Those of the Ortokids have been studied by 'Ali Emiri Efendi who also examined the *wafq* documents relating to the principal buildings of this dynasty at Mardin (cf. Kātib Ferdī [944], *Mardin Mülak-ı Uretkiye Tarikhi*, ed. and annot. by 'Ali Emiri, Istanbul 1331). For the list of buildings cf. the article on Ortokids. The monuments of Mardin which must be of considerable artistic interest have never been described in detail. Buckingham (p. 191) gives a few details about the minaret of the "great mosque" (a cylinder decorated with carved arches, on a square base, etc.; a stone gallery with a pointed roof on the top) i.e. the Mosque of Nadim al-Din Alpi built in 568-572; but the buildings have never been studied. We do not know if the *madrasa* of Kāsim Padshah Ak-Koyunlu (Niebuhr) is still in existence. The domes of the mosques of Mardin are "ribbed and guttered", their vertical ribs radiating from the summit.

MARDJ DĀBIK, a battlefield near Dābiḳ [q.v.] on the Nahr al-Kuwaik in northern Syria. On the history of the town of Dābiḳ, which was known to the Assyrians as *Dablu* (Sachau, Z. A., xii. 47) and is called *Ḍāḇḇas* by Theophanes (*Chron.*, ed. de Boor, p. 431, 451 *sq.*) cf. above vol. I, DĀBIK.

For convenience in his campaigns against the Byzantines, Sulaimān b. 'Abd al-Malik moved the headquarters of the Syrian troops from Djabhiya to Dābiḳ (Lammens, *supra* I, DĀBIYA). In 717 with an army under 'Ubayda he set out from Mardj Dābiḳ for Asia Minor and on his return died there in Safar of the same year (al-Mas'ūdī, *Murūj al-Dhahab*, ed. Paris, v. 397; *Chronica Minor*, ed. Guidi, in C.S.C.O., Ser. Syri., ser. iii., vol. iv., text, p. 234; transl., p. 177). Hārūn al-Rashid also encamped in 807 A. D. there (Syr. *Mardj Dābiḳ*) and composed the differences between the Syrian bishops (Michael Syrus, *Chron.*, ed. Chabot, iii. 19; Barthelmeau, *Chron. Eccles.*, ed. Abbeloos-Lamy, i. 339). The Mirdāsīd Mahmūd in Rajab 457 (1064—1065) defeated his uncle 'Aṭṭiya on the field of Dābiḳ and then took Haleb (Kamāl al-Dīn, *Zuhā*, transl. J. J. Müller, *Historia Mirdāsīd*, Bonn 1829, p. 59).

When in 491 (1098) the Franks conquered Antākiya, Kerbūgha of Mawṣil assembled a large army on Mardj Dābiḳ, with which he laid siege to Antākiya (Ibn al-Aṭṭar, ed. Tornberg, x. 188; Abu 'l-Fida', Kamāl al-Dīn etc., in *Rev. hist. or. croit.*, i. 3, 194; iii. 580). In the spring of 513 (1119) Ilghāz on his campaign against the Franks crossed the Euphrates at Baddiyā (now Beddai on Sachau's map) and Sandja and advanced via Tell Bāshir [q.v.], Tell Khaliḍ, Mardj Dābiḳ and Maslamiya against Kinnasra (Kamāl al-Dīn, in *Rev. hist. or. croit.*, iii. 616). In the beginning of September 1124 Dubais b. Ṣadaka was defeated by Husām al-Dīn Thaurīsh on the field of Dābiḳ (*Rev. hist. or. croit.*, v. 645). On his campaign against Leo II of Little Armenia, al-Malik al-Zāhir encamped in 602 (1305—1306) on Mardj Dābiḳ (*Rev. hist. or. croit.*, v. 155). On Saif al-Dīn Tuglar's campaign against the Tatars to Malatya

[q.v.] in which Abu 'l-Fida' of Hama took part, a halt was made on the way back on the field of Dābiḳ from the 30th Safar to the 2nd Rabi' II 715 (May 9—July 6, 1315) (Abu 'l-Fida', *Rev. hist. or. croit.*, i. 3).

On the 25th Rajab 922 (Aug. 24, 1516) was fought at Mardj Dābiḳ the battle which gave Selīm I a decisive victory by which Syria passed for the next four centuries under Ottoman rule (H. Jansky, *Mittell. u. oman. Geschichte*, ii., 1925—1926, p. 214—224).

(K. HOSUMANN)

MARDJ RĀHĪT, the name of a plain near Damascus. On leaving Damascus in the direction of Hama, just before crossing the pass of the Eagle, al-'Uḡāb, one reaches the village of Mardj 'Aḍḥā. To the east of this place stretches the plain, Mardj Rāhī, which extends as far as the desert. It was here and not in the 'Hochebene von Qataife' (H. Moritz) that the fate of the Omniyads after the death of Mu'awiya II was settled. This decisive battle since it was fought in the neighbourhood of Mardj 'Aḍḥā was named by the poet al-Kaṭī after this place. With greater exactitude the contemporary poet al-Akḥḥāl, who was more cognizant with Omīyad history, places this battle 'between the 'Uḡāb and Rāhī', namely in 'the vast plain of Mardj' mentioned by the poets (*Aḡḥāl*, xvii. 112).

During the discussions of the congress of Djabhiya [q.v.] the concentration of the Kaist forces was taking place under the command of Dābiḳ b. Kaīs [q.v.] supported by the Yemen contingent and the Kaḡarī malcontents to the south-east of Damascus. Their total — which has probably been exaggerated — has been placed at 30,000. Marwān b. al-Hakam had at his command eight or ten thousand combatants, the majority of whom were Kalbi. The Kaists seem to have taken up their position first at Mardj al-Suffar [q.v.] to the north of Djabhiya. After an engagement in this place had ended to their disadvantage, they were forced to double back to the north. In the meantime a sudden attack launched against Damascus which was depleted of troops, had delivered into the hands of the Omīyad supporters the treasury and the arsenal of this town. The Kaists in order to avoid being caught between the capital and the Kalbi army advancing from Djabhiya retreated, while harassed at close quarters by their adversaries. These engagements occupied nearly twenty days. On arriving on the heights of Mardj Rāhī, trapped between the defiles of 'Uḡāb and the desert, they accepted battle. One must ask how the Kalbis succeeded in making up for their glaring inferiority in numbers. Mu'awīh, without explaining further, speaks of a stratagem devised by Marwān. This stratagem, which is mentioned by the author of

the *ʿIṣṣ al-farḥ*, should be described not as a cause of war but as a crime. After the advantage gained at Mardj al-Suffar, the Omayyads had had the time, and without doubt made use of it, to detach from the Kaissis their temporary allies, the Yemenis and the *Ḥaḥāʾis*. The treasure of the state seized at Damascus and the large amount of wealth brought from the *ʿIrāq* by the family of Ziyād b. Abihl may have been of assistance in doing this. The Syrian Arabs, not at their ease in the camp of Dabḥūk, no doubt understood how much the triumph of Ibn al-Zubair would be prejudicial to their hitherto privileged position and to the hegemony wielded since the days of the Sufyānids by the Syrian tribes. Their defection must, we think, have determined the issue of the engagement at Mardj Rāhīt and hastened the triumph of the Omayyad arms. Whatever was the cause this victory was decisive (the middle of July 684). 3,000 Kaissas are said to have been killed. The death of Dabḥūk seems to have been the signal of defeat, which became a regular disaster, in which the principal chiefs of Kaiss perished. Flight alone saved the most prominent among them, Zufar b. al-Ḥarith (q. v.).

The memory of Mardj Rāhīt was deeply impressed upon the Kaissas. It detached them *ex illo* from the Omayyad cause. Under the first two Marwānid caliphs, their battle-cry became "Vengeance for the victims of Rāhīt". From this time a smile is said never to have appeared on the countenances of the surviving chiefs. Between them and their ancient rivals of Kalb the split became much deeper. The latter's songs of victory answered the cries of rage of the Kaissas. In celebrating the battle of Rāhīt the Kalb poets give more emphasis to their triumph than to that of the Omayyads. Their compositions complacently develop this theme without regard to the Marwānids, their debtors rather than their sovereigns. This great victory afforded the aged Marwān the opportunity of proclaiming himself as Caliph of Damascus before beginning the conquest of the old Sufyānid lands now under the authority of Ibn al-Zubair. In the bosom of the Caliphate, it courbed the most dangerous rebellion; it inaugurated a savage war of extermination between Kalb and Kaiss. The tribes of *Ruḥla* first, then the Yemenis and lastly the Taghlibi saw themselves in turn fatally involved. These internal feuds in which the members of the Marwānid family had the imprudence to take part, to the satisfaction of their maternal connections, precipitated the fall of the Omayyad dynasty by destroying the agreement and the unity amongst the Arab tribes, which had been but imperfectly realized by the Sufyānid Caliphs.

(H. LAMMENS)

MARDJ AL-SUFFAR, a plain situated 20 miles south of Damascus near the modern Tell Shakhāb; a stream called the "Wādī 'Atrām" runs through it. The place plays a part in the military history of the first century A.H.; first in the accounts of the Arab conquest of Syria, and later at the beginning of the Marwānid dynasty. The name has been sometimes confused with that of Mardj Rāhīt (q. v.). For the history of Syria in the first century A.H. we are exclusively dependent upon the *ʿIrāq* annalists. Forgetting that the name "Mardj" abounds in the topography of the Damascus region, writers have confused two distinct battles and made them one and referred them to Mardj Rāhīt, a name which occurs frequently in the poets of the Marwānid period.

At the close of the year 13 A.H. the Arabs, victorious at Fihl, endeavoured to reach Damascus by cutting across the Djawlan. One of their bands, under the command of the Omayyad Khālīd b. Saʿd, encamped at Mardj al-Suffar and allowed themselves to be taken by surprise by the Byzantine troops. The Arab leader was killed and his contingent decimated. But the arrival of Muslim reinforcements enabled them to regain the advantage. The Greeks then proceeded to shut themselves in Damascus to which the Arabs at once laid siege.

In the month of May 684 (64), supporters of the Omayyads joined with Djabīya (q. v.) in order to elect a successor to Muʿawīya II. Dabḥūk b. Kaiss (q. v.), the leader of the rival section of the Zubairis and the governor of Damascus, was invited to the conference. He promised to come to the conclave and marched out of Damascus at the head of imposing forces. But, having gone about half way on the road to Djabīya, on the heights of Mardj al-Suffar, he determined to await events there. The presence of water and of forage made it suitable for the encampment of an army. An excellent point of observation, the site not only commanded the congress of Djabīya, but also commanded the road leading to Damascus. Dabḥūk brought about at this point the concentration of the Kaissas of Syria, who were in revolt against the Omayyads. At Djabīya after 40 days' deliberation, the Kalbs and the Omayyad partisans elected Marwān b. al-Ḥakam (q. v.) to be Caliph. Then in their advance upon Damascus, they attacked Dabḥūk and the Kaissas encamped at Mardj al-Suffar and succeeded in defeating them.

Of this campaign the *ʿIrāq* annalists and their copyists have only recorded and have only desired to record the decisive battle, namely that of Mardj Rāhīt, to the north of Damascus. For a quarter of a century no mention is made of any battle between the Kaissas and the Kalbs but Mardj Rāhīt. The extraordinary prominence given to this latter battle by the poets of both sides helped to throw into oblivion the preceding engagements commencing with that of Mardj al-Suffar. Certain texts have however preserved its memory. Yāqūt (*Muʿjam*, li. 400) locates in this place "a battle celebrated in the history and poetry of the Marwānid period". Otherwise there is no reference to Mardj al-Suffar in the military history of the younger branch of the Omayyads. As regards poetry it has kept for us the testimony of the Taghlibi poet al-Akhtal (*Dirwān*, ed. Salhani, p. 224, v. i.). This contemporary poet, who was a habitué of the Omayyad court while praising the glorious deeds of his

tribe, claims for it "many victories even before Mardj al-Suffar". As we know that the Taghlibis fought in the ranks of the Omayyads, for whom they showed themselves at all times strong partisans, the reference must be to this battle. Moreover the manner in which al-Akhtal praises this victory suggests that he was not dealing with a small skirmish.

In the meanwhile an Omayyad partisan residing at Damascus had seized the capital. The position became untenable at Mardj al-Suffar for the Khawāṣ. It was to avoid being caught between Damascus and the victorious Kalbīs that Dahhāk fell back precipitously to Mardj Rāhiṭ where he was defeated and killed. On the 22nd June 684, the election of Marwān b. al-Hakam was proclaimed at Dīshīyā. It is probable then that the battle of Mardj al-Suffar must be located in the early days of July.

LAMMENS)

MAREJA [See MĀRYĀ.]

MARGHELAN, originally **MARGHINĀN**, a town in Farghāna [q. v.]; where also the minor importance of the town in the 19th (xix) century (*B. G. A.*, iii. 272, 42; *agāḥ*) and its rise in the centuries following are discussed (Samʿānī, *K. al-Ansāb*, G. M. S., xx, c. 522: *min maḥallāt al-Bīd*; Vākūfī, iv. 500; i: *min aḥḥāl al-Bīd*). The town does not seem to have been of political importance during this period, although raids were occasionally struck here under the dynasty of the Ilēk-Khāṇs [q. v.] (A. Markow, *Inventory of the Catalogue musulmans de la Bibliothèque Imp. d'Ermitage*, p. 260, 265 and 272). Hānūr (fasc. ed. Beveridge, c. 3^e 19.) gives a brief description of the town; the population at that time consisted of Sarts [q. v.] i. e., according to the linguistic usage of the time, of Tadjik [q. v.]; since then the Tadjik have been driven by the Oshegs here as everywhere out of the plain. The more recent, probably Osheg form Marghān is found for example in 'Abd al-Karīm Bukhārī (ed. Schuler, p. 94) whence the Russian Margelan; the river on which the town stands is called Margelan-Sai. In literature the old form Marghān or Marghīnān is still frequently used e.g. in the *Taʾrīkh Shāhrukhī*, ed. Pantusov, p. 195.

Marghelen was occupied without resistance by the Russians on the 8/20th Sept. 1875; New Margelan founded as the capital of Farghāna in 1877 by the Russians about 7 miles from Marghelen was called Skobelev from 1907 (since the Revolution: Fergana). The original Marghelen was mainly noted for its silk industry; according to the census of 1897, the population was 36,490, in 1911 46,780 of whom only 144 were Russians. A building which is certainly not ancient is called Iskandar

Pasha and said to be the tomb of Alexander the Great (W. Musul'skiy, *Turkistan'skiy Krai*, Petersburg 1913, p. 705 19.).

Bibliography: given in the text.

(W. BARTHOLO)

AL-MARGHINĀNĪ, the name of two families of Hanafī lawyers, *nishā* from their native town and the scene of their activities Marghān in Farghāna.

1. 1. The most important was BURNĀN AL-DĪN ABU 'L-HASAN 'ABD Z. ABU BAKR B. 'ABD AL-DĪAL AL-FARGHĀNĪ AL-MARGHINĀNĪ, the author of the celebrated *Hidāya*. He acquired his knowledge on his travels, then still the usual way of studying in Islām. His principal teachers were Naḍīm al-Dīn Abū Ḥafṣ Umar b. Muḥammad b. Ahmad al-Nasafī († 537 = 1142—1143), al-Sadr al-Shahīd Ḥusām al-Dīn 'Omar b. 'Abd al-'Azīz b. 'Omar b. Mārāh († 536 = 1141—1142) and Abū 'Amr 'Othmān b. 'Alī al-Bakhandī († 552 = 1157), a pupil of al-Sarakhsī. He studied Tirmidhī's work on Tradition under Dīyā' al-ʿIm Abū Muḥammad Saʿīd b. Aṣad with the *imād* given in Kurāshī, l. 259, N^o. 679 and also with al-Ḥasan b. 'Alī al-Marghīnānī (Kurāshī, l. 198, N^o. 487). He himself as was often done at this time, wrote a record of his studies but it does not appear to have survived. He far surpassed his teachers and won recognition in his native town also where he died in 593 (1197). Of his works the following are known, some surviving in manuscript and others only known from literary references: 1. *Najm al-Maḥḥab* (Kur., Lak., in *Madḥijī Khulfa*, N^o. 13790 probably wrongly: *al-Maḥḥab*); 2. *K. Maḥḥab al-Ḥaḥḥ* (Kur., Lak., H. Kh., N^o. 12943); 3. *K. 'L-Farā'id* (Kur., Lak.), also called *Farā'id al-'Othmānī* (H. Kh., N^o. 8089); 4. two collections of *fatāwā*: *K. al-Tafḥīm wa 'l-Mawā'id* (Kutl., Lak., H. Kh., N^o. 2467; MSS. in Brockelmann) and 5. *Muḥḥab al-Nawā'il* (Lak.; in Kutl. called: *K. Muḥḥab al-Mawā'id* and in H. Kh., N^o. 11586 called: *Muḥḥab al-Fatāwā*; MSS. in Brockelmann); 6. *Mawā'id fi Furu' al-Hanafīya* (H. Kh., N^o. 11538; identical with N^o. 47); 7. a commentary on al-Shahīd's *al-Djāmī al-Kaṭṭī* (H. Kh., li. 567); 8. his principal work is the legal compendium *K. Bidāyat al-Muḥḥab* (MSS. in Brockelmann), based on Ḥadīr's *Muḥḥab* and Shahīd's *al-Djāmī al-Sagḥī*. On this work he himself wrote a large commentary in 8 volumes: the *Kifāyat al-Muḥḥab*. But before he had completed it, he thought it was much too diffuse and decided to write a second commentary, the celebrated *Hidāya* which later writers repeatedly edited and annotated. The most important commentaries and synopses are given in the table on p. 280.

For the manuscripts and printed texts of these commentaries and synopses and many supercommentaries and glosses see Brockelmann, *G. A. L.*, i. 376; a printed edition of the *Hidāya* recently appeared in 4 vols., Cairo 1326.

Bibliography: al-Kurāshī, *al-Djāmī al-Kaṭṭī*, *Muḥḥab*, *al-Djāmī al-Sagḥī*, N^o. 1058; 'Abd al-Hayy al-Laknawī, *al-Fawā'id al-Bakhtīya*, Cairo 1324, p. 141 199. (synopsis of the *Tahkīk* of Kafawī); Ibn Kutlūbghāh, *Taḥḥ al-Tawḥīd*, ed. Flügel, Leipzig 1862, N^o. 124; Brockelmann, *G. A. L.*, i. 376 and the literature there given. His sons and pupils were:

1. 'IMD AL-DĪN AL-FARGHĀNĪ; cf. Laknawī,

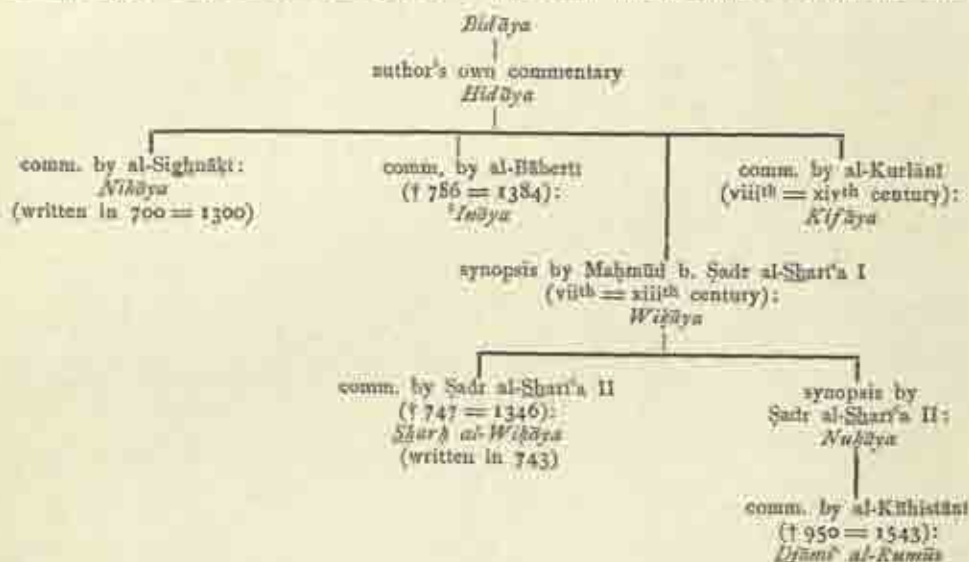

p. 146.

3. 'OMAR NIZĀM AL-DIN AL-FARĠĠĀNĪ. Two works by him are recorded: 1. *Farmā'id* (H. Kh., N^o. 9305); 2. *Djawā'id al-Filāh*, which he compiled from the *Muhtasar* of Ṭahāwī and other works (H. Kh., N^o. 4291; MSS. in Brockelmann, *G. A. L.*, i. 376, note 2, where the mark of interrogation should be deleted; cf. Kurashī, i. 394; Lahnawī, p. 149).

4. MUHAMMAD ABU 'L-FATH DIALĀL AL-DIN AL-FARĠĠĀNĪ; cf. Kullī, p. 137 and Lahnawī, p. 182; in Kurashī, ii. 99 apparently identical with N^o. 2.

5. A SON of 4 and grandson of 1: ABU 'L-FATH ZAIN AL-DIN 'ABD AL-RAḤMĀN B. ABĪ BAKK 'IMĀD AL-DIN B. 'ALĪ BURHĀN AL-DIN B. ABĪ BAKK B. 'ABD AL-DJALĪL AL-FARĠĠĀNĪ AL-MARGHĪNĀNĪ. He wrote the work on legal procedure in civil cases entitled *al-Fuḥūl al-'Imādīya*, which he completed in Sha'ban 651 (Oct. 1253) in Samarqand. Cf. H. Kh., N^o. 9094; Lak., p. 93; Brockelmann, *G. A. L.*, i. 382, where the MSS. are given.

Th. J. Arnaud (1843), J. Halévy (1869) and E. Glaser (1888), is situated in the plateau of Saba, 3,900 feet above sea-level, which runs east of the Balāḥ range and is traversed by the Wādī Dhann (Adhana) which in the course of millennia has deposited a thick layer of silt and thus made a luxuriant vegetation possible. The modern village of the same name stands on a large mound of ancient rubble within the old city walls and is situated about exactly in 15° 26' N. Lat. and 45° 16' East Long., about 10 days' journey from the Red Sea and the same from the Gulf of 'Aden. This favourable situation predestined Mārīb to be the centre of the Sabaean kingdom, the heart of which was the southwestern corner of the Arabian Peninsula and which at times also included the eastern hinterland of the Gulf of 'Aden including Hadramūt and Mahra (E. Glaser, *Reise nach Mārīb*, p. 18, 185). Mārīb also lay on the important caravan-route which connects the lands which produced frankincense with the

II. Another family of Ḥanafī lawyers goes back to 'ABD AL-'AZĪZ B. 'ABD AL-KAZẒĀZ B. NAḤB B. DJA'VAR B. SULAYMĀN AL-MARGHĪNĀNĪ, who died in 477 (1084—1085) in Marghīnān at the age of 68. Of his six sons who attained fame as muftis we may mention ABU 'L-ḤASAN ZAHĪR AL-DIN 'ALĪ († 506 = 1112—1113). His son and pupil was ZAHĪR AL-DIN AL-ḤASAN B. 'ALĪ ABU 'L-MAHJĀN. Four works by him are recorded: *Akṣāya*, *Fatāwā*, *Farmā'id* and *Šurūf*, only the last of which survives in manuscript. He was the teacher of the famous Fakḥ al-Din Qādīkhān († 592 = 1196) and of Burhān al-Din al-Marghīnānī (q. v.).

Bibliography: Sam'ānī, *K. al-Ansāb*, fol. 522; Kurashī, N^o. 487, 850, 1010; Lahnawī, p. 62, 97, 121; Flügel, *Classen d. hanaf. Rechtsgelahrten*, Leipzig 1860, p. 309; Brockelmann, *G. A. L.*, i. 379. (HERRMANN)

MA'RĪB (MĀRĪB), a town in the south-west of Arabia, formerly the capital of the Sabaean and now the capital of the amirate of the same name.

The ancient town of Mārīb, which so far has only been visited by three European travellers,

Mediterranean (Gaza-Gharze) and which run from Shabwat-Sahota via Thumna-Thumna near Dard Kohlān in the Wādī Bahān, through Wādī Ḥarb via Mārīb into the Minaeen Djawī, to Nadīrān and from there via Thirmāla, Abū al-Khaḍar, Hūhila, al-Djīf, Djebel Siru, Badr, Wādī 'l-Ḥāṣil, Wādī 'l-Zibair, Wādī 'l-Faif, Haradje, Koiba, Banāt Ḥarb, Djurash, Tehala, Karn al-Manāsil, Mekka, Yaḥrib (al-Medina), Fadak, Khaibar, al-'Ola', Taimā, Akra', Tabūk, al-Hijr, Maḥna, Madyan, al-Hakl, Arām, Aḥrah to Petra and thence to Gaza while Mārīb was also connected with al-Yemāma, the coast of the Persian Gulf and Babylonia, via Nedīrān by the route which followed the Wādī 'l-Dawāsir (cf. A. Grohmann, *Historisch-geographische Bemerkungen zu Gl. 418, 419, 1000 A. D.*, p. 116 sq.). It still forms an important junction and has good connections with Hadramūt, Redk', Yerin, Ša'it', al-Djawi, Sa'da, Nedīrān and the Wādī 'l-Dawāsir (E. Glaser, *Reise nach Mārīb*, p. 20).

The ancient city wall, 3 feet thick, enables us still to recognise with more or less certainty 8 gates — not only 2, as Th. Arnaud (*Plan de la digue et de la ville de Mārīb*, in *J. A.*, art. vii,

vol. iii. [1874], p. 12) thought — distinct gate-like breaks in the stone wall. They are now called Bab al-Akkr (W.), Bab al-Hadd (S.W.), then along the south wall to the east and from here to the north, Bab al-Nasr, Bab Aba l-Kar, Bab al-Mahram, Bab al-Darb, Bab al-Kibla, Bab al-Madjenah. The names Bab al-Nasr, Bab al-Darb and Bab al-Hadd are still borne by the gates of the modern village of Marib but the modern Bab al-Nasr corresponds to the Bab al-Akkr of the ancient town, since from the latter by traversing the whole of the old town the village is reached through the Bab al-Nasr.

The old town forms at the present day a considerable mound or rather a number of mounds of ruins, out of which project remains of walls and portions of columns. Excavations conducted here would, as Glaser pointed out, bring to light most unexpected things. Four distinct areas may be distinguished in the site: 1. The mound on which stands the modern village which stands in the eastern part, almost in the S.E. corner, of the old town and seems to consist entirely of refuse and rubble, beneath which at a considerable depth one comes upon old buildings. Glaser believed that these old buildings represent the oldest part of the town upon which in the later centuries of the Sabaean period rubbish was shot. It is also possible that the town of Marib or at least many of its buildings have been several times destroyed. The topmost stratum is of course of comparatively recent date if we exclude the many old stones with Sabaean inscriptions. The village, which, according to Glaser, can hardly have more than 600 inhabitants, consists of about 80 houses, usually in several stories on a rectangular plan narrowing a little as they ascend. Only the lower parts are of stone, the rest is of clay. Only the two fort-like houses of the amir are built entirely of hewn stone. The outer wall of the village consists simply of the walls of the outermost houses, which are built on to one another or linked up by connecting walls. The village has two gates of some size, one facing west and the other south, and several small doors. There is an old well outside the village between this and the eastern gate of the old town, and also the chief mosque (Masjid Sulaiman). 2. The Maidan Umm al-Kris identified by Glaser in his *Kartenbuch*, p. 8 with Umm Bilqis, in the S.E. corner with great mounds of ruins, which perhaps come from castles. 3. The S.W. area which apparently contained temples and castles. 4. A large round open space (Maidan) in the N.W. and western part of the town which does not seem to have been built on in ancient times either. It stretches almost to the modern village and particularly on the south side is surrounded by portions of columns and other ruins (E. Glaser, *Reise nach Marib*, p. 48 sq., 73). These faceted columns which still protrude 3—4 feet out of the ruins, one of which lying on the ground measured 12—15 feet, are also mentioned by Arnaud (p. 12). The place is probably identical with the "Champs de Mars" mentioned by the French traveller in his report to Fremont (*J.A.*, ser. iv., vol. v. [1845], p. 325). The place in any case was at one time surrounded by large buildings which are now in ruins and form great mounds, which are also dotted with fragments of columns and Glaser leaves the question open whether there were here the palaces

of the kings and notables or the temples of the ancient Sabaean. To the south of the Maidan in particular may still be seen the foundations of a colossal building which Glaser wanted to identify with the famous royal citadel of Salhu celebrated by later tradition.

The old town which occupied an area of about 1,000 yards square, a calculation by E. Glaser, which agrees with Th. Arnaud's plan of the town (*J.A.*, ser. vii., vol. iii. [1874], p. 11) [Glaser gives the distance between the two opposite gates as $\frac{1}{4}$ hour], is built entirely on the left bank of the Wadi Dhenne. It seems, to conclude from the remains of the 3 feet thick wall around it, which has only survived in places, to have practically formed an oblique angled parallelogram the longer sides of which follow the line of the Wadi Dhenne while the eastern and western sides (breadth) run practically due north and south. The southern wall which runs parallel to the river bank turns from north to east at an angle of 60° and runs almost E.N.E. This fact is clear not only from E. Glaser's description of his *Reise nach Marib* (p. 36 sq., 48) and the *Marib Tagebuch* but also from Glaser's *Skizzen* (Nº. 51) upon which is based the appended plan of Marib and vicinity. It is a striking contrast to Th. J. Arnaud's description and map (*J.A.*, ser. vii., vol. iii. [1874], p. 11) which makes the wall around Marib describe a circle and also to Glaser's earlier sketches in his large *Kartenbuch*, p. 8 sq. and the map drawn up after investigations in the year 1888, which forms fol. 4 of E. Glaser's collection 1. The foundation of the wall consists of cement blocks 5 feet long, 15 inches high and 2 feet thick. On the top of 8—10 layers of these blocks are placed regularly hewn blocks of marble of the same size. The wall which unfortunately is almost completely destroyed does not run in a straight line but at regular intervals there are rectangular projections, as is clearly shown in E. Glaser's already mentioned sketch Nº. 51 and in that of his *Tagebuch*, xi., p. 125, which moreover gives the plan of the town as a rectangle — Glaser notes here "the city wall was apparently built as a quadrilateral" — while Nº. 51 shows rather a trapezium the base of which lies away from the river while the shorter side parallel runs along the river. The rectangular projections found at regular intervals were probably towers, which strengthened the defences and stood out at regular intervals in the style we know from Assyrian fortifications (cf. the similar quadrangular plan of a fortress with gates near the corner and towers covered by stippled battlements in B. Meissner, *Babylonien und Assyrien*, i., *Kulturgesch. Bibliothek*, 1. 3, Heidelberg 1920). That the city walls of Marib had towers is also evident from the great inscription (Glaser 412—419) which is older than the great Sirwath inscription G1. 1000. In this we are told in line 4 that the unknown ruler built "the two gates of Marib (𐩦𐩣𐩪𐩬) and built towers for Marib of Balak stone" (cf. N. Rhodokanakis, *Altäthiopische Texte*, i. 6 sq.).

Rhodokanakis suggests, presumably rightly, that this king was continuing the work of the unnamed son of the Sabaean mukarrib Samhu'alaya Yana'f (𐩦𐩣𐩪𐩬 𐩦𐩣𐩪𐩬 𐩦𐩣𐩪𐩬) who, according to the inscriptions Glaser 412 = Arnaud 41, 415 = Arnaud 42, 414, 427, 445, 500, 510, 537, 580, 600, 614 and perhaps also 751, "built a wall around Marib

(1775) by command of and with the help of 'Aḥṣa'. Whether the son of Sumḥu-ʿalaya Yanāf was the builder of Marib seems uncertain; in any case he is the oldest builder of the town whom we know from the inscriptions.

Nor is it known who founded Marib. That it was Saba', son of Yaḥṣub, as the Arab genealogists think, is of course quite an unfounded supposition (cf. Yāqūt, *Muḥṭarib*, p. 239; Abu 'l-Fidā', *Historia antislamica*, p. 114 sq.; A. v. Kramer, *Über die südarabische Sage*, p. 26 sq.; E. Oslander, *Z.D.M.G.*, x. 68).

That the city wall was frequently restored is evident from the fact that inscribed blocks of the earliest period of Sabaean history were used as building material in any order without heeding the context of the inscription (cf. Glaser, *Reise nach Marib*, p. 48 sq., 51, 74) which is the case e.g. in the texts Glaser 699—707, and as there were no inscriptions of a later period in the lower strata the renovation must have begun after the reigns of the three Sabaean mukarribs Yid'i-lu-Bayin, Sumḥu-ʿalaya Yanāf and Yith'i-ʿamara Waṭar. To the same period as these inscriptions must belong the old Sabaean lunistropheion text, Glaser 926 = 1350 + 1351 = 1730, which comes from al-Mushājjah, not far east of Sirwāh, in the second line of which there is mentioned the building of a road up to the gate of Marib (مَرِيب) (cf. E. Glaser, *Allgemeine Nachrichten*, I. Munich 1908, p. 98 sq. and N. Rhodokanakis, *Natubäische Texte zur Bodenvirtschaft*, II. 49, and note 3, 54—56). Of the three Sabaean mukarribs mentioned here Yith'i-ʿamara, Yid'i-lu and Sumḥu-ʿalaya, the first, as N. Rhodokanakis has pointed out, is identical with Yith'i-ʿamara Waṭar, Yid'i-lu with Yid'i-lu Bayin, the conqueror of Nashq, while Sumḥu-ʿalaya is perhaps the same as Sumḥu-ʿalaya Yanāf, in whose reign the inscription Glaser 926 was set up. Glaser must also be right in assuming (*Skins*, I. 68) that the town of Marib is considerably older than the wall and a number of decades must have passed away before the town attained the extent indicated by the oldest remains of walls. This is also evident from the mention of independent kings of Marib in the inscription Glaser 302 which is older than Glaser 418—419. A memory of this earliest period in Sabaean history seems to be preserved by the poet 'Alḥama Dhī Ḥadān, who mentions kings of Marib along with kings of Sirwāh (cf. D. H. Müller, *Sabäische Denkmäler*, p. 99).

According to al-Ḥamdānī (*Ikhlāṭ*, viii., in D. H. Müller, *Burgen u. Schlösser*, II. 959 sq., 1038 sq.), there were in Marib the three citadels Saḥib, al-Ḳaṣīb and al-Ḥaḡḡar. For the former which is expressly stated to have been the royal capital and palace of Bilqis, cf. the article SAḤIB. The question where this castle is to be located in Marib has been very variously answered. D. H. Müller, *Burgen u. Schlösser*, II. 968 thinks that Saḥib was on the site of the modern village of Marib, which, as Arnold had already suggested, had been occupied by an old citadel (*J.A.*, ser. vii., vol. III. [1874], p. 12). Glaser (*Reise nach Marib*, p. 73) on the other hand identifies Saḥib with the colossal building the foundations of which lie south of the Maidān. In connection with Saḥib, al-Ḥamdānī also mentions the lower pillars of the throne (of Bilqis) — so D. H. Müller translates 'arīḥ — which became celebrated in the Muslim world

through Qurʾān xxvii. 23 and were still standing in his time and so firmly rooted in the ground that they could not be overthrown. Glaser, *Reise nach Marib*, p. 139 however assumes that the reference here is to the Haram of Bilqis with its pillars but admits the possibility that a citadel of the town proper is being described, since Saḥib is talked of immediately afterwards. Dhīḡal Zaidān, *Kitāb al-ʿArab ʿab al-Islām*, p. 143 also assumes that the palace of Saḥib is referred to. Sprenger, *Poet. u. Reiseurkunden*, p. 140 also tells of this throne of Bilqis that it stood on stone pillars 29 ells high which were still intact and the foundations were as deep as its height (this statement is erroneously attributed by Sprenger to Bakri but presumably comes from Ibn al-Muḡāwir). The *Dhīḡal-namā* also (cf. Jomard in F. Mengin, *Histoire de l'Égypte*, p. 344) says that the throne of Bilqis was built on columns 28 ells high in Saba' (= Marib). This sounds very improbable if we should really understand by 'arīḥ a throne, which according to Naḡwān al-Ḥimyarī, p. 50, stood in the palace of Bilqis in Marib. When however we are told by Naḡwān, p. 70, that 'arīḥ is a castle which was built on columns of stone and the verse of Aṣād Tabba' quoted gives the name 'arīḥ to the palace of Bilqis, we may then in the above passages take it to mean a citadel rather than a throne and with Glaser, *Reise nach Marib*, p. 73, look for it in the S.E. corner of the old town. Legend has associated the name 'Arḥ Bilqis with other localities also. According to Abu 'l-Raḥī Salāmīn b. al-Raḥīn in Yāqūt, *Muḡāḡam*, III. 640, it is the name of a place a day's journey from Ḍḡamār on which stand six great marble columns and the principal group of pillars of the old ruins of Sirwāh still bears this name (J. Halévy, *Rapport*, *J.A.*, ser. vi., xix. [1872], p. 67 sq.; Glaser, *Reise nach Marib*, p. 179). On the other hand, it is an open question where the two other citadels al-Ḳaṣīb and al-Ḥaḡḡar mentioned by al-Ḥamdānī and Bakri (*Muḡāḡam*, II. 302) are to be located. According to Yāqūt, *Muḡāḡam*, IV. 104, al-Ḳaṣīb was built by order of king Sharḥbīl b. Yaḥṣub, who put up on it a copper plate inscribed "They who built this castle are Ḍawḡal and Saḡar; its building was entrusted to them by Sharḥbīl b. Yaḥṣub, the king of Saba' and of the Tihāna and its Arabs". D. H. Müller in *Burgen u. Schlösser*, II. 1039, note 1 has already identified Sharḥbīl b. Yaḥṣub with king Ḥaḡḡarab Yaḥṣīb of the Sabaean inscriptions (Glaser, No. 424, 220; *Bibl. Nat.*, No. 2) and for Ḍawḡal compared the Sabaean Ḍḡwāl and for Saḡar (so to be read, not ساجر) the similar Sabaean name. If the inscription given by Yāqūt really goes back to a genuine *muḡāḡam* inscription, Ḳaṣīb must have been built about the first century A. D. If the Sabaean king here mentioned whose epithet in the *Ḥimyarī Sayyid* (verse 109) publ. by A. v. Kramer is to be read Yaḥṣīb, in the Sabaean inscription *Bibl. Nat.*, No. 2 [cf. article SAḤIB] speaks expressly of Saḥib, Ḥamḡān and Sirwāh only and does not mention al-Ḳaṣīb, this is not itself proof that Yāqūt's foundation inscription is not genuine. The building might easily be later than the inscription *Bibl. Nat.*, No. 2. A difficulty however is raised by the fact that al-Ḥamdānī (in Müller, *Burgen und Schlösser*, II. 1039) and Naḡwān al-

Himyar (quoted *ibid.*, note 1) give al-Kashib b. Dhi Hafar as the builder. Glaser, *Reise nach Märib*, p. 139, goes so far as to say that the name Kashib is derived from the verb *kāshā* or *kāshāb*, which frequently occurs in dedicatory inscriptions, and the form of the king's titles points to the last period of Himyar rule, and the king is to be identified with Shahrābil Ya'fur; indeed it must be conceded that the style and titles is quite unusual for a king of Saba' and Dhi Raiḍn and for this reason the *musnad* inscription must be regarded as a forgery. This does not mean that al-Hamdānī's note is to be rejected as worthless. V. Hommel (*Ethnologie u. Geographie d. alten Orients*, p. 666 and note 2) has shown the possibility that the castle of Ḥaḍjar (the name means "the town") was perhaps the principal castle, on the ruins of which the modern village of Märib was planted and the older and more celebrated Saliḥ was a smaller castle. If we remember the meaning "new" given in Yāqut, iv. 104 and Nashwan, p. 86 s. v. *ḥadīḥ*, al-Kashib might also be an epithet of the citadel as "the new" which came to be erroneously differentiated from al-Ḥaḍjar as the name of a third castle. Al-Bakri, *Muḥam*, ii. 502, 754 explains the difficulty by saying that al-Kashib was the last of the castles to be built in Märib and therefore called the "new".

The Masjid Sulaimān lies to the west, just below the village which is built on a great mound of rubble. This Masjid Sulaimān b. Dawūd, now the principal mosque of Märib, according to Arnaud (*J. A.*, ser. vii, vol. iii. [1874], p. 73), an obviously modern building, square with a flat roof and built of brown stones, is of interest because, according to E. Glaser (*Reise nach Märib*, p. 44, 73 sq.), its north side is built against 7 or 8 colossal columns (monoliths) which correspond exactly to those of the Haram Bilka and the 'Amūd to be discussed below. Glaser suggests that there was once a temple here similar to the Haram Bilka. F. Hommel, *Ethnologie u. Geographie d. alten Orients*, p. 664, 666 thinks the Masjid Sulaimān was the temple of the chief deity. This principal temple in his opinion formed a group with the second temple, which lay on the south side of the Mainān — according to Arnaud (plan of Märib) local tradition thinks this was the site of an ancient temple. The length (2,000 yards), suggested by F. Hommel (*op. cit.*, p. 666) for the distance of this second temple from the Masjid Sulaimān, is however too high, as both Glaser and Arnaud put the distance between the two opposite city walls at only 1,000 yards. J. Halévy's figure (*Rapport, J. A.*, ser. vi, xix. [1872], p. 96) which puts the diameter of the Märib ruins at about 500 yards would give a much shorter distance but the estimate is certainly a very casual one and hardly to be taken seriously.

In the south and west outside the old town walls lies an old cemetery with a number of tombs, some vertical and some horizontal, the latter of which have a small opening at the top. It is now called Medjennat (or Djabat) Gharrā. It is probably from here that have come a number of old Sabaean tombstones (Glaser, No. 436, 574, 575, 581, 582, 605, 662, 663, 665, 667, 685—686, 748, 769, 773, 792) with rectangular niches sometimes rounded below or peaked at the top, in which is placed the bust of the deceased with an inscription below. On two of these tombstones

(Glaser No. 684, 745), Glaser found the bust let into the stone still in its place (cf. *Reise nach Märib*, p. 75, 92; *Tagebuch*, xi. 59). We may probably find the models for these tombstones in the steles of Assur. Stone sarcophagi are also sometimes found. One is still in use before the great well of Märib as a drinking-trough for animals (*Reise nach Märib*, p. 74).

In the southwest of the old town outside the city walls, Glaser found a remarkable building still partly preserved (G on the plan of the immediate vicinity of the old town of Märib) which was probably used for distributing the water and has on its north side the inscription Glaser 474 = 1671. It consists of two huge stretches of wall running due east and west in one line with a gap in the centre. The two corners of the northern entrance of this passage are angular while at the south side the two are rounded. The inscription, which is placed on the north side of the eastern wall states that Dimri-alaya Water, Makarrāb of Saba', son of Kariba'ila, built a פִּישׁ (*fish*) opposite (or in front of) the sanctuary of 'Aḥḥar. Glaser actually found some 300 paces N.W. or W.N.W. of this building, also outside of the old city walls but quite close to them, a ruin unfortunately reduced to a heap of rubble, which from its plan suggests a sanctuary, since on the N.E. side (the right stretch of wall) the niches for an idol can still be seen (*Reise nach Märib*, p. 405 *Tagebuch*, xi. 47; H on the plan of the immediate vicinity of the old town of Märib).

S.S.E. of the modern village of Märib (A) at a distance of about 3 miles between the Wādī Ḥamne and Wādī 'l-Felāḥ is the Haram Bilka (B) which was visited by Th. J. Arnaud on July 20, 1843 and by E. Glaser on March 23, 1888 (cf. *J. A.*, ser. vii, vol. iii. [1874], p. 142; Glaser, *Reise nach Märib*, p. 41, 44 sq., 73, 137, 141); the latter corrects Arnaud on a number of essential points. The Haram is a large building, elliptical in form, the longer axis of which 300 feet long runs from N.W. to S.E. The shorter axis runs N.E. to S.W. and is 250 feet in length. It is built of regularly hewn square blocks which are placed one above the other in 31 layers up to the frieze so that the height of the wall is 31 feet. This wall is finished off with a double cornice at the top which consists of two rows of blocks which follow one another at short intervals and look like dice on the top of the wall, the result being a mural crown-like frieze which recalls the relief found by Th. Bent in Jeddā in Abyssinia (cf. Th. Bent, *The Sacred City of the Ethiopians*, London 1893, p. 141) and the top of the Sabaean relief in D. Nielsen, *Handbuch der altäthiopischen Altertumskunde* (p. 157, fig. 44). The row of blocks below the lower cornice form a simple and effective decoration by placing the blocks four to six inches apart so as to leave little gaps. A similar kind of mural decoration is known from the Sabaean temple of Jeddā (cf. *Deutsche Akro-Expedition*, ii. 80, fig. 163). The frieze is still quite intact in places, especially on the east side. There is no trace of a roof, but it cannot be asserted definitely that there never was one, as Glaser assumes; the windowless building could have been lit by sky-lights. There are two doors in the wall, the larger (a) at the northeast end of the shorter axis and the smaller (b) at the N.W. end of the building at the end of the larger axis.

Exactly N.E. of the centre of the building there are four other monolithic pillars in the wall itself. Originally there were a larger number here so that the main gateway (a) had a pillared way leading to it. N.E. of these at a distance of 32 paces are 8 columns which are also erected in a line running from S.E. to N.W. (E). They are rectangular prisms, smooth, 15 feet high without capitals and terminate in dice-shaped tops 4 inches long on which stood the architrave. On the S.S.E. side of the Haram just outside the

inside. He expressly states however that he could discover no chambers in the walls as he had expected. On the other hand, the fine inscriptions on the outside of the walls give us information as to the purpose of the building — it is a temple of the Sabaeen moon-god Almakah — as well as the history of its erection. Arnaud was only able to copy 3 of these inscriptions, two others whose existence he established were covered by sand, which has since made further progress, so that he could not copy them. The oldest in-

Plan of the immediate vicinity of the old town of Maryah.

A the modern village of Marib, B Umm al-Kh., C Masjid Salamin, D Haram Bilkis, E 'Amr'id, F Pillars E.S.E. of al-Merwath, G old Building not given a definite name, H Temple, I-K old city-wall of Maryah, L Wadi Dhenne.

wall, four small pillars form a little square the sides of which lie W. to E. and S. to N. (c). Perhaps we have here the pillars for the canopy of a throne which was probably similar in appearance to the Aksumite king's throne illustrated in *Deutscher Aksum-Expedition*, II. 65, fig. 139. The floor of the building never seems to have been levelled, as a natural rock rises almost in the middle. Unfortunately in the interior the walls are nowhere clear, so that Glaser could form no deductions as to what it must have looked like

scription Glaser 184 is on the 28th layer from above on the east side. It records that Yift'hu Dhuhi, son of Sumuhu-alaya, makarrub of Saba, built the wall of the temple of Almakah 'Amm (cf. the latest definitive edition of the text in N. Rhodokanakis, *Studia*, II. 7. 29.) Since the brilliant E. Oslunder had previously recognised (*Z. D. M. G.*, x. 70) that the Haram Bilkis was a temple of Almakah, Glaser (*Saba*, I. 68) was able to deduce rightly from this inscription that the sanctuary 'Amm frequently mentioned here

and in other Sabaeen inscriptions was this very temple. From it the god Almaḡah is called "lord of 'Awm" (ʿAwm ʿAwm). The completion of this temple which was begun by Yidʿ-ilu Ḥarib, by Ṭihariba, son of Sumuh-alaya Ḥarib, king of Saba², is recorded in the inscription Glaser 485 = Arnaud 55, which is on the west side of the Haram on the 14th layer of stones (cf. N. Rhodokanakis, *Studien*, II, 12 199.) Glaser 481 = Arnaud 56, which is on the 13th and 14th layer on the north side records the completion of the wall from the inscription to the top by Ṭabaʿkariba a prominent official and general of three Sabaeen kings (N. Rhodokanakis, *Studien*, II, 15 199.). Connected with this are two inscriptions of similar content, Glaser 482 = Arnaud 54 on the south side of the 13th layer and Glaser 483 = Arnaud 54 on the east side at the same height. They record the restoration of a ruined part of the wall (presumably of the part of the temple) under King Karibaʿilu Watar Ḥuhanʿim of Saba and Ḥu Raidū, the son of Ḥimri-alaya Bayin, and his son Ḥalik-amar. Whether this concludes the history of the building of the Haram seems doubtful since, according to Glaser, *Reise nach Märit*, p. 46, inscriptions may still be concealed under the sand on the north and west sides also.

The orientation of the building is of interest. The little door of the Haram (b) faces that temple of the old town of Märib on the site of which now stands the Masjid Sulaimān. On the prolongation of the shorter axis to the N.E. lies the ruin called al-Mikrah, and Glaser has, perhaps rightly, suggested from this arrangement of the two buildings that there was some connection between their purposes. Both buildings are moreover oriented by the course of the Wādī Ḥenne. On the south side of the old city wall may still be seen the remains of a bridge which was built almost exactly in the direction of the Haram and, according to the local tradition, once reached it. Even if this is an exaggeration it is nevertheless probable that a bridge was built over the river Ḥenne, as in the rainy season the water must certainly have inundated the fields; the continuation of this bridge to the Haram was probably only a dam of which no trace now remains.

However unusual the elliptical form for the plan of a temple may appear, this is certainly not an isolated example in Southern Arabia. F. Fresnel (*J. A.*, ser. iv., vol. vi., p. 223) mentions the great ruins of Khariba (Sirwāh) which cover an even greater area than those of the Haram Bilḡis and include a semi-ellipse and long rows of pillars still in position. According to Arnaud, this elliptical plan has also been found by Halévy (*J. A.*, ser. vi., vol. xix., p. 67 191; cf. also Glaser, *Reise nach Märit*, p. 110, 137; *Séjour*, I, 67 191). According to the inscription Glaser, N° 901-903, its builder was the Sabaeen mukarrib Yidʿ-ilu Ḥarib, who also built the temple of 'Awm and the round temple of al-Masāḡid.

F. Hommel (*Ethnologie*, p. 664 191) has endeavoured to show how this temple came to have its modern name of Haram Bilḡis. In analogy to the Assyrian and Babylonian temples extra muros which were always dedicated to the wife of the chief deity and in which in the month of the new year his wedding ceremony took place, Hommel sees in the Haram Bilḡis the wedding house of Almaḡah, the sanctuary of his wife

Harimat and seems to assume that the name is also connected with this. D. H. Müller (*Bergien und Schöller*, II, 972 191) has shown how the Arab archaeologists transformed the god Almaḡah into Valmaḡah and then gave this name to the legendary Bilḡis and also made a *ḥaram* (women's apartments) out of the *mashram* (sanctuary) of the god. F. Fresnel's reasoning moves on similar lines (*J. A.*, ser. ix., vol. vi., p. 226 191, 234 191). He assumed that Bilḡis was not the correct name of the queen of Saba but rather Balḡamah (so Ibn 'Abd Rabbih, in the *ʿIḍ al-Farid* and Ibn al-Jawzi in the *Mir'at al-Zamān*) which was formed from Almaḡah. The queen of Saba was in this way deified by the Sabaeans and became the Isis of the Arabs.

In the S. S. E. of Märib and according to Arnaud $\frac{1}{4}$ hour E. S. E. of the Haram Bilḡis — while the latter, according to Glaser, *Reise nach Märit*, p. 41 lies almost due east barely $\frac{1}{4}$ hour from the five pillars — there stand on the opposite bank of the Wādī Ḥenne, $\frac{1}{2}$ hour or $1\frac{1}{2}$ miles (according to Glaser, *Séjour*, N° 51) from the town, the pillars called 'Amā'id. Five are still upright; these are 25–30 feet high, 32 inches broad and 24 deep, prismatic, rectangular monoliths which were erected perpendicular to the direction of the Wādī Ḥenne. Two which have been overthrown lie beside them on the ground. The pillars had no capitals and were just like the other pillars (at the Haram Bilḡis and other ruins outside the town). On the fragments of the two fallen pillars Glaser discovered inscriptions on each (Glaser 479 and 480 = Arnaud 53) from which it appears that a sanctuary Bar'an (בראן) dedicated to the god Almaḡah or some such sanctuary stood here. This name occurs not only in this inscription but is mentioned in Ottom. Mus., N° 17 (*Z. D. M. G.*, xxxiii, 486, N° 1, 2) where J. H. Mordtmann reads ברואן אלמקת and the name of this place is also found in Halévy, N° 43, 48, 49, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

The numerous separate finds made by Glaser in the neighbourhood of Mārib, sacrificial altars, masons' workshops etc. cannot be discussed here. On the other hand, there is one erection which demands a rather thorough discussion as it surpasses all these already mentioned in magnitude and preserved the fame of Mārib down to the late Islamic period, namely the dam and works connected with it, known in Muslim tradition as *Sudd Mārib* or *Sudd al-'Arin*.

The Wādī Dhahne in the course of time had cut a way through the Balāk hills here and divided the rocks into two parts Balāk al-Kibīl and Balāk al-Awsat. The Sabaean had built a dam of earth across the gap some 770 paces long behind which the water was collected. The dam, which Glaser (*Reise nach Mārib*, p. 58 199, 273 sq.) describes minutely, rises some 20—25 feet above the present level of the Wādī and is simply a mound of earth the section of which is an isosceles triangle the angle at the top of which is quite sharp. The angle of inclination of the two surfaces to the base is about 45° and the breadth of the base about 30 feet. The proper time and the height of the dam cannot be accurately ascertained as the mud has accumulated to the depth of many feet. But it can be assumed that the dam rested on a foundation of rock as the narrow passage between the two Balāk hills has a rocky foundation which comes up very nearly to the surface. But for this firm foundation of rock it would have been impossible to build the dam at all. The side of the dam which met the water (the western) is covered with small sharp unhewn stones, held together so strongly by mortar that it is impossible to detach one of them. The dam, which is 1½ hours from Mārib, is flanked to the north and south by two great sluices, the southern one of which is known as Marbat al-Dimn. Here on the site of the dam a great rock (A) 95 paces long and 15 in width, at the narrow places only 8—10 has become detached from the Djebel Balāk al-Awsat; it runs to the N.E. with a slight tendency to E.N.E. The main body of the rock, the northern wall of which runs eastwards forms with this isolated rock a pair of lines converging towards the S.W. end of the latter. The two rocky walls do not meet here but are separated by a gap spanned by a wall six paces long and 12 feet high (C). In the opening of the angle but within the eastern ends of the two walls is another detached block of rock (B) the north side of which runs parallel to the first mentioned detached rock and the south side parallel to the main rock (C) but quite close to the latter. All three rocks, particularly the main body (C) and the loose block (B), have steep sides, not however over 12 feet high. On the north side the great isolated rock (A) is very irregular in shape. It almost looks as if we had an artificial cleavage here; but Glaser does not think this possible because an earthquake is quite sufficient to account for the remarkable cleavage of the rocks. In any case it looks as if human hands had worked a good deal on the natural lines of fracture. The great block of rock (A) rises 20—25 feet above the present level of the river bed and has two inscriptions engraved on its south side (Glaser, No. 513, 523).

On all three rocks there are or were great buildings of hewn stone. The large block of rock (A) seems to have supported the main building.

Its masonry consisting entirely of finely hewn blocks of stone, arranged in pairs one above the other and held together by melted lead poured into corresponding cavities; it follows closely, especially on the south side, the rock which forms the foundations so that it does not form a straight line, as Arnaud (*J. A.*, ser. vii., vol. iii, in p. 64, *Digue de Mārib*) has represented it. The whole length of this wall is about 200 feet, its average breadth 15 feet, the height at the S.W. end about 12 feet, rather more at the N.E. end, as the rock is not high enough here. In general the top is horizontal but with slight differences of level where it rises and falls. The S.W. corner of the masonry consists of round towers (a) facing S.W. which stands about 3 feet above the level of the rest of the walls. The whole building and the tower have perpendicular sides and do not slope at all. The dam which runs N.N.W. seems to have joined the wall 25 feet from the towers on the N.W. On the side facing the Wādī at the N.E. end of the rock, steps have been hewn out of the rock which led from the bottom of the river bed (in S.S.W. direction) to the walls. Almost exactly south of the already mentioned tower which has also very steep steps cut in a perpendicular passage hewn out of the rock, there stands on the main mass of rock (C) a second tower (d) of the same height, round on the west but flat on the other sides. Between the two towers, is the already mentioned wall linking up the two rocks. As already mentioned, the top of this wall is 20—25 feet above the level of the river so that the towers are 35 to 40 feet above it. The dam seems to have been not much higher than the connecting wall. The out-flow of the water must have taken place over the connecting wall as well as through openings under the wall, probably now filled up with rubble, into the Ḥalāhid canal, and under or rather through the rock on which this great piece of masonry stands, into the Raḥāb canal. Indeed one can still see quite clearly that the great isolated rock is connected deep down by a ridge of rock (e), only the rounded top of which is visible, with the smaller block, so that the two channels were separated from one another. It is also possible that in ancient times the outflow went below and only later, when the water-level was raised by silting, over the wall. Grooves for boards are still recognisable. The smaller block of rock, steep and high on the western side, slopes to the east down to the level and has steplike cavities in it everywhere with stones still perpendicular on it, as if it had had a balustrade, especially above the steep wall in the west. At its eastern end where it joins the level ground, it shows regularly hewn cavities of prismatic shape, which look like watering-troughs for the cattle or like stone graves. The main rock shows the same features. The step-like cavities were perhaps not only used for climbing, but also to measure the level of the water to regulate the outflow.

Both towers and the other buildings in connection with the sluices, except such walls or railings as may have existed of the smaller block, are preserved intact. The hewn stones are so arranged that long stones are every now and then laid crosswise which give the otherwise parallel layers great cohesion. This is particularly the case with the inner filling of the wall, as can be observed in all very large buildings a section of

which comes to be exposed. The square blocks in the dam are also held together by little blocks of lead about 10 cm. high and about 10 cm.² in the section. These little rods of lead were placed in holes specially made for them about 4-5 cm. deep and the next block above was placed over with the corresponding cavity filled with the top half of the little rod. The Sabaeans only used mortar in the stone work of the dam as a top covering to prevent damage being done by the rain-water.

The northern system of sluices consists of three walls of which the northern and largest

is a kind of railing of masonry. The whole wall is coped with excellent cement.

Almost exactly S. E. about 11 paces from the S. W. end of the part, 114 paces long already described (2) runs to the S. E. a wall 38 paces long and 21 broad at its N. W. end, the S. E. end of which is narrow and rounded. This wall is exactly the height of the long wall. At the present there is on it a modern *ḥajra* (stone-house) built by the amir 'Abd al-Rahmān which probably existed in Arnaud's time and certainly in Halévy's.

Between the two walls, four paces from either,

Marbat el-Dimm

- Places where inscriptions are engraved on the rocks: 1 Gl. 513; 2 Gl. 514; 3 Gl. 523; 4 Gl. 525.
 a Tower with staircase, of the same height as d and the highest part of the whole building.
 b Staircase.
 c Barrier between the tower and southwestern rocks.
 d Tower exactly similar to a.

(a, d) with one end built against the rocks of Balak al-Kibbi runs northeast, a little towards E. N. E. This wall, which is in all 184 paces long and 15 thick at the broadest point, although the average is about 11 and 15-20 feet high consists of two parts: The southwestern part 70 paces long (a) is somewhat lower (quite low beside the Balak rocks, about 16 feet high at the point where it joins the N. E. part) and quite flat on the top. The N. E. part (d) 114 paces long and somewhat damaged towards its west end is not quite flat on the top and towards the south side the top shows

stands a north wall only 18 paces long, 3 broad and of the same height as the others, the base of which forms a perfect rectangle. This wall somewhat damaged on the north side and now joined to the S. E. wall by two modern slight walls, which the Beduins use as a stable, stands back a little at its S. W. end as compared with the two neighbouring walls and like the S. E. wall shows a prism-shaped cutting about a yard from the west end, now filled in about 2 feet broad and deep which was intended to take the boards. On the northern side this groove is no longer to be seen. The three

walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20-25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long.

Similar distributing works existed throughout the whole plain of Marib. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dheune not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information had been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (*manāṭṭā*) from which it was taken direct to the palm gardens and fields. The most of the *manāṭṭā* are in the form of cubes or shallow prisms and are rarely more than 6 feet

The Northern Sluice-system

○ Places with inscriptions.

a a little lower than b.

The canal, which led the water to the lower *ḥuṣn*, about 1,000 yards away, comes up to b and c.

d a large intervening wall standing by itself.

S.S.W. of Mabnā al-Ḥaṣṣadī (see below) lies *Ḥuṣn al-Aṣṣal*, a later building erected on the remains of old water-works, which formed the end of the main channel, already mentioned in connection with the northern sluices. It lies at about exactly the same level as the dam and several yards above the surrounding country. It consists of several walls, some of hewn stone and some of ordinary stones and cement, which sent the water out in eight different directions. The aqueduct runs practically westwards up to the northern sluices of the dam. Although perfectly preserved the bed of the canal has been in many places filled up with blown sand.

high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the *manāṭṭā* with the larger distributing centres and on the other side with the fields. Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba'.

The great barrier of the dam between the two Raṣṣ mountains seems however not to have sufficed for the strain upon it. A second dam called Mabnā al-Ḥaṣṣadī was therefore built N.N.E.

of the dam and west of Mārib which seems to have been intended to regulate the water of the Wādī 'l-Sā'ila (cf. Glaser, *Reise nach Mārib*, p. 49 sq.), which carried the waters of the north Balāḥ hill, the Djabal Hailān and the Ḥaḥḥab hills into the plain of Mārib and joined the Wādī Ḥanne below the village of Mārib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Sā'ila and runs 240 paces E. N. E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet

two walls run: the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (f) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (g, h) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N. E. On the S. E. is a wall 12 feet long now partly collapsed. Glaser copied 10 Sabaeen texts at al-Ḥaḥḥab which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, N^o 509).

high, which lies N. W. to S. E. 7 feet N. E. stands a second similar building (b) parallel to the first and continued to the S. E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (B) runs N. W. from the second building (b) and with many windings turns N. and N. W. where it joins the rocks. Its length is 268 paces, the space between it and the second building 10 paces (b). 21 paces N. E. of the second building are two others (d, e) which give an outlet to the N. E. The southern of the two is only partly preserved. It points to the S. E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrab period. Samuḥu-'alaya Yaḥūf, son of Ḍhimri-'alaya, Mukarrab of Saba', according to the inscription Glaser, N^o 513-514, made here an outlet in the barrage at Raḥāb, which was extended two generations later by the unknown author of the inscription Glaser, N^o 418-419 (cf. N. Rhodokanakis, *Altäthiopische Texte*, I. 7; *Studien*, II. 97, 99 sq.; Glaser, *Skizze*, I. 70 sq.; *Reise nach Mārib*, p. 59 sq.; Hommel, *Ethnologie*, p. 666). Where the barrage at Raḥāb was is not certain. Perhaps we should assume with Rhodokanakis, *Studien*, II. 100 sq. that it was built on the rib of rock (e) between A and B. About a generation later than the Raḥāb barrage is the similar con-

walls thus formed, like the three rocks on the south form two channels of exit, both of which however, it is worth noting, flow into one and the same main channel, which runs almost exactly east for about 1,000 yards to a large building for distributing water. This canal ran between two parallel dams of the same style and construction as the dam proper but the bed, which is paved with cemented stones, runs above the plain, especially on the south side some 20-25 feet. The dam proper, barely higher than the two walls of this canal, joins the east side of the most southern wall, 38 paces long.

Similar distributing works existed throughout the whole plain of Mārib. Glaser saw traces of aqueducts (with double dams) at different places. In the bed of the Dhenne not far below the dam he saw a remarkable erection of stone not unlike a weir. Unfortunately the inscription on it which might have given us definite information had been removed some years before. Canals seem to have led the water from the great distributing centres to the smaller ones (*manāṣiḥ*) from which it was taken direct to the palm gardens and fields. The most of the *manāṣiḥ* are in the form of cubes or shallow prisms and are rarely more than 6 feet

a a little lower than b.

The canal, which led the water to the lower *ḥuṣn*, about 1,000 yards away, comes up to b and c.

d a large intervening wall standing by itself.

S. S. W. of Mabāṭ al-Ḥashradj (see below) lies Hūṣn al-Aṣḥal, a later building erected on the remains of old water-works, which formed the end of the main channel, already mentioned in connection with the northern sluices. It lies at about exactly the same level as the dam and several yards above the surrounding country. It consists of several walls, some of hewn stone and some of ordinary stones and cement, which sent the water out in eight different directions. The aqueduct runs practically westwards up to the northern sluices of the dam. Although perfectly preserved the bed of the canal has been in many places filled up with blown sand.

high and 12 to 15 feet long. As a rule a canal leads out of them from the centre, usually walled on one side. Nothing is left of the canals which connected the *manāṣiḥ* with the larger distributing centres and on the other side with the fields. Deep furrows torn out of the ground by the periodic deluges of rain and, like the greater part of the plain, becoming gradually filled with desert sand are now the characteristic feature of the once flourishing plain of Saba.

The great barrier of the dam between the two Balāḥ mountains seems however not to have sufficed for the strain upon it. A second dam called Mabāṭ al-Ḥashradj was therefore built N.N.E.

of the dam and west of Märib which seems to have been intended to regulate the water of the Wadi 'l-Sa'ila (cf. Glaser, *Reise nach Märib*, p. 49 sq.), which carried the waters of the north Balak hill, the Djabal Hallan and the Khaghab hills into the plain of Märib and joined the Wadi Qhame below the village of Märib. This barrage consists of three walls of black porous stones, running very irregularly which are held together by mortar and arranged in 3 strata which perhaps point to 3 periods of building. The first of these walls (A) which dammed the river-bed begins just on the right bank of the Sa'ila and runs 240 paces E. N. E. where it joins a prism-shaped erection (a) 7 paces broad, 12 long and about 15 feet

two walls run; the one (third) wall (C) runs with many windings almost parallel to the second great wall (B) and like it runs up to the northern hills; it is 182 paces long. The other building (F) runs in a curve to the north, 50 paces in length, to a third outlet exactly opposite the second, which however consists of buildings (G, H) 8 paces from each other, with the ground between them covered by a layer of stone masonry. The outlet is to the N. E. On the S. E. is a wall 12 feet long now partly collapsed. Glaser copied 10 Sabaeen texts at al-Hashradj which came from other ruins and show that these works belong to a later period, like the late tombstone built into the wall here (Glaser, N^o 509).

high, which lies N. W. to S. E. 7 feet N. E. stands a second similar building (b) parallel to the first and continued to the S. E. in a narrower wall (c) 36 paces in length. The space between these two buildings must have been an outlet. With a very small space between, the second mortared wall (B) runs N. W. from the second building (b) and with many windings turns N. and N. W. where it joins the rocks. Its length is 268 paces, the space between it and the second building 10 paces (d), 21 paces N. E. of the second building are two others (d, e) which give an outlet to the N. E. The southern of the two is only partly preserved. It points to the S. E. end of the 36 paces long wall (c); perhaps the two were once connected or there was a sluice between. From the building (d) which forms the northern boundary of the second outlet

The various constructions date, as we learn from the inscriptions, from different periods. The southern system of sluices was erected as early as the Mukarrib period. Sumuhu'alaya Yanafi, son of Lhimu'alaya, Mukarrib of Saba, according to the inscription Glaser, N^o 513-514, made here an outlet in the barrage at Rahab, which was extended two generations later by the unknown author of the inscription Glaser, N^o 418-419 (cf. N. Rhodokanakis, *Altäthiopische Texte*, I. 7; *Studien*, II. 97, 99 sq.; Glaser, *Säben*, I. 70 sq.; *Reise nach Märib*, p. 59 sq.; Hommel, *Ethnologie*, p. 666). Where the barrage at Rahab was is not certain. Perhaps we should assume with Rhodokanakis, *Studien*, II. 100 sq. that it was built on the rib of rock (e) between A and B. About a generation later than the Rahab barrage is the similar con-

struction at Hababid, which was probably built at the junction (c) of the Mar'ib al-Damm. The Mukarrif Yith'amara Bayin, son of Sumaha-'alaya Yana'il, built a water-course for it, as his father had done for the Ra'ib (according to Glaser, N^o. 523, 525 = Arnaud, N^o. 12, 13 = Halévy, N^o. 678; cf. Rhodokanakis, *Studien*, ii. 102 sq.; Glaser, *op. cit.*). The northern sluice-works are much later; according to Glaser (*Festschrift Mär'ib*, p. 66-68), they did not get their present form till the time of king Shannasa Vaharish (c. 300 A.D.) and may perhaps even be not older than the fifth century A.D. The oldest parts of the works are put by Glaser (p. 68) to the period 1000-700 B.C. which is probably rather too early.

The great system of dams did not long exist in this form. This we know from two great prismatic monoliths, which are inscribed on all four sides and tell us of the later history of the dam. The one with the inscription Glaser, N^o. 554 is 7 feet long, 30 inches broad, and a foot thick; the second, even larger, bears the inscription Glaser, N^o. 618. Both lay close beside the junction of the northern wall of the northern sluice with the rocks of the Djebel Bulak. According to Glaser, N^o. 554, king Sharahhil Ya'far in 449 A.D. had a thorough renovation of the works carried out. But these lasted barely a year, for in 450 A.D. the waters broke through the dam so that the works had again to be completely restored. But the collapse of the great system was not to be prevented. From Glaser, N^o. 618 we learn that under the rule of the Abyssinian viceroy Abraha (542 A.D.) another breach occurred in the dam. Once more restoration work on a large scale averted the threatened disaster, but the final catastrophe must have occurred not long afterwards, which transformed the fertile plain of Saba into a barren desert, alluded to in the Qur'an (Sura xxxiv, 14 sq.; cf. Glaser, *Zwei Inschriften über den Dammsbruch von Mär'ib*, p. 13 sqq.; *Festschrift Mär'ib*, p. 16, 64, 144 sqq.).

Its cause is seen by Glaser in the action of wind and rain which gradually wore down and weakened the east side. Another main cause of destruction must have been the silt which so filled the reservoir in course of decades that the water flowed over the dam. A mention of the bursting of the dam in the Qur'an (*al-'urim*) and the importance of this event for the town of Mär'ib and the country round it has resulted in Muslim tradition devoting attention to this catastrophe and its consequences, so that all sorts of scraps of information about the dam were collected. Nevertheless it is remarkable how little even authorities on South Arabia like al-Hamdani (*Sifa*, p. 80 and *Ikhl*, viii., in D. H. Müller, *Burgen und Schlösser*, ii. 958 sq., 1036, 1038; cf. N. Rhodokanakis, *Studien*, ii. 105 sq.; al-Bakri, *Mu'djam*, ii. 502) really know about the dam. Al-Hamdani only says that the dam was built against a wall which was built on to the side walls of the reservoir, of great blocks of stone linked together with iron. The arrangement for distributing the water from the farms were still there as if their builder had only finished yesterday. Al-Hamdani saw the building which had survived on one of the two sides (i.e. on one bank) namely the one which rose out of the water intact (i.e. the sluices). The breach had only affected the barrage but even of this a portion remained intact which was adjoined by the gardens on the left and was 15 ells in breadth at the base.

How we are to interpret these statements of al-Hamdani, we learn from the description of the reservoir of Kohaito in Abyssinia (*Deutsche Aksum-Expedition*, ii. 150 and pl. 23). There a central wall is flanked by two side walls, one of which is at right angles to a third. That the stones were bound together by iron is evident from Glaser's description. When Yāqūt (*Mu'djam*, iv. 383), who pays very little attention to the dam itself, tells us that it lies among three hills, the reference is probably to the massif of the Djebel Balak split into the three hills of the Wādī Adhama and Ma'ala. He also mentions that the blocks are bound together with lead and says that the water accumulated behind the dam is led as required to the fields by strong sluices and cunningly contrived arrangements. According to al-Ma'sūdī (*Murūdj al-Dhahab*, iii. 368 sq.), the barrage was one parasang in length and breadth and contained 30 round openings, each of 1 ell in diameter through which the water was led to the fields.

Like many buildings in Arabia, the dam of Mär'ib is dated by later tradition to remote antiquity and attributed to Luqmān b. 'Ad (al-Bakri, *Mu'djam*, ii. 502; Yāqūt, *Mu'djam*, iv. 383; al-Ma'sūdī, *Murūdj al-Dhahab*, iii. 366; cf. A. v. Kremer, *Sage*, p. 19 sq.; Dīrdjī Zaidān, p. 151) or Saba' b. Yashujub b. Ya'rib (Yāqūt, iv. 382; cf. E. Oriander, *Z. D. M. G.*, x. 68; E. Pococke, *Specimen hist. Arabum*, p. 498). Al-Hamdani (*Ikhl*, viii.) mentions, besides Luqmān, also the Himyar and al-'Ad b. al-Jawh as builders of the dam. Al-Ma'sūdī, *Murūdj al-Dhahab*, p. 369 sq., says that the dam was built by a wise king on the advice of learned men.

The importance of the dam for the prosperity of the country is evident from the descriptions of the Arab historians and geographers, who in this connection usually quote the reference in the Qur'an to the two gardens of the Sabaeans, while, according to al-Hamdani, this irrigated area included not only the plain of Saba' but stretched to the borders of the desert of Salihi; Glaser (*Festschrift Mär'ib*, p. 52) held the view that the water accumulated by the dam would suffice to irrigate amply all the land on the borders of the desert as far as Hadramūt, and transform it into a vast garden. It is therefore perhaps not to be regarded as an exaggeration when al-Ma'sūdī (*Murūdj al-Dhahab*, p. 366 sq.) describes the land of Saba' with its wealth of gardens and fields, broad meadows and extensive irrigation system as the most fertile part of Yemen, the beauty of which had become proverbial throughout the world. According to him, a man on horseback would take more than a month to cross the rich cultivated country and any one travelling on foot or on horse used not fear the sun from one end of the land to the other, as he could always travel in the shade, so rich was the vegetation (cf. A. v. Kremer, *Sage*, p. 10, note 1). According to Ibn Rosta, p. 114, who also waxes eloquent over the fertility of the land of Saba', a bucket on the head of a man walking between the fruit trees would very soon have filled itself with fruit without one pulling or gathering them.

Under such circumstances it was natural that the catastrophe of the bursting of the dam, known as *al-'urim* throughout the Muslim world, should have the most far-reaching effects. The migration of Himyar tribes to the north is con-

nected with the catastrophe and the Banū Ghassān took this event as the starting point of an era of their own (*Am al-sail*; al-Mas'ūdī, *Kitaḥ al-Tanbih*, p. 202). There is hardly any historical event of pre-Islamic history, that has become embellished with so much that is fanciful and related in so many different versions, as the history of the bursting of the dam. Al-Mas'ūdī alone (*Musādīq al-Dhahab*, li. 370 sq.) dared attribute it to natural causes; he thought that the water had worn away the foundations of the dam and in time undermined them without its being noticed. When the masonry of the dam and the barrage had become so weakened that they could no longer resist the force of the water, the waters when unusually big broke through and flooded the plain. But even al-Mas'ūdī sees in the catastrophe a punishment for the arrogance of the Sabaeans and gives a good deal of space in his history to the legendary version of this event (*op. cit.*, p. 373 sq.), which in the main agrees with that of Yāqūt, *Muḥjam*, iv. 483-485. Ibn al-Muḥāwir alone (according to Sprenger, *Post- und Reiseroute*, p. 153 sq.) tells the history of the destruction of the dam in quite a different way from the older historians. According to al-Mas'ūdī the story is briefly as follows: the king 'Amr b. 'Amir who lived in Mārib was warned of the imminent catastrophe by his brother 'Imrān, who was a soothsayer and by his wife Zarifa al-Khāir, also skilled in prophecy. 'Imrān foresaw that his people would be scattered in different directions and told this to his brother. Zarifa on the other hand dreamed of a great cloud which covered her country and sent forth thunder and lightning. It burst and burned up everything upon which it fell. All this pointed to a terrible inundation and Zarifa was confirmed in her idea by other signs that the catastrophe was imminent. She warned 'Amr and urged him to see to the dam. If he saw a mouse there tearing out holes with its forepaws and throwing out big stones with his hind feet, the misfortune was inevitable and imminent. 'Amr went to the dam and actually saw a mouse which turned over with its feet a stone which 50 men could not have moved from the position. 'Amr himself then dreamed of an inundation by the dam and now decided to realise his possessions and leave the country with his family which he was able to do surreptitiously without arousing suspicions. Soon afterwards the collapse came, which destroyed the whole country, even high lying fields and places a considerable distance off.

While there are considerable differences in detail in the different versions of the story — the collapse took place for example, according to Yāqūt not under 'Amr but under his brother 'Imrān —, there is still greater disagreement about the date. Ḥamza al-Iṣfahānī, for example, puts it 400 years before Islām, i.e. in the third century A.D. According to Ibn Khaldūn, the catastrophe took place under Ḥasan b. Tibbān As'ad, who (with A. v. Kremer, *Sage*, p. 120 sq. and note 4) is to be identified with Abū Karib As'ad and according to Glaser (*Sitzb.*, ii. 542) reigned from 385-420. Among European scholars Gosselin goes furthest back in putting the date at 374 A.C. while Reiske thinks it took place 30-40 A.C. and Schultens puts it at 30-40 A.D., Perrot 553 years before Muḥammad and Silvestre de Sacy 210 or 170 A.D. Yāqūt, iv. 383 comes nearest the truth; he says

it took place in the period of Abyssinian rule. As the terminus post quem is 542 A.D., according to the inscription Glaser, N^o 618, we may put the last disastrous breach in the dam at occurring between 542 and 570 A.D. An exact date unfortunately cannot be obtained as the necessary data are lacking. Besides, the stories of the bursting of the dam in Mas'ūdī, p. 393 sqq. and Ibn Rosta, p. 114 sq. which speak of the land being twice devastated by the waters of the dam, may contain a memory of the actual course of events, and the final collapse of the dam may have taken place after the catastrophe of 542 A.D. when the dam was carried away for the first time.

The various attempts to explain the etymology of Mārib are not satisfactory. When, for example, Yāqūt, *Muḥjam*, iv. 382 sees in Mārib, a place-name from Arabic = *Ḥaḡḡar* or from *ariba* or *aruba*, this clearly shows what difficulties the explanation of this name gave the philologists. His further statement however that Mārib was the name of the Sabaean kings is worthy of note (cf. H. Fleischer, *Abulfedā hist. antitributa*, p. 114), especially as in Naḥḥāwī al-Himyari, a gloss is preserved according to which *Mārib* in Ḥimyarite means "lord" (cf. Blau in *Z.D.M.G.*, xxv. 591, note 7). Djurdj Zaidān, *Kitaḥ al-'Arab fah al-Islām*, p. 142 explains Mārib as a loan-word from the Aramaic, a compound of *mā* and *rib*. E. Oslander, *Z.D.M.G.*, xix. 162 takes Mārib to be connected with the root of the Sabaean proper name *Ṣāb* to which *Riyāb* and *Ri'āb* correspond in Arabic. J. H. Mordtmann, who deals in *Z.D.M.G.*, xxx. 322 sq. at length with the etymology of Mariaba, points to the *Ṣāb* and

Ṣāb of the inscriptions which he connects with the Arabic *ṣāb*, "dominus crassus, magnus gentis". D. H. Müller does not accept this derivation (*Burgen und Schlösser*, ii. 968 sq.). Al-Bakri, *Muḥjam*, li. 302 says, following al-Ḥamdānī, that Mārib was the name of a tribe of the 'Ad after whom the town is called and in fact al-Ḥamdānī in *Islām*, viii. (Müller, *Burgen und Schlösser*, ii. 960, 1040) says that Mārib and Marib are the names of two Arab tribes. In the older Sabaean inscriptions the town is called *Ṣāb* to which the Greeks added an *a* to give it a Greek form. Eratosthenes and Artemidoros (Strabo, xvi. 768, 778) call the town *Maḡarā*. The later inscriptions mention it under the name *Ṣāb* in which we have, with Rhodokanakis, to see a later contracted form, from which comes the Mārib of Muslim tradition. The Sabaean capital is however known to the classical authors and Arab geographers by another name, viz. *Ṣāb* (Agatharchides, p. 100 in *Geogr. Gr. min.*, l. 188 and in Steph. Byz. s. *Ṣāb* and *Ṣāb*; cf. *Ṣāb* in the *Art. Saba*, N^o 1, *R. E.*, ii. A, col. 1516) and *Saba*. *Tkad* (col. 1391 sq.) sees in contrast to J. H. Mordtmann (*Sabäische Denkmäler*, p. 3, note 1), E. Glaser (*Sitzb.*, ii. 15, *Sabäische Streitfragen*, p. 10) and A. Sprenger (*Die alte Geographie Arabiens*, p. 159, 162) in this double name of the Sabaean capital not an error but believes that *Saba*, while not the usual, was not a wrong name for the capital.

Against this Glaser, *Sitzb.*, ii. 15, rightly emphasised that the capital of the Sabaean kingdom Maryab or Mārib was never known as *Saba*. *Saba* was — so far as the inscriptions are con-

cerned — never anything but the name of the land or kingdom and of the tribe which had the hegemony in this land, to which the name Saba' has remained attached to the present day. This is quite clear from the inscriptions. Thus, in the first lines of the old Sabaeen inscriptions Glaser, N^o. 418—419, 1000 A and 1000 B (cf. N. Rhodokanakis, *Altarabische Texte*, I, 20 ff., 79), Al-makāh (the principal deity of Saba') and Saba' is the formula by which the Sabaeen, first a theocratic and then monarchic, state is known. That the predominant tribe Saba' is however never described as a tribe in the older period is clear evidence of its hegemony as Rhodokanakis points out (*Handbuch der altarabischen Altertumskunde*, I, 121). It was different in the later period; for example, in the inscription Glaser, N^o. 542, set up by king Shanmar Yuhar'ish, king of Saba' and Dhū Raidan, of the tribe of Saba', the reference is always to the "lords of the town of Mārib and its valleys" | שַׁבְּנָא | סַבְאָא | אַמְעַל | הַרְחַן | מַרְיָב |

ואסדרו (cf. N. Rhodokanakis, *Katabenische Texte zur Bodenvirtschaft*, II, 14), as a definite sphere of influence had been allotted to them in the government of Mārib and the administration of its territories. Deliberately contrasted with them as citizens of the town and the highly cultivated area round it are the "Beduins of Mārib" (| אַעֲרָב | מַרְיָב | in C. I. H., 353, 10 (cf. E. Glaser, *Die Abessinier in Arabien und Africa*, p. 128 199), who probably lived around the town (for references as regards Saba', cf. M. Hartmann, *Die arabische Frage*, p. 385—389). The idea that Saba' was a town, which we find in the classical authors, which was criticised as early as C. Niebuhr, *Beschreibung von Arabien*, p. 279, is therefore to be put down to a misunderstanding rather than to be taken seriously. This is also true of the identification of Mārib with Saba' among the Arab geographers (cf. the references collected by Iomard in Mengin, *Histoire sommaire de l'Égypte*, p. 341—344). Yāqūt for example (*Muhtarik*, p. 239) identifies Mārib with Saba' as does Abū 'l-Fida' (*Geographie*, p. 130 and *Historia antislamica*, p. 114); but the latter expressly points out that Mārib was known as the town of Saba' and it was also said that Mārib was the name of the king's palace while the town was called Saba'. It is in keeping with this that we find al-Suhaili in Yāqūt, *Mu'jam*, IV, 382 referring to Mārib as the name of a castle of the Ard. In al-Kazwini and in the *Djāhān-nūma* the town is called Saba'. Ibn Rosta, who includes Mārib in Hadramūt and mentions it under the name Madiyat Saba' or Saba', mentions the ruins of a second large town with wonderful buildings, which was close to Saba' and which the people of Saba' considered to have been the town of Saba'. Saba', they said, was two towns, which lay opposite one another and were a day's journey in length. As there are a number of buildings which belonged to Mārib on the right bank of the Wādī Dhenné, it is intelligible why the mistake should have been made of imagining two towns running parallel to one another, especially as there are still considerable ruins adjoining the Haram Bilqis, the 'Ama'id and the "pillars of Bilqis" as we have seen. The alleged length of a day's journey is of course much exaggerated and indeed the description in Ibn Rosta generally shows how little was known in later times of the

ancient Mārib. The association of the origin of the town of Mārib with Saba' b. Yashdub probably led to the name of this legendary ruler being transferred to the town or Saba' as a tribe being identified with Mārib, as Agatharchides had already done. The varying form in which the name is handed down, sometimes town of Saba' and sometimes Saba' alone, makes this development very probable. Besides al-Hamdāni (*Šifā*, p. 7, 3) identifies the Saba' of Ptolemy with Mārib and always calls the town Mārib.

The earliest history of the town is unfortunately wrapped in obscurity. The mention of kings of Mārib in the comparatively late inscription, Glaser, N^o. 302, 7, shows, it is true, that the town was still independent in the time of the older Sabaeen Mukarribs — for these "kings of Mārib" are their contemporaries — but gives no clue to the date of its foundation. It probably arose about the same time as the old royal city of Širwāh. The great inscription Glaser, N^o. 418—419, shows Mārib already in possession of the Sabaeen Mukarriba and not long afterwards it became their capital; this at least seems evident from the inscription Glaser, N^o. 481, 3 where we are told that the founder of the inscription "brought as far as Maryab the peace between Saba' and Katabān". This we can only interpret with Rhodokanakis (*Studien*, II, 24) as meaning that the general (he is called Tuba'kariba, son of Dhamaryeda' of the clan of Madhmarum) returned to the capital of Saba' after the conclusion of peace. Not long after the foundation of the great Sabaeen kingdom, of which the inscription Glaser, N^o. 1000 A B relates, it must have replaced Širwāh, the oldest capital of the Sabaeen kingdom; indeed there seems to be evidence that this had already taken place in the reign of the king who set up the two great Širwāh inscriptions Glaser, N^o. 1000 A B, Kariba-llu Watar, founder of the great Sabaeen kingdom. For when we are told in Glaser, N^o. 1000 B, I, 5 (N. Rhodokanakis, *Altarabische Texte*, I, 82) that he had built the upper part of his palace Šlhu (| סַלְחָא |) which is probably identical with the famous citadel Šalḥin at Mārib, it may be assumed that this Mukarrib resided here. The great barrage which went back to the older generation of Sabaeen Mukarriba, must have then transformed Mārib and the country round it into the flourishing oasis which made the town the centre of a great kingdom. The Mukarriba Sumuhu-alaya Yanaf and his father Vid'i-llu Dharih as well as Yithi-amara Bayin also did much for the development of the town and the country around it.

We do not know exactly when Mārib ceased to be the capital of the Sabaeen kingdom. Glaser (*Zwei Inschriften über den Dammbruch von Mārib*, p. 29) supposes that the capital was removed to Zafar (near Yarim) at latest towards the end of the third century A.D., but probably as early as the first century A.D., since the *Periplus maris Erythraei*, § 23 already knows Zafar as the capital.

Indeed the evidence of the *Periplus* which is supplemented by Pliny, *Nat. Hist.*, VI, 104, who knows Sapphar as a royal residence, can hardly be interpreted otherwise than meaning that Zafar was already the residence of the Sabaeen kings about 60 A.D. With the transfer of the capital to Zafar, the cause of which Glaser finds in the attacks of the Axamites on the independence of the Sabaeen kingdom, while M. Hartmann (*Die arabische Frage*,

p. 469) supposes the reason to have been the victory of the Hamdānids over Ḥimyar (cf. C.I.H., 347 and M. Hartmann, *op. cit.*, p. 146 sq.). Mārib's glory had passed away; the decline probably did not set in at once but Glaser must be right in assuming that Mārib was now neglected and this is how the dam, so important for the cultivation of the land, fell into disrepair. Isolated references in Muslim sources show that the town had however not yet lost all its importance. Al-Bakrī, *Mu'jam*, i. 308 (cf. A. v. Kremer, *Sage*, p. 138) knows Mārib as one of the treasuries of the Ḥimyars, and according to the Ḥimyar *ḥaṣida*, verse 56 (A. v. Kremer, *Sage*, p. xii, note 1 and p. 69), Shammar Yarīsh (c. 281 A.D.) kept his prisoners in Mārib. The two breaches in the dam which took place in 450 A.D. and under Abyssinian rule in 542 A.D., must have done grave injury to the prosperity of the town. In this last period of its brilliant history Mārib was for a short time (certainly in 542 A.D.) the capital of the governor of the Ethiopian king Ramḥis Zubaynān, Abrahā, and even had a Christian church (cf. Glaser, *Zwei Inschriften über den Dambruch von Mārib*, p. 47). The final catastrophe sealed the fate of the town. Its inhabitants left the sore tried town and migrated to the Ḥaḍira.

Mārib was resettled in the Muslim period. The favourable situation of the place and perhaps the rich deposits of salt in the neighbourhood (3 days' journey east of Mārib at Ṣāfir, mentioned in the time of the Prophet, who appointed Abū Mūsā al-Ash'arī governor of Mārib; E. Glaser, *Reise nach Mārib*, p. 26; al-Bakrī, *Mu'jam*, ii. 502; al-Hamdānī, *Sifa*, p. 87, 102, 155, 201; A. Sprenger, *Post- und Reiserouten*, p. 139) also kept the place from being quite forgotten. Ibn Khurḍādhbih (*B.G.A.*, vi. 138) and al-Muqaddasī (*B.G.A.*, vi. 138) and al-Muqaddasī (*B.G.A.*, vi. 138) mention the village of Mārib; al-Hamdānī, *Sifa*, p. 199 says the sesame of Mārib is a speciality of the Yemen. Al-Idrīsī, *Geographie*, p. 149 calls Mārib a *ḥarḍī*; according to Ibn al-Maḍjāwī (in A. Sprenger, *Post- und Reiserouten*, p. 140), Mārib (c. 630 A.H.) had a market and a mosque and was of some importance as a resting-place for the night and fruit could be obtained there at any time of the year. Since Yāqūt, *Mu'jam*, iv. 436, also says, the district of Mārib is rich in palms, it seems to have in part at least regained its old fertility.

The present little kingdom of Mārib owes its foundation to the sharif Ḥusain from al-Zahir in al-Djāwī, who took a vigorous part in the expulsion of the Turks from the Yemen in 1640. He was the first to assume the title of emir. His dominion extended over the whole land from Raghwan in the southern Djāwī to Baiḥān, which he divided among his four sons. Only one of these, Khalid, to whom Mārib fell, could exert effective authority; the others never gained possession of their inheritances although their descendants still play a certain part in Baiḥān al-Kasāb, Harḥ and Raghwan.

AL-MĀRIDĪNĪ, the *nishā* of three mathematicians and astronomers, of whose lives very little is so far known.

1. 'AND ALLĀH b. KHALĪL b. YUSUF was mu'addhin in the mosque of the Omayyads in Damascus and died in the first decade of the ixth (xvth) century. As a result of careless transmission, his works are often mixed up with those of his grandson Sibṭ al-Māridī (3). Lists of his works are given in Brockelmann, *G. A. L.*, ii. 169 and in Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*, 1900, N^o. 421.

2. IMĀD b. IBRAHĪM b. GHĀZĪ, known as Ibn Fallūs, lived in the first half of the viith (xiiith) century and composed works on arithmetic which are listed in Brockelmann, i. 472 and in Suter, N^o. 359.

3. MUḤAMMAD b. MUḤAMMAD b. AḤMAD SIBṬ AL-MĀRIDĪNĪ is the best known of the three and more of his works have survived than of those of the others. He was the grandson of N^o. 1 and mu'addhin at the Azhar mosque in Cairo. The date of his birth is 826 (1423). He died about the end of the ninth century.

His works cover most branches of mathematics, algebra and astronomy, especially instruments for use in the latter and other technical matters. Lists of them are given in Brockelmann, ii. 167 and Suter, N^o. 445. (M. PLESSNER)

MĀRIYA, a Copt maiden, according to one statement, daughter of a man named Shām'ūn, who was sent with her sister Sīrīn by Muḥawwīs [q.v.] in the year 7 A.H. to Muḥammad as a gift of honour (according to another authority there were four of them). The Prophet made her his concubine, while he gave Sīrīn to Ḥassān b. Thābit. He was very devoted to her and gave her a house in the upper town of Medina, where he is said to have visited her by day and night; this house was called after her the *maḥrabā* of the mother of Ibrāhīm. To the great joy of the Prophet, she bore him a son whom he called Ibrāhīm, but he died in infancy. According to tradition, an eclipse of the sun took place on the day of his death, an interesting statement by which we can get the date exactly — if the story is true — the 27th Jan. 632, that is only a few months before Muḥammad's death. Māriya's beauty and Muḥammad's passionate love for her excited such jealousy among his other wives that, to pacify them, he promised to have nothing more to do with the Copt girl, a promise which he afterwards withdrew. Abū Bakr and 'Umar honoured her and gave her a pension which she enjoyed till her death in Muḥarram 16 A. H. There is no reason

to doubt the essential correctness of this story, as there is no particular bias in it and it contains all sorts of details which do not look the least like inventions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrāhīm", after whom the *maḥrabā* was called, was some Jewess. On the other hand, in view of the fact that all the marriages of Muḥammad after the Hījra were childless, it would have been surprising if evil-minded people had not cast suspicions on the paternity of Ibrāhīm, and that this actually happened is evident from some traditions the object of which is to defend Māriya from this suspicion.

On the other hand, it is not so easy to justify the part which Kur'anic exegesis makes Māriya play in the exposition of Sūra lxi. In this Sūra, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy. At the same time Allāh blames him, because in order to please his wives, he has bound himself by oath to refrain from something which is not definitely stated and because he does not use the right granted him by Allāh to release himself from his oath. In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf. xxxiii. 28 sq.). According to the usual explanation, the two wives are Ḥafsa and 'Ā'isha and the revelation is said to have been provoked by the fact that Ḥafsa, on returning unexpectedly to her house, found Māriya and the Prophet in an intimate tête-à-tête and that on a day which by rotation belonged to her (or 'Ā'isha). In his embarrassment he pledged himself by oath to have no more intercourse with the Copt girl. But after Ḥafsa's breach of faith, Allāh tells him to release himself from his oath. This explanation fits very well in some respects and that the promise of continence is connected with marital complications is illuminating. That there are *ḥadīths*, which explain his quarrel with his wives quite differently, does not mean very much, for they are no doubt invented to drive out of currency the popular, less edifying version. But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muḥammad could call the situation in which Ḥafsa caught him and Māriya a secret that he trusted to her.

AL-MARKAB (the MARGAT, MERGHATUM of the Crusaders), a fortress near Bāniyas on the coast of Syria. According to the chronicle of Abū Ghālib Humam b. al-Faḥl al-Muḥaddhab al-Ma'arri (quoted in Yakūt, *Muḥjam*, ed. Wüstenfeld, iv. 500) and the *Ta'rikh al-Kilā' wa'l-Huṣūn* of Usāma b. Munqidh (in Abu'l-Fida', ed. Reinaud and de Slane, p. 255), it was built by the Muslims in 454 (1062). Al-Dimashqī (ed. Mehren, p. 208) wrongly attributes its foundation to Ḥārūn al-

Rashid (van Berchem, *Voyage*, p. 304, note 7 where the reference to Rashid [rather Rāshid] al-Dīn in Le Strange, *Palästina* is shown to be wrong); his statement seems to be correct, however, that the citadel was built out of material from ancient ruins. The Byzantines occupied al-Marḥab and other fortresses in the vicinity under the general Kantakuzenos in 1104 (Anna Comnena, *Ἀλεξάνδρῃ*, ed. Reifferscheid, II, 138: τὴν τε Ἀργυροκαστρίαν [= Salfūḥā] τὴν καλούμενον Μαρχάβον [= al-Marḥab], τὰ Γάβαλα [Ḥabala] καὶ ἄλλα τινά). When in 511 (1117–1118) the Crusaders approached the fortress, its lord Ibn Muḥriz surrendered it on condition that he and his family were allowed to remain in it; but after a few days the Franks expelled him and allotted al-Mauḥka to him in exchange for al-Marḥab; Franks and Armenians were settled in the latter. The first recorded lord of the fortress was Rainald Mansuer, the constable of the prince of Antioch. After the earthquake of 1170, from which the fortress must have suffered damage, Bertrand of al-Marḥab, perhaps out of fear of Saladin's threats, handed it over on Feb. 1, 1186 to the Knights of St. John. In July 1186 Saladin passed below the watch tower (now Burj al-Sabī), which from ancient times had commanded the road along the coast (cf. Dussaud, *Topogr.*, p. 127, note 5) below the fortress and was connected with it by a wall which protected a subterranean passage, but did not dare to attack Marḥab any more than Ṭarḥūs [q.v.]. Prince Isaac of Cyprus, a descendant of the Comnenoi (not the Emperor Isaac Comnenos as van Berchem, *op. cit.*, p. 298 sq., note 5 says), was taken prisoner by Richard Coeur-de-Lion on May 31, 1191, and imprisoned in Marḥab till his death (Neophytos, in *Recueil hist. crois., hist. grecs*, I/ii, 562 with note, II, 489: ἐν καστρίῳ καλουμένῳ Μαρχάβῳ). Sulṭān al-Malik al-Zāhir Ghāzī of Halab whose lands adjoined those of the Knights of St. John sent in 601 (1204–1205) troops against the fortress, who are said to have just succeeded in destroying the towers of the walls when their leader fell and they again retired without accomplishing their object. In 628 (1231) and 638 (1240–1241) the Knights were again at war with Yūsuf, Sulṭān of Halab. From this period (1212) dates the very full description of the strong fortress by Willbrand of Oldenburg. Built on a high hill and surrounded by a double wall and many towers, it was regarded in the period when the power of the Crusaders was beginning to decline, as *maximum totius terrae illae solacium*; the bishop of Valenia (Bāniyās) had moved into the fortress by 1212 out of fear of the Muslims. King Andrews of Hungary in 1217–1218 gave funds for the maintenance of the fortress which had given him an honourable reception (Röhrich, *Regesta Hierosolym.*, p. 243, No. 908). The straits to which the humiliating treaties with Baiḥars had reduced the Knightly Orders is lamented by the Grand Master Hugo Revel in 1268 in a letter in which he says that the possession of its last two fortresses, *Cratum* and *Margatum* (= Ḥiṣn al-Akrād and al-Marḥab), was only granted the Order on payment of oppressive taxes (Röhrich, *Regesta Hierosolym.*, *Additamentum*, Oesiponti 1924, p. 91, No. 1358a). After the loss of Ḥiṣn al-Akrād, the Templars and the Knights of St. John in 669 (1271) by a treaty which they concluded in 'Arḥa with Saif al-Dīn Balabān al-Dawādār ('the secretary') al-Rūmī,

the Sulṭān's plenipotentiary, had to cede half of the coastland (ḡāḥil) of Anṭarūs, al-Marḥab and Bāniyās and bind themselves not to build any new defences (Mufaḍḍal b. Abi 'l-Faḍā'il, *Ghāḥ al-Mamlūkensultān*, ed. Blochet, in *Patrol. Orient.*, xii, 536). After a raid by the Franks (Oct. 1279) the Emir Saif al-Dīn Balabān al-Ṭabbāḥī, the governor of Ḥiṣn al-Akrād for Kālā'ūn, in the beginning of 1281 sent troops against al-Marḥab, but they were driven back with heavy losses (Mufaḍḍal, *op. cit.*, xiv, 484, and the sources quoted in van Berchem, *Voyage*, p. 301, note 5). In the treaty between Kālā'ūn and the Templars of 681 (1282) al-Marḥab is mentioned among the districts half of which were to be ceded (Mufaḍḍal, *op. cit.*, xiv, 445; van Berchem, *op. cit.*, p. 302, note 2). The pilgrim Burchardus de Monte Sion in 1283 mentions the "*Castrum Margath fratrum hospitalis sancti Johannis*"; it was still at this date the see of the bishop of Valenia (*Peregrinatores*, ed. Laurent, p. 30, 170).

On 10th Šafar 684 (April 17, 1285) Kālā'ūn appeared before al-Marḥab and began the attack as soon as the siege artillery arrived. On the 19th Rabi' I (May 25) the Emir Fakhr al-Dīn Muḥrī received the surrender of the fortress. On account of its strategic value for defence against possible attacks from the sea, it was not destroyed but included in the "royal province of the fortunate conquests", the capital of which till 688, when Ṭarabulus was taken, was the Castle of the Kurds, still governed by Saif al-Dīn Balabān al-Ṭabbāḥī al-Manṣūrī. Kālā'ūn in 684 ordered him to repair the defences of the citadel as an inscription found *in situ* shows (van Berchem, *Inscriptions de Syrie*, p. 71 sq.). Among those present at the capture of the fortress were the 12 years old Abū 'l-Fida', who was then on his first campaign with his father, and the historian Ibn 'Abd al-Raḥīm, the continuator of Ibn Wāḥil's chronicle. The best account of the taking of al-Marḥab is in Kālā'ūn's biography entitled *Taḥrīf al-Aḥyām wa 'l-Uḥūr bi-Sirat al-Sulṭān al-Malik al-Manṣūr* (Paris, MS. ar., No. 1704, fol. 149 sq., ed. and transl. in van Berchem, *Voyage*, p. 310–320).

In the viith (xvth) century al-Marḥab belonged to the province of Ṭarabulus ('Umari, *Ta'rif*, transl. by R. Hartmann, *Z. D. M. G.*, lxx, [1916], 36; Khali al-Zāhiri, *Zubdat Kāthf al-Mamālik*, ed. Ravaisse, p. 48; Kaikashandī, *Shukh al-Aḥḥā*, ed. Cairo, iv, 145 sq.); at this time it was used as a state prison (van Berchem, p. 305, note 2). Its harbour is mentioned in documents of 1193 and 1299 (van Berchem, p. 309, note 3); it was presumably at the mouth of the Wādī 'Ain al-Kharaibe (in Walpole: *al-Mina*). As al-Marḥab lies on the outer spurs of the Anṭariye range it has often wrongly been included among the fortresses of the Ismā'īlīs (*Ḥiṣā al-Dawā*) (so 'Umari, *op. cit.*, in the Berlin and Gotha MS. but not in the others; Hartmann, *Z. D. M. G.*, lxx, 36, note 7). So far as we can judge from the brief notes by visitors, it was not till about the middle of the xixth century that it began to fall into ruins. About 1885 at the request of the kaimmakām of the kaza of al-Marḥab the seat of the government was transferred from the ruined Kal'at al-Marḥab to Bāniyās (M. Hartmann, *Z. D. P. V.*, xxii, p. 163, No. 27).

MARRAKESH (Ar. **MARRAKUŠH**, popular pronunciation **Merrākēš**), a town in Morocco, and one of the residences of the Sultān.

The form Marrakech, adopted by the administration of the protectorate, is of recent origin in French. Down to about 1890 the town was always known as Maroc (Morocco) in French. The kingdom of Morocco, distinct in origin from those of Fās and Sūs, finally gave its name to the whole empire. At one time it only consisted of the country south of the wādī Umm Rabi' as far as the range of the Great Atlas.

Marrakesh is situated in 31° 37' 35" N. Lat. and 7° 59' 42" East Long. (Greenw.). Its mean height above sea-level is about 1,510 feet. The town is 150 miles south of Casablanca. It is through the latter that almost all the traffic with the coast passes at the present day. It used to go via Safi which is the nearest port (100 miles). Sidi Muhammad b. 'Abd Allāh in 1765 tried to supplant it by Mogador (115 miles), where he built a town and harbour through which at the end of the xviiith century most of the trade between Marrakesh and Europe passed.

Although Marrakesh is only 235 miles from Fās as the crow flies, it is over 330 by Casablanca-Rabat-Meknes which is the only road that has been used for over a century, the direct road by the Tādla having been rendered impracticable by the traditional insecurity of the country.

The temperature which is very mild in winter is very hot in summer. The average maxima of 39° 6 in the month of August 1927 have nothing

unusual and imply extreme temperatures reaching or passing 50° on certain days. Rainfall is low (284.5 mm. in 1927, against 706.5 in Rabat and 1,007.3 in Tangier). But water fed by the snows of the Atlas is found at no great depth. It is collected by a system of long subterranean galleries (*khaffāra*, plur. *khaffāra*) which bring it to the surface by taking advantage of the very slight slope of the surface. This method of obtaining water, which is described in the xiith century by Idrisi, has enabled the vast gardens which surround the town to be created. The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains.

Contrary to what was until quite recently believed, Marrakesh is by far the most thickly populated town of the empire. The census of March 7, 1926 gives 149,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews. The probable growth of the population is not sufficient to explain the difference between the present day figures and the old estimates, almost all far below the truth and varying greatly among themselves: from 20,000 (given by Diego de Torres in 1585 and Hōst in 1768), 25,000 (Saint Olon, 1693), 30,000 (Ali Bey el-Abbassi, 1804), 40 to 50,000 (Gatell, 1864 and Eug. Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Beaumont, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811.

About 40 miles N. of the Atlas, the vast silhouette of which, covered by snow for eight months of the year fills the background, Marrakesh is built in a vast plain called the Haws which slopes very gently towards the wādī Tānsift, which runs 3 miles north of the town. The extreme uniformity of the plain is broken only in the N. W. by two rocky hills called Gūllis (1,700 feet) and Kudyat al-'Abid. In 1912 at the time of the French occupation, there was built a fort which commands Marrakesh. The modern European town called the Guéllis lies between this hill and the walls of the old town.

The wādī Isfīl, a left bank tributary of the Tānsift, a stream often dried up but transformed into a raging torrent after storms, runs along the walls of the town on the east. To the north of Marrakesh as far as the Tānsift and to the east stretches a great forest of palm-trees, the only one in Morocco north of the Atlas. It covers an area of 13,000 hectares and possesses over 100,000 palm-trees but the dates there only ripen very imperfectly.

The town is very large. The walls which run all round it measure at least 7 miles in length. The town in the strict sense does not occupy the whole of this vast area. The part built upon forms a long strip which starting from the *al-Wiṣṣa* of Sidi bel 'Abbās in the north runs towards the *ḳayba* which stands at the southern end of the town. On the two sides lie great gardens and estates among which we find in the neighbourhood of the chief gates inside the walls, isolated quarters grouped like so many villages around their *ḥaḳ* and their mosque.

The town consists mainly of little low houses of reddish clay, often in ruins, among which are scattered huge and magnificent dwellings without particularly imposing exteriors built either by the viziers of the old *makhzen* (e.g. the *ḥāḥya*, now

the Résidence Générale, the old palace of the Bā Hammād, vizier of Mawlaī al-Hassan) or by the great *kādis*, chiefs of the tribes of the country round. The narrow and overhung streets in the central area broaden towards the outskirts into sunny and dusty squares and crossroads. The colour, the picturesque architecture, the palm-trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan *khar* of vast dimensions.

The centre of the life of the city is the Djāma' al-Fna', a vast, irregular, ill defined open space, surrounded until quite recently by wretched buildings and reed huts, overshadowed by the high minaret of the Kutubiya Mosque. Its name comes, according to the author of the *Ta'rikh al-Sūdān*, from the ruins of a mosque which Ahmad al-Manṣūr had undertaken to build there: "As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (*al-fana'*); but his plans being upset by a series of unfortunate events, the prince was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (*djāma' al-fana'*". This origin having been forgotten, an attempt was later made to explain the name of the square from the fact that the heads of rebels used to be exposed there (mosque or place of assembly of ruin, of death). It was there also that executions took place. Lying on the western edge of the principal agglomeration of buildings at its most thickly populated part, close to the sūq, connected with the principal gates by direct and comparatively quiet roads, Djāma' al-Fna' is the point of convergence of the roads. At all hours swarming with people, it is occupied in the morning with a market of small traders: barbers, cobblers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soup (*harira*); in the evening, it is filled with acrobats and jugglers (Awlad Sidi Ahmad u Mūsā of Tazerwālt), sorcerers, story-tellers, fire-eaters, snake-charmers and *ghh* dancers. The audience consists mainly of people from the country who have come into town on business and want to enjoy the distractions of the town for a few hours before going home. These visitors are always very numerous in Marrakesh. Besides the regular inhabitants there is a floating population the number of which has been put at 20,000 to 25,000. For Marrakesh is the great market for supplying not only the Haws but also the mountain country, the Sūs and especially the extreme south, Dādes, Dar'a (Dra') and the Anti-Atlas. A portion of this traffic will probably be diverted via Agadir when this port is opened to trade. Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu. They brought back chiefly Sudanese slaves for whom Marrakesh was an important market. The conquest of the Sudan by France has put an end to this traffic.

To the north of the Djāma' al-Fna' begin the sūqs which are very large. As in Fās and in the other large towns, the traders and artisans are grouped by trades under the authority of the *mukharrib*, a kind of provost of the merchants. The most important sūqs are those of the cloth merchants (*ḡisariya*), of the sellers of slippers, of pottery, of basket work, of the embroiderers of harness, of the dyers and of the smiths. An important Thursday sūq (*al-khamis*) is held outside

and inside the walls around the old gate of Fās which has taken the name of the market (Bāb al-Khamis). This sūq was already in existence in the xvth century.

There is no industry to speak of in Marrakesh. The most important is the making of leather (tanning). The manufacture of slippers occupies 1,500 workmen who produce over 2,000 pairs each working day. There are the only articles manufactured in the town that are exported. They are sold as far away as Egypt and West Africa. The war interrupted communications and did great damage to this industry. For the rest, Marrakesh is mainly an agricultural market. The whole town is a vast *fonda* in which are warehoused the products of the country, almonds, caraway seeds, goat-skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have).

The town is divided into 32 quarters: Zāwiya 'Abbāsiya, Sidi Ben Slimān, Aṣwal, Riyād al-'Arūs, Sidi Abi 'Amr, Bāb Dukkālā (divided into two quarters), Sidi 'Abd al-'Aziz, Rahbat Azbaat, Dabāshi, Kammāriya, Riyād al-Zitūn al-Jadid, Djan ben Shagra, Kāfir, Mwāsin, Riyād al-Zitūn al-Qadim, 'Arja Mawlaī Mūsā Kūtra, 'Arja Mawlaī Mūsā Shūra, Bāb Hallūn, Sidi Mtūn, Ben Sālah, Sidi Aiyūb, Bā Zakri, Kā'at ben Moḍar, Bāb al-Dabbāgh, Hārat al-Sūr, Mawḡif, Arbatin, the *ḡasha* containing the royal palaces (again subdivided into several sections: al-Badr', Kaṣbat al-aḥḡāa, Berrima, Bāb Aḡmār, Maḡinat Sidi 'Amara and the *mellāh* or Jewish quarter. We may further mention outside the walls near the Bāb Dukkālā, a quarter called al-Hāra where the lepers live. Until recent years the gates of the town were closed during the night. The superintendents of the quarters (*mukharribin*) have watchmen (*assāsa*) under their orders. The old custom still survives of firing a salvo at midnight on the Djāma' al-Fna' as a curfew.

Marrakesh being an imperial town, the sultān who only stays there at long intervals is represented in his absence by a *khalifa*, a prince of the imperial family (usually the son or brother of the sovereign). The role of this *khalifa* is purely representative. His main duty is to preside at the ceremonies during the ritual celebrations. The governor of the town is a *pasha*, assisted by a delegate (*nā'ib*) and several *khalifas*. One of the latter supervises the prisons and the administration of justice. Another has the title of *pasha* of the *ḡasha*. He governs the southern part of the town which includes the imperial palace and the Jewish quarter. Formerly the *pasha* of the *ḡasha* was independent of the *pasha* of the town and served to counter-balance the power of the latter. He commanded the *ḡish*, an armed contingent furnished by the warlike tribes (Udaya, Ait Immār etc.) settled in the vicinity of the town by the sultāns on the domain lands. At the present day the *ḡish* is under the control of the *pasha* of the town and the *pasha* of the *ḡasha* only retains of his former powers certain rights of precedence and honorary privileges.

Muslim law is administered in Marrakesh by three *kādis*: one is established at the mosque of Ibn Yūsuf; the other at the mosque of al-Mwāsin and the third at the mosque of the *ḡasha*. The latter's competence does not extend beyond the limits of

his quarter. That of the others extends over the whole town and even over the tribes of the area governed from it who have no local *kādi*.

Marrakesh is not numbered like Rabat and Tetuan among the *ḥaḍariya* towns, i.e. it has not, like them, an old established citizen population, not of rural origin, with a bourgeois whose tone is given by the descendants of the Moors driven from Spain. In the xvth century however, Marrakesh did receive a colony of Morescos large enough to give one quarter the name of *Orgiba*, a town of Andalusia from which they came. The foundation of the population consists of people of the tribes for the most part Berber or Arabs strongly mixed with Berber blood. *Shlūh* is much spoken in Marrakesh although the language of the tribes around the town (*Rhāmna*, *Uḍāya*) is Arabic. The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population and the old Maḥmūdian race which must with Almoravids have been the primitive population of Marrakesh is only found in combination with amounts difficult to measure of Arab, Saharan and negro blood. Even to-day this process is going on: the newcomers come less from the valleys of the Atlas than from the Sūs, the Dra' and the Anti-Atlas, from the extreme south which is poor and overpopulated. The greater number of these immigrants soon become merged in the population of the town; but the *Enquête sur les corporations musulmanes*, conducted by L. Massignon in 1923—1924 (Paris 1925) yielded some very curious information about the survival in Marrakesh of vigorous groups of provincials, specialising in particular trades: the makers of silver jewellery (at least those who are not Jews) owe their name of *ṭaḡmūtiyyūn* to the fact that they originally came from *Ṭaḡmāt* in Sūs; the *Meṣfiwā* are charcoal-burners and greengrocers, the *Qhigḥāya*, salters; the people of the *Tedghā*, gatherers of dates and *ḥaḍafiriya*, i.e. diggers of wells, who specialise in water-channels (*ḥaḍafir*); those of *Tāfilāh*, porters and paviors; those of *Warḍānt*, water-carriers and of *Tatīa* (Anti-Atlas), restaurateurs; of the Dra', water-carriers and *ḥaḍafiriya*, etc. This division is not the result of specialisation in their original home nor of privileges granted by the civic authorities but arises from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Thus groups grew up, sometimes quite considerable. The list of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations have lost much of their power under the pressure of the *Makhzen*. Some of them however still retain a certain social importance: in the first place that of the shoemakers which is the largest (1,500 members); then come the tanners (439), the cloth (237) and silk (100) merchants; the *fāris* wholesalers, then some groups of skilled artisans, highly esteemed but of less influence, embroiderers of saddles, makers of mosaics, carpenters, sculptors of plaster etc.

Religious and intellectual life. Mosques are numerous in Marrakesh. Some of them will be the subjects of brief archaeological studies. Those which play the most important part in the religious life of the city are the mosque of al-Mwaṣn, the mosque of 'Alī b. Yūsuf, both close to the *sūqs*, that of Sidi bel 'Abbās and that of the *ḥaḍba*. Then come the *Kutubiya*, the mosque of the Bāb Duk-

kāla, of the Bāb Aīlān, of *Berrima*, and the *Djāma* 'Ibn Ṣālah. There are also many little mosques in the various *faubourgs*. But although it can claim illustrious men of learning, Marrakesh is not like Fās, a centre of learning and of teaching. The Almohads built schools and libraries there, brought the most illustrious scholars, philosophers and physicians from Spain, like Ibn Tufail, Abū Marwān Ibn Zuhr (Avenzoar) and Abū 'I-Walid Ibn Rushd (Averroes) who died at Marrakesh in 595 (1198). These great traditions did not survive the dynasty. In the beginning of the xvth century, in the time of Leo Africanus, the library of the Almohad palace was used as a poultry house and the madrasa built by the Marinids was in ruins. At the present day in the town of the *Kutubiya* there is not a single bookseller. A certain number of *ḥaḍba* still live in the madrasas (Ibn Yūsuf, Ibn Ṣālah, Sidi bel 'Abbās, *Berrima*, *Ḥaḍba*) but the teaching in Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Ḥarawiyūn in Fās, much decayed as it is. Although they attempt to imitate the customs of Fās (they celebrate notably the "festival of the sūltān of the *ḥaḍba*" [cf. *Fās*] every spring) the students are far from holding in Marrakesh the position their comrades enjoy in Fās.

The devotion of the people of Marrakesh expends itself particularly on the cult of saints, not at all orthodox but dear to the Berbers. Their town has always been famous for the great number of *ṣāḥbi* who are buried in its cemeteries and who justify the saying: "Marrakesh, tomb of the saints". But in the time of Mawlāi Ismā'īl, the Shaikh Abū 'Alī al-Ḥasan al-Yūsuf, by order of the prince organised, in imitation of the old established cult of the *Sab'atū Rijāl* (the seven saints of the *Raḡraḡa*, around the *Djābal al-Ḥadīd*, among the *Shayāma*) a pilgrimage to the *Sab'atū Rijāl* of Marrakesh including visits to seven sanctuaries and various demonstrations of piety. The following are the names of the seven saints in the order in which they ought to be visited: 1) Sidi Yūsuf b. 'Alī al-Sanḥādī, a leper, d. 593 (1196—1197), buried outside the Bāb Aghmāt on the spot where he had lived; 2) the *kādi* 'Iyād, 476—544 (1083—1149), *kādi* of Ceuta, then of Granada, a learned theologian, author of the *Sūfiya*, a celebrated collection of traditions, buried beside the Bāb Aīlān; 3) Sidi bel 'Abbās al-Sabī, patron saint of Marrakesh and the most venerated of the saints of the region 524—601 (1130—1204). He came to Marrakesh when the town was being besieged by the Almohads and settled there, at first in a hermitage on the *Djābal Gīlliz* where a *ḥaḍba* dedicated to him can still be seen. But the principal pilgrimage is to his tomb at the northern end of the town over which Abū Fāris b. Aḥmad al-Manṣūrī built a *ṣūfiya* and an important mosque at the beginning of the xvth century; 4) Sidi Muḥammad b. Sīman al-Djāzūlī, d. in 870 (1465) at Afughal among the *Shayāma*, a celebrated Sūfi, founder of the *Djāzūlī* brotherhood. His body was brought to Marrakesh in 930 (1523) by Aḥmad al-A'raḍī the Sa'diān; 5) Sidi Abd al-'Azīz al-Ṭabbā, a pupil of al-Djāzūlī, d. in 914 (1508); 6) Sidi 'Abd Allāh al-Qharwānī, popularly called Mawlā 'I-Kūṣūr, d. in 935 (1528); 7) Sidi 'Abd al-Rahmān al-Suḥailī, called the Imām al-Suḥailī, a native of the district of Malaga, d. 581 (1185) and buried outside the Bāb al-Rabb.

It is quite an arbitrary choice that these seven individuals have been chosen as the *Sab'atn Ridjāl*. Others could equally well have been chosen, as the town of Marrakesh and the cemeteries which stretch before it, contain a very large number of other venerated tombs. The principal are mentioned in the article by H. de Castries, *Les Sept Patrons de Marrakech* (*Hesperis*, 1924). Legend of course plays a great part in the cults of the various saints. We may mention for example the sayings and songs which perpetuate the memory of Lalla 'Uda, mother of the Sultān Ahmad al-Manṣūr, a real personage much transformed by the popular imagination. The various trade corporations have chosen patron saints. Thus Sidi Ya'qub is the patron of the tanners, Sidi bei 'Abbās of the soap-makers and lacemakers, Sidi Mas'ūd "slave" of Sidi Muḥammad b. Sīmān is the patron of the masons, Sidi 'Abd al-'Azīz al-Ṭabbā' of the dyers, etc. The majority of the artisans are also affiliated to the religious brotherhoods. In Massignou's investigation will be found details of the attraction which some of the latter have for certain trades.

The Jews. At the foundation of Marrakesh, the Jews had no permission to settle in the town. They came there to trade from Aghmāt Ailān where they lived. Al-Idrisi relates that under 'Alī b. Yūsuf they had not even the right to spend the night in Marrakesh and that those, who were caught within the walls after sunset, were in great danger of losing their lives and property. They settled there at a later date. At the beginning of the xvth century there was, according to Marmol, in Marrakesh a ghetto of over 3,000 houses. It lay near the sūq on the site now occupied by the mosque of al-Mwāṣin. When this mosque was built by Sultān 'Abd Allāh al-Ghālīb, the more scrupulous refused to pray there for some time on the pretext that it occupied the site of a Jewish cemetery. It was 'Abd Allāh al-Ghālīb who, about 1560, settled the Jews on the site they still occupy, along the wall of the *kaṣba* to the east, where the stables of the palace had been. In the beginning of the xvth century, there was here, according to the French traveller Mocquet, "like a separate town, surrounded by a good wall and having only one gate guarded by the Moors; here live the Jews who are over 4,000 in number and pay tribute". A century later, there were about 6,000 Jews and many synagogues. The Jewish quarter, called *mellāḥ* after the example of the Jewish quarter of Fās (the name *mellāḥ* is attested for Marrakesh as early as the end of the xvth century), has 12,000 inhabitants at the present day. As regards policing, it is under the authority of the pasha of the *kaṣba* but otherwise is administered by an elected Jewish committee. Questions of personal law are judged by a rabbinical tribunal of three members nominated and paid by the Makhzen. The Jews of Marrakesh are beginning to leave the bounds of the *mellāḥ*. For the most part they wear the ritual costume: gaberdine, skullcap and black slippers, but the younger generation shows a tendency to emancipate itself from this dress. They have little influence on the corporations of Marrakesh and are not allowed to settle in the sūqs. They are limited to certain trades (jewellers, tinmiths and embroiderers of slippers) and share with the people of Fās the wholesale trade. They trade particularly with the Shluḥ of the mountains. History. The Roman occupation never extended

so far as the region of Marrakesh. It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Aghmāt or at Marrakesh the site of *Bocanum Emerum* (Βόκανον Ἐμπερουμα of Ptolemy), a town of Tingitana, the site of which is now unknown. The earliest historians agree that the place where Marrakesh was built by the Almohads was a bare marshy plain where only a few bushes grew. The name Marrakesh gives no clue to the origin of the town. The etymologies given by the Arab authors are quite fanciful: according to al-Marrākushi, it was the name of a negro slave who escaped and set up as a brigand there. Another writer explains it by a punning interpretation: "the meaning of the name in the language of the Maḡmūda is "go away quickly"! The place was actually a place of ambuscade for brigands". It was, it appears, in 449 (1057-1058) that the Almohads advanced from Sās north of the Atlas and took Aghmāt Warika. It was there that they settled at first. But after the campaign of 452 (1060) in the course of which they conquered the country of Fāzā, Meknes and of the Lawāta near Fās, they wanted to make their position more permanent and independent by creating a kind of camp, which could be used as a base for their further campaigns and would threaten the Maḡmūda of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fās. Yūsuf b. Ṭāḡhīn therefore purchased from its owner an estate on the frontier between two Maḡmūda tribes, the Hailāna and the Hāmrān, and pitched his camp there. So far was he from thinking of founding a great capital, a thing for which this Saharan nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little *kaṣba* in which to keep his treasures and his weapons; but he did not build a surrounding wall. The native Maḡmūda built themselves dwellings surrounded by palisades of branches beside the Almoravid camp. The town grew rapidly to a considerable size, if it is true, that in the reign of 'Alī b. Yūsuf it had at least 100,000 hearths, but it did not lose its rural character until Ibn Tūmart appeared and the threat of the Almohad movement revived by him forced 'Alī b. Yūsuf to defend his town and surround it by a rampart which was built in eight months, probably in 520 (1126). Some historians give the date 526 (1132) but it is certain that the walls were already built in 524 (1130) when the Almohads attacked Marrakesh for the first time. Marrakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield. When Ibn Tūmart had established his power over the tribes of the mountains he tried to attack Marrakesh; he then sent an Almohad army under the command of Shaikh al-Baḡhīr, who, after defeating the Almoravids in the vicinity of Aghmāt, pursued them to the gates of Marrakesh. The Almohads could not enter the town but established themselves before its walls. After 40 days' siege, 'Alī b. Yūsuf received reinforcements and made a successful sortie which forced the attackers to retreat. This was the battle of al-Buḡaira (524 = May 1130) from the name of a large garden, *Buḡairat al-Raḡā'iq*, near which it was fought. It lay to the east of the town before the Bab Dabbāḡh and the Bab Ailān. Al-Baḡhīr was slain and Marrakesh resplended for 17 years. Ibn Tūmart died a few months

later. It is hardly likely that 'Abd al-Mu'min should have made soon after his accession, as the *Kitāb al-Bayān* says, a new attempt to take Marrakesh. The memoirs of al-Balḥāq which give such full details of all the events of this period make no mention of it. They show on the contrary the Almohad armies based at first in conquering the country before occupying the capital, taking Tadmā, Salé, Taza, Oran, Tiemeen and Fās and only returning to lay siege to Marrakesh after the whole country had been occupied and the capital alone held out as the last stronghold of the doomed dynasty. It was in the summer of 1146 that 'Abd al-Mu'min laid siege to Marrakesh. He made his headquarters at Gilla and, seeing that the siege would be a long one, at once had houses built in which to instal himself and his army. The siege lasted eleven months. An unsuccessful sortie by the Almoravids seems to have hastened the fall of the town. Disgusted by lack of success and by famine, a number of chiefs of the besieged went over to the enemy. 'Abd al-Mu'min had scaling-ladders made and distributed them among the tribes. The assault was made and, according to Ibn al-Athīr, the defection of the Christian soldiery facilitated its success. The Almoravid Sultān, Ishāk, a young boy who had sought refuge in the fortress, was slain, along with a large number of the Almoravids. This event took place in 541 in the month of Shawwāl (March 6—April 3, 1147), according to the majority of the historians.

The Almohad dynasty which came from the south naturally took Marrakesh as its capital. It was here that 'Abd al-Mu'min and his successors usually resided when they were not in the country. The town prospered exceedingly under their rule. They gave it many important public buildings: the *ḥaṣba*, mosques, schools, a hospital, aqueducts and magnificent gardens. During this period of prosperity, there were very few events of particular interest in the history of Marrakesh. In 547 (1152—1153) according to Ibn Khaldūn, in 549 (1154—1156) according to al-Balḥāq and the *Kitāb al-Bayān*, the Banū Anghār, brothers of the Maliki Ibn Tūmart, entered the town and tried to rouse the inhabitants against 'Abd al-Mu'min who was away at Salé. The rising was speedily put down and ended in the massacre of the rebels and their accomplices. But on the decline of the dynasty, i.e. after the battle of Las Navas de Tolosa (1212) and the death of al-Nāṣir, son of al-Manṣūr, Marrakesh became the scene of the struggle between the royal family descended from 'Abd al-Mu'min and the Almohad *ḥaḥkha* descended from the companions of Ibn Tūmart who, quoting traditions of the latter, claimed the right to grant investiture to the sultāns and to keep them in tutelage. Abū Muḥammad 'Abd al-Wāhid, brother of al-Manṣūr, was strangled in Sept. 621 (1224). His successor al-'Adil was drowned in a bath in the palace (Oct. 624 = 1227) and the Almohad *ḥaḥkha* appointed as his successor the young Yahyā b. al-Nāṣir, while Abū 'l-'Ulā Idrīs al-Ma'mūn, brother of al-'Adil, was proclaimed in Spain. The whole country was soon in the throes of revolution. Yahyā, fearing the defection of the noble Almohads, fled to Tinnāl (April—May 626 = 1228). Disorder reigned in Marrakesh, where a governor named al-Ma'mūn was finally appointed. But four months later, Yahyā returned to Marrakesh with fresh troops, put al-Ma'mūn's governor to death and after staying seven days in the town

was forced to go to Gilla to fight a battle (Feb. 1230), for al-Ma'mūn had arrived from Spain to take possession of his kingdom. Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Ma'mūn defeated Yahyā and his followers, entered Marrakesh and installed an anti-Almohad regime there, marked not only by a terrible massacre of the *ḥaḥkha* and their families but by a new orientation in religious matters quite opposed to that of the preceding reigns. On his arrival in Marrakesh, al-Ma'mūn mounted the pulpit of the mosque of the *ḥaṣba*, recited the *ḥaṣba*, solemnly cursed the memory of Ibn Tūmart and announced a whole series of measures, some of which are given by the *Kitāb al-Bayān* and Ibn Khaldūn and which show he intended to do everything on opposite lines to his predecessors. His innovations revived the discontent so that two years later (1232) while al-Ma'mūn and his militia were besieging Ceuta, Yahyā again occupied Marrakesh and plundered it. Al-Ma'mūn at once turned back to the rescue of his capital but died on the way (Oct. 17, 1232 = 629 A. H.). His widow, al-Ḥabāb, succeeded in getting her son al-Rashīd, aged 14, proclaimed by the leaders of the army, including the commander of the Christian mercenaries. In return she gave them Marrakesh to plunder if they could reconquer it. But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultān. The latter had to grant them the *amān* and pay the Christian general and his companions the sum they might have expected from the plunder of the capital—according to the *Kitāb al-Bayān*, 500,000 dinārs.

In 633 (1235—1236) a rebellion of the *Khilaf* drove al-Rashīd out of Marrakesh and he took refuge in Sijilmāsa while Yahyā recaptured Marrakesh. Al-Rashīd however succeeded in retaking it and Yahyā finally was assassinated. It was in the reign of the Almohad al-Sa'id (1242—1248) that the Marinids who had arrived in the east of the country in 1216, seized the greater part of the kingdom of Fās. His successor 'Umar al-Murtaḍā, proclaimed in 646 (1248), found himself in 658 (1260) reduced to the solitary kingdom of Marrakesh, to the south of the Umm Rabi'. In 660 (1261—1262) the Marinid Abū Yūsuf Ya'qūb b. 'Abd al-Ḥakīm came to attack Marrakesh. He encamped on mount Gilla whence he threatened the town. Al-Murtaḍā sent his cousin, the *ṣayyid* Abū 'l-'Ulā Idrīs, surnamed Abū Dabbūs, to fight him. The emir 'Abd Allāh b. Abū Yūsuf was slain in the battle and his father lost heart, abandoned his plans on Marrakesh and returned to Fās at the end of Rabi' al-Thani 661 (beg. June 1262).

From this time one feels that the dynasty is lost although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute; but they were to destroy themselves. Falling into disfavour with his cousin al-Murtaḍā, Abū Dabbūs, this great-grandson of 'Abd al-Mu'min, who in the preceding year had defended Marrakesh against the Marinid sultān, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Murtaḍā, on condition that he shared the spoils. Victorious and proclaimed sultān in October 1266, Abū Dabbūs forgot his promises. Abū Yūsuf Ya'qūb came in person to remind him of them. He laid siege to Marrakesh in 1267 but Abū Dabbūs had a stroke of good fortune for

the Marinid had to raise the siege to go and defend the kingdom of Fās against an attack by the sultan of Tlemcen, Yaghmurān. The campaign being over, Abū Yūsuf Ya'qūb returned to Marrakesh. He entered it in Muharram 668 (Sept. 1269). The *Khifā* tells us that he gave the *amān* to the inhabitants and to the surrounding tribes, whom he overwhelmed with benefits and ruled with justice and remained seven months to pacify and organise the country. By accepting Marinid rule, however, Marrakesh lost for two and a half centuries its position as a capital. The new dynasty made Fās its capital.

Its sultans, however, did not neglect Marrakesh especially during this period (end of the thirteenth and first half of the fourteenth century). The chronicles record many sojourns made by them there but its great days were over. The town began to lose its inhabitants. Abū 'I-Ḥasan 'Alī was the only Marinid to undertake buildings of any importance at Marrakesh (a mosque and a madrasa). In the absence of the sovereign, the government of the town and district was entrusted to powerful governors as befitted a large town remote from the central authority. For nearly 20 years, from 668 to 687 (1269-1288), this office was held by Muhammad b. 'Alī b. Muḥallī, a chief greatly devoted to the Marinids, says Ibn Khaldūn, and allied by marriage to the family of their ruler. But in February 1288, fearing treachery from Muhammad b. 'Alī, Abū Ya'qūb Yūsuf threw him into prison and gave his office to Muhammad b. 'Atiq al-Djānātī, a client and confidant of the royal family, to whom the sultan further entrusted his son Abū 'Amir. Abū Ya'qūb had not left Marrakesh six months when the young prince Abū 'Amir rebelled there and proclaimed himself sovereign at the instigation of the governor Ibn 'Atiq (Nov. 1228). Abū Ya'qūb hastened to Marrakesh which he took after several days' siege. The young Abū 'Amir had time to escape and seek refuge in the mountains among the Maṣmūdī tribes, after plundering the treasury.

The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up. Towards the end of May 1307, under the walls of Tlemcen, sultan Abū Thabit gave his cousin Yūsuf, son of Muhammad b. Abī 'Iyāḍ b. b. 'Abd al-Hakkī, the governorship of Marrakesh and the provinces depending on it. By the end of the year, Yūsuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Hādīdj Mas'ūd. Defeated by the imperial troops on the banks of the Umm Raba', the rebel fled to the mountains, plundering Marrakesh on his way (Jan. 1308). The punishment inflicted on the rebels was severe. Yūsuf b. Abī 'Iyāḍ, handed over by a *shaikh* with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town. Abū Sa'īd 'Uthmān stayed at Marrakesh on several occasions. He did much rebuilding in 720 (1320). Peace and comparative prosperity seem to have reigned there under the rule of Abū 'I-Ḥasan until this prince, as a result of reverses suffered in his struggle with the Hafsids, found his own son, the ambitious Abū 'Inān, rebelling against him. During the troubles which now broke out, Ibn Khaldūn tells us, the town was seriously threatened with being sacked by the Maṣmūdī of the mountains led by 'Abd al-Ilāh al-Saknawī. Abū 'Inān was able to consolidate his

power and avert this danger. The struggle between father and son ended in the region of Marrakesh. Abū 'I-Ḥasan, defeated at the end of Safar 757 (May 1350) near the town, sought refuge in the mountains with the emirs of the Hintata and died there just after becoming reconciled to his son and designating him his successor (June 1352).

During the course of the fourteenth century, the emirs of the Hintata played a very important part in the country. The position of this tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and predominating influence among the other Maṣmūdī. Abū 'Inān took no steps against the emir 'Abd al-'Azīz who had given asylum to the fugitive Abū 'I-Ḥasan. He retained him in the command of his tribe, which he gave a few years later to his brother Amir. In 1353 the latter, becoming chief of all the Maṣmūdī tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al-Mu'tamid, son of Abū 'Inān, very soon succeeded in making himself completely independent. He received and for a time held as hostages two rebel Marinid princes Abū 'I-Faḍl, son of the Sultan Abū Salīm, and 'Abd al-Rahmān, son of Sultan Abū 'Alī. Quarrelling with his protégé Abū 'I-Faḍl whom he had made governor of Marrakesh, he retired into his mountains and for several years defied the armies of the sultan. He was in the end captured and put to death in 1370.

After the death of Sultan 'Abd al-'Azīz, the pretender Abū 'I-Abbās, son of Abū Salīm, had himself proclaimed in Fās with the help of his cousin 'Abd al-Rahmān b. Abū Hellāsen, himself a pretender to the throne. The latter as a reward for his services was given the independent governorship of Marrakesh and the country round it (June 1374). The empire was thus completely broken up. The two rulers soon began to quarrel but then signed a treaty of peace in 1378. There was a new rupture and a new truce two years later after Marrakesh had been besieged for two months without result. Abū 'I-Abbās in the end took Marrakesh in Djumādā 784 (July-Aug. 1382), and 'Abd al-Rahmān was slain. Abū 'I-Abbās, dispossessed in 1384 and exiled to Granada, succeeded in reconquering his kingdom in 1387 and sent to Marrakesh as governor his son al-Mustasir. This event is the last recorded by Ibn Khaldūn. From the time his record ceases and throughout the fourteenth century we are incredibly poor in information about the history of Marrakesh. The south appears to have continued to form a large governorship in the hands of princes of the royal family. The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415-1418), Morocco was a prey to the struggles among the pretenders. While Abū Sa'īd 'Uthmān was ruling in Fās, Mawlay Bū 'Alī, king of Marrakesh, was fighting against another Marinid prince called Fāris. The "kingdom" or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fās for the governors of Marrakesh supplied contingents to the army which tried to retake Ceuta. But they very soon ceased to take part in the holy war in the north of Morocco and their name is not found among the opponents of the Portuguese.

Marrakesh by 1430 seems to have become *de facto* if not *de jure* independent but we do not know within fifty years at what date the Hintāta emirs established their power; they were descended from a brother of 'Amir b. Muḥammad. They were "kings" of Marrakesh when in 1508 the Portuguese established themselves at Safi, taking advantage of the anarchy prevailing, for the power of the Hintāta emirs hardly extended beyond the environs of their capital and they could not effectively protect their tribes against the attacks of the Christians. By 1512 the Portuguese governors of Safi had succeeded in extending their power over the tribes near Marrakesh (Awlād Mīṣ) and the town lived in fear of the bold raids which on several occasions brought the Portuguese cavalry and their Arab allies into the district. The king of Marrakesh, overawed, entered into negotiations in 1514 but the terms were nothing less than his paying tribute as vassal and the building of a Portuguese fortress at Marrakesh. Agreement could not be reached. The occupation of Marrakesh remained the dream of the Portuguese soldiers. An attack on the town led by the governors of Safi and Azemmūr failed (April 23, 1515). This was the period when in reaction against the anarchy and foreign invasions the Sa'dian sharifs began to come to the front in Sūs. Ahmad al-A'rādī, who appeared in 1513 to the north of the Atlas, had himself recognised as leader of the holy war and accepted as such by the local chiefs, even by al-Nāṣir, king of Marrakesh. In the month of April 1514, it is recorded that he was in Marrakesh with the king. At the end of 1521, al-A'rādī established himself peacefully in Marrakesh which he found partly depopulated by famine and married the daughter of the king Muḥammad b. Nāṣir called Bū Shentūf. The latter in 1524 having tried to kick against the tutelage of his too powerful son-in-law, al-A'rādī and his brother Muḥammad al-Shaikh, seized the kasba, which seems till then to have been held by Bū Shentūf. They disposed of the latter by having him assassinated in the following year (1525). Marrakesh became the Sa'dian capital. The king of Fās, Ahmad al-Wattāsi, tried unsuccessfully to take it in June 1527. It remained in the hands of al-A'rādī till 1554, when it was seized by his brother Muḥammad al-Shaikh, up till then king of Sūs. After the assassination of Muḥammad al-Shaikh in 1557, al-A'rādī was put to death at Marrakesh with seven of his sons and grandsons, so as to secure the crown for Mawlay 'Abd Allāh al-Ghālīb. The whole of the latter part of the century was for Marrakesh a period of great prosperity. 'Abd Allāh al-Ghālīb built a series of important public works: rearrangement of the palace and of the provision storerooms in the kasba; in the town, the madrasa Ibn Yūsuf and the al-Mawṣin mosque etc. Ahmad al-Manṣūr finished his brother's work by building in the kasba from 1578 to 1594 the famous al-Badr palace. The sultan, enriched by several years of peace and good government, and by the gold brought from the conquest of the Sūdān (1591-1592), lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the 13th century. But the death of al-Manṣūr opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast" to use the expression of the historian al-Ifrānī. While Abū

Fāris, son of al-Manṣūr, was proclaimed at Marrakesh, another son, Zidān, was chosen sultan at Fās. A third brother, al-Shaikh, came and took Fās, then sent against Marrakesh an army led by his son 'Abd Allāh, who seized the town in Dec. 22, 1606. But Zidān, who sought refuge first in Tlemcen, then made his way to Sūs, via Tāfāfāt and coming suddenly to Marrakesh, had himself proclaimed there while 'Abd Allāh b. al-Shaikh while escaping with his troops was attacked in the midst of the gardens (*ḡāḍi Bekkār*) and completely defeated (Feb. 25, 1607). In October of the same year, 'Abd Allāh returned after defeating Zidān's troops on the Wādī Tifāfālī (Oct. 2, 1607), fought a second battle with them at Rās al-Ain (a spring in Tānsīf), regained possession of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Gīllīr, proclaimed as sultan, Muḥammad, great-grandson of Ahmad al-A'rādī. 'Abd Allāh was forced to fly (Jan. 25, 1608). Zidān, recalled by a section of the populace, regained possession of his capital in a few days. The struggle between Zidān and his brother al-Shaikh, in the year following, centred round the possession of Fās. Zidān failed in his plans to retake it and henceforth Fās, given over completely to anarchy, remained separate from the kingdom of Marrakesh. On these happenings, a marabout from Tāfāfāt, named Abū Mahallī, attempted to intervene (1611) to put an end to the fighting among the pretenders, which was inflicting great suffering on the people. His intervention only made matters worse. He took Marrakesh on May 20, 1612. Zidān took refuge in Safi and succeeded in again gaining possession of his capital with the help of an influential marabout in Sūs, called Yahyā b. 'Abd Allāh. After a battle near Gīllīr, Zidān withdrew into Marrakesh on Nov. 30, 1613. But Yahyā, succumbing to ambition, rebelled himself at the end of 1618, against the ruler whose cause he had once so well sustained. Zidān had again to take refuge in Safi. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks. 'Abd al-Malik (1627-1631), son and successor of Zidān, has left only the memory of his cruelty and debauchery. He was murdered in May 1631. The renegades, who killed him, also disposed of his brother and successor al-Walīd in 1636. A third brother, Muḥammad al-Shaikh al-Aṣghar, succeeded him but had only a semblance of power. He managed however to reign till 1655, but his son Ahmad al-'Abbās was completely in the hands of the Shabāna, an Arab tribe who assassinated him and gave the throne to 'Abd al-Karīm, called Kārūm al-Ḥādīdī, in 1659. "The latter", says al-Ifrānī, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects". His son Abū Bakr succeeded him in 1668 but only reigned two months until the coming of the Filālī Sulṭān al-Raḥīm, already lord of Fās, who took Marrakesh on July 31, 1668. Called to Marrakesh by the rebellion of his nephew Ahmad b. Muḥriz, al-Raḥīm met his death there in the garden of al-Aḡḡāl, his head having been injured by a branch of an orange tree against which his horse threw him when it stumbled.

Mawlay Ismā'il had some difficulty in getting himself proclaimed at Marrakesh, which preferred

his nephew, Ahmad b. Muḥrit. Ismā'il forced his way in on the 9th Safar 1083 (June 4, 1672). In the following year, Marrakesh again welcomed Ahmad b. Muḥrit. After a siege of two years (March 1675—June 1677), Ismā'il reoccupied Marrakesh and plundered it. He passed through it again in 1094 (1683) on his way to Sūs to fight Ahmad b. Muḥrit who was still in rebellion. Marrakesh was no longer the capital. Mawlay Ismā'il took an interest in it and destroyed the palaces of the ḡasba to use the materials for his works in Meknes. In 1114 (Feb. 1703), a son of Mawlay Ismā'il, Muḥammad al-'Alim, rebelled against his father, seized Marrakesh and plundered it. Zidān, brother of the rebel, was given the task of suppressing the rising, which he did, plundering the town once more.

Anarchy again broke out after the death of Ismā'il. Its centre was Meknes. Mawlay al-Mustaḍī, proclaimed by the 'Abid in 1738, was disowned by them in 1740 and replaced by his brother 'Abd Allāh. He sought refuge in Marrakesh. His brother al-Naṣr remained his *ḡhalifa* in Marrakesh till 1745, while al-Mustaḍī tried in vain to reconquer his kingdom. Marrakesh finally submitted in 1746 to Mawlay 'Abd Allāh who sent his son Sidi Muḥammad there as *ḡhalifa*. The governorship and then the reign of the latter (1757—1790) formed one of the happiest periods in the history of Marrakesh. Sidi Muḥammad completely restored the town, made it his usual residence, received many European embassies there, including a French one led by the Comte de Bregnon in 1767, and developed its trade. Peace was not disturbed during his long reign except for a riot raised by a marabout pretender named 'Umar, who at the head of a few malcontents tried to attack the palace in order to plunder the public treasury. He was at once seized and put to death (between 1766 and 1772, according to the sources). On the death of Sidi Muḥammad b. 'Abd Allāh, the situation remained very unsettled for several years. After taking the oath of allegiance to Mawlay Vazīd (May 3, 1790) the people of Marrakesh took in his brother Mawlay Hishām and proclaimed him. On hearing this, Vazīd abandoned the siege of Ceuta, returned to Marrakesh, plundered it and committed all kinds of atrocities (1792). Hishām, supported by the 'Abda and the Dukilla, marched on Marrakesh. Vazīd, wounded in the battle, died a few days later in the palace (Feb. 1792). Marrakesh remained faithful to the party of Mawlay Hishām, but very soon the Rḡamna abandoned him to proclaim Mawlay Ḥusain, brother of Hishām. He established himself in the ḡasba (1209 = 1794—1795). While the partisans of the two princes were exhausting themselves in fighting, Mawlay Sltman, sultān of Fās, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (July 1799) who had in any case to submit some time before. The last years of the reign of Mawlay Sltman were overcast by troubles in all parts of the empire. Defeated at the very gates of Marrakesh, he was taken prisoner by the rebel Shūrda. He died at Marrakesh on Nov. 28, 1822. Mawlay 'Abd al-Raḥmān (1824—1859) did much for the afforestation of Agdal and restored the religious buildings. His son Muḥammad completed his work by repairing tanks and aqueducts. These two reigns were a period of tranquillity of Marrakesh. In 1862 however, while Sidi Muḥammad b. 'Abd al-Raḥmān was fighting the

Spaniards at Tetwan the Rḡamna rebelled, plundered the Sūḡ al-Khamis and closely blockaded the town, cutting off communications and supplies, until the Sultān, having made peace with Spain, came to relieve the town (June 1862). Mawlay al-Ḥasan hardly ever lived in Marrakesh but he stopped there on several occasions, notably in October 1875, to punish the Rḡamna and the Bil 'Isha', who had rebelled, and in 1880 and 1885, to prepare his expeditions into Sūs.

During the last years of the reign of Mawlay 'Abd al-'Aziz (1894—1908), it was at Marrakesh that the opposition to the European tastes and experiments of the Sultān made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Mauchamp (March 19, 1907), and the spirit of separatism in the proclamation as sultān of Mawlay 'Abd al-Ḥafiz, brother of 'Abd al-'Aziz and governor of the provinces of the south (Aug. 24, 1907). But 'Abd al-Ḥafiz becoming ruler of the whole empire (Aug. 24, 1907) and having signed the treaty of March 24, 1912 establishing the protectorate of France and of Spain over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Ḥiba had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sidi Ba 'Uḥmān on Sept. 6, 1912, the French troops occupied Marrakesh the next day.

Relations with Europe. Five minor friars sent by St. Francis were put to death at Marrakesh on Jan. 16, 1220, for having attempted to convert Muslims and having insulted the Prophet Muḥammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the sultān's army. In the Almoravid period, the sultāns had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time to time deported to Morocco by entire villages. In 1227, Abu 'Uḥā Idrīs al-Ma'mūn having won his kingdom with the help of Christian troops lent by the king of Castile found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This was called Notre Dame and stood in the ḡasba, probably opposite the mosque of al-Manṣūr: it was destroyed during a rising in 1232. But the Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh filled by an episcopal board at Seville, existed so long as there was an organised Christian soldiery in Morocco, i.e. to the end of the xvth century. The title of Bishop of Marrakesh was borne till the end of the xvth century by the suffragans of Seville (cf. Father A. Lopez, *Los obispos de Marruecos desde el siglo XIII*, in *Archivo Ibero-Americano*, N° xlii., 1920). A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1631 at Marrakesh. A few years later (1637), a monastery was re-established beside the prison for slaves in the ḡasba. It was destroyed in 1659 or 1660 after the death of the last Sa'dian. Henceforth the Franciscans were obliged to live in the *sultān*

where they had down to the end of the xviiith century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the middle ages. Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country. In the xvth century, 'Abd. Allāh al-Ghālīb had a *funduq* or "bonded warehouse" built in the *sūq* where the Christian merchants were allowed to live; but the majority of those who came to Marrakesh preferred to settle in the Jewish quarter. It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in one of the gardens of the palace.

Monuments. The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bāb Aghmāt, Bāb Aīlān, Bāb Dabbāgh which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524 (1130). Bāb Yūṣuf, Bāb al-Makḥḥūn, mentioned at the same time, have disappeared. Bāb al-Sāliha (no longer in existence: it stood on the site of the *millāḥ*) and Bāb Dukkālā (still in existence) figure in the story of the capture of the town by the Almohads (1147). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now built up, to which they owe their survival, but have lost their name. According to Abu 'l-Fidā' (xvth century), there were in Marrakesh seventeen gates; twenty-four at the beginning of the xvth century according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Faḍl Allāh al-'Umari (beginning of the xvth century) adds to the names already mentioned those of Bāb Nfis, Bāb Muḥrīq, Bāb Mesnūf, Bāb al-Rahā all four of which have disappeared, Bāb Taghrūt, Bāb Fās (now Bāb al-Khamīs), Bāb al-Rabb which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the *ḥaḥḥa* in the south and in the north the creation of the quarter of Sidi bel 'Abbās. The *sūwayn*, which as late as the xvth century stood outside the walls beyond the Bāb Taghrūt, was taken into the town with all its dependencies.

The ḥaḥḥa. The little *ḥaḥḥa* and the palace of Dār al-'Umma built by Yūṣuf b. Tashfin, lay north of the present "Mosque of the Booksellers" or Kutubāya. 'Alī b. Yūṣuf added in the same quarter other palaces called Sū al-Hadjar, or Kaḥr al-Hadjar because they were built with stones from the Giliā, while all the other buildings in the town were of brick or clay. It was here that the first Almohads took up their quarters. According to a somewhat obscure passage of the *Tarīkh*, Abū Ya'qūb Yūṣuf seems to have begun the building of a "fort" in the south of the town but it was Ya'qūb al-Manṣūr who built the new *ḥaḥḥa* (1189-97); that is to say he joined to the south wall of the town a new walled area within which he built palaces, a mosque, and a regular town. Nothing remains of the Almohad palaces, but one can from pieces of wall and other vestiges follow

the old wall, at least on the north and the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the *ḥaḥḥa* is now entered, must be one of al-Manṣūr's building. Its modern name of Bāb Agnāw (the Negro's Gate) is not found in any old text. It probably corresponds to Bāb al-Kuhl (Gate of the Negroes), often mentioned by the historians.

Ibn Faḍl Allāh al-'Umari, in the xvth century, Leo Africanus and Marmol in the xvth, have left us fairly detailed descriptions of the *ḥaḥḥa*, in spite of a few obscure passages. In the Almohad period, the *ḥaḥḥa* was divided into three quite distinct parts. One wall in the northwest, around the mosque of al-Manṣūr which still exists, contained the police offices, the headquarters of the Almohad tribes and the barracks of the Christian soldiery. From this one entered through the Bāb al-Tubūl, a second enclosure in which around a huge open space, the "Cereque" of Marmol (*asūrag*), were grouped the guardhouses, the offices of the minister of the army, a guest-house, a madrasa with its library and a large building called *al-saḥā'if* (the porticoes), the "Acequife" of Marmol, occupied by the principal members of the Almohad organisation, the "Ten", the "Fifty" and the *ḥalā*, the pages (*ahl al-dār*). The royal palace, sometimes called the Alhambra of Marrakesh, in imitation of that of Granada, was entered from the *asūrag* and occupied the whole area east of the *ḥaḥḥa*. The palaces of al-Manṣūr were still in existence at the beginning of the xvth century when the Sa'dians took possession. 'Abd Allāh al-Ghālīb incorporated them in the new palaces which he was building. Ahmad al-Manṣūr added, in the gardens to the north, the famous al-Badī' palace celebrated for its size and splendour. Only a few almost shapeless ruins remain of it, but its plan is perfectly clear. Mawlay Ismā'il had it destroyed in order to use its materials. The *ḥaḥḥa* remained so completely in ruins that Sidi Muḥammad b. 'Abd Allāh when he became governor of Marrakesh in 1746, was obliged to live in a tent until his new buildings were finished. It is to him that we owe an important part of the present palace with its inner garden, Arḥat al-Nil. Other works were later undertaken by Mawlay Slimān and his successors. Some large unfinished buildings date only from Mawlay 'Abd al-Hafīz. A number of gates, in addition to the Bāb Agnāw give admittance to the *ḥaḥḥa*: these are Bāb Berrima and Bāb al-Aḥmar in the east, Bāb Ighl and Bāb Kṣiba in the west. The palace has vast gardens belonging to it: Dīnān al-Aḥya, Agdāl, Dīnān Ridwān, Ma'mūniya, Maḥra. The latter, two miles west of the town, contained in the xvth century a pleasure house of the sultān. The palace of Dār al-Balidā, situated in the Agdāl, took the place of a Sa'dian palace. It was rebuilt by Sidi Muḥammad b. 'Abd Allāh and has since been restored. As to the gardens of the Agdāl, they seem to have been created in the xivth century by 'Abd al-Mu'min.

Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which Yūṣuf b. Tashfin himself worked along with the masons as a sign of humility. But the cathedral mosque of 'Alī b. Yūṣuf, where Ibn Tūmari had an interview with the sultān, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly

oriented. The mosque of 'Alī b. Yūsuf was only partly destroyed and was rebuilt. 'Abd Allāh al-Ghālīb restored it in the middle of the xvth century. The present buildings and the minaret date from Mawlay Shmān (1792—1822).

Kutubiya. When the Almohads entered Marrakesh, 'Abd al-Mu'min built the first Kutubiya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly oriented he built a new mosque, the present Kutubiya, in prolongation of the first but with a slightly different orientation. It takes its name from the 'roo booksellers' shops which used to be around its entrance. It is a very large building with seventeen naves, which with its decoration in carved plaster, its stalactite cupolas, the moulding of its timberwork, its capitals and magnificent pulpit (*minbar*) of inlaid work, is the most important and the most perfectly preserved work of Almohad art. The minaret, begun by 'Abd al-Mu'min, was only finished in the reign of his grandson al-Manṣūr (1195). It is 230 feet high and its powerful silhouette dominates the whole town and the palm-groves. It is the prototype of the Giralda of Seville and of the tower of Hassan at Rabat. It is decorated with arcatures the effects of which were formerly heightened by paintings still visible in places, with a band of ceramic work around the top.

The mosque of the ḡaṣba or mosque of al-Manṣūr is the work of Ya'qūb al-Manṣūr. It was begun in 1189—95 and built in great splendour. It has been profoundly altered, first by 'Abd Allāh al-Ghālīb the Sa'dian, then in the middle of the xvth century by Muḥammad b. 'Abd Allāh, then more recently by Mawlay 'Abd al-Rahmān (1822—1859). The minaret of brick is intact and magnificently ornamented with green ceramics. The lamp-holder supports a *ḡimūr* of three bowls of gilt copper, which occupy a considerable place in the legends of Marrakesh. They are said to be of pure gold and to be enchanted so that no one could take them away without bringing on himself the most terrible misfortunes. This legend is often wrongly connected with the *ḡimūr* of the Kutubiya.

Among the religious monuments of Marrakesh of archaeological interest, may also be mentioned the minarets of the mosque of Ibn Ṣalāh (dated 731 = 1331) and of the sanctuary of Mawla 'I-Kūr, built in the Marinid period in the Almohad tradition, and two Sa'dian mosques: the mosque of al-Mwāṣim or mosque of the Sharifs, which owes its origin to 'Abd Allāh al-Ghālīb, and that of Bāb Dukkālā, built in 965 (1557—1558) by Lalla Mas'ada, the mother of the Sulṭān Aḥmad al-Manṣūr.

Madrasas. An Almohad madrasa, built 'to teach the children of the king and others of his family in it', formed part of the buildings of Ya'qūb al-Manṣūr. This royal school was presumably different from what later were the Marinid madrasas. It stood on the great square in front of the palace and was still in existence in the time of Leo Africanus. The Marinid Abu 'l-Ḥasan in 1347 built another madrasa, also described by Leo. It lay north of the mosque of the ḡaṣba, where traces of it can still be seen. The madrasa of Ibn Yūsuf is not, as is usually said, a restoration of the Marinid madrasa. It was a new building by 'Abd Allāh al-Ghālīb, dated by an inscription of 972 (1564—1565), the only surviving example of a Sa'dian madrasa.

Sa'dian tombs. The two first founders of

the dynasty rest beside the tomb of Sidi Muḥammad b. Sītmān al-Djazzūlī in the Riyāḡ al-'Arīṣ quarter. Their successors from 1557 were buried to the south of the mosque of the ḡaṣba. There was a cemetery there, probably as early as the Almohad period, which still has tombs of the xvth century. The magnificent ḡabbas which cover the tombs of the Sa'dian dynasty must have been built at two different periods. The one on the east under which is the tomb of Muḥammad al-Shāikh seems to have been built by 'Abd Allāh al-Ghālīb. The other, with three chambers, seems to have been erected by Aḥmad al-Manṣūr (d. 1603) to hold his tomb.

(PIERRE DE CÉNUVAL)

AL-MARRAKUSHI. [See 'ARD AL-WAKID.]

MARŠAD (A.), from *rašada*, "to wait on the road, to watch, to lie in wait", originally any place where a watch was kept, for example, a custom-house, then (with or without *al-kawākib*) an observatory. *Al-rašad* is also used in the latter sense. "To consult the stars for any one" is *rašada li-fulan*, to take astronomical measurements with instruments in *šūra* (cf. *šayr* = ascertaining latitude and longitude and *mišyār* = gnomo).

The Arab observatories had their models and predecessors in the Persian, Indian, Greek and Babylonian observatories. Very little is known about the construction of the oldest observatories. It is obvious however that when the advance was made from the observation and recording of isolated phenomena in the heavens, which were regarded as omens of good or ill fortune, to the exact following of the movements of heavenly bodies, simple instruments to calculate time and measure areas and angles in the heavens would become necessary. Such must have existed in the towers of Babylonian temples which were used as observatories, in the form of sundials, sand- and water-clocks measuring rods, and graduated circles. In the time of Ptolemy sundials and water-clocks were certainly in use, a circle divided parallel to the equator of the heavens which was used to calculate the equinox and length of the year, a meridian circle, the armillary sphere and the astrolabe or planisphere. The Arab astronomers, however, received their knowledge from the Hindus and Persians, among whom astrology and practical astronomy had reached a high level. When the first astronomical observations were made under the 'Abbāsids at Djundi-Sābūr and the first astronomical works were translated out of the Sanskrit and Pahlavi, there is no doubt that the observatories erected in Baghdad were also modelled on Indian and Persian prototypes. In his astronomical work, al-Battānī describes the construction of the sundial (*al-ruḡḡama*), a globe of the heavens (*al-ḥayda*), a wall-quantum (*al-ruḡḡa* or *al-līḥa*) and a triquetrum (*al-ḥayda al-fawila* or *al-ḥayda al-fawila*). The instrument most used in the Arab period however was the astrolabe which was portable (cf. above I., p. 501). The number of makers of astrolabes, observers and compilers of astronomical tables from the beginning of the 'Abbāsid period is immense and the rivalry of princes to obtain more and more accuracy in the astronomical foundations of astrology also led to the improvement of instruments and the arrangements in observatories generally. It is sufficient to mention out of the many observatories that of Cairo where Ibn Yūnus (d. 400—401 = 1009) completed the Hākimī tables, the observatory of Nišāpūr where al-Khāzini (d. beginning of the 10th = 11th century) took observations, that of Marāgha which Naṣir al-Dīn al-Ṭūsī erected

with many new instruments for the Mongol Khān Hūlāgū (1259) and the observatory of Samarkand, where Ulugh Beg employed the astronomers of his time. Following him in many points but also stimulated by European astronomy Džai Singh in India built the great observatories, the remains of which still arouse admiration in Delhi, Džai-pūr, Ujjain, Benares and Mathura.
